Re: *Phase I Environmental Site Assessment*
Idaho-Maryland Mine: Centennial and Brunswick Sites
Grass Valley, Nevada County, California

Dear Mr. Pappani:

ECM Consultants (ECM) is pleased to submit this *Phase I Environmental Site Assessment (ESA)* to Raney, Planning and Management, Inc. (RPM) at the Idaho-Maryland Mine: Centennial and Brunswick Sites in Grass Valley, Nevada County, California. The Phase I ESA was performed in accordance with ASTM Standard E1527-13 and satisfies the notice requirements of Section 120(h) of Comprehensive Environmental Response, Compensation, and Recovery Act, 42 U.S. Code §§ 9601 et seq. and 40 CFR part 312 - Innocent Landowners, Standards for Conducting All Appropriate Inquiries (40 CFR part 312).

If you have any questions, please contact me at (916) 917-5022.

Best regards,
ECM Consultants

Chris Drabandt
Senior Geologist/Environmental Professional

EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) is part of the Environmental Impact Report (EIR) determination of impacts and mitigations. The Idaho-Maryland Mine is separated into two distinct properties titled the Centennial Site located along Centennial Road that was a repository for offsite mine wastes and the Brunswick Site located on Brunswick Road that contains the primary mine shaft. Nevada County Planning Department has contracted Raney Planning and Management (RPM) to conduct an EIR as part of a Hazardous Waste Operations Historical Assessment.

The total area covered by these properties is approximately 175.34 acres as determined by the Nevada County Assessor's Office. The Centennial Site is historically associated with lode gold mining operation at the Idaho Maryland Mine. While no mining and milling structures are associated with the site, mine waste rock and mill tailings were disposed of onsite. The Brunswick Site contained several mines of varying historical use including the former Union Hill mine, New Brunswick mine, and an old unknown mine. Mine waste rock and tailings are scattered throughout the site. Additionally, a sawmill operated onsite including lumber storage and a recycling pond were operated at the site in the southern area.

The Centennial Site is bounded on the north by Idaho-Maryland Road and Centennial Dr and Whispering Pines Lane to the northeast. The area is hummocky with several drainages the course east to west. The Brunswick Site is bound to the north by East Bennett Road and to the east by Brunswick Road. The area is generally irregular and elongate and consists of 6 separate parcels as identified in the inset table below.

Several Historical Recognized Environmental Conditions (RECs) and Controlled RECs were identified during the course of this Phase I ESA. This assessment has revealed evidence of recognized environmental conditions in connection with the Centennial and Brunswick Sites and are briefly described below.

Centennial Site

- Idaho Maryland Mine Corporation and Centennial M-1 Property is documented as having mill tailings scattered throughout the site and may pose a hazard based upon metals concentrations and the fine-grained nature. Berms located on the north central and eastern portions of the site may have mine waste and mill tailings as part of the fill material. Arsenic, lead, mercury cyanide, and nickel are considered COCs for further evaluation at the site.

Brunswick Site

- Mine waste rock and soil fill have reported elevated levels of arsenic but may be a result of natural mineralization. Mine waste rock and tailings are present around New Brunswick Mine and to the paved and unpaved areas to the south. Former Union Hill Mine has several piles of associated waste rock located northwest of the inclined shaft.
- The CalEPA database identified Sierra Pacific Industries – Grass Valley Mill onsite as part of the Cleanup Program. As of December 2006, the case was closed according to the CalEPA database. A No Further Action determination was provided indicating that Sierra Pacific Industries has satisfactorily completed site investigation and remedial actions, filed a Land Use Covenant with the Nevada County Assessor's Office, and submitted proof of monitoring well destruction.
- The Sierra Pacific Industries site was also identified in the RCRA database. No violations were noted and the last date in the agency list was September 2015. No additional documentation was found regarding the storage and fate of oil-containing wastes onsite.

- AC Industrial Cleaning (AC) excavated a buried transformer and contaminated soil for a location west of the recycling pond, contaminated soil of a reported surface oil spill on the west-central portion of the site, and soils from a former disposal area. The buried transformer excavation has remaining contaminated soils in place and the others have no documentation regarding the closure.

The Idaho-Maryland Mine sites may also have non-scope, *de minimis*, or other considerations to evaluate based on physical hazards, potential water impairment, and undocumented features.

Centennial Site

- Assessment of the condition of the South Idaho Mine shaft beneath the tailings is recommended to be assessed for safety purposes.

Brunswick Site

- The old unknown exploratory mine or prospect in the southern portion of the site has a depression where water drains and may require further assessment.
- Three monitoring wells remain onsite and two of the wells are suspected to be from the former sawmill environmental investigations. One monitoring well appears to be undocumented and has standing water.
- The recycling pond has a dock on the southern corner with two large cisterns formerly housing large pumps. The pumps have been removed but the large cisterns are a physical hazard that if a person or animal falls in as there is no emergency exit from the 6-foot deep cavity.
- The irrigation piping on the southwestern hillside is open and may present a physical hazard if stepped into.
- Steel drums located beside the exploratory drilling rock core boxes should be properly identified and labeled as appropriate. Currently, the labels indicate the drums are part of former environmental investigations. However, the drums may have been reused for other purposes.

Further investigation into these areas and the issues identified may be warranted. Non-scope and other considerations should be assessed to determine if further investigation or intervention is required. Other identified non-scope, *de minimis*, or other considerations do not pose any known environmental or safety threat at this time.

1 INTRODUCTION

1.1 Purpose

The overall purpose of the Phase I Environmental Site Assessment (ESA) is to provide Nevada County Planning Department with knowledge of the full range of "environmental issues and liabilities" associated with the parcels identified for Conditional Use Permit and Reclamation Plan for the Idaho-Maryland Mine, owned by Rise Grass Valley Incorporated, a private company and satisfy requirements of American Society for Testing and Materials (ASTM) Standard E1527-13, the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), (42 U.S.C. § 9601 et seq.), and 40 CFR part 312 - Innocent Landowners, Standards for Conducting All Appropriate Inquiries (40 CFR part 312). Nevada County Planning Department contracted Raney Planning and Management (RPM) to conduct an Environmental Impact Report (EIR). This Phase I ESA is part of the hazardous waste operations historical assessment of the properties. The Idaho-Maryland Mine is separated into two distinct properties titled the Centennial Site located along Centennial Road that is a repository for mine wastes and the Brunswick Site located on Brunswick Road that contains the New Brunswick mine shaft (**Figure 1**).

The primary objectives of the ESA were the following:

- Identify, describe, and document conditions indicative of releases and threatened releases of hazardous substances (i.e. CERCLA liabilities) on, at, in, or to the subject property. The ASTM Standard E1527-13 expands the ESA investigation to include both hazardous substances and petroleum products, and the release or threat of release of either defines a Recognized Environmental Condition (REC).
- "Non-Scope Consideration" issues under the ASTM Standard which include, but are not limited to, asbestos containing material, radon, lead-based paint, non-hazardous solid waste disposal areas, waste water disposal systems, drinking water systems, drinking water and/or other wells, physical hazards, etc., are also to be considered in the ESA.
- Past and present practices and processes concerned with storage, use, and disposal of hazardous substances, as well as future land uses, will be accounted for as Non-Scope Considerations.
- Determine whether there are human or environmental receptors actually or potentially exposed to releases or potential releases of hazardous substances.
- Evaluate and identify RECs at the subject property.

1.2 Evaluation Scope

The scope for evaluation of the property is based on information derived from the following sources in general accordance with guidelines set forth in ASTM Practice E1527-13:

- Interviews with past and present owners, operators, and occupants, as available.
- Examination of aspects of the historical background and operating history of the site based upon interviews, review of aerial photographs, and other available historical documents.
- Examination of existing information regarding the site’s hydrogeological, geological, and topographical characteristics.
- Performance of a physical site inspection to observe existing conditions, business activities, and operations on the subject site and adjoining properties.

- Review of federal, state, county, tribal, and local agency records, as deemed appropriate by ECM, pertaining to the site and other selected properties within the approximate minimum search distance of the subject site.

1.3 Disclaimer

The client should be aware that ASTM Practice E1527-13 does not necessarily address requirements of state or local laws or any federal laws other than aspects of the "all appropriate inquiry" provisions of the landowner liability protections. ASTM E1527-13 was used as a guideline for the preparation of this ESA with modifications to meet requirements of CERCLA 120(h) and 40 CFR part 312. The client and users of this report are cautioned that federal, state, and local laws may impose environmental assessment and other obligations that are beyond the scope of this practice. The client and users of this report should also be aware that there are likely to be other legal obligations with regard to hazardous substances, substances of concern of petroleum products that may be on the property that are not addressed in this practice or within the scope of work of this investigation that may pose risks of civil and/or criminal sanctions for non-compliance.

ECM assumes the client has provided all of the following information regarding the subject property:

- Knowledge regarding activity and land use limitations that are in place on the subject site or that have been filed or recorded in a registry.
- Any specialized knowledge or experience known by the subject site or surrounding properties.
- Any commonly known or reasonably ascertainable information about the subject property related to the presence or likely presence of contamination on the subject property.

This report was prepared over a specific period of time from May 2020 through July 2020. Site conditions may have changed, or the current owner may have taken actions at the site after the Phase I ESA was completed.

2 REGIONAL SETTING

2.1 Location

The total area covered by these properties is approximately 175.34 acres as determined by the Nevada County Assessor's Office. There are 12 parcels that have been assessed ranging in size from 0.13 acre to 50.01 acres. The parcel identifiers and associated assessor's parcel numbers (APNs) and legal descriptions are provided in **Appendix A** and in each separate section describing the Centennial and Brunswick Sites.

The Centennial and Brunswick Sites are currently owned by Rise Grass Valley, Inc. (Rise Grass Valley) located in Grass Valley, California (**Figure 2**). The owner's location is not onsite at 333 Crowne Point Circle, Suite 215, Grass Valley, California 95945. The two sites are connected via East Bennett Road in which Rise has right-of-way (ROW) for commercial use. The city of Grass Valley is located to the west of the sites and the Cities of Glenbrook, Town Talk, and Nevada City are located to the north.

2.2 Regional Characteristics

The subject sites are separated approximately 4,500 feet apart in Nevada County in the Sierra Mountain Foothills on historically mined and lumber production land. In general, the sites are located on land with former mine and lumber structures in hilly terrain. The surrounding areas are forested with mixed commercial and residential developments.

2.3 Physical Setting Sources

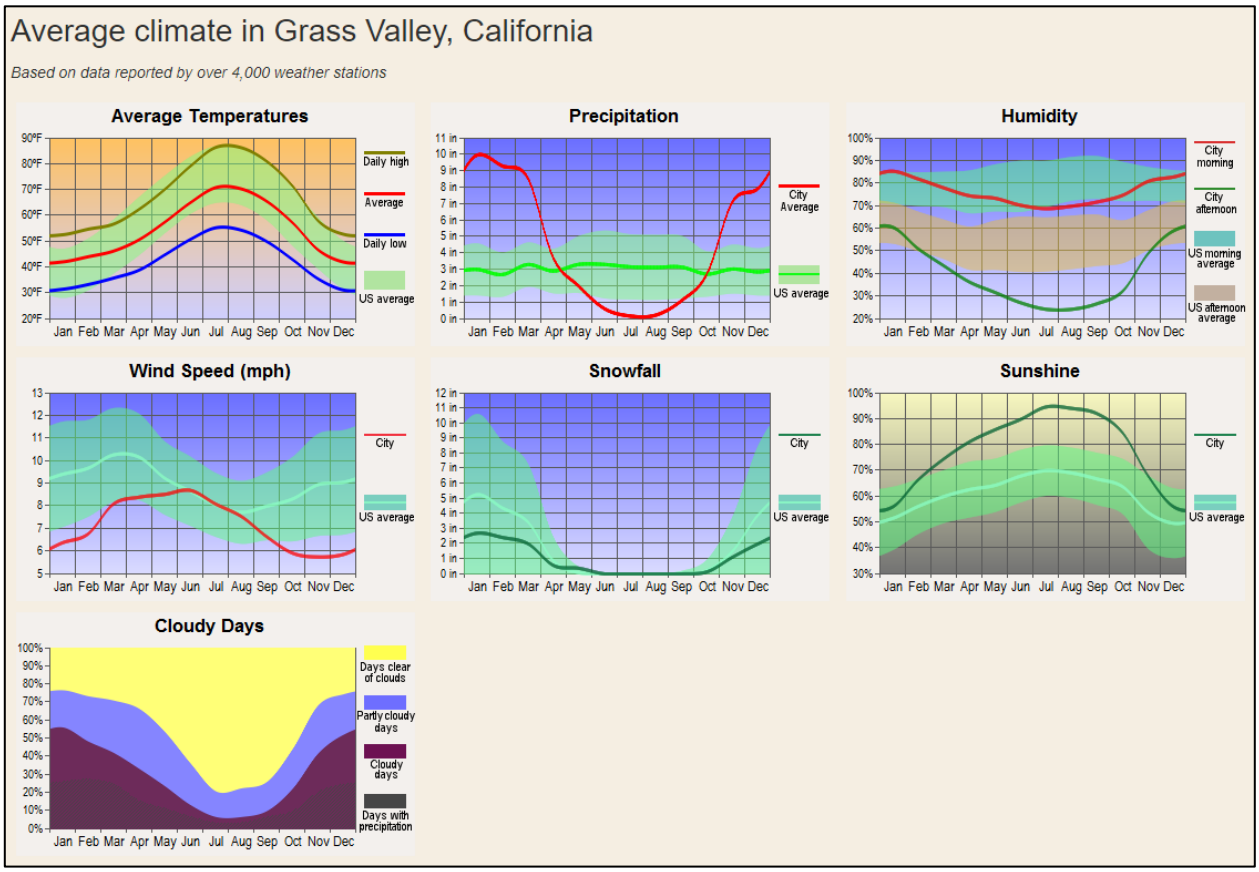

ECM performed research to generally evaluate the regional environmental context and onsite subsurface geologic and hydrogeologic conditions of the properties. ECM reviewed reference texts and maps to obtain information on the geologic and hydrogeologic characteristics of the site and vicinity (**Appendix B**).

2.3.1 Site Topography

The following topographic information was derived from the EnviroSite records research provided in (**Appendix C-1 and C-2)**. In general, the sites are located in the western Sierra Nevada Mountain Foothills which slope to the west toward the Central Valley. Regional topography includes rolling hills and some flat areas of alluvial and fluvial accumulation. Sites are located within valleys of flowing creeks and dip toward the northwest and the Great Valley.

2.3.2 Climate

Nevada County has a temperate climate with seasonal variations consisting of hot dry summers and cold wet winters. The average temperature ranges from a daily low of approximately 30 degrees Fahrenheit (ºF) in January/December to a daily high of 88ºF in July/August. Precipitation falls primarily between October and April which includes snowfall. The majority of precipitation falls in December, January, and February.

Source: http://www.city-data.com/city/Grass-Valley-California.html

2.3.3 Regional Geologic Setting

The Site is located within the western foothills of the Sierra Nevada geomorphic province. The Sierra Nevada is a long, northwest-southeast-trending, west-tilted, fault-block mountain range. The eastern

edge forms a steep scarp above the adjacent Basin and Range province to the east. The western slope of the Sierra Nevada dips gently westward and extends beneath the sediments of the Great Valley Province. The Sierra Nevada range continues to erode from continual uplift into the Great Valley.

Within the western foothills of the Sierra Nevada lies the foothills gold belt or Motherlode mining district. The Motherlode averages 50 miles in width and extends for 200 miles in a northwest-southeast orientation along the western slope of the Sierra Nevada. In general, bedrock beneath the area are Mesozoic to Paleozoic rocks of an ophiolitic mélange assemblage (2010 CGS). The California Geologic map dated 2010 indicates that the sites are underlain by undivided Mesozoic volcanic and metavolcanic rocks. Andesite and rhyolite flow rocks, greenstone, volcanic breccia, and other pyroclastic rocks and are in part strongly metamorphosed. This includes volcanic rocks of Franciscan Complex which includes basaltic pillow lava, diabase, greenstone, and minor pyroclastic rocks. Rocks have undergone low to medium grade metamorphism.

Regional faulting is associated with the central area of the Foothill Fault System which include the Wolf Creek Fault Zone, Spenceville Fault, Bear Mountain Fault Zone, Weimar Fault Zone, and the Cleveland Hill Fault (https://maps.conservation.ca.gov/cgs/EQZApp/app/). The Foothill Fault System is a broad zone of northwest trending east dipping normal faults formed along the margin of the Great Valley and the Sierra Nevada geologic provinces on the western flank of the Sierra Nevada and southern Cascade mountain ranges. The nearest pre-quaternary fault is the Grass Valley Fault and one other certain unnamed fault that is located running parallel with Brunswick Road.

ECM has reviewed the maps for the Grass Valley Quadrangle with respect to the Alquist-Priolo Earthquake Fault Zoning Act. The online mapping program indicates that the area is not within an Alquist-Priolo Active Fault Zone or a fault zone with activity within 11,000 years (https://maps.conservation.ca.gov/cgs/EQZApp/app/).

Slope failures involve the downslope displacement and movement of material, triggered either by static (gravity) or dynamic (earthquake) forces. Exposed rock slopes undergo rockfalls, rockslides, or rock avalanches, while soil slopes experience soil slumps, rapid debris flows, and deep-seated rotational slides. Complex variables, including the geology, structure, topography, slope geometry, and amount of groundwater present can determine slope stability. External processes including climate and human activity are also variables. Considering no known active faults were found in the area, the sites are considered to have a low potential for landslide hazard.

2.3.1 Hydrologic and Hydrogeologic Setting

The Centennial and Brunswick Sites lie within the Rattlesnake Creek-Wolf Creek (HUC 180201260202) in the Upper Bear subbasin of the Bear River Basin of the Lower Sacramento Basin (2020 US EPA; **Appendix B**). The Upper Bear subbasin, which incorporates the Centennial and Brunswick Sites, originates about 20 miles west of the crest of the Sierra Nevada in northern Placer County within the boundaries of the Tahoe National Forest. The Bear River flow patterns are high in the winter and spring and very low in the summer and fall. Bear River flows are regulated almost entirely by several storage reservoirs and numerous diversions. Wolf Creek drains into the Bear River northwest of the project site. Wolf Creek drains approximately 76 square miles from its headwaters at Banner Mountain to its confluence with the Bear River.

Wolf Creek passes through the City of Grass Valley (downgradient), where the creek receives stormwater runoff, wastewater treatment plant discharges, and a number of mines. Wolf Creek flows through the northern area of the Centennial Site. South Fork Wolf Creek passes through the middle of the Brunswick Site and collects in the large recycling pond located onsite. Both the Centennial Site and the Brunswick Site are located in the Wolf Creek sub-watershed.

According to California Department of Water Resources (DWR) Bulletin 118 for groundwater basins, no current groundwater basin underlies the sites. According the *1991 Nevada County General Plan Master Environmental Inventory* groundwater in western Nevada county is characterized as poorly defined and variable (**Appendix B**). The nature of the fractured lithology, varying soil depth, and disparity in percolation rates make it difficult to unify groundwater characteristics.

3 CENTENNIAL SITE

3.1 Location and Legal Description

The Centennial Site is located in Section 26, Township 16 North, Range 8 East, Mount Diablo Base and Meridian (MDBM). The Centennial Site is on wholly undeveloped land with some historical mine tailings deposits, prospects, and mine workings and is generally rectangular. This area is bound to the north by Idaho-Maryland Road and to the northeast by Centennial Road and Whispering Pines Lane. It consists of six separate parcels with a total acreage of 56.41 acres as identified in the inset table below.

Parcel ID	APN	Size in Acres	Address
Centennial	009-550-032	0.48	N/A
Centennial	009-550-037	4.47	10344 Centennial Drive
Centennial	009-550-038	40.1	10350 Centennial Drive
Centennial	009-550-039	0.98	10344 Centennial Drive
Centennial	009-550-040	0.13	N/A
Centennial	009-560-036	10.25	10344 Centennial Drive
Total Acreage		**56.41**	

3.2 Site and Vicinity Characteristics

The Centennial Site is bounded on the north by Idaho-Maryland Road with Centennial Drive and Whispering Pines Lane to the northeast. The site is situated approximately 2,528 feet above mean sea level (amsl) and slopes to the north toward Wolf Creek which flows to the west. The area is hummocky with several drainages that course east to west. The southeast corner has the highest elevation at approximately 2,594 feet amsl and the northwest corner has the lowest elevation at approximately 2,486 feet amsl.

Within the Centennial Site, Hap Warnke Lumber operated a small sawmill in the northeast portion of the site since 1956 through 2016, of which only a metal building, storage shed, and various debris remain. The surrounding area is paved with gravel. The paved area has tires, old lumber pallets, an old boat, several buckets, and metal debris.

Three anthropogenic berms are located along the northern and eastern portions of the site boundaries and another central berm through the center of the site trending east to west. The area is fenced off with an access gate on Centennial Drive with access to the former lumber area. The north and east boundaries of the site have large berms. The northern berm is constructed of mine waste rock and mill tailings and has two tower culverts on the western portion of the berm. The east berm has a road built along the top and separates the site from the former log pond with a connecting culvert in the center. A small spring feeds water from the former log pond onto the site. The area is hummocky with several drainages including a central drain which intermittently flows from the wetlands and culvert of the eastern berm to the west through the site. On the northern boundary is the perennial stream, Wolf Creek, which flows west.

Two former decanting towers are located in the northwest portion of the site. The decanting towers have a culvert running beneath the northern berm. They are no longer in use, but the concrete structures remain.

Current use of the Property

The site is unoccupied with only two buildings, a former metal workshop and storage shed in the northeast portion of the site at the former Hap Warnke Sawmill. The workshop, storage shed, and former sawmill paved area are used for storing debris and old non-operational boat, truck, tanks, and pallets. The site is open with trees and shrubs and several access roads. Two decanting towers remain onsite but are not currently used. Several homeless encampments and illegal dumping sites are located scattered throughout the property. The southeast portion of the site is an access road from the nearby staging area for power poles and is used temporarily to store a few items including a small approximate 100-gallon tar/oil tank with compressor. Several encampments and dump piles with tires are scattered throughout the site. There are currently no commercial or industrial activities occurring onsite. Following a voluntary cleanup action with the Department of Toxic Substances Control (DTSC), the site is proposed to be regraded for the purposes of storing additional tailing and mine workings from the offsite New Brunswick mine.

Descriptions of Structures, Roads, Other Improvements

In general, the property is undeveloped land with some minor structural improvements including past mining features, fencing, roads, and past water course modifications. The northeastern portion of the site has a paved area including a corrugated steel building and storage shed which are no longer used. The workshop has an open metal structure attached to it likely used for sawmill equipment or lumber storage. The storage shed, adjacent to the workshop, is no longer used but still contains empty buckets of petroleum products. The northern berm, which consists of mine waste rock and tailings, is the most prominent feature on the site with two decanting towers, formerly used to control water levels and flow, on the western end of the northern berm. A central berm and drainage ditch trend east to west from the culvert on the eastern berm and offsite log pond. The eastern berm is large and separates the former log pond from the site and has a north-south road on its crest.

Several roads are noted on the property in different degrees of drivability and access. There is a main road trending north and south that is gated on the southern end. In the southeastern corner, an access road trends northwest toward the former South Idaho mine and tailings area. Several other tailings areas are noted near the roads including on the northeast end of the main north-south access road, east central of the access road, and in the northwest and east-central portions of the site. The tailings are notable due to the lack of vegetation growing.

Current Uses of the Adjoining Properties

Commercial buildings are located to the northeast and west of the property. Several former offsite mine buildings are currently occupied with other businesses. To the east of the site is a timber production company that, during the time of the site visit, was chipping wood for bark. Treated telephone poles are being stored beside the property and a creosote odor was noted. A wooded area between the site and the adjacent lumber yard was a former log pond that drained via a culvert into the site. A storage yard south of the site is fenced with a gate. To the west of the site is DeMartini Recreational Vehicle Sales, which also has an access road though the site via an easement.

3.3 Historical Use of Property

ECM personnel researched historical land uses, which could potentially create current recognized environmental conditions on the subject property. As a standard part of the Phase I ESA scope of work, ECM obtained available topographic maps, aerial photographs, and any other readily accessible information to develop information on the historical use of the site and surrounding areas, back to the property's obvious first developed use as required by the All Appropriate Inquires (AAI)

rule. Additionally, ECM interviewed the owner of the properties, reviewed historical city directories, fire insurance maps, and reviewed building department records (as available and applicable to the evaluation of the site). The content and span of the historical investigation was limited by the content of records, coverage, and the inability to access physical records at the Searles Library, Nevada County Public Library, and Empire Mine State Park Records. Sanborn fire insurance maps from 1898 were available through the U.S. Library of Congress Map Collection for the Eureka and Crown Point Mine area located adjacent to the Centennial site property. The City Directory did identify the Hap Warnke Mill located at 10344 Centennial Drive as early as 1990. Maps and directories provided by the Historical Information Gatherers are included in **Appendix C-1**.

Based upon the historical topographic maps, aerials, and Nevada county documents the Idaho-Maryland mine operated between 1863 and 1956. After 1956, a 3-acre area in the northeast corner of the Centennial site was used intermittently as the Hap Warnke sawmill. A timeline summary of historical property use is included in the table below:

Year	Description
1851	Mining claims were filed at the Eureka mine. East of the Centennial Site.
1863	Mining claims were filed at the Idaho Maryland mine and operations commence. East of the Centennial Site.
1894	Maryland Gold Quartz Mining Company purchases the Idaho Quartz Mining Company and its Idaho Mine. The name is changed to Idaho Maryland Mine.
1901	Idaho Maryland Mine closes due to insufficient capital.
1903	Idaho Maryland Mine was bonded to Idaho Maryland Development Company. Mining activities resume.
1914	Idaho Maryland mine closes at the beginning of World War I.
1919	Idaho shaft No. 1 is advanced east of Centennial Drive and treated mine waste was stored on the site. The recovery process included mercury.
1925	Work at the Idaho Maryland Mine is suspended because it was not profitable.
1926	Work at the Idaho Maryland Mine resumes when Errol Mac Boyle and Edwin Oliver consolidate the mine with the Brunswick and Morehouse mines.
1936	Ball mill constructed east of Centennial Drive. Treated mine waste was stored on the site. The recovery process included cyanide.
1942	Mining operations are suspended due to World War II Production Order L-208.
1945	Mining operations resume.
1955	Mining and milling of gold discontinued. Operations focused on production of tungsten.
1956	Idaho Maryland Mine permanently closes. The mine was no longer profitable.
1983	The property and mineral rights were inherited by Mary Bouma, Ericka Erickson, and William Toms and/or their estates or companies. Emgold leases the Idaho-Maryland mine mineral rights.
1988-1989	From August 1988 through April 1989, Argo Associates excavated 7,756 tons of tailings from the eastern portion of the site for offsite milling.
1990	Hap Warnke Lumber Mill is operational.

Year	Description
Early to late 1990s	Idaho Maryland Mining Corporation (IMMC) leased the Centennial site and mineral rights.
2002 to 2012	IMMC again leased the site and mineral rights and conducted technical studies on the site.
2017	Rise Grass Valley LLC purchases the property and mineral rights.
2019	Hap Warnke Lumber Mill closes.

Historical Mine Information Obtained From www.mindat.org

3.4 Standard Environmental Record Sources

ECM contracted EnviroSite Corporation (EnviroSite) reports to provide specific federal, state, county, and tribal (as available) regulatory records pertaining to the subject site and surrounding sites within an approximate minimum search distance of each of the subject properties, in accordance with the requirements outlined in ASTM Practice E1527-13 (and subject to record availability).

The EnviroSite report for the Centennial Site is presented in **Appendix C-1**. Please see the attached report for details of the specific databases searched, descriptions of the information provided by each database and the dates the records were last updated. Information from pertinent databases and databases with results are shown below.

Additionally, other databases were utilized to derive site specific information including, but not limited to, well completions report from the DWR database which provides a broad area assessment of wells constructed (https://dwr.maps.arcgis.com/apps/webappviewer/), Mine Resource Data System (https://mrdata.usgs.gov/mrds/map-graded.html), California State Water board GeoTracker Database, DTSC EnviroStor, U.S. Fish and Wildlife Service (USFWS) Critical Habitat for Threatened and Endangered Species (https://fws.maps.arcgis.com/home/webmap/), USFWS Information for Planning and Consultation (IPaC, https://ecos.fws.gov/ipac/location/index), and the National Wetland Inventory database (https://www.fws.gov/wetlands/data/Mapper.html).

VCP	State	California DTSC Voluntary Cleanup Program	½ mile	5
Water Wells	Federal/State/County	Federal and state Public Water Supply	½ mile	

* AMSD – Approximate Minimum Search Distance, per ASTM Practice E1527-13

ECM's review of the above listed and several additional databases revealed several onsite records and are summarized below:

- The Federal Service Registry (FRS) identified the Idaho Maryland Corporation and references the DTSC EnviroStor Database.
- The EnviroStor and Voluntary Cleanup Program (VCP) databases indicate that the two sites are listed: Idaho Maryland Mine Corporation and Centennial M-1 Property. The Idaho Maryland Mine site is inactive and needs evaluation, but the Centennial M-1 site is active and is detailed as voluntary cleanup. Constituents of concern (COCs) are arsenic, lead, mercury cyanide, and nickel.
- The site is listed under the Fire Hazard Severity Zone with a very high hazard class and a hazard code of 3.
- The Idaho Maryland Mine is within several databases including the historical Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), Federal Brownfields, Federal Registry System, and the Superfund, Enterprise Management System (SEMS) Active Site Inventory (8R). The description is as follows: *The irregular-shaped, approximately 57-acre site was previously part of the Idaho Maryland Mine, which is no longer in operation. A lumber mill (Hap Warnke Mill) currently operates in the northern portion of the Site, near the intersection of Idaho Maryland Road and Centennial Drive. The remainder of the Site is vacant, largely forested land. Evidence of former mining activities is most apparent on the northwestern portion of the Site where two concrete decanting towers and mine tailings were observed. Several trails and unimproved (unpaved) roads extend across the property, likely originally from historical use, but currently used by an extensive homeless population. The Site is surrounded by vacant land and light industrial and commercial uses.*
- The Idaho Maryland Mine Property is listed under DTSC EnviroStor "Needing Further Evaluation" and is currently under investigation.
- The Idaho Maryland Mine 2 site is located at the same address as other sites and listed under the FRS and SEMS 8R Active Site database.

- National Wetlands Inventory (NWI) listed freshwater emergent wetland area, categorized as a Freshwater Pond, in the eastern portion of the site at the outfall of the culvert from the former log pond.

Remaining database findings are located offsite within 1 mile. No offsite database findings appear to have significant impact at the Centennial Site.

3.4.1 Historical Environmental and Geotechnical Investigations

A summary of environmental investigation, cleanup activities, and regulatory action at the Centennial Site is included in the table below:

1989 – Anderson Investigation
As reported by Weston (2005) and Geocon (2016), Anderson obtained five soil samples from the northeastern "T1" tailings area. Four of the samples were composites prepared using two to four grab soil samples from one to two exploratory locations. One of the samples referenced as "White PPT" was apparently obtained from white precipitate encountered at the ground surface. The remaining samples appear to be of tailings/soil. Arsenic, lead, mercury, and cyanide were detected in the soil samples.

1990 – Vector Investigation
As reported by Weston (2005) and Geocon (2016), Vector obtained four discrete samples from three exploratory locations (HS-1, HS-2 and HS-3) in the northeastern "T1" tailings area. Samples were obtained from depths up to 15 feet bgs. Arsenic, chromium, mercury, and lead were detected in the soil samples.

1993 Vector – Contaminant Assessment
Vector performed soil sampling and laboratory analysis of approximately 124 acres of property owned by Bouma, Erickson and Toms, currently the Centennial Site. This report was available as an attachment to the Weston (2005) preliminary assessment report. Vector excavated 19 exploratory trenches through tailings at the site and contracted for analysis of 28 discrete samples of tailings, soil and bedrock. Samples were tested for pH and total concentrations of metals.

2004 H&K – Preliminary Geotechnical Engineering Report
H&K performed a geotechnical feasibility study on behalf of IMMC for a 139-acre property that included the Centennial Site. No sampling or analysis was performed.

2005 Weston – Preliminary Assessment Report
Weston conducted a Preliminary Assessment (PA) of the Idaho Maryland Mine Property, which included the site and surrounding properties comprising a total of 122 acres. This investigation did not include sampling and analysis.

2007 IMMC – Data Supporting DTSC Voluntary Cleanup Application
IMMC was a prospective purchaser of the site and prepared an application for DTSC oversight. Attachment C of the application presented site investigation data, including soil sampling and laboratory analysis in November 2004, February 2005, and November 2005.

2007 Engeo – Environmental Soil Sampling and Testing Report
Engeo performed soil sampling and analytical testing concurrently with the geotechnical investigation. The geotechnical investigation included subsurface site exploration including eleven hollow-stem auger borings using CME 75 and CME 850 drill rigs. The maximum boring depth was approximately 50 feet bgs. Eleven exploratory excavations were completed using a Caterpillar 320C

excavator with a 24-inch-wide bucket. The maximum excavation depth was approximately 13 feet bgs. Engeo exploratory logs generally record mine tailings overlying weathered bedrock. A total of 17 soil samples were obtained for analytical testing from the northern portion of the site at depths ranging from 1 to 15 feet bgs.

2007 Engeo – Geotechnical Report
Engeo performed a geotechnical engineering investigation of the Idaho Maryland Mine Property, which included the site and property to the south and southeast, comprising a total of 138 acres. The purpose of the investigation was to support the design of surface facilities and improvements.

2008 ESA – Draft Environmental Impact Report
ESA prepared a Draft EIR for a proposed mine project that included the Centennial property.

2010 McClelland – Report on Kinetic Acid Rock Drainage Potential
McClelland performed kinetic testing (humidity cell testing) and static testing (Modified Sobek Acid-Base Accounting) using one tailings sample (TP3 Tailings) and one waste rock sample. McClelland reported that both samples had a net neutralizing potential and were not expected to produce acid in a natural weathering and oxidizing environment.

2015 Geocon – Phase 1 ESA
On behalf of the City of Grass Valley, Geocon prepared a Phase I ESA for the site as part of the Grass Valley 2013 Brownfield Community-Wide Assessment Grant.

2016 Geocon – Draft PEA Report
On behalf of the City of Grass Valley, Geocon prepared a draft Preliminary Endangerment Assessment (PEA) report for the site as part of the Grass Valley 2013 Brownfield Community-Wide Assessment Grant. The purpose of the PEA was to compile data from previous investigations of soil and mine tailings at the site and to perform a human health screening evaluation.

2017 AMEC – Technical Report
AMEC prepared a technical report on the Centennial property and other properties owned by Rise Grass Valley, as well as mineral resources underlying the properties.

2018 Weston – Site Reassessment Report
Weston conducted a Site Reassessment Report (SR Report) on behalf of the USEPA under the authority of the CERCLA. Weston used existing information to evaluate the site based on the USEPA Hazard Ranking System (HRS) criteria to assess the relative threat associated with actual or potential releases of hazardous substances at the site.

2019 Weston – Site Inspection Report
Weston conducted a site inspection report on behalf of the USEPA. Representatives from DTSC, Rise Grass Valley, and the City of Grass Valley were present during the SI sampling event. Representatives from USGS were present to conduct sampling for a bioavailability study. The SI included tailing samples, shallow soil samples, surface water from the Eureka shaft portal, and co-located sediment and surface water samples from Wolf Creek.

2020 NV5 – Site Inspection Report
NV5 conducted a PEA at the Centennial M-1 Property. The purpose of the PEA was to investigate environmental conditions and to address potential health risks associated with the disposal of mine waste to land at the site associated with historical gold mining and gold ore processing on adjacent property. The PEA included supplemental site investigation, review of community demographics,

compilation and validation of previous investigation data, delineation of assessment areas and statistical evaluation, human and ecological risk assessment, sensitive receptor survey, and water quality evaluation.

2020 Vergence Geo Services Inc. – Asbestoses Sampling Memo
Vergence Geo Services conducted a survey of natural occurring asbestos within the Idaho-Maryland mine subsurface. Core samples from various lithologies and geologic formations were analyzed for the presence of asbestos. Naturally occurring chrysotile asbestos were found at concentrations of 0.8% to 3.1% in unaltered serpentinite rock below the Centennial site. Ankeritized serpentinite had no detectable asbestos and had a gabbroic texture with ultra-mafic and mafic rock sand meta-volcanic rocks. Mitigation of asbestos fibers while tunneling will include application of water spray on waste rock and auxiliary ventilation systems.

3.4.2 Historical Aerial Photographs

Historical aerial photographs were provided by EnviroSite for the Centennial Site (**Appendix C-1**). Historical aerial photographs from U.S. Department of Agriculture (USDA), National High-Altitude Aerial Photography (NHAP), National Aerial Photography Program (NAPP), National Agriculture Imagery Program (NAIP), and U.S. Geological Service (USGS) from 1941 to 2018 were examined to assist in determining past and current uses of the property. Interpretation of each aerial historical photograph is provided bellow. To assist in the interpretation, all the photos show the Centennial Site area in the center of the aerial photographs (**Appendix C-1**). The approximate Centennial Site boundaries are outlined in red. A description of the aerial photography is summarized in the table below.

Year	Description
1941	Idaho Maryland Road is visible traveling east to west along the northern Centennial site boundary. Areas of the site appear barren, but the quality of the aerial is poor.
1947	Within the Centennial site boundaries, a suspected long sawmill building and several stacked areas to the south are apparent in the northeastern corner of the site. Several roads and berms are located on the northern and eastern boundary and in the northeastern portion of the site. Conveyance lines from the offsite Idaho-Maryland mine enter the site toward the central drainage feature. The Central drainage feature flows into the northwest portion of the site where large berms were constructed to hold water with mill tailing float. Wolf Creek is apparent on the north side of the north berm flowing east to west. The log pond is apparent east of the site with a visible inlet to the central drainage feature. Logs can be seen floating or resting in the water. Sawmill structures are apparent on the north and south sides of the log pond. North east of the site are multiple structures associated with the Idaho-Maryland mine workings. A small building is located in the southeastern corner of the site and appears to have associated waste rock piles to the south. The Pacific Gas and Electric (PG&E) compressor station is apparent northwest of the site and downgradient.

Year	Description
1952	Northeast of the site boundary, several buildings have been removed. The log pond east of the site boundary appears to be partially filled in. A large area south of the site boundary has been graded and has long piles of what appears to be rock stretching east to west. Waste rock may have been laid out in this area for future milling. Light colored mine waste piles are visible in the center of the site. Standing water is apparent in the northern portion of the site south of the berm and has tailings flowing in from the southwestern corner from the central drainage.
1957	Workings from the South Idaho Mine are apparent in the southeast portion of the site in a circular shape. The shaft and buildings are apparent east of the mine waste or mill tailings pile. The tailings float area in the northwest of the site appear mostly drained as the berm and decanting towers are easily observed. Several additional buildings have been constructed northeast of the site.
1962	The structures associated with South Idaho Mine have been removed and a portion of the long piles has been graded. The Idaho-Maryland mine area appears to have many buildings removed. It appears both mines and mills are no longer operational. The northwest tailings float pond appears dried up and the central drainage has increased vegetation.
1968	The float pond appears to have standing water in the northwesternmost portion. Several additional buildings have been constructed southeast of the site.
1972	Residences have been built north of the site. The float pond appears dry again.
1975	Vegetation increased throughout the site.
1978	No apparent changes.
1984	No apparent changes.
1987	Vegetation increased throughout the site. Several additional structures near the former Idaho-Maryland Mine area have been constructed. Tailings are still apparent with little vegetation and a white duff color. Significant commercial construction is apparent northeast of the site.
1988	No apparent changes.
1993	No apparent changes.
1998	Further development is visible north of Idaho Maryland Road and northeast of the site boundary around Whispering Pines Lane. The log pond appears more vegetated and shrinking in size with standing water. The Hap Warnke (Lumber) Mill yard is visible at the northern eastern corner. The workshop structure is visible.
2005	Offsite construction is apparent northwest of the site.
2009	Recreational Vehicle sales lot and structures are apparent east of the site.
2010	No apparent changes.
2012	No apparent changes.
2014	An area around the former log pond has been graded.

Year	Description
2016	The area around the former log pond has expanded and contains piles of wood chips and bark. The offsite parking area on the south side has been extended.
2018	The offsite parking area on the south side has been extended. More activity is apparent around the former log pond.

3.4.3 Historical Topographic Maps

Topographic maps were provided by EnviroSite (**Appendix C-1**) from USGS historical topographic maps from 1949 to 2018 were examined to assist in determining past and current uses of the property. To assist in the interpretation, all the photos show the Centennial Site area in the center of the historical topographic maps. Interpretation of each historical topographic map is provided bellow.

Year	Description
1949	Idaho Maryland Road and Wolf Creek are visible traveling east to west along the northern site boundary. Several structures are apparent in the northwest, northeast, and eastern portions of the site. The northwest structures are likely the decanting towers in operation at that time. In the northeast portion of the long structures are noted which may be part of the former sawmill. In the eastern part of the site along the central drainage, several structures are apparent, but their function is not known. The tailings pond is located in the northwest portion of the site. Offsite to the northeast, the Idaho-Maryland Mine workings are apparent. The log pond appears to fed by the Idaho Maryland ditch and has two sawmill buildings north and south.
1949 with 1973 revision	No significant changes.
1949	The tailings pond is still present including the surrounding structures.
1950	No apparent changes.
1995	The tailings pond is no longer identified and four-wheel drive (4WD) roads have been added. The majority of structures are no longer identified onsite except for the workshop in the northeastern corner. The former log pond is now identified as a water body. A gravel pit is noted to the west of the site. Structures are identified southeast and northeast of the site.
1998	No apparent changes.
2012	Structures and 4WD roads are no longer identified on the map.
2015	No apparent changes.
2018	No apparent changes.

3.5 Physical Settings

3.5.1 Soil Setting

The USDA Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining, and distributing soil survey information for privately owned lands in the United States. Summaries of soil units and characteristics that may be observed

within the Centennial Site is presented below. Site specific soil location, description, and details are provided in the EnviroSite report **Appendix C-1** and USDA Soil Survey Reports are provided in **Appendix D-1**.

Cut and Fill Land – fill

Cut and fill land (Ct) consisting of areas that have been altered by methods other than mining so that the soil characteristics have been eliminated. The cut and fill, or dozed area has no value as farmland. Slopes are 0 to 50 percent.

Placer Diggings – gravelly and sandy – mine waste

Placer Diggings (Pr) consists of land that has been placer mined. Placer deposits are alluvial streambeds. Slopes are 2 to 75 percent. The soil type is considered sandy, gravely, and cobbly waste rock.

Rock Outcrop Dubakella complex – cobbly clay – mountain flanks

Rock outcrop Dubakella complex (RrE) consists of well drained soils and ultrabasic colluvium derived from weathered igneous rock. Dubakella complex rock outcrops are rolling and steep mountains uplands. Slopes are 5 to 50 percent. The soil type contains clay and cobbles.

Secca Rock outcrop complex – cobbly clayey loam – mountain flank

The Secca Rock outcrop complex (ScE) consists of moderately drained soils derived from basic igneous and metamorphic rock. Secca Rock outcrop are on hills and mountains. Slopes are 2 to 50 percent. The soil type is gravely, cobbly, and clayey

3.5.2 Vegetation

The ecoregion of the site is considered to be Sierran Steppe-Mixed Forest-Coniferous Forest-Alpine Meadow (2019a Matuzak). Several vegetation communities have been identified at the site and include the following. Underbrush is typically dominated by Himalayan blackberry.

- **Montane Hardwood:** Small localized stands of black and live oak.
- **Montane Hardwood-Conifer:** Mixture of hardwoods and conifers including ponderosa pine, black oak, live oak, madrone, and Douglas fir.
- **Mixed Chaparral:** Southwestern portion of site with manzanita, buck brush, white oak, sweet pea, and foothill pine.
- **Annual Grassland:** Historic disturbance causes typical underbrush into the open and include yellow star thistle, garden burnett, soft chess, bisnaga, and blackberry.
- **Montane Riparian:** oaks and pines grading into the riparian species near water courses and include black cottonwood, red willow, arroyo willow, and ponderosa pine.
- **Wet Meadow:** Disturbance or diggings are influenced by hydrologic factors and include Agrostis and Baltic Rush.
- **Freshwater Emergent March Wetlands:** Hydrophilic plants and standing water and include cattails, arroyo willow, and pacific rush.

The site contains federally endangered, California endangered, and/or California state rare plants including the Pine Hill Flannelbush, Scadden Flat Checkerbloom, and Stebbins' morning glory.

3.6 Site Reconnaissance

Site reconnaissance was performed by ECM on June 9 and June 12, 2020. A site photograph log for the Centennial site is included in **Appendix D-1** and site reconnaissance sheets for the Centennial Site are provided in **Appendix E-1**. On June 9, 2020, ECM was accompanied by Ben

Mossman of Rise Grass Valley and Jason Muir of NV5. They provided maps and details of historical and current activities of the site. The site is generally accessible by foot; however, some lower depression areas (with abundant water) were overgrown with blackberries and poison oak and inaccessible. Site reconnaissance was conducted again on June 12, 2020 to collect additional pictures and survey more areas. **Figure 3** shows relevant site reconnaissance findings.

Storm Water Management on Site

Several culverts were noted at the site to transport the perennial Wolf Creek beneath Centennial Drive in the northeast corner and beneath the access road to DeMartini Recreational Vehicle sales. Additionally, one culvert is present beneath the central portion of the eastern berm but was not observed due to thick vegetation and poison oak preventing access. The historical central drainage is still present and appears as though it may flow during high precipitation events. The northern berm has a culvert that flows underneath to each decanting tower, but it is currently dry and inoperable.

Wolf Creek appeared to be flowing and did not have any observable impacts associated with it coming onsite or leaving the site. No other standing water from past or current events or operations were observed at the Centennial Site.

Petroleum Storage or Disposal Features

An abandoned truck is located west of the storage shed and workshop. The engine is mostly intact, and no staining or stressed vegetation was noted. In the paved area adjacent to and inside the workshop and storage shed, are cans and buckets of empty petroleum lubricants (some partly full with other substances). In the southeast corner of the site near the boundary, is a tar tank on a trailer with leaky compressor. Staining was observed beneath the compressor but was minor.

Floor Drains and Sumps

Structures located on applicable parcels did not have any evidence of former or current interior drainage features. No floor drains or sumps were noted during site reconnaissance.

Utility Connections

It is unclear if operational potable water systems exist at the Centennial Site. ECM noted a water spigot in front of the workshop in the northeast portion of the site. The interior of the building did not have plumbing and the flooring was slab-on-grade. Water in the area is serviced by the Nevada Irrigation District. An approximate 250-gallon old water tank was observed near the workshop and storage shed and another approximate 150-gallon poly tank on a trailer is located on the southeast access road to the site. Power lines run east to west on a part of the north boundary of the site and did not have transformers associated with them. The area is under the jurisdiction of the Community Development Agency and supplied by PG&E for electrical and gas, but the site is not serviced.

Septic tanks and sewage leachate fields were not observed at the site, the area is serviced by the City of Grass Valley Public Works Department. No municipal systems exist on the subject properties since there are no operational structures.

Solid Waste, Physical Hazards, and Non-Scope Issues

In the southeast portion of the site, the former South Idaho Mine shaft may be covered by tailings and could not be located during site reconnaissance. Historical photos indicate that the shaft may be to the east of the tailings and was not observed. There is no documentation of how the shaft was abandoned and may be a potential physical hazard. Mill tailings scattered throughout the site may pose a hazard based upon metals concentrations and the fine-grained nature. The main road near the northern portion of the site is unpassable. More than 30 tires were noted scattered around the site.

Solid waste was observed scattered around the site in the form of tires, old propane tanks, old lumber, pallets, rubber sheeting, empty drums, chairs, shopping carts, various metal debris, household wastes, and chunks of concrete.

Several burn areas were noted where possibly brush was burned. No waste remnants were noted within the burn area or surroundings, which indicates that these are likely brush burn areas. Latent buried waste may be present on any property, particularly if efforts were undertaken to conceal this act. Indication of such activity may or may not be revealed in the records and observations during the Phase I ESA. Site reconnaissance did not indicate the presence of underground wastes at the time the site inspection was conducted.

Polychlorinated-Biphenyls

Polychlorinated biphenyls (PCBs), often found in electrical equipment such as transformers, ballasts in fluorescent lighting, circuit breakers and switch gears, and hydraulic fluids, contain toxic compounds which attach themselves to human fat tissue and may act as possible carcinogens if ingested. No pole-mounted transformers nor other potential PCB-containing equipment within the parcel boundaries were observed during site reconnaissance.

Wetlands

There is a National Wetlands Inventory (NWI) listed freshwater emergent wetland area, categorized as a Freshwater Pond, in the eastern portion of the site at the outfall of the culvert from the former log pond which likely may contain a seep. The single recognized wetland was identified onsite and is heavily vegetated. USGS topographic maps indicated a water body at the location of the offsite former log pond and a former tailings pond present in the northwestern portion of the site. During site reconnaissance, the former tailings pond area was dry and had little vegetation on the tailings. This is likely due to the nature of the mill tailings being deposited by water and is not considered a wetland. The USFWS NWI map is included as **Appendix B-1**.

Vegetation on Site

Stressed vegetation was observed where mill tailings currently are located on the north, central, east, and southeast areas. Tailings do not allow vegetation to become established due to drainage and potentially elevated metals concentrations. Two burn areas were located, although it is suspected that only brush was burned at these locations.

4 BRUNSWICK SITE

4.1 Location and Legal Description

The Brunswick Site is located in Section 36, Township 16 North, Range 8 East and Section 31, Township 16 North, Range 9 East, MDBM (**Figure 4**). The Brunswick Site is on reworked mining land with multiple anthropomorphic features. The area is generally irregular and elongate and consists of 6 separate parcels as identified in the inset table below. This area is bound to the north by East Bennett Road and to the east by Brunswick Road. Millsite Road extends through the northeastern portion of the site. The total acreage for the area is 118.93 acres. The parcel identifiers and associated APNs and legal descriptions are provided in **Appendix A**.

APN	Address	Size in Acres
006-441-003	12503 Brunswick Road	15.19
006-441-005	12791 Brunswick Road	50.01

APN	Address	Size in Acres
006-441-004	12625 Brunswick Road	0.85
006-441-034	12381 Brunswick Road	16.01
009-630-037	12603 East Bennett Road	21.8
009-630-039	12301 Millsite Road	15.07
Total Acreage		**118.93**

4.2 Vicinity and Site Characteristics

Within the Brunswick Site, the South Fork Wolf Creek enters the southeastern corner and is conveyed beneath the site via corrugated piping to the eastern central portion where it outfalls into the natural drainage of the creek. South Fork Wolf Creek continues flowing on the western side of the property and exits the northwestern corner of the site near the former Union Hill mine. A clay-lined pond was constructed in the center of the property for use by Sierra Pacific to irrigate onsite lumber. The pond has two large intake conveyance pipes, no overflow or outflow piping was observed. The former lumber area has multiple water conveyance channels and irrigation piping throughout the site. Drainage channels transported water to the central pond for reuse in spraying lumber through the irrigation system.

Site Topography

The following topographic information was derived from the EnviroSite records research provided in **Appendix B-2**. In general, the sites are located in the western Sierra Nevada Mountain Foothills which slope to the west toward the Central Valley. The Brunswick site is situated approximately 2,703 feet amsl and slopes to the northwest toward South Fork Wolf Creek which flows to the northwest. The southwest corner has the highest elevation at approximately 2,952 feet amsl and the northwest corner has the lowest elevation at approximately 2,7570 feet amsl. A pond is located in the center of the site with a berm constructed between the lower elevation outfall into South Fork Wolf Creek and the grassland to the north.

Current use of the Property

The Brunswick Site is currently owned by Rise Grass Valley. The site is open with trees, shrubs, and grasses. There are currently no commercial or industrial activities occurring onsite. The site is unoccupied with only one building structure, a former mine silo but is not currently in operation. Several exploratory borings have been conducted west of the former sawmill. The large paved area in the southern area of the site is used for brush collection (Community Green Waste Transfer) by Nevada County Office of Emergency Services and the Fire Safety Council. Adjacent to the brush collection is firewood storage on the paved area as part of the Senior Firewood Program. The northeast portion of the site has concrete structures from the former Union Hill Mine.

Descriptions of Structures, Roads, Other Improvements

In general, the parcels are undeveloped land with structural improvements including mine silos, mine shafts, concrete footings for headframes, paved areas, recycling pond and piping with large capacity pump, swales and drainages, fire hydrants, berms, roads, and fencing. Several terraced open areas unimproved and paved are located in the central and southern portions of the site. The majority of the old mine and mill workings were located in the northeastern corner. Mine and mill tailings mixed with soil fill were noted through investigations below the large paved and open areas in the south portion of the site. An open flat grassland area is located in the northern portion between the New Brunswick and Union Hill Mines.

The New Brunswick mine silos remain, and the shaft is covered with a large steel plate. South of the New Brunswick mine are terraced flat areas that had former sawmill buildings. The flat area adjacent to the mine formerly contained multiple mining buildings. A gulley to the south of the mine contains a gulley and fence, along an abandoned narrow-gauge railroad.

The Union Hill mine is covered with a steel plate and waste rock is piled up and partially grown over to the north. Large concrete footings of the former headframe remain near the shaft opening. A large area of drill cuttings from exploratory drilling is dispersed north of the Union Hill Mine.

In the southwestern portion of the area, a small depression was observed with some pipe, concrete and miscellaneous debris, along with what appeared to be a small amount of rock around. This is potentially an old exploratory shaft. Identified in the debris what appeared to be the remains of concrete footings, a rotted timber, cable, and metal piping. A flat area beside the footings contains what might be waste rock from the excavation. No documentation regarding this feature was located during research.

The former sawmill is surrounded by drainages into the adjacent recycling pond. A swale and fire hydrant line runs adjacent to an access road west of the sawmill. At the lower end of the swale is a large culvert drain that leads to the recycling pond. The pond is approximately 2.8 acres and bermed on the west and north side. A dock is located in the southern corner with two former large irrigation pumps. The overflow or outfall of the pond is suspected to be on the north corner of the pond and drains to the north into the adjacent grassland or flood plain to the South Fork Wolf Creek.

Several roads are located throughout the property from historical use. The main access road enters through Brunswick road and travels north through the eastern margin of the site. Several smaller and unimproved roads bifurcate from the main access road. The sawmill area has several roads connecting the irrigation piping on the western hillside.

Current Uses of the Adjoining Properties

The Brunswick Site is bounded on the north by East Bennett Road and on the east by Brunswick Road. Residences surround the property including a keyhole property surrounded by the site in the northern portion. Adjacent to the southwestern-most corner is the McBurney Christmas Tree Farm. Approximately 900 feet northwest of the site is Creative Kids preschool and childcare.

4.3 Historical Use of the Property

ECM personnel researched historical land uses, which could potentially create current recognized environmental conditions on the subject property. As a standard part of the Phase I ESA scope of work, ECM obtained available topographic maps, aerial photographs, and any other readily accessible information to develop information on the historical use of the site and surrounding areas, back to the property's obvious first developed use as required by the All Appropriate Inquires (AAI) rule. Additionally, ECM interviewed the site owner, Rise Grass Valley, reviewed historical city directories, fire insurance maps, and reviewed building department records (as available and applicable to the evaluation of the site). The content and span of the historical investigation was limited by the content of records and coverage.

Based upon the historical topographic maps, aerials, and Nevada County documents the Idaho-Maryland mine operated between 1863 and 1956. Maps and directories provided by the Historical Information Gatherers are included in **Appendix C-2**. A timeline summary of historical property use is included in the table below:

Year	Description
1854	Union Hill Mine is established.
1870	Union Hill Mine closes.

1900	Union Hill Mine reopens.
1909	New Brunswick Mine is established.
1910	New Brunswick Mine closes due to water flooding the mine.
1911	Union Hill Mine closes.
1914	Union Hill Mine is reopened by Gold Point Consolidated Mines, Inc. Both gold and tungsten are mined.
1915	New Brunswick Mine drained of water and reopens.
1918	Union Hill Mine and New Brunswick Mine close.
1922	New Brunswick Mine is dewatered and reopens.
1927	New Brunswick Mine is closed.
1933	Brunswick Mine bought by Idaho-Maryland Mining Corporation. The mine is dewatered and reopens.
1942	Mining operations are suspended by World War II Production Order L-208.
1945	Mining operations resume.
1956	The New Brunswick mine closes permanently. The mine was no longer profitable.
1958 -1959	Brunswick Timber Products Company owned by Yuba River Lumber Company opens the Brunswick Grass Valley Sawmill.
1976	Bohemia Inc. acquires the Brunswick Grass Valley Sawmill.
1991	Sierra Pacific Industries purchased the Brunswick Grass Valley Sawmill.
2002	Sierra Pacific Industries close the Brunswick Grass Valley Sawmill.
2004	Sawmill structures are demolished.
2017	Rise Grass Valley Inc. purchases the property and mineral rights.
2020	Currently the Brunswick Industrial Site is used as the Community Green Waste Transfer Station and the Senior Firewood Program.

The primary historical uses of the property include gold mining and lumber milling and storage. Historical documentation of mining included Union Hill Mine and New Brunswick Mine. Historical documentation of Lumber Milling included Sierra Pacific Industries. The following provides a historical use of these primary operations and uses of the Brunswick Site. Historical records were compiled and presented by ERRG in a Phase I ESA in 2007 and by NV5 in a combined Phase I/II ESA in 2020.

The Union Hill Mine and New Brunswick Mine were lode gold mining using inclined and vertical shafts, respectively. Workings at former Union Hill Mine began in 1854. In 1856, an ore mill and hoist were constructed. The inclined shaft extended southwest into the subsurface approximately 300 feet and operated until approximately 1870. The mine was reportedly reopened in 1900 and extended the inclined shaft to 600 feet bgs and operated until 1911. A second reopening operated from 1914 until 1918 and the shaft was extended to 800 feet bgs. Additional equipment and operations occurred during this period including installation of a new hoist system, air compressor, 12-foot Pelton wheel and Cornish pump, and a 20-stamp mill for processing tungsten containing scheelite. The stamp mill

was removed from the site when Idaho-Maryland Mines Company was absorbed by the Metal Exploration Company. Union Hill mine workings may have been also used by operations at the New Brunswick Mine.

The New Brunswick Mine was established in 1909 with a vertical shaft on the northern portion of the property. The headframe was constructed beside the still standing concrete silos. A narrow-gauge railroad spur was constructed from north of East Bennett Road into the site along the south portion of the New Brunswick Mine. Groundwater entering the mine at a depth of approximately 443 feet closed the mine in 1910. Pumps were installed in 1915 to drain the shaft via the old Brunswick Mine. The old Brunswick Mine was an inclined shaft north of the New Brunswick Mine and dipped toward the southwest. Equipment and buildings were constructed at the New Brunswick mine including a steel headframe, 20-stamp mill, and a cyanide recovery plant. In 1918, the mine extended to 1,200 feet bgs and was closed again. By this time, several additional metal buildings were constructed including an office, assay office, drying furnace building, blacksmith and machine shop, garage, transformer house, powder magazine, and store house. In 1922, the mine reopened and was dewatered and operated until 1927. The shaft was extended to 3,300 feet bgs by the IMMC after reporting in 1933. A Marcy mill (used for sizing discharged materials) and a regrind mill were installed as well. During World War II, the mine ceased operation but continued operations after the war until 1956. At that time, the remaining structures except the concrete silos, mine shaft collar, and foundations were removed. In 1997, the building foundations were removed.

The former sawmill was located in the central portion of the property and was referred to as the Grass Valley Sawmill, Bohemia Sawmill, and the Sierra Pacific Mill. The sawmill operated from the late 1950s to the early 2000s. Operations at the sawmill including lumbering, wood treatment, and log storage for which an irrigation system was used. Supporting infrastructure included the sawmill building, two sorter buildings (one constructed in 1987), an office building, transformer, slot feeder, conveyors, timber racks, recycling pond and pumps, irrigation piping, and log storage areas. The recycling pond and associated appurtenances was used to collect and recycle surface water runoff to cool, wet, and protect logs and lumber stored onsite. Pesticides were used for wood treatment prior to 1984. The sawmill structures were demolished by approximately 2004 although the paved areas, subsurface irrigation, and drainage features remain in place. A No Further Action determination was provided on December 16, 2006 indicating that Sierra Pacific Industries has satisfactorily completed site investigation and remedial actions, filed a Land Use Covenant with the Nevada County Assessor's Office, and submitted proof of monitoring well destruction (**Appendix F**).

4.4 Standard Environmental Record Sources

ECM contracted EnviroSite reports to provide specific federal, state, county, and tribal (as available) regulatory records pertaining to the subject site and surrounding sites within an approximate minimum search distance of each of the subject properties, in accordance with the requirements outlined in ASTM Practice E1527-13 (and subject to record availability).

The EnviroSite report for the Brunswick Site is presented in **Appendix C-2**. Please see the attached report for details of the specific databases searched, descriptions of the information provided by each database and the dates the records were last updated. Information from pertinent databases and databases with results are shown below.

Additionally, other databases were utilized to derive site specific information including, but not limited to, well completions report from the DWR database which provides a broad area assessment of wells constructed (https://dwr.maps.arcgis.com/apps/webappviewer/), Mine Resource Data System (https://mrdata.usgs.gov/mrds/map-graded.html), California State Water board GeoTracker Database, DTSC EnviroStor, U.S. Fish and Wildlife Service (USFWS) Critical Habitat for Threatened and Endangered Species (https://fws.maps.arcgis.com/home/webmap/), USFWS Information for

Planning and Consultation (IPaC, https://ecos.fws.gov/ipac/location/index), and the National Wetland Inventory database (https://www.fws.gov/wetlands/data/Mapper.html).

4.4.1 Regulatory Agency Database Information

Identifier	*Agency*	*Name*	*AMSD**	*No. of Listings*
BROWNFIELDS	Federal/State/Tribal	Federal, Tribal, and California Brownfields	½ mile	0

* AMSD – Approximate Minimum Search Distance, per ASTM Practice E1527-13

For clarity, Sierra Pacific Industries, Grass Valley Sawmill, Brunswick Sawmill, and Bohemia Sawmill are in reference to the same property, structures, and operations but different owners/responsible parties. The named parties are based upon the time of initial input into the specific database. ECM's review of the above listed and several additional databases revealed several onsite records and are summarized below:

- The California Environmental Protection Agency (CalEPA) identified the facility Rise Grass Valley, Inc. as having Chemical Storage Facilities (ID 10792774). The specifics of what chemicals were stored were not located.
- Including the CalEPA database and the California Integrated Water Quality System (CIWQS), a National Pollutant Discharge Elimination System (NPDES) permit for Wastewater and Stormwater occurs onsite for the Emperor Gold Corporation. As of September 2017, the permit is considered historical and no longer enforced.
- The CalEPA database also identified Sierra Pacific Industries – Grass Valley Mill onsite as part of the Cleanup Program (SL0605738327). The current case status is closed, and a current deed restriction covenant has been placed on the site. The Spills, Leaks, Investigations, and Cleanup (SLIC) database indicates that the site case status was opened in March 1994 and reopened in June 2005. As of December 2006, the case was closed. A No Further Action determination was provided indicating that Sierra Pacific Industries has satisfactorily completed site investigation and remedial actions, filed a Land Use Covenant with the Nevada County Assessor's Office, and submitted proof of monitoring well destruction.
- The Sierra Pacific Industries site was also identified in the RCRA database. The site was considered a small quantity generator (SQG) for unspecified oil-containing waste generating approximately 2 tons per year. No violations were noted and the last date in the agency list was September 2015.
- The HAZMAT database indicated that the Sierra Pacific Industries had asbestos containing materials (ACM) and approximately 6.7 tons was disposed in 2003. Additionally, other organic solids at 4.2 tons and unspecified oil-containing waste at 0.8 tons was disposed.
- A historical underground storage tank (UST) was listed onsite as the East Grass Valley Congregation.
- The CERCLIS identified Bohemia Inc. (operator of the sawmill) in 1985. Preliminary Assessment, Site Inspection, and Discovery was conducted using EPA funds.
- The historical HAZNET database identified the County of Nevada – Department of Transportation and last date in the agency list was November 2014.
- The site is listed under the Fire Hazard Severity Zone with a very high hazard class and a hazard code of 3.
- National Wetlands Inventory (NWI) listed freshwater emergent wetland area, categorized as a Freshwater Pond, in the center of the site identified as the recycling pond.

Remaining database findings are located offsite within 1 mile. No offsite database findings appear to have significant impact at the Brunswick Site.

4.4.2 Historical Environmental and Geotechnical Investigations

Based upon prior historical research conducted at Nevada County offices, state environmental sources, and prior reporting efforts by various consultants. A summary of environmental investigation, cleanup activities, and regulatory action is included in the list below:

1965 County of Nevada – Notice of Approval of Use Permit Application
Nevada County approves the Use Permit for the Brunswick Timber Products Corp.

1987 Emcon Associates – Soil and Groundwater Investigation
Emcon performed a soil and groundwater investigation and prepared a report for the former Bohemia Inc. Brunswick Sawmill. Emcon investigated contamination related to the sawmill pesticide wood treatment processing. Emcon also installed monitoring wells MW-1 through MW-5 at the sawmill wood treatment area.

1988 Emcon Associates – Soil and Groundwater Investigation
Emcon prepared plans to replace the water recycling pond with a larger pond and surface water controls.

1988 Emcon Associates – Water Balance Analysis
Emcon performed a surface water balance analysis for the sawmill.

1988 Emcon Associates – Bioremediation Plan
Emcon prepared a bioremediation plan to address the contamination from the sawmill's pesticide wood treatment processes.

1988 RWQCB-CVR – Waste Discharge Requirements
The Central Valley Regional Water Quality Control Board (RWQCB-CVR) issued Order No 88-185 — Waste Discharge Requirements for Bohemia sawmill.

1989 Emcon Associates – Remediation of Pentachlorophenol-Impacted Soil
Emcon excavated and removed contaminated soil and remediated contaminated soil according to the 1988 bioremediation plan.

1989 Vector – Report of In-Situ Permeability Testing and Quality Control of the Clay Liner System
Vector prepared a report for In-Situ Permeability Testing and Quality Control of the Clay Liner System for the water recycle pond at the Bohemia sawmill.

1990 Vector – Response Report for Groundwater Investigation and Monitoring Requirements
Vector prepared a Response Report for Groundwater Investigation and Monitoring Requirements for the Bohemia sawmill. The report included a survey of nearby water wells and addressed the RWQCBs concerns about the groundwater contamination at the Bohemia sawmill.

1992 Vector – Hydrogeologic Study for the Idaho-Maryland Mine
Vector prepared a hydrogeologic study for the Idaho-Maryland Mine which included the New Brunswick Mine.

1992 AC Industrial Cleaning – Remediation Work Plan / Report of Contaminated Soil Removed
AC Industrial Cleaning prepared a remediation work plan / report of contaminated soil removed from three areas with oil-contaminated soil. AC Industrial Cleaning performed the contaminated soil removal from the three areas located near the southern site boundary for Sierra Pacific Industries.

1994 Vector – Mineral Exploration and Environmental Assessment
Vector prepared a Mineral Exploration and Environmental Assessment Mineral Exploration and Environmental Assessment for Idaho-Maryland Mine Project.

1996 Vector – Fourth Quarter Groundwater and Annual Monitoring Report
Vector prepared a Fourth Quarter and Annual (1995) Groundwater Monitoring Report for Sierra Pacific Industries Brunswick Sawmill site.

1999 Sierra Pacific Industries – Ground Water Monitoring Report
Sierra Pacific Industries prepared a Ground Water Monitoring Report for the former Bohemia Inc. Brunswick Sawmill. Groundwater was monitored at the former solvent storage area. Groundwater was sampled from three onsite monitoring wells and analyzed for purgeable hydrocarbons and aromatics.

2005 Carlton Engineering – Hydropunch Groundwater Sampling
Carlton Engineering performed hydropunch groundwater sampling at the Brunswick Lumber Mill. Hydropunch groundwater samples were collected in the area of former monitoring well MW-5 to investigate any remaining VOC impacts in groundwater.

2006 Geomatrix – Preliminary Environmental Evaluation and Phase ll Investigation
Geomatrix performed a Preliminary Environmental Evaluation in February 2006 and a Phase ll Investigation in September 2006. Soil surface water and groundwater samples were analyzed for metals to assess mine waste impacts at the Brunswick site.

2006 Sierra Pacific Industries – Covenant and Environmental Restriction on Property
Deed restriction mandates no groundwater can be used for domestic purposes and new wells can be drilled on the property. The deed restriction was mandated by the Regional Water Quality Control Board (RWQCB) to Sierra Pacific Industries who was the property owner at the time.

2007 ERRG – Phase 1 ESA
ERRG performed a Phase 1 ESA part of the Brunswick Site and surrounding properties. The Phase 1 ESA was prepared for IMMC.

2008 ESA – Draft Environmental Impact Report
ESA prepared a Draft Environmental Impact Report (EIR) for a proposed mine project that included the Centennial property.

2010 McClelland – Report on Kinetic Acid Rock Drainage Potential
McClelland (2010) performed kinetic testing (humidity cell testing) and static testing (Modified Sobek Acid-Base Accounting, ABA) using one tailings sample (TP3 Tailings) and one waste rock sample (Dev. Rock-1105). McClelland reported that both samples had a net neutralizing potential and were not expected to produce acid in a natural weathering and oxidizing environment.

2016 Geocon – Draft PEA Report
On behalf of the City of Grass Valley, Geocon prepared a draft PEA report for the site as part of the Grass Valley 2013 Brownfield Community-Wide Assessment Grant. The purpose of the PEA was to compile data from previous investigations of soil and mine tailings at the site and to perform a human health screening evaluation.

2017 AMEC – Technical Report
AMEC prepared a technical report on the Centennial property and other properties owned by the Rise Grass Valley, as well as mineral resources underlying the properties.

2018 Weston – Site Reassessment Report
Weston conducted a Site Reassessment Report (SR Report) on behalf of the USEPA under the authority of the CERCLA. Weston used existing information to evaluate the site based on the USEPA Hazard Ranking System (HRS) criteria to assess the relative threat associated with actual or potential releases of hazardous substances at the site.

2019 NV5 – Engineering Geotechnical Report
NV5 conducted an Engineering Geotechnical Report for the Rise Grass Valley Inc. Idaho-Maryland Mine Project, Brunswick Industrial Site.

2020 Emco – Groundwater Hydrology and Water Quality Analysis Report
Emco prepared a Groundwater Hydrology and Water Quality Analysis Report for the Brunswick Site. Surface water samples water samples were collected from the South Fork Wolf Creek and groundwater samples were collected from the New Brunswick mine shaft. The report evaluated the water quality at the Brunswick Site.

2020 NV5 – Phase I/II
NV5 conducted a Phase I and Phase II Site Assessment at the Brunswick Site for Rise Grass Valley. The Phase I reviewed historical records, reports, and investigations at the Brunswick site. The Phase ll investigation portion included soil samples from 36 exploratory trenches to characterize the extent of mine waste at the Brunswick site. Several RECs, CRECs, and HRECs were noted at the site including, but not limited to mine wastes, mixed soil and rock fill material, former fuel USTs, buried electrical and petroleum equipment, and sawmill contamination. Arsenic was identified above regulatory levels in fill, waste rock materials, and a mixture of both.

2020 Vergence Geo Services Inc. – Asbestoses Sampling Memo
Vergence Geo Services conducted a survey of natural occurring asbestos within the Idaho-Maryland mine subsurface. Core samples from various lithologies and geologic formations were analyzed for the presence of asbestos. No asbestos was found in the native rock below the Brunswick Site.

4.4.3 Historical Aerial Photographs

Historical aerial photographs were provided by EnviroSite (**Appendix C-2**) for the Brunswick sites. Historical aerial photographs from USDA, NHAP, NAPP, NAIP, and USGS from 1941 to 2018 were examined to assist in determining past and current uses of the property. Interpretation of each aerial historical photograph is provided bellow. To assist in the interpretation, all the photos show Brunswick Canyon running southeast to northwest with the site boundaries outlined in red. A description of the aerial photography is summarized in the table below.

Year	Description
1941	The Brunswick Canyon is apparent trending southeast to northwest with several draws entering the broad, dry valley. Roads are visible along the northern and eastern site boundary. Mine structures are visible in the northeastern portion of the site.
1947	The New Brunswick Mine is fully developed at the northern area of the site with numerous buildings. Two long narrow buildings in parallel with northeastern to southwestern orientation are apparent. Other mine structures surrounding the shaft are noted. Additionally, mine waste appears to be conveyed to the southern area and spills out into a broad expanse. South Fork Wolf Creek runs along the western portion of the boundary. Numerous roads traverse the northern area site with rectangular containers lined up in rows along the northeastern site boundary. A farm homestead is apparent west of the mine structures. A small community of houses set up in a grid orientation is visible beyond the southern site boundary including the Christmas tree farm. An electric utility line heads north from the community to the southern site boundary. The Union Hill mine area is apparent in the northwestern corner of the site. The former railroad tracks are apparent on the north side of the keyhole property and the south side of the mine.

1962	Most of the buildings at the northern area have been removed with the exception of the silos. Approximately 100 rectangular containers are arranged in rows along both sides of the Millsite Road. Two large rectangular sawmill buildings have been constructed in the south-central portion of the site. A large berm and pond have been added south of the mine with large piles of mine waste or sawmill waste visible to the east of the pond. East Bennett road and Brunswick road along the northern and northeastern site boundaries appear to be paved and widened. The housing community south of the site appears developed and the electric utility line connecting the community to the southern site boundary appears improved. The unknown old exploratory mine shaft area is apparent in the southwestern portion of the site. The recycling pond berm is present in the center of the site but does not appear to be filled with water.
1968	The southern paved area is apparent including rows of logs or lumber.
1969	No apparent changes.
1972	No apparent changes.
1975	Forest has been removed and sawmill buildings have been added to the southern area of the site. Long piles of timber are visible at the southern area of the site. The pond has a clear definition but does not appear to contain significant water. The Union Hill mine area appears to have activity but it is unclear what type.
1978	More long piles of timber have been added to the southern area of the site.
1984	The pond appears in an S-shape and contains water. Additional long piles of waste rock have been added to the southeastern area of the Brunswick site.
1987	No apparent changes.
1988	No apparent changes.
1993	The pond appears to contain significant water. The long timber piles at the southeastern area of the site appear to have been removed.
1998	The pond appears in the current diamond shape and the area around the silos appears graded.
2005	All remaining sawmill buildings and timber have been removed. The housing communities surrounding the site have been developed further.
2009	Algae is abundant in the recycling pond. The drainage swale is apparent on the southern side of the recycling pond.
2010	No apparent changes.
2012	No apparent changes.
2014	No apparent changes.
2016	No apparent changes.
2018	Drilling equipment for mining exploratory borings are apparent to the east and south of the pond.

4.4.4 Historical Topographic Maps

Topographic maps were provided by EnviroSite (**Appendix C-2**) from USGS historical topographic maps from 1949 to 2018 were examined to assist in determining past and current uses of the property. To assist in the interpretation, all the topographic maps show Brunswick Canyon running southeast to northwest. The Brunswick site boundaries are outlined in red. Interpretation of each historical topographic map is provided bellow.

1949	The Brunswick valley is apparent trending southeast to northwest. Brunswick road and East Bennett road are visible along the northern and northeastern site boundaries. The topographic map shows New Brunswick Mine listed in the center of the Brunswick valley with several structures and Millsite road running through the site. South Fork Wolf creek is visible flowing through the southern and western portions of the site. Additionally, Old Brunswick Mine is apparent to the north of the New Brunswick mine site.
1949 with 1973 revision	The sawmill structures are now apparent on the map in the southern portion of the site. An additional creek flow across from the County Airport onto the site and combines with South Fork Wolf Creek.
1949	No significant changes.
1950	Compared to the 1949 topographic map no significant changes are noted.
1995	New Brunswick mine has been relabeled as “Ruins” but the sawmill structures are still present. The recycling pond is also apparent in the center of the site. The pond has been added to the Brunswick site and small squares representing buildings have been added to the southern area of the site. South Fork Wolf Creek appears to originate from the recycling pond; however, documentation suggests that this is not the case.
1998	No apparent changes.
2012	Notations and structural representations have been removed from the topographic map. Millsite Road has been added to the Brunswick site.
2015	Millsite road label has been removed.
2018	The recycling pond has been enlarged and in the current diamond shape.

4.5 Physical Setting

4.5.1 Soil Setting

The USDA SCS leads the NCSS and is responsible for collecting, storing, maintaining, and distributing soil survey information for privately owned lands in the United States. Summaries of soil units and characteristics that may be observed within the Brunswick Site is presented below. Site specific soil location, description, and details are provided in the EnviroSite report **Appendix C-2** and USDA Soil Survey Reports are provided in **Appendix B-2**.

Aiken loam – clay loam – ranges

The Aiken loam (AfC) consists of well drained soils derived from Lahar deposits. Aiken soils are on ranges and side slopes. Slopes are 9 to 15 percent. The soil type is considered loam and clay loam.

Aiken loam – clay loam – ridges

The Aiken loam (AfD) consists of well drained soils derived from colluvium and residuum derived from andesitic conglomerate and tuff breccia. Aiken soils are on ridges and back slopes. Slopes are 15 to 30 percent. The soil type is considered loam and clay loam.

Aiken loam – clay loam – hills

The Aiken loam (AfE) consists of well drained soils derived from colluvium derived from conglomerate and/or cobbly andesitic colluvium derived from tuff and/or residuum weathered from conglomerate and/or tuff. Aiken soils are on hills and back slopes. Slopes are 30 to 50 percent. The soil type is considered loam and clay loam.

Alluvial land – clayey – floodplains

Alluvial land (Ao) consists of moderately well drained soils derived from mixed metabasic and/or granitic rocks. Alluvial soils are in floodplains, and drainageways. Slopes are 0 to 15 percent. The soil type is considered clayey.

Cohassat loam – clayey loam – shoulders

Cohassatt loam (CmC) consists of well drained soils derived from residuum weathered from volcanic breccia and conglomerate. Cohassat loam soils are valued for farmland and found on shoulders and ridges. Slopes are 3 to 20 percent. The soil type is considered loam, clay loam.

Cohassat loam – clayey loam – backslopes

Cohassatt loam (CmD) consists of well drained soils derived from residuum and colluvium derived from volcanic rock. Cohassat loam soils are found on backslopes and ridges. Slopes are 5 to 30 percent. The soil type is considered loam, clay loam.

Cohassat cobbly loam – Cobbly loam – hills

Cohassatt loam (CoD) consists of well drained soils derived from cobbly andesitic colluvium derived from conglomerate. Cohassat loam soils are found on hills and side slopes. Slopes are 5 to 30 percent. The soil type is considered cobbly loam and cobbly clay loam.

Placer Diggings – gravelly and sandy – mine waste

Placer Diggings (Pr) consists of land that has been placer mined. Placer deposits are alluvial streambeds. Slopes are 2 to 75 percent. The soil type is considered sandy, gravely, and cobbly waste rock.

Sites silt loam – silt loam – mountains

Sites silt loam (SID) consists of well drained soils derived from residuum weathered from metamorphic rock. Sites silt loam soils are found on mountains and back slopes. Slopes are 15 to 30 percent. The soil type is considered silty loam and clay loam.

4.5.2 Vegetation

The Ecoregion of the site is considered to be Sierran Steppe-Mixed Forest-Coniferous Forest-Alpine Meadow (2019b Matuzak). Several vegetation communities have been identified at the site and include the following. Underbrush typically dominated by Himalayan blackberry.

- **Montane Hardwood:** Small localized stands of black and live oak.
- **Montane Hardwood-Conifer:** Mixture of hardwoods and conifers including ponderosa pine, black oak, live oak, madrone, and Douglas fir.
- **Ponderosa Pine:** Including Ponderosa pine, California black oak, madrone, foothill pine, and incense cedar are associated with these forested areas.

- **Annual Grassland:** Historic disturbance causes typical underbrush into the open and include yellow star thistle, garden burnett, soft chess, bisnaga, and blackberry.
- **Sierran Mixed Conifer:** Dominated by conifers with hardwood as a component of the understory.
- **Wet Meadow:** Disturbance or diggings are influenced by hydrologic factors and include Agrostis, Baltic Rush, and velvet grass.
- **Freshwater Emergent March Wetlands:** Hydrophilic plants and standing water and include cattails, arroyo willow, red willow, and pacific rush.
- **Man-made Pond:** Hydrophilic plants and standing water and include cattails, arroyo willow, and pacific rush.
- **Developed:** Paved and gravel areas for access and association with historical industrial uses.
- **Disturbed:** Area containing mixed fill-material, asphalt, and gravel creating a mix of non-native ruderal grassland vegetation and areas of barren ground.

The site contains federally endangered, California endangered, and/or California state rare plants including the Pine Hill flannelbush, Scadden Flat checkerbloom, and Stebbins' morning glory.

4.6 Site Reconnaissance

Site reconnaissance was performed by ECM on June 9 and June 12, 2020. A site photograph log for the Brunswick site is included in **Appendix D-2** and site reconnaissance sheets are provided in **Appendix E-2**. On June 9, 2020, ECM was accompanied by Ben Mossman of the Rise Grass Valley Corporation and Jason Muir of NV5. They provided maps and details for historical and current activities of the site. The site is generally accessible by foot; however, grassland area and portions of the wooded areas were inaccessible. Site reconnaissance was conducted again on June 12, 2020 to collect additional pictures and survey more areas. **Figure 3** shows relevant site reconnaissance findings.

Storm Water Management on Site

The South Fork Wolf Creek enters a diversion pipeline in the southeast corner of the site and the out fall is located on the central-western berm of the site (adjacent to the recycling pond) and continues its natural drainage pattern. The inlet has a gate but appears not to have been closed for years. South Fork Wolf Creek has naturally occurring iron precipitate. South Fork Wolf Creek appeared to be flowing well and did not have any observable impacts associated with it coming onsite or leaving the site. No other standing water from past or current events or operations were observed at the Brunswick Site.

The recycling pond has concrete swales and anthropogenic drainages feeding overflow of site surface waters. The concrete swale near the former sawmill drains into a large 48-inch culvert storm drain with cover. The recycling pond is suspected to have an overflow in the north corner as is evidenced by vegetation suited to a wet environment. The overflow culvert was not observed and may be covered by thick vegetation. The former log storage area is paved but is noticeably graded toward a large drainage leading to the pond for the former use of recycling water.

Rills from unmanaged surface flow are apparent in several places on the property due to unmaintained drainages. The southwestern boundary has irrigation piping and the access roads to the area are scoured by surface water.

Petroleum Storage or Disposal Features

Historical environmental records indicated three areas of former petroleum spills or storage. These areas were investigated, and no obvious sign of contamination were noted. The southern area has a gravel cover and no apparent staining or stressed vegetation. According to records, the area was partly remediated by excavation, but some contaminated soils may have been left in place as sidewall samples indicate residual impacts. The other areas are bare, with no vegetation. No residual petroleum impacts were observed; however, subsurface impacts may still be present but were not assessed during this Phase I ESA.

A former AST pad was noted in the records along the southern shoulder of East Bennett Road; however, this pad was not observed during site reconnaissance. Additionally, operations at the mine and sawmill likely had petroleum storage and usage during their operations. No stressed vegetation or staining from former petroleum equipment or storage were observed during the site visit.

One drum was noted in a paved area south of the existing mine silo half full of lubricating oil. This drum was recently used for exploration drilling activities by Rise Grass Valley. No staining or stressed vegetation was noted around the drum and the drum does not appear to be leaking.

Floor Drains and Sumps

The existing mine ore silo structure did not have any evidence of former or current interior drainage features. The mine ore from the silo has an opening to the lower haul area, but no floor drains or sumps were noted during site reconnaissance.

Utility Connections

Several fire hydrants are noted around the former sawmill area and in good condition. These hydrants may still be operable, but according to the interview with the site owner, Rise does not currently pay for utility water connection at the site. Water in the area of the site is serviced by the Nevada Irrigation District.

Two approximate 1,000-gallon poly water tanks were observed near the paved area south of the existing mine silos. They appeared to be empty and were likely used for the recent exploration drilling.

Power lines run through the northern portion of the site and along the eastern perimeter. One transformer was noted on the northern boundary of the site. The area is under the jurisdiction of the Community Development Agency and supplied by PG&E for electrical and gas, but the site is not currently serviced.

Septic tanks and sewage leachate fields were not observed at the site, the area is serviced by the City of Grass Valley Public Works Department. No municipal systems exist on the subject properties since there are no operational structures.

Solid Waste, Physical Hazards, and Non-Scope Issues

Three monitoring wells were noted around the property. Suspected monitoring well MW-7 is located on the southeastern portion of the property and is a stovepipe type well. It is secured with a lock; therefore, the integrity of the well cannot be confirmed. The concrete apron has been elevated off the ground by approximately 4 inches which may indicate ground subsidence. Suspected monitoring well MW-3 is located in the central portion of the property west of the former sawmill. The well is flush mount with a PVC cap that could not be removed during the site visit. Another unnamed and undocumented well, of the same construction as MW-3, was found in the south-central portion of the property southeast of the irrigation pipelines. The well was approximately 19 feet deep and had approximately 6 feet of water. No other information was found regarding this well.

Two refrigerators were observed in the northeastern portion of the property east of the mine ore silos. The refrigerators were primarily intact but missing doors. These are of potential concern due

to the unknown status of mercury thermometers. No leaking or stains were observed around the refrigerators to indicate rupture of mercury thermometers.

Exploratory drilling core boxes and drums are located north of the silos in the former mine building area and southeast of the silos on the eastern edge of the paved area. The drums were marked with environmental labels indicating non-hazardous material or wastes pending analysis. One drum had what was noted to be purge water from a monitoring well. Several other drums were noted to have soil cuttings from monitoring well B-6. Rise Grass Valley was uncertain of the contents of the drums but thought that the drums were reused. Contents and disposition of the materials in the drums could not be determined during site assessment.

Two mine shafts and 6 exploratory borings were located during the site visit. Three of the borings were located southeast of the pond and in the northwestern most area northwest of the former Union Hill mine. Boring casings were protruding at an angle from the ground. The two mine shafts are covered by locked steel plates. Former Union Hill has associated concrete foundations for the headframe, waste rock piles, metal debris, and metal cables.

A potential exploration or prospecting shaft was observed in the southeastern portion of the site. A depression adjacent to concrete footings for a suspected headframe appears to collect water and does not drain away from the depression. The remains of the old suspected shaft are evidenced by old timber, hoist cables, and drill pipe in the vicinity of the shaft area. This shaft of unknown designation or condition may present a physical hazard if unstable, and the rock found adjacent could have been sourced from underground and inside the opening.

Mine waste rock and tailings are scattered throughout the southern area of the site. Some mine waste rock and mill tailings were used as base for the southern paved area of the former log storage. South of the paved areas waste rock and mill tailings are exposed. Many areas of the site have fill from unknown origins.

The dock to the recycling pond that formerly contained two large pumps is open and has areas with no flooring posing a potential fall hazard. Two large cisterns in the pond are on the dock and the northwesternmost cistern is open with no emergency escape route.

Along the hillside on the southwest portion of the property is the irrigation piping system. Many pipelines are open to the ground with bollards surrounding them. The open holes may present a trip hazard if stepped into.

The former narrow-gauge railroad extends northwest of the silos into the site adjacent to the southwest of the silos. The rails and ties no longer remain and were reportedly removed during World War II for steel reclamation. The area is overgrown with blackberries and could not be physically inspected.

Latent buried waste may be present on any property, particularly if efforts were undertaken to conceal this act. Indication of such activity may or may not be revealed in the records and observations in the Phase I ESA. Site reconnaissance did not indicate the presence of underground wastes, other than what has been mentioned above, at the time the site inspection was conducted.

Polychlorinated Biphenyls

Polychlorinated biphenyls (PCBs), often found in electrical equipment such as transformers, ballasts in fluorescent lighting, circuit breakers and switch gears, and hydraulic fluids, contain toxic compounds which attach themselves to human fat tissue and may act as possible carcinogens if ingested. One small pole-mounted transformer was noted on the northern site boundary; however, no staining or stressed vegetation was noted below the transformer and it appears as though it is relatively new. AC Industrial Cleaning (AC) excavated a buried transformer and contaminated soil for a location west of the recycling pond. A relatively small amount of contaminated soil remains

onsite according to the summary report. No staining or stressed vegetation was noted in this area. No other potential PCB-containing equipment within the site boundaries were observed during reconnaissance.

Wetlands

There is an NWI listed freshwater emergent wetland area in the center of the site that is the former recycling pond. The pond likely retains its water level due to a clay lined bottom and drainage from the historical irrigation recycling features. The single recognized wetland was identified onsite using the National Wetlands Inventory. USGS topographic maps indicated a water body at the location of the recycling pond. The USFWS NWI map is included as **Appendix D-2**.

Vegetation on Site

Stressed vegetation was observed where mill tailings and mine waste rock currently are located on the north, central, east, and southeast areas. Tailings do not allow vegetation to become established.

5 INTERVIEWS

The following sections combine the Centennial and Brunswick Sites. The objective of interviews is to obtain information indicating RECs related to the subject property. To accomplish that objective, this portion of the report discusses interviews, email correspondence, and other forms of communication related to the subject property. ECM sent a site questionnaire to the Property owner representative for the Rise Grass Valley Inc. Ben Mossman is the President and referred the interview questionnaire to their environmental and geotechnical consultant NV5.

Interviews are typically conducted with prior property owners or operators/workers at the site. However, during the time of this Phase I ESA former property owners could not be located or are deceased. Many operations at the Centennial and Brunswick Sites ceased nearly 30 to 50 years ago and records of employment are no longer available. Historical Phase 1 ESAs and other interviews in prior environmental documents will be used for additional information. ECM has cited the portions that are historical and may not be relevant or accurate as of this date in the prior interviews.

Completed site survey questionnaires are located in **Appendix G**. The following summaries are responses from onsite and offsite survey questionnaires. Interviews are supplemented and confirmed by site reconnaissance.

Mr. Benjamin Mossman (Rise Grass Valley, Inc. President – Current Owner)

- Mr. Mossman has been associated with the property since 2017.
- The Centennial Site has been used for mill tailings and mine waste rock storage from Idaho-Maryland Mine until 1956.
- Small-scale sawmilling operations continued up to 2019 under the title Hap Warnke Mill. The small metal building at the Centennial Site is from Hap Warnke Mill operations.
- The Brunswick Site had numerous buildings associated with gold mining and lumber milling.
- Many of the interview questions regarding hazardous substances underground structures and tanks, spills, unknown contaminated materials brought onsite, and water well information (current and historical) are referred to the Preliminary Endangerment Assessment for the Centennial Site and the Phase I/II Study for the Brunswick Site submitted by NV5 in June 2020.

Mr. A. Lee Johnson (Partial Prior Owner) – 2015 Geocon Phase 1 ESA (Centennial Site)

- Mr. Johnson, son-in-law of partial site owner Ericka Erickson (owner representative) accompanied Ms. Hastings-Bethel on the site reconnaissance (Geocon 2015).
- Mr. Johnson was aware that the Site was formerly part of the Idaho Maryland Mine and that tailings are still present onsite (Geocon 2015).
- Mr. Johnson stated that the owners were unaware that the Site was contaminated when they inherited the property approximately 35 years ago (Geocon 2015).

Mr. Watkinson (Property Lesee) – 2015 Geocon Phase 1 ESA (Centennial Site)

- Mr. Watkinson stated that IMMC leased the Site during the scoping process for the Idaho-Maryland Project which would have resumed mining operation on the Site and the adjacent Lausman Property already owned by IMMC.
- During the permitting process for the Idaho-Maryland Project, IMMC retained ENGEO to conduct environmental and geotechnical characterization on the Site, including the historic tailing areas.

- Mr. Watkinson stated that IMMC intended to enter into a VCA or Prospective Purchaser's Agreement with the DTSC; however, because they were only leasing the property, they were not able to enter into a mutually acceptable agreement that would limit liability until the Site was purchased (Geocon 2015). However, all the documents were still submitted to the DTSC and City of Grass Valley even though an agreement was not in place (Geocon 2015).
- Mr. Watkinson stated in an email that an area of tailings adjacent to Centennial Drive with higher concentrations of metals is likely the remnants of an ore stockpile rather than mine tailings, or potentially a mix. Material from this area was shipped to the McLaughlin Mine in Lake County in the 1970s and processed. The volume and quantity of material shipped is unknown. The historic mine also did custom milling, so this could also have been the remnants of ore shipped in from elsewhere and stockpiled, and subsequently milled at the mine (with the base of the stockpile remaining).
- Mr. Watkinson provided a map prepared by their Chief Geologist, Robert Pease, of the tailing deposits on the Site (Geocon 2015). IMMC calculated the volume of tailings based on STLC, TTLC, and other data as a preliminary step to analyze what tailings might have to be encapsulated onsite during grading as part of a cleanup plan proposed for the project.
- Mr. Watkinson also provided information that came forward during the preparation of the Draft EIR that a potential hybrid of the Pine Hill flannelbush was found on the Site, which is listed as an endangered species. There was confusion about whether a hybrid would be protected or not but stated this could be a potential concern for cleanup and/or development of the Site (Geocon 2015).

Ms. Sullivan (Property Lessee) – 2015 Geocon Phase 1 ESA (Centennial Site)

- Ms. Sullivan was interviewed regarding the historical and current operations at the mill.
- Ms. Sullivan stated that her father originally leased the property and opened the mill in the late 1970s.
- The site building was present when he leased the property and was previously used for auctions, prior to the mill operations. The sawmill was moved to the Site from Oregon. The mill operation has always been small scale, producing rough untreated cut lumber. Ms. Sullivan stated that she does not operate the mill very often and primarily uses the yard to store logs prior to sale to a third party (Geocon 2015).
- She stated that the empty metal drums and other miscellaneous debris throughout the yard was purchased at auction as scrap and is intended to be repurposed or recycled (Geocon 2015).
- She stated that fuels or other hazardous materials are not stored at the facility and that the NCDEH inspected the site a year or two ago to confirm that her business did not require a hazardous materials business plan (Geocon 2015).
- She stated that the storage boxes in the yard belong to the Alternative Building Supply Center, adjacent to the northwest of the Site and contain mostly office furniture (Geocon 2015).

6 DATA GAPS AND DEVIATIONS

During the course of research and drafting the Phase I ESA, ECM noted the following data gaps or deviations. Data gaps and deviations may result in not fully portraying all applicable RECs at the sites. Further research into the above defined data gaps and deviations may provide a refined REC determination if documentation is located or confirmed.

- Case closure for the Bohemia Inc. sawmill was documented as of August 2005; however, no documentation of no further action or site closure could be located.
- A full chain-of-title research effort was not part of the scope of this Phase I ESA.
- No pertinent documentation was located regarding USTs or ASTs at the Brunswick Site. Existing documentation indicates closure was granted for a historical release of petroleum at the former Grass Valley Sawmill on December 2006. A historical UST was listed onsite as the East Grass Valley Congregation. No further documentation regarding this former UST was located during research.
- Remaining monitoring wells from the former sawmill site investigation remain. However, site closure was granted, and no evidence of these documents were located during research. Additionally, a well not formerly identified is located on site and unsecured.
- An unknown exploratory mine shaft or prospect pit is located near the southwestern corner of the Brunswick Site and is undocumented. It may be associated with other mines identified in the Mine Resource Data System (MRDS) but cannot be confirmed at this time.
- Physical review of files at Nevada County Offices and Libraries that may have been pertinent to the site investigation were unable to be conducted. The coronavirus pandemic limited the search capabilities typically conducted for Phase I ESAs. However, extensive research has been conducted on prior reporting of environmental sampling and geotechnical analyses and information has been cross-checked with available resources and databases to the extent practicable.

7 FINDINGS AND CONCLUSIONS

7.1 Historical Recognized Environmental Conditions

A Historical Recognized Environmental Condition (HREC) refers to a past release that has been remediated to below "residential" standards and given regulatory closure with no use restrictions. HREC is defined by ASTM in the E1527-13 standard as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

Centennial Site

The Idaho Maryland Mine is within several databases including the historical CERCLIS, Federal Brownfields, Federal Registry System, and the SEMS Active Site Inventory (8R). A description of the current uses of the site and characteristics is provided, but no other information could be found regarding the placement into these federal databases. No activity information is noted regarding these database entries.

Brunswick Site

The Sierra Pacific Industries site is listed in the SLIC database. No specific documentation found regarding this spill or leak.

A historical UST was listed onsite as the East Grass Valley Congregation. No further documentation regarding this former UST was located during research.

7.2 Controlled Recognized Environmental Conditions

Controlled Recognized Environmental Condition (CREC) concept was introduced to address contaminated sites that have received risk-based regulatory closure, where no further remediation is required but residual contamination still exists at a site and the property is subject to some sort of control or use restriction.

Centennial Site

No CRECs were noted at the Centennial Site during the Phase I ESA. The mill tailings and berms are being addressed through a VCP and are considered a REC.

Brunswick Site

Records research indicated that the Bohemia Inc. was a pentachlorophenol (PCP) and tetrachlorophenol (TCP) contaminated site. Transfer of ownership occurred several times ultimately ended with Sierra Pacific Industries to whom closure was granted. Documentation suggests that contaminated soil was excavated in 1989 to a cleanup goal of 3 µg/kg. The former Sierra Pacific Industries - Grass Valley Mill was closed by No Further Action letter dated December 16, 2006. The No Further Action determination indicated that Sierra Pacific Industries has satisfactorily completed site investigation and remedial actions, filed a Land Use Covenant with the Nevada County Assessor's Office, and submitted proof of monitoring well destruction (**Appendix F**). The land covenant placed on the property to address remaining groundwater contamination remains in place until additional confirmation groundwater sampling satisfies the conditions of the deed restriction.

7.3 Recognized Environmental Conditions

An REC is one of the terms used to identify environmental liability within the context of a Phase I Environmental Site Assessment. ASTM E1527-13 standard defines the recognized environmental condition as "the presence or likely presence of any hazardous substances or petroleum products

in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

Centennial Site

Voluntary Cleanup Program (VCP) database indicates that the two sites are listed: Idaho Maryland Mine Corporation and Centennial M-1 Property. The Idaho Maryland Mine site is inactive and was recorded as needs evaluation, but the Centennial M-1 site is active and detailed as voluntary cleanup. Mill tailings scattered throughout the site may pose a hazard based upon metals concentrations and the fine-grained nature. Additionally, the berms located on the north central and eastern portions of the site may have mine waste and mill tailings as part of the fill material but are being addressed as part of the VCP. The entirety of the site is assessed under the PEA report submitted by NV5 (2020). Arsenic, lead, mercury cyanide, and nickel are considered COCs for evaluation at the site. Refer to the NV5 report for further documentation of site-specific characteristics of mill tailings from offsite and potential mitigation measures.

Brunswick Site

Previous environmental investigations have identified metals concentrations that exceed regulatory criteria. Mine waste rock and soil fill contain elevated levels of arsenic but may be a result of natural occurrences. Mine waste rock and tailings are present around New Brunswick Mine and the paved and unimproved areas to the south. Additionally, former Union Hill Mine has several piles of associated waste rock located northwest of the inclined shaft. A Phase I/II ESA submitted by NV5 (2020) details the extents of impacts observed through current and historical investigations.

Records research indicated that fuel USTs were formerly present onsite. The CalEPA database identified Sierra Pacific Industries – Grass Valley Mill onsite as part of the Cleanup Program (SL0605738327). The current case status is closed, and a current deed restriction covenant has been placed on the site.

The Sierra Pacific Industries site was also identified in the RCRA database. The site was considered an SQG for unspecified oil-containing waste generating approximately 2 tons per year. No violations were noted and the last date in the agency list was September 2015. No additional documentation was found regarding the storage and fate of oil-containing wastes onsite.

According to environmental reporting, three areas had excavations associated with petroleum contaminated soils.

- AC Industrial Cleaning (AC) excavated a buried transformer and contaminated soil for a location west of the recycling pond. The excavation sidewalls contain impacted soil according to the summary report. The remaining contaminated soils are assumed to be present onsite.
- AC removed contaminated soil from location of a reported surface oil spill. The excavation extents were verified clean by wall sampling and laboratory analysis. No documentation regarding the closure of this site was found during research.
- AC excavated soils from a former disposal area. The summary report indicates that contamination extents were verified by excavation wall sampling and laboratory analysis. No documentation regarding the closure of this site was found during research.

7.4 *De Minimis* Conditions

De minimis conditions are defined by ASTM E1527-13 as environmental conditions that "generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies." The following details provide a summary of *de minimis* conditions on the acquisition parcels.

Centennial Site

An abandoned truck is located west of the storage shed and workshop. The engine is still intact, and no staining or stressed vegetation was noted. In the paved area adjacent to the workshop and inside of the workshop and storage shed, are empty cans and buckets of labeled petroleum lubricants. In the southeast corner of the site near the boundary, is a tar tank with leaky compressor. Staining was observed beneath the compressor but was minor. No documentation was located regarding the petroleum storage and use and there no significant spills were observed to warrant further investigation.

Vergence Geo Services conducted a survey of natural occurring asbestos within the Idaho-Maryland mine subsurface. Naturally occurring chrysotile asbestos were found below the Centennial Site at concentrations of 0.8% to 3.1% in unaltered serpentinite rock. Mitigation of asbestos fibers while tunneling will include application of water spray on waste rock and auxiliary ventilation systems.

Several areas were noted where possibly brush was burned. No hazardous waste remnants were noted within the burn area or surroundings, which indicates that these are likely brush burn areas. No documentation regarding these areas were found during research.

Brunswick Site

The CalEPA database and the CIWQS indicate an NPDES permit for Wastewater and Stormwater occurred onsite for the Emperor Gold Corporation. As of September 2017, the permit is considered historical and no longer enforced. No documentation was found as to the nature of the controlled release or potential violations of the NPDES permit.

The HAZMAT database indicated that the Sierra Pacific Industries had ACM and approximately 6.7 tons was disposed in 2003. Additionally, other organic solids at 4.2 tons and unspecified oil-containing waste at 0.8 tons was disposed. No further documentation about the ACM was located, but no structures with the potential for ACM are currently standing.

One drum was noted in a paved area south of the existing mine silo, half full of lubricating oil. This drum was recently used for exploration drilling activities by the property owner. No staining or stressed vegetation was noted around the drum and the drum does not appear to be leaking at this time.

7.5 Non-Scope and Other Considerations

Non-scope considerations are items that do not fall under the purview of the Phase I ESA ASTM E1527-13 guidelines. The following presents parcel characteristics that may be non-scope items or should be otherwise considered. Latent buried waste may be present on any property, particularly if efforts were undertaken to conceal this act. Indication of such activity may or may not be revealed in the records and observations in the Phase I ESA. Site reconnaissance did not indicate the presence of underground wastes at the time the site inspection was conducted.

Centennial Site

- In the southeast portion of the site, the former South Idaho mine shaft may be covered by tailings and could not be located during site reconnaissance. Historical aerial images indicate the mine may be east of the tailings piles as the mill tailings were generated after waste rock was removed and piled south of the site. There is no documentation of how the shaft was abandoned and may be a potential physical hazard.
- Solid waste was observed scattered around the site in the form of tires, old propane tanks, old lumber, pallets, rubber sheeting, empty drums, chairs, shopping carts, various metal debris, household wastes, and chunks of concrete. More than 30 tires were noted scattered around the site.

- There is an NWI listed freshwater emergent wetland area in the eastern portion of the site at the outfall of the culvert from the former log pond which likely contains a seep and is categorized as a Freshwater Pond. The single recognized wetland was identified onsite using the National Wetlands Inventory.

Brunswick Site

- The California Environmental Protection Agency (CalEPA) identified the facility Rise Grass Valley, Inc. as having Chemical Storage Facilities (ID 10792774). No further information regarding the types of chemicals or and incidences were found during research.
- Mining features are located on and around the Brunswick Site. Two mine shafts at the New Brunswick mine and the former Union Hill mine are covered with steel plates and secured with a lock. Unsecured mine shafts would be a physical hazard; however, adequate steps have been taken to secure the openings. A depression at the southwestern portion of the site is indicative of a shaft as water coalesces there but does not appear to surface flow away. The depression is next to concrete foundations, metal cables, drill pipe, and an old timber. Adjacent to the exploratory shaft is what appears to be a potential waste rock area. This suspected shaft or pit of unknown designation or condition may present a physical hazard if unstable.
- Drums near the exploratory drilling core boxes are located north of the silos in the former mine building area and southeast of the silos on the eastern edge of the paved area. The drums were marked with environmental investigation labels indicating non-hazardous material or wastes pending analysis. Contents and disposition of the materials in the drums could not be determined during site assessment. Determination of contents may require further assessment.
- The dock to the recycling pond that formerly contained two large pumps is open and has areas with no flooring posing a potential fall hazard. Two large cisterns in the pond are on the dock and the northwesternmost cistern is open with no emergency escape route. The dock presents a physical hazard for unauthorized visitors and animals.
- Three monitoring wells were observed present around the property. Suspected monitoring well MW-7 is located on the southeastern portion of the property and is a stovepipe type well. It is secured with a lock; therefore, the integrity of the well cannot be confirmed at this time. The concrete apron has been elevated off the ground by approximately 4 inches which may indicate ground subsidence. Suspected monitoring well MW-3 is located in the central portion of the property west of the former sawmill. The well is flush mount with a PVC cap that could not be removed during the site visit. Another unnamed and undocumented well was found in the south-central portion of the property southeast of the hillside irrigation pipelines. The well was approximately 19 feet deep and had approximately 6 feet of water. No other information was found regarding this well. These wells present conduits to groundwater and may need assessment as to the reusability or potential removal.
- Two refrigerators were observed in the northeastern portion of the property east of the mine ore silos. The refrigerators were primarily intact but missing doors. These are of potential concern due to the unknown status of possible mercury thermometers. No leaking or stains were observed around the refrigerators to indicate any fluid loss or the rupture of mercury thermometers.
- Along the hillside on the southwest portion of the property is the irrigation piping system. Many pipelines are open to the ground with bollards surrounding them. The open holes may present a trip hazard is stepped into.

- Several tires, metal debris and piping, PVC pipes, and a mattress were noted scattered about the site.

8 CONCLUSIONS AND RECOMMENDATIONS

ECM has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 on the Idaho-Maryland Mine properties for the Centennial Site and the Brunswick Site located in Grass Valley, California. This section provides conclusions and recommendations into further investigation, assessment, or potential mitigation of features that may be warranted.

Centennial Site

This assessment has revealed evidence of RECs in connection with the Centennial Site as the DTSC VCP of the mill tailings documented onsite. The PEA submitted by NV5 was designed to investigate environmental conditions and to address potential health risks associated with the disposal of mine waste at the site from historical hard rock gold mining and ore processing on adjacent property. This voluntary process is ongoing and mitigation measures will be conducted once site construction has commenced.

Assessment of the condition of the South Idaho Mine shaft beneath or east of the tailings is recommended to be assessed for safety purposes. Potential mitigation of physical hazards may be warranted recommended.

Brunswick Site

Surrounding the New Brunswick Mine, former Union Hill Mine, and paved open areas to the south are mine waste piles and tailing mixture accumulations. Prior investigations have identified elevated metal concentrations within the mixed waste rock and fill material. Due to the nature and uncertainty of this area, it may require further investigation and assessment for evaluation of materials.

The old unknown exploratory mine in the southern portion of the site has a depression where water collects and may require further assessment to determine the nature of the feature and assess the potential for physical hazards. Additionally, adjacent mine waste investigation may be warranted to determine the nature and extent of mine wastes.

Three monitoring wells remain onsite and two of the wells are suspected to be from the former sawmill environmental investigations. Closure documentation states that the wells were destroyed, but onsite reconnaissance indicates that several may remain. One monitoring well is undocumented and has standing water. It is recommended that these wells have further assessment and potential mitigation to groundwater.

The recycling pond has a dock on the southern corner with two large cisterns formerly housing large pumps. The pumps have been removed but the large cisterns are a physical hazard that if a person or animal falls in there is no emergency exit from the 6-foot deep cavity. These cisterns and dock condition may require potential mitigation to reduce physical hazards.

The irrigation piping on the southwestern hillside is open and may present a physical hazard if stepped into. Open piping at ground level may require potential mitigation to reduce physical hazards.

Several areas associated with AC Industrial Cleaning were excavated to remove contaminated soil. While no records of regulatory closure were found during research, one area was documented to contain residual contamination in soils southwest of the pond and drainage culvert. Additional investigation and assessment may be required to evaluate the status of potentially contaminated soils.

Steel drums located beside the exploratory drilling rock core boxes should be properly identified and labeled, as appropriate. Currently, the labels indicate the drums are part of former environmental investigations. However, the drums may have been reused for other purposes. Further assessment of the drums is recommended to determine the contents and should provide mitigation measures to address the contents of the drums, as necessary.

9 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

We declare that to the best of my professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquired in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have any questions or require further assistance, please contact ECM at your convenience.

Respectfully Submitted,

ECM CONSULTANTS

Chris Drabandt, P.G.
Senior Geologist/Environmental Professional

PHYSICAL SETTING SOURCES

Geology compiled 1984-1988

BASE MAP

Prepared by the U.S. Army Topographic Command (ACSK), Washington, D.C. Compiled in 1957 from United States quadrangles, 1:24,000, 1:25,000, 1:48,000, 1:50,00f, and 1:62,500, 1937-57. Planimetry revised in part from aerial photographs taken 1952 and 1957. Map fold checked 1958. Revised in 1970 by the U.S. Geological Survey from aerial photographs taken 1967-69.

Area covered by dashed light-blue pattern is subject to controlled inundation.

Minor corrections and additions to culture by California Division of Mines and Geology 1989.

Depth contours in Lake Tahoe in feet - compiled from soundings shown on U.S. Coast and Geodetic Survey Chart 5001.

LOCATION DIAGRAM

Scale 1:250,000

20 Statute Miles
30 Kilometers
15 Nautical Miles

CONTOUR INTERVAL 200 FEET
WITH SUPPLEMENTARY CONTOURS AT 100 FEET

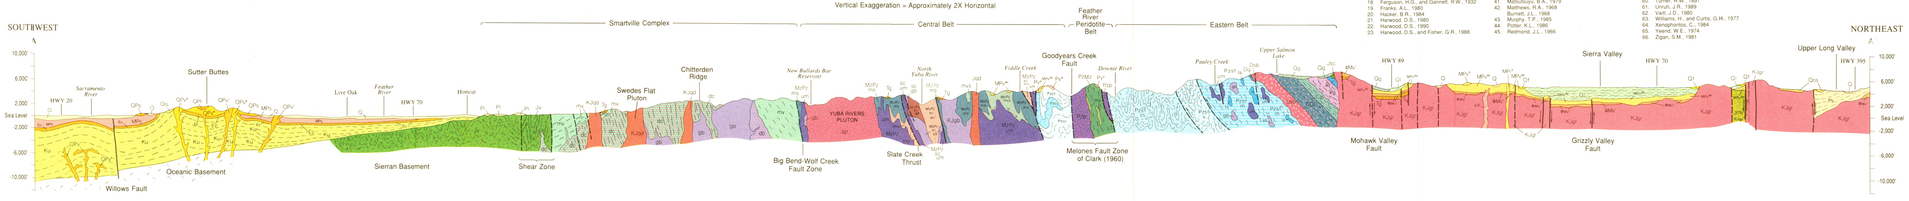

TRANSVERSE MERCATOR PROJECTION

BLACK NUMBERED LINES INDICATE THE 10,000 METER UNIVERSAL TRANSVERSE MERCATOR GRID: ZONE 10

10½ MAGNETIC DECLINATION FROM TRUE NORTH VARIES FROM 16° 00½ MILS EASTERN FROM THE CENTER OF THE WEST EDGE TO 17 1/2° (310 MILS) EASTERLY FOR THE CENTER OF THE EAST EDGE

CROSS SECTION ACROSS THE CHICO QUADRANGLE

Vertical Exaggeration = Approximately 2X Horizontal

ABBREVIATED EXPLANATION

Approximate stratigraphic relationships only; see Geologic Map Explanation for more accurate age designations and unit descriptions.

CENOZOIC — QUATERNARY — Holocene

- af — Artificial fill
- t — Dredge or mine tailings
- Al — Alluvium
- Qa — Natural levee and channel deposits
- Qb — Basin deposits *(Alluvium)*
- Qls — Landslide deposits
- Ql — Lake deposits
- Qf — Fan deposits
- Qt — Terrace deposits
- Qg — Glacial deposits

QUATERNARY — Pleistocene

- Qm — Modesto Formation *(Alluvium)*
- Qr — Riverbank Formation *(Alluvium)*
- Qos — Pleistocene nonmarine sedimentary rocks *(Fluvial and lacustrine gravel, sand, silt, and clay)*
- Qrb — Red Bluff Formation *(Coarse red gravel, sand, and silt)*
- Volcanic sediments of Sutter Buttes *(Volcaniclastic sediments and lahars)* Ql-Volcanic lake beds
- Tuffs of Oroville *(Volcaniclastic sediments and tuff)* Pnt-Nomlaki Tuff
- Tuscan Formation *(Lahars, volcaniclastic sediments, and tuff)* Pnt-Nomlaki Tuff
- Laguna Formation *(Alluvial gravel, sand, and silt)*
- Pliocene nonmarine sedimentary rocks *(Fluvial and lacustrine shale, sandstone, and ash)*
- Moocene-Pliocene channel deposits *(Fluvial conglomerates and sandstone)*
- Sutter Formation *(Volcaniclastic sediments; nonmarine)*

TERTIARY — Pliocene

- Qv^{ol} — Pleistocene volcanic rocks *(b-basalt; lp-scoria and tuff)*
- Volcanic rocks o' Sutter Buttes (QPv^{a}-*andesite;* QPv^{r}-*rhyolite*)
- Pi — Pliocene intrusive rocks *(a-andesite; b-basalt)*
- Pv^{ol} — Pliocene volcanic rocks *(a-andesite; b-basalt)*
- Cinder cone or volcano; major Pelean domes at Sutter Buttes
- MPi — Miocene-Pliocene intrusive rocks *(a-andesite; b-basalt)*
- MPv — Miocene-Pliocene volcanic rocks *(b-basalt; a-andesite; af-andesite flows; ap-andesite pyroclastic rocks; -dacitic tuff-breccia)*
- Mlb — Lovejoy Basalt
- Oligocene-Miocene volcanic rocks *(r-rhyolite tuff andsedimentary rocks)*

TERTIARY — Miocene — Oligocene — Eocene

- Ec — Capay Formation *(Sandstone and shale; marine)*
- El — Ione Formation *(Quartzose sandstone, claystone, and conglomerate; mostly nonmarine)*
- Tg — "Auriferous" Gravels

MESOZOIC — CRETACEOUS

- Ku — Upper Cretaceous rocks *(Shale and sandstone; marine)*
- Kc — Chico Formation *(Sandstone, conglomerate, and siltstone; marine)*

MESOZOIC PLUTONIC ROCKS

- KJgr — Granite, granodiorite
- KJqd — Quartz diorite, tonalite, trondhjemite, quartz monzonite
- KJdi — Diorite
- Kjgb — Gabbro

MESOZOIC — JURASSIC

SMARTVILLE COMPLEX

- Jvsp — Monte de Oro Formation *(Sandstone and slate; marine)*
- Jv — Jurassic volcanic rocks *(Pyroclastic rocks and flows*
- mv — Volcanic rocks
- qd — Quartz diorite and tonalite
- dc — Dike complex
- gb — Gabbroic rocks
- db — Massive diabase
- um — Ultramafic rocks

CENTRAL BELT

- Jm — Mariposa Formation *(Slate and sandstone; marine)*
- Jlr — Logtown Ridge Formation *(Flows and pyroclastic rocks)*

CENTRAL BELT

- Jgr — Granite, granodiorite
- Jqd — Quartz diorite, trondhjemite
- Jdi — Diorite
- Jgb — Gabbro
- Jum — Ultramafic rocks

EASTERN BELT (Northern Sierra terrane)

- Jurassic (? metamorphic rocks
  Jmv - Metasedimentary rocks
  Jmv - Metavolcanic rocks
  Jmvs - Undivided metasedimentary and metavolcanic rocks
- Sailor Canyon Formation *(Greywacke and slate; marine)* Jls-Limestone and marble
- Triassic metasedimentary rocks *(Phyllite, and conglomerate; marine)* Rls-Limestone

PALEOZOIC AND MESOZOIC ROCKS

MzPz- Undifferentiated
lc- Lake Combie complex
sc- Slate Creek complex

- ms - metasedimentary rocks
- mv - metavolcanic rocks
- mvs - volcaniclastic sediments
- ch - chert and chert breccia
- ls - limestone and marble
- db - massive diabase
- qd - metadiorite
- gb - gabbro
- um - ultramafic rocks

FEATHER RIVER PERIDOTITE BELT

- mv-blueschist bearing metavolcanic rocks
- Metamorphic rocks of unknown age *(Quartz, mica, and hornblende schists)*
- Calaveras Complex *(Chert and argillite)*
- Pzcv - Metavolcanic rocks
- ls - limestone
- Pza — Paleozoic amphibolite
- Pzgb — Peridotite of Melones fault zone *(Partially to completely serpentinized)* Pzgb-Gabbro
- Permian and Triassic rocks *(Slate, conglomerate, and greenstone; marine)* ls-limestone

PALEOZOIC — PERMIAN — PENNSYLVANIAN — MISSISSIPPIAN — DEVONIAN — SILURIAN — ORDOVICIAN

- Reeve Formation *(Andesitic breccia, flows, and tuff)*
- Goodhue Formation *(Andesitic and basaltic breccia, pillow lavas, and tuff)*
- Peale Formation *(Bedded chert, shale, pillow lavas and tuff)*
- Taylor Formation *(Andesitic breccia, tuff, and slate)*
- Sierra Buttes Formation *(Rhyolitic to andesitic flows, breccia, tuffs, and chert)*
- Grizzly Formation *(Conglomerate, sandstone, and chert; marine)*

Pzsf — Shoo Fly Complex

- ss - sandstone, siltstone, and slate
- v - greenstone
- ch - chert and chert breccia
- ls - limestone and marble
- gb - gabbro and diabase
- um - serpenitized ultramafic rocks
- m - undiffrentiated melange

Dbz — Bowman Lake Batholith
Dbt - Trondhjemite, tonalite
Dbg - Granite, granodiorite

Pzu — Paleozoic rocks of uncertain age and correlation *(Quartzite, pellite, and conglomerate; marine)*

MAP SYMBOLS

Contact
Observed or approximately located; queried where gradational or inferred.

Fault
Solid where well located; dashed where approximately located or inferred; dotted where concealed by younger rocks or water; queried where continuation or existence is uncertain. U, upthrown side; D, downthrown side (relative or apparent).

Thrust fault—barbs on the upper plate. Generally dips less than 45°, but locally may have been subsequently steepened. Dashed where approximately located or inferred; dotted where concealed by younger rocks or water; queried where continuation or existence is uncertain.

Anticlinal fold
Showing direction of plunge; dashed where inferred; dotted where concealed by younger rocks.

Synclinal fold
Dashed where inferred; dotted where concealed by younger rocks.

Monoclinal fold

Strike and dip of beds
General strike and dip of stratified rocks.

Vertical beds

Strike and dip of overturned beds

Strike and dip of foliation
General strike and dip of foliation in metamorphic rocks.

Vertical foliation

Strike and dip of dikes

CALIFORNIA Water Boards

U.S. Geological Survey and the California State Water Resources Control Board

Groundwater Quality in the Yuba River and Bear River Watersheds, Sierra Nevada, California

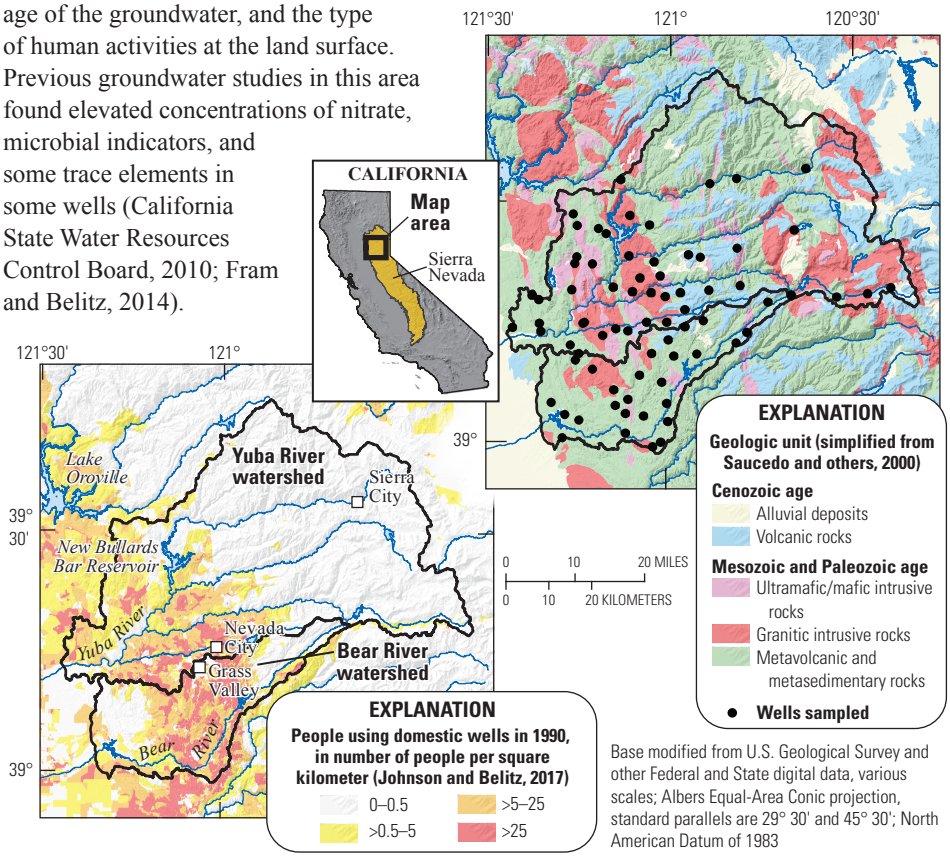

Groundwater provides more than 40 percent of California's drinking water. To protect this vital resource, the State of California created the Groundwater Ambient Monitoring and Assessment (GAMA) Program. The GAMA Program's Priority Basin Project assesses the quality of groundwater resources used for drinking water supply and increases public access to groundwater-quality information. In the Yuba River and Bear River Watersheds of the Sierra Nevada, many rural households rely on private wells for their drinking water supplies.

The Yuba-Bear Watersheds

The Yuba River and Bear River Watersheds study unit (Yuba-Bear Watersheds) covers approximately 4,400 square kilometers on the western slope of the Sierra Nevada. Groundwater composes about 10 percent of overall water use in the region, but is the sole supply for many individual homes beyond the limits of public water supply infrastructure (Cosumnes, American, Bear, Yuba Integrated Regional Water Management Group, 2014). Recent drought conditions highlighted the vulnerability of private wells to diminished groundwater supplies in the study area and many wells required deepening (California Department of Water Resources, 2014).

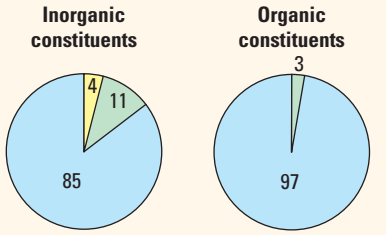

Well water in the Yuba-Bear Watersheds mostly comes from fractured-rock aquifers. The quality of groundwater in these aquifers primarily depends on the type of rock, the age of the groundwater, and the type of human activities at the land surface. Previous groundwater studies in this area found elevated concentrations of nitrate, microbial indicators, and some trace elements in some wells (California State Water Resources Control Board, 2010; Fram and Belitz, 2014).

Base modified from U.S. Geological Survey and other Federal and State digital data, various scales; Albers Equal-Area Conic projection, standard parallels are 29° 30' and 45° 30'; North American Datum of 1983

This study was designed to provide a statistically representative assessment of the quality of groundwater resources used for domestic drinking water in the Yuba-Bear Watersheds. A total of 71 wells and 4 springs were sampled between October 2015 and May 2016 (Jasper and others, 2017). The wells in the study unit typically were 30–150 meters deep, and water levels typically were 7–25 meters below land surface.

Overview of Water Quality

CONSTITUENT CONCENTRATIONS

High Moderate Low or not detected

Values indicate percentages of the area of the groundwater resources used for domestic drinking water with concentrations in the three specified categories.

GAMA's Priority Basin Project evaluates the quality of untreated groundwater. For context, concentrations measured in groundwater are compared to benchmarks established for drinking-water quality, such as maximum contaminant levels (MCL). A concentration above a benchmark is defined as high. Benchmarks and definitions of moderate and low concentrations are discussed on page 3.

Many inorganic constituents are natural in groundwater, and their concentrations can be affected by natural processes as well as by human activities. In the Yuba-Bear Watersheds, one or more inorganic constituents were present at high concentrations in about 4 percent of the groundwater resources used for domestic drinking water.

Organic constituents are found in products used in the home, business, industry, and agriculture, and can enter the environment through normal usage, spills, or improper disposal. Organic constituents were not present at high concentrations in the groundwater resources used for domestic drinking water in the Yuba-Bear Watersheds.

September 2017

INORGANIC CONSTITUENTS

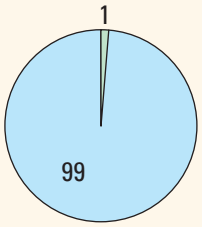

Trace elements

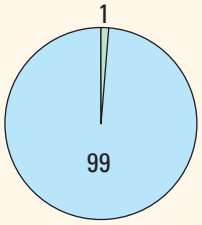

Uranium and radioactive constituents

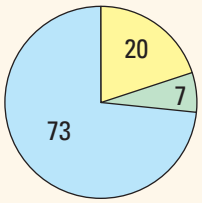

Nitrate

Total dissolved solids

Manganese or iron

Inorganic Constituents with Human-Health Benchmarks

Historical gold-mining activity in the Yuba-Bear Watersheds has resulted in elevated concentrations of mercury and other trace elements in water and sediments in rivers and reservoirs. Trace elements also are naturally present in the minerals of rocks and sediments and in the groundwater that comes into contact with those materials. About 4 percent of the groundwater resources used for domestic drinking water had high concentrations of one or more trace elements and 8 percent had moderate concentrations. Four trace elements were present at high concentrations (arsenic, barium, molybdenum, and strontium), and three were present at moderate concentrations (arsenic, molybdenum, and vanadium). Mercury was detected at low concentrations in 4 percent of the groundwater resources.

Most of the radioactivity in groundwater comes from the decay of naturally radioactive isotopes of uranium, thorium, and potassium in minerals in aquifer materials. Radioactive constituents were not present at high levels in the groundwater resources used for domestic drinking water. Gross alpha-particle activity and gross beta-particle activity were present at moderate levels in about 3 percent.

Nutrients, including nitrate, are naturally present at low concentrations in groundwater, but moderate and high concentrations generally indicate contamination from human activities. Common sources of nutrients include fertilizer applied to crops and landscaping, seepage from septic systems, and human and animal waste. Nitrate was not present at high concentrations in the groundwater resources used for domestic drinking water.

Inorganic Constituents with Non-Health Benchmarks

(Not included in water-quality overview charts shown on the front page)

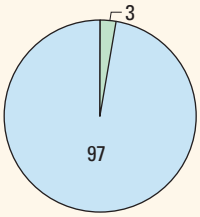

Some constituents affect the aesthetic properties of water, such as taste, color, and odor, or can create nuisance problems, such as staining and scaling. The benchmarks used for these constituents were non-regulatory secondary maximum contaminant level benchmarks.

Total dissolved solids (TDS) concentration is a measure of the salinity of the groundwater, and all water naturally contains dissolved solids as a result of the weathering and dissolution of minerals in rocks and sediments. The State of California has a recommended and an upper limit for TDS in drinking water. Total dissolved solids were not present at high concentrations (greater than the upper limit), but was present at moderate concentrations (between the recommended and upper limits) in about 1 percent of the groundwater resources used for domestic drinking water.

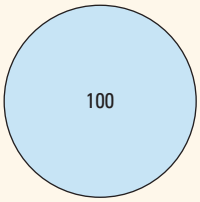

Anoxic conditions (low amounts of dissolved oxygen) can result in the release of natural manganese, iron, and other associated trace elements from minerals into groundwater. Manganese or iron was present at high concentrations in about 20 percent of the groundwater resources used for domestic drinking water. In the entire Sierra Nevada, groundwater from wells in metamorphic rocks more commonly had high concentrations of manganese or iron than groundwater from wells in granitic, volcanic, or sedimentary rocks (Fram and Belitz, 2014). Over half of the wells sampled for the Yuba-Bear Watersheds were in metamorphic rocks.

ORGANIC CONSTITUENTS

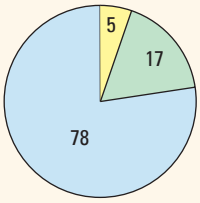

VOCs

Pesticides

E. Coli and total coliforms

Organic Constituents with Human-Health Benchmarks

The Priority Basin Project used laboratory methods that can detect concentrations of volatile organic compounds (VOCs) and pesticides that are below human-health benchmarks. The VOCs and pesticides detected at these very low concentrations can be used to help trace movement of water from the land surface into the aquifer system.

Volatile organic compounds, including solvents, gasoline components, and refrigerants, are contained in many household, commercial, and industrial products. No VOCs were detected at high concentrations in the groundwater resources used for domestic drinking water in the Yuba-Bear Watersheds, and VOCs were detected at moderate concentrations in about 3 percent. The VOCs detected at moderate concentrations were tetrachloroethene (PCE), trichloroethene (TCE), and toluene.

Pesticides, including herbicides, insecticides, and fumigants, are applied to crops, gardens, lawns, around buildings, and along roads to help control unwanted vegetation, insects, fungi, and other pests. Pesticides were not detected at high or moderate concentrations in the groundwater resources used for domestic drinking water. Low concentrations of herbicides or degradates of herbicides were detected in about 4 percent of the groundwater resources.

Microbial Indicators

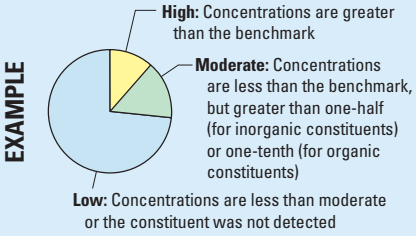

(Not included in water-quality overview charts shown on the front page)

Microbial indicators are used to evaluate the potential for fecal contamination of water sources. In the Yuba-Bear Watersheds, total coliforms and *Escherichia coli* (*E. coli*) were detected in 5 percent of the wells sampled, and total coliforms alone were detected in another 17 percent of the wells samples. Total coliforms are present naturally in soils and in digestive tracts of animals, whereas *E. coli* specifically indicate contamination with animal (or human) fecal waste (California State Water Resources Control Board, 2016).

METHODS FOR EVALUATING GROUNDWATER QUALITY

This study used comparison to benchmarks established for drinking water to provide context for evaluating the quality of groundwater. The quality of drinking water can differ from the quality of groundwater because of contact with household plumbing, exposure to the atmosphere, or water treatment. U.S. Environmental Protection Agency and California State Water Resources Control Board Division of Drinking Water regulatory benchmarks set for the protection of human health (maximum contaminant level, MCL) were used for comparison when available. Otherwise, non-regulatory benchmarks set for protection of aesthetic and technical properties, such as taste and odor (secondary maximum contaminant level, SMCL), and non-regulatory benchmarks set for the protection of human health (notification levels, NL, and lifetime health advisory levels, HAL) were used. Water quality in domestic wells is not regulated in California.

CONSTITUENT CONCENTRATIONS

Pie diagrams are used to summarize groundwater quality results. The pie slices represent the percentages of the groundwater resources with high, moderate, and low concentrations of a constituent. Methods for calculating these percentages are discussed by Fram and Belitz (2014).

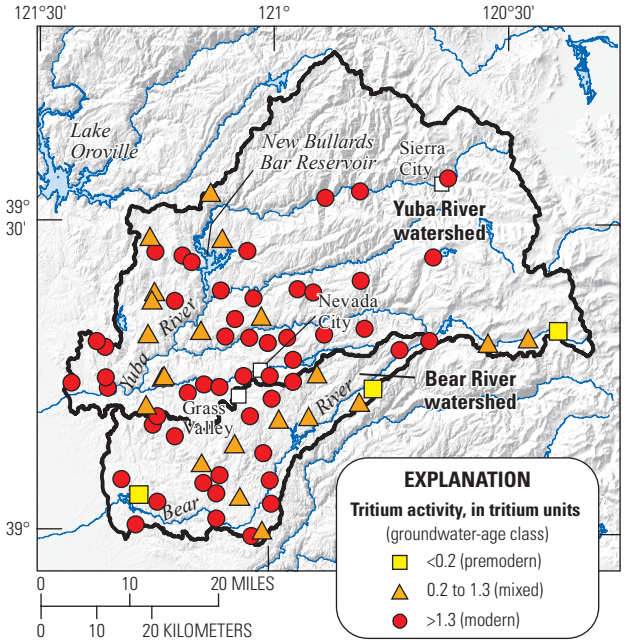

Benchmark type and value for selected constituents.

[**Benchmark type**: CA, State Water Resources Control Board Division of Drinking Water; EPA, U.S. Environmental Protection Agency; HAL, lifetime health advisory level; MCL, maximum contaminant level; NL, notification level; SMCL, secondary maximum contaminant level. **Abbreviations**: pCi/L, picocuries per liter; ppb, parts per billion or micrograms per liter (µg/L); ppm, parts per million or milligrams per liter (mg/L)]

Constituent	Benchmark		Constituent	Benchmark	
	Type	Value		Type	Value
Arsenic	EPA MCL	10 ppb	Nitrate, as nitrogen	EPA MCL	10 ppm
Barium	CA MCL	1,000 ppb	Total dissolved solids (TDS), upper and recommended	CA SMCL	1,000 ppm 500 ppm
Molybdenum	EPA MCL	40 ppb			
Strontium	EPA HAL	4,000 ppb	Manganese	CA SMCL	50 ppb
Vanadium	CA NL	50 ppb	Iron	CA SMCL	300 ppb
Mercury	EPA MCL	2 ppb	Tetrachloroethene (PCE)	EPA MCL	5 ppb
Gross alpha-particle activity	EPA MCL	15 pCi/L	Trichloroethene (TCE)	EPA MCL	5 ppb
Gross beta-particle activity	CA MCL	50 pCi/L	Toluene	CA MCL	150 ppb

Factors that Affect Groundwater Quality

Groundwater is generally a mixture of waters that recharged the aquifer system at different times. Groundwater 'age' — the time since the water was at the land surface — can range from less than 1 year to more than 50,000 years. The distribution of ages in a groundwater sample affects the water quality. Some constituents can be present at higher concentrations in older groundwater because of slow dissolution of minerals. Some constituents can be present at higher concentrations in groundwater with ages corresponding to particular times when human activities introduced contaminants to the recharged water. Preliminary groundwater ages based on tritium data for samples from the Yuba-Bear Watershed are summarized here.

Base modified from U.S. Geological Survey and other Federal and State digital data, various scales; Albers Equal-Area Conic projection, standard parallels are 29° 30' and 45° 30'; North American Datum of 1983

Tritium is a radioactive isotope of hydrogen that forms in the atmosphere naturally and in nuclear explosions and reactors. Atmospheric nuclear-weapons testing in the 1950s and 1960s increased tritium concentrations to far above natural levels. The tritium concentration in groundwater can be used to estimate whether the groundwater recharged before or after about 1950 (Jurgens and others, 2012). Two-thirds of the samples from the Yuba-Bear Watershed study unit had tritium concentration greater than 1.3 tritium units (TU), indicating they were "modern" (recharged after 1950). A few samples had tritium concentrations less than 0.2 TU, indicating they were "pre-modern" groundwater recharged before 1950, and the rest were mixtures of water recharged before and after 1950. Because most samples indicated relatively recent groundwater recharge, groundwater resources used for domestic supply in the Yuba-Bear Watersheds study unit could be vulnerable to water-quality changes resulting from human activities at the land surface and to relatively rapid depletion during periods of drought.

By Miranda S. Fram, Monica Jasper, and Kim A. Taylor

Priority Basin Assessments

GAMA's Priority Basin Project (PBP) assesses water quality in groundwater resources used for public and domestic drinking-water supplies. This study in the Yuba and Bear River Watersheds in the Sierra Nevada focused on groundwater resources used for domestic drinking water. Ongoing assessments are being carried out in more than 120 basins and areas outside of basins throughout California. The PBP assessments compare constituent concentrations in untreated groundwater with benchmarks established for the protection of human health and for aesthetic concerns. The PBP does not evaluate the quality of drinking water.

The PBP uses two scientific approaches for assessing groundwater quality. The first approach uses a network of wells to statistically assess the status of groundwater quality. The second approach combines water-quality, hydrologic, geographic, and other data to help assess the factors that affect water quality. In the Yuba-Bear Watersheds study unit, data were collected by the PBP in 2015–16. The PBP includes chemical analyses not generally available as part of regulatory compliance monitoring, including measurements at concentrations much lower than human-health benchmarks and measurement of constituents that can be used to trace the sources and movement of groundwater.

Custom Soil Resource Report for Nevada County Area, California

Cenntenial Site

May 28, 2020

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Nevada County Area, California
Survey Area Data: Version 12, Sep 16, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Dec 6, 2018—Dec 12, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
Ct	Cut and fill land	1.2	2.0%
Pr	Placer diggings	43.2	68.5%
RrE	Rock outcrop-Dubakella complex, 5 to 50 percent slopes	1.2	1.9%
ScE	Secca-Rock outcrop complex, 2 to 50 percent slopes	17.4	27.6%
Totals for Area of Interest		**63.0**	**100.0%**

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate

pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Nevada County Area, California

Ct—Cut and fill land

Map Unit Setting

National map unit symbol: hfwf
Elevation: 300 to 4,600 feet
Mean annual precipitation: 20 to 60 inches
Mean annual air temperature: 48 to 63 degrees F
Frost-free period: 135 to 265 days
Farmland classification: Not prime farmland

Map Unit Composition

Cut and fill land: 100 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cut And Fill Land

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Hydric soil rating: No

Pr—Placer diggings

Map Unit Setting

National map unit symbol: hfxb
Elevation: 300 to 4,600 feet
Mean annual precipitation: 20 to 60 inches
Mean annual air temperature: 48 to 63 degrees F
Frost-free period: 135 to 265 days
Farmland classification: Not prime farmland

Map Unit Composition

Placer diggings: 70 percent
Minor components: 30 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Placer Diggings

Typical profile

C - 0 to 60 inches: variable

Properties and qualities

Slope: 2 to 75 percent
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Frequency of flooding: Rare
Available water storage in profile: Very low (about 1.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Ecological site: PLACER DIGGINGS (R018XD084CA)
Hydric soil rating: No

RrE—Rock outcrop-Dubakella complex, 5 to 50 percent slopes

Map Unit Setting
National map unit symbol: hfxh
Elevation: 2,200 to 2,700 feet
Mean annual precipitation: 46 to 54 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 150 to 235 days
Farmland classification: Not prime farmland

Map Unit Composition
Dubakella and similar soils: 50 percent
Rock outcrop: 40 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Dubakella

Setting
Landform: Mountains, hills
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Mountainflank, side slope
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Ultrabasic colluvium derived from igneous rock and/or residuum weathered from igneous rock

Typical profile
A - 0 to 10 inches: very gravelly clay loam
Bt - 10 to 21 inches: very cobbly clay
Cr - 21 to 25 inches: bedrock

Properties and qualities
Slope: 5 to 50 percent
Depth to restrictive feature: 20 to 26 inches to paralithic bedrock
Natural drainage class: Well drained

Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Very low (about 2.0 inches)

Interpretive groups
Land capability classification (irrigated): 7e
Land capability classification (nonirrigated): 7e
Hydrologic Soil Group: D
Ecological site: SERPENTINE (R022XC059CA)
Hydric soil rating: No

Description of Rock Outcrop

Setting
Landform: Mountains, hills
Parent material: Ultrabasic rock

Typical profile
R - 0 to 4 inches: bedrock

Properties and qualities
Slope: 5 to 50 percent
Depth to restrictive feature: 0 inches to lithic bedrock
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)

Interpretive groups
Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 8
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Boomer
Percent of map unit: 4 percent
Landform: Mountains, hills
Hydric soil rating: No

Secca
Percent of map unit: 3 percent
Landform: Mountains, hills
Hydric soil rating: No

Dubakella, clay loam
Percent of map unit: 3 percent
Landform: Hills, mountains
Hydric soil rating: No

ScE—Secca-Rock outcrop complex, 2 to 50 percent slopes

Map Unit Setting

National map unit symbol: hfxj
Elevation: 1,700 to 3,000 feet
Mean annual precipitation: 35 to 55 inches
Mean annual air temperature: 57 to 58 degrees F
Frost-free period: 230 to 255 days
Farmland classification: Not prime farmland

Map Unit Composition

Secca and similar soils: 55 percent
Rock outcrop: 25 percent
Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Secca

Setting

Landform: Mountains, hills
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Mountainflank, side slope
Down-slope shape: Concave
Across-slope shape: Convex
Parent material: Basic colluvium derived from igneous and metamorphic rock and/or residuum weathered from igneous and metamorphic rock

Typical profile

A - 0 to 15 inches: gravelly silt loam
Bt1 - 15 to 22 inches: cobbly silty clay loam
Bt2 - 22 to 36 inches: cobbly clay
BCt - 36 to 45 inches: gravelly clay
Cr - 45 to 49 inches: bedrock

Properties and qualities

Slope: 2 to 50 percent
Depth to restrictive feature: 40 to 60 inches to paralithic bedrock
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: Low (about 5.6 inches)

Interpretive groups

Land capability classification (irrigated): 6e
Land capability classification (nonirrigated): 6e

Hydrologic Soil Group: C
Hydric soil rating: No

Description of Rock Outcrop

Setting

Landform: Hills, mountains
Parent material: Basic igneous and metamorphic rock

Typical profile

R - 0 to 4 inches: bedrock

Properties and qualities

Slope: 2 to 50 percent
Depth to restrictive feature: 0 inches to lithic bedrock
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Very low (0.00 to 0.00 in/hr)

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas

are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Nevada County Area, California

AfC—Aiken loam, 9 to 15 percent slopes, high precip

Map Unit Setting

National map unit symbol: 2x8kv
Elevation: 2,460 to 3,800 feet
Mean annual precipitation: 55 to 65 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 200 to 225 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Aiken and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Aiken

Setting

Landform: Ridges
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Center third of mountainflank, side slope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Lahar deposits derived from conglomerate and/or andesite over residuum weathered from andesite

Typical profile

A - 0 to 29 inches: loam
Bt - 29 to 52 inches: clay loam
BCt - 52 to 64 inches: clay loam
Cr - 64 to 68 inches: bedrock

Properties and qualities

Slope: 9 to 15 percent
Depth to restrictive feature: 48 to 96 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: High (about 9.8 inches)

Interpretive groups

Land capability classification (irrigated): 3e
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Aiken, cobbly

Percent of map unit: 5 percent

Landform: Ridges
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Center third of mountainflank, side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Cohasset

Percent of map unit: 4 percent
Landform: Ridges
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Center third of mountainflank, side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Cohasset, cobbly

Percent of map unit: 3 percent
Landform: Ridges
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Center third of mountainflank, side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Mccarthy

Percent of map unit: 3 percent
Landform: Ridges
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Center third of mountainflank, side slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

AfD—Aiken loam, 15 to 30 percent slopes, N Low Mid Montane

Map Unit Setting

National map unit symbol: 2xhk9
Elevation: 2,460 to 4,030 feet
Mean annual precipitation: 54 to 66 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 200 to 255 days
Farmland classification: Not prime farmland

Map Unit Composition

Aiken and similar soils: 88 percent
Minor components: 12 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Aiken

Setting

Landform: Ridges
Landform position (two-dimensional): Backslope, summit
Landform position (three-dimensional): Side slope
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Colluvium and/or residuum derived from andesitic conglomerate and/or tuff breccia

Typical profile

Oi - 0 to 4 inches: slightly decomposed plant material
A - 4 to 33 inches: loam
Bt - 33 to 56 inches: clay loam
BCt - 56 to 68 inches: clay loam
Cr - 68 to 78 inches: bedrock

Properties and qualities

Slope: 15 to 30 percent
Depth to restrictive feature: 48 to 96 inches to paralithic bedrock
Natural drainage class: Well drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: High (about 11.5 inches)

Interpretive groups

Land capability classification (irrigated): 4e
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Cohasset, cobbly loam

Percent of map unit: 6 percent
Landform: Ridges
Landform position (two-dimensional): Backslope, summit
Landform position (three-dimensional): Side slope
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Iron mountain

Percent of map unit: 3 percent
Landform: Ridges
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Crest
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Mccarthy, cobbly loam

Percent of map unit: 3 percent
Landform: Ridges
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

AfE—Aiken loam, 30 to 50 percent slopes

Map Unit Setting

National map unit symbol: hfvc
Elevation: 2,000 to 4,000 feet
Mean annual precipitation: 48 to 58 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 140 to 230 days
Farmland classification: Not prime farmland

Map Unit Composition

Aiken and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Aiken

Setting

Landform: Hills, mountains
Landform position (two-dimensional): Backslope, summit
Landform position (three-dimensional): Mountainflank, side slope
Down-slope shape: Concave
Across-slope shape: Concave
Parent material: Colluvium derived from conglomerate and/or cobbly andesitic colluvium derived from tuff and/or residuum weathered from conglomerate and/or tuff

Typical profile

A - 0 to 29 inches: loam
Bt - 29 to 52 inches: clay loam
BCt - 52 to 64 inches: clay loam
Cr - 64 to 68 inches: bedrock

Properties and qualities

Slope: 30 to 50 percent
Depth to restrictive feature: 48 to 96 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: More than 80 inches

Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: High (about 9.8 inches)

Interpretive groups

Land capability classification (irrigated): 6e
Land capability classification (nonirrigated): 6e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Aiken, cobbly loam

Percent of map unit: 4 percent
Landform: Hills, mountains
Landform position (two-dimensional): Summit, backslope
Hydric soil rating: No

Cohasset, loam

Percent of map unit: 4 percent
Landform: Mountains, hills
Landform position (two-dimensional): Summit, backslope
Hydric soil rating: No

Percent of map unit: 4 percent
Landform: Hills, mountains
Landform position (two-dimensional): Summit, backslope
Hydric soil rating: No

Mccarthy, cobbly loam

Percent of map unit: 3 percent
Landform: Hills, mountains
Landform position (two-dimensional): Summit, backslope
Hydric soil rating: No

Ao—Alluvial land, clayey

Map Unit Setting

National map unit symbol: hfvh
Elevation: 300 to 4,000 feet
Mean annual precipitation: 20 to 48 inches
Mean annual air temperature: 54 to 63 degrees F
Frost-free period: 140 to 265 days
Farmland classification: Not prime farmland

Map Unit Composition

Alluvial land: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Alluvial Land

Setting

Landform: Flood plains, drainageways
Parent material: Alluvium derived from mixed metabasic and/or granitic rocks

Properties and qualities

Slope: 0 to 15 percent
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 30 to 60 inches
Frequency of flooding: Occasional

Interpretive groups

Land capability classification (irrigated): 3w
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C
Hydric soil rating: Yes

Minor Components

Alluvial land, riparian

Percent of map unit: 10 percent
Landform: Flood plains, drainageways
Hydric soil rating: Yes

Unnamed, dry

Percent of map unit: 5 percent
Landform: Flood plains
Hydric soil rating: No

CmC—Cohasset loam, shoulders, 3 to 20 percent slopes

Map Unit Setting

National map unit symbol: 2w8c0
Elevation: 2,430 to 4,250 feet
Mean annual precipitation: 51 to 67 inches
Mean annual air temperature: 53 to 58 degrees F
Frost-free period: 100 to 250 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Cohasset and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cohasset

Setting

Landform: Ridges
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Upper third of mountainflank
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Residuum weathered from volcanic breccia and/or conglomerate

Typical profile

Oi - 0 to 3 inches: slightly decomposed plant material
A1 - 3 to 12 inches: loam
A2 - 12 to 21 inches: loam
BAt - 21 to 32 inches: loam
Bt1 - 32 to 42 inches: clay loam
Bt2 - 42 to 60 inches: clay loam
Crt - 60 to 67 inches: cemented bedrock

Properties and qualities

Slope: 3 to 20 percent
Depth to restrictive feature: 40 to 96 inches to paralithic bedrock
Natural drainage class: Well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.01 to 0.14 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline (0.2 to 0.5 mmhos/cm)
Available water storage in profile: High (about 11.1 inches)

Interpretive groups

Land capability classification (irrigated): 3e
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Mccarthy, cobbly sandy loam

Percent of map unit: 10 percent
Hydric soil rating: No

Aiken, loam

Percent of map unit: 5 percent
Hydric soil rating: No

CmD—Cohasset loam, backslopes, 5 to 30 percent slopes

Map Unit Setting

National map unit symbol: 2w8c3
Elevation: 2,340 to 4,430 feet
Mean annual precipitation: 47 to 67 inches
Mean annual air temperature: 53 to 59 degrees F
Frost-free period: 140 to 230 days
Farmland classification: Not prime farmland

Map Unit Composition

Cohasset and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cohasset

Setting

Landform: Ridges
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Upper third of mountainflank
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Residuum and/or colluvium derived from volcanic rock

Typical profile

FISH AND WILDLIFE SERVICE
Sacramento Fish And Wildlife Office
Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846
Phone: (916) 414-6600 Fax: (916) 414-6713

In Reply Refer To: May 28, 2020
Consultation Code: 08ESMF00-2020-SLI-2030
Event Code: 08ESMF00-2020-E-06315
Project Name: Idaho-Maryland Mine (Brunswick) Phase 1 ESA

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, under the jurisdiction of the U.S. Fish and Wildlife Service (Service) that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the Service under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

Please follow the link below to see if your proposed project has the potential to affect other species or their habitats under the jurisdiction of the National Marine Fisheries Service:

http://www.nwr.noaa.gov/protected_species/species_list/species_lists.html

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Sacramento Fish And Wildlife Office
Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846
(916) 414-6600

Project Summary

Consultation Code: 08ESMF00-2020-SLI-2030

Event Code: 08ESMF00-2020-E-06315

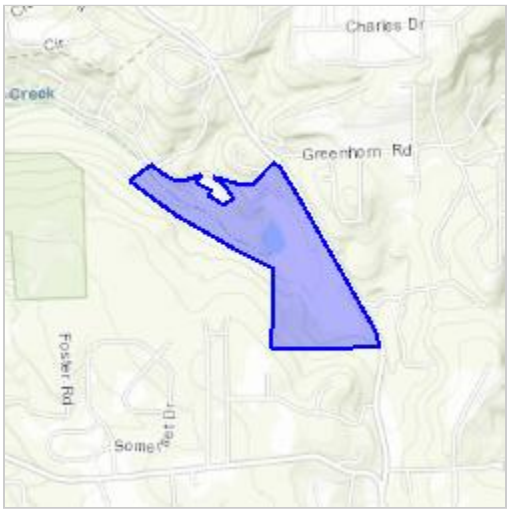

Project Name: Idaho-Maryland Mine (Brunswick) Phase 1 ESA

Project Type: LAND - ACQUISITION

Project Description: Two separate parcels for acquisition for the Idaho-Maryland Mine Phase 1 ESA

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/place/39.208647411511954N121.01638632807735W

Counties: Nevada, CA

Endangered Species Act Species

There is a total of 4 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Amphibians

NAME	STATUS
California Red-legged Frog *Rana draytonii*	Threatened

There is **final** critical habitat for this species. Your location is outside the critical habitat.
Species profile: https://ecos.fws.gov/ecp/species/2891
Species survey guidelines:
https://ecos.fws.gov/ipac/guideline/survey/population/205/office/11420.pdf

Fishes

NAME	STATUS
Delta Smelt *Hypomesus transpacificus*	Threatened

There is **final** critical habitat for this species. Your location is outside the critical habitat.
Species profile: https://ecos.fws.gov/ecp/species/321

Flowering Plants

NAME	STATUS
Pine Hill Flannelbush *Fremontodendron californicum ssp. decumbens*	Endangered
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/4818	
Stebbins' Morning-glory *Calystegia stebbinsii*	Endangered
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/3991	

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

SEMS_8R_ACTIVE SITES: The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. NPL sites include latitude and longitude information. For non-NPL sites, a brief site status is provided. **2 SITES FOUND WITHIN .5 MILE**

Description/History :

The irregular-shaped, approximately 57-acre site was previously part of the Idaho Maryland Mine, which is no longer in operation. A lumber mill (Hap Warnke Mill) currently operates in the northern portion of the Site, near the intersection of Idaho Maryland Road and Centennial Drive. The remainder of the Site is vacant, largely forested land. Evidence of former mining activities is most apparent on the northwestern portion of the Site where two concrete decanting towers and mine tailings were observed. Several trails and unimproved (unpaved) roads extend across the property, likely originally from historical use, but currently used by an extensive homeless population. The Site is surrounded by vacant land and light industrial and commercial uses.

Last Date in Agency List : 03/10/2020

Alias Type : Alternate Name

Completed Activities
Completed Date : 01/04/1994
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Site Screening

Comments :

PEA recommended medium priority. This facility is located at a former PG&E gas manufacturing plant site, approximately 1.3 acres. Water-gas was produced by cracking oil in the presence of blue gas and steam. The plant had a 100,000 cubic feet steel gas holder, 5 steel compression tanks, two 500 barrel fuel oil tanks encased in six foot concrete pits. Soil analyses indicated the presence of polynuclear aromatic compounds, PNAs, at .2 - 9,296 milligrams per kilogram. Ground water was analyzed from 3 monitoring wells, PNAs were detected in a monitoring well adjacent to Wolf Creek on the south border of the property.

Site Details

Status Date :	07/01/2010
Status :	Completed - Case Closed
Begin Date :	06/01/1999
Global ID :	T0605700132
Region :	REGION 5S

Site History :

The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

Site History :

According to PG&E, the Grass Valley Manufactured Gas Plant was built in 1902 on 1.3 acres located at 10403 Idaho Maryland Road, Assessor's parcel no. 009-0220-002 and -003. The plant was designated as "GV-2", and it replaced an older plant in Grass Valley located at Main and Stewart Streets. The site manufactued propane by "cracking" bunker C oil in the presence of blue gas and steam. The process resulted in the formation of wastes including tar sludges that contain Polynuclear Aromatic Hydrocarbons, ash and clinkers, lamp black, and petroleum sludges. Some of these materials remain buried at the side, capped under asphalt and concrete and separated from the adjacent Wolf Creek by a retaining wall. PG&E conducted investigations from 1989 to 1992 to assess the amount of contamination. Subsequent groundwater monitoring determined that the wastes, although toxic, did not readily move from the site through the groundwater. As long as the wastes remain isolated from infiltrating precipitation and groundwater, and if human exposure is prevented, they are not expected to create environmental problems or health problems. PG&E signed a deed restriction, recorded 10/19/2001, that runs with the land and prevents digging into the subsurface. MRP NO. R5-2007-0805 was signed on 10/3/2007, and requires annual inspections of the cap and a retaining wall. The inspection must be done by a PE or PG after the rainy season and an annual report submitted by 1 August each year.

RB Case Number :	SL205513020
Potential Media Affected :	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern :	Polynuclear aromatic hydrocarbons (PAHs), Total Petroleum Hydrocarbons (TPH)
Local Agency :	N/R
Local Case Number :	N/R
Lead Agency :	CENTRAL VALLEY RWQCB (REGION 5S)

Description/History :

The irregular-shaped, approximately 27-acre site is adjacent to the former Idaho Maryland Mine. The Site is vacant, partially forested land previously developed with a lumber mill (the Old Lausman Mill) that reportedly serviced the mine. Concrete foundations of former lumber mill buildings are present in the northwestern portion of the Site. Several trails and unimproved roads traverse the property, likely originally from historic use, but currently used primarily by the homeless. Other surrounding properties are vacant or developed with light industrial uses. A 5,000-gallon gasoline and 8,000-gallon diesel underground storage tank (UST), were reportedly removed from the Site in 2002 and a release was identified. Lead and hydrocarbon impacted soil was removed from the Site. Six groundwater monitoring wells were installed and monitored. In 2010, the Central Valley Regional Water Quality Control Board grated no further action for the regulatory case. No records were identified for the destruction of the groundwater monitoring wells.

Citation : 22 CCR 23 66273.36 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.36

Description :

Failure of the universal waste handler to initially train and provide annually, thereafter, all personnel who manage or who supervise those who manage universal wastes and to maintain a written record by date indicating the names of personnel who received the information. The universal waste handler shall maintain these records for at least three years from the date the person last managed any universal waste at the facility. This training shall include: 1) The types and hazards associated with the universal waste that personnel may manage at the facility; 2) The proper disposition of universal wastes managed at the facility; 3) The proper procedures for responding to releases of universal wastes including the position titles and the means of contacting those personnel at the facility who are designated to respond to reports of releases and/or to respond to questions received from other personnel at the facility; and 4) The applicable requirements of universal waste regarding labeling, collecting, handling, consolidating, and shipping universal wastes at the facility, including, but not limited to, the prohibition on the disposal of universal wastes, and for personnel involved in shipping universal wastes who are hazmat employees.

Horizontal Reference Datum :	N/R

Description/History :

The irregular-shaped, approximately 50-acre Site is adjacent to the former Idaho Maryland Mine, which is no longer in operation. Prospect pits and a former sulphuret works are depicted on historic maps of the Site; however, evidence of these activities was no longer apparent. The western portion of the Site is pine forest, and the eastern portion is sparsely vegetated with predominately shrubs and grasses. Several trails and unimproved (unpaved) roads traverse the property, likely originating from historic use, but currently utilized by an extensive homeless population. Other surrounding properties consist of vacant land, and light industrial use.

Description/History :

Property Description: The approximate 4.6-acre property is developed with a residence and associated sheds in its northeastern portion, but largely undeveloped in the northwestern and southeastern portions. Remnants of a foundation from previous development are present in the northwestern portion of the property. History and Past Ownership: Current owner has owned the Property since 2003 during which time it has been used for residential purposes and to store construction fill. The residence has been on the property for more than 50 years. Approximately ten years ago, soil generated during the grading and construction of Springhill Storage at 150 Spring Hill Drive, approximately 3,700 feet northeast of the property, was placed on western portion of the property, and the area south of the residence. The previous owner, Mr. Rodgers (first name unknown), used the western portion of the property as a blacksmith shop to make tractor plows and other farming equipment for about 50 to 60 years. Mr. Rodgers stored various tractor parts, tires, metal debris, and other miscellaneous materials and equipment in the western portion of the property. The property was used by Nevada County as a maintenance yard sometime during the 1940s.

Site Details

Status Date :	08/15/2013
Status :	Open - Verification Monitoring
Begin Date :	02/08/1993
Global ID :	T0605700053
Region :	REGION 5S

Site History :

The case was opened following an unauthorized release from an underground storage tank system at the subject site. Corrective action is underway as directed by the CVRWQCB. Corrective action may consist of preliminary site investigation, planning and implementation of remedial action, verification monitoring, or a combination thereof. A summary of the site history is available by clicking on either the "Cleanup Status History", "Regulatory Activities" or the "Site Maps/Documents" tab. For a complete site history the case file at the CVRWQCB should be consulted.

RB Case Number :	290076

FED BROWNFIELDS

Facility Name :	Bitton
Facility Address :	544 East Main Street, GRASS VALLEY, CA 95945

Site Details

ACRES Property ID :	241846
Cooperative Agreement Number :	99T62701
Type of Brownfields Grant :	Assessment
Type of Funding :	Hazardous
Grant Recipient Name :	City of Grass Valley
IC Data Address :	N/R
Redevelopment Completion Date :	N/R
Property Size (acres) :	.39
Local Property Number(s) :	009-190-007-000
Ownership Entity :	Private
Current Owner :	N/R
Did Ownership Change :	N
SFLLP fact into the ownership :	N/R
Latitude :	39.22319715432024
Longitude :	-121.05400925883448
Horizontal Collection Method :	N/R
Source Map Scale :	N/R
Reference Point :	N/R
Horizontal Reference Datum :	N/R

Description/History :

The east portion of the property is a vacant, fenced gravel lot, and the west portion of the property is a vacant paved lot with an entrance from East Main Street. The property was used as an auto sales lot and for parking from the early 2000s until March 2018 and has been vacant since that time. The Hills Sulphuret Works property was constructed in 1862, and the sulphuret works facility boundary included a portion of the property. The Hills Sulphuret Works discontinued operations in the site vicinity in the late 1800s to early 1900s. The area east of the subject property, along East Main Street, was developed with commercial buildings beginning in the 1930s. Businesses of potential environmental interest included a ranch and garden supply, auto body and repair shops, an auto dealership, a dry cleaner, and a gas station.

Facility Address :	568, 582, 602 EAST MAIN STREET, GRASS VALLEY, CA
County :	Nevada

Site Details

Status Date :	08/13/2014
Status :	Completed - Case Closed
Begin Date :	12/01/1996
Global ID :	SL186302986
Region :	REGION 5S

Site History :

Tetrachloroethylene (PCE) has been detected in groundwater samples collected from monitoring wells located on the 10-Minute Lube site. Current remedial activities are focused on the adjacent Valet Cleaners site, which has been identified as a source of PCE pollution in groundwater. Based on review of monitoring data at both the Valet Cleaners site and 10 Minute Lube, Central Valley Water Board staff determined that there is no apparent source on the 10 Minute Lube site.

County :	Nevada

Site Details

Status Date :	11/05/2002
Status :	Completed - Case Closed
Begin Date :	03/28/2000
Global ID :	SL0605767407
Region :	REGION 5S

Site History :

In 1999, a Phase 1 environmental investigation concluded that the property had been used as a gasoline service station prior to the 1960s. Dumping of motor oil may have occurred along the northern edge of the Site for vegetation suppression and/or dust control. In addition, a subsurface hydraulic lift was present at the site. In August 1999, trenches were excavated along the area where an underground storage tank (UST) was suspected of being located. One approximately 400-gallon UST was discovered in the area. The hydraulic lift and UST were excavated and removed in 1999. Soil investigations indicated concentrations of total oil and grease remained in Site soils and Nevada County directed additional investigations to assess the lateral and vertical extent of contamination. One groundwater sample contained a low concentration of nickel below the maximum contaminant level. Petroleum hydrocarbons were not detected in any of the groundwater samples collected. In 2001, about 25 cubic yards of contaminated soil was excavated at the Site. Site Status was updated to Completed - Case Closed following 18 January 2017 inactive case review. Central Valley Water Board staff considers the case closed as of 5 November 2002.

RB Case Number :	SLT5S762
Potential Media Affected :	Other Groundwater (uses other than drinking water), Under Investigation
Potential Contaminants of Concern :	Other Petroleum

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Description/History :

The property is undeveloped land covered with grasses, weeds, shrubs, and trees. Footpaths traverse the property, and Matson Creek runs through the west portion of the property from north to south. The property appears to have been undeveloped prior to 1862, when the Hills Sulphuret Works was constructed. The sulphuret works facility boundary included the southern portion of the property. The Hills Sulphuret Works discontinued operations in the property vicinity in the late 1800s to early 1900s. Additionally, a portion of the Coe Quartz mine claim extended onto the north portion of the site in the late 1800s to early 1900s. By 1921, a lumber pond associated with a Hills Flat Lumber sawmill located northwest of the site was present on the northwest portion of the subject property. The lumber pond was removed in the 1970s. The area east of the subject property, along East Main Street, was developed with commercial buildings beginning in the 1930s. Businesses of potential environmental interest included a ranch and garden supply, auto body and repair shops, an auto dealership, a dry cleaner, and a gas station.

Background Information :

ABANDONED MINE LAND SITE WITH SULPHERET WORK AREA. Elevated concentrations of arsenic have beend detected in soil samples from teh sulpheret works area. Chlorinated solvents have reportedly been detected in groundwater adjacent to the western boundary of the Sierra Terrace site. Soil gas samples collected along the western and southern boundaries of the site indicated the presence of chlorinated solvents and benzene in the vadose zone soil gas.

Comments : All previous DTSC comments on the HHRA tech memo have been adequately addressed.

Completed Date : 07/13/2011
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Risk Assessment Report

Comments : DTSC's previous comments have been adequately addressed and the ECO tech memo is approved

Completed Date : 12/27/2010
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Risk Assessment Workplan

Comments : All of DTSC's comments were adequately addressed and the final Work Plan is approved for implementation.

Completed Date : 06/21/2010
Area Name : Conveyance Corridor
Sub Area Name : N/R
Document Type : Remedial Investigation Report
Comments : Conveyance Corridor Data Transmittal and Evaluation Report.

Completed Date : 05/06/2010
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Site Characterization Report
Comments : N/R

Completed Date : 01/31/2010
Area Name : Sand Dam
Sub Area Name : N/R
Document Type : Fieldwork

Comments :

Because of questions regarding the need to obtain a streambed alteration permit to complete the sampling activities included in the work plan, it was decided not to collect subsurface samples in an attempt to quantify the volume of tailings in the Conveyance Corridor. Instead, a detailed topographic survey was conducted by Dundas and Dundas to estimate this volume. Fieldwork was completed in January 2010.

Completed Date : 09/01/2009
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Consent Order

Comments :

This is the 2009 consent order that provides for work beyond the scope of Amendment #2 to the 2006 Order. Its structure is similar to the previous orders in that it does not cover all activities necessary to achieve complete clean up of the Park. This order includes language requiring all parties to meet and develop a final comprehensive order (2010 Order) whose scope will provide for all activities necessary to achieve complete clean up of the Park. It is expected the 2010 Order will be completed in the first quarter of 2010.

Comments : AMENDMENT #2 TO CLEANUP AND ABATEMENT ORDER, IMMINENT AND/OR SUBSTANTIAL ENDANGERMENT DETERMINATION AND PARTIAL CONSENT ORDER

Completed Date : 02/17/2009
Area Name : Trails
Sub Area Name : N/R
Document Type : Removal Action Workplan

Comments : DTSC filed a Notice of Determination on 2/5/09 that Parks' MND adequately covered the CEQA requirements for the RAW. An approval letter for the RAW was sent to all parties listed in the Order on 2/9/09. Parks must now submit an implementation plan for review and approval before construction can begin.

Completed Date : 11/12/2008
Area Name : Trails
Sub Area Name : N/R
Document Type : Fact Sheets

Comments : The Fact Sheet for the Osborne Hill Area Trails draft RAW is completed and has been transmitted to Parks for mailing. The comment period runs from 11/17/08 to 12/22/08.

Completed Date : 10/16/2008
Area Name : Trails
Sub Area Name : N/R
Document Type : CEQA - Initial Study/ Mitigated Neg. Dec. (MND)

Comments : Parks is the lead agency for CEQA. DTSC has reviewed the MND and determined it is sufficient for the Trails RAW.

Comments :	The completion report for the Red Dirt Pile documents the installation of a cover over the former sulfide tailings pile. The remedy was approved as a time critical removal action in the 2006 RDP Priority Action Work Plan. The cover is composed of a GCL with soil or asphalt on top. The asphalt portion will be used as a parking lot.

Comments :

The Order is a Cleanup and Abatement and Partial Consent Order that provides for joint DTSC and Regional Board oversight during the implementation of 5 distinct response measures approved for the site to partially address hazardous substances that remain from historical mining operations. The final draft of the Order was sent to the Respondents on 10/5/06. The Regional Board signed on 10/6/06, Parks signed on 10/17/06, and Newmont signed on 10/30/06. Respondents delivered the original signature pages to DTSC on 11/22/06. After receiving the Respondents signature pages, DTSC signed and fully executed the Order on 11/28/06.

FEDERAL RCRA NON-CORRACTS TSD FACILITIES LIST

ARCHIVED RCRA TSDF: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Agency Version Date: 02/10/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 07/23/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 04/24/2020

RCRA_TSDF: Resource Conservation and Recovery Act hazardous waste transportation storage disposal and treatment facilities

Agency Version Date: 02/10/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 07/23/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 04/24/2020

FEDERAL CERCLIS LIST

CERCLIS NFRAP: The CERCLIS sites with No Further Remedial Action Planned from the CERCLIS program database. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 03/16/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 05/25/2020

CERCLIS-HIST: The CERCLIS program database contains information on the assessment and remediation of federal hazardous waste sites. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 03/16/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 05/25/2020

FEDERAL FACILITY: Sites where Federal Facilities Restoration and Reuse Office (FFRRO) arranged cleanup for Base Closure and Property Transfer at Federal Facilities

Agency Version Date: 02/26/2020
Agency Update Frequency: Varies
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8712
Most Recent Contact: 05/25/2020

SEMS_8R_ACTIVE SITES: The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. NPL sites include latitude and longitude information. For non-NPL sites, a brief site status is provided.

Agency Version Date: 02/26/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 05/25/2020

SEMS_8R_ARCHIVED SITES: The Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Agency Version Date: 02/26/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 05/25/2020

FEDERAL RCRA CORRACTS FACILITIES LIST

CORRACTS: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases

Agency Version Date: 02/10/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 07/23/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 202-566-1667
Most Recent Contact: 04/24/2020

HIST CORRACTS 2: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases that are no longer in current agency list.

Agency Version Date: 10/12/2018
Agency Update Frequency: Annually
Planned Next Contact: 06/26/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 202-566-1667
Most Recent Contact: 03/30/2020

FEDERAL DELISTED NPL SITE LIST

DELISTED NPL: National Priority List of sites that were delisted and no longer require action

Agency Version Date: 03/16/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 05/25/2020

DELISTED PROPOSED NPL: Sites that have been delisted from the proposed National Priority List

Agency Version Date: 03/16/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867

HIST PWS ENF
Historical Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
List of Safe Drinking Water Information Systems (SDWIS) with enforcement violations that are no longer in current agency list.

NWIS
National Water Information Systems
United States Geological Society
(703) 648-5953
Information on all water resources for the United States. This database contains all current and historical data for the nation.

PWS
Public Water Supply
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems

PWS ENF
Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

SSURGO
Detailed Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
Detailed Soil Data Map

STATSGO & MUI
General Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
General Soil Data Map

USGS GEOLOGIC AGE
USGS Digital Data Series DDS
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
USGS Digital Data Series DDS: Geologic Age and Rock Stratigraphic Unit

RADON
National Radon Database
USGS
703-605-6008
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

RADON - CA
Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurments

DAMS - CA
California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA
Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Historical Information Gatherers

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Publication year, publisher and title

2011 Haines North Sacramento Valley

2006 Haines North Sacramento Valley

2001-02 Haines North Sacramento Valley

1995-96 Haines North Sacramento Valley

1990 Haines North Sacramento Valley

Abstract Section 1- This section includes the city directory data sorted by address.

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

City Directory Pages/Abstracts

Research Methodology: A search was conducted for city directories that include coverage of the site area using HIG's City Directory Collection and other sources, if needed. Directories for the following years were identified for the site area. A comma between date ranges indicates a gap of 10 years or more in available city directories:

N Sacramento Valley, CA; 1985-2019

The above listed directories were reviewed at approximate 5 year intervals to determine if the street(s) specified in the order were included in the directories and had listings for the site area. HIG attempted to identify former street names and aliases and if identified, these were also included in the review.

Research Results: City directory information, when provided, was used to create a multi-page file(s) named CD- followed by the street name. When City Directory Pages are provided, the publication name and date are shown at the top of each page. When a City Directory abstract is provided, the first page of the abstract includes the relevant publication information. The years of coverage identified for each street and any identified historical street names are as follows:

Centennial Drive (1990-2011)
Idaho Maryland Road (1990-2019)
Whispering Pines Lane (1985-2019)

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. No FIMs or similar maps were identified for the site location and/or adjoining properties.

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the "Site Specific HIG Data") contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Agency Update Frequency: Quarterly
Planned Next Contact: 07/23/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 215-814-2469
Most Recent Contact: 04/24/2020

FEDERAL CERCLIS LIST

CERCLIS NFRAP: The CERCLIS sites with No Further Remedial Action Planned from the CERCLIS program database. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 03/16/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 05/25/2020

CERCLIS-HIST: The CERCLIS program database contains information on the assessment and remediation of federal hazardous waste sites. The Environmental Protection Agency decommissioned the CERCLIS data in 2014. The last update was November 12, 2013.

Agency Version Date: 03/16/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 800-424-9346
Most Recent Contact: 05/25/2020

FEDERAL FACILITY: Sites where Federal Facilities Restoration and Reuse Office (FFRRO) arranged cleanup for Base Closure and Property Transfer at Federal Facilities

Agency Version Date: 02/26/2020
Agency Update Frequency: Varies
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8712
Most Recent Contact: 05/25/2020

SEMS_8R_ACTIVE SITES: The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted. NPL sites include latitude and longitude information. For non-NPL sites, a brief site status is provided.

Agency Version Date: 02/26/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 05/25/2020

SEMS_8R_ARCHIVED SITES: The Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Agency Version Date: 02/26/2020
Agency Update Frequency: Quarterly
Planned Next Contact: 08/21/2020
Agency: U.S. Environmental Protection Agency
Agency Contact: 703-603-8867
Most Recent Contact: 05/25/2020

FEDERAL RCRA CORRACTS FACILITIES LIST

CORRACTS: List of facilities where Resource Conservation and Recovery Act Corrective Action Program used to investigate and remediate hazardous releases

FINE-GRAINED SOILS, Silts and clays (liquid limit is less than 50%), Lean Clay. Reference: This is a classification of soil material designed for general construction purposes. It is dependent on the particle size distribution of the <75 mm, the liquid limit, and the plasticity index and on whether the soil material is high in organic matter (ASTM test D 2487, in ASTM, 1984).	1.41-5	4.5-6

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

HIST PWS ENF
Historical Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
List of Safe Drinking Water Information Systems (SDWIS) with enforcement violations that are no longer in current agency list.

NWIS
National Water Information Systems
United States Geological Society
(703) 648-5953
Information on all water resources for the United States. This database contains all current and historical data for the nation.

PWS
Public Water Supply
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems

PWS ENF
Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service
(703) 358-2171
Wetland Inventory for the United States

SSURGO
Detailed Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
Detailed Soil Data Map

STATSGO & MUI
General Soil Data Map
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
General Soil Data Map

USGS GEOLOGIC AGE
USGS Digital Data Series DDS
Natural Resources Conservation Service: U.S. Department of Agriculture
(202) 690-4985
USGS Digital Data Series DDS: Geologic Age and Rock Stratigraphic Unit

DAMS - CA
California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA
Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

RADON - CA
Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurments

RADON
National Radon Database
USGS
703-605-6008
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Research Summary for City Directory Abstract

Site Location
Brunswick Site
Millsite Rd, East Bennett Rd and Brunswick Rd
Grass Valley, CA

Conducted For
Envirosite Corporation
2 Corporate Drive
Shelton, CT

HIG Project #
2038008
Client Project #
41641
Date Created
06/01/2020

Historical Information Gatherers

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Publication year, publisher and title

2019 Haines North Sacramento Valley

2011 Haines North Sacramento Valley

2006 Haines North Sacramento Valley

2001-02 Haines North Sacramento Valley

1995-96 Haines North Sacramento Valley

1990 Haines North Sacramento Valley

1985 Haines North Sacramento Valley

Abstract Section 1- This section includes the city directory data sorted by address.

Historical Information Gatherers

HIG has produced a city directory abstract for one or more streets associated with the site location indicated above. The publications used to create the CD Abstract are listed below.

The information below is taken directly from the city directory books. The following are definitions as they are found in the Haines books:

XXXX = is no phone, no people or non-published phone.

600 XXXX = Correct address only. No other information.

X Streetname = intersecting cross street

Publication year, publisher and title

2019 Haines North Sacramento Valley

2011 Haines North Sacramento Valley

2006 Haines North Sacramento Valley

2001-02 Haines North Sacramento Valley

1995-96 Haines North Sacramento Valley

1990 Haines North Sacramento Valley

1985 Haines North Sacramento Valley

Abstract Section 1- This section includes the city directory data sorted by address.

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

City Directory Pages/Abstracts

Research Methodology: A search was conducted for city directories that include coverage of the site area using HIG's City Directory Collection and other sources, if needed. Directories for the following years were identified for the site area. A comma between date ranges indicates a gap of 10 years or more in available city directories:

N Sacramento Valley, CA; 1985-2019

The above listed directories were reviewed at approximate 5 year intervals to determine if the street(s) specified in the order were included in the directories and had listings for the site area. HIG attempted to identify former street names and aliases and if identified, these were also included in the review.

Research Results: City directory information, when provided, was used to create a multi-page file(s) named CD- followed by the street name. When City Directory Pages are provided, the publication name and date are shown at the top of each page. When a City Directory abstract is provided, the first page of the abstract includes the relevant publication information. The years of coverage identified for each street and any identified historical street names are as follows:

Bennett Road East (1985-2019) / Greenhorn Rd (1990-2019)
Brunswick Road (1985-2019)
Millsite Rd (No Coverage)

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. No FIMs or similar maps were identified for the site location and/or adjoining properties.

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the "Site Specific HIG Data") contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 1 – View to the south of lumber and various debris at the former Hap Warnke lumber yard and sawmill.	 Photo 2 – Five-gallon bucket of transmission fluid at the former sawmill. Possibly containing fluid.
 Photo 3 – View to the west of debris, fork lift prongs, and old boat at former Hap Warnke lumber yard.	 Photo 4 – View to the east of gate into the former sawmill.
 Photo 5 – View to the east of 150-gallon air compressor tank at the former sawmill.	 Photo 6 – Inside the sawmill workshop with various debris including lubricants, paint, and hydraulic oil. No floor drains were observed.

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 7 – Mini-excavator inside the sawmill workshop. No staining was observed around the vehicle.	 Photo 8 – Oxygen/Acetylene tanks unknown if compressed air is still present inside workshop.
 Photo 9 – View to the east of the former workshop and storage shed. Tires and debris apparent.	 Photo 10 –Water spigot in front of the sawmill workshop. Unknown if operational or what it is connect to.
 Photo 11 – View to the south of empty 30-gallon drum in weeds behind the former workshop.	 Photo 12 – View to the east showing an old 55-gal drum with holes in it. Located on the east side of the former workshop.

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 13 – View to the south of a storage shed with lubricants, oil, and other debris and parts.	 Photo 14 – View to the east of old propane air tank and debris near the workshop. Several other propane tanks were observed near the same area.
 Photo 15 – View to the west of an abandoned truck with engine. No staining or stressed vegetation was observed beneath the truck from any leaks from the engine.	 Photo 16 – View to the northwest of waste tires near the former sawmill.
 Photo 17 – View to the west of the northern berm. The materials of the berm appear to be constructed of tailings and waste rock likely from offsite	 Photo 18 – View to the south of the northern decanting tower behind the northern berm.

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 19 – View to the west showing the southern decanting tower. Tailings scattered throughout the area from past milling operations from offsite.	 Photo 20 – View to the north of the tailings area in front of the northern berm.
 Photo 21 – View to the south located southwest of the decanting towers are many debris piles with various household trash and remnants of encampments.	 Photo 22 – View south of main access road and gate at southwestern site boundary.
 Photo 23 – View to the east an example of one of the many tire piles located around the site.	 Photo 24 – View to the north of one of the two observed burn areas. No debris other than brush was noted in these burn areas.

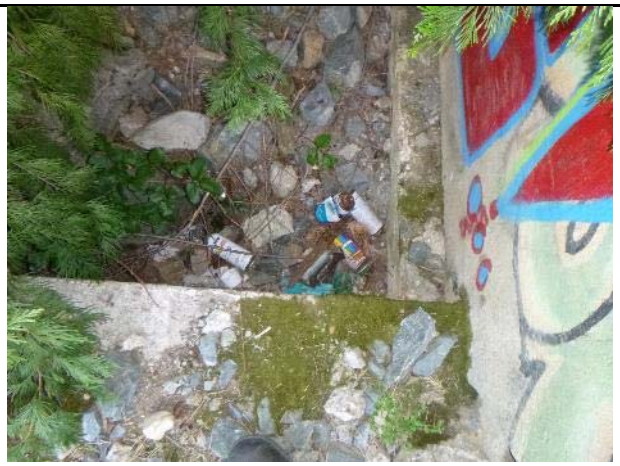

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 25 – View to the south of an encampment remnant.	 Photo 26 – View to the east of household waste in the central portion of the site.
 Photo 27 – View to the north of Central Drain and berm. Not flowing during site visit.	 Photo 28 – View to the north of east tailings and waste rock area. Workshop visible in background.
 Photo 29 –View to the east of east tailings and waste rock area.	 Photo 30 – View to the east of gravel road and east berm gate.

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 31 – View to the west of designated NWI wetland at east site boundary at culvert outfall. Wetland drains under east berm through culvert from the former log pond to the east.	 Photo 32 – View to the east formerly used tar tank with minor leak from small engine noted on ground surface. Staining present.
 Photo 33 – View to the west showing the access road to the South Idaho Mine area.	 Photo 34 – View to the northwest of tailings covering South Idaho Mine shaft. Shaft could not be physically located.
 Photo 35 – View to the east of neighboring property conducting wood chipping operations.	 Photo 36 – View to the east of neighboring property storing power/telephone poles. Creosote odor noted in area.

CENTENNIAL SITE	**Date: June 9 and 12, 2020**
 Photo 37 – View to the south of gate and gravel access road to neighboring property to the south.	 Photo 38 – View to the east of former Idaho Mine building located on the east side of Centennial Dr.

APPENDIX D-2

BRUNSWICK SITE PHOTOGRAPHIC LOG

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 1 – View to the north of the main ore rock silo from New Brunswick Mine operations, no longer in use.	 Photo 2 – View to the east of the former headframe position. Mine shaft below the silo wall.
 Photo 3 – View to the northwest of the New Brunswick Mine shaft entrance at the base of the silo.	 Photo 4 – Looking up at the mining ore discharge outlet under the silo. Blocked off for safety.
 Photo 5 – Used spray paint cans in the ore rock discharge below the silos.	 Photo 6 – View to the south showing the discharge ports for the silos.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 7 – Exploration drilling core boxes and drums located north of the silos. Drums are marked with environmental label; however, the contents could not be confirmed.	 Photo 8 – Close up of a drum with soil cuttings from a monitoring well for environmental sampling.
 Photo 9 – Exploration core boxes along the eastern portion of the site .	 Photo 10 – Pallets, wood, and unused core boxes and other debris.
 Photo 11 – Drum containing lubricant oil at least half full.	 Photo 12 – Two refrigerators possibly containing mercury thermometers. Status could not be confirmed.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 13 – View to the west of the Union Standard oil 250-gallon tank. Contents are empty no visible staining observed.	 Photo 14 – View to the east of piping and two approximate 500-gallon water tanks currently empty.
 Photo 15 – View to the southwest of crushed asphalt gravel pile.	 Photo 16 – View to the southeast of the former Sawmill area excavated and reworked.
 Photo 17 – Unknown piping at former sawmill	 Photo 18 – View to the south of the excavation area which partly remains at former sawmill

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 19 – View to the southeast of the depressed area of former excavation now covered in vegetation in the southeast corner of sawmill	 Photo 20 – View to the west of the road and drainage swale west of the sawmill toward pond area.
 Photo 21 – View to the north showing one of many fire hydrants used by the sawmill.	 Photo 22 – View to the east showing a fire hydrant and fire hose shed used by the sawmill.
 Photo 23 – Suspected remaining monitoring well MW-3. Could not open cap to confirm depth and water level.	 Photo 24 – View to the east drainage swale toward pond formerly capturing overflow from lumber yard.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 25 – View to the southeast of sump located southeast of the pond at the end of the drainage swale. Sump drained water from the swale to the pond.	 Photo 26 – View to the northeast of the pond and pier to the former pumping station to the lumber irrigation system.
 Photo 27 – View to the northeast showing a sump at the former pumping station at the southern corner of the pond.	 Photo 28 – View to the southeast showing the sump of the former pumping station at the southern corner of the pond.
 Photo 29 – View to the southeast. South Fork of Wolf Creek outfall culvert pipe at the southern site boundary.	 Photo 30 – View to the northwest of the South Fork of Wolf Creek with iron precipitate downgradient of the outfall.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 31 – View to the west of the former excavation of petroleum impacted soils southwest of the irrigation pond. Surface cover of rock no visible signs of staining.	 Photo 32 – View to the north of the former excataved area south of the irrigation pond. Precise excavation extents could not be determined.
 Photo 33 – View to the north of an angle exploration boring advanced by Rise Grass Valley. Located near the western boundary near the center of the site.	 Photo 34 – View to the south of an angle boring for gold exploration. Located south of the pond in the open clearing.
 Photo 35 – View to the north of an angle boring for gold exploration. Located south of the pond in the open clearing.	 Photo 36 – View to the north of the west berm of the pond.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 37 – View to the northwest of south fork wolf creek flood plain area and grasslands in the northern portion of the site.	 Photo 38 – View to the east of south fork wolf creek flood plain area in the northern portion of the site.
 Photo 39 – View of irrigation berm and construction for piping and road access. Road is	 Photo 40 – View to the northeast of the noted petroleum spill area where excavation may have occurred. No evidence of spill or excavation noted.
 Photo 41 – View to the south of the irrigation berm and of unimproved road on western site boundary. Safety bollards and irrigation pipe in left hand portion of photo.	 Photo 42 – View to the south of abandoned irrigation pipe cut off at surface. Bend in pipe at 6 feet bgs and appears connected to multiple inline along berm/road.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 43 – View to the northeast of abandoned irrigation pipe cut off at surface. Irrigation pipes have similar appearance and are numerous.	 Photo 44 – View to the northeast of conduit and 6-inch diameter PVC associated with the irrigation system.
 Photo 45 – View to the northeast of the former sawmill log pile area.	 Photo 46 – Approximate 19-foot deep monitoring well located at the southern end of the irrigation pipelines. No records of this well were located. Approximately 6 feet of standing water in well. Well condition unknown..
 Photo 47 – View to the south of abandon standpipe. Located in the southern portion of site.	 Photo 48 – View to the west of 6-inch PVC standpipe. Approximately 8 feet deep and appear to bend. Part of the irrigation system.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 49 – View to the west of old roof for silo. Unknown origin and use.	 Photo 50 – View to the north of drilling area for possible percolation test. Located on or near western site boundary.
 Photo 51 – View to the east of waste rock from adjacent exploratory drilling from likely 100 years or more ago. Vegetation not growing in rocky area.	 Photo 52 – View to the east of concrete foundations (left) with former timbers of a likely headframe. Between the trees is a depression where water drains.
 Photo 53 – View to the north of drill pipe, cables, and concrete pad at the former exploratory mine shaft located near south site boundary.	 Photo 54 – View to the south of the suspected former mine shaft depression adjacent to the concrete foundations. Water appears to drain into this area.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 55 – View to the east of the waste rock mixed with sawmill wood filings waste in the southern portion of the site.	 Photo 56 – Gate at the culvert pipe inlet of the South Fork of Wolf Creek. Located at southeast site boundar.y
 Photo 57 – View to the east of monitoring well MW-7 located near southeastern site boundary.	 Photo 58 – View to the northwest of mine tailings and waste rock south of the former lumber yard paved area.
 Photo 59 – View to the north of mine tailings and waste rock south of the former lumber yard paved area.	 Photo 60 – View to the northwest of the former lumber yard paved area. This area used the irrigation system to cool and wet lumber prior to transport.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 61 – View to the west of the drainage immediately north of the former lumber yard paved area. This area received overflow water and drained to the irrigation pond.	 Photo 62 – View to the south of former lumber yard paved area showing brush collection activities and firewood storage.
 Photo 63 – Suspected abandoned monitoring well located east of the pond near the eastern site boundary.	 Photo 64 – View to the southeast of the entrance gate to the former Union Hill mine.
 Photo 65 – View to the northwest of drill cuttings from exploration borings near the Union Hill Mine area.	 Photo 66 – View to the northwest of angle borings used for gold exploration near the Union Hill Mine.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 67 – View to the southeast of a waste rock pile at near the former Union Hill Mine shaft.	 Photo 68 – View to the northwest of another waste rock pile at near the former Union Hill Mine shaft.
 Photo 69 – Former Union Hill Mine inclined shaft secured with a steel plate and a lock for safety.	 Photo 70 – View to the northeast of the head frame concrete foundation at former Union Hill Mine shaft.
 Photo 71 – View to the southwest of the South Fork Wolf Creek and old wagon road connecting to the grassland area near the former Union Hill Mine shaft.	 Photo 72 – View to the east of old metal tank along old wagon road on the northwestern site boundary.

BRUNSWICK SITE RECONNAISSANCE	**Date: June 9 and 12, 2020**
 Photo 73 – View to the west of forged metal, which may be a automotive camshaft cover. No staining or stressed vegetation was noted in regard to this debris.	 Photo 74 – View to the east of the high voltage line and transformer near the former Union Hill Mine area. No staining was observed beneath the transformer and appears to be relatively new.
 Photo 75 – View to the south of a mattress at the East Bennett entrance to the New Brunswick Mine.	 Photo 76 – Northeast and offsite is the Nevada County Airport and Grass Valley Air Attack Base for CalFire.

APPENDIX E

SITE RECONNAISSANCE SHEETS

ECM Consultants — Ignite Success

Date/ Time 6/9 +12/2020 **Idaho-Maryland Mine** **Site ID** CENTENNIAL

Site Inspector Name(s) CHRIS DRABANDT, WES SNYDER

Weather WARM, PTLY CLOUDY **Inspection Strategy** Drive Drone (Foot)

PROPERTY USES

1. (Y) N Are there currently structures and improvements present on the property?
   # 37 Description: NE PORTION OF SITE, OLD SAWMILL, PAVED AREA, CORRUGATED STEEL WORKSHOP, STORAGE SHED, UNKNOWN METAL SHED, 2 GATES, 2 DECANT TOWERS
2. (Y) N Is there evidence that there were structures and improvements present on the property in the past?
   # Description: DRAINAGE CHANNELS + CULVERTS. TAILINGS COVERING FORMER S. IDAHO MINE
3. Y (N) Is there evidence of agricultural use (livestock, crop raising, agricultural drainage; including surface, and/or subsurface drains)? Is there evidence that there were structures and improvements present on the property in the past?
   # Description: DRAINAGE FEATURES ARE FOR MINING
4. Y (N) Is there evidence of oil and gas exploration/development?
   # Description: NONE OBSERVED

   Y N If yes, are oil and/or gas drilling pads, holding ponds, or conveyance pipelines and structures present on the property?
   # Description:

   Y N Is there evidence of current and/or past spills or releases of hazardous substances or pollutants, contaminants, or petroleum and petroleum products related to the oil and gas exploration/development?
   # Description:
5. (Y) N Is there any evidence of strip mining, hard rock mining, piles, or other extractive mineral activities?
   # Description: ~3 TAILING AREAS W/LITTLE OR NO VEGETATION, 3 BERMS, 2 DITCHES FROM MINING/MILLING OPERATIONS

   Y (N) If minerals extraction operations are present, is there evidence of the use/storage or release of hazardous substances (example, fuel storage tanks, cyanide or chemical use at mill sites)?
   # Description: NO OBSERVABLE USE/STORAGE ONSITE

   (Y) N If minerals extraction operations are present, are there other potential environmental concerns (draining adits or acid mine drainage, waste rock, or mill tailings in or adjacent to streams and surface waters, etc.)?
   # 5 Description: SEVERAL TAILINGS AREAS + NEARBY WOLF CREEK + ONSITE DRAINAGES

   (Y) N If minerals extraction operations are present, are there physical safety hazards present (open adits, vertical shafts, heavy equipment, etc.)?
   # Description: POSSIBLE SHAFT NEAR S. IDAHO MINE BUT NO EVIDENCE OF SHAFT. NO DEPRESSIONAL OBSERVATION.

   (Y) N If the areas of mineral extraction activities (mine sites, mill sites, etc) are not accessible for visual and/or physical inspection, describe the reason for the inaccessibility.
   MANY FEATURES HISTORICAL OR REMOVED.

6. (Y) N Describe and note the topographic conditions of the property as well as the general topography of the area surrounding the property that is visually and/or physically observed from the periphery of the property. Identify and locate on a property/site map any key topographic features that may relate to offsite or onsite migration of contaminants.

GENERAL GRADE TO NORTH TO WOLF CREEK. SEVERAL BERMS + DRAINAGE DITCHES ACROSS SITE

(Y) N Is there evidence of modified topography or unnatural topographic features (i.e., fill dirt brought onto the property, cover for dumps, mounds, fill areas, depressions, etc.)?

Description: BERMS + DITCHES (INCLUDING TAILINGS)

7. (Y) N Is there any evidence of waste materials currently or previously being dumped above grade, buried, and/or burned on the property (i.e., dumps, industrial waste, petroleum products, labeled/unlabeled drums or other containers, pesticide containers, household and farm debris, automotive or industrial batteries, building demolition debris, etc.)?

Description: AT SAWMILL, SEVERAL DRUMS / CANS OF OIL/TRANS FLUID ON PAVED AREA AND IN WORKSHOP. ONE NON-OPERATIONAL TRUCK, BUILDING DEBRIS

8. (Y) N Are there roads and/or paths present on the property?

Description: MAIN RUNS NORTH-SOUTH W / OTHER SMALLER ROADS

(Y) N If roads and/or paths are present, is there evidence of illegal or unauthorized dumping activities occurring?

Description: SEVERAL AREAS HAVE CURRENT OR FORMER ENCAMPMENTS. + MANY TIRES.

HAZARDOUS MATERIALS AND SUBSTANCES

1. Y (N) Is there evidence that current operations on the property involve the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, official and/or unofficial shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?

Description:

Y N If yes, is there evidence that there has been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with current operations?

Description:

2. Y (N) Is there evidence that previous operations on the property involved the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, official and/or unofficial shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?

Description:

Y N If yes, is there evidence that there has been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with past operations or tenants?

Description:

3. (Y) N Is there evidence that the property is currently or was previously used for any form of illegal activities which may involve the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, illegal drug labs, waste disposal sites)?
   # Description: BUT LIMITED TO HOUSEHOLD WASTE DUMPING

4. Y N Is there any evidence of contamination (i.e., hazardous substances or petroleum products) or other materials (soil, rock, etc.) migrating from adjacent and/or nearby properties onto the site?
   # Description:

5. Y (N) Is there evidence of use, storage, mixing, and/or disposal of industrial drums (typically 55 gallons) or sacks of chemicals, automotive or industrial batteries, pesticides (including herbicides), paints, solvents, or other chemicals in individual containers larger than 5 gallons in volume or 50 gallons in the aggregate at the property?
   # Description: SURROUNDING AREA MAINLY COMMERCIAL. LOG MILL TO EAST DOES NOT APPEAR TO USE LOG POND DRAINING INTO PROPERTY

6. (Y) N Are there any unidentified substance containers on the property?
   # Description: UNLABELED RUSTY DRUMS + CANS/BOTTLES IN WORKSHOP, OLD TANKS LIKELY PROPANE/ACETYLENE/WATER

7. Y (N) Is there evidence of use of chemicals, automotive or industrial batteries, pesticides, herbicides, fungicides, paints, solvents, or other, on-fence lines, right of ways, airstrips, heliports, crop duster operations, etc.?
   # Description:

8. Y (N) Is there evidence of oiled roads, oil seeps and slicks, staining on the soil and cracked concrete, asphalt, adjacent to storm-water drains, or other surfaces?
   # Description:

9. (Y) N Are there currently any aboveground or underground storage tanks on the property or indications of the presence of abandoned aboveground or underground storage tanks, such as any vent pipes, fill pipes, access ways indicating a fill pipe, concrete or asphalt pads or patches, islands, or dispensers on the property or adjacent to any structure on the property?
   # Description: ~~BOB~~ TRAILER FOR PAVING COMPRESSOR LOCATED NEAR SE BOUNDARY

   (Y) N If ASTs or USTs are present, is there any evidence of spill or releases?
   # Description: MINOR STAINING FROM OIL BENGA JH PUMP ON TRAILER

10. Y (N) Is there evidence or any indications that an aboveground or underground storage tank had been installed on the property in the past? For example, the presence of tank pads, vent pipes, fill pipes, access ways indicating a fill pipe, or dispensers on the property or adjacent to any structure on the property?
    # Description:

    Y N If ASTs or USTs are present, is there any evidence of spill or releases?
    # Description:

11. (Y) N Are there electric transmission lines, transformers, capacitors, or any hydraulic equipment (i.e., elevators, presses, lifts, doors, etc.) currently present on the property?
    # Description: POWER LINES ON NORTHERN BOUNDARY BUT NO TRANSFORMERS ONSITE. MINI-EX LOCATED IN WORKSHOP

    Y (N) If electrical transmission lines, transformers, capacitors, or hydraulic equipment are present, is there any evidence of leakage or the presence of PCBs?

Description:

12. Y (N) Is there any evidence electric transmission lines, transformers, capacitors, or any hydraulic equipment (i.e., elevators, presses, lifts, doors, etc.) being present on the property in the past?

Description:

13. Y (N) Are there identified mercury containing materials (i.e., fluorescent lamps, button batteries, thermostats, thermometers, manometers, and other medical devices, pressure gauges, switches, relays, sink traps, and medical waste) on the site?

Description: NONE IDENTIFIED IN WORKSHOP

14. Y (N) Is there evidence of any pipelines, utility lines, railways, entry/exit ports, and associated structures, either buried or overhead, crossing the property, and is there evidence of any spills or releases associated with them?

Description:

Y N If yes, is there any evidence of any spills or releases associated with them?

Description:

15. (Y) N Are there structures (i.e., buildings, water towers, lead smelters, etc.) and/or soils surrounding structures on the site which might indicate the presence of lead in dust, old paint (peeling, chipping, chalking, or cracking lead-based paint) and/or which were built prior to 1978 (or of unknown construction dates)?

Description: WORKSHOP MAY CONTAIN LEAD-MATERIALS; HOWEVER, NO OBSERVED OR TESTED; NO PAINT OBSERVED ON WALLS/FLOORS

(Y) N If a structure is suspected to contain lead, is there any indication of what the intended use for the structure is or is it to be demolished?

Description: CURRENTLY STANDING BUT PROPOSED TO BE RAZED.

16. Y (N) Are there structures on the site containing identified asbestos-containing materials (ACMs) or with suspect ACMs (i.e., fire proofing, acoustical plaster, siding, floor tiles, roofing shingles, mastic, insulation, vermiculate, etc.)?

Description: CONCRETE FLOOR + NO INSULATION

17. Y (N) Are there floor drains present in any of the onsite structures and/or areas where hazardous materials are used and/or stored or have been used and/or stored in the past?

Description:

Y N In the areas with floor drains, is there evidence of any chemical stains present on the walls and/or floors of the onsite areas and structures where hazardous materials are/have been used and/or stored?

Description:

18. Y (N) Are there any floors, drains, ceiling, or walls stained by substances other than water or that are emitting foul and/or unnatural odors (i.e. mold, mildew, other)?

Description:

19. Y (N) Is there any evidence of any drains, pools, or sumps that contain liquids likely to be hazardous substances or petroleum products?
Description:

20. Y (N) If structures are present on the property, is there indication of how the structures are heated/cooled? If yes, describe the refrigeration/cooling systems and indicate whether they contain Freon and other regulated substances?
Description: WORKSHOP NOT COOLED; UNKNOWN HEATING ELEMENTS

WATER/WASTER WATER

1. (Y) N Is surface water present on the property (i.e. pits, ponds, lagoons, rivers, creeks, oceans, etc.)?
Description: DRAINAGE FROM OFFSITE LOG POND ENTERING SITE. WOLF CREEK IN NORTHERN BOUNDARY

Y (N) If yes, is there evidence that there has been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with current operations?
Description: WOLF CREEK NEAR TAILINGS, BUT BERMED + VEGETATED BETWEEN. BERM IN NORTH MADE OF ROCK + TAILINGS.

Y (N) If surface water is present (example pits, ponds, lagoons), is there evidence of any unnatural characteristics (i.e., color, sheens, odors, sterile, etc)?If known, indicate whether it is associated with an activity related to the property and whether it is the situation is new or has been present for an extended period of time.
Description:

Y (N) If surface water is present, is there evidence of hazardous materials dumping in water bodies (e.g. used for agricultural, commercial and/or industrial purposes, marinas, docks, etc.)?
Description:

2. Y (N) Is there evidence that the property currently or was previously served by an onsite drinking water supply well?If the well is no longer used, indicate whether it has been properly abandoned. If no, indicate whether the property is supplied by an offsite water source.
Description: NOT SUPPLIED BY OFFSITE WATER? NO WELLS OBSERVED. HOSE BIB OBSERVED IN FRONT OF WORK SHOP

Y N If a well is present on the property, is there evidence of any contamination of the water supply or of the nearby soils?
Description:

3. Y (N) Is there evidence that the property currently or was previously served by a non-potable water system (example, agricultural well)? If the well is no longer used, indicate whether it has been properly abandoned.
Description:

Y N If a non-potable well is present on the property, is there evidence of any contamination of the water supply or of the nearby soils?
Description:

4. Y (N) Is there evidence, other than storm water, of sanitary wastewater discharge from restrooms, kitchens, or other household-type uses? Is there evidence of industrial and/or other wastewater discharge on or adjacent to the property?
   # Description:

5. Y (N) Is there evidence that the property currently has or had in the past an onsite waste water treatment and disposal system (septic systems, sewage lagoons, etc.)?
   # Description:

   Y N If the onsite waste water treatment and disposal system is no longer in use, is there evidence that is has it been closed?
   # Description:

6. Y (N) Is there evidence that the property discharged waste water to an offsite facility?
   # Description:

   Y N Is there evidence of other wastewater treatment/disposal facilities (example oil water separators, ponds, pits, lagoons) located on the property that have or may have been used for waste disposal?
   # Description:

7. Y (N) Is there evidence of any other existent discharges, drains, grates, etc that have not been addressed previously?
   # Description:

WATER/WASTER WATER

1. Y (N) Is there any evidence that any monitoring wells have been installed on the property?
   # Description:

   Y N If the monitoring wells have been installed and are no longer in use, is there evidence that they been properly abandoned in accordance with applicable regulatory requirements?
   # Description:

2. (Y) N Is there evidence of stressed vegetation on the property (i.e., bare ground, distressed/dead vegetation, unusually healthy vegetation, etc.) that is not associated with insufficient or too much water?
   # Description: TAILING AREAS ARE GENERALLY BARREN W/ SPARCE VEGETATION

3. Y (N) Is there a large number or amount of invasive plants present on the property? If yes, please indicate common name if known (e.g., kudzu, phragmites, cheatgrass, etc.), and approximate amount if possible (e.g., approximately half an acre, etc.).
   # Description:

4. Y N Is there a large number or amount of invasive plants present on the property? If yes, please indicate common name if known (e.g., kudzu, phragmites, cheatgrass, etc.), and approximate amount if possible (e.g., approximately half an acre, etc.).
   # Description:

SURROUNDING PROPERTY USE

1. (Y) N As can be visually and/or physically observed from the periphery of the property, are there currently structures and improvements present on the surrounding property?
   # Description: COMMERCIAL BUILDINGS WEST, NORTH + EAST. SAW MILL TO EAST + STORAGE AREA DE SOUTH.
2. (Y) N As can be visually and/or physically observed from the periphery of the property, is there evidence that there were structures and improvements present on the surrounding property in the past?
   # Description: MING BUILDINGS FROM FORMER OPERATIONS STILL OCCUPIED.
3. (Y) N As can be visually and/or physically observed from the periphery of the property, is there evidence that current operations on the surrounding property involve the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?
   # Description: POSSIBLE TELEPHONE POLE STORAGE SE OF SITE POSSIBLY PCP, CREOSOTE, As OR Cr
4. (Y) N As can be visually and/or physically observed from the periphery of the property, is there evidence that past operations on the surrounding property involved the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?
   # Description: LOG POND MAY HAVE CONTAINED UNKNOWN SUBSTANCES.
5. (Y) N Is there evidence of any other nearby land uses or activities, especially upstream or upgradient that might have had a waste or dump site? For example, are there upstream or upgradient active or abandoned mine sites which may impact or threaten the subject real property?
   # Description: IDAHO-MARYLAND MINE AND MILL + EUREKA MING UPGRADIENT OF SITE. NO OBSERVED CURRENT IMPACTS
6. Y (N) Is there evidence of any hazardous substance, pollutant/contaminant spill or release, or other potential environmental problems on any adjacent or nearby properties?
   # Description:
7. (Y) N As can be visually and/or physically observed from the periphery of the property, is there evidence of any current or past agricultural drainage (surface, and/or subsurface drains, field runoff, etc.) discharging from the adjacent properties onto the property/site?
   # Description: LOG POND DRAINS THROUGH CULVERT ONTO SITE
8. Y (N) As can be visually and/or physically observed from the periphery of the property, is there any evidence of contamination (i.e., hazardous substances or petroleum products) or other materials (soil, rock, etc.) migrating from adjacent and/or nearby properties onto the property/site? If
   # Description:
9. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of oil and gas exploration/development on the adjacent and surrounding property?
   # Description:

Y N If yes, is there any evidence of oil and/or gas drilling pads, holding ponds, or conveyance pipelines and structures present on the adjacent and surrounding property?
Description:

10. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of current and/or past spills or releases of hazardous substances or pollutants, contaminants, or petroleum and petroleum products related to the oil and gas exploration/development?
Description:

11. (Y) N As can be visually and/or physically observed from the periphery of the property, is there any evidence of strip mining, hardrock mining, piles, or other extractive mineral activities on the adjacent and surrounding property?
Description: FORMER MINE BUILDINGS FROM HISTORICAL OPERATIONS

12. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of the use/storage or release of hazardous substances (for example, fuel storage tanks, cyanide or chemical use at mill sites) associated with the minerals extraction operations on adjacent and surrounding property?
Description: NOT VISUALLY BUT RECORDS INDICATE TAILINGS FORMERLY STORED HAD CYANIDE

13. (Y) N As can be visually and/or physically observed from the periphery of the property, describe and note the topographic conditions of the surrounding property as well as the general topography of the area.
Description: HILLY IN SMALL VALLEY GRADED TOWARD WOLF CREEK, MING FEATURES TO EAST @ HIGHER ELEVATION.

(Y) N As can be visually and/or physically observed from the periphery of the property, is there evidence of modified topography or unnatural topographic features on the surrounding property that may indicate (i.e., fill dirt brought onto property, cover for dumps, mounds, fill areas, depressions, etc.)?
Description: AREAS HAVE BEEN TERRACED FOR STRUCTURES + FLATTENED FOR SAW MILL OPERATIONS TO THE EAST

14. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of stressed vegetation on the surrounding property (i.e., bare ground, distressed/dead vegetation, unusually healthy vegetation, etc.) that is not associated with insufficient or too much water?
Description: LOG POND APPEARS FED BY SEEP

15. Y (N) As can be visually and/or physically observed from the periphery of the property, is there a large number or amount of invasive plants present on the surrounding property?
Description:

16. (Y) N Is there anything else observed that could indicate the presence of hazardous substances, petroleum products, or other potential environmental problems on the surrounding properties?
Description: TWO BURN AREAS WERE NOTED NEAR CENTER OF SITE. NO EVIDENCE OF HAZ OR SOLID WASTE BEING BURNED

SOLID WASTE, PHYSICAL HAZARDS, AND NON-SCOPE ISSUES

Solid Waste, Physical Hazards, and Non-Scope Issues identified during the inquiry will be described below, identified on the site map, and photographs taken and provided as an attachment. If none, so state.

Solid Waste: such as household garbage, tires, appliances, dead animals, abandoned automobiles, and similar items.

NON-OP PICK UP TRUCK, HOUSGHOLD TRASH (CLOTHES, MATTRESSES, TRANS OIL BUCKETS, PAINT CANS, AIR FILTER OIL, BEARING GREASE, WOOD SEALANT, MINI EXCAVATOR, ACETYLENE TANK, >30 TIRES, WATER TANK, PROPANE TANKS, VISQUEEN SHEETING, RUBBER MATTING, PALLETS METAL DEBRIS

Physical Hazards: human-caused environmental impacts such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features where the potential exists for injury to visitors ~~on the lands after acquisition is completed~~.

UNKNOWN CONDITION OF S IDAHO MINE SHAFT POSSIBLY COVERED BY TAILINGS. SOME ROADS NOT PASSIBLE.

Non-Scope Issues: such as asbestos-containing materials, radon, lead-based paint, drinking water systems, health and safety issues and similar items.

NO ACM OR LBP NOTED. NO WELLS + HOSE BIB CONNECTION UNKNOWN.

(Y) N	Are all identified issues logged on a GPS or marked on a map?

PROPERTY USES

1. (Y) N Are there currently structures and improvements present on the property?
   # 8 Description: THE MINE WASTE SILOS, MINE SHAFT (CONCRETE), PAVED AREAS, FENCING, IRRIGATION PIPING, LOG POND, CONCRETE SWALES, DIVERSION
2. (Y) N Is there evidence that there were structures and improvements present on the property in the past? PIPELINE + CATS
   # Description: FLAT AREAS AROUND SILOS AND ABOVE POND & FORMER SAWMILL, FLAT AREA FOR OLD RR., BROKEN PIPELINE, HEADFRAME CONCRETE
3. (Y) N Is there evidence of agricultural use (livestock, crop raising, agricultural drainage; including surface, and/or subsurface drains)? Is there evidence that there were structures and improvements present on the property in the past?
   # Description: DRAINS FOR LUMBER SPRAY DRAIN BACK INTO POND, ABOVE + BELOW GROUND
4. Y (N) Is there evidence of oil and gas exploration/development?
   # Description:

   Y N If yes, are oil and/or gas drilling pads, holding ponds, or conveyance pipelines and structures present on the property?
   # Description:

   Y N Is there evidence of current and/or past spills or releases of hazardous substances or pollutants, contaminants, or petroleum and petroleum products related to the oil and gas exploration/development?
   # Description:
5. (Y) N Is there any evidence of strip mining, hard rock mining, piles, or other extractive mineral activities?
   # Description: NEW BRUNSWICK, UNION HILL, UNKNOWN MINE W/ POSSIBLE SHAFT (DEPRESSION)

   Y (N) If minerals extraction operations are present, is there evidence of the use/storage or release of hazardous substances (example, fuel storage tanks, cyanide or chemical use at mill sites)?
   # Description: MINE + MILL HYDROELECTRIC POWERED, UNION HILL + UNKNOWN TOO OLD FOR FUEL. NO CYANIDE OPS.

   (Y) N If minerals extraction operations are present, are there other potential environmental concerns (draining adits or acid mine drainage, waste rock, or mill tailings in or adjacent to streams and surface waters, etc.)?
   # Description: MILL TAILING + WASTE ROCK SPREAD AS BASE FOR PAVED AREA.

   (Y) N If minerals extraction operations are present, are there physical safety hazards present (open adits, vertical shafts, heavy equipment, etc.)?
   # Description: NEW BRUNSWICK + UNION HILL HAS CONCRETE CAP ON SHAFT, UNKNOWN MINE HAS A DEPRESSION WHERE WATER DRAINS (SHAFT? COVER GONE)

   Y (N) If the areas of mineral extraction activities (mine sites, mill sites, etc) are not accessible for visual and/or physical inspection, describe the reason for the inaccessibility.
   MANY FEATURES ARE HISTORICAL OR REMOVED

6. (Y) N Describe and note the topographic conditions of the property as well as the general topography of the area surrounding the property that is visually and/or physically observed from the periphery of the property. Identify and locate on a property/site map any key topographic features that may relate to offsite or onsite migration of contaminants.
HILLS TO WEST, ROAD TO NORTH + EAST ABOVE SITE, POND IN CENTER OF SITE, S. FORK WOLF CREEK ON SE + NW PART OFSITE, GRASSLAND TO N.

(Y) N Is there evidence of modified topography or unnatural topographic features (i.e., fill dirt brought onto the property, cover for dumps, mounds, fill areas, depressions, etc.)?
Description: POND, FLAT AREAS (FILL W/ ROCK + TAIL), DRAINAGES, DEPRESSION @ UNKOWN MINE

7. (Y) N Is there any evidence of waste materials currently or previously being dumped above grade, buried, and/or burned on the property (i.e., dumps, industrial waste, petroleum products, labeled/unlabeled drums or other containers, pesticide containers, household and farm debris, automotive or industrial batteries, building demolition debris, etc.)?
Description: NEVADA CTY DROPOFF OF GREEN WASTE @ PAVED AREAS.

8. (Y) N Are there roads and/or paths present on the property?
Description: MILLSITE IS THE MAIN ROAD OTHER ACCESS ROADS THROUGHOUT PROPERTY

Y (N) If roads and/or paths are present, is there evidence of illegal or unauthorized dumping activities occurring?
Description: SITE USUALLY SECURED W/ GATES. RISE GOLD KEEPING CORES + CUTTING DRUMS ONSITE.

HAZARDOUS MATERIALS AND SUBSTANCES

1. Y (N) Is there evidence that current operations on the property involve the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, official and/or unofficial shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?
Description: NO OPERATING FACILITIES

Y N If yes, is there evidence that there has been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with current operations?
Description:

2. (Y) N Is there evidence that previous operations on the property involved the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, official and/or unofficial shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?
Description: PCP PRODUCTION + USE W/ SAWMILL; CLEANUP ACTION APPARENT W/ MANY EXCAVATIONS. AREAS OF OIL STORAGE EXCAVATED.

(Y) N If yes, is there evidence that there has been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with past operations or tenants?
Description: CONTAMINATED SOIL EXCAVATIONS + MWs AROUND SAWMILL + IRRIGATION SYSTEMS

3. Y (N) Is there evidence that the property is currently or was previously used for any form of illegal activities which may involve the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, illegal drug labs, waste disposal sites)?
   # Description: NOT OBSERVED

4. Y (N) Is there any evidence of contamination (i.e., hazardous substances or petroleum products) or other materials (soil, rock, etc.) migrating from adjacent and/or nearby properties onto the site?
   # Description: ROADS + HILLSIDES SEPARATE PROPERTY

5. (Y) N Is there evidence of use, storage, mixing, and/or disposal of industrial drums (typically 55 gallons) or sacks of chemicals, automotive or industrial batteries, pesticides (including herbicides), paints, solvents, or other chemicals in individual containers larger than 5 gallons in volume or 50 gallons in the aggregate at the property?
   # Description: DRUMS LABELED W/ ENVIRONMENTAL DRILL CUTTINGS + MW PURGE WATER. UNKNOWN CONTENTS. LABELED AS NON-HAZ + PENDING

6. (Y) N Are there any unidentified substance containers on the property? LG 250-GAL TANK OIL (EMPTY) ANALYSIS, DRUM OF OIL (55-GAL)
   # Description: 5-GAL DRILL MATERIALS

7. Y (N) Is there evidence of use of chemicals, automotive or industrial batteries, pesticides, herbicides, fungicides, paints, solvents, or other, on-fence lines, right of ways, airstrips, heliports, crop duster operations, etc.?
   # Description:

8. (Y) N Is there evidence of oiled roads, oil seeps and slicks, staining on the soil and cracked concrete, asphalt, adjacent to storm-water drains, or other surfaces?
   # Description: PAVED AREA IS CRACKED + OTHER ACCESS ROADS NEAR SAW MILL.

9. (Y) N Are there currently any aboveground or underground storage tanks on the property or indications of the presence of abandoned aboveground or underground storage tanks, such as any vent pipes, fill pipes, access ways indicating a fill pipe, concrete or asphalt pads or patches, islands, or dispensers on the property or adjacent to any structure on the property?
   # Description: 250-GAL UNION STANDARD OIL TANK - EMPTY, 55-GAL INDUSTRIAL OIL DRUM; 2 1,000-GAL WATER TANKS
   Y (N) If ASTs or USTs are present, is there any evidence of spill or releases?
   # Description: 55-GAL HALF FULL ON STAINING, 250-GAL NO STAINING

10. (Y) N Is there evidence or any indications that an aboveground or underground storage tank had been installed on the property in the past? For example, the presence of tank pads, vent pipes, fill pipes, access ways indicating a fill pipe, or dispensers on the property or adjacent to any structure on the property?
    # Description: 250-GAL LIKELY USED IN PAST
    Y (N) If ASTs or USTs are present, is there any evidence of spill or releases?
    # Description:

11. (Y) N Are there electric transmission lines, transformers, capacitors, or any hydraulic equipment (i.e., elevators, presses, lifts, doors, etc.) currently present on the property?
    # Description: POWERLINES ON N BOUNDARY; 1 SMALL TRANSFORMER NOTED
    Y (N) If electrical transmission lines, transformers, capacitors, or hydraulic equipment are present, is there any evidence of leakage or the presence of PCBs?

Description:

12. Y (N) Is there any evidence electric transmission lines, transformers, capacitors, or any hydraulic equipment (i.e., elevators, presses, lifts, doors, etc.) being present on the property in the past?

Description: MAY HAVE BEEN USED BUT NO EVIDENCE

13. (Y) N Are there identified mercury containing materials (i.e., fluorescent lamps, button batteries, thermostats, thermometers, manometers, and other medical devices, pressure gauges, switches, relays, sink traps, and medical waste) on the site?

Description: POSSIBLY IN TWO REFRIDGERATORS REMAINING ON SITE.

14. (Y) N Is there evidence of any pipelines, utility lines, railways, entry/exit ports, and associated structures, either buried or overhead, crossing the property, and is there evidence of any spills or releases associated with them?

Description: SOUTH FORK WOLF CREEK ENTERS DIVERSION PIPELINE + RUNS BEHANDATH SITE + EXITS WEST OF POND. OLD RR NOT FOUND EXCEPT FOR OLD TIMBER.

Y (N) If yes, is there any evidence of any spills or releases associated with them?

Description:

15. Y (N) Are there structures (i.e., buildings, water towers, lead smelters, etc.) and/or soils surrounding structures on the site which might indicate the presence of lead in dust, old paint (peeling, chipping, chalking, or cracking lead-based paint) and/or which were built prior to 1978 (or of unknown construction dates)?

Description: SILOS NOT PAINTED

Y N If a structure is suspected to contain lead, is there any indication of what the intended use for the structure is or is it to be demolished?

Description:

16. Y (N) Are there structures on the site containing identified asbestos-containing materials (ACMs) or with suspect ACMs (i.e., fire proofing, acoustical plaster, siding, floor tiles, roofing shingles, mastic, insulation, vermiculate, etc.)?

Description:

17. (Y) N Are there floor drains present in any of the onsite structures and/or areas where hazardous materials are used and/or stored or have been used and/or stored in the past?

Description: DRAINS + SWALES ROUTED WATER OVERFLOW BACK INTO POND AROUND SAWMILL

Y (N) In the areas with floor drains, is there evidence of any chemical stains present on the walls and/or floors of the onsite areas and structures where hazardous materials are/have been used and/or stored?

Description:

18. Y (N) Are there any floors, drains, ceiling, or walls stained by substances other than water or that are emitting foul and/or unnatural odors (i.e. mold, mildew, other)?

Description:

19. Y (N) Is there any evidence of any drains, pools, or sumps that contain liquids likely to be hazardous substances or petroleum products?
    # Description:

20. Y (N) If structures are present on the property, is there indication of how the structures are heated/cooled? If yes, describe the refrigeration/cooling systems and indicate whether they contain Freon and other regulated substances?
    # Description:

WATER/WASTER WATER

1. (Y) N Is surface water present on the property (i.e. pits, ponds, lagoons, rivers, creeks, oceans, etc.)?
   # Description: LOG POND FOR LUMBER SPRAYING, S. FORK WALKER CREEK FLOWS ABOVEGROUND + IN DIVERSION PIPELING.

   Y (N) If yes, is there evidence that there has been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with current operations?
   # Description:

   Y (N) If surface water is present (example pits, ponds, lagoons), is there evidence of any unnatural characteristics (i.e., color, sheens, odors, sterile, etc)?If known, indicate whether it is associated with an activity related to the property and whether it is the situation is new or has been present for an extended period of time.
   # Description: CREEK HAS NATURAL IRON PRECIPITATE

   Y (N) If surface water is present, is there evidence of hazardous materials dumping in water bodies (e.g. used for agricultural, commercial and/or industrial purposes, marinas, docks, etc.)?
   # Description:

2. Y (N) Is there evidence that the property currently or was previously served by an onsite drinking water supply well?If the well is no longer used, indicate whether it has been properly abandoned. If no, indicate whether the property is supplied by an offsite water source.
   # Description: FIRE HYDRANTS ARE IN THE EASTERN PORTION OF THE SITE. OBSERVED WELLS APPEAR TO BE FOR MONITORING

   Y (N) If a well is present on the property, is there evidence of any contamination of the water supply or of the nearby soils?
   # Description: NONE OBSERVED

3. (Y) N Is there evidence that the property currently or was previously served by a non-potable water system (example, agricultural well)? If the well is no longer used, indicate whether it has been properly abandoned.
   # Description: FIRE HYDRANTS AS STATED ABOVE

   Y (N) If a non-potable well is present on the property, is there evidence of any contamination of the water supply or of the nearby soils?
   # Description:

4. Y (N) Is there evidence, other than storm water, of sanitary wastewater discharge from restrooms, kitchens, or other household-type uses? Is there evidence of industrial and/or other wastewater discharge on or adjacent to the property?
   # Description: NONG OBSERVED

5. Y (N) Is there evidence that the property currently has or had in the past an onsite waste water treatment and disposal system (septic systems, sewage lagoons, etc.)?
   # Description: NONE OBSERVED

   Y N If the onsite waste water treatment and disposal system is no longer in use, is there evidence that is has it been closed?
   # Description:

6. Y (N) Is there evidence that the property discharged waste water to an offsite facility?
   # Description:

   Y N Is there evidence of other wastewater treatment/disposal facilities (example oil water separators, ponds, pits, lagoons) located on the property that have or may have been used for waste disposal?
   # Description:

7. Y (N) Is there evidence of any other existent discharges, drains, grates, etc that have not been addressed previously?
   # Description:

WATER/WASTER WATER

1. (Y) N Is there any evidence that any monitoring wells have been installed on the property?
   # Description: TWO OBSERVED 2" PVC ("MW-3" + ANOTHER) UPHILL MW @19' BGS W/6' WATER.

   Y (N) If the monitoring wells have been installed and are no longer in use, is there evidence that they been properly abandoned in accordance with applicable regulatory requirements?
   # Description: NO DOCUMENTATION OR SEALING OBSERVED, "MW-3" CANNOT REMOVE CAP.

2. (Y) N Is there evidence of stressed vegetation on the property (i.e., bare ground, distressed/dead vegetation, unusually healthy vegetation, etc.) that is not associated with insufficient or too much water?
   # Description: GRASSLAND N.OF POND. THICK VEGETATION MANY AREAS OVER GROWN, WASTE ROCK DISPERSED AREAS HAVE LITTLE VEG.

3. Y (N) Is there a large number or amount of invasive plants present on the property? If yes, please indicate common name if known (e.g., kudzu, phragmites, cheatgrass, etc.), and approximate amount if possible (e.g., approximately half an acre, etc.).
   # Description:

~~4. Y N~~ Is there a large number or amount of invasive plants present on the property? If yes, please indicate common name if known (e.g., kudzu, phragmites, cheatgrass, etc.), and approximate amount if possible (e.g., approximately half an acre, etc.).
   # Description:

SURROUNDING PROPERTY USE

1. (Y) N As can be visually and/or physically observed from the periphery of the property, are there currently structures and improvements present on the surrounding property?
   # Description: N. OF SITE ON E. BENETT ARE HOUSES

2. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence that there were structures and improvements present on the surrounding property in the past?
   # Description:

3. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence that current operations on the surrounding property involve the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?
   # Description:

4. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence that past operations on the surrounding property involved the processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products (for example, shooting ranges, gasoline station, equipment/vehicle repair, printing facility, dry cleaners, photo developing laboratory, analytical laboratory, junkyard, boneyard, landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)?
   # Description:

5. Y (N) Is there evidence of any other nearby land uses or activities, especially upstream or upgradient that might have had a waste or dump site? For example, are there upstream or upgradient active or abandoned mine sites which may impact or threaten the subject real property?
   # Description: NONE OBSERVED

6. Y (N) Is there evidence of any hazardous substance, pollutant/contaminant spill or release, or other potential environmental problems on any adjacent or nearby properties?
   # Description:

7. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of any current or past agricultural drainage (surface, and/or subsurface drains, field runoff, etc.) discharging from the adjacent properties onto the property/site?
   # Description:

8. Y (N) As can be visually and/or physically observed from the periphery of the property, is there any evidence of contamination (i.e., hazardous substances or petroleum products) or other materials (soil, rock, etc.) migrating from adjacent and/or nearby properties onto the property/site? If
   # Description:

9. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of oil and gas exploration/development on the adjacent and surrounding property?
   # Description:

Y N If yes, is there any evidence of oil and/or gas drilling pads, holding ponds, or conveyance pipelines and structures present on the adjacent and surrounding property?
Description:

10. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of current and/or past spills or releases of hazardous substances or pollutants, contaminants, or petroleum and petroleum products related to the oil and gas exploration/development?
Description:

11. Y (N) As can be visually and/or physically observed from the periphery of the property, is there any evidence of strip mining, hardrock mining, piles, or other extractive mineral activities on the adjacent and surrounding property?
Description: RECORDS INDICATE FORMER MINES BUT NONE OBSERVED

12. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of the use/storage or release of hazardous substances (for example, fuel storage tanks, cyanide or chemical use at mill sites) associated with the minerals extraction operations on adjacent and surrounding property?
Description:

13. (Y) N As can be visually and/or physically observed from the periphery of the property, describe and note the topographic conditions of the surrounding property as well as the general topography of the area.
Description: HILLY TRENDING TOWARD THE SITE

(Y) N As can be visually and/or physically observed from the periphery of the property, is there evidence of modified topography or unnatural topographic features on the surrounding property that may indicate (i.e., fill dirt brought onto property, cover for dumps, mounds, fill areas, depressions, etc.)?
Description: ROADS HAVE BEEN GRADED + HOUSE DEVELOPMENTS HAVE BEEN TERRACED

14. Y (N) As can be visually and/or physically observed from the periphery of the property, is there evidence of stressed vegetation on the surrounding property (i.e., bare ground, distressed/dead vegetation, unusually healthy vegetation, etc.) that is not associated with insufficient or too much water?
Description:

15. Y (N) As can be visually and/or physically observed from the periphery of the property, is there a large number or amount of invasive plants present on the surrounding property?
Description:

16. Y N Is there anything else observed that could indicate the presence of hazardous substances, petroleum products, or other potential environmental problems on the surrounding properties?
Description:

SOLID WASTE, PHYSICAL HAZARDS, AND NON-SCOPE ISSUES

Solid Waste, Physical Hazards, and Non-Scope Issues identified during the inquiry will be described below, identified on the site map, and photographs taken and provided as an attachment. If none, so state.

Solid Waste: such as household garbage, tires, appliances, dead animals, abandoned automobiles, and similar items.

~4 DRUMS (EMPTY + FULL W/CUTTINGS OR OIL), 2 REFRIGERATORS, ~~[illegible]~~ TIRES, ROCK CORE BOXES, PIPING, HOSES, DRILL ROD, OPEN IRRIGATION PIPES, SPRAY PAINT CANS, OPEN WELLS, ANGLE BORING ROD STICKING OUT OF GROUND, EXCAVATION DEPRESSIONS, METAL DEBRIS, MATTRESS

Physical Hazards: human-caused environmental impacts such as mine shafts, high walls, unsafe bridges, primitive roads, or similar features where the potential exists for injury to visitors on the lands after acquisition is completed.

2 KNOWN MINE SHAFTS @ UNION HILL + NEW BRUNSWICK. 1 SUSPECTED SHAFT IN DEPRESSION. END OF PROPERTY. DOCK @ POND OPEN + POTENTIAL HAZARD.

Non-Scope Issues: such as asbestos-containing materials, radon, lead-based paint, drinking water systems, health and safety issues and similar items.

IRRIGATION PIPING OPEN.

(Y) N	Are all identified issues logged on a GPS or marked on a map?

FILE COPY

20 December 2006

Mr. Bob Ellery
Sierra Pacific Industries, Inc.
P.O. Box 496014
Redding, CA 96049-6014

NO FURTHER ACTION DETERMINATION, BRUNSWICK GRASS VALLEY MILL, 12503 BRUNSWICK ROAD, GRASS VALLEY, SIERRA PACIFIC INDUSTRIES, NEVADA COUNTY

Sierra Pacific Industries has completed well destruction of all monitoring wells at the Brunswick Grass Valley Mill and filed a covenant with the Nevada County Assessor's Office restricting use of groundwater as required in a 18 July 2006 letter from the Central Valley Regional Water Quality Control Board (Regional Water Board). Regional Water Board staff concur with Sierra Pacific Industries that all volatile organic compounds (VOCs) remaining in groundwater do not pose a risk to human health, the environment or waters of the State. Remaining VOCs show a downward trend and should reach nondetectable concentrations by 2015.

Sierra Pacific Industries removed volatile organic compounds from the source area next to a former solvent storage by excavation of approximately 200 cubic yards of contaminated soil in 1992. In a letter dated 21 September 1994, Regional Board staff concurred that the source removal was completed satisfactorily.

Currently three VOCs remain detectable in groundwater: 1,1 dichloroethane; 1,1 dichloroethylene; and 1,1,1 trichloroethane. The current concentrations of these VOCs are: 10 ug/L, 1.3 ug/L, and 1.1 ug/L respectively. All VOC concentrations show a decreasing trend as shown in the attached figures labeled MW-1, MW-4 and MW-5. Current concentrations of VOCs are below their respective maximum contaminant levels with the exception of, 1,1 dichloroethane, detected at 10 ug/L, which is above its maximum contaminant level of 5 ug/L. Concentrations of 1,1 dichlorethane in groundwater have decreased from a high of 116 ug/L in 1994. The area of known pollution is less than 150 feet in diameter. Since a small area of groundwater has 1,1-dichloroethane at concentrations above the MCL, Regional Water Board staff requested that Sierra Pacific Industries file a covenant restricting use of groundwater with the Nevada County Assessor's Office.

Sierra Pacific Industries has satisfactorily completed site investigation and remedial actions, filed a Land Use Covenant with the Nevada County Assessor's Office and submitted proof of monitoring well destruction for the Brunswick Grass Valley Mill site. Therefore, no further action is required.

APPENDIX G

INTERVIEWS – SITE SURVEY QUESTIONNAIRES

Questionnaire for Interview

Liability Survey

The All Appropriate Inquiry (AAI) Rule requires that interviews be conducted of the current owner and occupant of the subject property. This worksheet is intended to assist with completion of the Interview portion of the All Appropriate Inquiries land acquisition screening. While it is intended as a useful guide, it is not all inclusive and does not meet all the requirements for CERCLA defenses. If the property has multiple occupants, the inquiry of the environmental professional must include interviewing major occupants, as well as those occupants likely to use, store, treat, handle, or dispose of hazardous substances, pollutants, contaminants, petroleum and petroleum products, and controlled substances, or those occupants who have likely done so in the past. This includes interviewing one or more of the following persons:

- Current and past facility managers with relevant knowledge of uses and physical characteristics of the property
- Past owners, occupants, or operators of the subject property
- Employees of current and past occupants of the subject property

Name of person being interviewed:

Benjamin Mossman

(If by phone, provide phone number)

Affiliation with Subject Real Property:

President of Rise Grass Valley Inc. (owner of property)

Owner/operator/caretaker/previous owner/neighbor, etc.)

President of property owner

Time frame affiliated with Subject Real Property:

2017 to present

Name of person conducting interview:

Signature and Title of person conducting interview:

Date(s) of interview

June 16th 2020

Note: This form may be mailed to the person(s) to be interviewed. Request a written response to the questions.

Questionnaire for Interview

Liability Survey

"To the Best of Your Knowledge…"

A. Property Use/s

1. Is the property currently or was it previously used for an industrial or commercial use (i.e. official and unofficial shooting ranges, processing, handling, management, disposal, storage, manufacture, or transportation of hazardous substances or petroleum products, such as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, meth lab, junkyard, boneyard, or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility)? If yes, describe the activities and provide the time frame, types, location(s), and quantities of hazardous substance use and/or storage.

Yes ■ No ☐ Unknown ☐ N/A☐

Centennial Site used for mine tailings and waste rock storage from Idaho-Maryland Mine up to 1956

Centennial Site used for small scale saw milling up to 2019 (Hap Warnke Mill)

Brunswick Site used for Gold mining and gold processing up to 1956 and saw milling to 1990

Has there been any past, present, or permitted or planned mining activity or oil and gas exploration/development present on the property? If yes, describe the activities and provide the time frame, location(s), and scope of operations.

Yes ☐ No ■ Unknown ☐ N/A☐

2. Has the property ever been used for agricultural, livestock, or crop purposes? If yes, describe the operations and indicate the location(s) and time frames involved.

Yes ☐ No ■ Unknown ☐ N/A☐

If yes, was hazardous substance use and/or storage involved in the operations (example, pesticide/herbicide use, cattle dip vats)? If yes, describe and provide location(s) and the type, quantity, and duration of use.

Yes ☐ No ☐ Unknown ☐ N/A■

4. Are there or have there been any improvements, such as old building foundations, buildings, water towers, smokestacks, smelters, etc., on the property? If yes, describe the improvements and provide location(s) and the date of construction and removal (if applicable).

Yes ■ No ☐ Unknown ☐ N/A☐

Small metal building at the Centennial Site from Hap Warnke Mill

Brunswick site previously had numerous buildings associated with gold mining

Brunswick site previously had numerous buildings associate with lumber milling.

5. Other Questions as necessary based on the records review:

B. Hazardous Materials & Substances

1. Do the current operations at/on the property involve the use and storage of hazardous materials and substances? If yes, please describe the operations and indicate the location(s), type, and quantities of materials used. Describe the storage location(s) and if any chemical mixing (example, pesticide blending) operations occur. Discuss any use, storage, mixing, or disposal of chemicals, automotive or industrial batteries, pesticides, herbicides, fungicides, paints, solvents, or other on fence lines, right of ways, or other structures such as airstrips, heliports, crop duster operations, etc.

Yes ☐ No ■ Unknown ☐ N/A☐

If yes, has there been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with current operations? If yes, describe the nature and location(s) of the release and the quantities and types of hazardous substances. This includes staining of soils and floors in areas utilized for the use and storage of hazardous materials.

Yes ☐ No ■ Unknown ☐ N/A☐

2. If a spill or release of hazardous substances or petroleum products had occurred, was it reported to the National Response Center or a local or state emergency response authority? If yes, identify the agency.

Yes ☐ No ☐ Unknown ☐ N/A■

If a spill or release of hazardous substances or petroleum products has occurred, has the release been mitigated? If yes, describe the mitigation, identify the regulatory agency that oversaw the mitigation, and indicate if a no-further action (NFA) determination has been issued by the lead regulatory agency.

Yes ☐ No ☐ Unknown ☐ N/A■

If remediation is completed, is there contamination or residual contamination present? If yes, are there any institutional controls/land use restrictions in place or long-term monitoring and maintenance requirements?

Yes ☐ No ☐ Unknown ☐ N/A■

2. Are there any past operations at the property that involved the use and storage of hazardous materials and substances? If yes, describe the operations and the location(s), types and quantities.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If yes, has there been a spill or release of hazardous substances, petroleum products, or other potential environmental problems on the property associated with past operations or tenants? If yes, describe the nature and location(s) of the release and the quantities and types of hazardous substances.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If a spill or release of hazardous substances or petroleum products occurred, was it reported to the National Response Center or a local or state emergency response authority? If yes, identify the agency.

Yes ☐ No ☐ Unknown ■ N/A☐

If a release of hazardous substances or petroleum products occurred, was the release mitigated? If yes, describe the mitigation, identify the regulatory agency who oversaw the mitigation, and indicate if a no- further action (NFA) determination was been issued by the lead regulatory agency.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If remediation is completed, is there still contamination or residual contamination present? If yes, are there any institutional controls/land use restrictions in place or long-term monitoring and maintenance requirements?

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

3. Are there or have there ever been any pipelines, utility lines, railways, or entry/exit ports and associated structures, either buried or overhead, crossing the property? If yes, please describe and indicate the location(s), approximate date when constructed, and the identification of the owner.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If yes, are you aware of any spills or releases associated with them? If yes, please describe the spills and/or releases and indicate the date, type and quantities of materials involved.

Yes ☐ No ☐ Unknown ■ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If a spill or release has occurred, are you aware if the release has been mitigated? If yes, please indicate who conducted the mitigation and identify the regulatory agency who oversaw the mitigation. If known, indicate if a no-further action (NFA) determination was been issued by the lead regulatory agency.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If remediation is completed, are you aware if there is still contamination or residual contamination present? If yes, are there any institutional controls/land use restrictions in place or long-term monitoring and maintenance requirements?

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

4. Are you aware of any hazardous substance or pollutant or contaminant spill or release, or other potential environmental problems on any adjacent or nearby properties? If yes, please describe (if known) the location(s) of the release, the type, and quantities of materials involved and the approximate dates. If known, also indicate the owner of the property where the release occurred.

Yes ☐ No ■ Unknown ☐ N/A☐

If there was a release of hazardous substances or petroleum products on any adjacent or nearby properties, are you aware if the release was mitigated?

Yes ☐ No ■ Unknown ☐ N/A☐

6. Are you aware if there is contamination present or residual contamination present on adjacent and/or nearby properties that poses a threat or may pose a future threat to the subject real property? If yes, describe the threat or potential threat.

Yes ☐ No ■ Unknown ☐ N/A☐

7. Are you aware of any institutional controls/land use restrictions in place or long-term monitoring and maintenance requirements in place on adjacent or nearby properties that affect the subject real property? If yes, please describe and identify the adjacent or nearby property and the property owner.

Yes ☐ No ■ Unknown ☐ N/A☐

8. Are you aware if the site topography has been altered and/or if there are any unnatural topographic features present on the subject real property? If yes, please describe the topographic alterations and/or unnatural features. Indicate their location(s) on the subject real property and if known when the alterations occurred and by whom.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

9. Has fill material ever been brought onto the property that originated from a contaminated site or that was of an unknown origin? If yes, describe the date and quantity of material brought to the subject real property, indicate when on the property the material was placed.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If fill material came from a contaminated site, identify the contaminated origin site of the material and describe the contamination present.

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

10. Is there any evidence of waste materials currently or previously being dumped above grade, buried, and/or burned on the property (i.e. hazardous materials, industrial waste, petroleum products, labeled/unlabeled drums or other containers, pesticide containers, household and farm debris, automotive or industrial batteries, building demolition debris, or any other waste materials)?

Yes ☐ No ☐ Unknown ■ N/A☐

11. Are any aboveground or underground storage tanks being or have been used on the property? If yes, identify where on the property the tanks are/were located, when the tanks were installed, and the types and quantities of hazardous materials stored. If the tanks were removed, indicate when the removal took place and whether a closure certification notice was received by the lead regulatory agency.

Yes ☐ No ☐ Unknown ■ N/A☐

If aboveground or underground storage tanks are or have been used on the property, was there ever a spill or release of hazardous substances associated with the tank system? If yes, indicate the date and nature of the spill or release.

Yes ☐ No ☐ Unknown ■ N/A☐

If a spill or release has occurred related to an onsite tank system, was it mitigated to the satisfaction of the lead regulatory agency? If no, describe further actions that must be undertaken to address the spill or release.

Yes ☐ No ☐ Unknown ■ N/A☐

12. Other questions as necessary based on the records review:

C. Water/Waste Water

1. Does the property currently or has it ever been supplied by an onsite drinking water supply well? If yes, provide the location(s) of the well and date of construction.

Yes ☐ No ☐ Unknown ■ N/A☐

2. Have contaminants ever been identified in the onsite drinking water well or the water system that exceeded acceptable levels? If yes, describe the contamination and indicate the dates, contaminant levels, and the source of the contamination, if known.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Phase I/II study for Brunswick Site - NV5

If an onsite drinking water well is no longer used, has it been properly abandoned in accordance with applicable regulatory requirements? If, yes, indicate the date the well was abandoned.

Yes ☐ No ☐ Unknown ■ N/A☐

2. Does the property currently have or has there ever been an onsite waste water treatment and disposal systems (septic systems, sewage lagoons, etc.)? If yes, please provide a description of the system, including the location(s), size, date constructed, and which buildings discharge to the system.

Yes ☐ No ☐ Unknown ■ N/A☐

If the onsite waste water treatment and disposal system is no longer in use, has it been closed? If yes, describe method of closure and date closed.

Yes ☐ No ☐ Unknown ■ N/A☐

3. Have any monitoring wells been installed on the property? If yes, explain the purpose of the wells and provide the location(s), dates of construction, and any analytical results.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Phase I/II study for Brunswick Site - NV5

If the monitoring wells are no longer in use, have they been properly abandoned in accordance with applicable regulatory requirements? If, yes, indicate the date the wells were abandoned.

Yes ☐ No ☐ Unknown ■ N/A☐

Refer to Phase I/II study for Brunswick Site - NV5

4. Is surface water present on the property (i.e. pits, ponds, lagoons, rivers, creeks, oceans, etc.)? If yes, provide a description of the location(s) and type of surface water present.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

If surface water is present, are you aware of any unnatural characteristics (i.e., color, sheens, odors, sterile, etc.)? If yes, please describe and indicate whether the situation is new or has been present for an extended period of time.

Yes ☐ No ■ Unknown ☐ N/A☐

5. Other questions as necessary based on the records review:

D. Compliance/Permits

1. Are you aware of any environmental liens against the subject real property that have been filed or recorded under Federal, tribal, state, or local law? If yes, describe the lien and indicate the date and effect on the current and future use of the property.

Yes ☐ No ■ Unknown ☐ N/A☐

2. Are you aware of any activity and land use limitations that are in place on the subject real property or that have been filed or recorded under Federal, tribal, state, or local law? If yes, describe the land use restrictions and identify when they were issued and by whom.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Phase I/II study for Brunswick Site - NV5

3. Are you aware if any environmental site assessment or other environmental investigations of the subject real property or any other property/site records that indicated the presence of hazardous substances, petroleum products, or other potential environmental problems on the property? If yes, describe the report and findings.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

Are you aware if any environmental site assessment or other environmental investigations of the subject real property or any other property/site records that recommended further assessment of the property? If yes, identify the report and indicate if the further assessment was performed.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

4. Are you aware of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substances or petroleum products on the subject real property? If yes, describe and identify when and by whom the legal and/or administrative action was initiated.

Yes ■ No ☐ Unknown ☐ N/A☐

Refer to Preliminary Endangerment Assessment for Centennial Site - NV5

Refer to Phase I/II study for Brunswick Site - NV5

6. Have there ever been spills of hazardous substances or petroleum products that were reported to the National Response Center or a local or state emergency response authority?

Yes ☐ No ☐ Unknown ■ N/A☐

7. Other questions as necessary based on the records review:

E. Other

1. Are you aware of the presence of or has there been any anomalous vegetation (i.e. stressed, dead, etc.) present on the property? If yes, indicate the location(s) and approximate dates.

Yes ☐ No ■ Unknown ☐ N/A☐

2. If not mentioned above, is there anything else that could indicate the presence of hazardous substances, petroleum products, or other environmental conditions that may impact the subject real property?

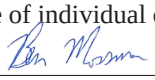

Yes ☐ No ■ Unknown ☐ N/A☐

If the questionnaire is provided to the owner/operator, provide a signature block. Following is a suggested format:

Name of individual completing Questionnaire:

Benjamin Mossman

Signature of individual completing Questionnaire:

Affiliation with Subject Real Property:

President - Rise Grass Valley Inc.

(Owner/operator/caretaker/previous owner/neighbor, etc.)

Time frame affiliated with Subject Real Property:

2017 to present

Date Signed: June 15th 2016
