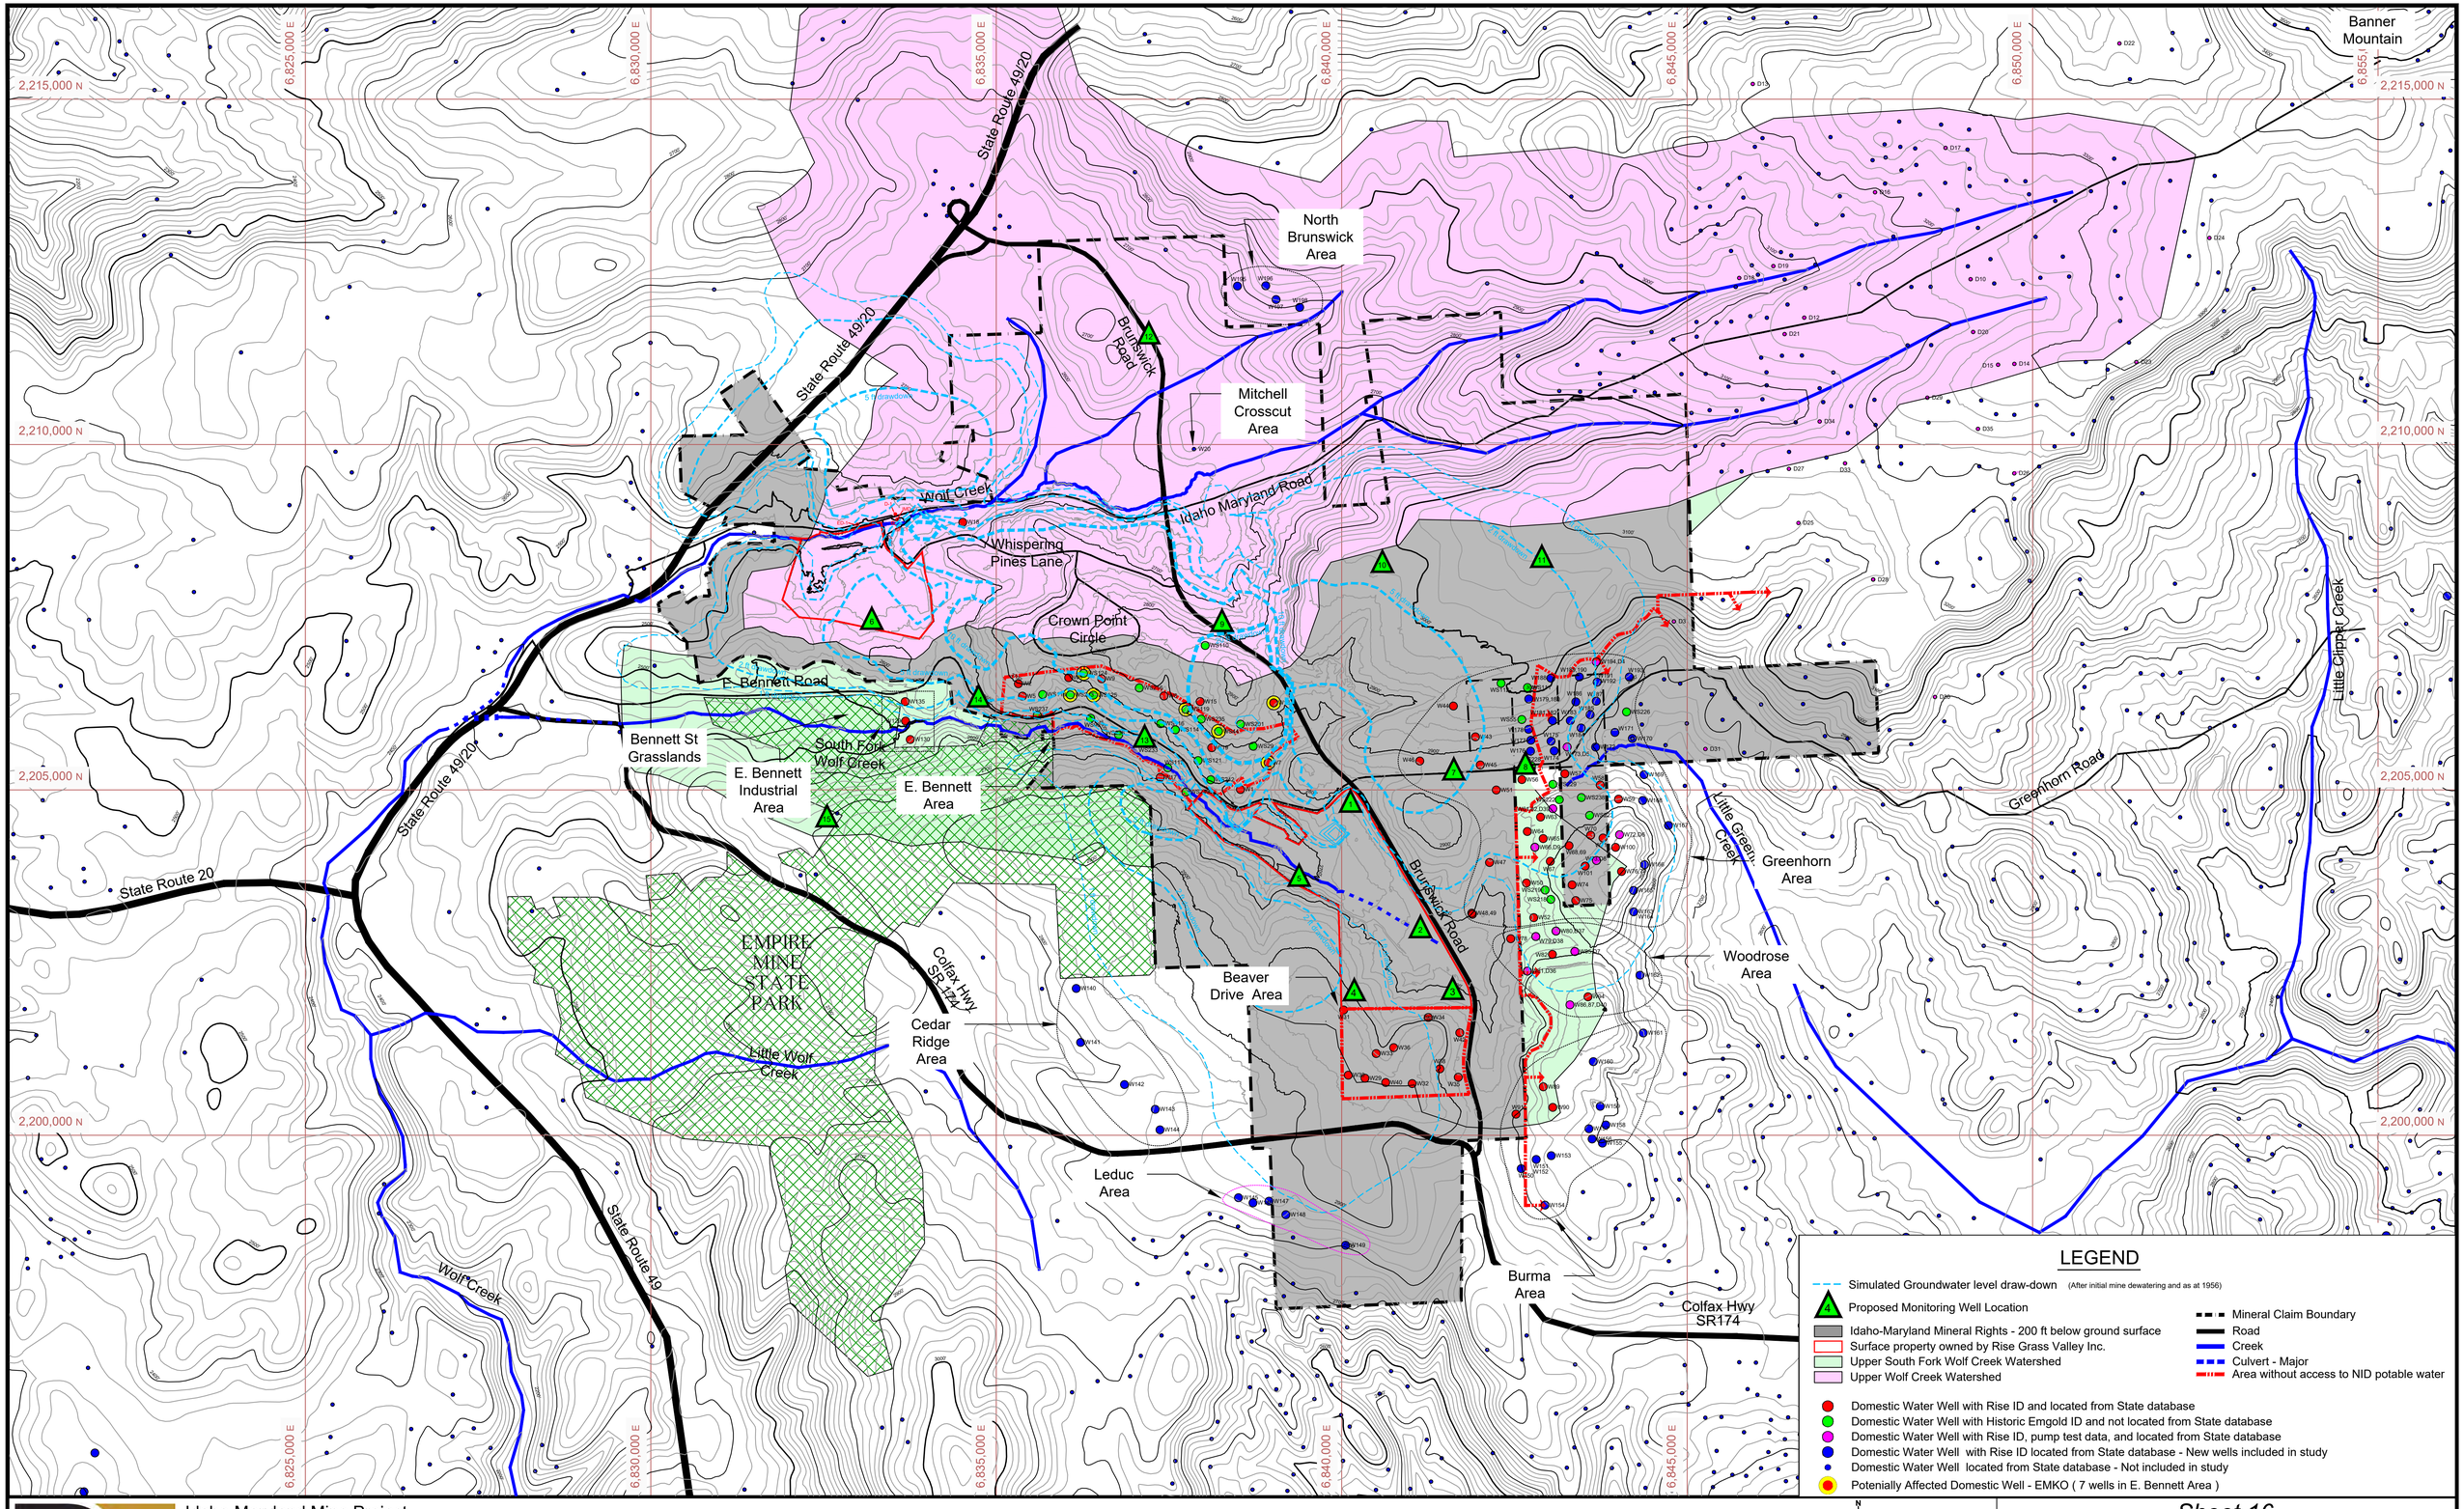
Appendix L



LEGEND

- Simulated Groundwater level draw-down (After initial mine dewatering and as at 1956)
- Proposed Monitoring Well Location
- Idaho-Maryland Mineral Rights - 200 ft below ground surface
- Surface property owned by Rise Grass Valley Inc.
- Upper South Fork Wolf Creek Watershed
- Upper Wolf Creek Watershed
- Mineral Claim Boundary
- Road
- Creek
- Culvert - Major
- Area without access to NID potable water
- Domestic Water Well with Rise ID and located from State database
- Domestic Water Well with Historic Emgold ID and not located from State database
- Domestic Water Well with Rise ID, pump test data, and located from State database
- Domestic Water Well with Rise ID located from State database - New wells included in study
- Domestic Water Well located from State database - Not included in study
- Potenially Affected Domestic Well - EMKO (7 wells in E. Bennett Area)

MEMORANDUM

To:	Ben Mossman, Rise Grass Valley, Inc.
From:	Matthew Morales, Dudek
Subject:	Idaho-Maryland Mine Project Energy Demand Estimates
Date:	May 26, 2022
cc:	
Attachment A:	

This memorandum estimates and presents the energy demand of the Idaho-Maryland Mine Project (Project) based on the information provided in the EIR, Appendix E.1.

1 Energy Demand Estimates

1.1 Petroleum

Project construction and operations would consume energy in the form of petroleum-based fuels associated with the use of off-road equipment, worker/ or employee vehicles, haul/ material transport trucks, and routine testing and maintenance of the emergency generators. Fuel consumption from off-road equipment, vehicles, and generator testing was estimated by converting the total carbon dioxide (CO_2) emissions from these sources (as provided in Appendix E.1 of the EIR) for each construction and operational phase to gallons using the conversion factors for CO_2 to gallons of gasoline or diesel. The conversion factor for gasoline is 8.78 kilograms per metric ton CO_2 per gallon, and the conversion factor for diesel is 10.21 kilograms per metric ton CO_2 per gallon (The Climate Registry 2021). For the calculation, it was assumed that the off-road equipment that would directly generate CO_2 (i.e., not the electrically powered equipment, which was included in the electricity estimate in Section 1.2 below), as well as all trucks and emergency generators for the Project construction and operations, would be diesel fueled. Construction worker and employee vehicles were assumed to be gasoline fueled. The estimated petroleum usage for the Project is shown in Table 1.

Table 1. Project Petroleum Demand

Emission Source	CO_2 (MT/year)	kg CO_2/gallon	Gallons/year
Year 2021 – Construction/Dewatering			
Emergency Generators (Diesel)	301.76	10.21	29,555.34
Off-Road Equipment (Diesel)	1,029.94	10.21	100,875.61
On-Road Vehicles – Off-Site Trucks (Diesel)	310.12	10.21	30,373.74

Table 1. Project Petroleum Demand

Emission Source	CO_2 (MT/year)	kg CO_2/gallon	Gallons/year
On-Road Vehicles – Off-Site Workers (Gasoline)	186.24	8.78	21,211.47
On-Road Vehicles – On-Site Trucks (Diesel)	9.18	10.21	899.02
On-Road Vehicles – On-Site Workers (Gasoline)	2.43	8.78	276.70
		Year 2021 - Total Diesel Gallons	**161,703.70**
		Year 2021 - Total Gasoline Gallons	**21,488.17**
Year 2022 to 2026 – Mining, Brunswick Industrial Site Operations, Fill Placement at Centennial			
Emergency Generators (Diesel)	603.53	10.21	59,111.66
Off-Road Equipment (Diesel)	721.54	10.21	70,669.93
On-Road Vehicles – Off-Site Trucks (Diesel)	360.59	10.21	35,317.59
On-Road Vehicles – Off-Site Employees (Gasoline)	540.02	8.78	61,505.90
On-Road Vehicles – On-Site Trucks (Diesel)	63.11	10.21	6,181.37

		Annual Gasoline (gal/year)	*45,467.76*
		Year 2033 to 2102 - Total Diesel Gallons	**25,041,907.23**
		Year 2033 to 2102 - Total Gasoline Gallons	**3,182,743.10**
Year 2103 – Reclamation			
Off-Road Equipment (Diesel)	25.86	10.21	2,532.81
On-Road Vehicles – Off-Site Trucks (Diesel)	14.60	10.21	1,430.22
On-Road Vehicles – Off-Site Workers (Gasoline)	5.01	8.78	570.36
		Year 2103 - Total Diesel Gallons	**3,963.03**
		Year 2103 - Total Gasoline Gallons	**570.36**
Total Project			
		Total Diesel Gallons for Entire Project	*27,024,578.36*
		Total Gasoline Gallons for Entire Project	*3,833,919.79*
		Total Petroleum Demand (Gallons) for Entire Project	**30,858,498.14**

Sources: EIR Appendix E.1; The Climate Registry (2021)
Notes: CO_2 = carbon dioxide; MT = metric ton; kg = kilogram.

1.2 Electricity

Implementation of the Project would result in the consumption of electricity resources during construction and operations. Off-road equipment (such as graders, excavators, cranes, et.) and stationary generators would generally be powered by diesel; however, some equipment, such as boring machines, air compressors, locomotives, pumps, and ventilation equipment would be electrically powered. Electricity would also be required for the ore processing facility, water treatment, and surface buildings. The estimated electricity usage for the Project is based on the EIR, Appendix E.1, and is summarized in Table 2.

Table 2. Project Electricity Demand

Utility	Megawatt-hours/ year
Year 2021 – Construction/Dewatering	

PG&E Supplied Electricity	16,512.95
Year 2021 - Total Electricity	**16,512.95**
Year 2022 to 2026 – Mining, Brunswick Industrial Site Operations, Fill Placement at Centennial	
PG&E Supplied Electricity	49,612.82
Year 2022 to 2026 - Total Electricity (MWh)	**248,064.12**
Year 2027 to 2032 – Mining, Brunswick Industrial Site Operations, Fill Placement at Brunswick	
PG&E Supplied Electricity	49,612.82
Year 2027 to 2032 - Total Electricity (MWh)	**297,676.95**
Year 2033 to 2102 – Mining, Brunswick Industrial Site Operations, Fill Placement at Off-Site Location	
PG&E Supplied Electricity	49,612.82
Year 2033 to 2102 - Total Electricity (MWh)	**3,472,897.72**
Year 2103 – Reclamation	
PG&E Supplied Electricity	0.00
Year 2103 - Total Electricity (MWh)	**0.00**
Total Project	
Total Electricity Demand (MWh) for Entire Project	**4,035,151.73**

Source: EIR Appendix E.1
Notes: kWh = kilowatt-hour.

1.3 Natural Gas

Natural gas consumption is not anticipated to be required during Project construction or operations.

TRAFFIC IMPACT ANALYSIS FOR THE
IDAHO-MARYLAND MINE PROJECT
Nevada County, CA

I. INTRODUCTION

I.1. Study Purpose and Objectives

This technical study has been prepared for Rise Grass Valley Inc. ("Rise Grass Valley" or "Rise") to evaluate the potential traffic impacts associated with the proposed Idaho-Maryland Mine Project located in Nevada County, CA.

This report was prepared:

- to provide information for the CEQA analysis;
- to comply with the Nevada County Code & General Plan;
- in accordance with the County of Nevada Traffic Impact Study Guidelines, last updated November 2013 (Pack, 2013); and
- following City of Grass Valley Traffic Study Guidelines for applicable roadways and intersections.

The 2018 CEQA Guidelines Update includes new and revised provisions for analyzing the significance of transportation impacts. Specifically, CEQA Guidelines section 15064.3 was adopted, effective December 28, 2018, and states that Vehicle Miles Travelled (VMT) for land use projects "exceeding an applicable threshold of significance may indicate a significant impact." (14 CCR § 15064.3, subd. (b)(1).). **This new metric took effect state-wide July 1, 2020.** As a result of this new section, the significance threshold for transportation impacts in both CEQA Guidelines section 15064 and Appendix G (Environmental Checklist Form) are described in terms of VMT rather than LOS.

- A project must still be evaluated individually and cumulatively to determine whether the project is consistent with the local agency's General Plan. The project was evaluated under an Existing plus Approved Projects condition, i.e., existing plus near term condition which included local projects previously approved by Nevada County and Grass Valley. Cumulatively, it was analyzed under future conditions which may include either a list of past, present and probably future projects producing related or cumulative impacts or a summary of projections contained in an adopted local, regional or statewide plan or related planning document. For this project the Nevada County Transportation Commission travel demand model was used as the basis to establish Cumulative No Project conditions.

The Level of Service (LOS) analysis was evaluated for General Plan consistency and to identify feasible improvements to meet the General Plan Vehicle LOS Standard. Vehicle LOS is used to identify potential improvement projects that may be included in conditions of approval for the project entitlements.

The scope of this traffic impact analysis has been identified through consultation with Nevada County and the City of Grass Valley. In addition to VMT analysis, this study addresses the following scenarios for LOS analysis:

1. Existing Setting
2. Existing Plus Approved Projects [EPAP] (5-year)
    A. Existing Plus Approved Projects [EPAP] Conditions
    B. EPAP plus Project Conditions to Centennial site
    C. EPAP plus Project Conditions to SR 49
3. Cumulative Impacts (2035)
    A. 2035 Traffic Conditions
    B. 2035 Plus Project Conditions to Centennial site
    C. 2035 Plus Project Conditions to SR 49

The objective of the Vehicle LOS study is to identify those street intersections and roadways that may be impacted by development of this project based on Nevada County and City of Grass Valley significance criteria and to suggest strategies for locations that are adversely affected by this project.

The VMT analysis incorporates Transportation Alternatives pursuant to Nevada County Land Use and Development Code Sec. L-II 4.1.9. The Vehicle LOS study also includes an evaluation of truck turning movements, sight distance at key locations, acceleration on grade, and the Traffic Index (TI) to assess pavement conditions.

I.2. Project Description

Rise Grass Valley proposes to reinitiate underground mining and gold mineralization processing of the Idaho-Maryland Mine (the "project") in unincorporated Nevada County (County). The proposed facilities and operations will be located on two properties owned by Rise referred to as the Brunswick Industrial Site and the Centennial Industrial Site. The project sites are shown on the vicinity map in Figure 1. The project comprises five primary elements:

1. dewatering the existing underground mine workings,
2. mining existing and new underground mine workings,
3. processing gold mineralization and rock,

4. placing engineered fill at the Brunswick and Centennial Industrial Sites, and
5. export of engineered fill from the Brunswick Industrial Site to support local construction projects.

Rise is seeking approval of a new use permit and reclamation plan to build and operate the facilities for these project elements. This use permit and reclamation plan proposes to allow:

- operation of pumps and a water treatment facility to dewater the underground workings;
- construction of a water pipeline to transport treated water to an outfall located in South Fork Wolf Creek;
- construction of the necessary aboveground facilities at the Brunswick Industrial Site (e.g., headframes and hoists, surface structures, a mineral processing plant) to support underground mining and mineral processing;
- construction of a new service shaft and ventilation shaft from the underground mine to surface at the Brunswick Industrial Site;
- underground mining, including drilling, blasting, and gold mineralization removal;
- gold mineralization and rock processing at the Brunswick Industrial Site and off-site transport of gold concentrate;
- transport of engineered fill from the Brunswick Industrial Site and placement at the Centennial Industrial Site;
- transport of engineered fill from the Brunswick Industrial Site to off-site construction projects;
- placement of engineered fill at the Brunswick Industrial Site; and
- construction of a potable water pipeline to supply residences along a portion of East Bennett Road.

The majority of aboveground facilities, the access to the underground mining, the treated-water outfall structure, and a portion of the engineered fill will be located on Rise's 119-acre Brunswick Industrial Site. Engineered fill will also be placed on Rise's 56-acre Centennial Industrial Site. In addition, Rise owns approximately 2,585 acres of subsurface rights that encompass the historic Idaho-Maryland Mine workings and Idaho-Maryland Mine Project. Once the aboveground facilities are constructed, Rise will begin dewatering the mine, performing advanced exploration, and mining the underground workings.

The project is projected to include year-round underground mining with a production target of 1,000 tons per day of gold ore extraction. Approximately 500 tons per day of sand tailings and 500 tons per day of barren rock from tunneling would be used as engineered fill material. Gold concentrate will be shipped off-site for refining.

Active mining operations will result in the highest off-site traffic volume due to full employment in this phase, material and supplies delivery for both Brunswick and Centennial sites and shipping of gold concentrate to an off-site refiner.

I.2.a. *Brunswick Industrial Site*

The proposed project will reactivate the Idaho-Maryland Mine at the Brunswick Industrial Site located at 12625 Brunswick Road, along the west side of Brunswick Road and south of E. Bennett Road. This site is mainly surrounded by rural-residential properties and to a lesser degree by light industrial zoned property. The vicinity map is presented in Figure 1 and the project sites are shown in Figure 2.

Primary access to the Brunswick site will be via the existing access location approximately ½ mile south of the Brunswick Road / E. Bennett Road – Greenhorn Road intersection. This driveway will provide full access for all vehicles other than semi-trailer and dump trucks used for transporting engineered fill. The Brunswick Road driveway will provide inbound access for these vehicles while the secondary access, located at Millsite Road / E. Bennett Road intersection, will provide for right-turn only outbound truck movements from the site.

I.2.b. *Centennial Industrial Site*

Engineered fill will be transported by truck from the Brunswick Industrial Site and placed on the Centennial Industrial Site ("Centennial site"). It is projected that this will occur over a five-year time period within the 20-year analysis.

The Centennial site is located at 10350 Centennial Drive. The site is within Nevada County; however, the site will be accessed from a new driveway along Whispering Pines Lane in the City of Grass Valley. This site is surrounded by various properties consisting of a mixture of commercial / industrial and business park within the City of Grass Valley and light industrial uses within Nevada County. The vicinity map is presented in Figure 1 and the project sites are shown in Figure 2.

The engineered fill will be hauled to the Centennial Industrial site with proposed access along the west end of Whispering Pines Lane. A new driveway is proposed along Whispering Pines Lane approximately 180 feet east of the Centennial Drive intersection.

Figure 2 provides an aerial view of both Brunswick and Centennial sites relative to the surrounding area.

II. VEHICLE MILES TRAVELED (VMT) ANALYSIS

II.1. VMT Description

As previously noted, the 2018 CEQA Guidelines Update includes new and revised provisions for analyzing the significance of transportation impacts using VMT in determining the significance of a project relative to the transportation system. The criterion considers the effect a project has on the vehicle miles traveled.

VMT is a metric that accounts for the number of vehicle trips generated and the length or distance of those trips (Fehr & Peers, 2019). The available measures of VMT for Nevada County include (Fehr & Peers, 2019):

- Total VMT – the sum of VMT for all vehicle trips and trip purposes.
- Residential VMT per capita – sum of VMT for trips originating from home, divided by the number of residents.
- VMT per worker – sum of VMT for trips from home to work, divided by the number of workers.

II.2. VMT Methodology and Analysis Criteria

Fehr & Peers prepared *Senate Bill 743, Vehicle Miles Traveled Implementation (VMTI)* for the Nevada County Transportation Commission (NCTC). NCTC, in turn distributed the document to the various agencies within the County so that each agency can develop their own significant threshold guidelines. Fehr & Peers recommends that VMT should be expressed as a generation rate and not a ratio. Since this project is an industrial land use project, it was determined that the preferred significance threshold metric was VMT per Worker (i.e., employee).

Methodologies and Threshold Recommendations were made by Fehr & Peers and are described below:

Thresholds of Significance Recommendation - A project's or plan's VMT impact may be considered less than significant if:

- The project or plan total weekday VMT per service population is less than or equal to the subarea mean under baseline conditions; and
- The project or plan is consistent with the jurisdiction's general plan and the Nevada County Regional Transportation Plan.

The subareas, based on similar travel characteristics and proximity, are recommended to be: City of Grass Valley, City of Nevada City, Town of Truckee, Alta Sierra, Lake of the Pines, Lake Wildwood and Penn Valley, the Remainder of Western Nevada County, and the Remainder of

Eastern Nevada County. The subarea threshold acknowledges the differences in VMT generation in different parts of Nevada County.

VMT Methodology for Land Use Projects and Land Use Plans

Table A-4, Total VMT per Service Population , of the Fehr & Peers report presents results of the VMT measurement analysis that considers trips from outside the model as well as within the TDM model.

The NCTC TDM data, shown in Table 1, was used to determine the significance threshold for the Idaho-Maryland Mine Project. The Grass Valley subarea was used as the basis due to the project's proximity to the City.

A project or plan's VMT is considered less than significant if:

- The project or plan total weekday VMT per service population is equal to or less than 14.3% below the subarea mean under baseline conditions, or the project reduces the total VMT per service population for the subarea; AND

- The project or plan is consistent with the General Plan and the Nevada County Regional Transportation Plan.

TABLE 1
TOTAL VMT PER SERVICE POPULATION

Location (SubArea)[1]	**Total VMT Per Service Population**
Grass Valley	28.0
Nevada City	36.2
Truckee	N/A
Alta Sierra	17.1
Lake Wildwood	22.5
Penn Valley	18.8
Lake of the Pines	16.4
Unincorporated Western Nevada County	18.1
Western Nevada County Total	22.2
Source: Fehr & Peers, 2019 (Table A-4) [1]VMTI, Page 26	

II.3. Project Vehicle Miles Traveled (VMT)

The Nevada County Transportation Commission travel demand model (TDM) for 2035 conditions was used to estimate the proposed project's daily VMT per service population for comparison to the NCTC baseline VMT per service population. Fehr & Peers was retained to conduct model runs to develop VMT projections for the Idaho-Maryland Mine Project (Fehr & Peers, 2020). Trip generation for the VMT analysis was based on the project building square footage and the trip generation rates contained in the TDM. An initial model run was performed to compare model trip generation to the project employee generation expected to occur. Fehr and Peers iteratively adjusted the input land use element of the model as it initially estimated higher volumes than the project is expected to generate. Project trips were then tracked throughout the model network using a select-zone analysis. Project VMT was calculated on each link by multiplying the link distance by the number of vehicles using a particular link. The methodology and results are described in the Fehr & Peers Memo in Appendix 1.

II.3.a. Heavy Truck Vehicle Miles Traveled

The VMT analysis did not include heavy trucks.

Rise intends to utilize heavy-trucks to transport engineered fill from the Brunswick site to offsite locations. The County is now preparing an Environmental Impact Report ("EIR") for the Project in compliance with the California Environmental Quality Act ("CEQA").

The new California Environmental Quality Act ("CEQA") requirement set forth in 14 CCR § 15064.3 to analyze traffic impacts in terms of vehicle miles traveled ("VMT") does not apply to the use of heavy trucks.

The intent of SB 743 and the associated CEQA Guidelines Section 15064.3 is to compel lead agencies to analyze VMT for passenger car and light truck trips related to land use projects. As noted by the Governor's Office of Planning and Research, the use of the term "automobiles" in the new regulation refers only to passenger cars and light trucks. Heavy trucks *can* be included in VMT analysis for convenience, but are not the subject of the new CEQA requirement. In this case, inclusion of heavy trucks would not be convenient and rather would make the EIR's traffic analysis confusing.

II.3.b. History of VMT Requirement

In 2013, the Legislature enacted Senate Bill 743 (Steinberg, 2013) ("SB 743"), which required the California Office of Planning and Research ("OPR") to establish criteria for determining the significance of transportation impacts of projects based on VMT. In 2018, the California Natural Resources Agency implemented the goals of SB 743 in issuing 14 CCR § 15064.3, which requires the use of a VMT metric to determine the significance of transportation impacts in place of the prior level of service ("LOS") metric.

The purpose of SB 743 and the associated VMT analysis requirement must be viewed in the context of the prior related climate-change statutes that led to this new traffic analysis methodology. As stated in Section 1 of SB 743, *"[w]ith the adoption of Chapter 728 of the Statutes of 2008, popularly known as the Sustainable Communities and Climate Protection Act of 2008 [known as SB 375], the Legislature signaled its commitment to encouraging land use and transportation planning decisions and investments that reduce vehicle miles traveled and contribute to the reductions in greenhouse gas emissions required in the California Global Warming Solutions Act of 2006 ...."* (Emphasis added.) As such, the text of SB 743 acknowledges that the implementation of VMT methodology stems from the goals set in SB 375, which in turn looks to AB 32 for the requirement to reduce emissions of GHG.

Section 1(b) of SB 375, enacted in 2008, states that "*[i]n 2006, the Legislature passed and the Governor signed Assembly Bill 32 (Chapter 488 of the Statutes of 2006; hereafter AB 32), which requires the State of California to reduce its greenhouse gas emissions to 1990 levels no later than 2020. According to the State Air Resources Board, in 1990 greenhouse gas emissions from automobiles and light trucks were 108 million metric tons, but by 2004 these emissions had increased to 135 million metric tons."*

Likewise, Section 1(c) of SB 375 states that *"[g]reenhouse gas emissions from automobiles and light trucks can be substantially reduced by new vehicle technology and by the increased use of low carbon fuel. However, even taking these measures into account, it will be necessary to achieve significant additional greenhouse gas reductions from changed land use patterns and improved transportation. Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32.*" As such, SB 375 was focused on reducing GHG emissions through changing land use patterns in a way that reduces automobile and light truck use, rather than by reducing use of heavy trucks for movement of goods. Nowhere in either SB 375 or SB 743 are heavy trucks mentioned because passenger cars/light trucks and land use patterns were the focus of these policies.

In December 2018, the Governor's Office of Planning and Research issued guidance ("OPR Guidance") on implementation of SB 743 and the related CEQA Guideline Section 14 CCR § 15064.3. The OPR Guidance clearly acknowledges the purpose of the VMT methodology is to reduce emission of GHG per the strategies set forth in SB 375: "*employing VMT as the metric of transportation impact statewide will help to ensure GHG reductions planned under SB 375 will be achieved through on-the-ground development, and will also play an important role in creating the additional GHG reductions needed beyond SB 375 across the State. Implementation of this change will rely, in part, on local land use decisions to reduce GHG emissions associated with the transportation sector, both at the project level, and in long-term plans (including general plans, climate action plans, specific plans, and transportation plans) and supporting sustainable community strategies developed under SB 375."* (OPR Guidance, p. 3.)

The new CEQA Guidelines Section 15064.3 does not specifically state what type of vehicles are to be include or excluded from the VMT analysis, and merely states "*[f]or the purposes of this section, 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project."* (14 CCR § 15064.3(a).) This requirement went into effect on July 1, 2020 and is therefore applicable to the Project. While the regulation itself is not crystal clear as to scope of the vehicles that should be included in a VMT analysis, the history of SB 375 and SB743 from which the regulation comes, dictate that the intent was to reduce passenger car and light truck trips through use of VMT traffic methodology and related mitigation requirements.

On the question of what types of vehicles are to be included in the VMT analysis, OPR stated in its 2018 Guidance that *"[p]roposed Section 15064.3, subdivision (a), states, "For the purposes of this section, 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project.' **Here, the term 'automobile' refers to on-road passenger vehicles, specifically cars and light trucks.** Heavy-duty truck VMT **could** be included for modeling convenience and ease of calculation (for example, where models or data provide combined auto and heavy truck VMT).*" (OPR Guidance, p. 4; Emphasis added.) Accordingly, OPR advises that the term "automobile" was not meant to include heavy trucks, but lead agencies **could** include heavy trucks where doing so was convenient under the applicable traffic model.

Additionally, the OPR Guidance addresses numerical transportation impact thresholds for a "land use project," but then only specifically describes residential, office, and retail projects, providing further evidence that movement of goods/materials in heavy trucks was meant to be excluded from the VMT requirement. (OPR Guidance, pp. 11-16.)

Based on the history of the VMT requirement traced through the text and intent of SB 375 and SB 743, and the State's guidance on implementation of this new requirement, it is clear that heavy truck trips are not required to be included in the VMT analysis, but **may** be included if convenient for modelling purposes.

II.3.c. *Examples of VMT Requirement Implementation in Other California Jurisdictions*

As examples of how other land use jurisdictions are approaching what vehicles to include in the new VMT traffic analysis, below are excerpts from new traffic impact analysis guidelines from the Cities of San Marcos, Clovis, San Diego, San Mateo, Irvine and Long Beach (collectively, the "Cities"):

San Marcos TIA Guidelines – 7.1.2020

2.1.3.3. Exclusion of Heavy Vehicle and Truck VMT

It shall be noted that SB 743 does not apply to goods movement (i.e. trucks). Section 15064.3 of the CEQA Guidelines states that VMT for transportation impacts refers to "... the amount and distance of automobile travel...". Therefore, the VMT associated with trucks and the movement of goods is not required to be analyzed and mitigated for the evaluation of transportation impacts under CEQA. VMT analysis and mitigation is limited to passenger vehicle and light truck trips. The VMT for all vehicles including heavy trucks related to a project will still be calculated as input for air quality, GHG, noise and energy impact analyses to be evaluated in non-transportation parts of the environmental analysis. In addition, heavy vehicle trips would still be assessed as part of the Local Transportation Analysis.

City of Long Beach – TIA Guidelines June, 2020

2.3 Project VMT Analysis

All land development projects that are not presumed to have a less than significant transportation impact related to CEQA Guidelines Section 15064.3, subdivision (b), according to the screening criteria provided above must conduct an analysis of the project's VMT. The VMT analysis will determine the appropriate VMT metric, identify the appropriate threshold of significance, calculate project VMT, identify the impact significance, and recommend appropriate mitigation. For the purposes of SB 743 and these guidelines, VMT to be analyzed is generated by on-road passenger vehicles, specifically cars and light-duty trucks. Heavy-duty trucks can be addressed in other CEQA sections (e.g., air quality, noise, GHG) and are subject to regulation in a separate collection of rules under CARB jurisdiction. While heavy-duty truck trips generated by Port or industrial activity are outside SB 743 regulation, all passenger vehicle trips generated by employees, including employees of the Port or industrial activities, are subject to VMT standards.

City of Clovis TIA Guidelines – 7.1.2020

12 2.1.3.3. Exclusion of Truck VMT

It shall be noted that SB 743 does not apply to goods movement (i.e. trucks). Section 15064.3 of the CEQA Guidelines states that VMT for transportation impacts refers to. "... the amount and distance of automobile travel...". Therefore the VMT associated with trucks and the movement of goods is not required to be analyzed and mitigated for the evaluation of transportation impacts under CEQA. Projects that generate a substantial amount of truck traffic also generate automobile trips, project-related automobile trips would be subject to VMT analysis and mitigation. The VMT for all vehicles including heavy trucks related to a project will still be calculated as input for air quality, GHG, noise and energy impact analyses to be evaluated in non-

transportation parts of the environmental analysis. The local transportation analysis requires an evaluation of truck traffic in terms of roadway and intersection operations, as discussed in Section 3.

City of San Diego TIA Guidelines – 3.20.2020

4.4.1 Recommendations Regarding Methodology

Vehicle Types

Vehicle Miles Traveled refers to on-road passenger vehicles, specifically cars and light trucks. Heavy-duty truck VMT could be included for modeling convenience and ease of calculation.

City of San Mateo TIA Guidelines – 7.16.2020

2.1.3.4. Exclusion of Truck VMT

It shall be noted that SB 743 does not apply to goods movement (i.e. trucks). Section 15064.3 of the CEQA Guidelines states that VMT for transportation impacts refers to. "… the amount and distance of automobile travel…". Therefore, the VMT associated with trucks and the movement of goods is not required to be analyzed and mitigated for the evaluation of transportation impacts under CEQA. Projects that generate a substantial amount of truck traffic also generate automobile trips, therefore project- related automobile trips would be subject to VMT analysis and mitigation. The VMT for all vehicles including heavy trucks related to a project will still be calculated as input for air quality, GHG, noise and energy impact analyses to be evaluated in non- transportation parts of the environmental analysis.

City of Irvine TIA Guidelines, SB743 Implementation VMT Technical Appendix – 5.12.2020

3.1 Screening Criteria

OPR Guidance Regarding Goods Movement: Section 3 of the Guidelines for Implementation of the California Environmental Quality Act specifies that VMT to be analyzed is defined as the amount and distance of automobile travel attributable to a project. SB 743 therefore does not require the inclusion of heavy-duty truck trips, utility vehicles or other types of vehicles in the VMT analysis. In the case of trucks, the State's strategy for the goods movement sector is not in VMT reduction, but in advances in technology (zero and near-zero emission control strategies).

City of Irvine Recommendation: VMT analysis will be performed for automobile trips only, which is consistent with State policy.

As demonstrated above, the approach taken by the Cities is consistent with the history of SB 375, SB 743 and the OPR Guidance on implementation of 14 CCR § 15064.3.

11.3.d. Analysis

As discussed above, the history of the VMT requirement can be traced back to SB 375 and ultimately back to AB 32 (the Global Warming Solutions Act of 2006) which aimed to fight global warming by establishing a program to reduce greenhouse gas emissions. In the subsequent sequence of California statues enacted to combat global warming/climate change, the VMT approach first appeared in SB 375, in 2008, as a means of reducing GHG emissions by encouraging developers to build homes closer to transportation hubs thereby reducing VMT for passenger cars and light trucks. SB 375 did not provide a strategy to reduce VMT for heavy trucks moving goods and materials, as heavy trucks were not the focus of that law. Likewise, SB 743, which seeks to implement many of the goals set forth in SB 375 did not include polices designed to reduce VMT for heavy trucks, and rather, was focused on passenger cars and light trucks.

While the regulation adopted to implement the VMT traffic analysis requirement could have been clearer as to the exclusion of heavy trucks from the required VMT analysis, OPR has provided clear guidance that heavy trucks were not intended to be considered "automobiles" for the purpose of CEQA VMT analysis. OPR advised that heavy trucks "could" be included for convenience in the context of traffic modelling or calculations, but the guidance is clear that this was not the intent of the regulation.

The inclusion of heavy trucks in the VMT analysis for the Project's EIR would be difficult, result in a confusing EIR, would deviate from the standard approach we observe trending among land use jurisdictions, and is plainly incorrect based on the history and intent of the VMT requirement.

II.4. Findings / Results

On a per service population basis, which is the County's recommended threshold of significance (Nevada County Traffic Impact Guidelines, June 2020), the Idaho-Maryland Mine Project is modelled to generate a daily rate per employee of 14.7 VMT in 2012 Base Year conditions and 13.9 VMT under 2035 plus Project conditions. Since the TAZ is within an industrial land use zone the calculated VMT per employee is also the service population of the TAZ. Interpolating between the two periods yields a 2020 baseline condition VMT of 14.4.

Half of the project is located in the Grass Valley Subarea while half is located in unincorporated Western Nevada County. The subarea mean VMT per service population rates are 28.0 for Grass

Valley and 18.1 for unincorporated Western Nevada County. A project is considered less than significant if the VMT per service population is equal to or less than 14.3% below the subarea mean, or the project reduces the total VMT per service population in the subarea. Using the more conservative 18.1 VMT rate for unincorporated Western Nevada County the project has to have a VMT of 15.5 (18.1 – (18.1 x 0.143) or lower to be considered less than significant. The projected 14.4 VMT per service population meets this criterion; therefore, the project's impact on VMT is considered less than significant.

II.5. Transportation Demand Management (TDM) Strategies

The Nevada County Land Use and Development Code, Section L-II 4.1.9, *Transportation Alternatives*, identifies that methods should be undertaken to reduce automobile dependence travel throughout the County. Land use applications requiring a development permit or a use permit shall address alternative transportation opportunities for employees, residents and/or customers served by the project. For projects that employ 50 or more persons, the applicant shall submit a detailed analysis of transportation alternatives, documenting feasible measures for reducing auto dependence.

The project is anticipated to employ approximately 312 direct employees during full operations. Project trip generation is described in Section V.1. of this report.

The project is not currently served by transit and the Nevada County Transit Services Division has no plans to bring service to this area. Currently, the nearest bus route to the Brunswick site is Route #3, the Grass Valley Loma Rica Loop route which operates between the Tinloy Street / Bank Street Transit Center and the Nevada County Airport.

An area for bicycle racks is incorporated into the site design at the Brunswick Industrial Site and will have a minimum of 11 racks (44 bicycle spaces).

As noted in the Findings section the project's impact on VMT is less than significant; however, the County also recognizes that projects requiring a development permit or use permit address alternative transportation opportunities for those served by the project. Below are transportation reduction alternatives based on the TDM strategies categorized in Appendix D, TDM Strategy Evaluation, of the *SB 743 Vehicle Miles Traveled Implementation [Draft]* report (Fehr & Peers, 2019).

Commute Trip Reduction, #3.4.11, TRT-11: Provide Employer-Sponsored Vanpool / Shuttle

This strategy would make available a company sponsored vanpool / shuttle to allow employees to commute in a single vehicle. Since employees are likely to be coming from throughout the area the use of specific locations for pick up, such as existing 'Park and Ride' lots in the County, would facilitate the reduction of commute vehicles. CAPCOA projects a 0.3% - 13.4% VMT commute reduction with this strategy.

The project could also institute a shuttle service between the project site(s) and the Tinloy Street / Bank Street Transit Center to provide a convenient location for employees to transfer from public transit or to be dropped off (i.e. kiss and ride). A shuttle could operate several times each day, during the 7:00 a.m. and 7:00 p.m. shift changes and at the end of the administrative workday, after 3:30 p.m.

Commute Trip Reduction, #3.4.3, TRT-3: Provide Ride-Sharing Programs

This strategy involves the employer providing ride share coordination and parking facilities to provide information for employees to ride share to and from work. The strategy is intended to match employees by location resulting in a reduction of commute vehicles. CAPCOA projects a 1% - 15% VMT commute reduction with this strategy.

Rideshare activities would provide incentives for employees commuting to and from the site. Ridesharing could be coordinated between employees along a similar route from their residence to the work site. The use of existing Park and Ride lots may provide a location for employees to meet and commute together, reducing the number of vehicles in the roadway network. There are three Caltrans Park and Ride locations in Nevada County, two in Penn Valley and one in Grass Valley; all are located along SR 20. There is also a Park and Ride location in Auburn for employees commuting along SR 49 from Placer County. Incentives may include the use of high occupancy vehicle (HOV) lanes, less maintenance on a single vehicle due to reduced use, and cost sharing between employees / employer.

III. VEHICLE LEVEL OF SERVICE (LOS) STUDY

III.1. Study Area

This study also addresses traffic conditions at 24 existing intersections and 11 roadway segments shown in Figure 3. The limits of the study area were reviewed and approved by Nevada County and City of Grass Valley staff. In addition to level of service analyses, a traffic index assessment was completed considering the haul routes of engineered fill along County and City roads and an AutoTURN assessment was completed considering the turning movements of haul trucks along the proposed routes. Specifically, truck movements were evaluated at the Brunswick and Centennial access locations, East Bennett Road at Brunswick Road and Brunswick Road at Whispering Pines Lane.

The text that follows describes the roadway facilities included in this analysis; intersections associated with SR 49 / SR 20 are referred to throughout this analysis as SR 49. The entirety of SR 49 proceeds in a northbound / southbound direction and is identified as such.

The quality of traffic flow is typically governed by the operation of major intersections and the daily volume of traffic along the roadways. The physical characteristics of the study intersections and roadways are described in the text which follows.

III.2. Study Area Intersections

1. The **Tinloy Street / Neal Street** intersection is a signal-controlled intersection providing access to downtown Grass Valley and SR 49. Southwest-bound Tinloy Street is a two-lane one-way street with left-through and through-right lanes. Neal Street is a two-way street with one eastbound and westbound lane along Neal Street. Crosswalks are present across both legs of Tinloy Street. Bike lanes are not present in the intersection.
2. The **Tinloy Street / S. Auburn Street** intersection is a signal-controlled intersection providing access to downtown Grass Valley and SR 49. Southwest-bound Tinloy Street is a two-lane one-way street with left-through and through-right lanes. S. Auburn Street is a two-way street with one southbound lane and two northbound lanes, one left-through and one through lane. Crosswalks are present across both legs of S. Auburn Street. Bike lanes are not present in the intersection.
3. The **Tinloy Street / E. Bennett Road – Southbound SR 49 off-ramp** intersection is a four-way stop-controlled intersection. The southbound SR 49 ramp is stop controlled and includes through-left and through-right lanes. Southbound E. Bennett Road includes a single uncontrolled lane while northbound E. Bennett Road includes a left lane and a through lane which are stop controlled. Crosswalks are present across the SR 49 ramp and E. Bennett Road approaches. Bike lanes are not present along any of these roads.

4. The **Hansen Way / E. Bennett Road** intersection is a four-way all-way stop controlled intersection. Hansen Way is a one-way northbound roadway consisting of through-left and through-right lanes on the approach leg. The eastbound E. Bennett Road approach includes a left turn lane and a through lane while westbound E. Bennett Road includes a through-right lane. Crosswalks are present along across both sides of Hansen Way while bike lanes are not present along any of the roadways.

5. The **E. Main Street / Idaho Maryland Road / SB SR 49 ramps** intersection is a modified one-lane roundabout. The E. Main Street approaches are along the southbound and eastbound approaches. The westbound Idaho Maryland Road approach includes two entry lanes, one for u- and left turning vehicles and one for through and right turning vehicles. The southbound E. Main approach includes a free right turn movement onto westbound E. Main Street and a single lane for through, left and u-turns. The eastbound E. Main Street and southbound SR 49 ramps approaches include a single lane for right, through, left and u-turns. Crosswalks are present along all the north, east and west approaches. Bike lanes are not present along any of the approaches.

6. The **Idaho Maryland Road / NB SR 49/20 ramps** intersection is an all-way stop tee intersection. The center of the intersection is about 175' west of the center of the Idaho Maryland / Railroad Avenue intersection, also all-way stop controlled. The eastbound Idaho Maryland Road approach includes a single through-right lane while the westbound approach includes a through-left lane and a through lane. The NB SR 49/20 off-ramp includes left and right lane turn lanes. Crosswalks are present across the west and south legs.

7. The **Idaho Maryland Road / Railroad Avenue** intersection is an all-way stop tee intersection just east of the NB SR 49/20 ramps as described above. The eastbound Idaho Maryland Road approach includes a through lane and a through-right lane while the westbound approach includes a through-left lane and a through lane. NB Railroad Avenue includes a single approach lane. A crosswalk is present across the Railroad Avenue leg.

8. The **E. Main Street / Brunswick Road** intersection is a split phase signal-controlled four leg intersection. The northbound E. Main Street approach includes left, through and right lanes while the southbound approach includes dual left turn lanes and a through-right lane. The westbound approach includes a left turn lane, a through-left lane and a right turn lane. The westbound right turn includes an overlap with the southbound left turn phase. The eastbound approach, Olympia Drive, is a single lane approach. Crosswalks are present across the southbound and westbound approaches. Bicycle lanes or marked sharrows, shared lanes for automobiles and bicycles, are present along the E. Main Street and Brunswick Road approaches.

9. The **Brunswick Road / Maltman Drive – SB SR 49 Off-ramp** intersection is a signal-controlled four leg intersection. The intersection is split phased along the Maltman Drive and SB SR 49 off-ramp approaches. The eastbound Brunswick Road approach includes a through lane and a through-right lane while the westbound Brunswick Road approach includes a left turn lane and two through lanes. The SB SR 49 off-ramp includes dual left turn lanes, a through

lane and a right turn lane while Maltman Drive includes a left turn lane and a right turn lane; the right turn lane is overlapped with the westbound left turn movement. A crosswalk is present across the Maltman Drive approach and bike lanes or sharrows are present along Brunswick Road.

10. The **Brunswick Road / NB SR 49 ramp** intersection is a signal-controlled intersection. Both approaches along Brunswick Road include a free right turn onto NB SR 49 and two through lanes. The off-ramp approach includes left and right turn lanes. A crosswalk exists across the ramp approach and marked bike lanes are present along the west side of the intersection.

11. The **Brunswick Road / Sutton Way** intersection is a four-way signal-controlled intersection. The eastbound Brunswick Road approach includes dual left turn lanes, two through lanes and a right turn lane. The westbound approach includes a left turn lane, a through lane and a through-right lane. Northbound Sutton Way includes dual left turn lanes and a through-right lane while the southbound approach includes a left turn lane, a through lane and a right turn lane. The southbound right turn lane has separate signal control than the rest of this approach and provides right green arrows with southbound Sutton Way, when eastbound through or left turn Brunswick Road movements are green and when northbound Sutton Way is green. Crosswalks exist across the north, south and east approaches while marked bike lanes are present along Brunswick Road east of the intersection. A bike lane is also present along the departure leg on the south side of Sutton Way while a northbound bike terminates prior to the Brunswick Road intersection.

12. The **Brunswick Road / Idaho Maryland Road** intersection is stop controlled along the Idaho Maryland Road approaches of the intersection. Northbound Brunswick Road includes a left lane and a through-right turn lane while the southbound approach includes left, through and right turn lanes. The eastbound Idaho Maryland Road approach includes a right turn only lane while the westbound approach includes a left lane and a right lane. Vehicles were observed along the Idaho Maryland Road approaches making illegal left and through movements. Those volumes were moved into legal movements for this analysis. Crosswalks and bike facilities are not present at this intersection.

13. The **Brunswick Road / Whispering Pines Lane** intersection is a tee intersection with stop control along Whispering Pines Lane. The northbound approach along Brunswick Road includes a left turn lane and a through lane while the southbound approach includes a through lane and a through-right lane; the outside lane merges into the through lane about 350 feet south of the intersection. The eastbound Whispering Pines Lane approach includes right and left turn lanes. Crosswalks and bike facilities are not present in the intersection.

14. The **Brunswick Road / E. Bennett Road – Greenhorn Road** intersection is an all-way stop controlled intersection. The Brunswick Road approaches include left turn lanes and through-right lanes while the E. Bennett Road and Greenhorn Road approaches include a single lane for all movements. Crosswalks and bike facilities are not present at this intersection.

15. The **Brunswick Road / SR 174** intersection is a tee intersection with stop control for Brunswick Road. The northbound SR 174 approach includes a single through-right lane with a slip ramp leading to northbound Brunswick Road. The southbound SR 174 approach includes a left turn lane and a through lane. The Brunswick Road approach is stop controlled and includes left and right turn lanes. Crosswalks and bike facilities are not present at this intersection.

16. The **Brunswick Road / Project Access** intersection is an existing tee intersection with stop control at the project driveway. Brunswick Road includes single lanes in each direction with a two-way left turn lane at the driveway. Bike facilities are not present.

17. The **E. Bennett Road / Millsite Road** intersection is an existing tee intersection providing a secondary access to the Brunswick site. The existing roadway along Millsite Road is unimproved. This driveway will provide right turn only access to Brunswick Road for larger haul trucks. E. Bennett Road includes single lanes in each direction. Bike facilities are not present.

18. The **Whispering Pines Lane / Centennial Industrial site** intersection is a future driveway that will provide access to the Centennial site. The driveway will be located about 180 feet east of Centennial Drive and will be used for employee and haul route truck traffic. Whispering Pines Lane is a two-lane divided roadway from Brunswick Road to just east of the proposed project driveway where the median ends. Although not marked as a bike lane the roadway includes a shoulder stripe to allow a bike lane.

19. The **Idaho Maryland Road / Centennial Road** intersection is a tee intersection with stop control at Centennial Road. Idaho Maryland Road includes a through lane and right turn lane along the eastbound approach and a left turn lane and through lane along the westbound approach. Centennial Drive is a single lane approach. Crosswalks and bike facilities are not present at this intersection.

20. The **Idaho Maryland Road / Sutton Way** intersection is an all-way stop controlled tee intersection. Idaho Maryland Road includes single lanes in each direction while Sutton Way includes right and left turn lanes. Crosswalks and bike facilities are not present at this intersection.

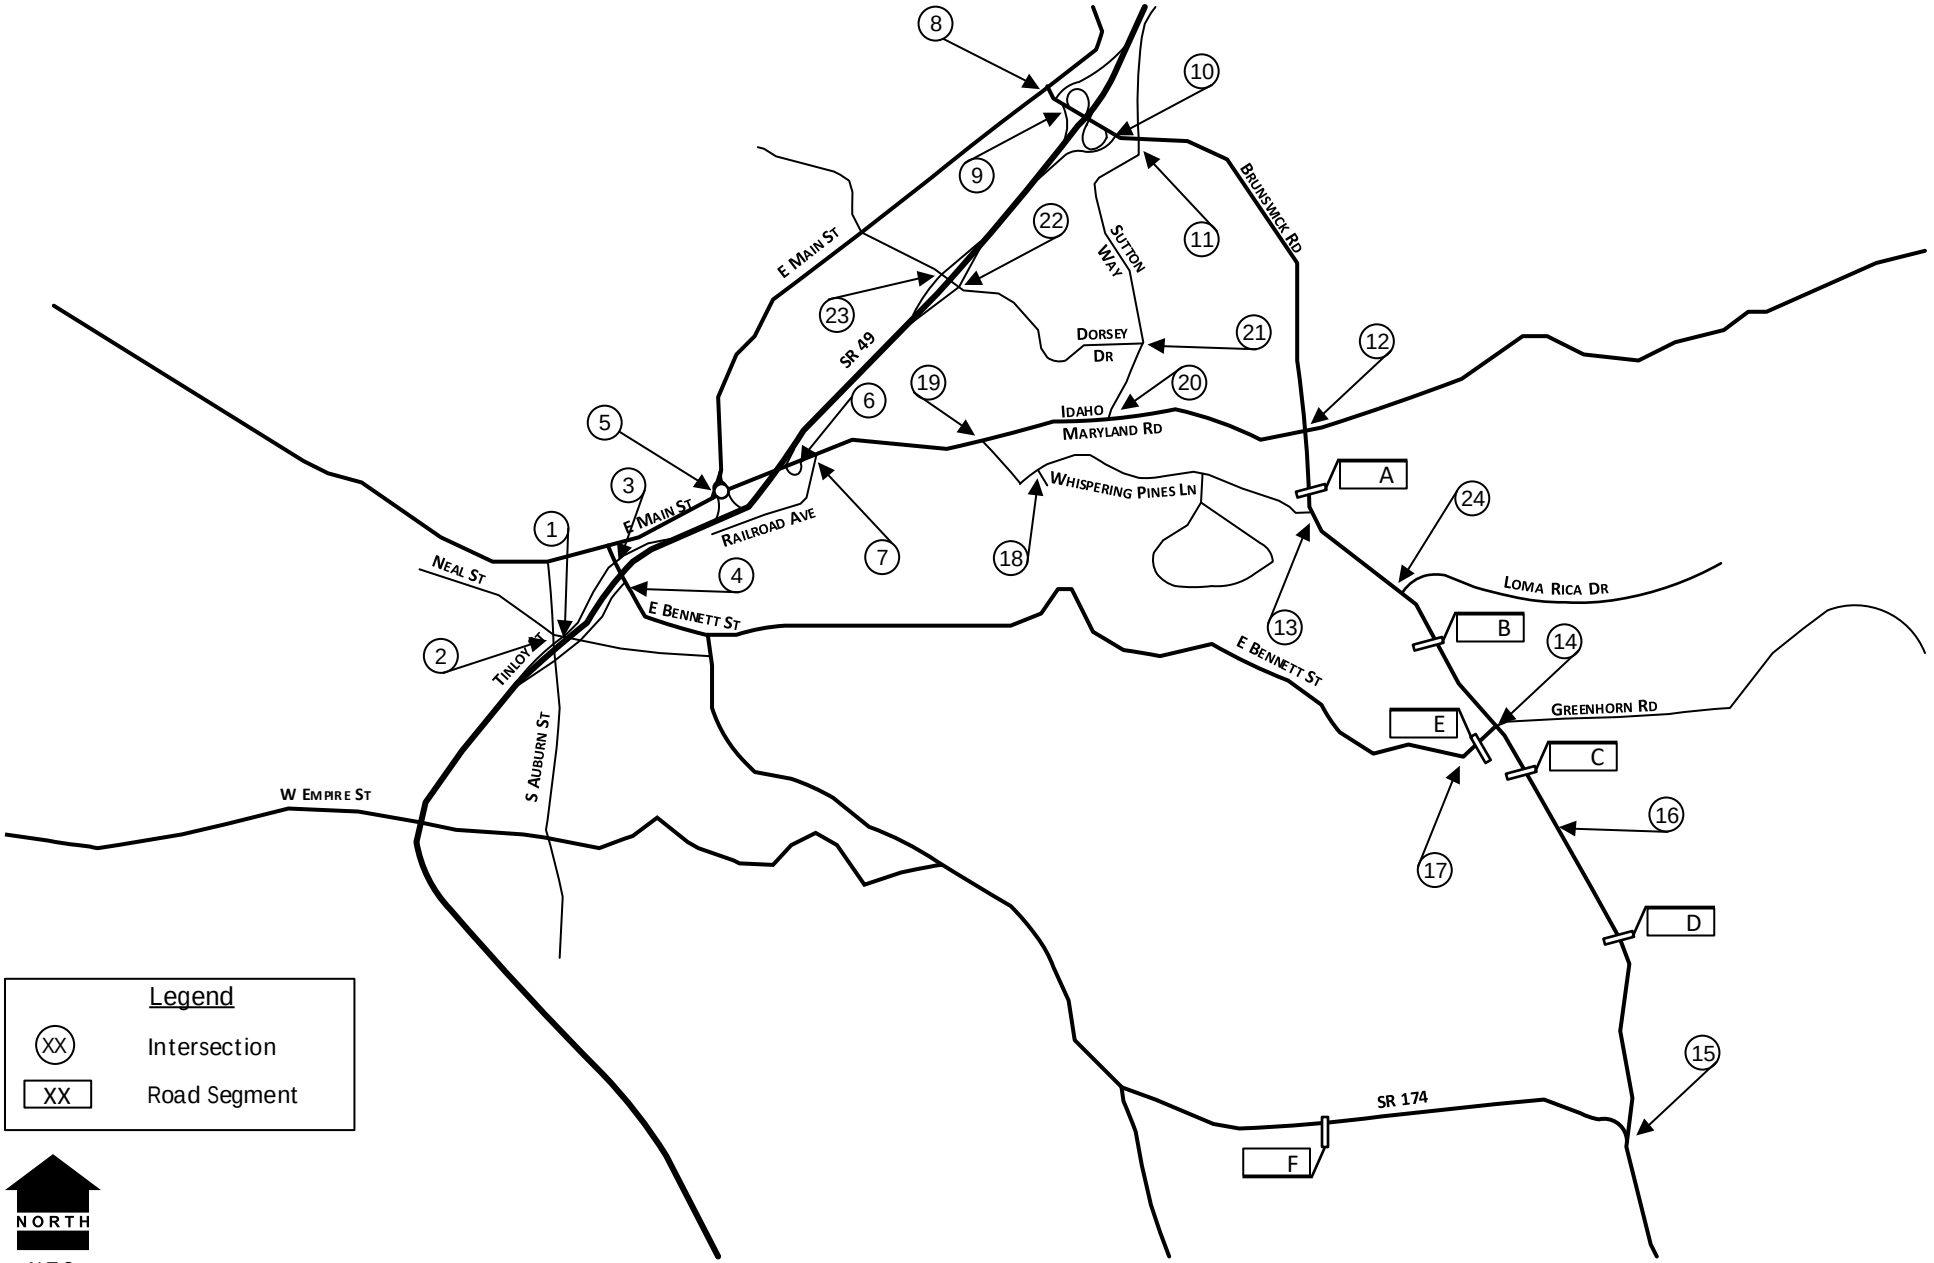
21. The **Sutton Way / Dorsey Drive** intersection is an all-way stop controlled tee intersection. Northbound Sutton Way includes a single lane for left and through movements while the southbound approach includes a through lane and right turn lane. The eastbound Dorsey Drive approach is a single lane; however, is wide enough to allow right turns past left turning vehicles. A crosswalk is present across the Dorsey Drive approach while bike facilities are not present.

22. The **SR 49 NB Ramps / Dorsey Drive** intersection is one-half of a diamond interchange. The intersection is signal-controlled. The eastbound Dorsey Drive approach includes a left turn lane and a through lane while the westbound approach includes two through lanes and a through-right lane; the inside through lane is a trap left turn lane for access onto southbound

SR 49. The northbound SR 49 off-ramp includes a left turn lane, a through-left lane and a right turn lane. Crosswalks are present along the northbound SR 49 ramps and the westbound Dorsey Drive approach. Bike lanes are present along Dorsey Drive.

23. The **SR 49 SB Ramps / Dorsey Drive** intersection is one-half of a diamond interchange. The intersection is signal controlled. The eastbound Dorsey Drive approach includes two through lanes and a right turn lane; the inside through lane is a trap left turn lane for access onto northbound SR 49. The westbound approach includes a left turn lane and two through lanes. Crosswalks are present along the southbound SR 49 ramps and the eastbound Dorsey Drive approach. Bike lanes are present along Dorsey Drive.

24. The **Brunswick Road / Loma Rica Drive** intersection is a three-way signal-controlled intersection. The signal operates with a westbound to northbound overlap with the southbound left turn phase. The southbound Brunswick Road approach includes a left turn lane and one through lane. The northbound approach includes a through lane and a right turn lane while westbound Loma Rica Drive includes left turn and right turn lanes. Crosswalks and bike lanes are not present at this intersection.



STUDY INTERSECTIONS AND ROADWAY SEGMENTS

KD Anderson & Associates, Inc.
Transportation Engineers

5875-01 RA 4/25/2022

figure 3

III.3. Study Area Roadway Segments

1. **Brunswick Road – SR 49 to Whispering Pines Lane.** This segment is an approximately 1¼ mile segment. The segment varies from a four-lane section with turn lanes between SR 49 and west of Old Tunnel Road to a two-lane road plus center turn lane between Old Tunnel Road and Bubbling Wells Road; this makes up about ½-mile of the segment. Between Bubbling Wells Road and Idaho-Maryland Road, about ⅗-mile, the road is two lanes. From Idaho-Maryland Road to Whispering Pines Lane, Brunswick Road has one northbound lane with a turn lane and two southbound lanes; this portion is about ⅕-mile. Each lane is about 12' wide. North of Bubbling Wells Road curb, gutter and sidewalk is present as the roadway displays more urbanized standards while to the south the roadway has more rural characteristics with varying width paved and unpaved shoulders. The roadway is classified as a Class I Highway with rolling terrain. The roadway is posted as a 40-mph road north of Bubbling Wells Road and 50 mph south of Bubbling Wells Road. Midweek traffic volumes are about 12,300 bi-directionally.

2. **Brunswick Road – Whispering Pines Lane to E. Bennett Road.** This ¾-mile segment is generally a two-lane roadway with turn lanes over rolling terrain. The roadway is two lanes between E. Bennett Road and Loma Rica Drive, where it widens to provide turn lanes at the intersection. Between Loma Rica Drive and Whispering Pines Lane the northbound direction includes a single lane while the southbound direction consists of a two-lane section departing the Whispering Pines Lane intersection for about 300 feet at which point a lane drop occurs approaching Loma Rica Drive. Lanes are generally 12-feet wide with varying width paved and unpaved shoulders. The roadway is classified as a Class I Highway and is posted at 50 mph. Midweek traffic volumes are about 15,360 bi-directionally.

3. **Brunswick Road – E. Bennett Road to Project Driveway.** This ½-mile segment is generally a two-lane roadway. Lanes are generally 12-feet wide with varying width paved and unpaved shoulders. The roadway is classified as a Class I Highway with about a 5% downhill grade from E. Bennett Road and is posted at 50 mph. Midweek traffic volumes are about 9,440 bi-directionally.

4. **Brunswick Road – Project Driveway to SR 174.** This ⅔-mile segment is a two-lane roadway over rolling terrain. Lanes are generally 12-feet wide with varying width paved and unpaved shoulders. The roadway is classified as a Class I Highway and is posted at 50 mph. Midweek traffic volumes are about 9,420 bi-directionally.

5. **E. Bennett Road – Project Driveway to Brunswick Road.** This 600-foot is a two-lane roadway over rolling terrain and part of a larger segment to Union Jack Street. Lanes are generally 12-feet wide with varying width paved and unpaved shoulders. The roadway is classified as a Class III Highway with rolling terrain and is posted at 35 mph. Midweek traffic volumes are about 1,490 bi-directionally.

6. **SR 174 – Brunswick Road to Empire Street.** This approximately 2-mile segment is generally a two-lane roadway with left turn lanes at various intersections over rolling terrain. Lanes are generally 12-feet wide with varying width paved and unpaved shoulders. The roadway is classified as a Class I Highway and is posted at 50 mph. Midweek traffic volumes are about 8,300 bi-directionally.

III.4. Analysis Criteria

Intersection Level of Service Methodology. *Level of Service Analysis* has been employed to provide a basis for describing existing traffic conditions and for evaluating the significance of project traffic impacts. Level of Service measures the *quality* of traffic flow and is represented by letter designations from "A" to "F", with a grade of "A" referring to the best conditions, and "F" representing the worst conditions.

The analysis techniques presented in the *Highway Capacity Manual 6th Edition* were used to provide a basis for describing existing traffic conditions and evaluating the significance of project traffic impacts.

Various software programs have been developed to assist in calculating intersection Level of Service, and the level of sophistication of each program responds to factors that affect the overall flow of traffic. Three programs, (1) Synchro, (2) Synchro/Simtraffic, a simulation program, and (3) SIDRA, a roundabout intersection analysis program, were utilized for the analysis depending on the intersection characteristics. The Synchro and Synchro/Simtraffic programs account for passenger car equivalents (PCE) through the use of truck percentages.

Synchro software was used at the following intersections:

4. Hansen Way / E. Bennett Road
6. Idaho Maryland Road / NB SR 49/20 Ramps
7. Idaho Maryland Road / Railroad Avenue
12. Brunswick Road / Idaho Maryland Road
13. Brunswick Road / Whispering Pines Lane
14. Brunswick Road / E. Bennett Road – Greenhorn Road
15. Brunswick Road / SR 174
16. Brunswick Road / Project Access
17. E. Bennett Road / Millsite Road
18. Whispering Pines Lane / Centennial Industrial site driveway
19. Idaho Maryland Road / Centennial Road
20. Idaho Maryland Road / Sutton Way
21. Sutton Way / Dorsey Drive

The City of Grass Valley has previously identified the Brunswick Road / SR 49/20 interchange to be analyzed using Synchro/Simtraffic simulation software. Additional intersections were also simulated based on non-standard traffic control conditions that Synchro cannot analyze. The following intersections utilized Synchro/Simtraffic simulation software:

1. Tinloy Street / Neal Street
2. Tinloy Street / S. Auburn Street
3. Tinloy Street / E. Bennett Road – SB SR 49 Off-Ramp
8. E. Main Street / Brunswick Road
9. Brunswick Road / Maltman Drive – SB SR 49 Off-Ramp
10. Brunswick Road / NB SR 49 Ramps
11. Brunswick Road / Sutton Way
22. NB SR 49 Ramps / Dorsey Drive
23. SB SR 49 Ramps /Dorsey Drive

SIDRA software was used at the following intersection:

5. E. Main Street / Idaho Maryland Road / SB SR 49 Ramps

Each of the intersections analyzed by Synchro/Simtraffic software is within the City of Grass Valley. As noted above, the City requires simulation of the Brunswick Road corridor. The remaining intersections were also simulated based on non-standard traffic control. The Synchro/Simtraffic software is a stochastic model, i.e. randomness is present when running the simulations. The results will vary within each scenario and between scenarios. This may result in some intersections having lower delays in the 'Plus Project' scenarios than in the 'No Project' scenarios. This is a normal occurrence for stochastic models, and it is not unexpected that delays or queues could improve at one intersection while increasing at other intersections. The changes typically should be reasonable; a substantial reduction in delay should not be anticipated. The simulation results contained herein reflect the average of the mean 10 one-hour simulation runs selected from a 20-run sample.

Roundabout analyses were conducted using *SIDRA* Version 8 software.

Applicable Level of Service thresholds based on average delay are shown in Table 2.

TABLE 2
LEVEL OF SERVICE DEFINITIONS

Level of Service	Signalized Intersection	Unsignalized Intersection	Roadway (Daily)
"A"	Uncongested operations, all queues clear in a single-signal cycle. Delay ≤ 10.0 sec	Little or no delay. Delay ≤ 10 sec/veh	Completely free flow.
"B"	Uncongested operations, all queues clear in a single cycle. Delay > 10.0 sec and ≤ 20.0 sec	Short traffic delays. Delay > 10 sec/veh and ≤ 15 sec/veh	Free flow, presence of other vehicles noticeable.
"C"	Light congestion, occasional backups on critical approaches. Delay > 20.0 sec and ≤ 35.0 sec	Average traffic delays. Delay > 15 sec/veh and ≤ 25 sec/veh	Ability to maneuver and select operating speed affected.
"D"	Significant congestion of critical approaches but intersection functional. Cars required to wait through more than one cycle during short peaks. No long queues formed. Delay > 35.0 sec and ≤ 55.0 sec	Long traffic delays. Delay > 25 sec/veh and ≤ 35 sec/veh	Unstable flow, speeds and ability to maneuver restricted.
"E"	Severe congestion with some long standing queues on critical approaches. Blockage of intersection may occur if traffic signal does not provide for protected turning movements. Traffic queue may block nearby intersection(s) upstream of critical approach(es). Delay > 55.0 sec and ≤ 80.0 sec	Very long traffic delays, failure, extreme congestion. Delay > 35 sec/veh and ≤ 50 sec/veh	At or near capacity, flow quite unstable.
"F"	Total breakdown, stop-and-go operation. Delay > 80.0 sec	Intersection blocked by external causes. Delay > 50 sec/veh	Forced flow, breakdown.

Sources: Highway Capacity Manual, 6th Edition Transportation Research Board, 2016.

Sec/veh – seconds per vehicle

III.5. Roadway Segment Level of Service Methodology

Two-Lane Highway Roadway Segments. Roadway segments were analyzed using methods presented in the *Highway Capacity Manual 2010 (HCM);* the methods used in 2010 and HCM 6th Edition are similar. A two-lane highway is an undivided roadway with one lane in each direction. Passing a slower vehicle requires use of the opposing lane as sight distance and gaps in the opposing traffic stream permit. As volumes and geometric restrictions increase, the ability to pass decreases and platoons form. Motorists in platoons are subject to delay because they are unable to pass. The HCM divides these roadways into three types: Class I, Class II and Class III. They are defined as follows:

- *Class I two-lane highways* are highways where motorists expect to travel at relatively high speeds. Two-lane highways that are major intercity routes, primary connectors of major traffic generators, daily commuter routes, or major links in state or national highway networks are generally assigned to Class I. These facilities serve mostly long-distance trips or provide the connections between facilities that serve long-distance trips.

- *Class II two-lane highways* are highways where motorists do not necessarily expect to travel at high speeds. Two-lane highways functioning as access routes to Class I facilities, serving as scenic or recreational routes (and not as primary arterials), or passing through rugged terrain (where high-speed operation would be impossible) are assigned to Class II. Class II facilities most often serve relatively short trips, the beginning or ending portions of longer trips, or trips for which sightseeing plays a significant role.

- *Class III two-lane highways* are highways serving moderately developed areas. They may be portions of a Class I or Class II highway that pass through small towns or developed recreational areas. On such segments, local traffic often mixes with through traffic, and the density of unsignalized roadside access points is noticeably higher than in a purely rural area. Class III highways may also be longer segments passing through more spread-out recreational areas, also with increased roadside densities. Such segments are often accompanied by reduced speed limits that reflect the higher activity level.

Levels of Service. Three measures of effectiveness are incorporated into the methodology to determine automobile LOS:

1. Average Travel Speed (ATS) reflects mobility on a two-lane highway. It is defined as the highway segment length divided by the average travel time taken by vehicles to traverse it during a designated time interval.

2. Percent Time Spent Following (PTSF) represents the freedom to maneuver and the comfort and convenience of travel. It is the average percentage of time that vehicles must travel in platoons behind slower vehicles due to the inability to pass. Because this characteristic is difficult to measure in the field, a surrogate measure is the percentage of vehicles traveling at headways of less than 3.0 at a representative location within the highway segment. PTSF also represents the approximate percentage of vehicles traveling in platoons.

3. Percent of free-flow speed (PFFS) represents the ability of vehicles to travel at or near the posted speed limit.

Speed and delay due to passing restrictions are both important to motorists on Class I two-lane highways; therefore, LOS is defined in terms of both ATS and PTSF. Travel speed is not a significant issue on Class II highways; therefore, LOS is defined in only terms of PTSF. High speeds are not expected on Class III highways and since the length of the Class III segments may be generally limited, passing restrictions are also not a major concern. In Class III segments drivers are expected to want to travel at or near the speed limit. Therefore, PFFS is used to define LOS. The LOS criteria for two-lane highways are shown in Table 3.

TABLE 3
AUTOMOBILE LOS FOR TWO-LANE HIGHWAYS†

LOS	Class I Highways		Class II Highways	Class III Highways
	ATS (mi / hr)	PTSF (%)	PTSF (%)	PFFS (%)
A	>55	≤35	≤40	>91.7
B	>50-55	>35-50	>40-55	>83.3 – 91.7
C	>45-50	>50-65	>55-70	>75.0 – 83.3
D	>40-45	>65-80	>70-85	>66.7 – 75.0
E	≤40	>80	>85	≤66.7

† HCM 2010, Chapter 15, December 2010

The following Nevada County roadway segments were analyzed:

A. Brunswick Road, from Whispering Pines Lane to SR 49 (Class III)
B. Brunswick Road, between E. Bennett Road and Whispering Pines Lane (Class III)
C. Brunswick Road, between E. Bennett Road and the project driveway (Class III)
D. Brunswick Road, between the project driveway and SR 174(Class III)
E. SR 174, between Brunswick Road and Empire Street (Class I)
F. E. Bennett Road, between Millsite Road and Brunswick Road (Class III)

III.6. Level of Service Thresholds of Significance

Nevada County

Nevada County identifies LOS D or better as the acceptable Level of Service at intersections and roadways in community regions and LOS C in rural regions. All intersections and roadways, except the SR 174 / Brunswick Road intersection and SR 174 east of Empire Street are within the Grass Valley Community Region as identified in the County's General Plan. The SR 174 / Brunswick Road intersection and SR 174 roadway segment, east of Empire Street, are a part of the State highway system.

Under project conditions, a traffic impact is considered to adversely affect an intersection or roadway segment if the conditions change from acceptable to unacceptable Levels of Service or a project adds traffic to an intersection or roadway segment already operating at unacceptable LOS.

The Nevada County General Plan Policy LU-4.1.6 states "Relative to the State highway system, Nevada County recognizes the major funding limitations that exist within the State system and finds that as a matter of policy, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development."

Grass Valley

The City of Grass Valley identifies LOS D or better as the acceptable Level of Service at intersections and roadways. Under project conditions a traffic impact is considered to adversely affect an intersection if the conditions change from acceptable to unacceptable Levels of Service or a project adds traffic to an intersection already operating at unacceptable LOS. The City allows LOS E conditions at the SR 49 SB Ramp / Bennett Road intersection.

Caltrans

The Caltrans *Guide for the Preparation of Traffic Impact Studies* (December 2002) states the following: "Caltrans endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" on State highway facilities. Caltrans acknowledges that this may not be always feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Based on the recently approved Dorsey Marketplace traffic study in Grass Valley the LOS D threshold was used as the acceptable LOS and will be used for Caltrans facilities.

Intersection Queuing Analysis. The quality of traffic flow can also be affected by queuing at signalized intersections. For this study, the lengths of peak period queues have been identified and compared to available storage in order to determine whether spillover from turn lanes can affect adjoining travel or extend through adjacent intersections. 95th percentile queue lengths are reported as part of the Synchro, Synchro/Simtraffic and SIDRA analyses. Those locations where the 95th percentile queue exceeds the available storage have also been noted. Nevada County notes that queuing impacts are considered to be substantial if the queues:

1) exceed the available storage capacity and extend through the adjacent street intersection,
2) extend through right- or left-turn pocket,
3) extend in the through lane blocking a right- or left-turn pocket, or
4) result in insufficient sight distance conditions.

In addition to the above parameters the queues projected under "Plus Project" conditions were also compared to "No Project" conditions to determine the extent of queues where existing queues exceed the available storage. For this report, "Plus Project" queues exceeding the turn lane are assumed to have a substantial impact if the "Plus Project" queue is greater than 25 feet of the "No Project" queue. This represents about one car length and is used by other agencies in assessing queuing impacts. The 25-foot length allows fluctuation in the results, especially in simulations where stochastic modeling results in some intersection queues increasing while others may decrease.

Traffic Signal Warrants. The extent to which existing or projected traffic volumes may justify signalization at unsignalized intersections has been determined based on consideration of traffic signal warrants presented in the *Manual of Uniform Traffic Control Devices, 2014.* For this analysis, the volume thresholds associated with Warrant 3 (Peak Hour Volume) have been

assessed. Since this analysis considered the peak hours of adjacent a.m. and p.m. street traffic as well as the peak hours of project traffic, the peak hour warrant was analyzed for each of the five hours. The meeting of a traffic signal warrant does not, in itself, require installation of a traffic signal but serves as a method to identify a location where further analysis is required.

III.7. Non-Automobile Transportation

Public Transit. The Transit Services Division of the Nevada County Public Works Department provides bus service throughout Nevada County. The nearest bus route to either the Brunswick site or Centennial site is Route #3 which passes directly by the Centennial site.

The #3 Grass Valley Loma Rica Loop route operates between the Tinloy Street / Bank Street Transit Center and the Nevada County Airport. The route operates Monday through Friday only, with departures from the Transit Center at 8:30 a.m., 10:30 a.m., 12:30 p.m., 1:30 p.m., 3:30 p.m. and 5:30 p.m. The loop takes approximately 30 minutes.

Bicycle and Pedestrian Facilities. Designated bicycle facilities exist on various parts of County roadways and City of Grass Valley streets. There are no marked bicycle facilities near the Brunswick site. Whispering Pines Lane, which will provide access to the Centennial site, is a two-lane divided roadway with a wide shoulder which is not marked as a bike lane. Sidewalk is more prevalent within the City of Grass Valley than along Nevada County roadways; however, no sidewalk exists near the Brunswick site or Centennial site.

III.8. Existing Traffic Operating Conditions

Traffic Volume Counts. New traffic counts were conducted by National Data and Surveying Services (NDS). Intersection turning movements (ITM) were conducted the weeks of August 26, 2019 and October 21, 2019 on Tuesdays, Wednesdays or Thursdays while schools were in session. Roadway segment counts were conducted over a three-day midweek period from August 27 to August 29, 2019 while vehicle classification counts were conducted over a seven-day period from September 4 to September 10.

All counts were conducted based on accepted engineering practice. Five (5) time periods were studied based on direction from Nevada County. These included the "standard" a.m. and p.m. peak hours, when adjacent street traffic is at its highest, and at the three time periods when project employee trips are expected to occur. The standard time periods are generally in the two-hour windows from 7:00 a.m. to 9:00 a.m. and from 4:00 p.m. to 6:00 p.m., with the peak hour defined as the highest four continuous 15-minute periods. The remaining three analysis periods include 6:30 a.m. to 7:30 a.m., 3:30 p.m. to 4:30 p.m., and 6:30 p.m. to 7:30 p.m. The 6:30 a.m. / p.m. to 7:30 a.m. / p.m. period coincides with mining operation shift changes at 7:00 a.m. / p.m. while the 3:30 p.m. to 4:30 p.m. period coincides with administrative personnel shift end at 3:30 p.m.; administrative personnel commence their workday at 7:00 a.m. This is referred to as 'project traffic hours' throughout the report. Unless the peak hour of adjacent street traffic is coincident with the peak hour of project traffic the 'plus project' scenarios will not make a noticeable

contribution to the area's traffic during the standard peak hours. Intersection turning movements are presented in Figures 4A through 4F with the peak hours identified in the footnotes occurring in the "standard" 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m. hours.

After the Covid-19 pandemic began the County requested that the Brunswick Road / Loma Rica Drive intersection be analyzed. Covid-19 has resulted in reduced traffic patterns due to school and work closures. ITM's have been therefore, generally lower than usual traffic counts. ITM's were developed based on data analytics provided from *Streetlight Data. Streetlight Data* uses "Big-Data" derived travel pattern analytics against publicly available traffic movement ratios derived from traffic counts to project current ITM's. The 2019 daily traffic volume data counted along Brunswick Road was used to calibrate the intersection data. The midweek four months of March, April, September and October 2019 were used to develop the intersection turning movements.

Intersection Levels of Service. Tables 4A and 4B summarize current operating Levels of Service at the study area intersections for each of the five time periods described. Three intersections currently operate at unacceptable Levels of Service, at LOS E or F. These intersections include:

12. Brunswick Road at Idaho Maryland Road where the westbound approach operates at LOS F,
15. Brunswick Road at SR 174 where the southbound approach operates at LOS F, and
19. Idaho Maryland Road at Centennial Drive where the northbound approach operates at LOS F.

Six intersections currently meet the peak hour signal warrant. The peak hour signal warrant is used to provide an informal analysis whether an intersection may be a candidate for signalization. This warrant is intended for use at locations where traffic conditions are such that for a minimum of one hour of an average day the minor street traffic cannot cross or enter the major street without undue delay. The warrant considers intersection volumes and the stopped time delay along the higher volume leg of the minor approach. While the warrant is applied only in unusual circumstances such as access from an office complex this warrant provides an indication whether an intersection may require further observation. An intersection may meet the minimum requirements but operate at acceptable levels of service. Prior to installation of a traffic signal a full warrant analysis / engineering study should be undertaken to determine whether the intersection overall safety and/or operation will be improved. Those intersections meeting the peak hour warrant include:

3. Bennett Road at Tinloy Street,
6. Idaho Maryland Road at SR 49/20 EB Ramps,
12. Brunswick Road at Idaho Maryland Road,
13. Brunswick Road at Whispering Pines Lane,
14. Brunswick Road at E. Bennett Road, and
15. Brunswick Road at SR 174.

The Brunswick Road / Idaho Maryland Road intersection and Brunswick Road / SR 174 intersection also operate below the accepted LOS D threshold.

Intersection Queues. The quality of traffic flow can also be affected by queuing. For this study, the lengths of turning lane queues and stop controlled approach lanes at unsignalized intersections were identified and compared to available storage in order to determine whether spillover from turn lanes can affect adjoining travel or extend through adjacent intersections. The available storage is presented along with the 95th percentile queue lengths. On multiple lane approaches the longest queue is identified unless noted.

Tables 5A and 5B present information regarding current queuing each study intersection where turn lanes exist, or spillback may cause a queue to extend beyond an adjacent intersection. Those 95th percentile queues with length exceeding the available storage have been highlighted. The 95th percentile queue exceeds available storage in 15 locations at nine intersections. The intersections of Neal Street at Tinloy Street and Tinloy Street at S. Auburn Street have queues that exceed the available storage and back up through the adjacent intersection. Similar conditions also exist at the westbound approach of the Idaho Maryland Rd / SR 49 EB Ramps intersection, the eastbound approach of the Idaho Maryland Rd / Railroad Avenue intersection and the eastbound approach of Brunswick Road at SR 49 Westbound Off-Ramp - Maltman Drive intersection. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at three locations. Finally, the westbound left turn queues along Loma Rica Drive at Brunswick Road will exceed the available 100-foot storage lane. This movement is part of a protected westbound phase that includes a westbound right turn overlap. Based on the intersection level of service it appears that while the left turn queue will exceed the left turn lane the right turn overlap will continually clear the queues.

Existing Roadway Segment Levels of Service. Table 6 summarizes the Levels of Service based on the current traffic volumes on study area roads with the existing roadway configuration. Applicable Level of Service thresholds and roadway classifications are presented.

The Levels of Service along Brunswick Road, E. Bennett Road and SR 174 were computed using the HCS two-lane roadway methodology. All segments along Brunswick Road and E. Bennett Road operate at LOS D or better while the SR 174 segment operates at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

TABLE 6

IV. EXISTING PLUS APPROVED PROJECTS [EPAP]

The analysis of the near-term cumulative condition is intended to consider the impact of projects that are approved or are reasonably foreseeable in the next five years. This is referred to as the "Existing Plus Approved Projects" (EPAP) scenarios. Nevada County and City of Grass Valley staff were contacted to identify any approved or pending projects in the project vicinity.

Where available, trip generation developed for a project was assigned to the study intersections. When unavailable, KD Anderson & Associates used the best available information for those projects, generated trips for each and distributed and assigned trips to the study intersections. The Approved Projects traffic was then added to the existing volumes to develop the EPAP scenario. EPAP volumes are presented in Figure 5A through 5F. The following 11 projects were identified based on an approved project list provided by Nevada County and a project status log provided by Grass Valley.

1) **Guilded Springs** - The project is located on E. Main Street west of Bennett Road. The project consists of division of a 6.96-acre parcel into 27 single family residential lots;
2) **O-Reilly Auto Parts** - The project is located on Nevada City Highway north of Brunswick Road. It includes 8,694 square feet of retail use;
3) **740 Maltman Drive** - The project is located south of Brunswick Road and includes replacement of an existing 2,000 square foot building with a new 3,700 square foot professional office building;
4) **500 Idaho Maryland Road** - The project includes construction of two manufacturing buildings, one of which has already been completed, consisting of 22,500 square feet. The site is located east of Railroad Avenue;
5) **River Valley Bank** - The project includes construction of two buildings, a 3,500 square foot bank which has already been completed and a new 1,450 square foot professional office building;
6) **634 Town Talk Road** includes division of a 1.36-acre parcel into 11 lots in an R-3 zone. The project is located just east of Brunswick Road in the vicinity of the SR 49 interchange;
7) **130 Crown Point Circle** - This project is located in the Whispering Pines Specific Plan zone and includes construction of a 6,889 square foot dental office (medical office building);
8) **Loma Rica Ranch** - This includes the first phase of the Loma Rica Ranch Specific Plan (LRRSP). The LRRSP area includes lands between Sutton Way to east of Brunswick Road north of Idaho Maryland Road. This first phase includes 175 single family residential units and 60 duplex/ townhome lots. Phase 1 is scheduled to begin construction in the Spring 2021;
9) **Dorsey Marketplace** - This project considered two alternative site plans. Alternative A included commercial development of 181,900 square feet, construction of 90 multiple-family residential units and a 3,200 square foot clubhouse. Alternative B provided up to

172 apartments, a 3,200-square foot clubhouse, approximately 104,350 square feet of commercial space and approximately 8,500 square feet of office space. The worst-case trip generation for this site, Alternative A, was used;

10) **South Woodlands** - This project is located on Greenhorn Road east of Brunswick Road. The project consists of development of 30 single family residential lots;

11) **Tranquility Lane Estates** - This project is located on Idaho Maryland Road east of Brunswick Road. The project consists of development of 9 single family residential lots.

Intersection Levels of Service. The identified EPAP volumes were used to recalculate operating Levels of Service at the study intersections. No improvements to the study area intersections were identified. Tables 7A and 7B summarize operating Levels of Service at the study area intersections for each of the five time periods described. Three intersections will continue to operate at unacceptable Levels of Service, at LOS E or F. These include Brunswick Road at Idaho Maryland Road where the westbound approach operates at LOS F, Brunswick Road at SR 174 where the southbound approach operates at LOS F and Idaho Maryland Road at Centennial Drive where the northbound approach operates at LOS F. A fourth intersection, Idaho Maryland Road at SR 49 EB Ramps will decline to LOS E.

Seven intersections will meet the peak hour signal warrant. These include E. Bennett Road at Tinloy Street, Idaho Maryland Road at SR 49/20 EB Ramps, Brunswick Road at Idaho Maryland Road, Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road, Brunswick Road at SR 174 and Idaho Maryland Road at Centennial Drive. As identified above, the Brunswick Road / Idaho Maryland Road intersection, Brunswick Road / SR 174 intersection and Idaho Maryland Road at Centennial Drive intersection also operate below the accepted LOS D threshold.

Intersection Queues. Tables 8A and 8B present information regarding queuing at each study intersection under EPAP conditions. 95th percentile queues with lengths exceeding the available storage are highlighted. The 95th percentile queue exceeds available storage in 19 locations at 13 intersections. The intersections of Neal Street at Tinloy Street and Tinloy Street at S. Auburn Street have queues that exceed the available storage and back up through the adjacent intersection. Similar conditions also exist at the westbound approach of the Idaho Maryland Road / SR 49 EB Ramps intersection and the eastbound approach of Brunswick Road at SR 49 Westbound Off-Ramp - Maltman Drive intersection. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at three locations. The westbound left turn lane at the Brunswick Road / Loma Rica Drive intersection will continue to have a queue exceeding the turn lane length. Based on the intersection LOS, it is expected that the queue will dissipate each signal cycle.

EPAP Roadway Segment Levels of Service. Table 9 summarizes the Levels of Service based on the EPAP traffic volumes on study area roads with the existing roadway configuration. All segments along Brunswick Road and E. Bennett Road will continue to operate at LOS D or better while the SR 174 segment will continue to operate at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

TABLE 9
EPAP ROADWAY SEGMENT LEVELS OF SERVICE

V. PROJECT CHARACTERISTICS

The development of the Idaho Maryland Mine project will attract traffic to the project site. The amount of additional traffic on a particular section of the street network is dependent upon two factors:

- Trip Generation, the number of new trips generated by the project, and
- Trip Distribution and Assignment, the specific routes that the new traffic takes.

V.1. Trip Generation

Trip generation is determined by identifying the type and size of land use being developed. Recognized sources of trip generation data may then be used to calculate the total number of trip ends resulting from the day to day operation of the project.

The *Trip Generation Manual* (Institute of Transportation Engineers, 10th Edition, 2017) is often used to calculate project trips for more common land use codes. However, this publication does not have trip generation data for mining operations. Instead, the project trip generation was developed based on projected employment rates, projected truck trips for hauling engineered fill and mining concentrate off site, and projected material and supply deliveries.

Rise anticipates employing approximately 312 direct employees during full mining operations, as detailed in Table 10. At full operations, approximately 44 employees will work regular 8-hour days, 5 days per week, and approximately 268 employees will work 12-hour shifts, 7 days on and 7 days off. Shift change for 12-hour employees will be 7 a.m. and 7 p.m. Work shifts for 8-hour employees will be from 7 a.m. to 3:30 p.m.

The Brunswick site will generate a maximum of 174 employee trips per day while the Centennial site will generate a maximum of 4 employee trips per day. The employee trip generation is shown in the top of Table 12.

TABLE 10
OPERATIONS WORKFORCE & HOURS OF OPERATION

Workforce	Shift	Total Employees
Administrative Personnel: Management, technical, construction, administrative staff	8 hours a day,5 days a week 7:00 a.m. – 3:30 p.m.	40
Mining Operations: Underground mining, mineral processing, engineered fill transport staff	12 hours a day, 7 days on, 7 days off 7:00 a.m. – 7:00 p.m. & 7:00 p.m. – 7:00 a.m.	268
Grading Operations: Centennial* or Brunswick Industrial Site – placement and compaction of engineered fill	8 hours a day, 5 days per week 7:00 a.m. – 3:30 p.m.	4
	TOTAL WORKFORCE	**312**
* Staffing at the Centennial site is projected to occur over an approximate five-year span within the analysis.		

In addition to employee traffic, the Idaho-Maryland Mine project will result in daily operational truck traffic, including but not limited to engineering fill trucking, concentrate trucking, and materials and supplies deliveries, and ancillary vehicle traffic to support operations. The truck traffic, hours, and projected trip generation are detailed in Table 11. The total maximum number of two-way truck trips is 118 trucks, with 236 total daily trips made, one inbound and one outbound.

TABLE 11
PROJECT TRUCK TRAFFIC & HOURS

Truck Traffic	Hours	Maximum Daily Trips	Average Daily Trips
Brunswick Site			
Engineered Fill	6:00 a.m. – 10:00 p.m. 7 days a week	100	50
Concentrate	6:00 a.m. – 10:00 p.m. 7 days a week	5	1
Materials / Supplies / Outside services	7:00 a.m. – 7:00 p.m. 7 days a week	12	6
Centennial Site			
Fuel Supplies	7:00 a.m. – 3:30 p.m. 5 days a week	1	0.3
	TOTAL TWO-WAY TRIPS (One-Way Trips)	**118 (236)**	**57.3 [rounded 58] (114.6) [rounded 115]**
NOTES: 1. Traffic analysis studies the worst-case scenario of maximum daily trips and with hours of operation as shown in Table 10.			

As discussed previously, a.m. and p.m. periods were analyzed during the "standard" peak of adjacent street traffic, generally from 7:00 a.m. to 9:00 a.m. and 4:00 p.m. to 6:00 p.m., and at the three time periods when project employee trips are expected to occur based on actual proposed work schedules. Table 12 presents the projected trip generation for the project during the five analysis periods, considering the worst-case scenarios for both Brunswick and Centennial sites.

For purposes of a worst-case analysis, the County requested that a worst-case scenario be analyzed, assuming the project traffic occurred during the "standard" peak hours. However, as noted, the project schedule intends to have employees commute during off-peak hours, as previously described.

As noted, the Centennial site is expected to be an active site with delivery of engineered fill occurring for a period of approximately 5 years. The engineered fill is projected to be delivered to construction sites accessible from SR 49 for the remaining 15 years of the analysis. It is unknown which years will be used for each scenario; therefore, two scenarios were analyzed, with each scenario assumed to be active at build-out:

Scenario 1: Transporting of engineered fill to the Centennial Industrial site.
Scenario 2: Transporting of engineered fill to construction sites accessible via SR 49/20.

TABLE 12
TRIP GENERATION

	Employee Trips (Hourly)									
	AM Peak Hour		PM Peak Hour		6:30 – 7:30 AM		3:30 – 4:30 PM		6:30 -7:30 PM

Notes:
- Trip generation assumes worst case scenario. Daily operations workforce and truck traffic are detailed in Table 9 and Table 10.
- Brunswick site operational on weekends and generate 67 inbound / outbound trips at shift change

* includes mining and administrative operations ‡ includes mining operations † includes administrative operations
□ 5 round trips (10 one-way truck trips) / day averaged over 8-hour day (worst case) Δ 1 trip per day
⌂ 12 round trips (24 one-way truck trips) / day averaged over 8-hour day ◊ 100 roundtrips (200 truck trips) / day averaged over 1212 hours (worst case)

V.2. Trip Distribution & Assignment

The distribution of traffic was developed based on existing traffic patterns in the Grass Valley area and where employees may be expected to live. Engineered fill will be hauled to either the Centennial site or to off-site construction sites and mining concentrate will be shipped off-site via SR 49. Other trucks providing materials and supplies are expected to access the site from both SR 49 and SR 174. Trip distribution for the various trip elements are shown in Table 13. The trip distribution shown in Figure 6A considers hauling to the Centennial site while Figure 6B provides trip distribution to construction sites accessible via SR 49/20. Project traffic volumes are shown in Figures 7A through 7F with the Centennial site used for engineered fill and Figures 8A through 8F with engineered fill hauled to off-site construction locations. The project distribution was reviewed by both Nevada County and Grass Valley staff.

TABLE 13

VI. PROJECT TRAFFIC IMPACTS

VI.1. EPAP Plus Project Conditions (Scenario #1)

Scenario #1 considers transporting of engineered fill to the Centennial Industrial site.

Traffic Volumes. The LOS impacts of the Idaho-Maryland Mine project have been identified by superimposing project traffic onto EPAP conditions. Figures 9A through 9F display the "EPAP Plus Project" traffic volumes at each study intersection for each of the five study time periods.

EPAP plus Project volumes under Scenario #1 were used to recalculate operating Levels of Service at the study intersections. No roadway improvements at the study area intersections, other than those incorporated as part of the EPAP scenario, were identified. Tables 14A and 14B summarize operating Levels of Service at the study area intersections for each of the five study time periods.

During the peak hour scenario three intersections would continue to operate at unacceptable Levels of Service, at LOS E or F, which include Brunswick Road at Idaho Maryland Road, Brunswick Road at SR 174, and Idaho Maryland Road at Centennial Drive. Two additional intersections will decline to LOS E, Idaho Maryland Road at SR 49/20 Eastbound Ramps and Brunswick Road at E. Bennett Road – Greenhorn Road.

During the project traffic hours, when the project employee traffic occurs, three intersections will operate below the LOS threshold. These intersections include Brunswick Road at Idaho Maryland Road, Brunswick Road at SR 174, and Idaho Maryland Road at Centennial Drive.

Seven intersections will meet the peak hour signal warrant during the a.m. and p.m. peak hour scenarios. These include E. Bennett Road at Tinloy Street, Idaho Maryland Road at SR 49/20 EB Ramps, Brunswick Road at Idaho Maryland Road, Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road-Greenhorn Road, Brunswick Road at SR 174 and Idaho Maryland Road at Centennial Drive. The Idaho Maryland Road / SR 49/20 EB Ramps intersection, Brunswick Road / Idaho Maryland Road intersection, Brunswick Road / E. Bennett Road-Greenhorn Road intersection, Brunswick Road / SR 174 intersection and Idaho Maryland Road at Centennial Drive intersection also operate below the accepted LOS D threshold. While the Brunswick Road / Whispering Pines Lane intersection meets the peak hour signal warrant it operates acceptably. During the project hour analyses the same seven intersections will meet the peak hour signal warrant; however, only the Brunswick Road / Idaho Maryland Road intersection, the SR 174 at Brunswick Road intersection and the Idaho Maryland Road at Centennial Drive intersection will operate below the accepted LOS D threshold.

Intersection Queues. Tables 15A and 15B present information regarding queuing at each study intersection under EPAP plus Project conditions. 95th percentile queues with lengths exceeding the available storage are highlighted. The 95th percentile queue exceeds available storage in 19 locations at 13 intersections considering the five analysis scenarios. Table 15B presents a comparison of EPAP plus Project, Scenario #1 to EPAP conditions. During "Plus Project" conditions no intersections will have a storage lane length that is greater than 25 feet when compared to the "No Project" condition. The intersections of Neal Street at Tinloy Street and Tinloy Street at S. Auburn Street have queues that will continue to exceed the available storage and back up through the adjacent intersection. Similar conditions will continue to exist at the westbound approach of the Idaho Maryland Road / SR 49 EB Ramps intersection and the eastbound approach of Brunswick Road at SR 49 Westbound Off-Ramp - Maltman Drive intersection. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at four locations. The queues in the westbound left turn lane at the Brunswick Road / Loma Rica Drive intersection will continue to exceed the available storage; however, it will not lengthen beyond the EPAP condition. None of the "Plus Project" condition queues are considered significant.

EPAP Plus Project Conditions (Scenario #1) Roadway Segment Levels of Service. Table 16 summarizes the Levels of Service based on the EPAP plus Project traffic volumes on study area roads with the existing roadway configuration. All segments along Brunswick Road and E. Bennett Road will continue to operate at LOS D or better while the SR 174 segment will continue to operate at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

TABLE 16
EPAP PLUS PROJECT
CENTENNIAL SITE (SCENARIO #1)
ROADWAY SEGMENT LEVELS OF SERVICE

Roadway	Location	Facility Classification	ATS/PTSF/LOS EPAP plus Project PM Peak Hour
Brunswick Rd	SR 49 to Whispering Pines Ln	Class I Highway	
	NB		31.2 / 77.1 / D
	SB		31.2 / 78.4 / D
	Whispering Pines Ln to E. Bennett Rd	Class I Highway	
	NB		36.1 / 72.5 / D
	SB		35.5 / 83.6 / D
	E. Bennett Rd to Project Driveway	Class I Highway	
	NB		34.9 / 68.3 / D
	SB		34.8 / 80.1 / D
	Project Driveway to SR 174	Class I Highway	
	NB		33.7 / 67.9 / D
	SB		33.2 / 83.9 / D
E. Bennett Rd	Project Driveway to Brunswick Rd	Class III Highway	
	EB		36.1 / 37.6 / B
	WB		34.8 / 53.4 / B
SR 174	Brunswick Rd to Empire St	Class I Highway	
	EB		**30.2 / 59.8 / E**
	WB		**29.2 / 78.2 / E**

ATS – average travel speed
PTSF – percent time spent following
LOS – level of service
Bold indicates LOS threshold exceeded

VI.2. EPAP Plus Project Conditions (Scenario #2)

Scenario #2 considers transporting of engineered fill to construction sites accessible via SR 49/20.

Traffic Volumes. The LOS impacts of the Idaho-Maryland Mine project have been identified by superimposing project traffic onto EPAP conditions. Figures 10A through 10F display the "EPAP Plus Project" traffic volumes at each study intersection for each of the five study time periods.

EPAP plus Project volumes under Scenario #2 were used to recalculate operating Levels of Service at the study intersections. No roadway improvements at the study area intersections, other than those incorporated as part of the EPAP scenario, were identified. Tables 17A and 17B summarize operating Levels of Service at the study area intersections for each of the five study time periods.

During the peak hour scenario, three intersections will continue to operate at unacceptable Levels of Service, at LOS E or F, which include Brunswick Road at Idaho Maryland Road, Brunswick Road at SR 174, and Idaho Maryland Road at Centennial Drive. Two additional intersections will decline to LOS E or F, Idaho Maryland Road at SR 49/20 Eastbound Ramps and Brunswick Road at E. Bennett Road – Greenhorn Road.

During the project traffic hours, when the project employee traffic occurs, three intersections will operate below the LOS threshold. These intersections include the Brunswick Road at Idaho Maryland Road, Brunswick Road at SR 174, and Idaho Maryland Road at Centennial Drive.

Seven intersections will meet the peak hour signal warrant during the a.m. and p.m. peak hour scenarios. These include E. Bennett Road at Tinloy Street, Idaho Maryland Road at SR 49/20 EB Ramps, Brunswick Road at Idaho Maryland Road, Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road-Greenhorn Road, Brunswick Road at SR 174 and Idaho Maryland Road at Centennial Drive. The Idaho Maryland Road / SR 49/20 EB Ramps intersection, Brunswick Road / Idaho Maryland Road intersection, Brunswick Road / E. Bennett Road-Greenhorn Road intersection, Brunswick Road / SR 174 intersection and Idaho Maryland Road at Centennial Drive intersection also operate below the accepted LOS D threshold. While the Brunswick Road / Whispering Pines Lane intersection meets the peak hour signal warrant it operates acceptably. During the project hour analyses the same seven intersections will meet the peak hour signal warrant; however, only the Brunswick Road / Idaho Maryland Road intersection, the SR 174 at Brunswick Road intersection and the Idaho Maryland Road at Centennial Drive intersection will operate below the accepted LOS D threshold.

Intersection Queues. Tables 18A and 18B present information regarding queuing at each study intersection under EPAP plus Project conditions. 95th percentile queues with lengths exceeding the available storage are highlighted. The 95th percentile queue exceeds available storage in 19 locations at 13 intersections considering the five analysis scenarios. Table 18B presents a comparison of EPAP plus Project, Scenario #2 to EPAP conditions. During "Plus Project" conditions no intersections will have a storage length that is greater than 25 feet when compared to the "No Project" condition. The intersections of Neal Street at Tinloy Street and Tinloy Street at S. Auburn Street have queues that will continue to exceed the available storage and back up through the adjacent intersection. Similar conditions will continue to exist at the westbound approach of the Idaho Maryland Rd / SR 49 EB Ramps intersection and the eastbound approach of Brunswick Road at SR 49 Westbound Off-Ramp - Maltman Drive intersection. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at five locations. The queues in the westbound left turn lane at the Brunswick Road / Loma Rica Drive intersection will continue to exceed the available storage; however, it will not lengthen beyond the EPAP condition. None of the "Plus Project" condition queues are considered significant.

EPAP Plus Project Conditions (Scenario #2) Roadway Segment Levels of Service. Table 19 summarizes the Levels of Service based on the EPAP traffic volumes on study area roads with the existing roadway configuration. All segments along Brunswick Road and E. Bennett Road will continue to operate at LOS D or better while the SR 174 segment will continue to operate at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

LOS – level of service
Bold indicates LOS threshold exceeded

VII. CUMULATIVE IMPACTS (2035)

The analysis of the long range 2035 cumulative condition is intended to consider the impact of this project within the context of the Nevada County region buildout projected to occur by 2035.

VII.1. Year 2035 Forecasts / Conditions

2035 Traffic Forecasts

Year 2035 traffic forecasts were based on the Nevada County Transportation Commission (NCTC) regional travel demand model and includes those projects identified in the EPAP scenario. Fehr & Peers maintains the NCTC model and provided a.m., p.m. and daily model volumes for the base year 2012 and the build out year 2035. Based on direction from the Nevada County Public Works Department the differential method was used to develop peak hour turning movements at all study intersections. The method adds the difference between the two model results to the existing traffic conditions. Turning movements at each intersection for the remaining three scenarios were developed by applying the differential method with the proportional traffic rate between the off-peak scenarios and the peak hour scenarios. Figures 11A through 11F display the Cumulative No Project traffic volumes at each study intersection for each of the five study time periods.

Roadway Conditions

The roadways studied for this project are generally projected to remain with their current lane configurations in 2035. The following changes to the projected 2035 roadway network were identified based on Nevada County, Grass Valley and Caltrans project lists:

- Idaho Maryland Road / SR 49/20 Ramps
  - Install traffic signal with NB overlap

- Idaho Maryland Road / Railroad Avenue
  - Install traffic signal

- Brunswick Road / Idaho Maryland Road
  - Install traffic signal, split phase on Idaho Maryland Road with EB overlap
  - Lane configuration to include:
    - eastbound left-through lane and right turn lane
    - westbound left-through lane and right turn lane
    - northbound left turn lane and through-right lane
    - southbound left turn lane, through lane and through-right lane

- Idaho Maryland Road / Centennial Drive
  - Install traffic signal

Signal timing was optimized at all intersections. Other roadway improvements were identified; however, none were operational and have not been listed.

One intersection, SR 174 at Brunswick Road was previously identified to be signalized in the NCTC Regional Transportation Program (RTMF). The most recent study, the NCTC 2016 Nexus Study, removed the project from the program as this study showed acceptable intersection levels of service. The Caltrans SR 174 TCR continues to identify this intersection as a planned, but unfunded improvement which could include either a traffic signal or roundabout. Based on this data, the intersection was analyzed under current traffic operations.

2035 Intersection Levels of Service. The Cumulative volumes were used to recalculate operating Levels of Service at the study intersections. Tables 20A and 20B summarize operating Levels of Service at the study area intersections for each of the five study time periods.

During the peak hour scenario three intersections will operate at unacceptable Levels of Service, at LOS E or F, which include Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road and Sutton Way at Dorsey Drive.

During the project traffic hours when most of the project traffic occurs, two intersections will operate below the LOS threshold during the 3:30 to 4:30 period when administrative staff is departing. These include Sutton Way at Dorsey Drive which will operate at LOS F and SR 174 at Brunswick Road which will operate at LOS E.

Seven intersections will meet the peak hour signal warrant during the a.m. and p.m. peak hour scenarios and the 3:30 – 4:30 p.m. project traffic scenario. These include E. Bennett Road at Tinloy Street - SR 49 WB Off-Ramp, E. Bennett Street at Hansen Way - SR 49 EB On-Ramp, Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road, Idaho-Maryland Road / Sutton Way and Sutton Way at Dorsey Drive. As identified above, the Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road and Sutton Way at Dorsey Drive intersections also operate below the accepted LOS threshold.

Intersection Queues. Tables 21A and 21B present information regarding queuing at each study intersection under Cumulative conditions. 95th percentile queues with lengths exceeding the available storage are highlighted. The 95th percentile queue exceeds available storage in 21 locations at 13 intersections considering the five analysis scenarios. Some intersections are shown to have excessive queues while maintaining acceptable levels of service. These include Neal Street at Tinloy Street, Idaho Maryland Road at SR 49/20 Eastbound Ramps, Idaho Maryland Road at Railroad Avenue, Brunswick Road / Sutton Way and Brunswick Road / Loma Rica Drive; the level of service is a result of the ability of the intersection to serve those vehicles that enter the intersection. Other intersections with queues exceeding the available storage include intersections identified to be signalized by 2035; with signalization the storage lanes require lengthening. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at four locations.

Cumulative Roadway Segment Levels of Service. Table 22 summarizes the Levels of Service based on the Cumulative traffic volumes on study area roads. All segments along Brunswick Road and E. Bennett Road will continue to operate at LOS D or better while the SR 174 segment will continue to operate at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

TABLE 22
CUMULATIVE ROADWAY SEGMENT LEVELS OF SERVICE

Roadway	Location	Facility Classification	ATS/PTSF/LOS Cumulative PM Peak Hour
Brunswick Rd	SR 49 to Whispering Pines Ln	Class I Highway

	EB		**29.8 / 60.2 / E**
	WB		**28.6 / 80.4 / E**

ATS – average travel speed
PTSF – percent time spent following
LOS – level of service
Bold indicates LOS threshold exceeded

VII.2. Cumulative Plus Project Conditions (Scenario #1)

Scenario #1 considers transporting of engineered fill to the Centennial Industrial site.

Traffic Volumes. The LOS impacts of the Idaho-Maryland Mine project have been identified by superimposing project traffic onto Cumulative conditions. Figures 12A through 12F display the "Cumulative Plus Project" traffic volumes at each study intersection for each of the five study time periods.

Cumulative plus Project volumes under Scenario #1 were used to recalculate operating Levels of Service at the study intersections. Tables 23A and 23B summarize operating Levels of Service at the study area intersections for each of the five study time periods.

During the peak hour scenario three intersections would continue to operate at unacceptable Levels of Service, at LOS E or F, which include Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road and Sutton Way at Dorsey Drive. One additional intersection, Brunswick Road at Whispering Pines Lane, would decline to LOS E.

During the project traffic hours two intersections will operate below the LOS threshold, at LOS E or F. These include Sutton Way at Dorsey Drive and SR 174 at Brunswick Road.

Eight intersections will meet the peak hour signal warrant during the a.m. and p.m. peak hour scenarios. These include E. Bennett Road at Tinloy Street - SR 49 WB Off-Ramp, E. Bennett Street at Hansen Way - SR 49 EB On-Ramp, Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road, Brunswick Road at Project Driveway, Idaho-Maryland Road at Sutton Way and Sutton Way at Dorsey Drive. The Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road, SR 174 at Brunswick Road and Sutton Way at Dorsey Drive intersections also operate below the accepted LOS threshold. While the E. Bennett Road at Tinloy Street - SR 49 WB Off-Ramp, E. Bennett Street at Hansen Way - SR 49 EB On-Ramp, Idaho-Maryland Road at Sutton Way and Brunswick Road / Project Driveway intersections meet the peak hour signal warrant they operate acceptably. During the project hour analyses the same eight intersections will meet the peak hour signal warrant; however, only the SR 174 at Brunswick Road and Sutton Way at Dorsey Drive intersections will operate below the accepted LOS threshold.

Intersection Queues. Tables 24A and 24B present information regarding queuing at each study intersection under Cumulative plus Project conditions. 95th percentile queues with lengths exceeding the available storage are highlighted. The 95th percentile queue exceeds available storage in 23 locations at 15 intersections considering the five analysis scenarios. Table 24B presents a comparison of Cumulative plus Project, Scenario #1 to Cumulative conditions. During "Plus Project" conditions one intersection will have a storage length that is greater than 25 feet when compared to the "No Project" condition. This is the Brunswick Road / Sutton Road intersection where the northbound left turn lanes extend up to 110 feet beyond the "No Project" scenario. The queues at the intersections of Neal Street at Tinloy Street, Idaho Maryland Road at SR 49/20 Eastbound Ramps, Idaho Maryland Road at Railroad Avenue, Brunswick Road / Sutton Way and Brunswick Road / Loma Rica Drive will continue to have excessive queues while maintaining acceptable levels of service, serving the vehicles that do enter the intersections. Some other intersections will continue to have queues exceeding the available storage include those intersections signalized by 2035. Two additional locations will exceed the available storage. These include the eastbound left turn lane of Whispering Pines Lane at Brunswick Road and the eastbound left turn lane of the Eastbound SR 49/20 ramps at Dorsey Drive. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at six locations.

Cumulative Plus Project Conditions (Scenario #1) Roadway Segment Levels of Service. Table 25 summarizes the Levels of Service based on the Cumulative plus Project traffic volumes on study area roads with the existing roadway configuration. All segments along Brunswick Road and E. Bennett Road will continue to operate at LOS D or better while the SR 174 segment will continue to operate at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

PTSF – percent time spent following
LOS – level of service
Bold indicates LOS threshold exceeded

VII.3. Cumulative Plus Project Conditions (Scenario #2)

Scenario #2 considers transporting of engineered fill to construction sites accessible via SR 49/20.

Traffic Volumes. The LOS impacts of the Idaho-Maryland Mine project have been identified by superimposing project traffic onto Cumulative conditions. Figures 13A through 13F display the "Cumulative Plus Project" traffic volumes at each study intersection for each of the five study time periods.

Cumulative plus Project volumes under Scenario #2 were used to recalculate operating Levels of Service at the study intersections. Tables 26A and 26B summarize operating Levels of Service at the study area intersections for each of the five study time periods.

During the peak hour scenario three intersections would continue to operate at unacceptable Levels of Service, at LOS E or F, which include Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road and Sutton Way at Dorsey Drive. One additional intersection, Brunswick Road at Whispering Pines Lane, would decline to LOS E.

During the project traffic hours two intersections will operate below the LOS threshold, at LOS E or F. These include Sutton Way at Dorsey Drive and SR 174 at Brunswick Road.

Eight intersections will meet the peak hour signal warrant during the a.m. and p.m. peak hour scenarios. These include E. Bennett Road at Tinloy Street - SR 49 WB Off-Ramp, E. Bennett Street at Hansen Way - SR 49 EB On-Ramp, Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road – Greenhorn Road, SR 174 at Brunswick Road, Brunswick Road at Project Driveway, Idaho-Maryland Road at Sutton Way and Sutton Way at Dorsey Drive. The Brunswick Road at Whispering Pines Lane, Brunswick Road at E. Bennett Road, SR 174 at Brunswick Road and Sutton Way at Dorsey Drive intersections also operate below the accepted LOS threshold. While the E. Bennett Road at Tinloy Street - SR 49 WB Off-Ramp, E. Bennett Street at Hansen Way - SR 49 EB On-Ramp, Idaho-Maryland Road at Sutton Way and Brunswick Road / Project Driveway intersections meet the peak hour signal warrant, they operate acceptably. During the project hour analyses the same eight intersections will meet the peak hour signal warrant; however, only the SR 174 at Brunswick Road and Sutton Way at Dorsey Drive intersections will operate below the accepted LOS threshold.

Intersection Queues. Tables 27A and 27B present information regarding queuing at each study intersection under Cumulative plus Project conditions. 95th percentile queues with lengths exceeding the available storage are highlighted. The 95th percentile queue exceeds available storage in 23 locations at 15 intersections considering the five analysis scenarios. Table 27B presents a comparison of Cumulative plus Project, Scenario #2 to Cumulative conditions. During "Plus Project" conditions one intersection will have a storage length that is greater than 25 feet when compared to the "No Project" condition. This is the Brunswick Road / Sutton Road intersection where the northbound left turn lanes extend up to 55 feet beyond the "No Project" scenario. The queues at the intersections of Neal Street at Tinloy Street, Idaho Maryland Road at SR 49/20 Eastbound Ramps, Idaho Maryland Road at Railroad Avenue, Brunswick Road / Sutton Way and Brunswick Road / Loma Rica Drive will continue to have excessive queues while maintaining acceptable levels of service, serving the vehicles that do enter the intersections. Some other intersections will continue to have queues exceeding the available storage include those intersections signalized by 2035. Two additional locations will exceed the available storage. These include the eastbound left turn lane of Whispering Pines Lane at Brunswick Road and the eastbound left turn lane of the Eastbound SR 49/20 ramps at Dorsey Drive. It is assumed that one additional vehicle (25') can store in the available left or right turn taper and this occurs at six locations.

Cumulative Plus Project Conditions (Scenario #2) Roadway Segment Levels of Service. Table 28 summarizes the Levels of Service based on the Cumulative plus Project traffic volumes on study area roads with the existing roadway configuration. All segments along Brunswick Road and E. Bennett Road will continue to operate at LOS D or better while the SR 174 segment will continue to operate at LOS E. The SR 174 segment exceeds the LOS C threshold in both directions.

Bold indicates LOS threshold exceeded

VIII. PAVEMENT CONDITION ANALYSIS

The purpose of this analysis is to assess the impact of the project on the roadway pavement where engineered fill haul trucks and other trucks, such as delivery vehicles and concentrate shipments, are expected to travel through NCTC's 2035 cumulative year traffic model.

Truck traffic is the primary factor affecting pavement design life and is therefore used to engineer pavement thickness. Passenger cars and pick-up trucks are considered to have a negligible impact when considering traffic loads. Traffic loads are transmitted to the pavement surface from the vehicle axles, and the loading is determined by using established constants to convert truck data into 18,000-pound Equivalent Single Axle Loads (ESAL). These ESAL's are converted into a Traffic Index (TI) which is then used to calculate the minimum pavement thickness. Pavement impacts were analyzed based on a comparison of the Traffic Index (TI) under 'Plus Project' and 'No Project' conditions. The segments studied include Brunswick Road from the project driveway north to the SR 49 / 20 interchange and along Whispering Pines Lane to the proposed Centennial site driveway.

VIII.1. Project Truck Trip Generation

Pavement analyses consider truck and bus traffic with ESAL constants varying for 2,3,4 and 5+ axle classifications. Pavement conditions were analyzed for an average day over a 20-year study period. Engineered fill will be transported in 4-axle single unit trucks. Other trucks providing materials and fuel were also assumed to be 5-axle trucks / semi-trailers. Truck trip generation for the Idaho-Maryland Mine project was estimated as shown in Table 29. The trip generation is based upon the project description identifying the projected truck traffic at both sites for the length of the project. Haul truck traffic between the Brunswick and Centennial sites is projected to last for five years of the 20-year study period while the engineered fill trucks are projected to access SR 49/20 for 15 of those years. All other trucks will access the site from the SR 49/20 interchange for the entire 20-year period.

TABLE 29
PROJECT TRUCKS (1-WAY)

Total Trucks		
Inbound Trucks (average daily)	**57**	**56**
Outbound Trucks (average daily)	**57**	**56**

* includes fuel trucks, explosives trucks, cement delivery and freight trucks
† includes fuel trucks

VIII.2. Pavement Condition Analysis

The impact of the Idaho-Maryland Mine project on roadway pavement conditions was evaluated for this report. The assessment of pavement is based on Chapters 600, 610, and 630 of the *Highway Design Manual* (California Department of Transportation, 2018). As stated in the *Highway Design Manual*, pavements should be engineered to carry the truck traffic loads expected during the pavement design life. Truck traffic, which includes buses, trucks, and truck-trailers, is the primary factor affecting pavement design life and its serviceability. The methods described in the *Highway Design Manual* for evaluating impacts specify how to estimate traffic loading and pavement performance. Traffic loading is estimated by using established constants to convert truck traffic volumes into 18-kip[1] equivalent single axle loads (ESALs).

Caltrans identifies 20 and 40-year design life periods when constructing or rehabilitating pavement. For this report a 20-year design life was used to calculate the Traffic Index (TI). The ESAL constants, as described in the *Highway Design Manual*, are presented in Table 30. The total projected ESALs during the pavement design life are converted into a TI (Table 31) that is used along with the characteristics of the subgrade soils (R-Value) to determine the required pavement thickness.

[1] 1 kip equals 1,000 pounds

TABLE 30
EQUIVALENT SINGLE AXLE LOAD CONSTANTS

Vehicle Type (By Axle Classification)	10-Year Constants	20-Year Constants	30-Year Constants	40-Year Constants
2-axle Trucks or Buses	690	1,380	2,070	2,760
3-axle Trucks or Buses	1,840	3,680	5,520	7,360
4-axle Trucks or Buses	2,940	5,880	8,820	11,760
5 or more-axle Trucks	6,890	13,780	20,670	27,560

Source: Caltrans Highway Design Manual (California Department of Transportation, 2012)

A fundamental characteristic of pavement condition analysis as described in the *Highway Design Manual* is that the TI value is calculated for a design life. The pavement condition analysis is analyzed over its design life timeframe. The mid-point of the timeline, in this analysis, is 10 years from Existing conditions, and represents the "average" ESAL over the design life. The proposed project will haul engineered fill between the Brunswick site and the Centennial site for five years while engineered fill will be hauled offsite via SR 49/20 for 15 years; therefore, the haul route between the Brunswick and Centennial sites will be used for 25% of the time while the SR 49 route will be used for 75% of the time. Other trucks, materials delivery and concentrate trucks, will access the Brunswick Road / SR 49/20 interchange throughout the duration of the project.

The *Highway Design Manual* indicates that the TI is a measure of the number of ESALs expected in the traffic lane over the pavement design life of the facility. The TI does not vary linearly with the ESAL values, but rather according to the exponential formula below and the values presented below.

$$TI = 9.0 \times ((\ ESAL \times LDF\ ) / 10^6\ )^{0.119}$$

Where:

TI = Traffic Index (determined to the nearest 0.5)
ESAL = Total number of cumulative 18-kip Equivalent Single Axle Loads
LDF = Lane Distribution Factor (Table 613.3B of the *Highway Design Manual*)
LDF =1

An increase in the TI as a result of a new project or regional growth creates a corresponding decrease in the expected life of the existing pavement. This is due to a pavement being designed to a particular thickness based on the TI and R values. A higher TI will result in a thicker pavement. If the pavement is not being changed, the result is a shorter lifespan. The actual decrease in the life of the pavement for a given increase in the TI is dependent upon variable factors such as the existing asphalt concrete thickness, the existing aggregate base thickness, and the

strength of the subgrade soils (R-Value). The determination of these factors is beyond the scope of this traffic impact study. Therefore, the actual decrease in pavement life is not identified.

TABLE 31
CONVERSION OF EQUIVALENT SINGLE AXLE LOADS (ESAL)
TO TRAFFIC INDEX (TI)

	10.5		17.0
4,500,000		238,000,000	
	11.0		17.5
6,600,000		303,000,000	

Source: Caltrans Highway Design Manual (California Department of Transportation, 2018)
Notes: According to Table 613.3C of the Caltrans Highway Design manual, "the determination of the TI closer than 0.5 is not justified. No interpolation should be made."
For ESAL's less than 5,000 or greater than 300,000,000, use the TI equation to calculate the design TI

VIII.3. Data Collection

Vehicle classification counts were conducted along Brunswick Road, E. Bennett Road and Whispering Pines Lane during the week of September 23, 2019 while school was in session to determine the existing daily truck volumes. The classification count provided a breakdown, by direction and axle, of the types of trucks along each of the roadways and is provided in Appendix 6. For this report, the impact of the Idaho-Maryland Mine project on pavement condition was analyzed for the following roadways, which includes the Centennial Industrial site haul route for five of the 20 years and the SR 49 haul route for 15 of the 20 years:

- Brunswick Rd between the Project Site Access and E. Bennett Rd – Greenhorn Rd,
- Brunswick Rd between E. Bennett Rd – Greenhorn Rd and Whispering Pines Ln,
- Brunswick Rd between Whispering Pines Ln and SR 49/20,
- E. Bennett Rd between Project Site Access and Brunswick Rd,
- Whispering Pines Ln between Brunswick Rd and Crown Point Circle, and
- Whispering Pines Ln between Crown Point Circle and Centennial Industrial Site.

Table 32 presents a breakdown of the existing average daily traffic conditions along the roadway segments including the vehicle classification in each direction along the roadway, and the truck type, by axle.

WB	1,744	51	11	4	4

The NCTC travel demand model traffic volume forecasts were used for this report. TI values were calculated for conditions without the proposed project and for conditions with the proposed project with both haul routes. As noted above, an increase in the TI as a result of a new project creates a corresponding decrease in the expected life of the existing pavement. Therefore, if the TI value for conditions with the proposed project is higher than the TI value without the project, this would indicate a project-related decrease in the expected life of the pavement and is considered an adverse impact.

A summary of the pavement condition analysis is presented in Table 33. For each roadway segment analyzed, Table 33 presents TI values for conditions without the Idaho-Maryland Mine project and TI values for conditions with the proposed project under both hauling scenarios. As noted above, the proposed project is considered to have an adverse impact if it would result in an increase in the TI value.

TABLE 33
ROADWAY SEGMENT TRAFFIC INDEX (TI) SUMMARY

Roadway Segment	Direction	20 Year Without Project	20 Year With Project TI (To Centennial Site – Scenario #1)	20 Year With Project TI (To SR 49 – Scenario #2)
Brunswick Road between the Project Site Access and E. Bennett Road – Greenhorn Road	Northbound	8.5	8.5	8.5
	Southbound	8.5	8.5	8.5
Brunswick Road between E. Bennett Road – Greenhorn Road and Whispering Pines Lane	Northbound	9.5	**10.0**	**10.0**
	Southbound	9.5	9.5	9.5
Brunswick Road between Whispering Pines Lane and SR 49/20	Northbound	8.5	8.5	**9.0**
	Southbound	8.5	8.5	8.5
E. Bennett Road between Project Site Access and Brunswick Road	Eastbound	7.0	**8.0**	**8.0**
	Westbound	7.0	7.0	7.0
Whispering Pines Lane between Brunswick Road and Crown Point Circle	Eastbound	8.0	8.0	Not used
	Westbound	8.0	8.0	Not used
Whispering Pines Lane between Crown Point Circle and Centennial Industrial Site	Eastbound	7.5	7.5	Not used
	Westbound	7.5	7.5	Not used

- Notes: ESAL – Equivalent Single Axle Load; TI= Traffic Index
- Calculation of TI Values presented in Technical Appendix
- **Bold** indicates existing TI exceeded

Implementation of the Idaho-Maryland Mine project would result in an increase in the TI value on the following directional roadway segments:

<u>To Centennial Industrial Site</u>

- Brunswick Road northbound between E. Bennett Rd and Whispering Pines Lane,
- E. Bennett Road between Millsite Road (project driveway) and Brunswick Road,

<u>To SR 49/20</u>

- Brunswick Road northbound between E. Bennett Rd and Whispering Pines Lane,
- Brunswick Road northbound between Whispering Pines Lane and SR 49/20, and
- E. Bennett Road between Millsite Road (project driveway) and Brunswick Road.

Because the design pavement thickness for roadway segments depends on the projected TI, the additional project truck traffic would result in a shorter lifespan of the pavement or increased maintenance.

IX. TRUCK TURN ASSESSMENT

This section presents an assessment of the adequacy of routes to and from the Brunswick Industrial site on Brunswick Road. The purpose of this analysis is to determine whether key intersections along each route, as currently configured, can accommodate haul trucks and to identify the approximate level of roadway widening improvements that would likely be necessary to allow haul truck movements. The haul truck to be used is a single unit 4-axle Superior Super Tag SST100 truck.

Study Area. Haul truck traffic to and from the Brunswick Industrial site consists of inbound and outbound routes to both the Centennial Industrial site and to the SR 49/20 / Brunswick Road interchange. Five (5) intersections were analyzed:

Brunswick Industrial Site Driveway. This entrance will be used for haul trucks entering the Brunswick Industrial site from the north. This will include right turning traffic into the site.

Millsite Road / E. Bennett Road Exit. This location will be used only for haul trucks departing the Brunswick Industrial site and heading to either the Centennial Industrial Use site or SR 49/20. This will include right turning traffic departing the site.

Brunswick Road / E. Bennett Road – Greenhorn Road. This location includes southbound through traffic and eastbound to northbound left turning traffic. The AutoTURN analysis only considered the turning movement.

Brunswick Road / Whispering Pines Lane. This location includes northbound to westbound traffic heading to the Centennial Industrial site and eastbound to southbound traffic heading from the Centennial site. Truck traffic will also use this intersection heading to SR 49/20; however, these through movements were not analyzed.

Centennial Industrial Use Site Driveway. This location includes westbound left turn movements into the proposed Centennial Industrial site driveway and northbound right turn movements departing the driveway.

IX.1. Methods of Analysis

AutoTURN. The assessment of truck turning movements was conducted using AutoTURN software prepared by Transoft. This software implements procedures described in the American Association of State and Highway Transportation Officials (AASHTO) document *A Policy on Geometric Design of Highways and Streets*, and the Caltrans *Highway Design Manual*. The software is a CADD based program that simulates turning maneuvers for various vehicles. The program is used to define both vehicle tire tracking and trailer sweep paths in order to test design roadway features to meet minimum design vehicle constraints. A Superior Super Tag SST100 truck vehicle template was created based on information obtained for this vehicle.

The spatial database used in the analysis of all truck turning movements was based on aerial photography acquired from Google Earth, with imagery dated May 17, 2018. At each location the aerial photograph was imported into a CADD file. AutoTURN was then superimposed over each aerial photograph to simulate the projected turning paths for a STAA vehicle. The resulting paths were then reviewed to determine the ability of vehicles to complete the required movements within the identified constraints:

- Drive off of the edge of the pavement or
- Encroach into the opposing lane.

These AutoTURN paths were then used to develop the limits of new pavement and shoulder, if needed, for each turning movement. Subsequent analysis based on new survey information would be needed to finalize design recommendations.

IX.2. Results

Figures 14 through 18 present haul truck turning movements at the five locations studied.

Brunswick Industrial Site Driveway (Figure 14)

Figure 14 presents the truck turning movement for inbound haul trucks. Trucks will approach the project driveway from the north, from either SR 49/20 or the Centennial Industrial Site. The AutoTURN path shows that the truck will be able to enter the wide driveway unimpeded, while allowing any outbound vehicles to queue adjacent to the inbound movements.

E. Bennett Road / Millsite Road Access (Figure 15)

Figure 15 presents the truck turning movement for haul trucks departing the Brunswick site. The AutoTURN assessment considered the existing gravel road as seen in the figure as well as a former road looping around the mine shaft. This road is proposed to be used as it allows departing trucks to approach E. Bennett Road at a 90° angle, maximizing visibility for departing drivers. As shown in the figure the intersection will require new pavement along the Millsite Road approach.

Brunswick Road / E. Bennett Road (Figure 16)

Figure 16 presents the truck turning movement for trucks leaving the Brunswick site and heading north on Brunswick Road to either the Centennial Industrial site or SR 49/20. The AutoTURN assessment illustrates that the design vehicle can complete the left turn without entering the southbound left turn lane. Additionally, the vehicle envelope will remain on the roadway along northbound Brunswick Road.

Brunswick Road / Whispering Pines Lane (Figure 17)

Figure 17 presents the truck turning movement for trucks turning to and leaving from the Centennial Industrial site. The AutoTURN assessment shows that northbound to westbound movements can be completed without entering the eastbound left turn lane or the westbound shoulder. AutoTURN indicates that the eastbound to southbound right turn will be completed with trucks able to complete the right turn while staying within the eastbound approach and the outside departure lane along Brunswick Road. The truck wheels should not overtop the curb in the southwest quadrant of the intersection.

Centennial Industrial Site Driveway (Figure 18)

The existing center median east of the project frontage along Whispering Pines Lane ends about 60' east of the property. The east end of the property is the approximate location where the full width roadway section ends, and a two-way roadway begins and continues to Idaho Maryland Road. To provide access to the Centennial site widening of the south side of Whispering Pines Lane is proposed. Figure 18 shows the proposed conceptual layout of the roadway improvements along the project frontage to allow haul trucks to enter and exit the site. This plan was reviewed by City of Grass Valley staff. Whispering Pines Lane would be widened to provide a 12' two-way-left-turn-lane (TWLTL), a 12' travel lane and a 6' bicycle lane. This layout will allow haul trucks to queue in the TWLTL while waiting to enter the site. The AutoTURN assessment shows that inbound and outbound trucks can turn simultaneously without interfering with the opposing vehicle. One alternative considered but dismissed was the installation of a driveway as the extension of Centennial Drive, creating a tee intersection with Whispering Pines Lane. This would require either installation of an unwarranted all-way stop control intersection or installation of a non-standard stop control with stop control only on the Industrial site driveway leg.

CENTENNIAL SITE DRIVEWAY

X. SIGHT DISTANCE

A sight distance analysis was completed at several locations along the proposed haul routes. These included the Brunswick Road driveway, the Millsite Road driveway, the Centennial Site driveway and the Brunswick Road / Whispering Pines Lane intersection.

Available sight distance was evaluated using the standards documented in the Caltrans *Highway Design Manual* (HDM). Based on the locations of the driveways "**Minimum Stopping Sight** Distance" (MSSD) and "**Corner Sight Distance**" (CSD) was considered. These criteria are documented in Tables 201.1 and 405.1A of the HDM; the HDM notes that the MSSD criterion is used for CSD evaluation at unsignalized urban driveways.

Brunswick Road Driveway. The posted speed limit along Brunswick Road is 50 miles per hour (mph). Considering CSD requirements the corresponding minimum sight distance standard for this speed is 700 feet for left turning vehicles and 775 feet for right running vehicles. Figure 19 illustrates the sight line looking north with a line of sight of 800 feet. Figure 20 provides the sight line looking south with a line of sight of 750 feet. Both directions meet the CSD requirements. Any landscaping material over 2 feet in height inside the sight line should be removed.

Millsite Road. The posted speed limit along E. Bennett Road is 35 mph. Considering CSD requirements the corresponding minimum sight distance standard for this speed is 540 feet. The sight line was reviewed for eastbound traffic as this access will be restricted to right turning movements. Figure 21 presents the sight line looking west of 580 feet. This exceeds the CSD requirement. The entire sight line is along paved roads.

Whispering Pines Lane. The posted speed limit along Brunswick Road is 45 mph. Considering CSD requirements the corresponding minimum sight distance standard for this speed is 695 feet. The sight line was reviewed for southbound traffic as all truck traffic from the Centennial Site will be turning right heading to the Brunswick Site. Figure 22 presents the sight line looking north of 1,000 feet. This exceeds the CSD requirement.

Centennial Site Driveway. The posted speed limit along Whispering Pines Lane and Centennial Drive is 30 mph. However, traffic heading south on Centennial Drive is required to make a 90° turn to the east onto Brunswick Road. Warning signs along Centennial Road note that truck traffic is present on the road and a left turn sign with a suggested speed of 15 mph is present just prior to the 90° turn. The sight line was reviewed for eastbound traffic as haul trucks leaving the site will head east back to the Brunswick Site.

MSSD requirements for vehicles completing the 90° left turn at the suggested 15 mph speed requires a minimum sight distance of 100 feet. Figure 23 illustrates the sight line looking west with a line of sight of 210 feet. This meets the MSSD requirement. The entire sight line is along paved roads.

XI. ACCELERATION ON GRADE

The location of the Brunswick site relative to hauling engineered fill to either the Centennial Industrial site or SR 49/20 requires loaded trucks to travel northbound uphill on Brunswick Road from E. Bennett Road about ¼ mile north until it reaches the crest just west of Loma Rica Drive. Brunswick Road has a posted speed limit of 50 mph and is used by truck traffic between SR 174 and SR 49-20. Trucks currently account for about 6% of all traffic between SR 49 and SR 174, with the truck traffic increasing to about 9% between Whispering Pines Lane and E. Bennett Road. Trucks also account for about 8% of traffic along Whispering Pines Lane.

Heading north along Brunswick Road, the grade departing the E. Bennett Road intersection is about 1% for ~800 feet after which the grade increases to approximately 8% for ~600 feet. From the crest to Whispering Pines Lane the grade declines at approximately 5%. Trucks returning from the Centennial site or SR 49/20 will travel unloaded and will be able to accelerate more quickly, especially when entering southbound Brunswick Road from Whispering Pines Lane.

Section 3.4 of AASHTO's Policy of Geometric Design of Highways and Street (i.e., the Green Book) was reviewed to estimate the speeds of trucks on these hills. As trucks depart the E. Bennett Road intersection, the northbound grade is flat and allows trucks to accelerate smoothly. Figure 3-16 of the Green Book suggests that a fully laden "typical truck" can reach about 42 mph prior to arriving at the 8% grade west of Loma Rica Drive. Trucks will then decelerate to about 35 mph as they travel up the grade.

Southbound trucks heading towards the Brunswick site will either be traveling at a higher rate of speed (i.e. 45 mph) as they travel south through the intersection or will be accelerating from a stopped condition as they turn right from Whispering Pines Lane. As noted in the *Sight Distance* section vehicles turning right have 1000 feet of sight distance looking north. While these trucks are accelerating from a stopped condition, they should be able to accelerate faster and to a higher speed as they will be unloaded; the AASHTO figures account for gross vehicle weight. Two southbound lanes are present along Brunswick Road north of Whispering Pines Lane. The outside lane continues for about 325 feet before ending and merging into the inside lane. The uphill 5%± grade continues past Loma Rica Drive for about 1,500 feet before reaching the crest. Under a fully laden condition trucks should be able to reach the merge point with a speed of about 26 mph and reach a speed of about 33 mph by the time they reach the crest. Project trucks will reach higher speeds because they are empty, and the available sight distance will allow drivers to enter Brunswick Road when road conditions permit.

XII. VEHICLE LEVEL OF SERVICE FINDINGS AND RECOMMENDATIONS

The preceding analysis has identified the effect of the project on the local roadway network. Recommendations are identified for facilities that have deficiencies in the roadway network without and with the project.

XII.1. Existing Conditions - Recommendations

Intersections

Three intersections, in the 3:30-4:30 PM period as shown in Table 4B, currently operate below the acceptable LOS D threshold, at LOS E or F. These include Brunswick Road at Idaho Maryland Road, SR 174 at Brunswick Road, and Idaho Maryland Road at Centennial Drive. Installation of traffic signals would result in acceptable levels of service. Brunswick Road at Idaho Maryland Road will operate at LOS B and Idaho Maryland Road at Centennial Drive will operate at LOS B after installation of traffic signals.

The City of Grass Valley has Transportation Impact Fee Projects, outlined in its 2016 Nexus Study update (GVTIF) which includes a plan to install traffic signals at the Brunswick Road at Idaho Maryland Road and Idaho Maryland Road at Centennial Drive intersections.

SR 174 at Brunswick Road was previously identified to be signalized in the NCTC Regional Transportation Program (RTMF); however, the most recent study, the NCTC 2016 Nexus Study, removed the project from the program as this study showed acceptable intersection levels of service. The Caltrans SR 174 TCR continues to identify this intersection as a planned, but unfunded improvement which could include either a traffic signal or roundabout.

The Nevada County General Plan Policy LU-4.1.6 states "Relative to the State highway system, Nevada County recognizes the major funding limitations that exist within the State system and finds that as a matter of policy, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development."

Roadway Segments

One roadway segment currently operates below the acceptable LOS threshold, at LOS E during the existing peak hour as shown in Table 6. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. Caltrans has one project programmed in their SR 174 Transportation Concept Report (TCR) in the segment from the Placer County line to the Grass Valley city limit. The project includes widening shoulders and curve improvements from near Bar Ela Ranch Road to You Bet Road. There are five conceptual projects also identified. These include: 1) construction of a left turn lane at Bartlett Drive including Class III bicycle and pedestrian facilities, 2) construction of a Class III bike facility between Rattlesnake Road and the Grass Valley city limit, 3) construction of a Class III bike facility between the Placer

County line (PM 0.00) and post mile 2.74, 4) construction of one turnout in each of the northbound and southbound directions between the Placer County line and Brunswick Road, and 5) construction of a Class III bicycle facility between You Bet Road and Brunswick Road.

The Nevada County General Plan Policy LU-4.1.6 states "Relative to the State highway system, Nevada County recognizes the major funding limitations that exist within the State system and finds that as a matter of policy, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development."

XII.2. Existing Plus Approved Projects Conditions - Recommendations

Intersections

Three intersections, in the 3:30-4:30 PM period as shown in Table 7B, will operate below acceptable the LOS D threshold, at LOS E or F. These include Brunswick Road at Idaho Maryland Road, SR 174 at Brunswick Road and Idaho Maryland Road at Centennial Drive. Installation of traffic signals would result in acceptable levels of service. Brunswick Road at Idaho Maryland Road will operate at LOS C and Idaho Maryland Road at Centennial Drive will operate at LOS B after installation of traffic signals.

The City of Grass Valley has Transportation Impact Fee Projects, outlined in its 2016 Nexus Study update, (GVTIF) which includes a plan to install traffic signals at the Brunswick Road at Idaho Maryland Road and Idaho Maryland Road at Centennial Drive intersections.

SR 174 at Brunswick Road was previously identified to be signalized in the NCTC Regional Transportation Program (RTMF); however, the most recent study, the NCTC 2016 Nexus Study, removed the project from the program as this study showed acceptable intersection levels of service. The Caltrans SR 174 TCR continues to identify this intersection as a planned, but unfunded improvement which could include either a traffic signal or roundabout.

The Nevada County General Plan Policy LU-4.1.6 states "Relative to the State highway system, Nevada County recognizes the major funding limitations that exist within the State system and finds that as a matter of policy, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development."

Roadway Segments

One roadway segment will operate below the acceptable LOS threshold, at LOS E in the Existing Plus Approved Projects peak hour as shown in Table 9. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. Caltrans has one project programmed in their SR 174 Transportation Concept Report (TCR) in the segment from the Placer County line to the Grass Valley city limit. The project includes widening shoulders

and curve improvements from near Bar Ela Ranch Road to You Bet Road. There are five conceptual projects also identified. These include: 1) construction of a left turn lane at Bartlett Drive including Class III bicycle and pedestrian facilities, 2) construction of a Class III bike facility between Rattlesnake Road and the Grass Valley city limit, 3) construction of a Class III bike facility between the Placer County line (PM 0.00) and post mile 2.74, 4) construction of one turnout in each of the northbound and southbound directions between the Placer County line and Brunswick Road, and 5) construction of a Class III bicycle facility between You Bet Road and Brunswick Road.

The Nevada County General Plan Policy LU-4.1.6 states "Relative to the State highway system, Nevada County recognizes the major funding limitations that exist within the State system and finds that as a matter of policy, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development."

XII.3. Existing Plus Approved Projects Plus Project Conditions (Scenario #1 – Centennial Site)

As identified in the project description the project intends to operate under the following work periods:

- 7:00 a.m. – mining shift change and inbound administrative personnel begin day
- 3:30 p.m. – administrative personnel day ends
- 7:00 p.m. – mining shift change

Under the proposed work periods there is negligible traffic to or from the site during the a.m. and p.m. peak hours. The majority of project traffic occurs in the periods surrounding mining shift changes and the end of the administrative personnel workday as identified above; the end of the day for administrative personnel does occur during some peak periods, and this was reflected in the level of service analyses during the 3:30-4:30 p.m. analysis period. Recommendations, therefore, are based on the project traffic hours.

Intersections

During the 3:30-4:30 PM period, as shown in Table 14B, three intersections will operate below the acceptable LOS D threshold, at LOS E or F. These include Brunswick Road at Idaho Maryland Road, SR 174 at Brunswick Road and Idaho Maryland Road at Centennial Drive, all of which already operate below the acceptable LOS D threshold under Existing and EPAP scenarios.

12) Brunswick Road at Idaho Maryland Road - Signalization will improve the intersection to LOS D. This intersection is identified to be signalized in the City of Grass Valley GVTIF. The project is expected to add 35 additional vehicles through the intersection during the 3:30-4:30 PM time period. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection.

15) SR 174 at Brunswick Road - Signalization or a roundabout would improve the intersection to acceptable LOS conditions. The project is expected to add 10 additional vehicles through the intersection during the 3:30 to 4:30 PM time period. NCTC removed this intersection from their RTMF program in their 2016 Nexus Study while Caltrans has the intersection identified as a planned, but unfunded improvement in their SR 174 TCR. Installation of a traffic signal would improve the intersection operation to LOS B with an overall delay of 13.3 seconds per vehicle. The fair share payment will be implemented through a mitigation measure that requires the applicant to enter into a traffic mitigation agreement with Nevada County. Based on the Caltrans methodology to assess fair share, the fair share percentage is 14.9%. Based on an estimated cost of $450,000 this would equal $67,050.

19) Idaho Maryland Road at Centennial Drive - Signalization will improve the intersection to LOS D. This intersection is identified to be signalized in the City of Grass Valley GVTIF. The project is expected to add 18 additional vehicles through the intersection during the 3:30 to 4:30 PM time period. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection.

Roadway Segments

One roadway segment will continue to operate below the acceptable LOS threshold, at LOS E as shown in Table 16. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. Caltrans has not identified a widening project to improve roadway operational characteristics in this segment. This segment will continue to operate at LOS E during the peak hour. The project has minimal effect on projected conditions with an increase in the percent time following (PTSF) from 76.9% (Table 9) to 78.2% (Table 16) in the westbound direction; the average travel speed (ATS) will decrease by 0.1 mph, from 29.3 mph to 29.2 mph. The PTSF in the eastbound direction will remain unchanged at 59.8% and the ATS will decrease by 0.1 mph, from 30.3 mph to 30.2 mph. Under County Policy LU-4.16, relative to the State highway system, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

Acceleration on Grade

A W51 “Slow Trucks” sign should be installed northbound along Brunswick Road about 500 feet north of the E. Bennett Road intersection. Currently, about 9% of the daily traffic is heavy trucks. The posted speed departing the intersection is 50 mph and a horizontal curve is present about 700 feet to the north. Installation of a “Slow Trucks” sign will provide notification to motorists that slower moving vehicles may be on the roadway prior to reaching the uphill grade approaching Loma Rica Drive.

Pavement

Millsite Road is currently unimproved. As part of the project, the E. Bennett Rd / Millsite Road intersection should be paved to accommodate the projected outbound truck traffic. The project should pay for this improvement.

XII.4. Existing Plus Approved Projects Plus Project Conditions (Scenario #2 – To SR 49)

As identified in the project description the project intends to operate under the following work periods:

- 7:00 a.m. – mining shift change and inbound administrative personnel begin day
- 3:30 p.m. – administrative personnel day ends
- 7:00 p.m. – mining shift change

Under the proposed work periods there is negligible traffic to or from the site during the a.m. and p.m. peak hours. The majority of project traffic occurs in the periods surrounding mining shift changes and the end of the administrative personnel workday as identified above; the end of the day for administrative personnel does occur during some peak periods, and this was reflected in the level of service analyses during the 3:30-4:30 p.m. analysis period. Recommendations, therefore, are based on the project traffic hours.

Intersections

During the 3:30-4:30 PM period, as shown in Table 17B, three intersections will operate below the acceptable LOS D threshold, at LOS E or F. These include Brunswick Road at Idaho Maryland Road, SR 174 at Brunswick Road and Idaho Maryland Road at Centennial Drive, all of which already operate below the acceptable LOS D threshold under Existing and EPAP scenarios.

12) Brunswick Road at Idaho Maryland Road - Signalization will improve the intersection to LOS D. This intersection is identified to be signalized in the City of Grass Valley GVTIF. The project is expected to add 47 additional vehicles through the intersection during the 3:30-4:30 PM time period. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection.

15) SR 174 at Brunswick Road - Signalization or a roundabout would improve the intersection to acceptable LOS conditions. The project is expected to add 10 additional vehicles through the intersection during the 3:30 to 4:30 PM time period. NCTC removed this intersection from their RTMF program in their 2016 Nexus Study while Caltrans has the intersection identified as a planned, but unfunded improvement in their SR 174 TCR. Installation of a traffic signal would improve the intersection operation to LOS B with an overall delay of 13.3 seconds per vehicle. The fair share payment will be implemented through a mitigation measure that requires the applicant to enter into a traffic mitigation agreement with Nevada

County. Based on the Caltrans methodology to assess fair share, the fair share percentage is 14.9%. Based on an estimated cost of $450,000 this would equal $67,050.

19) Idaho Maryland Road at Centennial Drive - Signalization will improve the intersection to LOS D. This intersection is identified to be signalized in the City of Grass Valley GVTIF. The project is expected to add 15 additional vehicles through the intersection during the 3:30-4:30 PM time period. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection.

Roadway Segments

One roadway segment will continue to operate below the acceptable LOS threshold, at LOS E as shown in Table 19. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. Caltrans has not identified a widening project to improve roadway operational characteristics in this segment. This segment will continue to operate at LOS E during the peak hour. The project has minimal effect on projected EPAP conditions with modelling showing an increase in the percent time following (PTSF) from 76.9% (Table 9) to 78.2% (Table 19) in the west bound direction; the average travel speed (ATS) will decrease by 0.1 mph. The PTSF in the eastbound direction will remain unchanged at 59.8% and the ATS will decrease by 0.1 mph. Under County Policy LU-4.16, relative to the State highway system, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

Pavement

Millsite Road is currently unimproved. As part of the project, the E. Bennett Rd / Millsite Road intersection should be paved to accommodate the projected outbound truck traffic. The project should pay for this improvement.

XII.5. Cumulative (2035) Conditions No Project – Recommendations

Intersections

Two intersections, Sutton Way at Dorsey Drive and SR 174 at Brunswick Road, and shown in Table 20B, will operate below the acceptable the LOS D threshold, at LOS E or F. Both intersections will meet the peak hour signal warrant.

15) SR 174 at Brunswick Road was previously identified to be signalized in the NCTC Regional Transportation Program (RTMF); however, the most recent study, the NCTC 2016 Nexus Study, removed the project from the program as this study showed acceptable intersection levels of service. The Caltrans SR 174 TCR continues to identify this intersection as a planned, but unfunded improvement which could include either a traffic signal or roundabout. Under County Policy LU-4.16, relative to the State highway system, additional

growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

21) Sutton Way at Dorsey Drive - As part of the FEIR for the Dorsey Marketplace project, the Sutton Way / Dorsey Drive intersection will be realigned to create two three-legged intersections. Construction of this project is slated to begin in Spring 2021. The City has noted that signalization is not anticipated for this intersection and that stop controls are to be determined *(e-mail Dec 12, 2019)*.

Roadway Segments

One roadway segment, as shown in Table 22, will continue to operate below the acceptable LOS threshold, at LOS E. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. There are no funded projects identified in the NCTC RTMF or Caltrans SR 174 TCR to improve motor vehicle operations of this segment. Under County Policy LU-4.16, relative to the State highway system, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

XII.6. Cumulative (2035) Plus Project Conditions (Scenario #1 – Centennial Site)

As identified in the project description the project intends to operate under the following work periods:

- 7:00 a.m. – mining shift change and inbound administrative personnel begin day
- 3:30 p.m. – administrative personnel day ends
- 7:00 p.m. – mining shift change

Under the proposed work periods there is negligible traffic to or from the site during the a.m. and p.m. peak hours. The majority of project traffic occurs in the periods surrounding mining shift changes and the end of the administrative personnel workday as identified above; the end of the day for administrative personnel does occur during some peak periods, and this was reflected in the level of service analyses during the 3:30-4:30 PM analysis period. Recommendations, therefore, are based on the project traffic hours.

Intersections

Two intersections shown in Table 23B, Sutton Way at Dorsey Drive and SR 174 at Brunswick Road, will operate below the acceptable LOS D threshold, at LOS E or F. Both intersections will meet the peak hour signal warrant.

15) SR 174 at Brunswick Road - Signalization or a roundabout would improve the intersection to acceptable LOS conditions. The project would add 10 additional trips to the intersection

during the 3:30 to 4:30 PM time period. NCTC removed this intersection from their CIP program in their 2016 Nexus Study while Caltrans has the intersection identified as a planned, but unfunded improvement in their SR 174 TCR. The fair share percentage and amount was previously identified. The fair share payment will be implemented through a mitigation measure that requires the applicant to enter into a traffic mitigation agreement with Nevada County.

21) Sutton Way at Dorsey Drive – As part of the FEIR for the Dorsey Marketplace project, the Sutton Way / Dorsey Drive intersection will be realigned to create two three-legged intersections. Construction of this project is slated to begin in Spring 2021. The City has noted that signalization is not anticipated for this intersection and that stop controls are to be determined *(e-mail Dec 12, 2019)*. Based on the Caltrans methodology to assess fair share, the fair share percentage for this intersection is 0.2%. While the intersection controls are still to be determined the fair share contribution from Rise would be negligible.

Queues

11) Brunswick Road at Sutton Way – Queues in the northbound left turn lanes will be greater than 25 feet beyond Cumulative No Project conditions in the 3:30 – 4:30 PM scenario. Re-timing of the intersection will maintain LOS C conditions (28.2 seconds per vehicle) with queues declining for this movement. The queues are shown to decrease to up to 386 feet, which is 49 feet less than Cumulative conditions. Based on the Caltrans methodology to assess fair share percentage, the fair share is 4.0%. Based on an estimated cost of $5,000 to retime the intersection, this would equal $200.

Roadway Segments

One roadway segment, as shown in Table 25, will continue to operate below the acceptable LOS threshold, at LOS E. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. There are no funded projects identified in the NCTC CIP or Caltrans SR 174 TCR to improve motor vehicle operations of this segment. This segment will continue to operate at LOS E during the peak hour. The project has minimal effect on projected conditions with an increase in the PTSF from 80.4% to 81.5% in the westbound direction; the average travel speed (ATS) will remain at 28.6 mph. In the eastbound direction the PTSF will increase from 60.2% to 60.8% while the ATS will decrease by 0.1 mph, from 29.8 mph to 29.7 mph. Under County Policy LU-4.16, relative to the State highway system, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

XII.7. Cumulative (2035) Plus Project Conditions (Scenario #2 – To SR 49)

As identified in the project description the project intends to operate under the following work periods:

- 7:00 a.m. – mining shift change and inbound administrative personnel begin day
- 3:30 p.m. – administrative personnel day ends
- 7:00 p.m. – mining shift change

Under the proposed work periods there is negligible traffic to or from the site during the a.m. and p.m. peak hours. The majority of project traffic occurs in the periods surrounding mining shift changes and the end of the administrative personnel workday as identified above; the end of the day for administrative personnel does occur during some peak periods, and this was reflected in the level of service analyses during the 3:30-4:30 PM analysis period. Recommendations, therefore, are based on the project traffic hours.

Intersections

Two intersections, shown in Table 26B, Sutton Way at Dorsey Drive and SR 174 at Brunswick Road, will operate below the acceptable LOS D threshold, at LOS E or F. Both intersections will meet the peak hour signal warrant.

15) SR 174 at Brunswick Road - Signalization or a roundabout would improve the intersection to acceptable LOS conditions. The project would add 10 additional trips to the intersection during the 3:30 to 4:30 PM time period. NCTC removed this intersection from their CIP program in their 2016 Nexus Study while Caltrans has the intersection identified as a planned, but unfunded improvement in their SR 174 TCR. The fair share percentage and amount was previously identified. The fair share payment will be implemented through a mitigation measure that requires the applicant to enter into a traffic mitigation agreement with Nevada County.

21) Sutton Way at Dorsey Drive - As part of the FEIR for the Dorsey Marketplace project, the Sutton Way / Dorsey Drive intersection will be realigned to create two three-legged intersections. Construction of this project is slated to begin in Spring 2021. The City has noted that signalization is not anticipated for this intersection and that stop controls are to be determined *(e-mail Dec 12, 2019)*. Based on the Caltrans methodology to assess fair share, the fair share percentage for this intersection is 0.2%. While the intersection controls are still to be determined the fair share contribution from Rise would be negligible.

Queues

11) Brunswick Road at Sutton Way – Queues in the northbound left turn lanes will be greater than 25 feet beyond Cumulative No Project conditions in the 3:30 – 4:30 PM scenario. Re-timing of the intersection will maintain LOS C conditions (29.5 seconds per vehicle) with queues declining for this movement. The queues are shown to decrease to up to 434 feet, which is 1 foot less than Cumulative conditions. Based on the Caltrans methodology to assess fair share percentage, the fair share is 8.5%. Based on an estimated cost of $5,000 to retime the intersection, this would equal $425.

Roadway Segments

One roadway segment, as shown in Table 28, will continue to operate below the acceptable LOS threshold, at LOS E. This is the segment of SR 174 between Brunswick Road and Empire Street which is within the rural region of the County. There are no funded projects identified in the NCTC CIP or Caltrans SR 174 TCR to improve motor vehicle operations of this segment. This segment will continue to operate at LOS E during the peak hour. The project has minimal effect on projected conditions with an increase in the PTSF from 80.4% to 81.5% in the westbound direction; the average travel speed (ATS) will remain at 28.6 mph. In the eastbound direction the PTSF will increase from 60.2% to 60.8% while the ATS will decrease by 0.1 mph, from 29.8 mph to 29.7 mph. Under County Policy LU-4.16, relative to the State highway system, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

XIII. SUMMARY OF TRAFFIC IMPROVEMENT RECOMMENDATIONS

Intersections

11) Brunswick Road at Sutton Way - Re-timing of the intersection will maintain LOS C conditions with queues declining for this movement. The queues are shown to decrease to less than Cumulative conditions. Considering this queueing is projected to occur in the future the project should pay their fair share to re-time the intersection. Including both scenarios the maximum fair share amount is $425.

12) Brunswick Road at Idaho Maryland Road - Signalization will improve the intersection to LOS D. This intersection is identified to be signalized in the City of Grass Valley GVTIF and is not identified in the Western Nevada County Regional Transportation Mitigation Fee program. Up to 47 additional vehicles are projected to pass through the intersection during the 3:30-4:30 PM period. Existing traffic through this intersection is estimated at ~1458 vehicles. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection.

15) SR 174 at Brunswick Road - Signalization or a roundabout would improve the intersection to acceptable LOS conditions. The project would add 10 additional trips to the intersection during the 3:30 to 4:30 PM time period. Existing traffic through this intersection is estimated at ~1172 vehicles. NCTC removed this intersection from their RTMF program in their 2016 Nexus Study while Caltrans has the intersection identified as a planned, but unfunded improvement in their SR 174 TCR. The project should pay their fair share to install a traffic signal, which will be implemented through a mitigation measure that requires the applicant to enter into a traffic mitigation agreement with Nevada County. The fair share for either scenario is $67,050.

17) E. Bennett Road at Millsite Road - The Millsite Road approach is currently gravel. The roadway approach should be paved at E. Bennett Road. Rise should pay 100% for this improvement.

19) Idaho Maryland Road at Centennial Drive - Signalization will improve the intersection to LOS D. This intersection is identified to be signalized in the City of Grass Valley GVTIF and is not identified in the Western Nevada County Regional Transportation Mitigation Fee program. Up to 18 additional vehicles are projected to pass through the intersection during the PM peak hour. Existing traffic through this intersection is estimated at ~1015 vehicles. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection.

21) Sutton Way at Dorsey Drive - As part of the FEIR for the Dorsey Marketplace project, the Sutton Way / Dorsey Drive intersection will be realigned to create two three-legged intersections. Construction of this project is slated to begin in Spring 2021. The City has noted that signalization is not anticipated for this intersection and that stop controls are to be determined. The project is expected to generate 2 additional vehicles in a total of 1936 vehicles

passing through the intersection during the 3:30 – 4:30 PM period. As the signalization of this intersection is included in the GVTIF, payment of the GVTIF will mitigate project impacts to this intersection

Roadway Segments

One roadway segment, SR 174 between Brunswick Road and Empire Street, will continue to operate below the acceptable LOS threshold, at LOS E. This segment is within the rural region of the County. Caltrans has not identified a widening project to improve roadway operational characteristics in this segment. This segment will continue to operate at LOS E during the peak hour. The project has minimal effect on projected conditions in regards to the percent time following (PTSF) and the average travel speed (ATS). Under County Policy LU-4.16, relative to the State highway system, additional growth and development may be allowed within the County, notwithstanding the adverse impacts which may result in the short term by this growth and development.

Sign Recommendations

A W51 "Slow Trucks" sign should be installed northbound along Brunswick Road about 500 feet north of the E. Bennett Road intersection. Currently, about 9% of the daily traffic is heavy trucks. The posted speed departing the intersection is 50 mph and a horizontal curve is present about 700 feet to the north. Installation of a "Slow Trucks" sign will provide notification to motorists that slower moving vehicles may be on the roadway prior to reaching the uphill grade approaching Loma Rica Drive.

Pavement Condition Recommendations

The pavement condition analysis presented in Section VII indicates that pavement in the northbound direction on Brunswick Road from Greenhorn Road to SR 49 and on E. Bennett Road eastbound from the project driveway to Brunswick Road may be impacted by truck traffic generated by the project.

Rise shall enter into a road maintenance agreement with Nevada County and Grass Valley to provide its fair share of funding for maintenance of roadways commensurate with the project's impact to pavement conditions.

Centennial Industrial Site Driveway

To provide access to the Centennial site, widening of the south side of Whispering Pines Lane is proposed. Figure 18 shows the proposed conceptual layout of the roadway improvements along the project frontage to allow haul trucks to enter and exit the site. Whispering Pines Lane would be widened to provide a 12' two-way-left-turn-lane (TWLTL), a 12' travel lane and a 6' bicycle lane. This layout will allow haul trucks to queue in the TWLTL while waiting to enter the site.

Rise should pay 100% of the cost for this improvement to Whispering Pines Lane.

Regional Transportation Mitigation Fee

Western Nevada County Regional Transportation Mitigation Fee (the "RTMF"). The Nevada County Transportation Commission (NCTC), in partnership with Nevada County, Nevada City, and the City of Grass Valley established the RTMF program in 2001. Under this program, development impact fees are collected to help fund construction of the regional system of roads, streets, and highways needed to accommodate growth in western Nevada County. Nevada City and the City of Grass Valley also have adopted their own transportation mitigation fees to fund transportation improvements in each city. All three fee programs were updated in 2008 and again in 2016 to reflect changes in demographic and economic assumptions and associated changes in transportation improvement needs and funding opportunities for these improvements (NCTC 2016).

The purpose of the RTMF is to establish a uniform, cooperative program to mitigate the cumulative indirect regional impacts of future developments on traffic conditions on regional roadways in Nevada County. The fees will help fund improvements needed to maintain the target level of service in the face of the higher traffic volumes brought on by new developments.

The RTMF is based on total thousand square feet of industrial buildings. The Project proposes 126,000 square feet of industrial buildings and should pay the required RTMF. The current fee would be calculated as 126 TSF x 5.33 x $76.91 = $51,651. The actual fee paid will depend on the mitigation fee in place at the time of construction.

Nevada County Local Traffic Mitigation Fee

Nevada County established their current Traffic Impact Mitigation Program in 1997 with the adoption of a Local Traffic Mitigation Fee (LTMF). Under the program development impact fees are collected to help fund construction for local improvements within unincorporated Nevada County. The current fee schedule is effective fiscal year 2020/2021. The LTMF is based on total thousand square feet of industrial buildings. The Project proposes 126,000 square feet of industrial buildings and should pay the required LTMF. The current fee would be calculated as 126 TSF x $428.73 = $54,020. The actual fee paid will depend on the mitigation fee in place at the time of construction.

Grass Valley Transportation Impact Fee (GVTIF) Program

The City of Grass Valley has an established Transportation Impact Fee Program (GVTIF) that collects fees to help fund construction for local improvements within the City of Grass Valley. Although the project is not located in the City of Grass Valley, the project should pay the GVTIF as mitigation for impacts to intersection included in the GVTIF. The GVTIF is based on total thousand square feet of industrial buildings. The Project proposes 126,000 square feet of industrial buildings and should pay the required GVTIF. The current fee would be calculated as 126 TSF x $666.66 = $83,999 and an administration fee of 1% = $839.99. The actual fee paid will depend on the mitigation fee in place at the time of construction.
