## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 770-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 817-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 841-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

**Support Card 865**

**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 865-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

**Sup 889-1**

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 912-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

**Sup 959-1**

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 983-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

**Sup 1007-1**

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

**Sup 1030-1**

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

**Sup 1054-1**

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 1077-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 1100-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine.

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Sup 1147-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

**Individual Letter 1**

**From:** Aaron Zueck
**To:** Idaho MMEIR
**Subject:** Rise Gold DEIR Comment
**Date:** Monday, February 7, 2022 7:32:12 AM

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

To Whom it May Concern,

**Ind 1-1** I am writing to express my strong resistance to the reopening of the Idaho Maryland Mine. I am a resident of Nevada County for over eight years, and currently reside approximately 2 miles from the proposed mine site, along with my wife and two young children.

**Ind 1-2** Of the many valid reasons to oppose the mine, my chief concern is energy usage. The mine intends to increase our county's electrical use by 12% at a time when our county's Environment Action Plan aims to *decrease* our power consumption.

**Ind 1-3** I can't see a way for our county's leadership to responsibly support a project like this when it works against our goals of a more sustainable future, extracts a resource that is already abundantly available from previous mining, and primarily serves the goal of wealth generation for investors who do not live in this area.

I grew up in Wyoming, in an economy dependent on extractive industry, and moved here in part to flee the boom and bust associated with mining and drilling. I thought Nevada County had put the extraction mindset behind it. I hope it has.

Thank you for your time,

Aaron Zueck

## INDIVIDUAL LETTER 1: AARON ZUECK

### Response to Comment Ind 1-1

The commenter is a local resident and is opposed to reopening the Idaho-Maryland Mine. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 1-2

The commenter states that the project would increase energy demand in the County which would be inconsistent with the County's Energy Action Plan. The commenter is referred to Master Response 25 - Nevada County Energy Action Plan.

### Response to Comment Ind 1-3

The commenter states that extractive industries are prone to boom and bust cycles and is opposed to the project. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

MAR 07 2022

February 28, 2022

Dear Nevada County Board of Supervisors:

**Ind 2-1** I OPPOSE the Idaho-Maryland Gold Mine being reopened by Rise Mining Company.

As a registered voter in Nevada County and a homeowner, I am deeply concerned about the proposed possibility of reopening the Idaho-Maryland Mine. I have downloaded and reviewed the EIR report.

Here are the reasons why I oppose reopening the Idaho-Maryland Mine:

**Ind 2-2** MINE WASTE and WATER POLLUTION
Gold mining produces huge amounts of mining waste, some of which contain heavy metals and other toxic substances. Both waste rock and tailings threaten to pollute groundwater and surface water. Our community is still dealing with arsenic and the leaching of heavy metals from the Gold-Era days. And now, Rise, a Canadian company comes along and wants to produce even more mine waste for more 80 years: 182,500 tons per year! More tailings that polluting big rig diesel trucks will need to haul away with the potential for leaching more arsenic into our waterways for generations to come.

**Ind 2-3** INCREASE GREENHOUSE GAS EMISSIONS
Diesel haul trucks, up to 100 round trips PER DAY will be needed to transport this mine waste, significantly increasing the amount of air pollution and greenhouse gas emissions into our community's air.

**Ind 2-4** TRAFFIC AND SAFETY
The increase of vehicles, specifically 20 ton haul trucks, up to 100 round trips per day on Brunswick Road and the Cedar Ridge Y (Brunswick Road and Highway 174) intersection will be significant and unavoidable! This is according to the EIR report. Are the supervisors aware that the Union Hill School District, with over 800 students and staff, are within the boundaries of these dangerous roads and intersections? The same intersection and roads that school buses and parents use to transport students to school five days a week, twice a day. The same roadways that the EIR report states will have significant and unavoidable harm even after implementation of feasible measures. Reopening the Mine will threaten the safety of our children, their parents, and the over 100 school staff members from the nearby Union Hill School.

**Ind 2-5** Is the pursuit of gold really worth so much environmental destruction AND the real potential for significant and unavoidable auto accidents between 20 ton trucks and children in cars/buses?
I think not. Vote NO to Rise Mining Company.

Sincerely,

Abby Velasquez, 12656 Banner Lava Cap Road, Nevada City, CA 95959

## INDIVIDUAL LETTER 2: ABBY VALASQUEZ

### Response to Comment Ind 2-1
Please see Master Response 1.

### Response to Comment Ind 2-2
Please see Master Response 8.

### Response to Comment Ind 2-3
The commenter expresses general concerns regarding the project but does not specifically address the adequacy of the DEIR.

### Response to Comment Ind 2-4
As noted in Chapter 4.12, Transportation, of the DEIR and reiterated by the commenter, the DEIR concluded that a significant and unavoidable impact would occur associated with level of service (LOS) at the SR 174/Brunswick Road intersection (see page 4.12-66). According to CEQA Guidelines Section 15093, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." As such, the County would be required to adopt a Statement of Overriding Considerations to address the aforementioned significant and unavoidable impact. Moreover, the DEIR addressed impacts regarding whether the project would substantially increase hazards to vehicle safety under Impact 4.12-6, and concluded that with Mitigation Measures 4.12-6(a) through 4.12-6(f), a less-than-significant impact would occur. Therefore, impacts related to intersection delay at the SR 174/Brunswick Road intersection and hazardous roadway conditions were adequately addressed in the DEIR.

### Response to Comment Ind 2-5
The comment presents a concluding statement and does not address the adequacy of the DEIR.

RE: REOPENING OF IDAHO-MARYLAND MINE

Please, please, when reviewing the Draft Environmental Impact Report, consider the wishes of the current residents of our beautiful, and rapidly growing communities.

I am very concerned that the Rise Gold Mine will not put our best interests first. I have not read the report, but so many of my neighbors are sorely worried about the environmental impact of this type of industry. Not only the increase in traffic to our narrow, paved-over wagon roads, but the promise of high paying jobs might be great for unemployed or underemployed residents but if the administrators are opting to advertise for out of area workers, then this will also put another huge strain on our "unaffordable" housing.

**Ind 3-1**

Thank you for your thoughtful and informed consideration of this possibly toxic industry.

**Individual Letter 6**

**From:** Alan Emerson <saintjudethedude@gmail.com>
**Sent:** Sunday, April 3, 2022 3:00 PM
**To:** Idaho MMEIR
**Subject:** DEIR for Idaho Maryland Mine Project

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To whom it may concern:

**Ind 6-1** I am writing in regards to the DEIR as submitted to the NC Planning Commission for the proposed mining project at the Idaho Maryland site.

I have lived in Nevada County for over 20 years now in various locations within the GV/NC region. I do not live in the local area of the mine site itself, but this is an issue that has a potential impact on the entire community. I need to also say that I can't believe we are even talking about this mining project as even being a remote possibility, as it is my recollection that previous attempts to reopen this mine have come and gone in the past. But, here we are again.

**Ind 6-2** It is my considered opinion that this mine would be an absolute disaster in so many ways if permitted, but I will only focus my comments on a central area of concern that is critical to our resources and quality of life here - water. This element is essential to life here, and yet the mine proposal and the DEIR has consistently minimized the impacts to our supply of groundwater as it will be directly affected by the initial dewatering of the mine as well as the constant dewatering during continuous mining operations. The DEIR is flawed in its assumptions regarding initial

**Ind 6-3** conditions, areal extent, and other hydrological concerns. The

1

considerations of effects related to dewatering cannot be adequately calculated, much less predicted in such a complex system of fractured granite and other subsurface features. Even with the best modeling and data, the risks of failure are just too great. Any well drilling company could tell you that water levels throughout the county have been falling for the last few decades and wells are being drilled deeper and deeper. The potential impacts of this proposal are serious and could very well be catastrophic. It's just not worth the risk, and as far as I can see...any rewards to be realized by the community are grossly overstated by Rise Gold.

**Ind 6-3**

**Ind 6-4**

It is my overall conclusion that Rise Gold had a hand in crafting the shoddy DEIR in such a way as to downplay and in many instances - ignore potential serious harmful impacts of the project in general, because they are in it for the buck. They don't give one nugget about the community we have here. They are carpetbaggers and interlopers looking to exploit natural resources at our expense. We need a moratorium on ALL hard rock mining proposals and projects in perpetuity here in Nevada County. The gold rush did so much harm to the area over nearly 100 years. We can't go back to that era.

**Ind 6-5**

Thank You ~ Alan Emerson

## INDIVIDUAL LETTER 6: ALAN EMERSON

### Response to Comment Ind 6-1
This comment is introductory in nature. The commenter is generally opposed to the project. The comment is noted for the decisionmakers. The commenter is referred to Master Response 1 – Non-EIR/Administrative Issues.

### Response to Comment Ind 6-2
The commenter states that the project would be "an absolute disaster" if approved. The commenter also states that the DEIR minimizes the potential impacts to groundwater supplies but does not state how. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues. The DEIR discusses the project's potential impacts to groundwater supplies in Chapter 4.8 (Hydrology and Water Quality). The DEIR found that impacts to groundwater supplies would be less than significant after mitigation. (DEIR, p. 4.8-54–68.) The commenter is referred to Master Response 14 - Adequacy of Groundwater Model and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 6-3
The commenter states that DEIR is flawed in describing the hydrological baseline of the underground mine workings and that impacts of the dewatering cannot be measured, but does not provide additional information. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR, Master Response 14 – Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 6-4
The commenter states that the impacts from the dewatering of the mine could be catastrophic and are not worth the risk, but does not provide additional information. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR, Master Response 14 - Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 6-5
Please see Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts.

The commenter states that the DEIR was prepared by the Project Applicant in such a way as to downplay the project's impacts. CEQA does not require that the lead agency's staff directly prepare the DEIR. (14 CCR 15084(d)(3).) Instead, the lead agency is responsible for independently reviewing and ensuring that the document complies with the content- and process-related requirements of CEQA and that it presents the independent judgment of the lead agency with respect to the significance of impacts and the selection of mitigation. (14 CCR 15084(e).) The DEIR was prepared by a consulting firm on behalf of the County, under direct contract with the County, and pursuant to the direction of County staff. The DEIR was independently reviewed by County staff and presents the findings of the County with regard to the project's environmental effects. Numerous technical studies were provided by the Applicant to support preparation of the DEIR. The technical studies were independently reviewed by County staff and, where necessary, independent, third-party consultants with expertise in the relevant technical issue area to ensure adequacy. The commenter is also referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 3 - Operator Responsibility.

**Individual Letter 7**

Formal Public Comments for the Idaho Maryland Mine DEIR

My name is Alecia Weisman,

**Ind 7-1** I have a MS degree in Hydrology from the University of Nevada—Reno and a BS in Environmental Science. My work has focused largely on water quality, and I currently work in habitat restoration at the South Yuba River Citizens League (SYRCL).

**Ind 7-2** I formally oppose the mine due to the significant environmental impacts that would occur as a result of the proposed mining operations. As a citizen of Nevada and Placer Counties, I am concerned that, should the Idaho-Maryland Mine reopen, mining operations would introduce pollution into our waterways, dewater groundwater, and dry up private wells that are already being adversely impacted by long periods of drought. Further, legacy mining impacts include serious health impacts for community members who may be exposed to heavy metals such as arsenic and mercury.

**Ind 7-3**

**Ind 7-4** Further health impacts due to the massive increase in greenhouse gases that will degrade local air quality are also of concern, especially in an area that already coping with poor air quality during extended fire seasons. Mining operations, which include heavy equipment and large trucks, are slated to occur 24 hours a day, seven days a week and produce 9,000 metric tons of greenhouse gas emissions per year.

**Ind 7-5** I am especially concerned with water availability in our area and do not think sufficient data exists to support whether we have enough water security to support this Mining Operation. With drought predicted as the new norm, and increasingly less water as snow in the Sierra Nevada, the Community of Grass Valley is especially vulnerable to changes in precipitation and the associated impact on regional water security. NID reports in its Plan for Water that we do not have sufficient water to support population growth in our area. Furthermore, how consistent drought has impacted local groundwater catchments has not been determined, and we cannot make decisions on this large of a project with incredible water demands without such critical data.

**Ind 7-6** The Draft EIR fails to meet appropriate soil and water quality standards and has insufficient mitigations. For example, soil sampling locations on page 4.7-6 are too few/sparse for the large project area. The potential for downstream impacts to Wolf Creek are too large and significant mitigation strategies have not been identified to outline how the mine would deal with potential leaks in the water treatment pond. Potential for natural disasters that could impact the integrity of the water treatment pond on-site are many: Earthquake, extreme rain driven flooding and erosion events, fire events that could damage surrounding infrastructure and cause prolonged power outages.

**Ind 7-7** As a concerned citizen and community member with a background in water quality, I simply cannot understand why the reopening of this mine is being considered. I firmly oppose the opening of the Idaho Maryland Mine.

Kind Regards, Alecia Weisman

313 Railroad Ave.
Nevada City, CA 95959

## INDIVIDUAL LETTER 7: ALECIA WEISMAN

### Response to Comment Ind 7-1
The commenter provides an overview of their educational background. This comment is noted.

### Response to Comment Ind 7-2
The commenter believes the project will lead to negative environmental impacts and opposes the project. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

The DEIR identifies and evaluates each of the environmental concerns raised by the commenter in DEIR Chapter 4.8 (Hydrology and Water Quality). Specifically, surface water quality is addressed by Impact 4.8-1 on DEIR, pages 4.8-41 through -53; and impacts to groundwater supplies are addressed by Impact 4.8-2 on DEIR pages 4.8-54 through -68. With implementation of the related mitigation measures, these impacts were found to be less than significant. The commenter is referred to Master Response 35 - Discharge to South Fork Wolf Creek, Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 7-3
The commenter states that legacy mining impacts negatively affect the community. This comment does not address the adequacy of the DEIR. The commenter is referred to Master Response 9 - Historical Mine Waste at Centennial Site.

### Response to Comment Ind 7-4
The commenter states that the project will result in the increase of GHG emissions. The DEIR acknowledges the project's potential to emit GHGs under Impact 4.3-7 on DEIR pages 4.3-92 through 4.3-99 and determines that with mitigation, the impact would be less than cumulatively considerable. The DEIR also acknowledges the project's potential to emit particulate matter (PM10 and PM2.5) under Impact 4.3-1 on DEIR page 4.3-66 and determines that with mitigation, the impact would be less than significant. The commenter is also referred to Master Response 18 - Air Quality Thresholds and Master Response 27 - Greenhouse Gas Thresholds.

### Response to Comment Ind 7-5
The commenter is concerned about the project's water usage in light of the current drought. The commenter is referred to Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 7-6
The commenter states that the DEIR fails to meet appropriate soil and water quality standards. The commenter specifically states that soil sampling locations are too few for the project area. The commenter also states that the potential for impacts to Wolf Creek are too large. Lastly, the commenter states the DEIR does not address the potential for the water treatment pond to fail. The commenter does not explain how the number of soil sample locations conducted by NV5 in its Phase II investigation is inadequate. Regarding impacts to Wolf Creek, the commenter is referred to Master Response 35 - Discharge to South Fork Wolf Creek. Regarding the treatment pond, the geotechnical stability of the treatment pond is analyzed in Chapter 4.6 (Geology, Soils, and Mineral Resources) of the DEIR and required mitigations would reduce the impact to a less than significant level. (DEIR, p. 4.6-41.) The commenter is also referred to Appendix H.1 of the DEIR.

The commenter is also concerned about the potential for natural disasters or wildfire and the possibility that the Idaho-Maryland Mine operation could be subject to a prolonged power outage. Earthquakes are analyzed in Chapter 4.6 (Geology, Soils, and Mineral Resources) of the DEIR. Rain, flooding, and erosion are analyzed in Chapter 4.8 (Hydrology and Water Quality) of the DEIR. Wildfire is analyzed in Chapter 4.13 (Wildfire) of the DEIR. As stated on page 3-40 of the DEIR, backup power generation would be provided by four diesel generators with a capacity to provide approximately 6 MW on a continuous basis.

Much of this comment pertains to speculative scenarios in which natural disaster could disrupt the Idaho-Maryland Mine operation. CEQA does not require the analysis of speculative impacts. As stated in CEQA Guidelines Section 15384, "[a]rgument, speculation, unsubstantiated opinion or narrative, evidence which is clearly erroneous or inaccurate, or evidence of social or economic impacts which do not contribute to or are not caused by physical impacts on the environment does not constitute substantial evidence."

## Response to Comment Ind 7-7

The commenter opposes the reopening of the Idaho-Maryland Mine. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 8**

4 April, 2022

Matt Kelley
Senior Planner, Nevada County Planning Department
950 Maidu Avenue Suite 170
Nevada City, CA 95959-7902
Idaho.MMEIR@co.nevada.ca.us

Alexander Lerch
17019 Pine Peak Rd.
Grass Valley, CA 95945

Idaho Maryland Mine Draft EIR Comments

As a private citizen, I find the DEIR's analysis of air impacts **inadequate** as it relates to emissions of criteria air pollutants and our county's non-attainment status under the National and California Clean Air Acts.

At the end of Appendix E-1, there is a memorandum stating that "no available modeling tools have been proven to provide a reliable and meaningful analysis to correlate an increase in mass totals or concentrations of criteria air pollutants from an individual project to specific health effects or estimate additional pollutant non-attainmant days relative to the NAAQS or CAAQS due to a single project."

**Ind 8-1**

I find the DEIR's analysis distinctly inadequate as it cannot tell me the degree to which my health will be impacted. My home is just 4 miles from the mine and I have chronic asthma, so an accurate understanding of the proposed project's health effects is a necessity of very practicle concern. Indeed, CA Health and Safety Code section 41700 states "a person shall not discharge from any source whatsoever quantities of air contaminants or other material that... endanger the comfort, repose, health, or safety of any...persons or the public." I hope the County can offer an adequate analysis of these effects now, rather than seeking mitigatory funding once damage has been done years down the road.

An adequately considered EIR will answer the following, "How will my respiratory health be affected by this mine?" If this is an unanswerable question, then there is no adequate manner in which this project's impacts can be reviewed and conveyed accurately or meaningfully to the public.

## INDIVIDUAL LETTER 8: ALEX LERCH

### Response to Comment Ind 8-1

Please see Master Responses 18 and 19.

In addition, as detailed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, starting on page 4.3-40, the DEIR evaluates all potential air quality impacts required for analysis under CEQA in accordance with the standards of significance established by Appendix G of the CEQA Guidelines. Where project impacts are determined to result in a potentially significant impact, the DEIR requires mitigation measures to reduce all potential air quality impacts to a less-than-significant level. As such, the discussions and analysis in the DEIR are adequate under CEQA.

**Individual Letter 9**

To whom it may concern,
I am writing to strongly oppose the re-opening of the Idaho Maryland Mine.
We as a community are still dealing with the impacts of our mining history. Why in the world we would reverse progress in such a way to add a further burden to our community's future is beyond me?

I am appalled at the short sightedness of the agencies for even allowing the process to get to this point. As a former consultant to developers, and someone who is well versed in getting through the permit process and EIR's, I know full well the power of the dollar. With enough money to mitigate, we know most projects get through. I beg of you to not let that be the case here. This area is precious, our economy is not dependent on this income. I can assure you the other forms of revenue through tourism and home prices will be severely devalued. No reason to rob Peter to pay Paul.

**Ind 9-1**

There are families that have built there lives and invested greatly in areas surrounding the mine. How dare this company put at risk their groundwater, their investment, their ability to sell their home in the future or their ability to pass on that land to the next generation.

History will not judge kindly those who let this move forward. We must learn from the past, protect our valuable resources and listen to the community at large who does not support this re-opening.

Thank you for taking the time,
Ali Arnerich
Nevada City Resident.

**Subject:** Opposed to Risegold mine proposal

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Attn Matt Kelley:

**Ind 10-1** I am a thirty plus year resident of Nevada County, living in Rough & Ready. Though we were in part drawn to Nevada County because of gold mining, we are opposed to this new mine proposal. We don't live near the proposed mining site, but think this is a terrible idea, at the wrong time and place. If it were proposed out in an unpopulated area, it might be somewhat viable, but to place this in the residential area of Grass Valley is horrific. The traffic and noise would be enough of a deterrent, but the environmental impacts beyond this do not make this a reasonable proposal. Also, this company is financially unstable, and out of the country. Please do not approve this proposal.

We vote in every election, and will vote and campaign against any supervisor that would approve this.

Sincerely,

Alice Williams-Root
Rough & Ready, CA

**Individual Letter 12**

**From:** Alison Alkon
**To:** BOS Public Comment
**Subject:** The proposed Idaho-Maryland mine
**Date:** Friday, February 25, 2022 12:48:43 PM

Not a resident

**CAUTION**: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Supervisors,

My name is Alison Alkon. I own a property on Flying Cloud Drive off of Greenhorn road. While I don't live there full time, I am very much invested in the land in Nevada County and want to ensure that it is protected and cared for in every way possible.

**Ind 12-1**

I'm an environmental sociologist, meaning I study the social side of environmental issues. I've been following debates about the proposed mine, especially RISE's recent claim that there will be no proposed impact on the local air and water. This is a common claim made by petitioners. It's easy to say there will be no effects and then to have those effects occur anyway. This is what we have commonly seen in mining projects throughout the country. There are many efforts to make mining more green and sustainable, but like coal, they do more to clean the industry's reputation than its actually effects.

Further, many of the new jobs tend to require specific skills and companies tend to bring folks in for them rather than hire locally. We are in a period of record employment so the argument about jobs needs more scrutiny. What kind of jobs are these? Long-term operating or short term development?

In my professional opinion, this project is not worth the risk.

Sincerely,
Alison Alkon
Professor of Sociology
University of the Pacific

## INDIVIDUAL LETTER 12: ALISON ALKON

### Response to Comment Ind 12-1

The commenter expresses general concerns regarding the project but does not specifically address the adequacy of the DEIR. Please see Master Responses 1, 2, and 3.

**Individual Letter 13**

**From:** Allison Bischofberger <akmccann38@gmail.com>
**Sent:** Monday, April 4, 2022 4:15 PM
**To:** Idaho MMEIR
**Subject:** Comments of DEIR

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To whom it concerns:

I am writing to express my concern over the proposed reopening of the Idaho Maryland mine, specifically the DEIR's inadequacy in addressing the impact on local water quality.

**Ind 13-1** I live in Chicago Park on a small farm off the Greenhorn watershed. Like many, if not most, Nevada County residents we rely on a well for our water, and already we have a high level of heavy metals present in our water, which we have tested regularly due to the history of mining and its negative impact on water quality. On page 51-52 of section 4.8 of the DEIR, it clearly states that the impact of this mine on water quality would be significant. While it does go on to suggest ways of mitigating this impact, I do believe it's enough to fully address the very real concerns for those of us who live in the vicinity, and truly the whole county. With so little rainfall this year, even the slightest of water issues cannot be ignored and will have a very detrimental impact on our quality of life.

Furthermore, my children attend Montessori House of Children, one of the schools mentioned in the report as being very close to the proposed mine, and the traffic and air quality impact is a huge concern for me in terms of their wellbeing as well as that of all the young children who currently attend that school and those who will attend in the future.

**Ind 13-2** Thank you for taking the time to listen to the concerns of our community members.

Sincerely,

Allison Bischofberger
530-913-9929
14226 Greenhorn Access Rd
Grass Valley, CA 95945

1

## INDIVIDUAL LETTER 13: ALLISON BISCHOFBERGER

### Response to Comment Ind 13-1

The comment expresses a general opinion that Mitigation Measures 4.8-1(a) through 4.8-1(e) under Impact 4.8-1 (DEIR page 4.8-41) would not sufficiently reduce potential impacts to surface or groundwater quality, but does not provide specific examples that would allow for a detailed response.

Please see Master Responses 15 and 16.

### Response to Comment Ind 13-2

Please see Master Response 1, as well as the discussions and analyses in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, and Chapter 4.12, Transportation, of the DEIR. As presented in Table 4.3-21 on page 4.3-80 of the DEIR, the proposed project would result in a less-than-significant impact associated with increased health risks (including at the surrounding schools).

The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

**Individual Letter 14**

**From:** Allison Roush <allisonmroush@gmail.com>
**Sent:** Thursday, March 31, 2022 8:22 PM
**To:** Idaho MMEIR
**Subject:** Comments to EIR Idaho-Maryland Mine Project

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Matt Kelly,

Please see the below for my comments on the Draft Environmental Impact Report for the Idaho-Maryland Mine Project published on January 4, 2022.

**Ind 14-1** 1. Page 4.7-37 There is the possibility during an 80-year mining operation that local groundwater could be contaminated, but there is no mention of monitoring it during operation to protect the local population. There are no mitigation measures mentioned later in the text other than at the groundwater treatment plant.

**Ind 14-2** 2. Page 4.8-5 The drainage calculations were done on the currently existing landscape conditions, not the future conditions. This makes the assessment null and void for future impacts. It is understood that future conditions cannot be fully predicted and might change, but a base level plan was presented for where drilling and work might occur and could be applied to the assessment.

**Ind 14-3** 3. Figure 4.8-4 needs directional groundwater flow arrows. This figure gives the reader no indication of how the local watershed plays into things and how the local wells will be affected.

**Ind 14-4** 4. If the mine is dewatered and there is no clean water pumped in to replace it, there could be migration of contaminated groundwater towards private wells. What is the plan to mitigate this? Are private wells going to be monitored at least on an annual basis?

**Ind 14-5** 5. Page 4.8-13 In the last paragraph on the page, they say the cyclicity of the mine shifts shows that there is no fracture that connects them to the private wells. Have they done groundwater sampling to confirm there has been no contaminate migration?

**Ind 14-6** 6. 4.8-48 – The report says that only during the mining phase is there a possibility that the hexavalent chromium (Cr6) could leach from the PCB. The mining phase is 80 years long. Does that mean there is an 80-year time period where people (workers and residents) could be exposed to an analyte consider that can be a human health risk? This also means that the Cr6 could get into the groundwater and move through the aquifer.

a. There is no attempt in the report to research if the known contaminants have been detected in the nearby potable wells. A base-level needs to be established at all wells within a one-mile radius so future impacts can be adequately tracked. Additionally, there is only a suggested monitoring program for the nearby vicinity and onsite treatment. Future seismic activity is unknown and cannot be predicted. Though fractures might not currently exist that allow for downgradient movement to private wells, fractures could be created in the future in the case of an earthquake. It is important to get base level data to take into account any future impacts on local residents and water supplies.

**Ind 14-7** 7. The report states that the mine will use up non-renewable resources (Chap 5-8), and the project will also consume energy and natural resources in an irreversible way. The project freely admits this. California has been in a decade-long drought, and with climate change, it is projected to continue. This project is not prioritizing the public interest. The mining company has touted that it will make roughly 300+ jobs through this enterprise, and

1

**Ind 14-8**

it is safe to assume that a majority of the job creation will happen in the first-year construction phase. Present-day mining is highly specialized, and due to the need for safety, it is highly mechanized. How many people will actually be employed from the local community on a long-term basis, 15? How many of these highly skilled jobs will actually be from people that currently live in the local community and not people that move in? It is not worth trading the local public's resources for the small number of jobs that are created. Additionally, the 80-year project could create environmental devastation in the area that is also not worth the public's health.

a. Page 6-6- the Project "would result in a substantial reduction in groundwater supplies, substantial alteration of drainage patterns...risk release of pollutants in flood hazard area." Again, the northern California population's water supply is not worth this alteration.

8. This EIR proposes mitigation efforts to offset the risk, but the "best choice" is to not implement the project. No implementation will not result in the community being worse off. The County and City has presented alternatives that could be utilized that would be less invasive than mining and could create local jobs. Alternatives were presented starting on page 6-12. Page 6-42 also states that the environmentally superior alternative is the "No Project (No Build) Alternative" by CEQA standards.

Thank you,

Allison Roush

## INDIVIDUAL LETTER 14: ALLISON ROUSH

### Response to Comment Ind 14-1

The commenter states that there is a possibility that local groundwater could be contaminated by operations and references page 4.7-37. The DEIR assesses the project's impact to water quality in Chapter 4.8 of the DEIR and concludes that the project would not cause an exceedance of water quality standards, after incorporation of mitigation.

As stated on page 119 of Appendix E.1, during mining, there will be a net inflow of groundwater into the mine workings, such that any mining activities would not affect water quality within the fractured bedrock. After mining ceases, conditions would return to those are currently exist. The proposed new mining activities would all occur at depths that are comparable to or much deeper than the historic mine workings. Due to the substantial reduction in hydraulic conductivity at those depths, compared to the depths of the domestic supply wells, it is highly unlikely that the proposed project would affect water quality in those wells.

Mitigation Measure 4.8-2(a) of the DEIR requires implementation of a Groundwater Monitoring Plan. As described in Section 8.0 of Appendix K.8, the groundwater monitoring includes groundwater quality sampling prior to the commencement of mine dewatering, during initial mine dewatering, and for the first year of maintenance pumping after the flooded underground workings have been dewatered. The commenter also asserts that groundwater monitoring is not required by the DEIR; however, the groundwater monitoring plan included in Appendix K.8 states that water quality will be monitored in the monitoring wells. Mitigation Measure 4.8-2(a) has been amended in the FEIR to clarify that water quality monitoring is required as part of the groundwater monitoring plan – please refer to Chapter 4, Mitigation Monitoring and Reporting Program, of this Final EIR for the final mitigation language.

Please also see Master Response 15 – Adequacy of Groundwater Monitoring Wells, for an updated description of the proposed monitoring approach, which now also includes a proposal by the applicant to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

### Response to Comment Ind 14-2

The commenter states that drainage calculations were done on the current landscape conditions and not future conditions and references page 4.8-5. This page of the DEIR discusses drainage calculations for the Centennial site. As stated on this page of the DEIR, the environmental baseline for the hydrology analysis of the Centennial Industrial Site is based on the existing conditions at the site and does not reflect the post-remediation condition that would exist following completion of the separate Centennial Industrial Site Clean-Up Project. The use of existing conditions at the Centennial Industrial Site for the hydrology analysis provides the most conservative approach for the drainage analysis. As stated on Page 4.8-5 of the DEIR, the use of existing conditions at the Centennial Industrial Site for the hydrology analysis provides the most conservative approach for the drainage analysis for the following reasons. The drainage calculations for existing conditions at the Centennial Industrial Site assume heavily wooded forest and understory cover as exists on the majority of the property at this time. Generally speaking, the existing Centennial land cover types generate less runoff compared to a post-remediated condition, whereon less absorption of runoff into the soil would occur. The on-site detention pond is designed and sized to reduce post-project stormwater flows exiting the site to not greater than

existing values. Using this standard, the detention pond for the Centennial Industrial Site would be required to hold back a greater amount of project runoff in order to equal the existing runoff condition of wooded forest and understory cover, as compared to holding back project runoff to equal the runoff that would be generated from the post-remediation condition. Therefore, using the lower existing conditions target value will result in a larger detention requirement to reduce post-development runoff to pre-development (existing condition) levels. In regard to future conditions, as explained on page 4.8-73 of the DEIR, the hydrologic calculations and detention studies for the Centennial site anticipates runoff at potential future industrial development levels, though industrial development is not proposed at this time, and separate environmental review and permitting through the County would be required prior to any on-site industrial development. Therefore, the sizing of the detention basins is conservative.

## Response to Comment Ind 14-3

The commenter states that groundwater direction arrows needs to be added to Figure 4.8-4 to indicate how local watersheds effect the groundwater model and how local wells will be affected. However, Figure 4-5 of Appendix K.3 to the DEIR already shows simulated groundwater contours and flow direction can be determined from these contours. Regional groundwater flow is generally from the east to the west and approximately perpendicular to the groundwater contours shown on Figure 4-5 of Appendix K.3. As discussed in Section 4.1 of Appendix K.3 of the DEIR, the Hydrologic study area (HSA) encompasses watershed boundaries and creeks, and as discussed in Section 4.3.2 of Appendix K.3, all the major rivers/creeks that are located within the HSA were incorporated into the model and simulated in the stream-routing package within MINEDW. The elevations of riverbeds in the area were based on the LIDAR data or topographic elevations. The stream-routing package simulates interactions between a routed river and an aquifer. Therefore, local watersheds have been considered in the model and used to determine how local wells would be affected by the project.

## Response to Comment Ind 14-4

The commenter asserts that dewatering could cause contaminated water to migrate to groundwater wells if no clean water replaces the water removed from the mine. As stated on page 119 of Appendix E.1, during mining, there will be a net inflow of groundwater into the mine workings, such that any mining activities would not affect water quality within the fractured bedrock. The groundwater flows into the mine workings rather than water in the mine workings flowing out into the regional groundwater. Water quality sampling from groundwater monitoring wells, which are representative of the surrounding private wells, will be conducted as described in Section 8.0 of Appendix K.8.

As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

## Response to Comment Ind 14-5

The commenter questions whether there is groundwater sampling to show whether contaminants have migrated towards groundwater wells from the mine. As stated on page 119 of Appendix E.1, there is no evidence to indicate that the historic underground mine workings have caused any water quality impacts at any domestic well. Water sampling has been conducted from groundwater present in the Brunswick shaft and draining from the mine at Idaho-Maryland Road. No water quality sampling has been conducted in private wells. Mitigation Measure 4.8-2(a) of the DEIR requires a Groundwater Monitoring Plan. As described in Section 8.0 of Appendix K.8

the groundwater monitoring includes groundwater quality sampling prior to the commencement of mine dewatering, during initial mine dewatering, and for the first year of maintenance pumping after the flooded underground workings have been dewatered. This will provide a baseline for the groundwater quality in the area of the mine and proof that no groundwater quality changes, attributable to mine dewatered, have occurred. Because the mining activities will not provide recharge to the domestic wells, the mining activities at the project site will not affect the water quality of the domestic wells.

As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

## Response to Comment Ind 14-6

The commenter suggests a possibility that the hexavalent chromium could leach from cemented paste backfill and become a human health risk. The groundwater flows into the mine workings rather than water in the mine workings flowing out into the regional groundwater. Nonetheless, as discussed in the DEIR, hexavalent chromium will not leach into groundwater and workers and residents would not be exposed to hexavalent chromium from cemented paste backfill. As stated on page 4.8-48 of the DEIR, the project's strategy for addressing the potential leaching of Cr+6 from CPB is not reactive (i.e., removal at the WTP), but rather proactive, whereby, as part of obtaining WDRs from the RWQCB for use of CPB, test work would be completed on CPB samples to verify that leaching of Cr+6 would not be an issue and use of the selected cement and CPB admixture would meet applicable regulatory requirements. The RWQCB has jurisdiction over placement of CPB, and approval of WDRs from the RWQCB would be necessary prior to any placement in the underground mine, ensuring compliance with water quality standards, including Cr+6 levels. In this way, the potential water quality effects related to chromium would be addressed through selection of the appropriate cement source and product, along with the proper CPB mixture, rather than by water treatment.

The commenter suggests that a baseline of groundwater quality in a one-mile radius should be established. This suggestion is already implemented by the project. Mitigation Measure 4.8-2(a) of the DEIR requires a Groundwater Monitoring Plan. As described in Section 8.0 of Appendix K.8, the groundwater monitoring includes groundwater quality sampling prior to the commencement of mine dewatering, during initial mine dewatering, and for the first year of maintenance pumping after the flooded underground workings have been dewatered. As stated on page 15 of Appendix K.8, total chromium and hexavalent chromium will be included in all sampling events. The proposed monitoring well locations are dispersed throughout the project area over several square miles (see figure 1 of Appendix K.8). This will provide a baseline for the groundwater quality in the area of the mine and proof that no groundwater quality changes, attributable to mine dewatering, has occurred. Because the mining activities will not provide recharge to the domestic wells, the mining activities at the project site will not affect the water quality of the domestic wells. In addition, as noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells, including water level and quality, within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

The commenter suggests that future seismic activity could cause fractures that allow for downgradient movement of groundwater to private wells. As discussed on page 4.6-2 of the DEIR, the overall project site is located within the Foothills Fault System. The Foothills Fault System is designated as a Type C fault zone, with low seismicity and a low rate of recurrence. The Foothills Fault System has been assigned a moment magnitude of 6.5. The nearest mapped active portion of the Foothill Fault System is approximately 25 miles northwest of the overall project site on the Cleveland Hill Fault. Notwithstanding the low seismicity and rate of occurrence in the area, a seismic event would not result in changes to groundwater flow and groundwater would continue flow into the mine workings, such that any mining activities would not affect water quality within the fractured bedrock.

## Response to Comment Ind 14-7

The commenter implies that the project would result in wasteful use of energy. As discussed in Impact 4.3-9 of the DEIR, implementation of the project in combination with other cumulative development would not result in the wasteful or inefficient use of energy, resulting in a less-than-significant impact. Please also see Response to Comment Agcy 8-17. The commenter also states that the project's job creation benefits are not worth the environmental impacts. Please see Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts. The commenter asserts that the project "would result in a substantial reduction in groundwater supplies; substantial alteration of drainage patterns", citing page 6-6 of the DEIR, but the commenter omits the following sentence: "However, the EIR requires mitigation in order to ensure that impacts related to hydrology and water quality are reduced to less-than-significant levels." (DEIR, p. 6-7.)

## Response to Comment Ind 14-8

The commenter states that the best choice is not to implement the project and notes that the DEIR presents alternatives to the proposed project. As the commenter notes, the No Project alternative is considered the environmentally superior alternative; however, the No Project alternative does not meet the basic project objectives. Please see Master Response 1.

**To:** Idaho MMEIR
**Subject:** Comment on the RiseGold Draft EIR and mine proposal

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Hi,

My name is Amie Ferrier, and I live in the Cedar Ridge neighborhood of Grass Valley, very near RiseGold's proposed mine site. My husband Eli and I are both local school teachers, and Eli was born and raised here as a life-long local. I am commenting on the Draft EIR and proposal from RiseGold regarding re-opening the mine.

We treasure living in this community and are engaged neighbors and friends. We're also avid lovers of the outdoors and spend as much time as we can soaking up river rafting, backcountry skiing, mountain biking our local trail network, and loving this land.

It is precisely for these reasons that we are so deeply opposed to the reopening of this mine. We know from decades of similar disingenuous marketing that projects such as these have destructively high price tags that our community will pay for a long time to come if this is approved. We should be looking to our county's future economic growth with innovation and stewardship of resources - not looking backward to such devastatingly harmful plans as this mine reopening.

**Ind 15-1** For the health of our neighbors and their young kiddos whom we teach, and for the sake of the land that we love and the clean water that is already scarce enough, please condemn RiseGold's shortsighted proposal. While our community does need more jobs, please do not assume that we want such short-term, unsafe, costly jobs as this. We don't.

Please treat this as an opportunity to demonstrate strong and courageous leadership and strongly reject RiseGold's proposal. We need stewards of our foothills with a vision for a healthy, sustainable future, and this is a powerful chance to clarify our priorities and collaborate together as a community. We unequivocally do not want this mine to re-open, and we do not want RiseGold's business. Thank you for taking the time to listen to your community.

with gratitude,
-Amie Ferrier

April 3, 2022

Mr. Matt Kelley

Senior Planner

Nevada County Planning Department

950 Maidu Avenue, Suite 170

Nevada City, CA 95959-7902

Dear Mr. Kelley:

**Ind 16-1** I am writing to express my grave concerns with the recent Draft Environmental Impact Report (DEIR) submitted for the proposed reopening of the Idaho-Maryland Mine. The DEIR appears deeply flawed. I urge this commission to reject several points in the DEIR.

**Ind 16-2** Additionally, there are fundamental flaws with reopening the Idaho-Maryland Mine that cannot be cured through mitigation. The analysis within the DEIR, even with these oversights and flaws, makes it clear that there is no place for the Idaho-Maryland mine reopening in such a populated area of Nevada County.

**Ind 16-3** The Mine reopening cannot occur without deeply compromising the visual beauty of Nevada County, undermining the county's tourism appeal, which is centered on the arts and the outdoors, and threatening the health and wellness of our residents, communities and natural resources. The mine poses clear threats of noise pollution, dust pollution, water depletion, toxic releases into the air and water, extreme increases to traffic, visual blight, and the potential for traffic increases that threaten both key evacuation routes and key routes to reach hospital and emergency medical services.

**Background on the Idaho-Maryland Mine**

**Ind 16-4** Rise Gold proposes to mine an average of 1,000 tons of rock per day in the reopened Idaho-Maryland Mine sites. The DEIR indicates this will require an incredible resource input to remove that much earth on a daily basis. This movement of earth will have a myriad of environmental and community impacts, and will require hundreds of trucks driving daily between the two mining sites in Nevada County, in addition to the truck movement needed to enter and leave the county.

**My Background and Experience in Nevada County**

Ind 16-5

As homeowners in Nevada County, my husband and I have invested our life savings to be able to call Nevada County home, for ourselves and our two children. We own a home less than a mile away from the proposed underground mining area for the Idaho-Maryland Mine. We rely upon our well for water, and we work closely with our neighbors to keep our area well-maintained and fire-safe. We continue to invest in our home to upgrade it for fire-safety, for ourselves and our neighbors. The health and safety of our children and the economic stability and longevity of this community are our top priorities.

Additionally, I also lived in Truckee, California for many years. I worked in the tourism industry, and I also worked in the schools during that time period. As such, I am deeply familiar with Nevada County and I cherish its rich beauty, wildlife habitats, art districts, outdoor activities, and tourist attractions.

Some of the many features I love about Nevada County are the following:

Ind 16-6

1. Beautiful, serene natural surroundings;
2. Terrific schools with dedicated teachers and staff;
3. Family oriented communities and activities;
4. Three cities that are Cultural Arts Districts (Grass Valley, Nevada City and Truckee);
5. A large regional hospital;
6. Wildlife habitat;
7. Outdoor sports;
8. An attractive county for tourists and friends to visit to enjoy the arts, beauty, and outdoors;
9. Many creative people who are entrepreneurs and self-starters, and who open really interesting businesses;
10. Many opportunities for music and food lovers to enjoy the area.

**The Planning Commission's Responsibility as a Steward of Community Wealth and Resources**

Ind 16-7

I enjoy living in Nevada County because I have noticed people are exceptionally kind. I have noticed that people work hard, and they invest their sweat equity into their communities and their property, and into each other. This is a form of wealth, albeit one that cannot always be measured through a formal accounting.

The Planning Commission is a steward of this community wealth. This wealth can cease to exist if county planning fails to support the spirit and dynamism that creates this wealth. We expect the Planning Commission to plan for the health and safety of our community. The Planning Commission is also responsible for the economic viability and environmental longevity of our community and its natural resources.

**Flaws and Concerns with the DEIR**

Ind 16-8

I have noted many flaws in the DEIR for the Idaho-Maryland Mine, as well as many concerns that seem to be minimized in the DEIR, and cannot be mitigated. Among them are the following:

1. **Visual Blight:**
   - Visitors and residents alike will have a huge blight on their views of this visually pristine region. This will also impact the view of tourists as they drive through the Grass Valley area up to Truckee.
   - Sierra Nevada Memorial Hospital employs almost 1000 employees

Ind 16-9

and staff, and also hosts patients and visitors. The DIER made it clear that the Mine would significantly impair their daily view.

**Ind 16-10**

- The visual blight would be visible from main roads and highways. This is unacceptable, as our county depends on our image of natural beauty and outdoor adventure for our many outdoor businesses.

**2. Air Pollution:**

**Ind 16-11**

- Nevada County already ranks one of the worst in the nation for air quality. We cannot afford to increase the daily dust and pollution in this county that the Mine will bring.

**3. Art and Tourism Revenue will decrease when we are Rebranded as an Industrial Waste Zone:**

**Ind 16-12**

- A Mine is incompatible with the tourism and artistic activities in Nevada County. In 2019-2020, the Arts and Cultural sector brought in almost 47 million to Nevada County.[1] The art revenue in this county depends on our image as a natural, serene and creative community. Nevada County has a unique image of a highly artistic and creative community, and this image has been cultivated over decades. Our county stands to lose this image, and therefore millions of dollars in revenue annually, if we allow a singular foreign mining interest to rebrand our community as an industrial waste zone.

**4. The DEIR does not adequately address the Impact to both the Groundwater and Watersheds:**

**Ind 16-13**

- There is no room in our county for one company to take so much water for itself and its own financial gain, at the risk of all of our wells, our watershed, and our long term planning for drought and climate change. It is abhorrent that the DEIR indicates it will deplete or pollute a large percentage of our water resources in the county, and jeopardize hundreds, if not thousands, of wells – all the while claiming that only 30 wells will be potentially impacted.

**Ind 16-14**

- The DEIR appears unsound in its assessment that only 30 wells will be impacted. With the dewatering, the pollutants flushed in the water, as well as the high amount of daily water needed for operation, the entire watershed in Nevada County is threatened by a reopening of the Mine. These are severe impacts that cannot be mitigated.

**Ind 16-15**

- Additionally, there should be a guarantee to homeowners with wells in the county. If there is to be a new DEIR, I would like a guarantee that there will be bi-annual well testing throughout the county with any Mine re-opening, not just at the 30 identified sites. I would also like an agreement that if wells are compromised anywhere in Nevada County in the event this unsound Mine is reopened, that the planning commission agrees that the county will pay the full cost for homeowners to move onto municipal water lines. Any DEIR should factor in these costs, as a bond to the county or otherwise, so that the county can cover these costs in the (very likely) event that wells and the watershed in general shall be compromised beyond what is indicated in the DEIR.

**5. Emergency Services:**

**Ind 16-16**

- I have concerns that the increase in daily truck traffic will hamper emergency evacuation routes for fire and other emergencies. At a time when homeowners are asked to take on additional costs and burdens of

maintaining the fire safety of our property, it is disingenuous to suggest that one foreign company can come in with hundreds of trucks daily, and that this will not compromise our emergency preparedness or fire safety.

**Ind 16-17**

- I have concerns that the increase in daily truck traffic will cause emergency medical vehicles difficulty in accessing the hospital and residents throughout the county for emergency care and transport. This has the potential to compromise our hospital and emergency response services. This should be studied further.

6. **Vehicle Pollution:**

**Ind 16-18**

- In addition to the sheer numbers of vehicles causing traffic and pollution, and jeopardizing emergency response, the DEIR indicates that the company will minimize diesel vehicle idling, only to the extent reasonable. This offers the community no assurances as to either the air quality or the noise issues concerning hundreds of diesel vehicles operating in the county on a daily basis.

7. **Endangering Residential Communities:**

**Ind 16-19**

- In the 1940's when the Idaho-Maryland Mine was still operating, Nevada County had fewer than 5000 people in urban areas, and fewer than 20,000 residents total. Today the population of Nevada County is greater than 5 times that size, at approximately 100,000. The population of young people age 18-35 is on the rise.[2] This community is growing, and people are coming here to raise their families. In the past 70 years, whole communities and neighborhoods have grown up around this ancient defunct Mine. Our entire neighborhood was built in the 1970's, after the Mine was no longer operating.

**Ind 16-20**

- It is inappropriate to open a defunct industrial site in the middle of neighborhoods and communities. It destroys property value, it destroys community moral, and it degrades the health of the county citizens. Additionally, the noise that will be generated threatens the physical and mental health of county residents.

**Ind 16-21**

- This mine threatens the livelihood of all of the entrepreneurs and artists and spiritual leaders who have worked so hard to make Nevada County a special place to live, and an attractive place for tourists and visitors.

**Ind 16-22**

- The historic downtowns of Grass Valley, Nevada City and Truckee must be honored as both community centers and tourist destinations if Nevada County is to thrive into the future. Threatening the image of these city centers is a threat to the economic stability of all of Nevada County.

**Additional Missing Assessments in the DEIR**

In addition to the problems and flaws above, the DEIR should include the following costs and assessments:

**Ind 16-23**

- **The DEIR should realistically assess the loss of jobs and property value Nevada County will face due to the Mine**. There are minimal jobs to be created by the Mine, and no quality jobs. There is no other financial benefit to Nevada county communities from the mine. However, the loss to our county's reputation as a beautiful, scenic, outdoor and artistic community will certainly cause a loss in tourism, visitors, and a loss in property value. These are real costs that should be assessed by an independent economic consultant. To ensure an independent assessment,

perhaps an economic consultant should be commissioned by the Planning Commission.

**Ind 16-24**

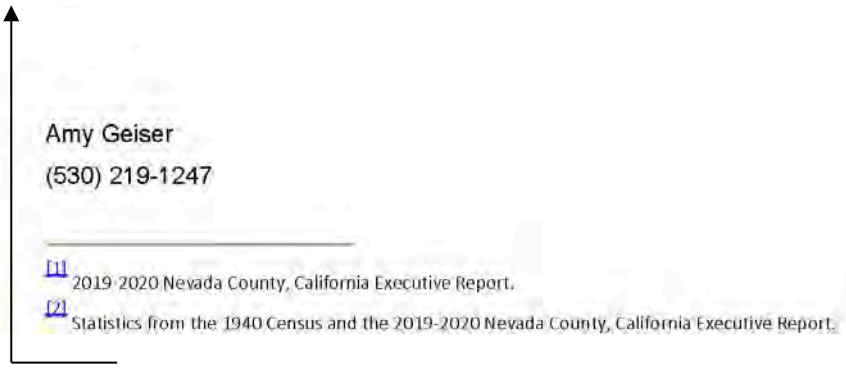
- **The DEIR should realistically assess the increased physical and mental health burden on our county system**. Increased dust will likely cause a rise in asthma in the region. Increased water and air pollution from asbestos and other toxins will cause other health problems. Increased noise pollution can lead to mental health issues in our residents. The DEIR should address these additional costs to the community, and how Rise Gold will pay for increased access to healthcare services in Nevada County. A large percentage of Nevada County residents have MediCal coverage, and the county systems will bear the costs of an increased need for medical and mental health services if we do not require the DEIR to assess them, and to commit to paying for them.

**Ind 16-25**

- **The DEIR should realistically assess the water shortage problems and well problems that opening the Mine will create, and bear the burden of proving that any future well or watershed damage is <u>not</u> due to the Mine.** Due to the concerns and flaws in the DEIR analysis, there should be biannual testing of all Nevada County wells upon owner request, and a guarantee to all Nevada County homeowners that if a problem with toxicity is detected or a well dries due to Mine operations, that the county will cover the costs of securing a municipal water supply (and seek reimbursement from Rise Gold). Rise Gold should also commit to bearing the burden of proving that any subsequent well problems are not due to mine operations, as we know that absent such an agreement, the company will outspend any resident on attorneys in its efforts to evade responsibility for ill effects of its Mining operations. A single resident is simply no match against the deep pockets of a corporation like Rise Gold in litigation, and thus the county must preemptively commit to supporting its residents in recouping costs, if it allows this Mine to reopen.

**Ind 16-26**

- **Rise Gold should insure against any potential seismic activity resulting from Mine activity in Nevada County.** It should not be the responsibility of individual citizens to insure against seismic damage that may be caused by this company, foreseen or unforeseen. In good faith, Rise Gold should guarantee it will bear the costs of any seismic activity reasonably thought to be caused by its mining activities.



**<u>Conclusion</u>**

Many residents of Nevada County like me work, and cannot attend daytime meetings. However, please do not discount our voices. We are the residents who are investing daily in this community with our lives and our livelihoods.

**Ind 16-27**

We are counting on you to challenge this DEIR for the many flaws and oversights, and to invest in us, our community, even if it means standing up to a powerful and well-funded foreign corporate interest. For the reasons identified above, and many more, if the Mine reopens it will threaten our physical and mental health, our safety, our fire preparedness, our income and property values, our natural resources, our water and wells, our visual beauty and our well-earned reputation as an artistic, creative, scenic, and outdoor-oriented community.

Thank you for considering these concerns, and continuing to safeguard our future and the future of our children.

Amy Geiser
(530) 219-1247

[2] Statistics from the 1940 Census and the 2019-2020 Nevada County, California Executive Report.

## INDIVIDUAL LETTER 16: AMY GEISER

### Response to Comment Ind 16-1
The commenter states that the DEIR is flawed and urges the County to reject the project. The comment is noted for the decisionmakers. Please see Master Response 1.

### Response to Comment Ind 16-2
The commenter states there are fundamental flaws that cannot be addressed through mitigation. The commenter's opposition to the project is noted for the decisionmakers. Please see Master Response 1.

### Response to Comment Ind 16-3
The commenter states that the project threatens the health and wellness of the community's residents and natural resources. The commenter states that the project will have negative impacts to aesthetics, noise, air quality, hydrology, traffic, and evacuation routes. The commenter also states the project will negatively impact the region's tourism industry. The commenter does not state how the DEIR is inadequate. The project's potential impacts to aesthetics and visual resources are evaluated in DEIR Chapter 4.1 (Aesthetics). Impact 4.1-2 discusses the project's impacts to the existing visual character and quality of public views of the project site. Mitigation Measure 4.1-2 is provided requiring implementation of a landscaping plan for the project. However, as stated on DEIR page 4.1-22, the impact would be significant and unavoidable. The DEIR also analyzed noise in Chapter 4.10 (Noise and Vibration), air quality in Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), traffic in Chapter 4.12 (Transportation), and evacuation routes in Chapter 4.13 (Wildfire). The commenter is also referred Master Response 5 – Evacuation Zone.

The portion of the comment regarding impacts to the tourism industry does not pertain to an environmental concern or the adequacy of the DEIR. The commenter is referred to Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 16-4
The commenter summarizes portions the project description relating to the number of truck trips generated during project operation. The environmental effects of the proposed transport and placement of engineered fill are evaluated throughout the DEIR. As shown in Table 4.12-8 on DEIR page 4.12-34, the DEIR assumes a worst-case scenario of 100 roundtrips (200 truck trips) per day. However, an average of 50 roundtrips (100 truck trips) per day is anticipated. (DEIR, p. 3-28.)

### Response to Comment Ind 16-5
The commenter resides near the project site and is concerned about the potential impacts to the community. The comment is noted for the decisionmakers. Please see Master Response 1.

### Response to Comment Ind 16-6
The commenter lists a number of desirable attributes associated with Nevada County. The comment is noted for the decisionmakers. Please see Master Response 1.

## Response to Comment Ind 16-7

The commenter states that the Nevada County Planning Commission is responsible for ensuring the economic viability and environmental longevity of the community. The comment is noted for the decisionmakers. Please see Master Responses 1 and 2.

## Response to Comment Ind 16-8

The commenter states that the project would have negative aesthetic impacts and that the DEIR minimizes these impacts. The project's potential impacts to public views are evaluated under Impact 4.1-2, beginning on DEIR page 4.1-14. The potential impacts to public views are not minimized. The DEIR identifies the project's potential impacts and determines that, even with available mitigation, the impact would be significant and unavoidable at multiple public viewpoints.

## Response to Comment Ind 16-9

The commenter states that the project would have negative aesthetic impacts and that the DEIR minimizes these impacts. The project's potential impacts to public views are evaluated under Impact 4.1-2, beginning on DEIR page 4.1-14. The potential impacts to public views are not minimized. The DEIR identifies the project's potential impacts and determines that, even with available mitigation, the impact would be significant and unavoidable at multiple public viewpoints.

## Response to Comment Ind 16-10

The commenter states that the project would have negative aesthetic impacts and that the DEIR minimizes these impacts. The commenter also states that the aesthetics of the project would impact outdoor businesses. The project's potential impacts to public views are evaluated under Impact 4.1-2, beginning on DEIR page 4.1-14. The potential impacts to public views are not minimized. The DEIR identifies the project's potential impacts and determines that, even with available mitigation, the impact would be significant and unavoidable at multiple public viewpoints. Evaluation of impacts to business and the local economy is not required by CEQA. The commenter is referred to Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 16-11

The commenter states that the Nevada County's air quality is already poor and afford to be degraded further. The commenter does not state how the DEIR is inadequate in addressing air quality impacts. The project's potential impacts to air quality are evaluated in Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy). As demonstrated throughout the Chapter, with mitigation, the project's air quality impacts would be less than significant.

## Response to Comment Ind 16-12

The commenter describes the project's potential adverse impacts to the local economy that could occur. The comment is noted for the decisionmakers. The commenter is referred to Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 16-13

The commenter states that the project would require an excessive amount of water and potentially impact thousands of wells. As demonstrated in Chapter 4.11 of the DEIR (Public Services and Utilities), there would be sufficient water supplies to serve both the project and other future planned development in the service area under normal and dry year conditions (see Impact 4.11-7 beginning on DEIR page 4.11-35). As stated on DEIR page 4.11-43, "sufficient water supplies would be available to serve the project, as well as existing and reasonably foreseeable future development during normal, dry, and multiple dry years." With regard to potential impacts to

groundwater supplies and local wells, the commenter is referred to Master Response 7 - Location of Future Mining Areas, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Master Response 16 - Drought and Climate Change. With regard to potential impacts to water quality, the commenter is referred to Master Response 36 - Discharges to South Fork Wolf Creek.

## Response to Comment Ind 16-14

The commenter states that the DEIR underestimates the number of groundwater wells the project could impact. The commenter also states that the dewatering of the mine would discharge pollutants to surface water. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Master Response 36 - Discharges to South Fork Wolf Creek.

## Response to Comment Ind 16-15

The commenter states there should be bi-annual well testing throughout the County and that that the County should pay for any impacted well to switch to NID service. Mitigation Measure 4.8-2(a) in Chapter 4.8 (Hydrology and Water Quality) requires the Project Applicant to implement a Groundwater Monitoring Plan (GMP) to monitor water levels in the project area and to perform a projected water-level impact assessment for individual domestic wells. Mitigation Measure 4.8-2(b) further requires the Project Applicant to provide a comparable alternative water supply to replace any wells that are significantly impacted by project operations. Regarding the bi-annual testing, the commenter is referred to Master Response 15 – Adequacy of Groundwater Monitoring Wells. As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

## Response to Comment Ind 16-16

The commenter states that the project's truck traffic will impede an evacuation during an emergency. The project's potential impacts to emergency response and evacuation are evaluated under Impact 4.7-4 beginning on DEIR page 4.7-37. Please also see Master Response 5 – Evacuation Zones.

## Response to Comment Ind 16-17

The commenter states that the project's truck traffic will impede emergency vehicles travelling to the hospital. The commenter is referred to Master Response 5.

## Response to Comment Ind 16-18

The commenter states that the DEIR directive to minimize truck idling is permissive and offers the community no assurances as to air quality and noise impacts. Regarding the air quality impacts, the California Air Resources Board has adopted rules limiting idling of both on-road and off-road heavy-duty diesel trucks to less than five minutes. (DEIR, p. 4.3-25–30.) This is an existing regulation that is enforced by the Northern Sierra Air Quality Management District (NSAQMD) and through the inclusion of required technologies in newer equipment. Regarding noise impacts, the DEIR evaluated the noise impacts from diesel trucks and found those impacts less than significant after mitigation. (DEIR 4.10-31.)

## Response to Comment Ind 16-19

The commenter states that the population of the community has grown in recent decades. The comment is noted. Please see Master Response 1.

## Response to Comment Ind 16-20

The commenter states that the location of the project near parcels zoned for residential is inappropriate and that the project will have negative noise impacts. The commenter also states the project will negatively impact property values. The project site is zoned for industrial uses. Regarding property values, the commenter is referred to Master Response 2 - Social and Economic Issues. The project's potential impacts related to noise are evaluated in Chapter 4.7 (Noise and Vibration).

## Response to Comment Ind 16-21

The commenter states that the project will cause negative economic impacts to the community. The commenter is referred to Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 16-22

The commenter states that the project will cause negative economic impacts to the community. The commenter is referred to Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 16-23

The commenter states the DEIR should assess the potential loss in jobs and property values to the community. The commenter is referred to Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 16-24

The commenter raises numerous potential environmental impacts but does not state how the DEIR is inadequate in addressing these impacts. Dust and air pollution concerns are addressed in DEIR Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy). A Health Risk Assessment was prepared for the project as described on DEIR page 4.3-61. The Project Applicant has prepared an Asbestos, Serpentinite, and Ultramafic Rock Management Plan (ASUR) which is designed to exclude asbestos containing material from the engineered fill produced by the project and from rock mined and processed. (DEIR, Appx. E.2.) All mined materials will be tested to ensure asbestos content does not exceed applicable standards and all engineered fill used for surfacing applications would have no detectable asbestos. Noise pollution is addressed in DEIR Chapter 4.10 (Noise and Vibration). Increased community medical costs are not an issue required by CEQA for evaluation in the DEIR. The commenter is referred to Master Response 2 - Social and Economic Impacts.

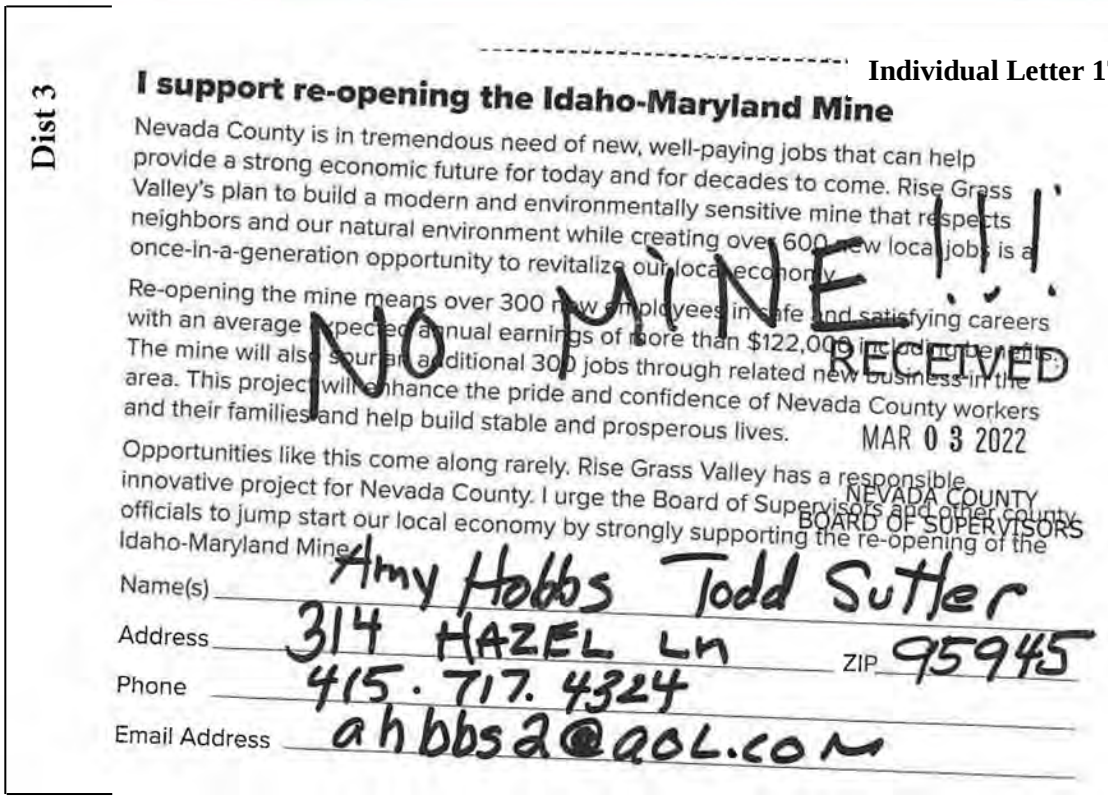
## Response to Comment Ind 16-25

The commenter states that the Project Applicant should conduct bi-annual testing of groundwater wells and should commit to covering the cost of switching to NID service. Groundwater quality is already required in the well monitoring plan from water monitoring wells which are representative of the surrounding domestic water wells. (DEIR, Appx. K.8.) Required well monitoring and mitigation already places the burden of proof on the applicant. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR, Master Response 14 - Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells. As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells, inclusive of water level and water quality, within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and

shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

Additionally, a mitigation monitoring and reporting program has been prepared and is included as Chapter 4 of this Final EIR. The mitigation measures and conditions of approval will be enforced by the County. To the extent the applicant receives permits from other state and federal agencies, those agencies will be responsible for their enforcement.

## Response to Comment Ind 16-26



The commenter states that the Project Applicant should be required to have insurance for any seismic impacts associated with the project. The project's mining activities would not induce seismic activity. The DEIR analyzed the project's ability to rupture an earthquake fault or cause a seismic-related ground failure and found the impact less than significant after mitigation. The commenter is referred to the NV5 memo attached to the Final EIR as Appendix P.

## Response to Comment Ind 16-27

The commenter reiterates her concerns with various potential project impacts and urges the County to reject the project. The commenter's opposition to the project is noted for the decisionmakers. Please see Master Response 1. Each of the environmental concerns listed in the comment was evaluated in the DEIR in the appropriate technical section.

**Ind 17-1**

Dist 3

**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

NO MINE!!!

## INDIVIDUAL LETTER 17: AMY HOBBS

### Response to Comment Ind 17-1

Please see Master Response 1.

**Individual Letter 18**

**From:** Andrea Berry <andreaddailey@gmail.com>
**Sent:** Sunday, April 3, 2022 8:13 PM
**To:** Idaho MMEIR
**Subject:** Idaho Maryland Mine Opposition

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Do not click links or open attachments unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To Whom It May Concern,

**Ind 18-1** As a homeowner adjacent to the Idaho Maryland Mine property, I am extremely concerned with the prospect of the mine reopening. Our family returned to Grass Valley after jobs and military deployments pulled us out of the area for a decade. We recently were able to fulfill our dream of buying a home in Grass Valley again and our three children are enrolled in schools and we are all happily readjusted. If the mine is approved, we will most certainly be forced to sell our dream home and move our family away from this appalling development.

**Ind 18-2** While I have multiple concerns with this project, the impact of noise disturbance will be the most constant nuisance. Our home is adjacent to the south end of the Brunswick site and as the mine property is cleared for development and mining uses, the noise will travel even more efficiently. In the Summary of Impacts and Mitigation Efforts, the noise levels are deemed "significant and unavoidable". While "significant" noise disturbances alone should deem the project unfit for this property, the impact of noise is grossly underestimated as there has not been any clearing of the property at this point. Once the property is forested and cleared for development, noise will travel even more efficiently. Mitigation efforts should include reasonable hours of operation (i.e. not 24/7) as well as a 12-foot sound deadening fence along the property.

**Ind 18-3** In addition to noise disturbances, I am concerned with the impact on traffic. The discussion of traffic impacts on DEIR page 102 is inadequate because while the responsiblity is certainly on Rise GV to pay toward road improvements necessary to safely facilitate the traffic increase, it is unclear what those "improvements" may include, and only a 14.9% contribution of the project seems underrepresented. The mitigation efforts should include a detailed road improvement plan of Brunswick Rd to accommodate the influx of heavy trucks, including and not limited to the widening Brunswick Rd. The DEIR does not outline how CalTrans reports only 14.9% accountability for Rise GV but the calculations for this should be shared with the public, and potentially re-evaluated insuring the calculation is not only considering the per vehicle usage but also per vehicle weight (i.e. road deterioration).

**Ind 18-4** Nevada County, along with much of California, has a rich history of mining. Let's keep it in our history and attract other, less environmentally harmful, and economically progressive businesses to redefine our community. A destructive mine in the midst of residential communities is harmful on various fronts and puts our community in jeopardy of losing significant revenue from home values dropping, tourism less attractive due to a loud mine operating 24/7, and an already-troubled air quality subject to even more stress. This is not an appropriate project for our community and I trust the Commission will accurately represent its constituents and not allow this project to move forward.

Regards,

Andrea Berry

## INDIVIDUAL LETTER 18: ANDREA BERRY

### Response to Comment Ind 18-1

The commenter is opposed to the project. The commenter's opposition is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 18-2

The commenter states that clearing of the project site for construction would result in greater noise impacts on adjacent properties due to the removal of vegetation which would have served to attenuate noise generated at the project site. The noise modeling conducted for the project considered the effects of ground cover on noise attenuation. The DEIR states that "it was assumed that the project site would essentially consist of acoustically hard surfaces with little sound absorption." (DEIR, p. 4.10-24.) In other words, the DEIR noise analysis assumes a worst-case scenario of the entire disturbed area of project site being cleared of vegetation. The commenter states that different hours of operation should be considered. A reduced hours alternative has already been considered in the DEIR and dismissed from further analysis. (DEIR, p. 6-13.)

As discussed in Chapter 4.10 (Noise and Vibration) of the DEIR, the noise impacts from the project, except for the construction of the water pipe along East Bennett Road, would be less than significant after mitigation. The construction of a 12-foot-high sound wall along the property boundary is not included in mitigation measures and is not required to lessen noise impacts below a level of significance.

### Response to Comment Ind 18-3

The commenter states that the DEIR is inadequate with regard to its mitigation measures for any damage to roadways caused by project traffic. The commenter is referred to page 207 of DEIR Appendix O (Traffic Impact Analysis), which details the recommended roadway and signal improvements for each scenario considered in the traffic study. Most of these improvements were previously identified in local and regional transportation plans and the project would contribute to the existing or projected need for the improvements.

The commenter suggests widening Brunswick Road but does not explain how that would lessen the impact of truck traffic on Brunswick Road. No such improvement is required based on the analysis in Section 4.12 (Transportation) of the DEIR.

The project's fair share contribution to the costs of roadway improvements was calculated by KD Anderson & Associates using Caltrans' standard methodology. The commenter is referred to DEIR Appendix O (Traffic Impact Analysis), Technical LOS Appendix IX, which provides the project's fair share cost calculations for each improvement. The fair share calculation is for intersection improvements to reduce traffic delay. The vehicle weight is not relevant to this calculation. In regard to road maintenance, Mitigation Measure 4.12-6(b) requires that prior to commencement of engineered fill hauling, the Project Applicant shall enter into separate road maintenance agreements with Nevada County and the City of Grass Valley to provide the project's fair share of funding for maintenance of roadways commensurate with the project's impact to pavement conditions on both Nevada County and Grass Valley roadways, including Brunswick Road between E. Bennett Road and SR 49, and E. Bennett Road between Project Driveway and Brunswick Road.

## Response to Comment Ind 18-4

The commenter urges the County not to approve the project. The comment is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 19**

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Greetings,

Andrew Ribotto here --

**Ind 19-1** I own property here between auburn and GV in nevada county and I find it shocking that we would even consider squandering any water resources in our county whatsoever during a 1000 year drought and ever increasing wildfire risk. Its basically a guarantee that any EIR provided by Rise Gold is going to be a rosy painted "best case scenario" and from what I've gathered, their track record has plenty of worse case scenarios.

I can't even imagine how annoying it would be for residents in that neighborhood to have to deal with this and not really clear how anyone could claim to be representing their community's interest by having this non-local company come in and exploit this beautiful town.

please PLEASE NO on the idaho maryland mine.

thank you,
-Ribotto

## INDIVIDUAL LETTER 19: ANDREW RIBOTTO

### Response to Comment Ind 19-1

Please see Master Responses 1 and 3. Please note that the DEIR was not provided by the applicant and, in fact, was prepared under the direction of the County.

**Individual Letter 20**

**From:** andrew wilson <ahwilson48@gmail.com>
**Sent:** Monday, April 4, 2022 4:26 PM
**To:** Idaho MMEIR
**Subject:** Rise Gold EIR

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley;

Please consider the following comments on the Rise Gold EIR:

**Ind 20-1** It is painfully obvious that the EIR for the proposed Rise Gold re-opening of the Idaho-Maryland mine is fatally flawed in numerous respect s which have been pointed out repeatedly by many comments I have read, and I am sure by many which I have not. The takeaway is the EIR failed to use the approach which would adequately address the many actual and potential harmful effects of the proposed project. Much of the data on which the EIR is based was compiled from secondary sources without identifying whether the data is reliable. Resulting noise and air pollution effects were minimized as was the potential effect on wells in the area and the effect of the discharges of water pumped from the mine into Wolf Creek. Based on mine developments in other areas, it seems very likely that properties in the Nevada City/Grass Valley area would experience a significant decline. Some areas have seen declines in excess of 20% which would result, if the properties were reassessed as they should, in a concomitant decline in property tax revenue.

**Ind 20-2** The following specific deficiencies have been pointed out by CEA and its consultants, any one of which should require that the EIR be amended to address them: (i) The EIR essentially ignores the fact that the mine site has not been cleaned us as required and therefore does not address what steps would need to be taken to do so; (ii) the EIR uses

**Ind 20-3** meteorological data from Blue Canyon, many miles away from the cite, rendering conclusions from that data

**Ind 20-4** insupportable; (iii) the EIR relied on an outside report for data on the drill core rock which was relied for the EIR's conclusion concerning impact on water quality – one of the most serious and long lasting consequences of the project; (iv) water quality samples were not taken from the Wolf Creek area, which is the most appropriate location.

**Ind 20-5** The EIR dispenses with the risks it identifies by asserting that they can be addressed, mitigated and/or ameliorated. However, no estimate of the costs of this are given, which is extremely troubling since Rise Gold is severely undercapitalized and could not realistically expect to be able to do the work necessary to-open the mine much less to perform the remediation efforts described in the EIR.

**Ind 20-6** It is painfully obvious that the EIR for the proposed Rise Gold re-opening of the Idaho-Maryland mine is fatally flawed in numerous respect s which have been pointed out repeatedly by many comments I have read, and I am sure by many which I have not. The takeaway is the EIR failed to use the approach which would adequately address the many actual and potential harmful effects of the proposed project. Much of the data on which the EIR is based was compiled from secondary sources without identifying whether the data is reliable. Based on mine developments in other areas, it seems very likely that properties in the Nevada City/Grass Valley area would experience a significant decline. Some areas have seen declines in excess of 20% which would result, if the properties were reassessed as they should, in a concomitant decline in property tax revenue.

1

**Ind 20-7**

The following specific deficiencies have been pointed out by CEA and its consultants, any one of which should require that the EIR be amended to address them: (i) The EIR essentially ignores the fact that the mine site has not been cleaned us as required and therefore does not address what steps would need to be taken to do so; (ii) the EIR uses meteorological data from Blue Canyon, many miles away from the cite, rendering conclusions from that data insupportable; (iii) the EIR relied on an outside report for data on the drill core rock which was relied for the EIR's conclusion concerning impact on water quality – one of the most serious and long lasting consequences of the project, (iv) water quality samples were not taken from the Wolf Creek area, which is the most appropriate location.

The EIR dispenses with the risks it identifies by asserting that they can be addressed, mitigated and/or ameliorated. However, no estimate of the costs of this are given, which is extremely troubling since Rise Gold is severely undercapitalized and could not realistically expect to be able to do the work necessary to-open the mine, much less to perform the remediation efforts described in the EIR.

**Ind 20-8**

This raises what is perhaps the most troubling aspect of the project. One which the EIR does not, and possibly could not address. That is the track record of Rise Gold and its CEO. That track record alone should disqualify Rise Gold from ever getting permission for any construction project, much less the reopening of a gold mine with all of the potential harmful effects which it presents. Rise Gold's previous project resulted in numerous unlawful and hazardous conditions which were left unremedied when it went into bankruptcy. Rise Gold's CEO was indicted and criminally convicted for this and, although the conviction was overturned, the case will be retried. Whether or not there is ultimately a conviction for Rise Gold's violation of laws designed to prevent environmental destruction, Rise's track record makes clear that there is serious risk that it will not, or cannot, perform in accordance with the laws and regulations designed to protect the environment. It would be foolish in the extreme to allow a company and CEO with this track record to proceed with this project.

ne which the EIR does not, and possibly could not address. That is the track record of Rise Gold and its CEO. That track record alone should disqualify Rise Gold from ever getting permission for any construction project, much less the reopening of a gold mine with all of the potential harmful effects which it presents. ## INDIVIDUAL LETTER 20: ANDREW WILSON

### Response to Comment Ind 20-1
The commenter states that the DEIR is flawed but provides no specifics or evidence to support this statement. The commenter also states that hydrology, air quality, and noise impacts were minimized but provides no additional information. Noise is analyzed in Chapter 4.10 of the DEIR, air quality is analyzed in Chapter 4.3 of the DEIR, and hydrology and water quality are analyzed in Chapter 4.8 of the DEIR. Responses to detailed comments are provided below. Lastly, the commenter states that the project will result in reduced property values. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2- Social and Economic Issues.

### Response to Comment Ind 20-2
The commenter states that the DEIR "ignores the fact that the mine site has not been cleaned up" which is presumably a reference to the Centennial Industrial Site. The commenter is referred to Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 20-3
The commenter states that the meteorological data is not representative of the project location. The commenter is referred to Master Response 17 - Meteorological Data Used in HRA.

### Response to Comment Ind 20-4
The commenter states that the DEIR relied on an outside report for data on the "drill core rock." The commenter is referred to Master Response 8 - Mine Waste Characterization. The commenter also states that water samples were not taken from the Wolf Creek area. Water quality samples were taken in Wolf Creek. (DEIR, p. 4.8-23.)

### Response to Comment Ind 20-5
The commenter is concerned about the Project Applicant's financial capability. The commenter is referred to Master Response 3 - Operator Responsibility, and Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 20-6
Please see Response to Comment Ind 20-1.

### Response to Comment Ind 20-7
The commenter reiterates concerns addressed in responses above. Regarding the cleanup of the Centennial Industrial Site, the commenter is referred to Response to Comment Ind 20-2. Regarding the air quality data, the commenter is referred to Response to Comment Ind 20-3. Regarding the sampling cores, the commenter is referred to Response to Comment Ind 20-4. Regarding water quality samples from Wolf Creek, the commenter is referred to Response to Comment Ind 20-4. Regarding the Project Applicant's financial condition, the commenter is referred to Response to Comment Ind 20-5.

### Response to Comment Ind 20-8
The commenter opposes the project and questions the Project Applicant's reputation. The commenter's opposition to the project is noted for the decisionmakers and is referred to Master Response 1 - Non-EIR/Administrative Issues. The commenter is also referred to Master Response 3 – Operator Responsibility.

April 3, 2022

Matt Kelley, Senior Planner

(Sent electronically to Idaho.MMEIR@co.nevada.ca.us)

Nevada County Planning Department

950 Maidu Avenue, Suite 170

Nevada City, CA 95959-8617

Subject: Idaho-Maryland Mine Project Draft EIR (SCH # 2020070378)

Dear Mr. Kelley,

Thank you for the opportunity to review and comment on the Draft Environmental Impact Report (Draft EIR) for the proposed Idaho-Maryland Mine Project (proposed project). The proposed project would reinitiate underground mining and gold mineralization processing for the Idaho-Maryland Mine over an 80-year permit period with gold mineralization processing and underground exploration and mining proposed to operate 24 hours a day, 7 days a week during full operations. The operations of the proposed would allow for unmitigable impacts on our community for 80 years resulting in significant and unavoidable environmental impacts as well as the damage the character and vitality of the community.

**Significant and Unavoidable Impacts**

The Draft EIR has determined that the following project impacts would remain significant and unavoidable, even after implementation of the feasible mitigation measures:

• Aesthetics

**Ind 21-1**

The Draft EIR determined that the proposed project would result in a significant impact related to substantially degrading the visual character or quality of the site and its surroundings. Even after mitigation, the impact would remain significant and unavoidable. The Draft EIR also determined that the project's incremental contribution to the significant cumulative impact related to substantial degradation of visual character or quality would be cumulatively considerable and significant and unavoidable.

• Noise.

The Draft EIR determined that during construction activities, the project could result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity (i.e., residents along East Bennett Road during construction of the potable water line). Even with implementation of mitigation, the impact would remain significant and unavoidable.

• Transportation and Circulation

The draft EIR determined that the proposed project would result in a significant impact at three study intersections under the EPAP Plus Project scenarios, one of which would be significant and unavoidable even after mitigation (Brunswick Road/SR 174). The Draft EIR also determined that the proposed project would have a cumulatively considerable incremental contribution to two intersections under both Cumulative Plus Project scenarios, one of which would be significant and unavoidable Draft EIR Idaho-Maryland Mine Project December 2021 Chapter 6 – Alternatives Analysis Page 6-8 even after mitigation (Brunswick Road/SR 174). In addition, the project's incremental traffic would cause a significant impact at one intersection queue during both Cumulative Plus Project scenarios (Brunswick Road/Sutton Way). Mitigation measures are identified and required for the aforementioned cumulative impacts, but it cannot be guaranteed that the measures would reduce the incremental impacts to a less than cumulatively considerable level.

**Ind 21-2**

**Preference of the No-Build Alternative**

Preference of the Environmentally Superior Alternative, which is Alternative 1: No Project (No-Build) Alternative. The No-Build ensure that the project area and the public would not result in project related impacts in the following CEQA Appendix G sections:

1

- Aesthetics
  - The proposed project would result in a significant impact related to substantially degrading the visual character or quality of the site and its surroundings. Even after mitigation, the impact would remain significant and unavoidable. The proposed project would result in tailings, the reduction of vegetative cover, the erection of industrial use buildings, mining equipment, engineered fill, and frequent trucks to transport materials. The No-Build would not impact the visual character or quality of the site and its surroundings.
- Air Quality
  - The proposed project would result in more truck traffic to the project area resulting in more air quality emissions, which may affect the health of the community even with the implementation of mitigation measures. The No-Build would not disturb naturally occurring asbestos as could possibly occur during underground mining.
- Biological Resources
  - The No-Build would not have the potential to impact special-status plants, foothill yellow-legged frog, western pond turtle, California red-legged frog, California black rail, coast horned lizard, special-status bats, and non-special status raptors and migratory birds. In addition, the Alternative would not result in any substantial adverse effects on riparian habitat and/or other sensitive natural communities and/or have a substantial adverse effect on federal or State protected aquatic resources.
- Cultural Resources
  - The No-Build would not have a substantial adverse effect to the underground mine workings, which were determined to be historically significant pursuant to the National Register of Historic Places (NRHP) and California Register of Historic Resources (CRHR). The No-Build would not impact any unknown cultural and tribal cultural resources should they be encountered during construction.
- Energy
  - The No-Build would not result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation. The No-Build would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency.
- Geology/Soils
  - The No-Build would not include underground mining and generation of engineered fill, grading or other ground-disturbing activities, substantial soil erosion would not occur. In addition, the near-surface geotechnical features identified for closure due to dewatering of the mine would not be adversely impacted, though they may currently pose some level of risk that would continue under the Alternative. Other geotechnical issues that could pose a significant effect under the proposed project, but would not pose an adverse effect under the Alternative, include potential seismic hazards at the Brunswick Industrial Site and slope stability associated with temporary steep cut slopes at the new service shaft collar. However, the proposed project would fix a few existing geotechnical issues that would remain under this Alternative, including the safety concern related to the presence of the South Idaho Shaft on the Centennial Industrial Site, and an unstable portion of the clay-lined pond dam on the Brunswick Industrial Site.
- Greenhouse Gas Emissions
  - The No-Build would not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment or conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.
- Hazards & Hazardous Materials
  - The proposed project could result in a significant impact related to creating a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, specifically, the transport and underground storage and use of explosives at the Brunswick Industrial Site. Compliance with applicable federal (MSHA, OSHA), State (CCR), and local regulations, and the additional mitigation measures in the Draft EIR, would reduce the significant hazard related to transport, underground storage and use of explosives to a less-than-significant level. Because the use of explosives would be eliminated under the No-Build, the significant impact would also be eliminated. The Draft EIR determined that the proposed project could result in a significant impact related to creating a significant hazard through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment related to the Brunswick Industrial Site, given the presence of elevated arsenic in the southeastern paved area, potential residual petroleum contamination in a few locations, and presence of groundwater monitoring wells of unknown status. The No-Build would result in fewer
  - impacts related to hazards and hazardous materials.
- Hydrology/Water Quality
  - The No-Build would not result in on-site construction disturbance or above-ground operations such that the following project-related significant impacts to water quality would not occur: Centennial Industrial Site: engineered fill pad construction; Brunswick Industrial Site: operations within industrial area, underground placement of Cement Paste Backfill, use of clay-lined pond for water treatment process purposes, engineered fill pad construction, and treated water discharge in South Fork Wolf Creek. In addition, the No-Build would not necessitate dewatering of the mine; thus, there would not be a substantial reduction in groundwater supplies resulting in effects to nearby wells, though the proposed project includes mitigation to offset impacts to wells (i.e., provision of potable water

service). Further, due to the lack of on-site operations, the No-Build would not result in the substantial alteration of drainage patterns, and for the Centennial Industrial Site, risk release of pollutants in a flood hazard area.

- Noise
  - The No-Build would not result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity, nor a substantial permanent increase in ambient noise levels in the vicinity of the project due to haul truck traffic. In addition, the Draft EIR concludes that the combined operational noise sources at the Brunswick Industrial Site could result in a significant noise impact. With respect to vibration, the Draft EIR determined that while blasting is not projected to exceed applicable thresholds, a ground vibration monitoring program should be implemented to determine the actual levels of ground vibration at commencement of mining. These operational noise and vibration impacts would not occur under the No-Build.
- Tribal Cultural Resources
  - The No-Build would not impact any unknown cultural and tribal cultural resources should they be encountered during construction.
- Transportation
  - The No-Build would not generate construction traffic or operational vehicle traffic on local roadways and, thus, unlike the proposed project, the Alternative would not result in a significant construction traffic impact, nor would General Plan LOS policy conflicts occur under the EPAP Plus Project conditions to the intersections of Brunswick Road/Idaho Maryland Road, Brunswick Road/SR 174, and Idaho Maryland Road/Centennial Drive; and under the Cumulative Plus Project scenarios to the intersections of Brunswick Road/SR 174 and Sutton Way/Dorsey Drive. The proposed project would also result in a significant effect to the intersection queue during the Cumulative Plus Project scenarios (Brunswick Road/Sutton Way), which would not occur under this Alternative. Further, the Draft EIR determined that proposed project (Brunswick Industrial Site operations) would have an impact related to truck turn movements at the Millsite Road/E. Bennett Road project egress at the Brunswick Industrial Site; this effect would not occur under this Alternative. The Draft EIR determined that some of the above-noted impacts would be considered significant and unavoidable due to the uncertainty concerning certain mitigation measures. The subject impacts are the EPAP Plus Project and Cumulative Plus Project intersection impacts to Brunswick Road/SR 174 and the Cumulative Plus Project intersection queue at Brunswick Road/Sutton Way. These significant and unavoidable impacts would be eliminated under this Alternative.
- Wildfire
  - The No-Build would not result in a significant impact related to exacerbating wildfire hazards, as compared to the proposed project. For example, above-ground machinery would not be operated at both project sites. Therefore, potential vegetation fires associated with on-site equipment operations would be substantially reduced under the No-Build.

**Beyond the Scope of CEQA**

CEQA can be narrow in scope and does not address various issues such as social or economic issues.

**Ind 21-3**

The Draft EIR is clinical and abstract in its review. In reality, this project will directly negatively impact in great and many ways people that I know and care for, and will impact our whole community in our daily (and nightly) lives. It does not appear to me that the benefit outweighs the burden. We appreciate our quality of life here in Western Nevada County and that is worth more than the financial and economic assets brought to the area in this project. It appears that long-term thinking is absent in planning decisions to the detriment of our community experience. You have a responsibility to the people who reside in Nevada County, and to take care of their needs and expectations, not enter into a situation with so many negative attributes.

Thank you for the opportunity to review and comment on the Draft EIR. If you have any questions or would like clarification, please contact me at mapereira@comcast.net

Sincerely,

Angie Pereira

## INDIVIDUAL LETTER 21: ANGIE PEREIRA

### Response to Comment Ind 21-1

The commenter provides a summary of the project and lists the impacts that the DEIR determined to be significant and unavoidable. The comments are noted for the decisionmakers.

### Response to Comment Ind 21-2

The commenter prefers that the County selects the "No Build" Alternative to the project and provides a variety of reasons as to why the No Build Alternative is environmentally superior. The comments are noted for the decisionmakers. Please see Master Response 1 – Non-EIR/Administrative Issues.

### Response to Comment Ind 21-3

The commenter states that economic and social impacts do not fall within the scope of CEQA. The commenter also opposes the project and urges the County not to approve it. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2-Social and Economic Issues.

**To:** Idaho MMEIR
**Subject:** DEIR

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley:

I have lived in Nevada County for 5.5 years and currently live and work in Grass Valley. I am writing to express my concerns about the shortcomings of the DEIR. Particulate-ly (see what I did there?) with regards to air quality. Grass Valley already gets an F on air quality from the 2020 "State of the Air Report" from the American Lung Association, and we all know how taxing fire season is with the smoke. The absolute last thing we need is something else to negatively impact our air quality! Especially when one of the best things about living here is enjoying the outdoors. Experts working with the CEA Foundation have determined there are significant errors and omissions in the DEIR with regards to air pollution. The affects of diesel exhaust and asbestos (to name a few) are understated and not thoroughly examined.

**Ind 22-1**

There are clearly lots of issues with the DEIR, and this email represents about 1% of my concerns surrounding the reopening of the Idaho-Maryland mine.

Thanks for reading,
Ani Kington
Grass Valley resident

My name is Anita Lincoln Pearson. I am vehemently opposed to reopening the mine in Nevada County. I was born and raised in Nevada County. I am a home owner, tax payer and currently work and reside in Nevada County. I am an active member of the California Native Plant Society, a member of the local chapter of the National Audubon Society and a member of the Arbor Day Foundation. I am a steward for the land.

I oppose a small organization profiting off of the destruction of our healthy ecology by mining. Our local economy depends on our water and the natural resources. Our community's economy depends on the beautiful setting, tourism and peace. Mining is a backward quick profit for a conglomerate corporation that will destroy our land and water then leave us with the toxic waste and run.

**Ind 23-1**

Look at the Malakoff Diggins as an example. The mineral composition of the mined area has rendered so much land unusable and has decimated the mineral composition of the soil. it can no longer sustain a healthy ecology. And it's been over a hundred years since that region was destroyed by hydro mining.

We need to stop going backwards and think of the future. We are a sustainable community and I want to keep it that way. We already learned from our past mistakes of unsustainable mining practices. There is zero benefit to our community to provide gold for the pocket of one wealthy individual at the cost of our Northern California water, air and landscape. It's criminal. We can invest in other sustainable ways to make money while preserving our environment for our children and our grandchildren.

Thank you.

NEVADA COUNTY
PLANNING DEPARTMENT

**Reopening of the Idaho-Maryland Mine by Rise Gold Corporation**

**Anita Wald-Tuttle** <anitaw1t3@gmail.com> Thu, Mar 24, 2022 at 12:27 AM
Draft

Planning Commission ~~Representatives~~, and Staff

Dear ~~Supervisors~~,

**Ind 24-1** I am opposed to the reopening of the Idaho-Maryland Mine. I have reviewed articles in the local newspaper and have also checked those sections of the Environmental Impact Report regarding special concerns of mine. When I came to Grass Valley 33 years ago it was quiet and peaceful but had the desire to change its image in order to attract tourists and grow as a destination for those wanting a restful place to enjoy ~~all facets~~ of the arts. It has been quite successful, but now we face a problem.

**Ind 24-2** In perusing the immense EIR I find very little addressing the problems of Noise and Vibration which Rise Gold has labeled as Significant and Unavoidable. They project that there would be a substantial temporary or periodic increase in ambient noise levels in the project vicinity and offer no ideas for mitigation.
In regard to Vibration they propose a ground vibration monitoring program should be implemented and additional protective measures be available.
The EIR DOES require mitigation in order to ensure that the aforementioned impacts ARE reduced to a LESS-THAN-SIGNIFICANT level.
I am hopeful that the Board of Supervisors will carefully question this portion of the EIR. Our concerts, plays, and other programs depend on quiet observance for happy audiences!

**Ind 24-3** Portions of the EIR are directly contrary to the Standard of Review stated in County Policy 17.14 and Policy 17.24

Sincerely,
Anita Wald-Tuttle

## INDIVIDUAL LETTER 24: ANITA WALD-TUTTLE

### Response to Comment Ind 24-1
Please see Master Response 1.

### Response to Comment Ind 24-2
Regarding concerns related to noise and vibration please refer to Chapter 4.10, Noise and Vibration, of the DEIR. As noted therein, the DEIR includes Mitigation Measure 4.10-1, which would reduce the temporary construction-related noise impact associated with installation of the potable water pipeline. However, because the noise reductions that would be achieved by the measures cannot be definitively determined to confirm that noise levels would be reduced to below a level of significance, the impact was considered significant and unavoidable.

According to CEQA Guidelines Section 15093, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." As such, the County would be required to adopt a Statement of Overriding Considerations to address the aforementioned significant and unavoidable impact. Therefore, impacts related to noise and vibration were adequately addressed in the DEIR.

### Response to Comment Ind 24-3
It is unclear what Standard of Review the commenter is referring to. Policy 17.14 of the Nevada County General Plan states that already existing development as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. Further, Policy 17.24 of the Nevada County General Plan states that subsurface mining shall be conditionally permitted throughout the County, and shall be allowed only after impacts on the environment and affected surface land uses have been adequately reviewed and found to be in compliance with CEQA.

As discussed within the Impacts and Mitigation Measures section of each technical chapter included in the DEIR (Chapter 4.1 through 4.13), the effects of the project were evaluated based on the standards of significance set forth in Appendix G of the CEQA Guidelines. As such, the DEIR is consistent with the requirements of CEQA, and impacts were adequately addressed within the DEIR.

DEIR Comment: 4.10. Noise and Vibration and Appendix L, Noise and Vibration Analysis

**Ind 26-1** In general, the "significant and unavoidable" impacts of noise and vibration cannot be mitigated as reported in the DEIR.

First, though the DEIR claims that noise and vibration would happen mostly during initial construction activities, this interpretation is misleading in my opinion. I addition, my experience with noise is that it can be omnipresent when dealing with a VALLEY which "we are in" (Brunswick Basin and along the SR 49 corridor through Grass Valley City)! Even minor noises tend to be compounded in usual situations like accidents, fire engines, and even minor (so called) vehicle noise like motorcycles.

**Ind 26-2** The DEIR overlooks that vibration also has significant impacts in an area like ours which has tourist traffic as its major industry. A visit to downtown Grass Valley reveals that numerous businesses use hangings, shelves, and wall displays to promote their merchandise. Vibration traveling up from underground blasting could create havoc with glass, ceramic, and other breakable products. It might be severe enough to put small businesses "at risk" because of accommodations to avoid breakage and disarray (see the "vibration level" from the DEIR below that I found). We need to keep the charming ambience for our tourists we have worked so hard to create over the years.

Second, The DEIR declares mitigations and specifically provides mitigations for blast vibration. **This is more than inadequate.** It is an insult to all of western Nevada County.

**Ind 26-3**

> "Once mining operations commence, the project applicant shall hire a blast consultant to assist with the development of a 95 percent confidence level equation for the site-specific ground vibration. The blast consultant would take the data acquired by the seismographs set-up on the mine, run a linear regression and log-log confidence model to develop an equation that the mine can use to modify blasting, as needed, to ensure vibration levels remain below 0.4 in/s at sensitive receptors.
>
> Results of the Ground Vibration Monitoring Program and the equation for site-specific ground vibration shall be submitted to the Nevada County Planning Department for review." (page 2-97)

1

Monitoring at the several "receptor sites" listed, recording on seismographs the vibration levels, running an equation and submitting results to the County is not a mitigation measure! When an explosion reaches a surface vibration level of almost ½ inch of motion, you have an absolutely unacceptable impact.

DEIR consultants can say that explosive charges will be reduced if the "blast consultant" sees explosions over the level experts decided. Experts have reported that the explosions will occur 7 days a week for 16 hrs. or 24 hrs. per day. Anyone who thinks residents can live with vibration before it is reduced, as implied to be .4 inches per second or above, and as the tunnels proceed under 2,500 acres, should be removed from office or fired.

I appreciate the education and explanation about noise and vibration such as the classic textbook chart on noise measured in decibels from different sources like a shotgun. This is a service to anyone in the community who can read it.

But when the DEIR says "Generation of excessive groundborne vibration or groundborne noise levels" will be avoided, I think this is extremely subjective and must be called inadequate.

Finally, the "Summary of Applicable Vibration Standards" beginning on page 4.10-20 includes a plethora of government and expert information about vibration. What it is missing is the public health impacts of being a "sensitive receptor" of vibration in people's homes in a semi-rural community. The whole treatment vibration and noise is for industrial settings and places next to airports.

**Ind 26-4**

Sincerely,

Anita Wald-Tuttle

Anita Wald-Tuttle, former Co-Owner of Tanglewood Forest Gallery

P.S. Related sections I am not going to analyze here but are relevant, and if this DEIR is accepted, we can further report on the inadequacy relative to our environment.

## INDIVIDUAL LETTER 26: ANITA WALD-TUTTLE

### Response to Comment Ind 26-1
Please see Responses to Comments Ind 26-2 through 26-4, below.

### Response to Comment Ind 26-2
As discussed in Chapter 4.10, Noise and Vibration, of the DEIR, a Noise and Vibration Analysis prepared for the proposed project by Bollard Acoustical Consultants (BAC) to assess project-specific noise impacts during both project operations and construction. As discussed in Impact 4.10-3 (see page 4.10-37 of the DEIR), impacts related to several long-term/permanent noise generating activities were assessed. Based on the analysis included therein, which was reliant on the technical study prepared by BAC, none of the individual activities associated with long-term operations of the proposed project would generate noise in excess of the applicable noise standards. However, because the project would include multiple processes which generate noise, and because compliance with the Nevada County Noise Standards is required, Mitigation Measure 4.10-2 was included in the DEIR out of an abundance of caution to ensure satisfaction with such standards and to reduce the potential for annoyance resulting from the proposed project to the maximum extent feasible.

Additionally, a Technical Blasting Report was prepared for the proposed project by Precision Blasting Services to assess potential impacts specifically related to vibration generated by blasting. Underground blasting was assessed on pages 4.10-52 through 4.10-58 of the DEIR. As concluded therein, the proposed project is not anticipated to result in the exposure of persons to or generation of excessive groundborne vibration levels. Nonetheless, in order to ensure that actual mining operations would generate vibration levels as expected, a Ground Vibration Monitoring Program is required. As such, Mitigation Measure 4.10-4 was included in the DEIR to ensure impacts would be less than significant.

Based on the above, impacts related to noise and blasting were adequately addressed in the DEIR.

### Response to Comment Ind 26-3
Where a comment provides the opinion, preference, or observation of the commenter (e.g., opinions on the merits of the project that are unrelated to its environmental impacts), without substantiation, this is acknowledged for the record, and no further response is provided. All comments, whether substantiated by facts or simply reflecting the position of the commenter, will be considered by the County throughout this process. Please refer to Master Response 1.

### Response to Comment Ind 26-4
Under CEQA Guidelines Section 15064.7, each lead agency holds the discretion to develop and publish thresholds of significance to be used to determine the significance of environmental effects. The lead agency, which, for this project, is Nevada County, approved all thresholds of significance that were used in the DEIR. The thresholds of significance used in Chapter 4.10, Noise and Vibration, are based on the Nevada County General Plan and guidance from the Federal Interagency Commission on Noise.

## Response to Comment Ind 26-5

Please see Master Response 1. The DEIR adequately addressed noise impacts pursuant to all CEQA requirements. The comment has been noted, and forwarded to decision-makers for their consideration.

**From:** Ann
**To:** Idaho MMEIR
**Subject:** Idaho-Maryland Mine. Water-Air Pollution
**Date:** Friday, April 1, 2022 4:26:54 PM

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley,

My husband and I recently started a search for a retirement home and Grass Valley seemed ideal—that is when we notice a "No Mine" sign in one of the pictures of homes for sale. Since both of us had spent many years handling environmental toxic tort/waste disposal litigation for a public utility (including numerous depositions of persons with health issues they believed to be caused by the toxic chemicals), we immediately started an inquiry into this mine.

Based on our research, we have decided not to purchase a home in Grass Valley. Benjamin Grossman, the C.E.O. of Rise Gold, is about to be personally criminally prosecuted for egregious flouting of the environmental laws for a mining operation on tribal lands in Canada. It is rare for a corporation to be criminally prosecuted and it is almost unheard of for an executive to be held personally liable. Ben Grossman left tribal lands and waters polluted and when sued, his company declared bankruptcy. Guess who picks up the bill for cleanup when a company goes belly up?

**Ind 27-1**

Also, it is my understanding that secured financing from banks is not available (a fact that should be verified). So, Rise Gold is underfunded and relying on its ability to raise unsecured funding. This again seems an m.o. for the company. Nevada County is walking a very dangerous line allowing a person with this past record to have such an environmental impact on the area.

Please reconsider.

Ann Finneran

FEB 2 8 2022
NEVADA COUNTY
PLANNING

February , 2022

Dear Nevada County Board of Supervisors:

**Ind 28-1** I OPPOSE the Idaho-Maryland Gold Mine being reopened by Rise Mining Company.

As a registered voter in Nevada County and a homeowner, I am deeply concerned about the proposed possibility of reopening the Idaho-Maryland Mine. I have downloaded and reviewed the EIR report.

Here are the reasons why I oppose reopening the Idaho-Maryland Mine:

**Ind 28-2** MINE WASTE and WATER POLLUTION
Gold mining produces huge amounts of mining waste, some of which contain heavy metals and other toxic substances. Both waste rock and tailings threaten to pollute groundwater and surface water. Our community is still dealing with arsenic and the leaching of heavy metals from the Gold-Era days. And now, Rise, a Canadian company comes along and wants to produce even more mine waste for more than 80 years: 182,500 tons per year! More tailings that polluting big rig diesel trucks will need to haul away with the potential for leaching more arsenic into our waterways for generations to come.

**Ind 28-3** INCREASE GREENHOUSE GAS EMISSIONS
Diesel haul trucks, up to 100 round trips PER DAY will be needed to transport this mine waste, significantly increasing the amount of air pollution and greenhouse gas emissions into our community's air.

**Ind 28-4** TRAFFIC AND SAFETY
The increase of vehicles, specifically 20 ton haul trucks, up to 100 round trips per day on the Cedar Ridge Y (Brunswick Road and Highway 174) intersection will be significant and unavoidable! This is according to the EIR report. Are the supervisors aware that the Union Hill Elementary School District, with over 800 students and staff, are within the boundaries of these dangerous roads and intersections? The same intersection and roads that school buses and parents use to transport students to school five days a week, twice a day. The same roadways that the EIR report states will have significant and unavoidable harm even after implementation of feasible measures. Reopening the Mine will threaten the safety of our children, their parents, and the over 100 school staff members from the nearby Union Hill School.

Is the pursuit of gold really worth so much environmental destruction AND the real potential for significant and unavoidable auto accidents between 20 ton trucks and children in cars/buses?
I think not. Vote NO to Rise Mining Company.

**Ind 28-5** Sincerely,

Ann M Torrisi Vogel
19633 Chaparral Cir
Penn Valley CA 95946
Ann M Torrisi Vogel

## INDIVIDUAL LETTER 28: ANN VOGEL

### Response to Comment Ind 28-1
Please see Master Response 1.

### Response to Comment Ind 28-2
Please see Master Response 8.

### Response to Comment Ind 28-3
The commenter expresses general concerns regarding the project but does not specifically address the adequacy of the DEIR.

### Response to Comment Ind 28-4
As noted in Chapter 4.12, Transportation, of the DEIR and reiterated by the commenter, the DEIR concluded that a significant and unavoidable impact would occur associated with level of service (LOS) at the SR 174/Brunswick Road intersection (see page 4.12-66). According to CEQA Guidelines Section 15093, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." As such, the County would be required to adopt a Statement of Overriding Considerations to address the aforementioned significant and unavoidable impact. Moreover, the DEIR addressed impacts regarding whether the project would substantially increase hazards to vehicle safety under Impact 4.12-6, and concluded that with Mitigation Measures 4.12-6(a) through 4.12-6(f), a less-than-significant impact would occur. Therefore, impacts related to intersection delay at the SR 174/Brunswick Road intersection and hazardous roadway conditions were adequately addressed in the DEIR.

### Response to Comment Ind 28-5
The comment presents a concluding statement and does not address the adequacy of the DEIR.

Re: Idaho Maryland Mine re-opening

Dear Sir,

**Ind 29-1** I am embarrassed to tell you that I was one of the respondents to the survey about Rise Grass Valley's reopening of the Idaho Maryland Mine. The questions and the way they were formulated led me to tentatively approve the reopening of the mine. I now wish to rescind my approval, and strongly oppose the reopening of the mine in our community.

There are far too many environmental hazards and few benefits to the land and people who live here to entrust our future to Rise Grass Valley. Please vote "no" on the draft environmental impact report for the Idaho-Maryland Mine project.

Sincerely,

Ann R Wallace

DIER comment email: idaho.mmeir@co.nevada.ca.us

**Ind 30-1**

As I write, I am hearing a neighbor some distance away chipping storm damaged wood. This irritation is minor, but irritating nevertheless. If I were a bird choosing a nesting site, I would try to find one further from the noise. It the Idaho Maryland Mine becomes a reality, similar and louder noises will become a permanent fixture in the landscape. This will drive birds to search for nesting habitat further from the mine that may already be inhabited; and unable to find a niche, may not breed at all.

There are several CDFW Species of Special Concern that have been documented at the portion of Empire Mine adjacent to the proposed mine sites: Olive-sided Flycatcher, Yellow-breasted Chat, and Yellow Warbler.

The Willow Flycatcher, a California Endangered Species has also been documented at the Empire Mine meadow on Bennet Road.

**Ind 30-2**

**Section 4.10** of the DEIR addressing Noise and Vibration makes no mention of this meadow as part of the Empire Mine Park, which should be addressed. Furthermore, no mention of noise effects on birds and other wildlife is mentioned.

www.livescience.com/4283 cites research finding that noise decreases pairing by almost 15% in a study done at a compressor station generating 90dBA.

**CalTrans Technical Guidance for Assessment and Mitigation of the Effects of Traffic Noise and Road Construction Noise on Birds** of June 2016 finds that "Any audible component of traffic and construction noise has the potential of causing behavioral or physiological effects independent of any direct effects on the auditory system of TTS (temporary threshold shift), PTS (permanent threshold shift), or masking.

Synthesis of Two Decades of Research Documentating the Effects of Noise on Wildlife in **Biological Reviews** V91 Issue 4 PP982-1005 finds reduced abundance of species in noisy habitats, changes in vigilance and foraging, impacts on individual fitness, and structure of ecological communities. These responses begin at 40dBA, and though the project sites are already subject to intermittent noise levels greater than 40dBA, consideration should should be given to the effect of constant noise on Endangered and Special Concern species.

**Ind 30-3**

**Section 4.10-24, Effects of Ground Cover** cites trees and other vegetation in the area that will reduce noise pollution. This does not address the potential loss of this ground cover due to wildfire reduction efforts that are likely in the near future.

**Ind 30-4**

I am confused about the decoupling of the two sites of the project for the DEIR. It is one project, therefore it should be one DEIR.

**Ind 30-5**

I would like to see thorough and properly timed surveys of the two sites for endangered species of all kinds.

**Ind 30-6**

I would like to see realistic projections of how Nevada County is likely to change in the coming decades in terms of human growth and climate change environmental effects, and a reasonable estimate of how the mine activity would affect people and nature.

Thank-you for your consideration of my concerns.

Anna Sullivan
13419 Hillview Rd.
Grass Valley, CA 95945
Email: tmueck@att.net

## INDIVIDUAL LETTER 30: ANNA SULLIVAN

### Response to Comment Ind 30-1
Noise impacts to wildlife and bird species were analyzed in Impact 4.4-2 and determined to be less than significant.

Please see Impact 4.4-2 and Master Response 37 - Birds and Raptors, regarding impacts to protected bird species.

### Response to Comment Ind 30-2
Noise impacts to wildlife and bird species were analyzed in Impact 4.4-2, Chapter 4.4, Biological Resources, of the DEIR and determined to be less than significant.

Regarding Empire Mine State Park (EMSP), Brunswick Industrial Site daytime and nighttime ambient noise level increases do not extend to the EMSP boundary (see DEIR Figure 4.10-7). Engineered fill placement at the Centennial Industrial Site is the closest project activity to the EMSP and could last approximately 6 years. The nearest receptor to the EMSP is number 8 (see DEIR Figure 4.10-3) and the closest noise and vibration measurement locations are numbers 7 and 8 (see Figure 4.10-3). As shown in DEIR, Table 4.10-12, Centennial Industrial Site engineered fill activity does not exceed existing baseline noise levels (see Table 4.10-6). As a result, wildlife species that may use the EMSP should not experience an increase in noise levels and therefore, such impacts would be considered less than significant.

### Response to Comment Ind 30-3
As identified in CEQA Guidelines section 15125, the environmental analysis presented in the DEIR should normally compare physical environmental conditions as they exist at the time of the Notice of Preparation. The DEIR analyzed the project's potential impacts consistent with this requirement in addition to reviewing potentially significant cumulative impacts based on known or planned development in the region. Analysis of potential future impacts that may occur in the future because of unknown events (e.g., climate change, megafires, vegetation removal as part of wildfire reduction efforts) is speculative and not required by CEQA. (see CEQA Guidelines Section 15384.)

### Response to Comment Ind 30-4
Please see Master Response 4 - Clean-Up Project is a Separate Project Under CEQA.

### Response to Comment Ind 30-5
Please see Master Response 30, Biological Study Technical Adequacy, Master Response 31, Rare Plants, and Master Response 38, Foothill Yellow Legged Frog and California Red Legged Frog.

### Response to Comment Ind 30-6
The DEIR presents analyses of the project's impacts in combination with impacts from reasonably foreseeable future growth based on local projections, including combined (i.e., cumulative) impacts on human health and wildlife. Cumulative impact analyses are provided at the end of each technical chapter of the DEIR (Chapters 4.1 through 4.13). Regarding climate change, please see Master Response 16 – Drought and Climate Change.

Penn Valley

**Ind 31-1**

Do NOT allow this mine to be opened! Financial benefits for the few NEVER OUT WEIGH the damage to so many!!!

We have TANNIN in our well water that we have to treat due to previous mine activities in the area. Tannin residue from wood used in the shafts contaminated our well! The "mines" are MILES away so this is an example of how toxins leach through, downhill!!!

PLEASE DO NOT ALLOW THE MINE TO OPERATE!

If you allow this and well water is decreased or contaminated due to mining activities; or our watershed is impacted, in any way; we all have the right to hold you responsible ... a new well is never guaranteed, so you can imagine the accumulated costs that those who are affected will be incurring; let alone the impact to wild life and geography ... do not risk this!

Re: DEIR Comment: Diesel Emissions

I am a retired teacher and have compromised lung function which has led me to focus on the impact of trucking on the quality of the air we breathe.

Based on expert analysis I have studied, diesel emissions, including both exhaust and particulate matter, or DPM, are not given adequate mitigation in the Rise Gold project DEIR, *Air Quality, Greenhouse Gas Emissions, and Energy* (Chapter 4.3).

The impact of these emissions on public health is serious. Approximately 70% of all airborne cancer risk in California is associated with diesel particulate matter. The mitigation measures are inadequate (see p. 2-14, Executive Summary).

**Ind 32-1**

Diesel particulate matter has other public health effects as well. Because it is part of PM2.5, DPM contributes to the same non-cancer effects as PM2.5 exposure. These effects include increased ER visits and hospitalizations for exacerbated heart and lung disease, asthma, and premature death. It may affect the immune system, increasing the risk of allergies and susceptibility to infectious diseases. (See Table 4.3-1, and Page 4.3-8).

Diesel emissions will be constant throughout the life of the project starting with the remedial action on the Centennial site, followed by the construction phase of the Brunswick site, then delivery and placement of engineered fill on the Centennial site, and ongoing operations at Brunswick site.

This project will require the use of many heavy-duty diesel engine equipment: 20-ton haul trucks, bulldozers, graders, compactors and generators. Additional diesel trucks will be used for earth moving and the delivery and dispersal of materials such as waste rock, gold concentrate and aggregate. In addition, diesel trucks will be hauling explosives, water, diesel fuel, and cement.

1

**32-2** The DEIR states that all diesel equipment "owned" by the mine would be equipped with Tier 4 Final engines, which is the current emissions standard for new trucks, requiring engine manufacturers to reduce particulate matter and oxides of nitrogen (NOx) by 50-96% as compared to Tier 3 engines. Yet if you look closely at the plans, you can easily see there are several loopholes. For instance, another section of the report states that "If these engines are not 'commercially available', then they will use CARB certified Tier 3 engines with the most effective Diesel Emission Control Strategies available for the engine type. "Commercially available" will take into consideration factors such as critical path timing of construction and geographic proximity of the equipment location to the project site. What isn't covered is the question about what the "Tier" status will be required for leased equipment and outside vendors. These trucks will travel the same roads as our residents and school buses. They'll be bringing explosives, fuel oil and cement to the mine. There are no guarantees that Tier 4 engines will be used exclusively.

**32-3** The DEIR must include a commitment to mitigate these emissions before they are in the environment and the human body.

Sincerely,

Anne Lyon

Anne Lyon

## INDIVIDUAL LETTER 32: ANNE LYON

### Response to Comment Ind 32-1

The commenter states that diesel emissions are not given adequate mitigation in the DEIR but provides no evidence or specific reason why mitigation measures in the DEIR are not adequate.

Diesel emissions from offroad and on-road vehicles are analyzed in Chapter 4.3 of the DEIR and are determined to be less than significant after mitigation. Please see Chapter 4.3 and Appendix E.1 of the DEIR, and Master Response 18 - Air Quality Thresholds.

### Response to Comment Ind 32-2

Tier 4 engine standards are applicable only to off-road equipment. On-road trucks are subject to various diesel risk reduction regulations as discussed on pages 4.3-23 and 4.3-24 of the DEIR.

The commenter questions how the applicant will ensure the use of Tier 4 equipment. The project analysis incorporates applicant proposed measures (APMs) that serve to reduce project emissions of criteria air pollutants and toxic air contaminants, including APM-AQ-1 that states "all off-road diesel-fueled equipment and emergency generators owned by Rise Grass Valley Inc. shall be equipped with Tier 4 Final engines" (DEIR page 4.3-65). APMs are mandatory conditions of approval and are enforceable by the County. Please see Master Response 3 – Operator Responsibility.

With regard to construction contractors, Mitigation Measure 4-3-1(b) requires a Construction Exhaust Emissions Minimization Plan and the use of Tier 4 Final engines or alternative sources of power. Tier 4 Final engines are commercially available now, so these would be used. The mitigated emissions presented in the Air Quality Analysis of the DEIR reflect the lower emissions that would be achieved by this mitigation measure.

Mitigation Measure 4-3-1(b), bullet point 2a, page 4.3-77 of the DEIR, has been modified in the Final EIR by striking out (deletion) "taking into consideration factors such as critical path timing of construction and geographic proximity of the equipment location to the project sites", as follows:

*4.3-1(b)* ***Construction Exhaust Emissions Minimization Plan.***
*Prior to the initiation of construction, Rise Grass Valley Inc. or its designee shall submit a Construction Exhaust Emissions Minimization Plan to Nevada County or its designated representative for review and approval. The Construction Exhaust Emissions Minimization Plan shall detail project compliance with the following requirements:*

- *Where access to alternative sources of power and alternative-fueled equipment are available, portable diesel engines shall be prohibited.*
- *All diesel-powered equipment with engines equal to or greater than 50 horsepower (hp) shall be powered by California Air Resources Board (CARB) certified Tier 4 Final engines. If 50 hp or greater engines that comply with Tier 4 Final emissions standards are not commercially available, then the Project Applicant shall ensure that all diesel-powered equipment equal to or greater than 25 hp shall have at least CARB-certified Tier 3 engines with the most effective Verified Diesel Emission Control Strategies available for the engine type, such as Level 3 Diesel Particulate Filters (Tier 4 engines automatically meet this requirement).*

a. *For purposes of this mitigation measure, "commercially available" shall mean the availability of the Tier 4 Final equipment~~, taking into consideration factors such as critical path timing of construction and geographic proximity of the equipment location to the project sites~~.*

b. *The Project Applicant shall maintain and submit records to Nevada County concerning its efforts to comply with this requirement.*

The above change is for clarification purposes and does not alter the conclusions of the DEIR.

A mitigation monitoring and reporting program has been prepared and is included as Chapter 4 of this Final EIR. The mitigation measures and conditions of approval will be enforced by the County. To the extent the applicant receives permits from other state and federal agencies, those agencies will be responsible for their enforcement.

## Response to Comment Ind 32-3

Mitigation Measures for emissions are required in Chapter 4.3 of the DEIR.

**Individual Letter 33**

## IDAHO-MARYLAND MINE PROJECT
## DRAFT EIR COMMENT FORM

To document the author of comments received, please provide the following information. Thank you.

Name: Anne + Ken Merdinger

Address: 323 Alexander Street Nevada City, CA 95959

Organization (if applicable): _____

Please provide us with your written comments on the Idaho-Maryland Mine Draft EIR by **5:00 PM, April 4, 2022**. Comments may be placed in the comment box located in the back of the Board of Supervisors Chambers during the Special Public Meeting of the Nevada County Planning Commission. Written comments may also be submitted (email or hardcopy) to the address below:

**Ind 33-1** * We believe the Governor should put a Moratorium on this project due to the water shortage.

* This project should be denied for a great many reasons: ① Rise Gold has used deceptive tactics in their attempts to generate support.
② The activities involved w/ the mine WILL/WOULD adversely affect the lives of community members and discourage tourism.

**Ind 33-2** ③ It is insanity to keep this issue viable!!!

Absolutely Opposed - along with EVERYBODY I know.

Stop the Madness!

Board of Supervisors, Nevada County, CA US

To Whom it May Concern,

I am in opposition to Rise Gold reopening the Idaho Maryland mine.

It is a bad idea for our neighborhoods, community, our state, country and our Earth.

**Ind 34-1**

It is an old business paradigm of taking as much as you can from a submissive, yielding earth for the benefit of a few wealthy businessmen looking to get wealthier at the detriment of everyone else around. Those wealthy fat cats aren't even in our own country and their track record of negligence and poor management practices is trailing behind them uncleaned and unresolved.

Please do the best for our fragile and slowly growing county by voting what the people need and want.

Please deny Rise Gold's reopening of the mine.

Emphatically yours,

Antoinette Regan

**From:** Antonio Dominguez <artandhomestead@gmail.com>
**Sent:** Monday, April 4, 2022 3:48 PM
**To:** Idaho MMEIR
**Subject:** Idaho Maryland Mine STOP

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To Whom it may concern,

**Ind 35-1** I am deeply concern with the reopening of the Idaho Maryland Mine. I am concerned for the residents, including the wildlife and the impact that it will have on our water and air quality that will be polluted in our county and region for many years to come. I am concerned for the well being of those generations after us, there is no excuse to put profits over the quality of human life, innocent children. It is tragic that that the though of reopening the mine has even come to existence after the slow recovery we have faced from previous mining in this state, and especially this region. There are many damaging effects that could happen according to the report in the DEIR that are very concerning and have been known to happen.

**Ind 35-2** I am concerned with the contaminants and hazardous materials from the process to reopen the mine which requires pumping water from an existing mine, filtering and released back to wolf creek. The leaching of chemical compounds that are used to separate target minerals from ore ( sulphuric acid or cyanide). It is not worth the risk even with safeguards.

**Ind 35-3** There is already heavy metals in our water supply from previous mining such copper, lead, mercury, arsenic that have leached into our ground water and surface water changing the ph, therefore making it non drinkable water for humans and destroying natural habitats that have been recovering from previous mining.
The amount of water that will be used is unethical with the droughts that we have been experiencing in California for over a decade. Our water table is already extremely low and we should be using that water to combat wildfires and saving lives rather than to make profits. Our area is in short supply, many people rely on drilled wells for their water supply and the aquifers below. If the water table begins to lower residents have to drill deeper in turn its creating a financial stress on many residents. There is also potential of the collapsing of the aquifers creating an even bigger impact, perhaps loss of the aquifer permanently. We need to protect our watershed. The evidence is in the San Juan Ridge Mine. Lets not repeat the same mistake.

**Ind 35-4** There is already a great concern with our air quality as we all know with our wildfires in the area, there is absolutely no need to add to the pollution of the air quality. Pollutants like ozone, carbon monoxide, sulfur dioxide, lead, and particulate matter all of which are a health concern and environmental concern. We don't want companies to come in and leave a mess for us locals to have to clean up. We are not signing up for this. This county and state and country has already experienced the detrimental damage from mining. People have died, indigenous peoples have been removed and killed and the environment has been tragically abused and disturbed at a micro level as well as a macro level, we all see it and we all experience it. We don't want to have more of that. I am not for the Idaho Maryland mine to reopen.

Concerned resident

Jose Dominguez
Artandhomestead@gmail.com

## INDIVIDUAL LETTER 35: ANTONIO DOMINGUEZ

### Response to Comment Ind 35-1

The commenter is opposed to the project due to a variety of impacts to resource areas such as hydrology, air quality, and biology. The commenter does provide specific information as to why the DEIR is inadequate in addressing impacts to these resource areas. The commenter's opposition to the project is noted for the decisionmakers. The project's potential impacts to wildlife, air quality, and water quality are addressed in DEIR Chapters 4.4 (Biological Resources), 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), and 4.8 (Hydrology and Water Quality), respectively. Regarding quality of life and historic mining, the commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 35-2

The commenter appears to be concerned with the potential disturbance of existing hazardous materials on the project site as well as the use of hazardous materials as part of project's operations. Impacts related to hazardous materials and water quality are addressed in DEIR Chapter 4.7 (Hazards and Hazardous Materials) and Chapter 4.8 (Hydrology and Water Quality), respectively. Specifically, surface water impacts resulting from mine dewatering are addressed under Impact 4.8-1 on DEIR page 4.8-42. Dewatering water would be discharged to a clay-lined pond for initial contaminant removal and then pumped to a water treatment plant for further treatment to meet applicable state standards, under oversight by the Central Valley Regional Water Quality Board, before discharge to South Fork Wolf Creek. As stated on DEIR page 4.7-28, the project does not propose the use of mercury or cyanide. Sulfuric acid would be used and stored at the proposed water treatment plant. Sulfuric acid and all other potentially hazardous materials stored on the project site would be done so in accordance with applicable storage requirements, as verified by the Fire Marshall's Office prior to project's operation.

In addition, Mitigation Measure 4.7-1(d) of the DEIR requires that prior to the transport, storage, or use of hazardous materials or explosives at the site, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials or explosives on-site.

The comment is noted for the decisionmakers.

### Response to Comment Ind 35-3

The first part of the comment refers to environmental effects of historic mining. The comment is noted for the decisionmakers but does not address the project nor the DEIR. The commenter is referred to Master Response 9 - Historical Mine Waste at Centennial Site. The second part of the comment pertains to general concerns regarding water quality and the impact of the project on private wells, especially in light of the drought, but the commenter does not address the adequacy of the DEIR. The commenter is referred to Chapter 4.8 of the DEIR and Master Response 16 - Drought and Climate Change, Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Master Response 29 - Near Surface Workings.

### Response to Comment Ind 35-4

The commenter is generally concerned with the project's adverse impacts to air quality but does not state how the DEIR is inadequate. The project's potential air quality impacts are addressed in DEIR Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy). The commenter's

opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 3 - Operator Responsibility.

**Subject:** No mine

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

I am 24 I have lived in grass valley my whole life and I have always been proud of the air quality and cleanliness of the town.

**Ind 36-1** Opening back up the mines means no more clean town. Soil holds literal tons of CO2 when you dig up soil it releases CO2, not to mention gold mining produces the most amount of toxic waste than other mining. Just one gold ring produces an Eiffel towers amount of waste. In just five days you can cover the city of Paris completely in waste. Not to mention the amount of mercury and cyanide that gets released into the surrounding soil and water. Grass valley already has cancer from our water and soil being the #1 death rate here, not to mention being bone here means you already have more lead in your system than what is healthy and opening the mine WILL make all of that EVEN WORSE.

**Ind 36-2** I would also like to address the fact that some areas WILL need NID installed but there's a reason NID is in only parts of the town, because they weren't able to install on the outer ashes of town (where the mine is) so how exactly do you plan on taking away the surrounding water? If my well dries up I will sue the city and I can if my water dries up. I am not the only one with this thought process. We are mad, we are unhappy, we think those in charge should shove a sock in it and mind their business instead of being greedy for money.

"Who cares about the major environmental impact we want money and that's more important than the towns health" that's how y'all sound FYI greedy rude, and uncaring for anyone but yourselves

Sent from my iPhone

### Response to Comment Ind 36-1
Please see Master Responses 1 and 8.

### Response to Comment Ind 36-2
Please see Master Response 14.

**Individual Letter 37**

To whom it may concern,

I manage a Trust which owns an industrial building in the Whispering Pines Industrial area.

We have the same renter since we built the building. 20 years ago.

Opening the mine will jeopardize our contract, they might move away, taking all the professional people they employ.

If the mine is allowed to open, we will claim that we were misled when we decided to build in that Industrial Park in Grass Valley.

**Ind 37-1** How would we pay Property Taxes on an empty building? We would never find another renter.

My kids built a house nearby that area, we moved up here to be near them. They will be leaving, taking great losses, if they do not have water and can not breeze the air.

Most likely, we are not alone with our concerns. What is planned is a scam, sadly we all are going to suffer because of it.

We strongly disapprove of the mine opening and will make the responsible people accountable for the damage we will encounter.

Hoping that you are making the only right decision, and soon, before more people suffer...

**Individual Letter 38**

April 3, 2022

Matt Kelley
Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959

Re: Comments on the Idaho-Maryland Mine Project DEIR

Dear Mr. Kelley:

I am a 16 year resident of 11918 East Bennett Road, GV, living with my wife and young daughter. Our property is approximately in the middle of the proposed mine underground footprint, surrounded by large ponderosa pines, oaks and madrones, across the road from South Fork Wolf Creek. I am very familiar with the details and environmental impacts of this current, as well as former proposals to re-open this mine, shuttered for over 65 years. The impacts are many, and significant to the nearby residents. Our life would be disrupted forever should this proposal ever come to fruition. There are virtually no impacts identified in this proposal that would not directly change our life for the worse in our bucolic, peaceful neighborhood. In addition, real estate values in our neighborhood will clearly decrease, impacting our financial ability to retire as we have planned. Every legitimate local real estate agent will testify to this reduction of our home values.

**Ind 38-1**

There are many impacts that are inadequately described, but I will highlight a few that seem most egregious to me. The following sections of the DEIR are inadequate under CA law in describing the full impacts of this mine proposal:

CENTENNIAL SITE CLEANUP AND INCLUSION WITH THE MINE PROJECT DEIR

The Centennial Site owned by Rise Gold is a key and necessary part of their proposal. It is also a heavily toxic, (literal Superfund site), now under a superseding cleanup obligation imposed by the State of California on Rise Gold. My comments during the NOP DEIR scoping process were heavily focused on making sure that the complex cleanup project at Centennial is fully identified, and coordinated with any mine re-opening proposal, completed before any mine operation could be fully vetted by the Planners and Supervisors.. When I saw the DEIR did not include this full coordination after all those many months, it was incredibly surprising and a glaring flaw of the DEIR.

**Ind 38-2**

The DEIR simply assumes that the Centennial site will be cleaned up, making the baseline analysis severely flawed. No agency or approving entity can simply assume this complex cleanup will take place. Currently, the applicant has not started any cleanup (to my knowledge), and currently does not have financial means to accomplish the full and proper cleanup. Nothing about the cleanup can be assumed. The mandated cleanup is critically important to the health

**Ind 38-3**

of the community and a vital part of waste rock disposal at the heart of the mine project. Without the full cleanup of the Centennial site, and a new reworked waste rock disposal plan, the DEIR is severely flawed. This section of the DEIR is inadequate and will need a full reworking to include the cleanup process, and then a new and complete analysis of the impacts.

HYDROLOGY- GROUNDWATER IMPACTS AND WELLS

**Ind 38-4** Other than the glaring flaw in the analysis of the Centennial site, hydrology is, in my opinion, the section on hydrology contains inadequate evaluation of groundwater impacts and impacts on wells. This section is lacking any real detail, and limited modeling, and contains only a very limited analysis of the potential impacts to the water levels in the area (ie, streams, groundwater levels), and particularly wells both inside and outside of the small area on East Bennett Road. Water is the most important thing we value here in CA and the Foothills, and to use old, recycled and very limited data from previous applications without a new and comprehensive analysis, renders this section inadequate and severely flawed. Nevada County is no stranger to functioning wells being destroyed by mining operations, so detail and use of outside experts is paramount here. There are potentially hundreds of properties who are likely or potentially impacted by dewatering, and yet there are no outside expert models and analysis contained in the DEIR. The County requires immediate replacement of water supplies for residents being rendered inadequate by mining impacts, as well as use of outside experts, so this section of the DEIR is severely inadequate, necessitating a full rewriting of this section of the DEIR.

**Ind 38-5** In addition, the mitigation plan for the limited amount of wells in the East Bennett Road area is inadequate. The applicant proposes to install NID water connections and "pay for" monthly expenses, but the applicant limits reimbursement of NID water usage to an arbitrary amount, and does not nearly account for a full replacement of water usage prior to decommissioning of each well. In addition, the applicant cannot demonstrate any financial ability to completely

**Ind 38-6** indemnify the residents from impacts. There is no comprehensive bond in place to account for resident's potential water usage above the arbitrary level set by the applicant. The replacement of our wells is not our choice. Our water usage cannot be set to some arbitrary number. This section of the DEIR is inadequate in mitigating the impacts of dewatering on wells.

GREENHOUSE GAS EMISSIONS

**Ind 38-7** Greenhouse Gas Emissions studied in the DEIR are grossly inadequate in describing the full 80 year life of the mine proposal, and all of the associated sources of GHG. There is an arbitrary annual level of GHG assumed under the mining plan, but no detail to back this up. Since there is far from any assurance that the toxic Centennial site will be available for the initial storage of waste rock, there must be an analysis done of GHG emissions caused by further offsite hauling. The impacts from GHG emissions caused by offsite trucking of waste rock are severely understated if Centennial is not available. Since the mining plan does not adequately account for the coordination of Centennial cleanup and use thereafter, this DEIR section must be re-written to account for the strong possibility of much larger GHG emissions created by longer route hauling of waste rock.

**Ind 38-8** In addition, there is no analysis of GHG emissions from the cement manufacturing required for the cement paste backfill of waste rock, and does not account for GHG emissions from the hauling of the gold product to subsequent processing facilities offsite, far remote from Grass Valley.

**Ind 38-9** The DEIR also neglects to mention and analyze the incompatibility of this DEIR and mining plan with the Nevada County Energy Action Plan, as well as the goals of the state of California (CARB). The goal is to reduce GHG by 50% by 2035. Incredibly, this single mining project would nearly emit the same amount of GHG as all of the current county non-residential use of GHG. Nevada County cannot possibly meet its emission goals with a project of this type. And under CARB, new projects should strive to achieve a zero-net impact on GHG emissions.

**Ind 38-10** The entirety of the project flies in the face and contradicts County and State goals for GHG emission reductions. The DEIR does not nearly account for the entirety of GHG emissions from this project. The DEIR must conclude that the entirety of impacts from GHG increases are significant and unavoidable.

**Ind 38-11** Thank you for allowing me to comment on 3 of the most obviously deficient areas of the DEIR. I am concerned with many, many more, but trust that they will be documented by other citizens and the many experts and agencies who will weigh in during this DEIR process.

Thank you,

Art Healy

11918 East Bennett Road
Grass Valley, CA 95945

## INDIVIDUAL LETTER 38: ART HEALY

### Response to Comment Ind 38-1

The commenter expresses general opposition to the project, quality of life issues, and real estate value. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 2 – Social and Economic Issues. Responses to specific comments are provided below.

### Response to Comment Ind 38-2

The commenter states that the Centennial Industrial Site is a Superfund site and that the Project Applicant is under an obligation by the State of California to clean up the site. The commenter also states that the DEIR is deficient for not including a discussion of the Centennial Industrial Site cleanup. However, the Centennial Industrial Site is not a designated Superfund site. In 2005, the EPA identified the Centennial Industrial Site as potentially needing environmental remediation and in 2018 confirmed that environmental remediation is necessary for the site. (DEIR, p. 1-4.) The Project Applicant entered into a voluntary agreement with the California Department of Toxic Substances Control (DTSC) to implement a Remedial Action Plan (RAP) to clean up the site. (DEIR, p. 3-10.) The RAP is currently under review by the DTSC. (*Ibid*.) The commenter is referred to Master Response 9 - Historical Mine Waste at Centennial Site. For CEQA purposes, the cleanup project is a separate project and discussion of the Centennial Industrial Site cleanup need not be included in the Idaho-Maryland Mine DEIR. Please see Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 38-3

The commenter states that the DEIR assumes the Centennial Industrial Site will be cleaned up and that the DEIR is deficient because it does not plan for this outcome. The DEIR states that it is the Project Applicant's intent to place engineered fill at the Centennial Industrial Site. (DEIR, p. 3-26.) However, in the event that the cleanup of the Centennial Industrial Site is not complete upon the commencement of mining, or not complete within the life of the mining permit, engineered fill would be placed at the Brunswick Industrial Site or transported off-site to be used in local and regional construction markets. (*Ibid*.) The commenter is directed to Master Response 4 - Cleanup Project is a Separate Project Under CEQA and Master Response 11 – Engineered Fill Utilized in Local and Regional Construction Markets.

### Response to Comment Ind 38-4

The commenter states that the DEIR's Hydrology and Water Quality section is deficient because the analysis and modeling are limited, but does not provide any additional information on why the section is limited. The commenter also indicates that the DEIR's Hydrology and Water Quality section underestimates the number of groundwater wells impacted by the project or does not rely on outside hydrology experts, but does not provide further detail. The commenter is referred to the DEIR, Chapter 4.8 (Hydrology and Water Quality). Regarding the adequacy of DEIR's analysis of impacts to private wells, the commenter is referred to Master Response 14 – Adequacy of Groundwater Model and Master Response 15 – Adequacy of Groundwater Monitoring Wells. The commenter is also referred to the various studies upon which DEIR Chapter 4.8 relies – Appendix K.2 (Groundwater Hydrology and Water Quality Analysis), Appendix K.3 (Groundwater Model Report), Appendix K.7 (West Yost Peer Review), Appendix K.8 (Idaho-Maryland Mine Groundwater Monitoring Plan), and Appendix K.9 (Idaho-Maryland Well Mitigation Plan.) Regarding the commenter's statement that water replacement is required for impacted wells, this is already required in the DEIR by Mitigation Measure 4.8-2(b) and General Plan Policy 17.12.

Note that the groundwater analysis was reviewed by the County's independent experts at West Yost, who provided input and concurred with the results of the analysis.

## Response to Comment Ind 38-5

The commenter states that the DEIR's Appendix K.9, Idaho-Maryland Well Mitigation Plan, is inadequate because the impacted properties would be compensated at an arbitrary amount. The reimbursement rate for NID water in the Well Mitigation Plan is $870, which assumes a daily use per house of 400 gallons per day at current water rates. (DEIR, Appendix K.9, p. 3.) This replacement amount was based on average usage data from NID, and the commenter provides no evidence identifying why this amount is inadequate. The commenter is referred to Master Response 15 – Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 38-6

The commenter states that the DEIR is inadequate because it does not demonstrate that the Project Applicant has the financial ability to reimburse residents with impacted private wells above the 400 gallon per day threshold. The financial condition of the Project Applicant is outside the scope of CEQA review. However, Nevada County General Plan Policy 17.12, which is referenced in the Well Mitigation Plan, provides that the operator of the mine must guarantee a comparable supply of water to such homes or businesses through accessible forms of security or alternate sources of water. (DEIR, Appendix K.9, p. 1.) The commenter is also referred to Master Response 15 -Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 38-7

The commenter assumes that if the Centennial Industrial Site were not available for fill placement, then that fill would be immediately hauled to offsite locations, which would result in $CO_2$ and $NO_x$ emissions exceeding thresholds of significance. However, if the Centennial Industrial Site were not available, fill placement would take place initially at the Brunswick Industrial Site rather than being immediately hauled to local and regional construction projects. (DEIR, p. 3-26.) The DEIR states "[i]f the separate DTSC cleanup project is not approved by DTSC and completed within the term of the Idaho Maryland Mine Project use permit, engineered fill would be placed on the Brunswick site, but not the Centennial site, and the remainder would be hauled to local and regional markets." (DEIR, p. 1-3.) Moreover, the DEIR already analyzed impacts related to hauling of material to local and regional markets. (DEIR, p. 1-3.) GHG emissions and $NO_x$ emissions would not exceed thresholds in this scenario. Please see response to referenced Baseline comment, Response to Comment Grp 21-122. Finally, the applicant has agreed to a condition of approval requiring that if the Centennial Industrial Site is not available to accept engineered fill when project operations commence, then the following conditions apply: (a) the engineered fill material will be first placed at the Brunswick Industrial Site until that site is at capacity prior to selling waste rock or tailings offsite; or, (b) waste rock or tailings materials sold offsite will be transported in electric trucks.

## Response to Comment Ind 38-8

The commenter states that the DEIR contains no analysis of GHG emissions from the production of the cement necessary for the cement paste backfill. This comment pertains to a "lifecycle" analysis, which is not required under CEQA. The commenter is directed to Master Response 26 – Life Cycle GHG emissions. The commenter also states that the DEIR does not discuss GHGs produced from the hauling of gold product to subsequent processing facilities. The air quality analysis analyzed emissions of gold concentrate hauling to the Port of Oakland, where the concentrate would be delivered to gold concentrate purchasers. The subsequent movement of that gold concentrate material is not required, as that would constitute a lifecycle analysis.

## Response to Comment Ind 38-9

The commenter states that the DEIR fails to mention that the project is incompatible with Nevada County's Energy Action Plan (EAP) and the California Air Resources Board's statewide climate goals. The commenter also states that new projects should have a net-zero GHG impact. As stated in the DEIR, the EAP is not a Qualified GHG Emissions Reduction Plan under CEQA. (DEIR, p. 4.3-89; CEQA Guidelines § 15138.5(b)(1)(D).) Therefore, no CEQA document can tier from the County EAP. Nevertheless, the compliance of the project with EAP strategies has been analyzed and the project was found to be consistent with the EAP. The commenter is referred to Master Response 25 - Nevada County Energy Action Plan. CEQA does not require that the project achieve a net-zero threshold for GHG emissions. The commenter is referred to Master Response 27 - Greenhouse Gas Thresholds.

## Response to Comment Ind 38-10

The commenter states that the entirety of GHG emissions is not accounted for in the DEIR, but does not explain how it is deficient. The project's GHG emissions have been found to be less than significant after mitigation. The commenter is referred to the DEIR, Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), and Master Response 27 - Greenhouse Gas Thresholds.

## Response to Comment Ind 38-11

This comment is a closing statement expressing thanks for the opportunity to comment and concern about the project. Comment noted.

**Individual Letter 39**

**From:** Ashley Hall <hallas@sonoma.edu>
**Sent:** Monday, April 4, 2022 11:20 AM
**To:** Idaho MMEIR
**Cc:** commgr@cea-nc.org
**Subject:** Comments on DEIR from Nevada County Resident Ashley C. Hall
**Attachments:** Comments on DEIR--Idaho Maryland Mine.docx

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Dear Mr. Matt Kelley and esteemed members of the Nevada County Planning Department,

I am writing to express my serious concerns about the Draft Environmental Impact Report (DEIR) for the proposed reopening of the Idaho Maryland Mine near Grass Valley by Canadian company, Rise Gold Corporation.

**Ind 39-1**

As a resident of Nevada County since 1978, father of two young children, professor of Native American Studies at Sonoma State University (Ph.D., UC Davis, 2006), and ally of Nisenan and other tribal peoples, I am deeply concerned about impacts to aesthetic resources, terrestrial and aquatic biological resources, and tribal cultural resources that are inadequately addressed in the DEIR. Given my professional expertise, I focus my comments here on the issue of Tribal and Cultural Resources in the DEIR.

Tribal and Cultural Resources:

**Ind 39-2**

On page 2-62 under 4.5-3, the DEIR acknowledges that reopening the Idaho Maryland Mine will likely disturb human remains, including those interred outside of dedicated cemeteries; likewise, on page 2-63 under 4.5-4 the DEIR acknowledges that reopening the Idaho Maryland Mine will cause a substantial adverse change in the significance of a tribal cultural resource as defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe. Under 4.5-3 and 4.5-4 the DEIR lists these impacts as significant ('S'). In light of the acknowledgements of these potentially significant impacts, I am concerned that on page 2-63 under 4.5-6, the DEIR claims that the potential cumulative loss of cultural resources is less than significant ('LS'). Under 4.5-6, the DEIR attempts to exempts the. Since the impacts under 4.5-3 and 4.5-4 are deemed significant, the cumulative loss of cultural resources should also be deemed 'S' and should require mitigation as outlined under CEQA Guidelines Section 15126.4(3) and any other applicable ordinances and policies. Alternative land use options should also be explored, e.g., purchase by Nevada County as cultural, historical, conservation easement.

**Ind 39-3**

I am also concerned with the proposed timeline, which calls for 'dewatering' of the mine prior to consultation with cultural resource experts, MLDs, or tribal members. Cultural resources at the project site should be evaluated prior to initiation of any phase of the project.

1

Rise Gold CEO, Benjamin Mossman's Track Record:

Along with the problems in the DEIR itself identified above, I am concerned about Rise Gold CEO, Benjamin Mossman's record of flouting Gitxaala (Canadian First Nation) tribal authority. As CEO of another Canadian mining corporation, Banks Island Gold, Mossman presided over a company that carried out a mining project in Gitxaala territory despite the stated opposition of the Gitxaala to mining operations on Banks Island, British Columbia, Canada, in an area Gitxaala Tribal Member, Leena Minifie describes as "part of the remote archipelago of islands that comprise Gitxaala territory. It is a central site for food gathering for the Gitxaala people, who live off the salmon, as well as halibut cod, mussels, cockle, seaweed and sea asparagus found in the area. Seaweed collection and drying camps are established there during the summer in order to build food stocks for the winter. Now that effluent is leaking into the streams and surrounding area, many people are afraid to harvest."(https://ricochet.media/en/537/banks-island-gold-refused-to-shut-down-mine-after-spill-in-remote-coastal-bc accessed 04/04 11:00 Accessed 04/04/22 at 11:00 AM). Given Rise Gold's CEO's documented unwillingness to honor the stated opposition of Gixaala objections to a mining project, the shortcomings and inconsistencies in the DEIR noted above, and the broader historical role of the mining industry in the dispossession, ecological destruction, and physical and cultural genocide of California Indian lands and people*, I am deeply concerned that Rise Gold will fail to provide adequate study and mitigation for the cumulative effects of their activities on tribal cultural, biological and other resources in Nevada County.

**Ind 39-4**

For the reasons detailed above, I urge you, Mr. Kelley and esteemed members of the Nevada County Planning Department, to order significant study and revision to the DEIR and to seriously consider the option of purchasing the land for a cultural, archaeological and conservation easement that would preserve those resources for Nisenan people, other residents of Nevada County, and the plant and animal communities who would be negatively impacted by reopening the Idaho Maryland Mine.

*As a general note, the history of mining in Nevada County and throughout California must be viewed in the context of the genocide of California Indian peoples and the ecological devastation to Indigenous homelands precipitated by the Gold Rush.

**Ind 39-5**

## INDIVIDUAL LETTER 39: ASHLEY HALL

### Response to Comment Ind 39-1
Please see Master Response 1.

### Response to Comment Ind 39-2
Table 2-1 included in Chapter 2, Executive Summary, of the DEIR provides a table summary of the conclusions of the environmental analysis provided in Chapters 4.1 through 4.13 of the DEIR. A detailed analysis of Impacts 4.5-3 and 4.5-4 is included in Chapter 4.5, Cultural and Tribal Cultural Resources, of the DEIR. As discussed therein, Mitigation Measures 4.5-3 and 4.5-4 would ensure that less than significant impacts would occur related to the disturbance of any human remains, including those interred outside of dedicated cemeteries, or the potential for the proposed project to cause a substantial adverse change in the significance of a tribal cultural resource as defined in PRC Section 21074. Furthermore, as discussed on page 4.5-34 of the DEIR, Generally, while some cultural resources may have regional significance, the resources themselves are site-specific, and impacts to them are project-specific. For example, impacts to a subsurface archeological find at one project site would not generally be made worse by impacts to a cultural resource at another site due to development of another project. Rather, the resources and the effects upon them are generally independent. Therefore, given that cultural resource impacts are generally site-specific and each future project within Nevada County would be required to mitigate such impacts, any potential impacts associated with cumulative buildout of the County would not combine to result in a cumulatively considerable impact. As such, impacts related to cultural and Tribal Cultural Resources were adequately addressed in the DEIR.

### Response to Comment Ind 39-3
As discussed on page 4.5-28 of the DEIR, the underground workings of the Idaho-Maryland Mine Company are not currently accessible to historic preservation professionals and the public because the tunnels are flooded with groundwater. Therefore, evaluation of any cultural resources located within the underground workings of the Idaho-Maryland Mine is not feasible.

### Response to Comment Ind 39-4
Please see Master Response 3.

### Response to Comment Ind 39-5
The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

**Individual Letter 40**

RECEIVED 2nd Copy

MAR 21 2022

NEVADA COUNTY
BOARD OF SUPERVISORS

To: Nevada County Board of Supervisors
From: Dave and Dianna Connell
Regarding: Idaho-Maryland Mine

**Ind 40-1**

If you were building a new home, would you give that job to a contractor of questionable character? A company that went bankrupt with court cases continuing? The obvious answer is "No Way!" Yet here we are with Rise Gold wanting to reopen and work the Idaho-Maryland Mine for 80 years! This contractor is on shaky ground (literally and figuratively).
We are definitely opposed to this mine reopening under any circumstances. There are many questionable issues surrounding the reopening of the mine for which we have concerns: noise pollution, air pollution, wells being depleted, dump trucks running 24/7, employment promises that are highly suspect, and a deceptive company running the show. Sounds like a recipe for disaster! Let's avoid this one!

### Response to Comment Ind 40-1

Please see Master Response 1, and 3.

**Individual Letter 41**

Audrey Jacus
District 1
Grass Valley

Stop the Mine

To Whom It May Concern,

**Ind 41-1**

I grew up in this beautiful County, and after having lived in Washington for a few years, I believe that nothing compares to the beauty of our little town. I would like to protect that at all costs. I think that this mine will destroy life as we know it in Nevada County. I believe that we would become the next Flint, Michigan. Destroying our environment, air quality, water supply, and wildlife. As a young adult who grew up with an underground well supplying my drinking water, I don't want to see the actions of a greedy conglomerate destroy the peaceful beautiful town we have all called home for so long. If you truly believe going forward with this mining development will benefit anyone other than those in the company then you are grossly misinformed. This mine will not increase revenue or help our economy, it will simply line the pockets of a select few, while destroying the livelihood of many others. Our world already has enough problems when it comes to destroying the environment, let's do our part to not add to the destruction. I could go on for hours about all of the specific scientific reasons why this mine is a terrible idea, as I am sure many others are. I would simply like to say, this mine will be a disaster, and should be stopped at all costs. Do not let sweet words and empty promises talk you into making the biggest mistake of your life. If this mine is opened you will not only be destroying a community, and the environment, but you will be destroying a way of life. I strongly urge you to put this issue to rest.

Sincerely,
A Concerned Citizen.

## INDIVIDUAL LETTER 41: AUDREY JACUS

### Response to Comment Ind 40-1

Please see Master Response 1.

**Individual Letter 42**

3/24/2022

Nevada County Planning Department
950 Maidu Avenue, #170
Nevada City, CA 95959

225 South Auburn Street
Grass Valley, Ca
95945

Dear Mr. Matt Kelley,

**Ind 42-1** Rise Gold, is The company that is 15 years old and never made any profits from any of their projects. All they've done is leave Canada in a mess. They dumped millions of pounds of toxic waste into a native river, that's exactly what they're going to do in the grass valley. Real estate professionals say that property value will drop down 5-20%. I believe that they should not reopen the Idaho Maryland mine because the grass valley air quality is already not that good and the mine will make it even worse.

**Ind 42-2** All the escaped dust from the mine continuous rock loading, crushing hauling, and unloading. Chronic Lung disease will double in rates.

**Ind 42-3** Water is one of the most important resources especially in California because of the drought Rise gold plans to pump 3.6 million gallons of water every day for 6 months. After the 6 months, they will pump 1.2 million every day. They also plan to "dewater" the abandoned tunnels which means treating the south fork and wolf creek like storm drains. 75 acres of land will be replaced with giant piles of mine waste that will kill all the wildlife in the area and destroy their habitat.

**Ind 42-4** Our nice peaceful town will turn into chaos. Loud machines 100+ trucks dumping and taking thousands of pounds of mine waste through the town. Hard rock mining is the largest source of toxic waste in the United States.

**Ind 42-5** Some people argue that the mine will open up thousands of jobs for the community. However, this company has proven that they cannot be successful, so these jobs won't last anyway. Others argue that the mine will also restore history. However, history isn't the most important thing when it comes to a thriving town. The US has some awful history that shouldn't be a part of who we are. The Idaho Maryland mine was once open but shut down because of the damage it caused To our town.

**Ind 42-6** Because of the toxicity of the mine, many innocent people could die and this peaceful town could turn into chaos. They dumped millions of pounds of toxic waste into a native river, that's exactly what they're going to do in the grass valley. I believe that the mine will harm many innocent people and don't think that it's right. I love my town and how we do things. I wouldn't

want to ruin it with a mine. We've already gone through this, we don't need to go through it again.

Sincerely,

Austin Fouyer Austin Fouyer

## INDIVIDUAL LETTER 42: AUSTIN FOUYER

**Individual Letter 43**

**From:** Avila Lowrance <paloma@sierraemail.com>
**Sent:** Monday, April 4, 2022 9:25 AM
**To:** Idaho MMEIR
**Subject:** DEIR Idaho Maryland Mine

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

**Ind 43-1** The DEIR does not account for how the proposed gold that is extracted from the mine would be transported to its final destination. Fort Knox? How many trucks would be needed along our roads to get the stuff out of here and get it all the way to Kentucky?

**Ind 43-2** Doesn't it make more sense to leave the gold in the ground? That would leave the way open for Nevada County to continue on its bright path as a rural getaway, a mountain retreat, an arts center, a tourist destination, and a thriving community of active, smart folks who are working to protect and enhance the natural beauty of this area while we continue to move forward, not backward.

**Ind 43-3** In summary, if this terrible project goes forward, the DEIR must address the carbon cost of transporting the refined ore to the final processing center, and also of the finished product (gold ingots) to their ultimate destination, including the cost of storing the ingots for the projected time of storage.

Respectfully submitted,
Avila Lowrance
11741 Alta Vista Avenue
Grass Valley 95945

1

## INDIVIDUAL LETTER 43: AVILA LOWRANCE

### Response to Comment Ind 43-1

As discussed on page 3-28 of the DEIR, off-site haul of gold concentrate will average one truck trip per day, and up to five truck trips per day, using Brunswick Road to State Route (SR) 20/49, over the 80-year term of the use permit. Chapter 4.12, Transportation, provides an analysis of project trip generation and distribution, including trips associated with the off-site haul of gold concentrate. As such, off-site transportation of gold was adequately addressed in the DEIR.

### Response to Comment Ind 43-2

Please see Master Responses 1 and 2.

### Response to Comment Ind 43-3

The comment refers to the cost of storing ingots, which is outside of the scope of CEQA. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration. In addition, please see Response to Comment 43-1 regarding trips associated with the off-site haul of gold concentrate, as well as Chapter 4.3, Air Quality, Greenhouse Gas, and Energy, of the DEIR, which includes an analysis of metric tons of carbon dioxide equivalent ($MTCO_2e$) that would be generated by the proposed project. Project specific trip generation rates were applied to the greenhouse gas (GHG) modeling conducted for the proposed project. Therefore, the carbon cost of transporting goods from the mine has been considered in the DEIR. Please see also Master Response 26.

Dear Nevada County Board of Supervisors,

Please oppose the reopening of the Idaho-Maryland Mine.

As a 42-year resident of Nevada County, I urge you to retain the integrity of our community by opposing the reopening of the Idaho Maryland Mine.

**Ind 44-1**

What is at stake?
Mine and wastewater pollution
Noise pollution from mine operations and vehicles serving it
Increased greenhouse emissions
Increased traffic and safely concerns
Lower home values in the neighborhoods adjacent to the mine

For the sake of our community today and in the future, exercise your wisdom and integrity by opposing the reopening of the mine. Please don't let increased revenue sway you to agree to a plan that will deeply impact and degrade life in Nevada County.

**Individual Letter 46**

DO NOT

**I support re-opening the Idaho-Maryland Mine**

Dist 3

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Ind 46-1**

Dear Matt Kelley,

We are writing to state that we oppose the reopening of the Idaho Marilyn Mine!

**Ind 47-1** In the over 43 years we have lived in Nevada County as citizens who provide safety net resources and services for our veterans and family caregivers who have a loved with Alzheimer's disease or a related dementia this proposal is very out of step with the progress we have made to keep our lovely county the beautiful county in which tourists, family and friends enjoy coming to.

**Ind 47-2** All corporations and businesses who gain profit from the destruction of our environment say, "we have it under control." That is until they DON'T.....and then who suffers.....the consumers. Just like PG&E. When they were held responsible for the Paradise Fire what was the outcome for the stricken residents: Even when they were able to rebuild many, many people could not purchase fire insurance. Shouldn't PG&E pay for their home insurance since they were the one's held responsible for the fire!!

Nobody has Mother Nature under control.....so, please, stop this nonsense and don't fall into the trap of the mine owner's idiot logic.

Thank you,
Bill and Barbara Larsen

Hello Mr Kelley,

**Ind 48-1** Thank you for being a part of this community and helping to support the well-being of our local environment. I'm writing as a resident of Cedar Ridge for 47 years. My father bought the surface to 100' mineral rights access on our land from Mrs. Ghidotti herself in since 1975 and I looked for gold for years (sadly with no success).

Obviously, there are a number of important concerns about the environmental impacts a new mine would bring. I will focus here on water and the stability of the ground. I was fortunate to learn about local gold mining as a girl here and I was always intrigued by the fact that there are well more than 3000 miles of tunnels lattice-worked throughout the two towns and surrounding areas. I knew kids who would go into tunnels at known locations and try to work their way underground (that was not too successful either). I went to school with Footes and other well known mining families. And I heard plenty about mine accidents and the devastations that could occur.

As a result, I've understood that we are in a singular geographic situation here, with miles of tunnels filled with water. In fact, the extent of the tunnels was never fully known, to my knowledge. And Rise Gold has been clear in its investor materials that access to the USGS was denied by the prior mine owners, so no government institution had a record of what the mine owners knew (see attached screen shots from their you tube video – link below).

**Ind 48-2** This arrangement, of water in tunnels underpinning the entire community, stabilizes our ground and provides a water table that protects our trees. Given these truly unique conditions, there is simply no credible way that the DEIR is accurate in forecasting the impacts and effects of the proposed massive dewatering. And properly understand it we must, given the scale of the risk the County would be assuming.

**Ind 48-3** The proposed massive dewatering potentially jeopardizes the entire latticed area. How is the County to be certain of the effects of losing all that water? How are we not to have more and more sinkholes? How are our trees to not dry to tinder, at the same time that we are in the middle of an historic 'mega drought?' The State of California has issued emergency stoppages on a number of projects that have the potential to increase fire risk. Why would Nevada County, in the heart of fire country, entertain an intentional draining of the water table? Set the forecasting on individual wells aside. It's the water table that demands understanding. Who is responsible when a fire rages right along East Bennett into downtown Grass Valley?

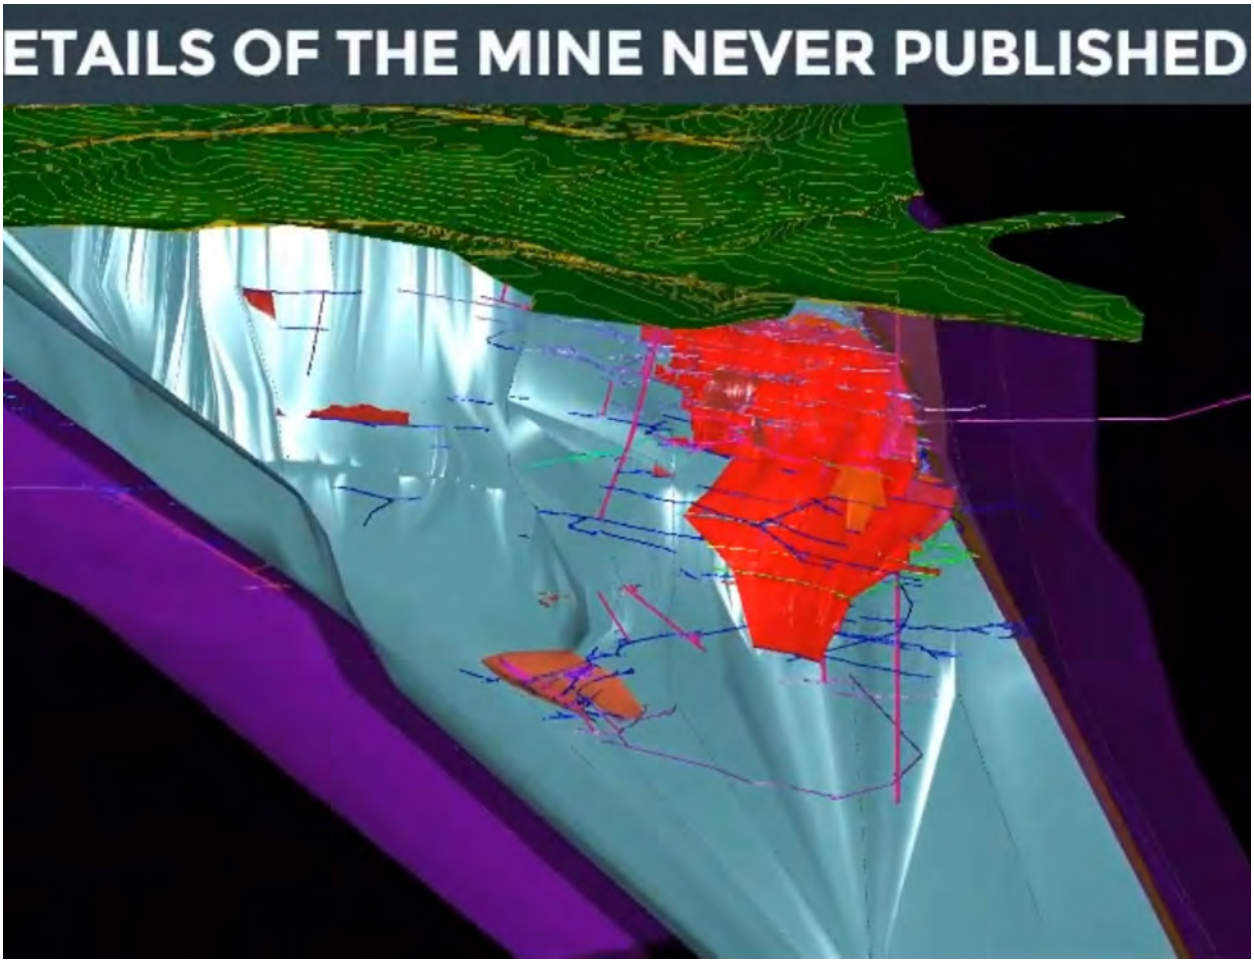
**Ind 48-4** It seems clear that for the Nevada County government to fully understand the scope of potential harm to the environment and community and to therefore limit its legal liabilities, a much more in-depth modeling with the exact details of this specific underground environment must be conducted. Analysis cannot be safely premised on simply the type of rock in the area. This is a mined-out area which the earth has been reclaiming and stabilizing for 80 years. There is so much more that needs to be understood.

1

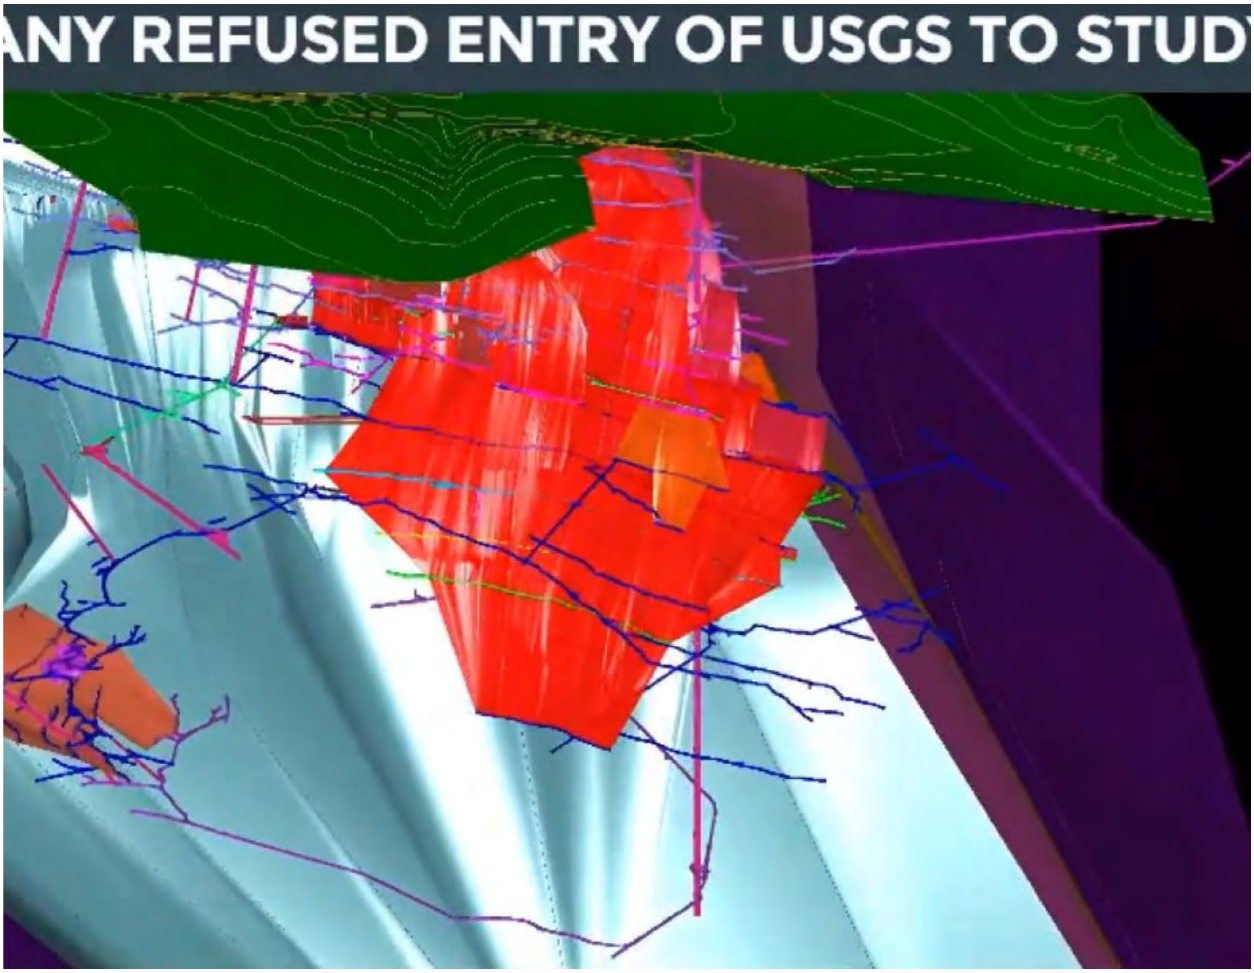
**Ind 48-5**

To prevent a catastrophe that could devastate this community, there must be commensurate investment. Given the unprecedented situation here and the scale of the risk, a detailed model needs to be developed and run through scenarios. I'd like to see corroborating models run as well. This is standard of practice in many research institutions. I know that underwater drone technology is available and there are powerful computer models that can be developed and run. I urge the County to require these models be created and shared transparently with the local residents.

**Ind 48-6**



It is one thing for a child to pan for gold in the old mine irrigation ditch and be intrigued by tunnels. It is another thing entirely for a government entrusted with protecting its people and environment to proceed with a decision which has such monumental implications on inadequate, incomplete, and therefore necessarily incorrect statements such as presented in the existing DEIR.



Thank you again for your efforts toward keeping this community a wonderful place to grow up, do business, recreate, and retire.

Sincerely
Barbara Raymond
PO Box 340

ETAILS OF THE MINE NEVER PUBLISHED

ANY REFUSED ENTRY OF USGS TO STUD

## INDIVIDUAL LETTER 48: BARBARA RAYMOND

### Response to Comment Ind 48-1
This comment is introductory in nature and the commenter discusses her upbringing in the area and familiarity with the mining history and operations of the region. The commenter also states that the full extent of tunnels was never fully known and that no government entity has a record of historic mine tunnels that was known by the mine owners. The Project Applicant has provided maps of the Idaho-Maryland Mine tunnels which are used in the analysis of the DEIR. The commenter is referred to Appendices H.6, K.2, and K.3 of the DEIR.

### Response to Comment Ind 48-2
The commenter is concerned that the dewatering of the mine will have adverse impacts to private groundwater wells, vegetation, and ground stabilization but does not provide specific reasons why the DEIR is inadequate. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, Master Response 29 - Near Surface Workings, and Master Response 33 - Groundwater Dependent Vegetation.

### Response to Comment Ind 48-3
The commenter reiterates many of the same concerns in Comment Ind 448-2 regarding the dewatering of the mine. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, Master Response 29 - Near Surface Workings, and Master Response 33 - Groundwater Dependent Vegetation. The commenter also expresses concern regarding the dewatering in connection with the drought and wildfire risks. The commenter is referred to Master Response 16 – Drought and Climate Change, and Master Response 6 – Wildfire Impacts.

### Response to Comment Ind 48-4
The commenter states that Nevada County need to further analyze the underground mine workings. However, the commenter does not explain how the DEIR's current analysis of the underground mine workings is inadequate. The commenter is referred to Master Response 14 – Adequacy of Groundwater Model, Master Response 29 - Near Surface Workings, and Appendices H.6, K.2, and K.3 of the DEIR.

### Response to Comment Ind 48-5
The commenter reiterates concerns regarding the supposed lack of knowledge of the underground mine workings. The Project Applicant has provided maps of mine tunnels which are used in the analysis of the DEIR. The commenter is also referred to Master Response 14 – Adequacy of Groundwater Model, Master Response 29 – Near Surface Workings, and Appendices H.6, K.2, and K.3 of the DEIR.

### Response to Comment Ind 48-6
The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 48-7
The commenter provides a link to a YouTube video. No response is required.

**Cc:** bdofsupervisors
**Subject:** Lack of Idaho-Maryland Mine Project noise and vibration analysis for the Cedar Ridge area

**CAUTION**: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Mr. Matt Kelley
Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902

via email: Idaho.MMEIR@co.nevada.ca.us

Mr Kelly,

I am strongly opposed to the Idaho-Maryland Mine Project and have significant concerns about the findings and inadequacies of the Draft Environmental Impact Report (DEIR).

I believe the report does not reflect what the actual noise level will be at my and my neighbor's homes. I live in The Cedars. My home is about 2,500 feet from the Brunswick mine property/operations. The report has only one noise receptor between our home and the mine (#30). Before this project goes forward, I ask that multiple noise receptors be used to obtain the actual ambient noise level in The Cedars and the other communities and streets in Cedar Ridge. Because of the lack of receptors, additional noise studies and predictions need to be performed for the Cedar Ridge community North of Highway 174.

**Ind 49-1**

Clearly, the study has ignored the Cedar Ridge area. There were zero Noise and Vibration Measurements performed between the mine and our home (Figure 4.10-3) in the report.

I ask that before any approval be granted for starting up the mine, that additional studies are performed to determine what the noise and vibration will likely be in The Cedars and Cedar Ridge. Excessive sound and vibration will cause serious health issues for us living in Cedar Ridge. Excessive sound and vibration would additionally create a significant loss of wealth for everyone living in the area from the loss of property values.

I want these comments to be seriously considered and acknowledged by Nevada County. If excessive sound and vibration occur from the mine project without additional Noise, Vibration Measurements and Analysis being performed, and appropriate mitigation implemented, this is notice to Nevada County for any and all legal action that anyone may make against the Rise Gold project and/or Nevada County.

Respectively submitted,

1

Barney Dewey

barney@deweys.org
13035 Somerset Drive
Grass Valley, CA 95945

## INDIVIDUAL LETTER 49: BARNEY DEWEY

### Response to Comment Ind 49-1

The commenter requests that noise measurements are taken at additional locations between the Brunswick Industrial Site and the Cedars Ridge neighborhood, located to the southwest, to more accurately determine the ambient noise levels in that area. The commenter also states that DEIR inadequately addressed the Cedar Ridge area. Note that the commenter mistakenly uses the term noise receptor when referring to noise measurement locations. Noise receptors are uses exposed to noise from project implementation, such as a residence or business.

The project Noise and Vibration Study (see DEIR Appendix L) explains the methods used for selecting the sensitive receptors analyzed in the study (shown on DEIR Figure 4.10-2) and for selecting ambient noise and vibration measurement sites (shown on DEIR Figure 4.10-3). As described on page 6 of DEIR Appendix L, rather than take noise measurements at every receptor in the project area, measurement locations were carefully selected to represent multiple similar receptors at the closest location to the project site to represent worst-case scenario noise levels. Noise data collected at measurement location 4 was extrapolated to represent ambient noise conditions at multiple sites located south of the Brunswick Industrial Site, including receptor 30. The DEIR concludes that noise produced from the operations at the Brunswick site would be less than significant after mitigation. (DEIR, p. 4.10-31.)

Mitigation Measure 4.10-2 of the DEIR requires ongoing implementation of a comprehensive noise monitoring program using noise monitors around the Brunswick and Centennial Industrial Sites. The monitoring program will be independently verified by a third-party consultant under direct contract with Nevada County. Within 30 days of installation and operation of mine-related equipment at the Brunswick Industrial Site, the County's third-party noise consultant shall retrieve and evaluate noise monitoring data to evaluate whether mine-related operational noise levels are in compliance with County noise standards at the pre-determined Receptor locations. The results shall be submitted to the Nevada County Planning Department within one week from evaluation of the noise data. If the results indicate that the County noise standards are being exceeded either by individual equipment or processes, or cumulative noise generation of the entire facility, operations shall cease until additional engineering controls can be implemented as needed. Such measures could take the form of noise barriers, installation of sound absorbing materials, use of additional silencers, etc. After implementation of any recommended measures, follow-up noise level data evaluation shall be conducted to demonstrate that the resultant operational noise levels comply with the County noise level standards at nearby sensitive receptors.

Mitigation Measure 4.10-2 also requires quarterly noise monitoring by the County's third-party noise consultant during the first five years of project operation, and once per year thereafter for the life of the project.

April 3, 2022
Mr. Matt Kelley
Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902

Dear Mr. Kelly,
I am writing to express my opposition to the proposed mine. Mining was once the major industry of our area but those days are long gone and good riddance.

**Ind 51-1**

Rise Gold has a well-documented and long history of being irresponsible to their communities. Is it not clear by now that the health of our environment is essential to our quality of life as well as the health of our economy? Rise Gold's plans jeopardize both at a critical time when we are dealing with issues of smoke, fire and drought that are beginning to affect our economy and way from our area.

Why take the risk of the consequences of their business plans for so limited a benefit to our community? Do the responsible thing and protect our community from this haphazard and ill-conceived plan.

Sincerely,
Ben Preston

1

**Individual Letter 52**

**Dist 2**

February 21, 2022
Grass Valley, CA 95945

RECEIVED
MAR 0 3 2022
NEVADA COUNTY
BOARD OF SUPERVISORS

Nevada County Board of Supervisors
Eric Rood Administrative Center
950 Maidu Avenue, Suite 200
Nevada City, CA 95959

**Ind 52-1** Dear Supervisors Susan Hoek, Chair, Heidi Hall, Ed Scofield, Dan Miller, Hardy Bullock:

While I appreciate the large quantity of letters and DEIR comments you are receiving, I think it necessary to envision what this summer is likely to be like. Long periods of choking smoke, unusual heat waves and a severe drought will be a backdrop for your County business at hand. Despite this, Rise Gold will continue do everything in their power to reopen the Idaho-Maryland Mine.

**Ind 52-2** Meanwhile, fire insurance rates are becoming painful and insurance policies are being canceled as fire season extends to almost year-round. Your constituency knows that catastrophic forest fires could come at any time. Our air quality is being labeled as unacceptable more days every year. You may have to deal with restrictions on water use, maybe even rationing. Reopening the Idaho-Maryland Mine would only make these unacceptable conditions worse.

**Ind 52-3** At least Nevada County has had the foresight to adopt the Nevada County Energy Action Plan, developed by the Sierra Business Council with support from PG&E in collaboration with your staff and community members.

**Ind 52-4** We must also help mitigate the local dangers of climate change by reducing our air as well as water pollution. The Nevada County Energy Action Plan calls for reducing annual residential electric use by 12 percent which will help. **Rise Gold's planned electrical use would cancel this goal by annually using 12 percent of our County's total electricity**, equivalent to 5,000 new homes.

**Ind 52-5** Despite Rise Mine's claims, they will have massive carbon emissions caused by diesel-powered heavy equipment used for: increased new diesel truck traffic (up to 100 round trips a day, seven days a week, 16 hours a day), constant construction during the first year and half; ongoing continuous excavating, underground blasting, drilling, rock crushing, loading, hauling, unloading, spreading, and compacting to create engineered fill up to seven stories tall; continuous mine dewatering by pumping, treating and sending millions of gallons of wastewater down Wolf Creek. These emissions would result in significant *increases* of greenhouse emissions rather than *decreases* planned in the county's Energy Action Plan.

**Ind 52-6** Please, let's stop using your time and ours by seriously considering reopening

1

the Idaho-Maryland Mine. Everyone I know is opposed to this project and we will fight Rise Mine's false claims and paid supporters as long as it takes.

Sincerely,

Bernell S. Scott

## INDIVIDUAL LETTER 52: BERNELL SCOTT

### Response to Comment Ind 52-1
Please see Master Response 1.

### Response to Comment Ind 52-2
Please see Master Response 1. In addition, impacts related to wildfire are addressed in Chapter 4.13, Wildfire, of the DEIR, as well as Master Response 6. Furthermore, see Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR for concerns related to air quality, as well as Chapter 4.8, Hydrology and Water Quality, and Chapter 4.11, Public Services and Utilities, regarding water supplies.

### Response to Comment Ind 52-3
The comment expresses a general opinion in support of the Nevada County Action Plan, but does not provide specific examples that would allow for a detailed response.

### Response to Comment Ind 52-4
Please see Master Response 25.

### Response to Comment Ind 52-5
Impacts related to Greenhouse Gas Emissions are presented in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR. As noted under Impact 4.3-7, with the implementation of mitigation, the proposed project's incremental contribution to global GHG emissions and climate change is less than cumulatively considerable.

### Response to Comment Ind 52-6
The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

Dist 3

**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the reopening of the Idaho-Maryland Mine.

I OPPOSE THE MINE

Supervisor Scofield

I am not a person who writes to my elected officials on a regular basis but I feel compelled to do so now. I am 100% against reopening the Idaho Maryland Mine.

How can this even be a consideration when we are going through another drought? To pump water from the mine, lowering the water table, sending that polluted water into Wolfe Creek with arsenic and other contaminates in it is unthinkable. If Rise Grass Valley pollutes our water and air, does the county have in place the ability to stop their actions and make them clean it up or fine them? And how much will this cost in taxes to county residents? Mr. Mossman does not have a good track record. I'm sure you're aware of his mining history in Canada. I don't want my county polluted to put money in the pockets of an out of country business.

Rise Grass Valley lies, touts high paying jobs for locals. Would you want your children or grandchildren working as a miner underground?

**Ind 57-1**

Then there is air and noise pollution. Also huge trucks hauling waste away on our roads that are not in great condition now and this will continue for 80 years.

Our area and tourism are known for its beauty and rural atmosphere not heavy industry. It kind of makes a mockery of our Wild and Scenic Film Festival.

If some county residents were so concerned about opening a Wendy's fast-food restaurant, imagine the negative opinions on reopening a heavy industry mine.

Please, no on reopening this mine. It is a lose, lose situation that will last a generation.

## IDAHO-MARYLAND MINE PROJECT
## DRAFT EIR COMMENT FORM

To document the author of comments received, please provide the following information. Thank you.

Name: BEVERLY STOUT

Address: 312 Horizon Circle GV

Organization (if applicable): —

Please provide us with your written comments on the Idaho-Maryland Mine Draft EIR by **5:00 PM, April 4, 2022**. Comments may be placed in the comment box located in the back of the Board of Supervisors Chambers during the Special Public Meeting of the Nevada County Planning Commission. Written comments may also be submitted (email or hardcopy) to the address below:

**Matt Kelley, Senior Planner**
**Nevada County Planning Department**
**950 Maidu Avenue**
**Nevada City, CA 95959-8617**
**Idaho.MMEIR@co.nevada.ca.us**

RECEIVED
MAR 24 2022
NEVADA COUNTY
PLANNING DEPARTMENT

I CAN'T UNDERSTAND WHY THE SUPERVISORS WOULD EVEN BE CONSIDERING A PROJECT WITH THIS COMPANY THAT HAS SUCH A POOR REPUTATION FOR PRIOR WORKS. THEY WERE UNTRUTHFUL IRRESPONSIBLE AND WALKED AWAY FROM THEIR RESPONSIBILITIES IN CANADA, LEAVING A MESS BEHIND.

THE ADVERTISING THEY HAVE DONE SO FAR ONLY HARDENS MY ANIMOSITY TOWARDS THEM. I WAS A RECIPIENT OF THEIR PHONE SURVEY, WHICH I CONSIDER QUITE BIASED AND DESIGNED TO PROVIDE ONLY POSITIVE ANSWERS. QUESTIONS LIKE IF WE DO THIS AND SO ALL PROBLEMS WILL BE MITIGATED. WHAT ABOUT IF THEY DON'T?

Ind 58-1

WITH COVID I AM OF COURSE CONCERNED ABOUT LOWER AIR QUALITY. AS TO THE WATER REQUIRED TO WORK A MINE, WHY ARE WE EVEN CONSIDERING THIS IN A COMMUNITY ALREADY PLAGUED BY DROUGHT AND FIRE; AND ALREADY RATIONING WATER USE??? NO.

TRAFFIC & ROAD WEAR & TEAR ARE ALSO CONCERNS

## INDIVIDUAL LETTER 58: BEVERLY STOUT

### Response to Comment Ind 58-1

Phone: 530-265-1423 Email: Idaho.MMEIR@co.nevada.ca.us

Dear Sir:

Please accept the following comments on the Draft Environmental Impact Report for the Idaho Maryland Mine.

**Chapter 1.4**

**Ind 59-1** It appears from the draft DEIR that Rise Gold could commence operations without using the Centennial site. It also implies that mining operations could proceed for some years without ever utilizing the Centennial site. Why isn't there a deadline date for the voluntary cleanup of the Centennial site? What assurances does Nevada County have that Rise Gold will clean up the site to the standards set by the Department of Toxic Substance Control?

**Chapter 4.7 Use and Storage of Various Chemicals**

**Ind 59-2**

1. There is no detailed description of the various processes used to recover the gold from the ore mined on the Brunswick site.

**Ind 59-3**

2. There is little mention of what is processed on site versus off-site. Are all processes completed on impermeable surfaces with secondary containment to ensure no contamination of surrounding ground?

**Ind 59-4**

3. A detailed description of the gold recovery processes including all chemicals utilized such Magnafloc10, methyl isobutyl carbinol (MIBC), soda ash, and Aerophine is needed. No material safety data sheets are provided for these materials. There are only references to "low potential for bioaccumulation" and "relatively non-toxic". There is no mention of the volumes of these materials that will be located on-site.

**Ind 59-5**

4. Are there other hazardous or toxic chemicals used in these recovery steps? This report must show a **flow chart** beginning with delivery to the storage areas showing secondary containment of the chemical vessels (55 gallon drums or large tank) and continuing to the separation process and removal of materials from the Brunswick site.

**Ind 59-6**

5. There is no mention of any hazardous wastes that may be generated during the gold recovery process.

**Ind 59-7**

6. Any hazardous materials that become airborne need to be documented and mitigation measures identified.

**Ind 59-8**

7. Wastes generated that are solid in nature need to be identified, characterized and methods used to manage these waste needs to be mentioned.

**Ind 59-9**

8. Liquid wastes generated during the gold recovery process are not identified. Management of these wastes is not discussed.

**Ind 59-10**

**Chapter 4.10 Noise and Vibration.** This chapter addresses the impacts of noise and vibration upon the environment (community) surrounding the Brunswick site but does not mention the impact of noise and vibration on individuals working at the Brunswick site. There is also no mention of occupational health and safety impacts upon the deep mine workers who spend many hours in a cold and wet environment. It is well documented that such workers experience high rates of respiratory disease and skin infections.

General comments on Draft Environmental Impact Report for Rise Gold

**Ind 59-11**

1. Why is treated water from the mine shaft dewatering sent to South Fork of Wolf Creek when there might be other uses of this water? Are there assurances that only water from the mine shafts will be sent to the creek? What is the frequency of testing of this water to be sent to Wolf Creek?

**Ind 59-12**

2. Rise Gold has indicated that there may be local markets for the engineered fill from the mining. There is no mention of the frequency of testing this material to ensure that it meets state standards for use in various commercial applications.

## INDIVIDUAL LETTER 59: BILL LAWRENCE

### Response to Comment Ind 59-1
The commenter states that the DEIR indicates the project could commence without the completion of the cleanup action at the Centennial Industrial Site. The commenter is referred to Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 59-2
The commenter states that the DEIR does not describe the mineral processing to recover the gold. Mineral processing is described on page 3-25 and page 4.8-46 of the DEIR.

### Response to Comment Ind 59-3
All mineral processing proposed by the project is done on-site inside of the enclosed mineral process plant building as described on page 3-25 of the DEIR. Certain thickening and stock tanks are located outside of the building, on paved impermeable surface and with secondary containment where necessary as discussed on page 3-26 and shown in Figure 3-8 of the DEIR.

### Response to Comment Ind 59-4
The commenter states that the DEIR lacks a detailed description of the types and volumes of chemicals required for the project's mineral processing. The details of volumes of reagents located on-site are not required for the analysis of the DEIR and further, engineering level detail is not required in an EIR. (*Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.). As stated on page 4.7-31 of the DEIR, implementation of Mitigation Measure 4.7-1(d) requires that prior to the transport, storage, or use of hazardous materials, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials on-site. The commenter is also referred to Master Response 10 - Explosives, Reagents, and Brunswick Fill.

### Response to Comment Ind 59-5
The commenter states that the DEIR must show a flow chart of the mineral processing by stages. A flow chart of delivery to storage areas and details of storage of mineral processing reagents are not required for the analysis of the DEIR and further, engineering level detail is not required in an EIR. (*Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.). As stated on page 4.7-31 of the DEIR, implementation of Mitigation Measure 4.7-1(d) requires that prior to the transport, storage, or use of hazardous materials, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials on-site. The commenter is also referred to Response to Comment Ind 59-4 regarding mineral processing reagent type and quantities.

### Response to Comment Ind 59-6
The commenter states that the DEIR does not disclose whether mineral processing will produce any hazardous wastes. No hazardous wastes are generated during the gold recovery process. In regard to mine waste (barren rock and sand tailings), the commenter is referred to Master Response 8 - Mine Waste Characterization.

### Response to Comment Ind 59-7
The commenter states that the DEIR must account for any hazardous materials that become airborne. All toxic air contaminants have been evaluated in the Health Risk Assessment and

analysis of the DEIR. The commenter is referred to Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy) and Appendix E.1 of the DEIR.

## Response to Comment Ind 59-8

The commenter states that the DEIR must identify and manage any solid wastes produced by the project. The commenter is referred to Master Response 8 - Mine Waste Characterization.

## Response to Comment Ind 59-9

The commenter states that the DEIR fails to identity liquid wastes produced during mineral processing. As stated on page 3-26 of the DEIR, the process plant is a closed loop system. The commenter is referred to Response to Comment Ind 59-4.

## Response to Comment Ind 59-10

Occupational (worker) health and safety in mines is governed the US Mine Safety and Health Administration (MSHA). The applicant is required by federal law to obtain a MSHA mine ID number and to comply with MSHA safety regulations. The DEIR appropriately evaluates the environmental impact of the project on the surrounding environment and health impacts to the surrounding public and is not required to perform an analysis of on-site workers and the adequacy of MSHA regulations. Compliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards (CCR Title 14 Section 15126.4).

## Response to Comment Ind 59-11

The commenter asks if the treated water to be discharged to South Fork Wolf Creek could have a more beneficial use and how frequent the water testing will occur. As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water available downstream if it desired to.

Treated mine water would be discharged to South Fork Wolf Creek and site run-off would also be discharged to South Fork Wolf Creek. The frequency of water testing would be determined in the Notice of Applicability. The commenter is referred to Master Response 35 - Discharge to South Fork Wolf Creek.

## Response to Comment Ind 59-12

Please see Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets.

To whom it may concern,

"In order to arrive at what you do not know You must go by a way which is the way of ignorance. T. S. ELIOT, "EAST COKER"

OUR PURPOSE HERE is to worry about the predominance of the supposition, in a time of great technological power, that humans either know enough already, or can learn enough soon enough, to foresee and forestall any bad consequences of their use of that power. This supposition is typified by Richard Dawkins's assertion, in an open letter to the Prince of Wales, that "our brains...are big enough to see into the future and plot long-term consequences."

**Ind 60-1**

When we consider how often and how recently our most advanced experts have been wrong about the future, and how often the future has shown up sooner than expected with bad news about our past, Mr. Dawkins's assessment of our ability to know is revealed as a superstition of the most primitive sort. We recognize it also as our old friend hubris, ungodly ignorance disguised as godly arrogance. Ignorance plus arrogance plus greed sponsors "better living with chemistry," and produces the ozone hole and the dead zone in the Gulf of Mexico. A modern science (chemistry or nuclear physics or molecular biology) "applied" by ignorant arrogance resembles much too closely an automobile being driven bya sixyear-old or a loaded pistol in the hands of a monkey. Arrogant ignorance promotes a global economy while ignoring the global exchamge of pests and diseases that most inevitably accompany it. Arrogant ignorance makes war without a thought of peace.

We identify arrogant ignorance by its willingness to work on too big a scale, and thus to put too much at risk. It fails to foresee bad consequences not only because some of the consequences of all acts are inherently unforeseeable, but also because the arrogantly ignorant often are blinded by money invested; they cannot afford to foresee bad cconsequences."

-Wendell Berry

This (report) is riddled with errors, omissions, and legal flaws.

**Ind 60-2**

Recently CEA Foundation and its MineWatch coalition members on Wednesday delivered comments to the Nevada County Planning Commission on the draft environmental impact report for the proposed reopening of the Idaho-Maryland Mine, a news release states.

Experts, volunteers, and legal minds reviewed the report's 1,000-plus pages to provide a review of the technical studies, impact assessments and proposed mitigations.

1

"Mining is our past, not our future," said retired capital planner Paul Schwartz in the release. "Today's economic engine is recreation-based, but we're also facing historic drought and fire risk. Protecting precious resources like water, air quality, and our peaceful rural setting is job number one."

Rise Gold Corp., was responsible for delivering the vast majority of the technical studies used by the county's hired consultant to determine the impacts.

Dewatering the mine is a key concern

"Groundwater modeling in fractured rock systems is considered unreliable even when everything is done right,"

Rise Gold's model has fundamental flaws in the initial start point of the model and baseline data assumptions — all of which throw off the entire analysis. The result is a report that concludes that groundwater levels would drop a maximum of 10 feet, and no more than 30 local wells would be a risk.

CEA's experts, however, say there is an extremely high degree of uncertainty involved. (Siskon mine being an example)

OTHER CONCERNS

Dealing with mine waste is another major concern.

**Ind 60-3**

"Looking at the rock core sample analysis, it is abundantly clear that asbestos will be a gnarly problem that will require comprehensive management. Mining operations don't get to just haul and dump rock like the days of old," said Silberstein. "Air and water quality regulations will significantly restrict throughput and the costs will be exorbitant."

**Ind 60-4**

CEA's experts found the plans to mitigate fugitive dust to be inadequate. They also found no credible evidence that the mine tailings could be effectively sold to third parties for fill or off-site construction.

**Ind 60-5**

Climate change has increased forest fires and parched lands, resulting in the newest federal and state greenhouse gas reduction goals. The report used a threshold of 10,000 metric tons per year for greenhouse gas emissions, but failed to include some elements that put the project over that limit and make it a significant impact.

That limit defined in the report is likely to be found irrelevant, CEA claims. Recent changes mean the county's threshold must be established at "net zero."

**Ind 60-6**

CEA also said gaps in the report include the clean up of the toxic, pre-superfund Centennial site that would be used to dump mine waste and is not included in the report, but is required by the California Environmental Quality Act; missing construction time estimates throwing off the entire analysis of noise, traffic, and air; and the incorrect assessment of nighttime noise, and underestimation of the noise of dumping mine waste near established residential neighborhoods.

2

**Ind 60-7**

Additionally, air traffic hazards and aesthetic impacts need to be studied further due to the likelihood of a massive fog plume that could be created by warm, saturated air ventilation; blasting plans don't follow U.S. mining guidelines that restrict blasting during evening hours; the plan doesn't demonstrate that the impact on biological and aquatic resources would be less than significant; and meteorological data used to assess the health risk of airborne pollutants doesn't fit Grass Valley's profile or accurately reflect local conditions.

**Ind 60-8**

Given these many concerns and history regarding Rise Gold Co, I Bishop (Brian) Randall request BOS deny their permit to reopen the Idaho Maryland Mine.

Yrz,

B. Randall

## INDIVIDUAL LETTER 60: BISHOP RANDALL

### Response to Comment Ind 60-1
Please see Master Response 1.

### Response to Comment Ind 60-2
Section 15151 of the CEQA Guidelines (and related judicial opinions) directs that in situations where there is a disagreement between experts, the EIR should summarize the main points of disagreement for consideration by the Board in reaching its decision. Disagreements between experts do not preclude the process from moving forward, nor do they preclude the Board from considering the evidence and making its decision(s). Please see Master Response 14 regarding the adequacy of the groundwater model.

### Response to Comment Ind 60-3
Please see Master Response 8 and 22.

### Response to Comment Ind 60-4
The comment provides general comments that lack the specificity to formulate a specific response to the claims of inadequacy. Fugitive dust was addressed in Chapter 4.3 of the DEIR with substantial evidence to support the conclusions included in Appendix E.1 of the DEIR. See also Master Response 3 regarding changes in circumstances under which the permit is granted.

### Response to Comment Ind 60-5
Please see Master Response 27.

### Response to Comment Ind 60-6
Please see Master Response 4.

### Response to Comment Ind 60-7
The comment does not provide substantial evidence to support that significant additional fog formation as compared to existing conditions would be a reasonably foreseeable outcome from operation of the proposed project. Even if fog formed from the project, pilots and air traffic controllers are trained to safely operate during all natural weather patterns, such as fog. Therefore, the phenomenon of fog is not considered an “air traffic hazard” as claimed by the commenter. The DEIR does however address potential impacts related to the Nevada County Air Park being within one mile of the Brunswick Industrial Site. As noted in the DEIR, the proposed project would be required to be reviewed by the Airport Land Use Commission. In addition, fog is not considered an aesthetic impact pursuant to the standards of significance used in the DEIR by the County (please refer to page 4.1-11 of the DEIR).

Please see Master Response 1. Potential impacts from proposed blasting (particularly noise and vibration) are addressed throughout the DEIR, and noise and vibration from blasting is addressed in Chapter 4.10. Impacts related to biological resources, including aquatic features, is addressed in Chapter 4.4. See also Master Response 17.

### Response to Comment Ind 60-8
Please see Master Responses 1 and 3.

Dear Supervisors:
I understand there is not an official way presently, to oppose Rise Gold's intention to open the Idaho Maryland mine again.
I have done a lot of research regarding this matter and have come to the overwhelming conclusion that it is a very bad idea. I could go on and on about the reasons and I am sure you know what they are.
I just want to inform you that we do not want the mine reopened. The possible environmental impact is just too great.

**Ind 61-1**

Thank you and have a great day. A nice quiet, peaceful day filled with clean air and water and plenty of electricity for all. Go mingle with the locals, they are great people, who really appreciate what we have here in Nevada County.

**Individual Letter 62**

March10, 2022

Mr. Matt Kelly, Sr Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902
Email: idaho.MMEIR@co.nevada.ca.us

RECEIVED
MAR 17 2022
NEVADA COUNTY
PLANNING DEPARTMENT

Dear Mr. Kelly:

The co-signers of this letter belong to a group of people in Nevada County called the RRRs. We are constituents of County Districts 2, 3, and 4, and our mission includes expression of our collective position on issues involving the county. We value our quality of life here and strive to educate and/or influence our neighbors to support these chosen issues.

We write as a collective at this time to strongly oppose reopening the Idaho-Maryland Mine and request that the comments expressed here be included in the decision-making on the draft EIR on the proposed mine.

**Ind 62-1**

We are requesting a 120-day period for comments. A few of us are former federal government employees who have had extensive experience in the public comment process under the National Environmental Policy Act. The proposed reopening of the Idaho Maryland mine is a matter of significant impact. The controversy, economic considerations, water and air quality threats, noise pollution, increase in heavy trucking traffic, etc., are already documented in many comments, news articles and protest demonstrations. These are major impacts which deserve sufficient time for study, research, and consideration by an educated public. Further, because there is no search tool on the website for the draft EIR, one needs to read the full 1,070 page document before concluding whether specific factors are addressed. More time is needed to read.

**Ind 62-2**

Nevada County's characteristics and demographics have changed since gold mining was halted. The county is now considered one of the most beautiful in the state, treasured for its natural beauty, peaceful lifestyle, and recreational assets. Availability and quality of water is vital and the protection of these resources is one of the most important considerations for us. No further proof of this is needed than the Christmas, 2021, storm and the devastation of drought-stricken trees. It has single-handedly changed the face of the beautiful forested hills of Alta Sierra and the Colfax corridor.

**Ind 62-3**

To add to our well-documented water problems by allowing a mine to extract even more water would be unconscionable. To use our creeks as flumes for mine waste is unconscionable, too. Hauling away the tons of mine tailings will require 100 trucks a day. A truck every 10 minutes, will be traveling through the heart of greater Grass Valley, impacting the quality of the highways and the community with noise. To allow this to happen is unconscionable. Our quiet foothills communities will be assaulted day and night with loud machinery operating all the time. The loud din of the mine operation will be constantly in our ears.

**Ind 62-4**

In fact, the EIR does not even factor in the consequences we will face from climate change. This, too, is unconscionable. We support the draft EIR public comment from the California Native Plant Society which understands, too well, the climate change consequences upon our environment. Habitat Management Plans must be developed.

**Ind 62-5**

We urge you to reject the draft EIR if only for the lack of consideration of the potential for a disaster. We find the draft EIR - chapter 4, section 11, specifically troubling. It finds the mine

to be a less than significant impact on the public services and utilities in the county. It does not address what public services will have to support the mine. Injuries, collapses, and ignitions, among other factors need to be anticipated. Again, the Christmas storm is a wake up call to the entire county about what should be planned for in the event of an emergency. What happens when a major mine emergency requires multi-day support of public services?

**Ind 62-6**

The draft EIR does not adequately take into consideration the negative impacts of Rise Gold's past poor behavior, failed business, bankruptcies, and financial problems.

The County should not want to partner with such speculative performance. It needs to factor in how such a partnership will affect the Board of Supervisors solid list of identified priorities for fiscal stability, emergency preparedness, economic development, broadband, housing, homelessness, and recreation. The County needs to encourage reliable partners to support living wages for residents. We suggest the mine proposal of Rise Gold will pay living wages to the professional workers it will seek from outside the county. The jobs available to residents seem limited to laborers who may not see living wages allowing them to buy homes and permanence in the county.

The company claims the project will bring economic prosperity to western Nevada County. We call for the analysis of the impacts of a project that, if past is prologue, threatens to turn our area into an abandoned toxic waste dump. We believe it is deceptive to promise jobs and tax revenues that could result in negative impacts by ***reducing*** tourism, due to pollution of our water and air, and ***declining*** property values and tax revenues.

Mining is a dirty business. We find the draft EIR insufficient and strongly urge you to disapprove this project in its entirety. The very destruction of the quality of our County, our properties, our safety, and our peaceful lifestyles is at stake.

Sincerely,

BJ Griffin

## INDIVIDUAL LETTER 62: BJ GRIFFIN, MARGARET BURKS, HOLLY BUNDOCK, PAT SHARP, AND GAYLE CROSSLEY

### Response to Comment Ind 62-1
Please see Master Response 1. With regard to the public comment period for the DEIR, the comment period lasted for 91 days, starting on January 4, 2022 and ending on April 4, 2022.

### Response to Comment Ind 62-2
Please see Master Response 1.

### Response to Comment Ind 62-3
Please see Response to Comment 1, 8, and 13.

### Response to Comment Ind 62-4
Impacts related to climate change are discussed in Chapter 4.3, Air Quality Greenhouse Gas Emissions, and Energy, of the DEIR. In addition, as discussed in Chapter 4.4, Biological Resources, of the DEIR, a Habitat Management Plan was prepared for both the Centennial and Brunswick sites. In addition, Mitigation Measures 4.4-1(b) and 4.4-2(c) would require the preparation of additional Habitat Management Plans for any additional special-status plant and wildlife species identified during pre-construction surveys.

### Response to Comment Ind 62-5
As discussed within Chapter 4.11, Public Services, of the DEIR, the chapter identifies potential new demands resulting from the proposed project on various public services and utility systems, including but not limited to fire protection, law enforcement, schools, parks and recreation, water supply, wastewater systems, solid waste disposal, and electrical utilities. As such, public services needed to support the mine were adequately addressed in the DEIR. In addition, Impact 4.7-4 analyzes whether the proposed project would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, and concluded that the proposed project would have a less-than-significant impact.

### Response to Comment Ind 62-6
Please see Master Responses 1, 2, 3, and 8.

The jobs available to residents seem limited to laborers who may not see living wages allowing them to buy homes and permanence in the county.

The company claims the project will bring economic prosperity to western Nevada County. We call for the analysis of the impacts of a project that, if past is prologue, threatens to turn our area into an abandoned toxic waste dump. We believe it is deceptive to promise jobs and tax revenues that could result in negative impacts by ***reducing*** tourism, due to pollution of our water and air, and ***declining*** property values and tax revenues.

Mining is a dirty business. We find the draft EIR insufficient and strongly urge you to disapprove this project in its entirety. The very destruction of the quality of our County, our properties, our safety, and our peaceful lifestyles is at stake.

Sincerely,

## INDIVIDUAL LETTER 63: BJ GRIFFIN, MARGARET BURKS, HOLLY BUNDOCK, PAT SHARP, AND GAYLE CROSSLEY

### Response to Comment Ind 63-1
Please see Master Response 1. With regard to the public comment period for the DEIR, the comment period lasted for 91 days, starting on January 4, 2022 and ending on April 4, 2022.

### Response to Comment Ind 63-2
Please see Master Response 1.

### Response to Comment Ind 63-3
Please see Response to Comment 1, 8, and 13.

### Response to Comment Ind 63-4
Impacts related to climate change are discussed in Chapter 4.3, Air Quality Greenhouse Gas Emissions, and Energy, of the DEIR. In addition, as discussed in Chapter 4.4, Biological Resources, of the DEIR, a Habitat Management Plan was prepared for both the Centennial and Brunswick sites. In addition, Mitigation Measures 4.4-1(b) and 4.4-2(c) would require the preparation of additional Habitat Management Plans for any additional special-status plant and wildlife species identified during pre-construction surveys.

### Response to Comment Ind 63-5
As discussed within Chapter 4.11, Public Services, of the DEIR, the chapter identifies potential new demands resulting from the proposed project on various public services and utility systems, including but not limited to fire protection, law enforcement, schools, parks and recreation, water supply, wastewater systems, solid waste disposal, and electrical utilities. As such, public services needed to support the mine were adequately addressed in the DEIR. In addition, Impact 4.7-4 analyzes whether the proposed project would impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, and concluded that the proposed project would have a less-than-significant impact.

### Response to Comment Ind 63-6
Please see Master Responses 1, 2, 3, and 8.

**Individual Letter 64**

March 31, 2022

**Ind 64-1**

We wish to state that the Idaho-Maryland Mine project should not be approved.

The pumping of water from the mine has to many risks. The increased traffic from trucks would be horrible for people now living in the area. Plus there is a large housing project starting that is very close to the mine. People will not want to live that close to the project.

Mining was our pass and does not need to be our future.

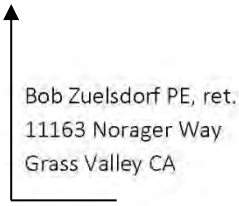
Nevada County Board of Supervisors: 2-27-2022



Once again a foreign company is attempting to open the Idaho Maryland Mine, the 3rd time I have seen this "once every decade" fiasco occur. Once again it is being portrayed as *beneficial to our community.* Another attempt to translate the now faded glory of the 1800's and early 1900's into today's very different world, it merely sucks up time and money from the county and local residents, rather than living up to the fables Rise Gold portrays. It is uncertain if they actually would resurrect the mine, or are simply hyping up the prospect to gather in money from stockholders to feather their nest – and bank accounts – before fading into the woodwork with the funds, as has happened before.

**Ind 65-1**

It is the wrong business at the wrong time and these new "mine owners" are once again putting their own benefits ahead of the needs and desires of this community. Yes, one can slant the numbers to show widespread support for another environmental disaster such as they have caused in in Canada, and are still in defensive litigation about for unmitigated environmental damage. A heavy trucking, noisy, air fouling industry is far from being in the best interests of the Grass Valley area. And if there is such widespread support as they claim, why is The Union filled with letters from those in opposition with most of the meager support coming from those with vested interests in the mine?

What the area does need is more of the High Tech industries such as were exemplified by Grass Valley Group and others, with that legacy now being carried on by the likes of Telestream and AJA Video and being supported by Training Programs such as those at Nevada County Media. Greater emphasis on the clean, well paying jobs they provide would be far more beneficial to the residents of Grass Valley, Nevada City and the rest of Nevada County.

RECEIVED

MAR 0 3 2022

NEVADA COUNTY
BOARD OF SUPERVISORS

Nevada County Planning Commission
950 Maidu Ave, Suite 170
Nevada City, CA 95959

February 28, 2022

Dear Commissioners Danny Milman, Laura Duncan, Robert Ingram, Mike Mastrodonato, and William Greeno

**Ind 66-1** I, the undersigned, am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I understand that you will be reviewing the Draft Environmental Impact Report and advising Nevada County's Board of Supervisors before they vote on the matter. I have read the Rise Gold Mine postcards they sent recently. The information is misleading and manipulative. They fail to adequately mitigate many significant negative impacts of this large industrial project at the detriment of our community.

**Ind 66-2** Gold mining is the world's worst business. It's capital-intensive. It's labor-intensive. Gold miners are ultra-sensitive to movements in the price of gold. When gold moves higher a gold mining company can get capital. When it moves lower, and the investors had enough with the industry they leave and find another opportunity. The 2013-2019 downturn in gold prices was the final straw for many investors. And companies like Rise Gold had little ability to raise money to run the business. Rise Gold is a bit player in the industry. They won't be around when gold plunges.

**Ind 66-3** They won't be around to clean up the toxic waste. They will go bankrupt and leave California and go back to Canada where they are well protected.

I have been a Nevada County resident since 2005 and see that Rise Gold wants to risk our environment and the people who live here for their profit. I am confident that you will value my input and comments and the comments from thousands of other residents. I hope all of you will be on the right side of history and protect our community from fraudsters like Rise Gold Mine.

**Ind 66-4**

Thank you,
Bonnie Lynn Murphy

Idaho.MMEIR@co.nevada.ca.us

Dear and Board of Supervisors and County Planners,

I understand you're still considering the Rise Gold proposal to reopen the Idaho-Maryland Mine. Are you kidding?

No. No. No. No. No.

**Ind 67-1** Let me start by reminding you that the individuals attempting to push this through were convicted by a Canadian court of environmental crimes, and despite their appeals on legal technicalities, this is a good indication of how they will probably do business here. Promise what we want to hear, then do whatever they please, and when it comes time to reconcile… they will skip town, like they did in Canada in 2015. We do not want to hear "I told you so" in 10 years from the Canadians. As far as I'm concerned, this alone should be reason to reject their proposal.

But wait, there are plenty more reasons to say "no".

Granted, Grass Valley has a long and colorful history as a mining town, and if this were the 19th century or even if the mine were a bit farther out of town, I might personally support a reputable, well-managed mining operation resuming gold production. BUT…

**Ind 67-2** In addition to this not being a reputable organization, due to the CEO's previous track record, downtown Grass Valley and Nevada City now rely on 21st century industries like tourism and technology to support

1

the local economy. These industries are NOT served by this mine proposal, and in fact may be substantially harmed by this project.

And there is little indication that this project will bring substantial economic benefit to the area. In the 1850's, gold mining was an entrepreneurial industry, and many people created and built businesses around the mining industry and some created lasting wealth for themselves and their families. Here, the only opportunity created for locals are in relatively low-wage labor and trucking positions, and the bulk of the money generated will immediately leave the area. This is NOT a win for the local labor force.

Saving best for last: for God's sake, think about the water!

The water situation in California is critical, due to climate change and increased population. Again, not the 1850's here.

**Ind 67-3** An underground mine will impact underground water, and you genuinely do not know how bad it will be until you do it. No Environmental Impact Report can predict this accurately, and once it happens it cannot be undone. Just ask the people of Banks Island, Canada.

Not only will it impact water below the water table, but the operation will need a LOT of water above ground for it's operations, and presumably will get that water from our NID water system? Sorry folks, but that is not as ample as it has been in years past.

**Ind 67-4** Other resources that will be stretched thin include our electric power grid, our roads which will take a heavy beating from heavy trucks, our air, which will absorb substantial pollution and noise, and our spirits, which will be pressed into hard service reconciling our wish for a clean, beautiful city with the realities of a large-scale industrial mining operation so near our downtown.

As our elected representatives, you need to hear and represent our concerns, not those of carpet-bagging industrialists who will not even be here to sue when the eventual problems arise. Note also that since Rise Gold is an "exploration company", they are neither appropriately capitalized to execute the submitted plan, nor intending to follow it through over the 80 years involved. THEY WILL SELL US OUT BEFORE THEY EVEN START, taking the money and leaving us with the mess.

**Ind 67-5** 80 years is a long time. Do the right thing, and reject the Rise Gold proposal.

Faithfully Yours,

Brandon Butrick

**Ind 69-1**

The Idaho Maryland mine is not in our interest as a community to have. It will poison our ground, our watershed, damage ecosystems, pollute and disturb the peace. The CEO of this company (Benjamin Mossman) is a hack. Even if this is to be green-lit, he will likely not even succeed in his goal. He's failed numerous times in the past, driving past projects into the ground spectacularly and has exemplified the selfishness and vanity of those who wish to exploit resources at the expense of all who share it freely. The average person of Nevada city, and Nevada county does not desire this and no person in their right mind should. Please, hear me and the many others who are pleading. This is an unnecessary dig.

Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902
(530) 265-1423

Dear Mr. Kelly:

My name is Brian Swagerty, and I live in the Peardale area of Grass Valley. I have lived here for over four years, after raising our family in Shasta, California, an old mining community just west of Redding. For over twelve years, I worked for the Shasta County Office of Education and was the director of Whiskeytown Environmental School in the Whiskeytown Recreation Area, just west of Redding. We taught sixth and fifth grade students about the environment and how they fit into our ecosystem. The Whiskeytown area is full of old gold mines and areas where they processed the ore. We had plenty of examples of the damage gold mining does to the environment.

**Ind 70-1** My wife and I moved to Grass Valley to live in the peaceful foothills of the Sierras. We love the balance of recreation, a slow-paced lifestyle, and opportunities for small businesses to survive. If the Idaho-Maryland Mine were to reopen under the conditions presented in the draft EIR, the character, lifestyle, and quality of life would be negatively affected. I don't agree that we should degrade our quality of life in order to enrich some Canadian investors.

My specific concerns gleaned from reading the draft EIR are in the areas of:

- Multiple water issues
- Increased truck traffic
- Air quality
- Lack of housing for new hires
- Misrepresentation in DEIR of economic benefits
- A general degradation in our quality of life for what?

Water Issues

**Ind 70-2** When I worked for the Shasta County Office of Education, I was in charge of building a camp facility in the Manton, California area. We built a camp facility on property that was donated by Leslie and Marice Latieze. They were one of a very few properties that did not sell their water rights to PG&E. There was a time when PG&E bought most of the water rights in the area for their hydroelectric projects. Within a ten year period, the area was drained of its water and was transformed from a green oasis to a brown dry scrubland. I fear that the same fate could befall the Grass Valley area. The DEIR states that water will be pumped from the mine at a rate of 3.6 million gallons a day for six months and then 1.2 million gallons of water a day for 80 years. That massive amount of water being drained from the area on an on-going basis will have a negative impact to the environment.

**Ind 70-3** Besides the massive loss of water from the mine area, Wolf Creek is expected to accept all of this water. The DEIR does not adequately address this issue. What will the increased flows do to the hydrology of the creek? How will the water temperature of the mine water affect the down flow streams? How will the increased flows affect the existing wildlife?

**Ind 70-4** Increased Truck Traffic

A major concern of mine is the impact the increased truck traffic will cause. The DEIR states that there will be 50 round trip (100 trips), seven days a week, 16 hours a day of trucks hauling rock from the mine to the engineered mountain they will build. My wife and I travel Brunswick Road on a regular basis to access the Brunswick Basin from our home near Peardale. There is already too much traffic coming and going from You Bet Road onto Highway 174. Facing the constant truck brigade along Brunswick Road sounds awful. Just another negative effect of the mine. Besides the increased traffic and congestion and air pollution, what is the increased traffic do the quality of our roads? Is the county ready to increase their road maintenance budget? Are we as a community, willing to pay more taxes to pay to keep our roads in repair? Are we prepared to face increased road repairs and delays? Just another degradation to our quality of life.

Air Quality

**Ind 70-5**

The death rate for chronic lung disease in Nevada County is twice the state average. The American Lung Association gave Nevada County an "F" for air quality. We cannot afford to add to the already poor air in our area. I thought I had moved into an area of clean air, surrounded by forests and wildlife. After experiencing several wildfire events and breathed the smoke they cause, I downloaded an app that shows the air quality on a daily basis. I noticed that Grass Valley often had worse air than Sacramento. I looked further into this and found that there is a natural wind tunnel that acts as an exhaust for Sacramento and the Valley's poor air that travels through our area on its way through the Sierras. I feel we cannot add to this poor air quality with the increased diesel fumes from the rock trucks and the dust from the mining and rock processing operations. If the mine operators truly wanted to keep the mine impacts to a minimum, they should use electric vehicles to move the rock. It would at least reduce their negative impact a little.

Housing Impacts by New Hires

**Ind 70-6**

Something that isn't adequately addressed in the DEIR is the impact the opening of the mine will have on local housing. We currently have a severe housing shortage in Nevada County. It is getting harder and harder to make a living in our area when we have to pay such high costs for housing, if you can find it. The dream of home ownership for a young couple in our area is a nightmare, and the rental market isn't much better. What could easily happen to our community is that the jobs are filled with people who fly in to work for a two week period, and then fly out. The workers aren't tied to the community, they are just here while they are working. That happened recently when PG&E contracted with a Texas company to inspect and repair their electric lines. The trucks were parked at the Brunswick area of the Idaho-Maryland Mine, and the workers were housed in temporary trailers while they were here. This is a common practice in remote areas of Australia and other parts of the world. They are called FIFO workers. Fly In Fly Out. I don't want our area to morph into such a community. Let's not add to our lack of housing in our area.

False Economic Benefits

**Ind 70-7**

Rise Gold asserts that they will create many jobs averaging $90,000 a year. This is extremely misleading. How many people live in our area that have mining expertise? Most of the high-paying jobs will require engineering degrees with mining experience. In other words, the high-paying jobs will be filled by people who do not currently live here. Most of the jobs for locals would be truck drivers, equipment operators, and general workers in the mines. In other words, there may be some low-paying jobs available for our local work force. The sight uptick in area spending won't offset the lower land values the opening of the mine will create. It won't offset the loss of spending by people who would normally come to our area for recreation. No one in our area is going to get rich on gold because of Rise Gold Corporation, even if they invest in their stocks.

Quality of Life

**Ind 70-8**

Even if the skewed assertions made in the DEIR were true, our quality of life would still be degraded. Just because the levels of pollution are under the legal limits doesn't mean that it won't damage our quality of life. The mine will degrade our water quality and quantity. It will increase our traffic on our roads. It will make our air quality even worse than it already is. It will impact our lack of housing. And for what? Why do we think this is a good idea? Even if Rise Gold Corporation can turn a profit, it will go to Canadian stockholders, not our community. What few tax receipts this project could generate won't pay for the negative impacts it would also generate and we would be left holding the bag.

For the reasons I state above, I feel this project should be rejected. The draft EIR was poorly researched or documented. It made poor assumptions and built conclusions on them. There are much better uses for that land which was not addressed as well. Let's not degrade our community to benefit a corporation with a poor track record of keeping their promises.

**Ind 70-9**

Thank you for considering my thoughts on this matter.

Sincerely yours,

Brian Swagerty
Nevada County Resident, District 1

2

## INDIVIDUAL LETTER 70: BRIAN SWAGERTY

### Response to Comment Ind 70-1

This comment is introductory in nature and lists a number of concerns associated with the project such as hydrology, traffic, and housing. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues. Responses to specific comments are provided below.

### Response to Comment Ind 70-2

The commenter states that that project's dewatering of the mine will have a negative impact to the environment but does not state how the DEIR is inadequate. The impact to groundwater from mine dewatering is analyzed in Chapter 4.8 (Hydrology and Water Quality) of the DEIR.

### Response to Comment Ind 70-3

The commenter states that the DEIR does not adequately address water discharge to South Fork Wolf Creek due to increased flows, water temperature, and the impact of flows to wildlife but does not state how the DEIR is inadequate. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR and Master Response 35 - Discharge to South Fork Wolf Creek, Master Response 36 - Flows in South Fork Wolf Creek, and Master Response 32 - Temperature of Mine Water Discharge.

### Response to Comment Ind 70-4

The commenter is concerned about truck traffic on Brunswick Road due to congestion, air pollution, and road maintenance cost but does not state how the DEIR is inadequate. Traffic impacts are analyzed in Chapter 4.12 (Transportation) of the DEIR and air quality impacts are analyzed in Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy) of the DEIR. Mitigation Measure 4.12-6(b) requires that prior to commencement of engineered fill hauling, the Project Applicant shall enter into separate road maintenance agreements with Nevada County and the City of Grass Valley to provide the project's fair share of funding for maintenance of roadways commensurate with the project's impact to pavement conditions on both Nevada County and Grass Valley roadways, including Brunswick Road between E. Bennett Road and SR 49, and E. Bennett Road between the Project Driveway and Brunswick Road. (DEIR, p. 4.12-91.)

### Response to Comment Ind 70-5

The commenter is concerned about the project's impacts to air quality but does not state how the DEIR is inadequate. Diesel fumes from hauling are evaluated in the Health Risk Assessment that was prepared for the proposed project. While the effect of haul truck diesel emissions, in combination with all other project TAC sources, could result in a significant adverse health impact, Mitigation Measure 4.3-2 of the DEIR would reduce this potential impact to a less than significant level.

It is also noted that Mitigation Measure 4.3-2 of the DEIR requires the submission of an Asbestos Dust Mitigation Plan (ADMP) to Northern Sierra Air Quality Management District (NSAQMD) for review and approval. The ADMP has minimum requirements as described in the mitigation measure. Additional measures, such as air monitoring if required by the NSAQMD, would be detailed in the ADMP.

The commenter is referred to Master Response 18 - Air Quality Thresholds.

## Response to Comment Ind 70-6

The commenter is concerned about the project's impact to local housing from project employees moving to the community but does not state how the DEIR is inadequate. Housing is analyzed in Chapter 4.9 (Land Use and Population and Housing) of the DEIR. As stated on page 4.9-27 of the DEIR, the project would provide employment opportunities that would result in indirect population growth. However, population growth resulting from the proposed project would not exceed the current housing stock in the area. Therefore, the project would not induce substantial unplanned population growth, and this impact would be less-than-significant.

## Response to Comment Ind 70-7

The commenter states that the project's economic benefits are misleading. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master response 2 - Social and Economic Impacts.

## Response to Comment Ind 70-8

The commenter states that even if the DEIR is correct in its estimation of the project's impacts, quality of life will still suffer. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 70-9

The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

*Hello County Supervisors,*
*I live in Nevada City CA, district 1. Have lived here since 1989.*

*I am adamantly opposed to allowing the mine to re-open for the following reasons.*

**Ind 71-1**

*1) Rise Gold CEO Ben Mossman has a horrible track record. His company, Banks Island Gold Ltd., owned the Yellow Giant Mine in British Columbia, Canada. They had multiple polluting spills at the site. They ignored shutdown orders. In January 2016, Banks Island declared bankruptcy and walked away — leaving Canadians with only a $420,000 reclamation bond to pay for a cleanup estimated to cost $1.6 million. There were a total of 35 charges issued and in July 2016, Mossman and another Banks Island executive had 18 pollution charges filed against them personally. They were initially acquitted of the charges, though Mossman was fined $15,000, but the B.C. Supreme Court subsequently overturned that acquittal. Despite attempts by their lawyers to block a new trial, a Court of Appeals judge recently issued a decision to reject those appeals. The two are set to face a new trial soon.*

*Is this the kind of company you want to open such a risky venture here in our beautiful county?!*

**Ind 71-2**

*2) Where the mine is located used to be 'in the country'. Now it is a residential area for hundreds of homes, who depend on wells for their domestic water supply. A mine puts their water at risk, no question about it. Would you want a mine next to your house and well? The mine tunnels go for miles in all directions. Stirring up contaminated mine waste undergound is playing Russian Roulette with our water.*

**Ind 71-3**

*3). Mine Waste. The mine proposes to dump 3.6 million gallons of treated wastewater every day into South Fork Wolf Creek for 6 months, then 1.2 million gallons a day after that. Who can think this is an okay thing? Will there be monitoring of the quality of the water every day? This company has proven they will skirt environmental requirements. Please think of the DOWNSTREAM PEOPLE and animals.*

**Thank you for your consideration.**

**Ind 72-1**

Criminal Canadian polluters, who went bankrupt running the Yellow Giant mine,
and left a $1,600,000 mess for the government to clean up,
now want to come here.

Meanwhile, waves of California workers, freed from commuting by the internet,
are spreading out from the Bay Area looking for good places to live.

This is a good place to live if the mine doesn't wreck it for the next 80 years.

80 years.
Enough time for all of our children and grandchildren to curse the
economic short-sightedness of letting this mine into our neighborhood.

Tell them to go back to Canada and clean up the mess they made there.

**Ind 73-1**

Good Morning,
I write as another voice who believes re-opening this mine is an awful idea. We purchased our retirement home here a decade ago and while of course we expect changes, we never would've planned to retire here if it was still an active mining town. The environmental degradation, pollution and noise will be reason enough to change our plans, but beyond that, this Rise group seems a terrible choice for the endeavor. Their previous failure foretells what we can expect when the price of gold drops below their projections. Frankly, this seems more like a classic stock "pump and dump" scheme. The "investors" will do fine in an eventual bankruptcy but our county will be left holding the bag. I'd be surprised if the workers even get severance when it all falls apart. Please don't approve this project, it may be our past but should not be our future. Thank-you!

**Subject:** Comments on the Draft EIR for the Idaho Maryland Mine

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley,

**Ind 74-1** I am writing to express my concern about the proposed plan to reopen the Idaho-Maryland Mine. I have concerns about the environmental impacts on the fine on our local water quality and air quality as well as its effects on wells in the area.

**Ind 74-2** Specifically, I believe that the mitigation suggested in 4.8-2(a) does not require enough time for baseline monitoring before the mine re-opens. With the unpredictable climate of recent years, and recent drought years in particular, one year of monitoring does not give an accurate picture of well and groundwater levels. The levels should be measured for a minimum of 3 years to determine an average pattern.

Thank you for listening.
Carlyle Miller

**From:** C1 Brady
**To:** Idaho MMEIR
**Subject:** attn: Matt Kelley, Senior Planner re: plan to re-open Idaho-Maryland Mine
**Date:** Tuesday, February 1, 2022 1:42:43 PM

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Matt Kelly, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902

Dear Mr. Kelley,

As residents of Nevada County for more than 30 years, we are writing to add our voices to those who have already contacted you to express opposition to the plan to re-open the Idaho-Maryland Mine.

The Nevada County of today looks nothing like the community that existed during the mine's operating years. When the Idaho-Maryland Mine closed in the 1950s, Nevada County's population was somewhere around 20,000. The 2020 census records us at 98,114, and many of today's Nevada County households rely on residential wells for our water.

**Ind 75-1**

We know you've already heard from many of us regarding concerns over the impact mining operations could have on our residential wells. We know you understand these wells recharge through patterns in fractured rock, and the massive amounts of rock and soil dislodged during mining operations may disrupt those patterns. We're sure you're aware that mining operations de-watered local wells on the North San Juan Ridge in the 1990s.

We're guessing you've received input from residents worried about the potential for the increased contamination of our air and water. Our county still struggles with water quality concerns resulting from the area's mining legacy (NID continues to be burdened with removing mercury from our local water supply). Wildfire smoke already pollutes our air; surely we do not need additional air quality degradation precipitated by a mining operation's dust, exhaust and (possibly) airborne elemental mercury.

**Ind 75-2**

Rise Grass Valley promises investment in our economy and workforce, but our community pays heavily for those promised benefits. Health issues created by increased air pollution and water contamination are expensive. Loss of residential wells and subsequent property devaluation are expensive. Forfeiture of Nevada County's reputation as a healthy place to raise families is expensive. Re-opening the Idaho-Maryland Mine costs Nevada County too much. We hope the Planning Department will look beyond Rise GV's promises and protect the home we all love.

**Ind 75-3**

Sincerely,

Carol & Bill Brady

To: Matt Kelley & The Planning Commission:

Introduction:

**Ind 76-1**

All of these time and energy expenditures for a gold mining project when no one really has any scientific geological info/estimates as to how much gold can even be obtained from it seems comical at best.

Comment re: DEIR:

**Ind 76-2**

1. Underground there would be "mining within an approximately 2,585-acre mineral rights boundary owned by the applicant…" How much private and air port property will be subject to "sinks" over time? I am from Franklin, NJ which was the site of the richest zinc mine in the world early in the 20th century. I am familiar with land above mined ground caving in, thereby displacing residents and ugly chain link fencing replacing parts of neighborhoods, plus parts of the town itself. The EIR did not take into account this specter.

**Ind 76-3**

2. The best plan emerging from the DEIR is Alternative 1: No Project (No Build) Alternative.

Best regards,

Carol F. Fenner

Sent from Mail for Windows

1

## INDIVIDUAL LETTER 76: CAROL FENNER

### Response to Comment Ind 76-1

The comment is an introductory remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

### Response to Comment Ind 76-2

The potential for collapse associated with underground mine shafts is discussed in Impact 4.6-3 in Chapter 4.6 Geology, Soils, and Mineral Resources, of the DEIR.

### Response to Comment Ind 76-3

The commenter states that the best plan emerging from the DEIR is the No Project alternative. As noted within Chapter 6, Alternatives Analysis, of the DEIR, the No Project alternative is considered the environmentally superior alternative; however, the No Project alternative does not meet the basic project objectives.

Hello,

I just want to let you know that I DO NOT support the re-opening of the Idaho-Maryland Mine. Mining companies in this county have a history of promises, promises, promises and then make the money and run. Our county is still dealing w/ after effects of mining from 100 years plus ago, including arsenic and cyanide water issues.

**Ind 77-1** The mailer sent by Rise Grass Valley is full of promises - fire engine, no traffic effects, no health effects, potable water line. What kinds of guarantees are there that any of this would be enough to mitigate the common sense known issues caused by mining?

Please do what you can to stop this mine.

Thank you.

Carol Gicker

**Ind 78-1**

Dear Mr. Kelley,
Any large project, especially as large as this mining operation, is bound to have negative issues that come up and were not foreseen. Often to fix problems a lot of money is thrown at the problem and everybody works night and day to correct the problem. That said the potential for catastrophic things to happen with this project is imminent. It's very possible that the results are untenable. It's also very possible that the problems cannot be reversed and we all will have to live with a bad situation forever. We're talking about mistakes that could render a great number of people without clean water, with noise pollution and even without power. Often the issues do not become clear until it's too late. It's also impossible to foresee everything that could happen good or bad.
I don't mind saying that I would hate to be in your shoes. When things go wrong you're going to be the person everybody points the finger at. If you sign your name on the line then you have the responsibility for the outcome that goes along with it. Realistically, if you decide that this project should not go through very little is going to happen to you that's negative but if you decide that this project should go through, the potential for headaches and sleepless nights for you would be great.
I hope that you stand with the people and not with the corporation. It is a fact that you must live with the citizens of Nevada County from now on. If you don't support this corporation they will go away and you probably will never hear from them again and you will still have your job and you will still be able to sleep at night.
I truly wish you well. Thank you for reading this.

Sincerely,
Carol Hansen-Dix

Nevada City, CA 95959-7902

Idaho.MMEIR@co.nevada.ca.us

Re: DEIR Comment: Inadequate Mitigation of Air Pollution

My name is Carol Hyndman and I have been a resident of Nevada County for over 25 years. I am a retired educator and my focus was with those having special education needs. I have a longstanding pulmonary health condition which makes this topic especially important to me.

It is clear that there will be many airborne pollutants that will be released during mining processes which will seriously worsen my health and impact the health of many in our community. All the pollutants noted in the DEIR have the potential to cause respiratory problems, acute and chronic, from both short and long-term exposures.

Rise Gold's Brunswick site is just a half mile southeast of the city limit – so any pollutants that are released will funnel into the Brunswick Basin and the City of Grass Valley and beyond.

**Ind 79-1**

Based on expert analysis of Rise Gold's technical reports in the DEIR, unacceptable pollutants will be released if the Idaho-Maryland Mine reopens. This comment argues that air pollution is not adequately mitigated as claimed by the DEIR. The potential health impacts primarily relates to these four pollutants: diesel emissions, radon, silica, and asbestos. These pollutants must not be allowed to enter our air!

I am especially concerned because Nevada County already has such poor air quality much of the time. The EPA has classified Nevada County to "serious" nonattainment for 8- hour ozone levels. California Air Resources Board, CARB has designated Nevada County as a nonattainment area for the state O3 and PM10 standards. The American Lung Association has given Nevada County an F, a failing grade for air quality due to its high ozone and particle pollution levels.

Also recognize that the World Health Organization revised their air quality guidelines for the first time in 15 years in recognition of the harmful effects of air pollution on human health. They lowered limits for PM2.5, PM10, ozone, nitrogen dioxide, sulfur dioxide and carbon monoxide.

1

Nevada County also has a vulnerable population. According to the 2020 census, in NC, nearly a third, 28.6% of our population is 65 years or older, compared to the statewide rate of 14.3%. So, we have an older demographic. The 2019 Health Assessment for NC revealed that our mortality rate for Chronic Lung Disease is twice that of the statewide rate (69 deaths/100,000 people for the county vs 35 deaths/100,000 for the state). Our Heart Disease Mortality rate is 1.5 times higher than the statewide rate. The bottom line is that we have a vulnerable population with chronic conditions that will increase mortality by exposure to these pollutants.

For the DEIR to be certified, it must include an uncompressing set of mitigations to this pollution in the environment and the human body OR an alternative use for the Rise Gold property should be mandated.

Signed,

Carol Hyndman

Carol Hyndman

2

## INDIVIDUAL LETTER 79: CAROL HYNDMAN

### Response to Comment Ind 79-1

Please refer to chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR for more information related to air pollution. As evaluated under Impact 4.3-2, and shown in Table 4.3-21, emissions of toxic air contaminants (TACs) would not result in health risks to nearby receptors in excess of NSAQMD thresholds. Nonetheless, Mitigation Measure 4.3-2 was included to ensure an Asbestos Dust Mitigation Plan is prepared, as required by the California Air Resources Board (CARB). Further information regarding the assumptions used when conducting the Health Risk Assessment for the proposed project is included in Master Responses 20 through 22.

**Ind 80-1**

The science is clear: The mine is a killer.

We cannot afford to dump fossil fuel exhaust in the air if civilization is to survive. Really. Air pollution is rising relentlessly, and it is driving global warming progressively. You know that is because the carbon compounds in the atmosphere reflect much more solar heat back to the ground than normal, upsetting the delicate balance that had enabled life to thrive on earth. We've understood that for decades. If it continues, every generation will suffer much more than the one before.

So what are we doing about this? Considering reopening the Idaho-Maryland gold mine. That means diesel trucks hauling 1000 tons of waste rock, 100 trips every day, plus trucking in explosives. Add a large factory on Brunswick Road, and massive machines crushing 1500 tons of mine waste every day. That's just counting diesel exhaust, which contains hundreds of toxic chemicals plus carbon particulates small enough to enter your blood. Then the silicate rock dust includes asbestos. We will have a lot of sick people, and they will endure unprecedented killer temperatures.

This is just one reason the mine is a horrendous idea. Please vote to protect us.

Sincerely,
Carol Kuczora, 11198 Butler Road, Grass Valley

## INDIVIDUAL LETTER 80: CAROL KUCZORA

### Response to Comment Ind 80-1

Please see Master Response 1. In addition, Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy of the DEIR provides a detailed analysis of potential air quality and greenhouse gas impacts associated with the proposed project. Specifically, Impact 4.3-2 addresses whether the project would expose sensitive receptors to substantial air pollutant concentrations. As noted therein, a Health Risk Assessment (HRA) was prepared to address air pollutant concerns related to diesel particulate matter generated by diesel trucks operating as part of the proposed project, as well as health risks associated with silica rock and asbestos (see Master Responses 21 and 22 for a description of the assumptions used to assess the aforementioned materials). Therefore, impacts related to air pollutant concerns were adequately addressed in the DEIR. Please see also Master Response 27.

**Ind 82-1**

The above report details many impacts and potential mitigations. I would specifically like to raise concerns about the claims regarding air quality. As noted at the beginning of the section regarding this issue, Nevada County currently faces specific challenges in this regard.

"Winds are, in general, stronger in spring and summer and lower in fall and winter. Periods of calm winds and clear skies in fall and winter often result in strong, ground-based inversions forming in mountain valleys. These layers of very stable air restrict the dispersal of pollutants, trapping these pollutants near the ground, representing the worst conditions for local air pollution occurring in the County." (Chapter 4-3.11)

Nonetheless, the report maintains that only in the year of initial construction will the air quality be impacted significantly by greenhouse gas emissions totaling more than 340 metric tons. In succeeding years, despite the estimated emissions doubling to 7221 metric tons, the impact is considered not significant. It would seem that all the relevant figures in this section need to be reexamined.

**Ind 82-2**

Further, the mitigation strategy proposed is to purchase carbon offsets. Offsets used to mathematically match carbon stored with the greenhouse gases emitted, do not help ameliorate the pollution in the location impacted by the emissions. In fact, they are often seen as a false solution, since the trees planted, or wind turbines built don't really happen or if they do, their location is far from the site of the pollution.

Perhaps the proponents of the mine reopening are assuming that since Nevada County already experiences poor air quality, there is no reason to be concerned about adding to the mix. Nothing could be further from the truth.

**Ind 83-1**

To the Nevada County Board of Supervisors,
Please do not allow Rise Gold Corp to reopen the Idaho Maryland mine. I live in Penn Valley (Lake Wildwood) and I often drive to and from Grass Valley and Nevada City on Highways 20 and 49. There are already too many heavy, large trucks on these highways. Additional heavy truck traffic from Rise Gold operations will increase traffic and dangerous driving conditions on roads surrounding their operation.

**Ind 83-2**

In addition to my concerns about increasing dangerous traffic conditions, I am concerned about the negative environmental impacts including dust generation and use of scarce resources such as water and electricity.

Of all the people that I know in Nevada County, I know of no one who thinks reopening this mine is positive for Nevada County as a place to live.

**Ind 83-3**

Thank-you for your attention,
Carol R Nelson
18526 Lake Forest Dr
Penn Valley, CA 95946
650 868-9908

## INDIVIDUAL LETTER 83: CAROL NELSON

### Response to Comment Ind 83-1

Please see Master Response 1.

Regarding concerns about increased heavy truck traffic resulting from the proposed project, please refer to Chapter 4.12, Transportation, of the DEIR. The DEIR addressed impacts regarding whether the project would substantially increase hazards to vehicle safety under Impact 4.12-6, and concluded that with Mitigation Measures 4.12-6(a) through 4.12-6(f), a less-than-significant impact would occur. Therefore, impacts related to heavy truck traffic and hazardous roadway conditions were adequately addressed in the DEIR.

### Response to Comment Ind 83-2

Potential impacts related to dust generation and electricity usage are discussed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy of the DEIR. Potential impacts related to water usage are discussed in Chapter 4.11, Public Services and Utilities, of the DEIR.

### Response to Comment Ind 83-3

The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

**Subject:** Idaho Maryland Mine Project DEIR Comments

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley,
I am submitting the following comments on the DEIR:

**Ind 84-1** I fully support the comments submitted by CEA Foundation (https://www.minewatchnc.org/post/deir-comments-mar2022)

Additionally:

**Ind 84-2** The DEIR and technical reports should use industry standard definitions and replace such terms as 'barren' with waste rock and 'sand tailings' with 'tailings' . A section with definitions should be included for these terms as well as definitions for project specific terms such as 'engineered fill', etc.

**Ind 84-3** The clean up of the Centennial site should be incorporated into the timeline of the project, and where would the waste rock and tailings be placed prior to the Centennial site being available for these materials?

**Ind 84-4** The tailings produced would likely be very fine grained material, vulnerable to transport as suspended sediment. It is likely this fine material would carry heavy metals, such as the iron and arsenic detected in the geologic analysis. As such, the stormwater detention and tailings ponds should be placed and designed such that they would not overflow or fail in the event of a 100 year + precipitation event. Failure of these ponds would have significant consequences locally and down Wolf Creek. As the 'engineered fill' on the Centennial site would be deposited over many years, the exposed areas of the fill should have adequate erosion control throughout the rainy season. The reclamation plan states the erosion control would be adequate for a 20 year rain event, which should be increased to be able to withstand a 100 year event.

**Ind 84-5** The tailings ponds, stormwater detention ponds, drainage structures and vegetation on site will need maintenance after the mining has ended. How will the County ensure that these sites do not end up being County liabilities in the future. The 90 foot tall mound perched above Wolf Creek will likely become covered with highly flammable vegetation (manzanita) as have other sites with poor soil productivity in our area. Without management this area will become vulnerable to high severity wildfire. A wildfire on that site would result in erosion and likely slope failures into Wolf Creek. Ponds and drainage structures without regular maintenance will eventually fail.

**Ind 84-6** The CEA Foundation analyzed the groundwater technical reports and found the analysis and sampling inadequate. Given that this project has the potential to permanently deplete groundwater resources, a more thorough and independently peer reviewed groundwater analysis is needed before the BOS can make an informed decision.

**Ind 84-7** As our climate changes, our region is experiencing increasing drought years as well as the potential for high precipitation events from back to back atmospheric rivers. With these climate patterns, this project has a significant potential to risk our most critical resource - a clean and reliable water supply. I urge the BOS to ensure they have all the needed information prior to making this decision that could have very long consequences into the future.

1

Respectfully,
Carol Purchase
Grass Valley

## INDIVIDUAL LETTER 84: CAROL PURCHASE

### Response to Comment Ind 84-1

This comment in introductory in nature and does not discuss the adequacy of the DEIR. The commenter is referred to the responses to comments submitted by CEA in Group Letters 7 and 8.

### Response to Comment Ind 84-2

The commenter states that the DEIR should use different terminology for "barren rock" and "sand tailings." Barren rock (with no gold values and not processed) is differentiated from mineralized rock (with gold values which is processed) in the DEIR to facilitate an understanding of the proposed project. Barren rock is also proposed to be sold in some cases and therefore would be a mineral product and not waste rock. The tailings particles are primarily of sand size gradation (DEIR, Appx. H.1, p. 14.) and therefore sand tailings is an appropriate description in the DEIR. Barren rock and sand tailings are compacted in lifts to engineering standards in order to provide a useful surface appropriate for construction of future buildings on the sites and is therefore described as engineered fill.

### Response to Comment Ind 84-3

The commenter states that the cleanup of the Centennial Industrial Site should be incorporated into the DEIR. As stated on page 3-26 of the DEIR, if the remediation of the Centennial Industrial Site, currently under DTSC oversight, is not complete upon commencement of mining, engineered fill would be placed at the Brunswick Industrial Site and/or transported off-site to be utilized in local and regional construction markets. Likewise, if the remediation of the Centennial Industrial Site is not complete within the life of the mining permit, engineered fill would be placed at the Brunswick Industrial Site and/or transported off-site to be utilized in local and regional construction markets, and no material from the mine would be placed on the Centennial Industrial Site. The commenter is also referred to Master Response 4 – Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 84-4

The commenter states that the stormwater detention basins and the tailings pond should be sized for a 100-year storm event. No tailings pond is proposed for the project. The drainage calculations and detention basins are specifically designed to respond to the drainage requirements of the County of Nevada. The Nevada County drainage requirements indicate that new storm drain systems and channels shall be designed to convey the 10- and 100-year, 24-hour storm event. (DEIR, 4.8-40.) Impact 4.8-3 and Table 4.8-4 provides a discussion regarding the detention basins at the Brunswick and Centennial Industrial Sites and both basins are designed to contain stormwater runoff in a 100-year, 24-hour storm event. (DEIR, 4.8-69–75.)

### Response to Comment Ind 84-5

The commenter states that the tailings ponds, stormwater detention pond, and drainage structures will require maintenance at the end of the project. The project does not propose to use a tailings pond.

As discussed on page 4.6-24 of the DEIR, to ensure that reclamation will proceed in accordance with the approved Reclamation Plan, the County shall require as a condition of approval Security that will be released upon satisfactory performance. The Project Applicant may pose Security in the form of a surety bond, trust fund, irrevocable letter of credit from an accredited financial

institution, or other method acceptable to the County and the State Mining and Geology Board as specified in State regulations, and which the County reasonably determines are adequate to perform reclamation in accordance with the mining operation's approved Plan.

There is no evidence that the drainage facilities would fail due to lack of maintenance or the site would become overgrown, and wildfires would cause slope failures and erosion. This impact is speculative, and the County is not required to analyze speculative impacts under CEQA. (CEQA Guidelines Section 15384.)

## Response to Comment Ind 84-6

The commenter sates that the groundwater impact analysis in the DEIR is inadequate but provides no specific reasons why it is inadequate. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR, Master Response 14 – Adequacy of Groundwater Model, and Master Response 15 – Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 84-7

The commenter states that the project will have adverse effect to groundwater supplies because of drought and climate change. The commenter is referred to Master Response 16 – Drought and Climate Change.

RE: Rise Gold Corp. Securities & Exchange Commission Form S-1 Submitted 3/29/2022 to SEC
Purpose to Provide Major Shareholders Ability to Sell Shares
http://archive.fast-edgar.com/20220330/A82SQQ2CZ225OZZZ2G2C2ZO5AKNKZZ2ZZ242/#page_1
or: https://www.sec.gov/Archives/edgar/data/1424864/000127351119000094/f191028riseforms1.htm

To: Nevada County Planning Commission

I have discovered through our brokerage firm that the above document has been filed within the past week, and I am submitting a copy for your perusal. Also, the above website is the location where it can be found along with ability to see other reports, such as 10-K, etc.

It is important for our Nevada County leaders to be aware of the potential investment risk that future shareholders are being advised through the document that is prepared by Rise Gold Corp., itself.

You are aware of the past history of Rise Gold in Canada, but there is also another legal trial in Canada that is upcoming as soon as April 11, 2022 involving Mr. Ben Mossman as spelled out in this document.

**Ind 85-1**

Hopefully, you all can protect our community from an ultra- risky attempt to re-open the Idaho-Maryland mine. I don't think it is worth the numerous potential environmental impacts as well as the potential negative financial impact our wonderful residents in Nevada County could suffer.

Sincerely,

Carol Todd

Carol Todd
PO Box 1191
Cedar Ridge, CA 95924

**Ind 85-2**

P.S. My husband was born and raised in Grass Valley. His father worked In the Idaho-Maryland Mine. My husband remembers the dust and noise from this mine in Union Hill area where they lived. The noise from the Idaho-Maryland plus the Empire Mine could be heard 24-7.

**Approximate date of commencement of proposed sale to the public:** As soon as practicable after this registration statement becomes effective.

If any of the securities being registered on this Form are to be offered on a delayed or continuous basis pursuant to Rule 415 under the Securities Act of 1933 check the following box: ☒

If this Form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act, please check the following box and list the Securities Act registration statement number of the earlier registration statement for the same offering. ☐

If this Form is a post-effective amendment filed pursuant to Rule 462(c) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering. ☐

If this Form is a post-effective amendment filed pursuant to Rule 462(d) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering. ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company or an emerging growth company:

Large Accelerated Filer ☐ Accelerated Filer ☐ Non-Accelerated Filer ☒ Smaller Reporting Company ☒

Emerging Growth Company ☒

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards pursuant to Section (7)(a)(2)(B) of the Securities Act. ☐

**The registrant hereby amends this registration statement on such date or dates as may be necessary to delay its effective date until the registrant shall file a further amendment which specifically states that this registration statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the registration statement shall become effective on such date as the Commission, acting pursuant to Section 8(a), may determine.**

**The information contained in this prospectus is not complete and may be changed. The selling stockholders may not sell these securities until the registration statement filed with the Securities and Exchange Commission is effective. This prospectus is not an offer to sell these securities and the selling stockholders are not soliciting an offer to buy these securities in any state where the offer or sale is not permitted.**

**Subject To Completion, Dated March 29, 2022**

12,840,000 Shares of Common Stock

This prospectus relates to the resale or other disposition from time to time by certain selling stockholders, as further described in this prospectus, of up to an aggregate of 12,840,000 shares of the Common Stock (the "**Shares**") of Rise Gold Corp. (the "**Company**", "**Rise**", "**we**", "**us**" or "**our**"). The Shares registered for sale are as follows:

- 6,017,500 Shares held by selling stockholders;
- 6,017,500 Shares issuable upon exercise of common stock purchase warrants held by selling stockholders issued January 28, 2022 and exercisable at a price per Share of $0.60; and
- 805,000 Shares issuable upon exercise of incentive stock options held by selling stockholders granted February 7, 2022 and exercisable at a price per Share of $0.65.

The Shares, warrants and options held by the selling stockholders were issued to such selling stockholders pursuant to private transactions between our company and the selling stockholders. The selling stockholders may sell or otherwise dispose of the Shares covered by this prospectus or interests therein on any stock exchange, market or trading facility on which the shares are traded or in private transactions. These dispositions may be at fixed prices, at prevailing market prices at the time of sale, at prices related to the prevailing market price, at varying prices determined at the time of sale, or at negotiated prices. Additional information about the selling stockholders, and the times and manner in which they may offer and sell Shares under this prospectus, is provided in the sections entitled "Selling Stockholders" and "Plan of Distribution" of this prospectus.

We will not receive any proceeds from the resale of the Shares by the selling stockholders.

Our Common Stock is listed on the Canadian Securities Exchange (the "**CSE**") under the symbol "RISE" and quoted on the OTCQX under the symbol "RYES".

All dollar amounts reflected herein refer to U.S. dollars unless otherwise noted.

**We are an "emerging growth company" as defined under federal securities laws and, as such, may elect to comply with certain reduced public company requirements for future filings.**

**Investing in the Shares involves a high degree of risk. See "Risk Factors" beginning on page 6 of this prospectus.**

**Neither the Securities and Exchange Commission (the "SEC") nor any state securities commission has approved or disapproved of the securities offered hereby or passed upon the adequacy or accuracy of this prospectus. Any representation to the contrary is a criminal offense.**

**The date of this prospectus is _____, 2022**

## GLOSSARY OF TERMS

"**Common Stock**" means the issued and unissued shares of our common stock with a par value of $0.001;

"**CSE**" means the Canadian Securities Exchange;

"**Exchange Act**" means the Securities Exchange Act of 1934, as amended;

"**February 2022 Stock Options**" means incentive stock options granted on February 7, 2022 and exercisable at a price per Share of $0.65 until February 7, 2027;

"**I-M Mine Property**" means the Idaho-Maryland Mine Property comprising approximately 93 acres (38 hectares) surface land and approximately 2,800 acres (1,133 hectares) mineral rights located near Grass Valley of Nevada County in northern California, USA.

"**I-M Mine Project**" means Rise's gold project located on the I-M Mine Property;

"**January 2022 Warrants**" means common stock purchase warrants issued on January 28, 2022, exercisable at a price of $0.60 per share until January 28, 2024; and

"**Securities Act**" means the United States Securities Act of 1933, as amended.

## CURRENCY

All dollar amounts in this prospectus are expressed in U.S. dollars unless otherwise indicated. Some of our material agreements use Canadian dollars and our Common Stock is traded on the CSE in Canadian dollars. As used herein "C$" represents Canadian dollars.

The following table sets forth the Bank of Canada rate of exchange for the Canadian dollar, expressed in United States dollars in effect at the end of the periods indicated, the average of exchange rates in effect during such periods, and the high and low exchange rates during such periods for conversion of Canadian dollars into United States dollars:

| | Fiscal Year Ended July 31 | | |
|---|---|---|---|
| **Canadian Dollars to U.S. Dollars** | **2021($)** | **2020($)** | **2019($)** |
| Rate at end of period | 0.8024 | 0.7460 | 0.7606 |
| Average rate for period | 0.7857 | 0.7433 | 0.7558 |
| High for period | 0.8306 | 0.7710 | 0.7811 |
| Low for period | 0.7465 | 0.6898 | 0.7330 |

## ABOUT THIS PROSPECTUS

This prospectus is part of a registration statement that we filed with the SEC. You should rely only on the information contained in this prospectus. We have not authorized anyone to provide you with information different from that contained in this prospectus. This prospectus is offering to sell, and is seeking offers to buy, the securities only in jurisdictions where offers and sales are permitted. The information contained in this prospectus speaks only as of the date of this prospectus (unless the information specifically indicates that another date applies), regardless of the time of delivery of this prospectus or of any sale of the Shares.

We may provide a prospectus supplement containing specific information about the terms of a particular offering by the selling stockholders, or their transferees. The prospectus supplement may add, update or change information in this prospectus. If information in a prospectus supplement is inconsistent with the information in this prospectus, you should rely on the information in that prospectus supplement. You should read both this prospectus and, if applicable, any prospectus supplement hereto. See "Where You Can Find More Information" for more information.

This prospectus includes and incorporates by reference industry and market data and other information that we have obtained from, or which is based upon, market research, independent industry publications or other publicly available information. Any such data and other information is subject to change based on various factors, including those described below under the heading "Risk Factors" and elsewhere in this prospectus.

**We have not, and the selling stockholders have not, authorized anyone to provide you with information different from that contained or incorporated by reference in this prospectus or in any supplement to this prospectus or free writing prospectus, and neither we nor the selling stockholders take any responsibility for any other information that others may give you. This prospectus is not an offer to sell, nor is it a solicitation of an offer to buy, the securities in any jurisdiction where the offer or sale is not permitted. You should not assume that the information contained in this prospectus or any prospectus supplement or free writing prospectus is accurate as of any date other than the date on the front cover of those documents, or that the information contained in any document incorporated by reference is accurate as of any date other than the date of the document incorporated by reference, regardless of the time of delivery of this prospectus or any sale of a security. Our business, financial condition, results of operations and prospects may have changed since those dates.**

4

## PROSPECTUS SUMMARY

*This summary highlights certain information contained elsewhere in this prospectus. You should read this entire prospectus carefully, including the "Risk Factors" and the financial statements and related notes incorporated by reference herein. This prospectus includes forward-looking statements that involve risks and uncertainties. See "Cautionary Note Regarding Forward-Looking Statements." References to "we," "our," "Rise," and the "Company" refer to Rise Gold Corp.*

### About the Company

We are a mineral exploration stage company incorporated in the state of Nevada, United States. Our current business operations are focused on exploring the I-M Mine Property located near Grass Valley of Nevada County in northern California. Our head office is located in Vancouver, BC, Canada, while certain members of the management team are now located in the United States.

We acquired our interest in the I-M Mine Project by exercising an option granted pursuant to an option agreement dated August 30, 2016 (as amended November 11, 2016 and December 23, 2016) with the owners of the property. A more detailed discussion of the I-M Mine Project and of the current status of our business operations is provided under the sections entitled "Business" and "Properties" in our Form 10-K annual report for the year ended July 31, 2021, which is incorporated herein by reference.

Our head office is located at Suite 650 - 669 Howe Street, Vancouver, BC V6C 0B4, Canada, and our telephone number is (604) 260-4577.

### The Offering

| | |
|---|---|
| **Shares Offered by the Selling Stockholders** | 12,840,000 Shares of our Common Stock, including:<br>• 6,017,500 Shares held by selling stockholders;<br>• 6,017,500 Shares issuable upon exercise of common stock purchase warrants held by selling stockholders issued on January 28, 2022 and exercisable at a price per Share of $0.60;<br>• 805,000 Shares issuable upon exercise of incentive stock options held by selling stockholders granted February 7, 2022 and exercisable at a price per Share of $0.65. |
| **Offering Price** | Determined at the time of sale by the selling stockholders. |
| **Use of Proceeds** | We will not receive any proceeds from the sale of the Shares by selling stockholders covered by this prospectus. |
| **Common Stock Outstanding as of March 28, 2022** | 32,787,798 shares of Common Stock. |
| **Trading Symbols** | Our Common Stock is listed on the CSE under the symbol "RISE" and quoted on the OTCQX under the symbol "RYES". |
| **Risk Factors** | Investing in our securities involves a high degree of risk. See "Risk Factors". |

## RISK FACTORS

*Investing in the Shares involves a high degree of risk. You should consider carefully the risks and uncertainties described below, together with all of the other information contained and incorporated by reference in this prospectus, before deciding to invest in the Shares. If any of the following risks materialize, our business, financial condition, results of operations, and future prospects will likely be materially and adversely affected. In that event, the market price of the Shares could decline and you could lose all or part of your investment.*

### Risks Related to Our Company

***Our business, financial condition and results of operations may be negatively affected by economic and other consequences from Russia's military action against Ukraine and the sanctions imposed in response to that action.***

In late February 2022, Russia launched a large scale military attack on Ukraine. The invasion significantly amplified already existing geopolitical tensions among Russia, Ukraine, Europe, NATO and the West, including the United States, In response to the military action by Russia, various countries, including the United States, the United Kingdom and European Union issued broad-ranging economic sanctions against Russia. Such sanctions included, among other things, a prohibition on doing business with certain Russian companies, large financial institutions, officials and oligarchs; a commitment by certain countries and the European Union to remove selected Russian banks from the Society for Worldwide Interbank Financial Telecommunications, or SWIFT, the electronic banking network that connects banks globally; a ban of oil imports from Russia to the United States; and restrictive measures to prevent the Russian Central Bank from undermining the impact of the sanctions. Additional sanctions may be imposed in the future. Such sanctions (and any future sanctions) and other actions against Russia may adversely impact, among other things, the Russian economy and various sectors of the economy, including but not limited to, financials, energy, metals and mining, engineering and defense and defense-related materials sectors; result in a decline in the value and liquidity of Russian securities; result in boycotts, tariffs, and purchasing and financing restrictions on Russia's government, companies and certain individuals; weaken the value of the ruble; downgrade the country's credit rating; freeze Russian securities and/or funds invested in prohibited assets and impair the ability to trade in Russian securities and/or other assets; and have other adverse consequences on the Russian government, economy, companies and region. Further, several large corporations and U.S. states have announced plans to divest interests or otherwise curtail business dealings with certain Russian businesses.

The ramifications of the hostilities and sanctions may not be limited to Russia, Ukraine and Russian and Ukrainian companies and may spill over to and negatively impact other regional and global economic markets (including Europe and the United States), companies in other countries (particularly those that have done business with Russia and Ukraine) and on various sectors, industries and markets for securities and commodities globally, such as oil and natural gas. Accordingly, the actions discussed above and the potential for a wider conflict could increase financial market volatility and cause severe negative effects on regional and global economic markets, industries, and companies. In addition, Russia may take retaliatory actions and other countermeasures, including cyberattacks and espionage against other countries and companies around the world, which may negatively impact such countries and companies.

The extent and duration of the military action or future escalation of such hostilities, the extent and impact of existing and future sanctions, market disruptions and volatility, and the result of any diplomatic negotiations cannot be predicted.

While we expect any direct impacts to our business to be limited, the indirect impacts on the economy and on the mining industry and other industries in general could negatively affect our business and may make it more difficult for us to raise equity or debt financing.

In addition, the impact of other current macro-economic factors on our business, which may be exacerbated by the war in Ukraine - including inflation, supply chain constraints and geopolitical events - is uncertain.

***The novel coronavirus (COVID-19) pandemic may negatively affect our business, financial condition and results of operations.***

The COVID-19 pandemic (including the emergence of variant strains of COVID-19), and measures taken in response by governments and health authorities around the world, has created ongoing uncertainty that has resulted in, and may continue to result in, restrictions on movement and on businesses being maintained, re-imposed or imposed on a stricter basis, which could negatively impact our business, results of operations and financial condition. These restrictions have adversely affected workforces, customers, supply chains, consumer sentiment, economies, and financial markets, and, along with decreased consumer spending, have led to an economic downturn across many global economies.

The extent to which COVID-19 ultimately impacts our business, financial condition and results of operations will depend on future developments, which are uncertain. It is impossible at this point to predict precisely the duration or extent of the impacts of the COVID-19 pandemic on our employees, customers, partners and business or when economic activity will normalize. There continues to be uncertainty surrounding the duration and severity of the COVID-19 pandemic, particularly with respect to the emergence of new variants of the virus, including the Omicron variant, the long-term efficacy and availability of COVID-19 vaccines and rates of vaccination (including COVID-19 vaccine booster shots) and the impact of vaccine mandates as well as risks relating to the pandemic worsening in countries that are already afflicted with COVID-19 or the COVID-19 pandemic continuing to spread to additional countries or returning to countries where the pandemic has been partially contained. These conditions may affect our ability to obtain debt and equity financing to fund ongoing exploration activities, as well as conduct business more efficiently.

Since the pandemic began, we have taken action to minimize the risks of the COVID-19 virus for our employees, contractors and other people participating in our operations, programs and activities. We continue to monitor the developments of the outbreak and continually assess the potential impact on our business. The health and safety of our work force remains a priority and we continue to follow government health protocols both in Canada and the United States.

The COVID-19 pandemic has resulted in, and may continue to result in, significant market uncertainty, including substantial fluctuations in commodity prices, currency exchange rates, inflation, interest rates, and general levels of investing and consumption. Even after the COVID-19 pandemic becomes endemic, we may experience materially adverse impacts to our business as a result of the pandemic's global economic impact.

***Our ability to operate as a going concern***

The ability of the Company to continue as a going concern is dependent on the Company's ability to maintain continued support from its shareholders and creditors and to raise additional capital and implement its business plan.
There is no assurance that the Company will be able to obtain adequate financing in the future or that such financing will be on terms advantageous to the Company. However, management believes that the Company has sufficient working capital to meet its projected minimum financial obligations for the next fiscal year. The accompanying financial statements have been prepared under the assumption that we will continue as a going concern. We are an exploration stage company and we have incurred losses since our inception.

***We will require significant additional capital to fund our business plan.***

We will be required to expend significant funds to determine whether proven and probable mineral reserves exist at our properties, to continue exploration and, if warranted, to develop our existing properties, and to identify and acquire additional properties to diversify our property portfolio. We anticipate that we will be required to make substantial capital expenditures for the continued exploration and, if warranted, development of our I-M Mine Property. We have spent and will be required to continue to expend significant amounts of capital for drilling, geological, and geochemical analysis, assaying, permitting, and feasibility studies with regard to the results of our exploration at our I-M Mine Property. We may not benefit from some of these investments if we are unable to identify commercially exploitable mineral reserves.

Our ability to obtain necessary funding for these purposes, in turn, depends upon a number of factors, including the status of the national and worldwide economy and the price of metals. Capital markets worldwide were adversely affected by substantial losses by financial institutions, caused by investments in asset-backed securities and remnants from those losses continue to impact the ability for us to raise capital. We may not be successful in obtaining the required financing or, if we can obtain such financing, such financing may not be on terms that are favorable to us.

Our inability to access sufficient capital for our operations could have a material adverse effect on our financial condition, results of operations, or prospects. Sales of substantial amounts of securities may have a highly dilutive effect on our ownership or share structure. Sales of a large number of shares of our Common Stock in the public markets, or the potential for such sales, could decrease the trading price of those shares and could impair our ability to raise capital through future sales of Common Stock. We have not yet commenced commercial production at any of our properties and, therefore, have not generated positive cash flows to date and have no reasonable prospects of doing so unless successful commercial production can be achieved at our I-M Mine Property. We expect to continue to incur negative investing and operating cash flows until such time as we enter into successful commercial production. This will require us to deploy our working capital to fund such negative cash flow and to seek additional sources of financing. There is no assurance that any such financing sources will be available or sufficient to meet our requirements. There is no assurance that we will be able to continue to raise equity capital or to secure additional debt financing, or that we will not continue to incur losses.

***We have a limited operating history on which to base an evaluation of our business and prospects.***

Since our inception, we have had no revenue from operations. We have no history of producing products from any of our properties. Our I-M Mine Project is a historic, past-producing mine with apart from the exploration work that we have completed since 2016 has had very little recent exploration work since 1956. Advancing our I-M Mine Property into the development stage will require significant capital and time, and successful commercial production from the I-M Mine Property will be subject to completing feasibility studies, permitting and re-commissioning of the mine, constructing processing plants, and other related works and infrastructure. As a result, we are subject to all of the risks associated with developing and establishing new mining operations and business enterprises including:

- completion of feasibility studies to verify reserves and commercial viability, including the ability to find sufficient ore reserves to support a commercial mining operation;
- the timing and cost, which can be considerable, of further exploration, preparing feasibility studies, permitting and construction of infrastructure, mining and processing facilities;
- the availability and costs of drill equipment, exploration personnel, skilled labor, and mining and processing equipment, if required;
- the availability and cost of appropriate smelting and/or refining arrangements, if required;
- compliance with stringent environmental and other governmental approval and permit requirements;
- the availability of funds to finance exploration, development, and construction activities, as warranted;
- potential opposition from non-governmental organizations, local groups or local inhabitants that may delay or prevent development activities;
- potential increases in exploration, construction, and operating costs due to changes in the cost of fuel, power, materials, and supplies; and
- potential shortages of mineral processing, construction, and other facilities related supplies.

The costs, timing, and complexities of exploration, development, and construction activities may be increased by the location of our properties and demand by other mineral exploration and mining companies. It is common in exploration programs to experience unexpected problems and delays during drill programs and, if commenced, development, construction, and mine start-up. In addition, our management and workforce will need to be expanded, and sufficient support systems for our workforce will have to be established. This could result in delays in the commencement of mineral production and increased costs of production. Accordingly, our activities may not result in profitable mining operations and we may not succeed in establishing mining operations or profitably producing metals at any of our current or future properties, including our I-M Mine Property.

***We have a history of losses and expect to continue to incur losses in the future.***

We have incurred losses since inception, have had negative cash flow from operating activities, and expect to continue to incur losses in the future. We have incurred the following losses from operations during each of the following periods:

- $1,603,878 for the year ended July 31, 2021; and
- $5,471,535 for the year ended July 31, 2020

We expect to continue to incur losses unless and until such time as one of our properties enters into commercial production and generates sufficient revenues to fund continuing operations. We recognize that if we are unable to generate significant revenues from mining operations and/or dispositions of our properties, we will not be able to earn profits or continue operations. At this early stage of our operation, we also expect to face the risks, uncertainties, expenses, and difficulties frequently encountered by companies at the start-up stage of their business development. We cannot be sure that we will be successful in addressing these risks and uncertainties and our failure to do so could have a materially adverse effect on our financial condition.

**Risks Related to Mining and Exploration**

***The I-M Mine Property is in the exploration stage. There is no assurance that we can establish the existence of any mineral reserve on the I-M Mine Property or any other properties we may acquire in commercially exploitable quantities. Unless and until we do so, we cannot earn any revenues from these properties and if we do not do so we will lose all of the funds that we expend on exploration. If we do not discover any mineral reserve in a commercially exploitable quantity, the exploration component of our business could fail.***

We have not established that any of our mineral properties contain any mineral reserve according to recognized reserve guidelines, nor can there be any assurance that we will be able to do so.

A mineral reserve is defined in subpart 1300 of Regulation S-K under the Securities Act ("**Subpart 1300**") as an estimate of tonnage and grade or quality of "indicated mineral resources" and "measured mineral resources" (as those terms are defined in Subpart 1300) that, in the opinion of a "qualified person" (as defined in Subpart 1300), can be the basis of an economically viable project. In general, the probability of any individual prospect having a "reserve" that meets the requirements of Subpart 1300 is small, and our mineral properties may not contain any "reserves" and any funds that we spend on exploration could be lost. Even if we do eventually discover a mineral reserve on one or more of our properties, there can be no assurance that they can be developed into producing mines and that we can extract those minerals. Both mineral exploration and development involve a high degree of risk, and few mineral properties that are explored are ultimately developed into producing mines.

The commercial viability of an established mineral deposit will depend on a number of factors including, by way of example, the size, grade, and other attributes of the mineral deposit, the proximity of the mineral deposit to infrastructure such as processing facilities, roads, rail, power, and a point for shipping, government regulation, and market prices. Most of these factors will be beyond our control, and any of them could increase costs and make extraction of any identified mineral deposit unprofitable.

***The nature of mineral exploration and production activities involves a high degree of risk and the possibility of uninsured losses.***

Exploration for and the production of minerals is highly speculative and involves greater risk than many other businesses. Most exploration programs do not result in the discovery of mineralization, and any mineralization discovered may not be of sufficient quantity or quality to be profitably mined. Our operations are, and any future development or mining operations we may conduct will be, subject to all of the operating hazards and risks normally incidental to exploring for and development of mineral properties, such as, but not limited to:

- economically insufficient mineralized material;
- fluctuation in production costs that make mining uneconomical;
- labor disputes;
- unanticipated variations in grade and other geologic problems;
- environmental hazards;
- water conditions;
- difficult surface or underground conditions;
- industrial accidents;
- metallurgic and other processing problems;
- mechanical and equipment performance problems;
- failure of dams, stockpiles, wastewater transportation systems, or impoundments;
- unusual or unexpected rock formations; and
- personal injury, fire, flooding, cave-ins and landslides.

Any of these risks can materially and adversely affect, among other things, the development of properties, production quantities and rates, costs and expenditures, potential revenues, and production dates. If we determine that capitalized costs associated with any of our mineral interests are not likely to be recovered, we would incur a write-down of our investment in these interests. All of these factors may result in losses in relation to amounts spent that are not recoverable, or that result in additional expenses.

***Commodity price volatility could have dramatic effects on the results of operations and our ability to execute our business plan.***

The price of commodities varies on a daily basis. Our future revenues, if any, will likely be derived from the extraction and sale of base and precious metals. The price of those commodities has fluctuated widely, particularly in recent years, and is affected by numerous factors beyond our control including economic and political trends, expectations of inflation, currency exchange fluctuations, interest rates, global and regional consumptive patterns, speculative activities and increased production due to new extraction developments and improved extraction and production methods. The effect of these factors on the price of base and precious metals, and therefore the economic viability of our business, could negatively affect our ability to secure financing or our results of operations.

***Estimates of mineralized material and resources are subject to evaluation uncertainties that could result in project failure.***

Our exploration and future mining operations, if any, are and would be faced with risks associated with being able to accurately predict the quantity and quality of mineralized material and resources/reserves within the earth using statistical sampling techniques. Estimates of any mineralized material or resource/reserve on any of our properties would be made using samples obtained from appropriately placed trenches, test pits, underground workings, and intelligently designed drilling. There is an inherent variability of assays between check and duplicate samples taken adjacent to each other and between sampling points that cannot be reasonably eliminated. Additionally, there also may be unknown geologic details that have not been identified or correctly appreciated at the current level of accumulated knowledge about our properties. This could result in uncertainties that cannot be reasonably eliminated from the process of estimating mineralized material and resources/reserves. If these estimates were to prove to be unreliable, we could implement an exploitation plan that may not lead to commercially viable operations in the future.

***Any material changes in mineral resource/reserve estimates and grades of mineralization will affect the economic viability of placing a property into production and a property's return on capital.***

As we have not completed feasibility studies on our I-M Mine Property and have not commenced actual production, mineralization resource estimates may require adjustments or downward revisions. In addition, the grade of ore ultimately mined, if any, may differ from that indicated by future feasibility studies and drill results. Minerals recovered in small scale tests may not be duplicated in large scale tests under on-site conditions or in production scale.

***Our exploration activities on our properties may not be commercially successful, which could lead us to abandon our plans to develop our properties and our investments in exploration.***

Our long-term success depends on our ability to identify mineral deposits on our I-M Mine Property and other properties we may acquire, if any, that we can then develop into commercially viable mining operations. Mineral exploration is highly speculative in nature, involves many risks, and is frequently non-productive. These risks include unusual or unexpected geologic formations, and the inability to obtain suitable or adequate machinery, equipment, or labor. The success of commodity exploration is determined in part by the following factors:

- the identification of potential mineralization based on surficial analysis;
- availability of government-granted exploration permits;
- the quality of our management and our geological and technical expertise; and
- the capital available for exploration and development work.

Substantial expenditures are required to establish proven and probable reserves through drilling and analysis, to develop metallurgical processes to extract metal, and to develop the mining and processing facilities and infrastructure at any site chosen for mining. Whether a mineral deposit will be commercially viable depends on a number of factors that include, without limitation, the particular attributes of the deposit, such as size, grade, and proximity to infrastructure; commodity prices, which can fluctuate widely; and government regulations, including, without limitation, regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals, and environmental protection. We may invest significant capital and resources in exploration activities and may abandon such investments if we are unable to identify commercially exploitable mineral reserves. The decision to abandon a project may have an adverse effect on the market value of our securities and the ability to raise future financing.

***We are subject to significant governmental regulations that affect our operations and costs of conducting our business and may not be able to obtain all required permits and licenses to place our properties into production.***

Our current and future operations, including exploration and, if warranted, development of the I-M Mine Property, do and will require permits from governmental authorities and will be governed by laws and regulations, including:

- laws and regulations governing mineral concession acquisition, prospecting, development, mining, and production;
- laws and regulations related to exports, taxes, and fees;
- labor standards and regulations related to occupational health and mine safety; and
- environmental standards and regulations related to waste disposal, toxic substances, land use reclamation, and environmental protection.

Companies engaged in exploration activities often experience increased costs and delays in production and other schedules as a result of the need to comply with applicable laws, regulations, and permits. Failure to comply with applicable laws, regulations, and permits may result in enforcement actions, including the forfeiture of mineral claims or other mineral tenures, orders issued by regulatory or judicial authorities requiring operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or costly remedial actions. We cannot predict if all permits that we may require for continued exploration, development, or construction of mining facilities and conduct of mining operations will be obtainable on reasonable terms, if at all. Costs related to applying for and obtaining permits and licenses may be prohibitive and could delay our planned exploration and development activities. We may be required to compensate those suffering loss or damage by reason of our mineral exploration or our mining activities, if any, and may have civil or criminal fines or penalties imposed for violations of, or our failure to comply with, such laws, regulations, and permits.

Existing and possible future laws, regulations, and permits governing operations and activities of exploration companies, or more stringent implementation of such laws, regulations and permits, could have a material adverse impact on our business and cause increases in capital expenditures or require abandonment or delays in exploration. Our I-M Mine Property is located in California and has numerous clearly defined regulations with respect to permitting mines, which could potentially impact the total time to market for the project.

Subsurface mining is allowed in the Nevada County M1 Zoning District, where the I-M Mine Property is located, with approval of a "Use Permit". Approval of a Use Permit for mining operations requires a public hearing before the County Planning Commission, whose decision may be appealed to the County Board of Supervisors ("County Board"). Use Permit approvals include conditions of approval, which are designed to minimize the impact of conditional uses on neighboring properties.

On November 21, 2019 we submitted an application for a Use Permit to Nevada County (the "County"). On April 28, 2020, with a vote of 5-0, the County Board approved the contract for Raney Planning & Management Inc. to prepare an Environmental Impact Report and conduct contract planning services on behalf of the County for the proposed I-M Mine Project.

The Use Permit application proposes underground mining to recommence at the I-M Mine Property at an average throughput of 1,000 tons per day. The existing Brunswick Shaft, which extends to ~3400 feet depth below surface, would be used as the primary rock conveyance from the I-M Mine Property. A second service shaft would be constructed by raising from underground to provide for the conveyance of personnel, materials, and equipment. Processing would be done by gravity and flotation to produce gravity and flotation gold concentrates.

We propose to produce barren rock from underground tunneling and sand tailings as part of the project which would be used for creation of approximately 58 acres of level and useable industrial zoned land for future economic development in Nevada County. A water treatment plant and pond, using conventional processes, would ensure that groundwater pumped from the mine is treated to regulatory standards before being discharged to the local waterways. There is no assurance our Use Permit application will be accepted as submitted. If substantial revisions are required, our ability to execute our business plan will be further delayed.

In 1975, the California Legislature enacted the Surface Mining and Reclamation Act ("**SMARA**"), which required that all surface mining operations in California have approved reclamation plans and financial assurances. SMARA was adopted to ensure that land used for mining operations in California would be reclaimed post-mining to a useable condition. Pursuant to SMARA, we would be required to obtain approval of a Reclamation Plan from and provide financial assurances to the County for any surface component of the underground mining operation before mining operations could commence. Approval of a Reclamation Plan will require a public hearing before the County Planning Commission.

To approve a Reclamation Plan and Use Permit, the County would need to satisfy the requirements of California Environmental Quality Act ("**CEQA**"). CEQA requires that public agency decision makers study the environmental impacts of any discretionary action, disclose the impacts to the public, and minimize unavoidable impacts to the extent feasible. CEQA is triggered whenever a California governmental agency is asked to approve a "discretionary project". The approval of a Reclamation Plan is a "discretionary project" under CEQA. Other necessary ancillary permits like the California Department of Fish and Wildlife ("**CDFW**") Streambed Alteration Agreement (if applicable) also triggers CEQA compliance.

In this situation, the lead agency for the purposes of CEQA would be the County. Other public agencies in charge of administering specific legislation will also need to approve aspects of the Project, such as the CDFW (the California Endangered Species Act), the Air Pollution Control District (Authority to Construct and Permit to Operate), and the Regional Water Quality Control Board (National Pollutant Discharge Elimination System (authorized to state governments by the US Environmental Protection Agency) and Report of Waste Discharge). However, CEQA's Guidelines provide that if more than one agency must act on a project, the agency that acts first is generally considered the lead agency under CEQA. All other agencies are considered "responsible agencies." Responsible agencies do need to consider the environmental document approved by the lead agency, but they will usually accept the lead agency's document and use it as the basis for issuing their own permits. There is no assurance that other agencies will not require additional assessments in their decision making process. If such assessments are required, additional time and costs will delay the execution of, and may even require us to re-evaluate the feasibility of, our business plan.

***Our activities are subject to environmental laws and regulations that may increase our costs of doing business and restrict our operations.***

All phases of our operations are subject to environmental regulation in the jurisdictions in which we operate. Environmental legislation is evolving in a manner that may require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects, and a heightened degree of responsibility for companies and their officers, directors, and employees. These laws address emissions into the air, discharges into water, management of waste, management of hazardous substances, protection of natural resources, antiquities and endangered species, and reclamation of lands disturbed by mining operations. Compliance with environmental laws and regulations, and future changes in these laws and regulations, may require significant capital outlays and may cause material changes or delays in our operations and future activities. It is possible that future changes in these laws or regulations could have a significant adverse impact on our properties or some portion of our business, causing us to re-evaluate those activities at that time.

***Regulations and pending legislation governing issues involving climate change could result in increased operating costs, which could have a material adverse effect on our business.***

A number of governments or governmental bodies have introduced or are contemplating legislative and/or regulatory changes in response to concerns about the potential impact of climate change. Legislation and increased regulation regarding climate change could impose significant costs on us, on our future venture partners, if any, and on our suppliers, including costs related to increased energy requirements, capital equipment, environmental monitoring and reporting, and other costs necessary to comply with such regulations. Any adopted future climate change regulations could also negatively impact our ability to compete with companies situated in areas not subject to such limitations. Given the emotional and political significance and uncertainty surrounding the impact of climate change and how it should be dealt with, we cannot predict how legislation and regulation will ultimately affect our financial condition, operating performance, and ability to compete. Furthermore, even without such regulation, increased awareness and any adverse publicity in the global marketplace about potential impacts on climate change by us or other companies in our industry could harm our reputation. The potential physical impacts of climate change on our operations are highly uncertain, could be particular to the geographic circumstances in areas in which we operate and may include changes in rainfall and storm patterns and intensities, water shortages, changing sea levels, and changing temperatures. These impacts may adversely impact the cost, production, and financial performance of our operations.

***Land reclamation requirements for our properties may be burdensome and expensive.***

Although variable depending on location and the governing authority, land reclamation requirements are generally imposed on mineral exploration companies (as well as companies with mining operations) in order to minimize long term effects of land disturbance.

Reclamation may include requirements to:

- control dispersion of potentially deleterious effluents;
- treat ground and surface water to drinking water standards; and
- reasonably re-establish pre-disturbance landforms and vegetation.

In order to carry out reclamation obligations imposed on us in connection with our potential development activities, we must allocate financial resources that might otherwise be spent on further exploration and development programs. We plan to set up a provision for our reclamation obligations on our properties, as appropriate, but this provision may not be adequate. If we are required to carry out unanticipated reclamation work, our financial position could be adversely affected.

***We face intense competition in the mining industry.***

The mining industry is intensely competitive in all of its phases. As a result of this competition, some of which is with large established mining companies with substantial capabilities and with greater financial and technical resources than ours, we may be unable to acquire additional properties, if any, or financing on terms we consider acceptable. We also compete with other mining companies in the recruitment and retention of qualified managerial and technical employees. If we are unable to successfully compete for qualified employees, our exploration and development programs may be slowed down or suspended. We compete with other companies that produce our planned commercial products for capital. If we are unable to raise sufficient capital, our exploration and development programs may be jeopardized or we may not be able to acquire, develop, or operate additional mining projects.

***A shortage of equipment and supplies could adversely affect our ability to operate our business.***

We are dependent on various supplies and equipment to carry out our mining exploration and, if warranted, development operations. Any shortage of such supplies, equipment, and parts could have a material adverse effect on our ability to carry out our operations and could therefore limit, or increase the cost of, production.

***Joint ventures and other partnerships, including offtake arrangements, may expose us to risks.***

We may enter into joint ventures, partnership arrangements, or offtake agreements, with other parties in relation to the exploration, development, and production of the properties in which we have an interest. Any failure of such other companies to meet their obligations to us or to third parties, or any disputes with respect to the parties' respective rights and obligations, could have a material adverse effect on us, the development and production at our properties, including the I-M Mine Property, and on future joint ventures, if any, or their properties, and therefore could have a material adverse effect on our results of operations, financial performance, cash flows and the price of our Common Stock.

***We may experience difficulty attracting and retaining qualified management to meet the needs of our anticipated growth, and the failure to manage our growth effectively could have a material adverse effect on our business and financial condition.***

We are dependent on a relatively small number of key employees, including our Chief Executive Officer and Chief Financial Officer. The loss of any officer could have an adverse effect on us. We have no life insurance on any individual, and we may be unable to hire a suitable replacement for them on favorable terms, should that become necessary.

***Our results of operations could be affected by currency fluctuations.***

Our properties are currently all located in the United States and while most costs associated with these properties are paid in U.S. dollars, a significant amount of our administrative expenses are payable in Canadian dollars. There can be significant swings in the exchange rate between the U.S. dollar and the Canadian dollar. There are no plans at this time to hedge against any exchange rate fluctuations in currencies.

***Title to our properties may be subject to other claims that could affect our property rights and claims.***

There are risks that title to our properties may be challenged or impugned. Our I-M Mine Property is located in California and may be subject to prior unrecorded agreements or transfers and title may be affected by undetected defects.

***We may be unable to secure surface access or purchase required surface rights.***

Although we obtain the rights to some or all of the minerals in the ground subject to the mineral tenures that we acquire, or have the right to acquire, in some cases we may not acquire any rights to, or ownership of, the surface to the areas covered by such mineral tenures. In such cases, applicable mining laws usually provide for rights of access to the surface for the purpose of carrying on mining activities; however, the enforcement of such rights through the courts can be costly and time consuming. It is necessary to negotiate surface access or to purchase the surface rights if long-term access is required. There can be no guarantee that, despite having the right at law to carry on mining activities, we will be able to negotiate satisfactory agreements with any such existing landowners/occupiers for such access or purchase of such surface rights, and therefore we may be unable to carry out planned mining activities. In addition, in circumstances where such access is denied, or no agreement can be reached, we may need to rely on the assistance of local officials or the courts in such jurisdiction the outcomes of which cannot be predicted with any certainty. Our inability to secure surface access or purchase required surface rights could materially and adversely affect our timing, cost, or overall ability to develop any mineral deposits we may locate.

***Our properties and operations may be subject to litigation or other claims.***

From time to time our properties or operations may be subject to disputes that may result in litigation or other legal claims. We may be required to take countermeasures or defend against these claims, which will divert resources and management time from operations. The costs of these claims or adverse filings may have a material effect on our business and results of operations.

***We do not currently insure against all the risks and hazards of mineral exploration, development, and mining operations.***

Exploration, development, and mining operations involve various hazards, including environmental hazards, industrial accidents, metallurgical and other processing problems, unusual or unexpected rock formations, structural cave-ins or slides, flooding, fires, and periodic interruptions due to inclement or hazardous weather conditions. These risks could result in damage to or destruction of mineral properties, facilities, or other property, personal injury, environmental damage, delays in operations, increased cost of operations, monetary losses, and possible legal liability. We may not be able to obtain insurance to cover these risks at economically feasible premiums or at all. We may elect not to insure where premium costs are disproportionate to our perception of the relevant risks. The payment of such insurance premiums and of such liabilities would reduce the funds available for exploration and production activities.

**Risks Related to the Shares**

***Our share price may be volatile and as a result you could lose all or part of your investment.***

In addition to volatility associated with equity securities in general, the value of your investment could decline due to the impact of any of the following factors upon the market price of the Shares:

- Disappointing results from our exploration efforts;
- Decline in demand for our Common Stock;
- Downward revisions in securities analysts' estimates or changes in general market conditions;
- Technological innovations by competitors or in competing technologies;
- Investor perception of our industry or our prospects; and
- General economic trends.

Our share price on the CSE and the OTCQX has experienced significant price and volume fluctuations. Stock markets in general have experienced extreme price and volume fluctuations, and the market prices of securities have been highly volatile. These fluctuations are often unrelated to operating performance and may adversely affect the market price of the Shares. As a result, you may be unable to sell any Shares you acquire at a desired price.

***We have never paid dividends on our Common Stock.***

We have not paid dividends on our Common Stock to date, and we do not expect to pay dividends for the foreseeable future. We intend to retain our initial earnings, if any, to finance our operations. Any future dividends on Common Stock will depend upon our earnings, our then-existing financial requirements, and other factors, and will be at the discretion of the Board.

***Investors' interests in our company will be diluted and investors may suffer dilution in their net book value per share of Common Stock if we issue additional employee/director/consultant options or if we sell additional Common Stock and/or warrants to finance our operations.***

In order to further expand our operations and meet our objectives, any additional growth and/or expanded exploration activity will likely need to be financed through sale of and issuance of additional Common Stock, including, but not limited to, raising funds to explore the I-M Mine Property. Furthermore, to finance any acquisition activity, should that activity be properly approved, and depending on the outcome of our exploration programs, we likely will also need to issue additional Common Stock to finance future acquisitions, growth, and/or additional exploration programs of any or all of our projects or to acquire additional properties. We will also in the future grant to some or all of our directors, officers, and key employees and/or consultants options to purchase Common Stock as non-cash incentives. The issuance of any equity securities could, and the issuance of any additional Common Stock will, cause our existing stockholders to experience dilution of their ownership interests.

If we issue additional Common Stock or decide to enter into joint ventures with other parties in order to raise financing through the sale of equity securities, investors' interests in our company will be diluted and investors may suffer dilution in their net book value per share of Common Stock depending on the price at which such securities are sold.

***The issuance of additional shares of Common Stock may negatively impact the trading price of our securities.***

We have issued Common Stock in the past and will continue to issue Common Stock to finance our activities in the future. In addition, newly issued or outstanding options, warrants, and broker warrants to purchase Common Stock may be exercised, resulting in the issuance of additional Common Stock. Any such issuance of additional Common Stock would result in dilution to our stockholders, and even the perception that such an issuance may occur could have a negative impact on the trading price of the Common Stock.

***We are subject to the continued listing criteria of the CSE, and our failure to satisfy these criteria may result in delisting of our Common Stock from the CSE.***

Our Common Stock is currently listed for trading on the CSE. In order to maintain the listing on the CSE or any other securities exchange we may trade on, we must maintain certain financial and share distribution targets, including maintaining a minimum number of public shareholders. In addition to objective standards, these exchanges may delist the securities of any issuer if, in the exchange's opinion, our financial condition and/or operating results appear unsatisfactory; if it appears that the extent of public distribution or the aggregate market value of the security has become so reduced as to make continued listing inadvisable; if we sell or dispose of our principal operating assets or cease to be an operating company; if we fail to comply with the listing requirements; or if any other event occurs or any condition exists which, in their opinion, makes continued listing on the exchange inadvisable.

If the CSE or any other exchange were to delist the Common Stock, investors may face material adverse consequences, including, but not limited to, a lack of trading market for the Common Stock, reduced liquidity, decreased analyst coverage, and/or an inability for us to obtain additional financing to fund our operations.

***We are an "emerging growth company," and we cannot be certain if the reduced reporting requirements applicable to emerging growth companies will make our Common Stock less attractive to investors.***

We are an "emerging growth company," as defined in the Jumpstart Our Business Startups Act (the "JOBS Act"). For as long as we continue to be an emerging growth company, we may take advantage of exemptions from various reporting requirements that are applicable to other public companies that are not emerging growth companies, including not being required to comply with the auditor attestation requirements of Section 404 of the Sarbanes-Oxley Act, reduced disclosure obligations regarding executive compensation in our periodic reports and proxy statements, and exemptions from the requirements of holding a non-binding advisory vote on executive compensation and stockholder approval of any golden parachute payments not previously approved. We could be an emerging growth company for up to five years, although circumstances could cause us to lose that status earlier, including if the market value of our Common Stock held by non-affiliates exceeds $700 million as of any July 31 before that time, in which case we would no longer be an emerging growth company as of the following January 31. We cannot predict if investors will find our Common Stock less attractive because we may rely on these exemptions. If some investors find our Common Stock less attractive as a result, there may be a less active trading market for our Common Stock and our stock price may be more volatile. Under the JOBS Act, emerging growth companies can also delay adopting new or revised accounting standards until such time as those standards apply to private companies. We have elected to avail ourselves of this exemption from new or revised accounting standards and, therefore, will not be subject to the same new or revised accounting standards as other public companies that are not emerging growth companies.

## CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

The information discussed in this prospectus includes "forward-looking statements" within the meaning of Section 27A of the Securities Act and Section 21E of the Exchange Act. All statements, other than statements of historical facts, included in this prospectus concerning, among other things, planned capital expenditures, future cash flows and borrowings, pursuit of potential acquisition opportunities, our financial position, business strategy and other plans and objectives for future operations, future exploration activities, future mineral resource estimates, and future joint venture arrangements are forward-looking statements. These forward-looking statements are identified by the use of terms and phrases such as "may," "expect," "estimate," "project," "plan," "believe," "intend," "achievable," "anticipate," "will," "continue," "potential," "should," "could," "would", "might" and similar terms and phrases.

Forward-looking statements are subject to a variety of known and unknown risks, uncertainties, and other factors that could cause actual events or results to differ from those expressed or implied by the forward-looking statements, including, without limitation, risks related to:

- our requirement of significant additional capital;
- our limited operating history;
- our history of losses;
- our properties that are in the exploration stage;
- mineral exploration and production activities;
- our lack of mineral production from our properties;
- our exploration activities being unsuccessful;
- our ability to obtain permits and licenses for production;
- government and environmental regulations that may increase our costs of doing business or restrict our operations;
- proposed legislation that may significantly affect the mining industry;
- land reclamation requirements;
- competition in the mining industry;
- equipment and supply shortages;
- current and future joint ventures and partnerships;
- our ability to attract qualified management;
- currency fluctuations;
- claims on the title to our properties;
- surface access on our properties;
- potential future litigation;
- our lack of insurance covering all our operations;
- our Common Stock, including price volatility, lack of dividend payments and dilution;
- the impact of the COVID-19 pandemic, including impacts on employees, our operations including our ability to raise equity or debt capital, regulations resulting in potential business interruptions and travel restrictions, and the global economy; and
- the impacts of the Russian war in Ukraine and related sanctions on the global economy and on the mining industry.

This list is not exhaustive of the factors that may affect our forward-looking statements. Some of the important risks and uncertainties that could affect forward-looking statements are described further under "Risk Factors" in this prospectus. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those anticipated, believed, estimated, or expected. We caution readers not to place undue reliance on any such forward-looking statements, which speak only as of the date made. We disclaim any obligation subsequently to revise any forward-looking statements to reflect events or circumstances after the date of such statements or to reflect the occurrence of anticipated or unanticipated events, except as required by law.

**USE OF PROCEEDS**

This prospectus relates to the sale or other disposition of Shares of our Common Stock by the selling stockholders listed in the "Selling Stockholders" section below, and their transferees. We will not receive any proceeds from any sale of the Shares by the selling stockholders.

**SELLING STOCKHOLDERS**

This prospectus covers the offering of up to 12,840,000 Shares by selling stockholders. This includes Shares acquirable upon exercise of our outstanding warrants and our outstanding incentive stock options.

Selling stockholders are persons or entities that, directly or indirectly, have acquired shares, or will acquire shares from us from time to time upon exercise of certain warrants and incentive stock options. This prospectus and any prospectus supplement will only permit the selling stockholders to sell the Shares identified in the column "Number of Shares Offered Hereby."

The selling stockholders may from time to time offer and sell the Shares pursuant to this prospectus and any applicable prospectus supplement. The selling stockholders may offer all or some portion of the Shares they hold or acquire, but only Shares that are currently outstanding or are acquired upon the exercise of certain warrants and incentive stock options that are currently outstanding, and in either case included in the "Number of Shares Offered Hereby" column, may be sold pursuant to this prospectus or any applicable prospectus supplement.

The Shares issued to the selling stockholders are "restricted" securities under applicable federal and state securities laws and are being registered to give the selling stockholders the opportunity to sell their Shares. The registration of such Shares does not necessarily mean, however, that any of these Shares will be offered or sold by the selling stockholders. The selling stockholders may from time to time offer and sell all or a portion of their Shares on the CSE, in the over-the-counter market, in negotiated transactions, or otherwise, at market prices prevailing at the time of sale or at negotiated prices.

The registered Shares may be sold directly or through brokers or dealers, or in a distribution by one or more underwriters on a firm commitment or best efforts basis. To the extent required, the names of any agent or broker-dealer and applicable commissions or discounts and any other required information with respect to any particular offer will be set forth in an accompanying prospectus supplement. See "Plan of Distribution."

Each of the selling stockholders reserves the sole right to accept or reject, in whole or in part, any proposed purchase of the registered Shares to be made directly or through agents. To the extent that any of the selling stockholders are affiliates of our company or are brokers or dealers, they may be deemed to be "underwriters" within the meaning of the Securities Act and any commissions received by them and any profit on the resale of the registered shares may be deemed to be underwriting commissions or discounts under the Securities Act. As of the date of this prospectus, and based on the representations we have received from the selling stockholders, none of the selling stockholders are brokers or dealers or are affiliated with a broker or dealer. Selling stockholders that are affiliates of or have material relationships with our company are identified below.

The following table sets forth the name of persons who are offering the resale of Shares by this prospectus, the number of shares of Common Stock beneficially owned by each person, the number of Shares that may be sold in this offering and the number of shares of Common Stock each person will own after the offering, assuming they sell all of the Shares offered. The information appearing in the table below is based on information provided by or on behalf of the named selling stockholders. We will not receive any proceeds from the resale of the Shares by the selling stockholders.

| Name | Number of Shares of Common Stock Beneficially Owned Prior to this Offering[1] | Number of Shares Offered Hereby[1] | Shares of Common Stock Owned After the Offering | |
|---|---|---|---|---|

(1) This table is based upon information supplied by the selling stockholders, which information may not be accurate as of the date hereof. We have determined beneficial ownership in accordance with the rules of the SEC. In computing the number of shares beneficially owned by a selling stockholder, shares that may be acquired by the stockholder upon exercise of any convertible securities (e.g., warrants and options) that are eligible (or within the next 60 days will become eligible) to be exercised (e.g., options that are vested or will vest any time within the next 60 days) are included with respect to that stockholder. Except as indicated by the footnotes below, we believe, based on the information furnished to us, that the selling stockholders named in the table above have sole voting and investment power with respect to all shares of Common Stock that they beneficially own, subject to applicable community property laws. Applicable percentages are based on 32,787,798 shares of Common Stock outstanding on March 28, 2022, adjusted as required by rules promulgated by the SEC.
(2) Michael Gentile, President and sole owner of 9458-2855 Quebec Inc., controls these securities.
(3) Includes 1,680,000 shares issuable upon exercise of January 2022 Warrants.
(4) Benjamin Wayne Mossman is a director and officer of the company.
(5) Includes 50,000 shares issuable upon exercise of January 2022 Warrants and includes 300,000 shares issuable upon exercise of February 2022 Stock Options.
(6) Includes 125,000 shares issuable upon exercise of January 2022 Warrants.
(7) Shares issuable upon exercise of February 2022 Stock Options.
(8) Lawrence Ward Lepard, a director of the Company and the Managing General Partner of Equity Management Associates ("**EMA**") along with David A. Foley, the Managing Partner of EMA, controls these securities.
(9) Includes 625,000 shares issuable upon exercise of January 2022 Warrants.
(10) Shares issuable upon exercise of February 2022 Stock Options.
(11) Includes 50,000 shares issuable upon exercise of January 2022 Warrants.
(12) George W. Noyes, the beneficial owner, controls these securities.
(13) Includes 125,000 shares issuable upon exercise of January 2022 Warrants.
(14) Murray G. Flanigan, a director of the company and President of GR7 Holdings Inc., controls these securities.
(15) Includes 50,000 shares issuable upon exercise of January 2022 Warrants.
(16) John G. Proust, a director of the Company and the sole trustee of the Gwen Proust 2018 Alter Ego Trust, controls these securities.
(17) Includes 700,000 shares issuable upon exercise of January 2022 Warrants.
(18) Hanif Jamal, the President of H. Jamal Holdings Ltd., controls these securities.
(19) Includes 62,500 shares issuable upon exercise of January 2022 Warrants.
(20) Includes 125,000 shares issuable upon exercise of January 2022 Warrants.
(21) John Graham Proust is a director of the Company. See also Note (16).
(22) Shares issuable upon exercise of February 2022 Stock Options.
(23) Includes 50,000 shares issuable upon exercise of January 2022 Warrants.
(24) Includes 125,000 shares issuable upon exercise of January 2022 Warrants.
(25) Includes 62,500 shares issuable upon exercise of January 2022 Warrants.
(26) Lawrence Ward Lepard is a director of the Company. See also Note (8) and Note (39).
(27) Includes 150,000 shares issuable upon exercise of January 2022 Warrants and 100,000 shares issuable upon exercise of February 2022 Stock Options.
(28) Maria D. Furman, the beneficial owner, controls these securities.
(29) Includes 125,000 shares issuable upon exercise of January 2022 Warrants.
(30) Murray Guinn Flanigan is a director of the Company.

(31) Shares issuable upon exercise of February 2022 Stock Options.
(32) Daniel Oliver Jr., the Managing Member of Myrmikan Gold Fund LLC, controls these securities.
(33) Includes 625,000 shares issuable upon exercise of January 2022 Warrants.
(34) Robert Cunjak, the beneficial owner, controls these securities.
(35) Includes 62,500 shares issuable upon exercise of January 2022 Warrants.
(36) Includes 37,500 shares issuable upon exercise of January 2022 Warrants.
(37) Includes 62,500 shares issuable upon exercise of January 2022 Warrants.
(38) Includes 125,000 shares issuable upon exercise of January 2022 Warrants.
(39) Lawrence Ward Lepard, the Managing General Partner of EMA along with David A. Foley, Managing Partner of EMA, controls these securities.
(40) Includes 500,000 shares issuable upon exercise of January 2022 Warrants.
(41) Thomas Irving Vehrs is a director of the Company.
(42) Shares issuable upon exercise of February 2022 Stock Options.
(43) Peter Maxwell Edwards, the Managing Director of the trust, VBS Exchange Pty Ltd, controls these securities.
(44) Includes 500,000 shares issuable upon exercise of January 2022 Warrants.
(45) Vincent Wei-Jiun Boon is an officer of the Company.
(46) Shares issuable upon exercise of February 2022 Stock Options.

None of the Selling Shareholders has, or within the past three years has had, any position, office or material or family relationship with our company or any of our predecessors or affiliates, except as follows:

- Benjamin Mossman is a director and officer of our company.
- Eileen Au is an officer of our company
- Lawrence Lepard is a director of our company. Mr. Lepard holds securities of our company in his personal capacity and controls securities held by (a) certain of his family members, (b) EMA GARP FUND, L.P. in his capacity as the Managing General Partner of EMA and (c) SEA VIEW Investments LLC. in his capacity as the Managing General Partner of EMA.
- John Proust is a director of our company. Mr. Proust holds securities of our company in his personal capacity and controls securities held by Gwen Proust 2018 Alter Ego Trust.
- Murray Flanigan is a director of our company. Mr. Flanigan holds securities of our company in his personal capacity and controls securities held by GR7 Holdings Inc.
- Thomas Vehrs is a director of our company.
- Vince Boon is an officer of our company.

## PLAN OF DISTRIBUTION

We are registering the Shares to permit the resale of those Shares under the Securities Act from time to time after the date of this prospectus at the discretion of the holders of such Shares. We will not receive any of the proceeds from the sale by the selling stockholders of the Shares. We will bear all fees and expenses incident to our obligation to register the Shares.

Each selling stockholder and any of their pledgees, assignees and successors-in-interest may, from time to time, sell any or all of their Shares on the CSE, the OTCQX, or any other stock exchange, market, quotation service or trading facility on which the shares are traded or in private transactions, provided that all applicable Canadian laws and other applicable local laws are satisfied. The selling stockholders may also sell their Shares directly or through one or more underwriters, broker-dealers, or agents. If the Shares are sold through underwriters or broker-dealers, the selling stockholders will be responsible for underwriting discounts or commissions or agent's commissions. The Shares may be sold in one or more transactions at fixed prices, at prevailing market prices at the time of the sale, at varying prices determined at the time of sale, or at negotiated prices. A selling stockholder may use any one or more of the following methods when selling shares:

- ordinary brokerage transactions and transactions in which the broker-dealer solicits purchasers;
- block trades in which the broker-dealer will attempt to sell the shares as agent but may position and resell a portion of the block as principal to facilitate the transaction;
- purchases by a broker-dealer as principal and resale by the broker-dealer for its account;

- an exchange distribution in accordance with the rules of the applicable exchange;
- privately negotiated transactions;
- settlement of short sales entered into after the effective date of the registration statement of which this prospectus is a part;
- broker-dealers may agree with the selling stockholders to sell a specified number of such shares at a stipulated price per share;
- through the writing or settlement of options or other hedging transactions, whether through an options exchange or otherwise;
- a combination of any such methods of sale; and
- any other method permitted pursuant to applicable law.

The selling stockholders may also sell shares pursuant to Rule 144 under the Securities Act, if available, rather than under this prospectus.

Any Shares offered by a selling stockholder by this prospectus that were acquired upon the exercise of January 2022 Warrants remain subject to Canadian resale restrictions which provide that unless permitted under Canadian securities legislation, a selling stockholder must not trade those Shares before May 29, 2022. Any shares offered by a selling stockholder by this prospectus that are acquired upon the exercise of February 2022 Stock Options will remain subject to a hold period expiring June 8, 2022 in accordance with CSE policies.

If the selling stockholders effect such transactions by selling Shares to or through underwriters, broker-dealers, or agents, such underwriters, broker-dealers, or agents may receive commissions in the form of discounts, concessions, or commissions from the selling stockholders or commissions from purchasers of the Shares for whom they may act as agent or to whom they may sell as principal (which discounts, concessions, or commissions as to particular underwriters, broker-dealers, or agents may be in excess of those customary in the types of transactions involved). Broker-dealers engaged by any selling stockholder may arrange for other brokers-dealers to participate in sales. Broker-dealers may receive commissions or discounts from the selling stockholder (or, if any broker-dealer acts as agent for the purchaser of shares, from the purchaser) in amounts to be negotiated, but, except as set forth in a supplement to this prospectus, in the case of an agency transaction not in excess of a customary brokerage commission in compliance with FINRA Rule 2440; and in the case of a principal transaction a markup or markdown in compliance with FINRA IM-2440.

In connection with sales of Shares or interests therein, the selling stockholders may enter into hedging transactions with broker-dealers or other financial institutions, which may in turn engage in short sales of the Shares in the course of hedging in positions they assume. The selling stockholders may also sell shares of Common Stock short and deliver Shares covered by this prospectus to close out their short positions and to return borrowed shares in connection with such short sales. The selling stockholders may also loan or pledge Shares to broker-dealers that in turn may sell such Shares. The selling stockholders may also enter into option or other transactions with broker-dealers or other financial institutions or the creation of one or more derivative securities which require the delivery to such broker-dealer or other financial institution of Shares offered by this prospectus, which Shares such broker-dealer or other financial institution may resell pursuant to this prospectus (as supplemented or amended to reflect such transaction).

The selling stockholders and any broker-dealers or agents that are involved in selling the Shares may be deemed to be "underwriters" within the meaning of the Securities Act, in connection with such sales. In such event, any commissions received by, or any discounts or concessions allowed to, any such broker-dealer or agent and any profit on the resale of any Shares purchased by them may be deemed to be underwriting commissions or discounts under the Securities Act. At the time a particular offering of the Shares is made, a prospectus supplement, if required, will be distributed that will set forth the aggregate amount of Shares being offered and the terms of the offering, including the name or names of any broker-dealers or agents, any discounts, commissions, and other terms constituting compensation from the selling stockholders and any discounts, commissions, or concessions allowed or re-allowed or paid to broker-dealers.

Each selling stockholder has informed us that it does not have any written or oral agreement or understanding, directly or indirectly, with any person to distribute the Shares.

Because the selling stockholders may be deemed to be "underwriters" within the meaning of the Securities Act, they will be subject to the prospectus delivery requirements of the Securities Act, including Rule 172 thereunder. Once this registration statement becomes effective, we intend to file the final prospectus with the SEC in accordance with SEC Rules 172 and 424. Provided we are not the subject of any SEC stop orders and we are not subject to any cease and desist proceedings, the obligation to deliver a final prospectus to a purchaser will be deemed to have been met.

There is no underwriter or coordinating broker acting in connection with the proposed sale of the resale shares by the selling stockholders.

Under the securities laws of some states, the Shares may be sold in such states only through registered or licensed brokers or dealers. In addition, in some states the Shares may not be sold unless such shares have been registered or qualified for sale in such state, or an exemption from registration or qualification is available and is complied with.

There can be no assurance that any selling stockholder will sell any or all of the Shares registered pursuant to the registration statement of which this prospectus forms a part.

Under applicable rules and regulations under the Exchange Act, any person engaged in the distribution of the Shares may not simultaneously engage in market making activities with respect to the Common Stock for the applicable restricted period, as defined in Regulation M, prior to the commencement of the distribution. In addition, the selling stockholders will be subject to applicable provisions of the Exchange Act, and the rules and regulations thereunder, including Regulation M, which may limit the timing of purchases and sales of shares of our Common Stock by the selling stockholders or any other person. All of the foregoing provisions may affect the marketability of the Shares and the ability of any person or entity to engage in market-making activities with respect to the Shares.

We will pay all expenses of the registration of the Shares, estimated to be approximately $23,714.07 in total, including, without limitation, SEC filing fees, expenses of compliance with state securities or "blue sky" laws, and legal and accounting fees; provided, however, that a selling stockholder will pay all underwriting discounts and selling commissions, if any. We will indemnify the selling stockholders against liabilities, including some liabilities under the Securities Act, in accordance with applicable registration rights agreements, if any, or the selling stockholders will be entitled to contribution. We may be indemnified by the selling stockholders against civil liabilities, including liabilities under the Securities Act, that may arise from any written information furnished to us by the selling stockholder specifically for use in this prospectus, in accordance with the related registration rights agreement, or we may be entitled to contribution.

We agreed to keep this prospectus effective until the earlier of (i) the date on which the Shares may be resold by the selling stockholders without registration and without the requirement to be in compliance with Rule 144(c)(1) and otherwise without restriction or limitation pursuant to Rule 144 or (ii) all of the Shares have been sold pursuant to this prospectus or Rule 144 under the Securities Act or any other rule of similar effect.

Once sold under the registration statement of which this prospectus forms a part, the Shares will be freely tradable in the hands of persons other than our affiliates.

## DESCRIPTION OF CAPITAL STOCK

### Common Stock

Our authorized capital consists of 400,000,000 shares of Common Stock with a par value of $0.001 per share. As of March 28, 2022, there were 32,787,798 shares of our Common Stock issued and outstanding.

Holders of our Common Stock have no preemptive rights to purchase additional shares of Common Stock or other subscription rights. The Common Stock carries no conversion rights and is not subject to redemption or to any sinking fund provisions. All of our issued Common Stock is entitled to share equally in dividends from sources legally available, when, as and if declared by our Board of Directors, and upon our liquidation or dissolution, whether voluntary or involuntary, to share equally in our assets available for distribution to security holders.

Our Board of Directors is authorized to issue additional shares of Common Stock not to exceed the amount authorized by our Articles of Incorporation, on such terms and conditions and for such consideration as the Board may deem appropriate without further security holder action.

**Voting Rights**

Each holder of our Common Stock is entitled to one vote per share on all matters on which such stockholders are entitled to vote. Since the Common Stock does not have cumulative voting rights, the holders of more than 50% of the shares voting for the election of directors can elect all the directors if they choose to do so and, in such event, the holders of the remaining shares will not be able to elect any person to the Board of Directors.

**Dividend Policy**

Holders of our Common Stock are entitled to dividends if declared by the Board of Directors out of funds legally available for the payment of dividends. Since our inception as a company on February 9, 2007, we have not declared any dividends, nor do we intend to issue any cash dividends in the future. Our foreseeable plans include retaining earnings, if any, to finance the development and expansion of our business.

## RECENT UPDATES

Benjamin W. Mossman was a director and officer of Banks Island Gold Ltd. (**"Banks"**), a company formerly listed on the TSX Venture Exchange that traded under the symbol "BOZ", during the time it assigned itself into bankruptcy on January 7, 2016. Banks appointed D. Manning & Associates as trustee in the bankruptcy proceedings. Subsequent to the bankruptcy, FTI Consulting of Vancouver, BC, was appointed as receiver by a major secured creditor. The trustee subsequently applied to be discharged from its role as trustee, which was granted on April 4, 2018. To the best of Mr. Mossman's knowledge, the secured creditor has taken possession of the property as of this date. To date, Banks remains undischarged from the bankruptcy proceedings.

Mr. Mossman, Banks, and two other former employees of Banks, were subject to summary conviction proceedings commenced in August 2016 for alleged violations of the British Columbia provincial *Environmental Management Act* (the **"EMA"**), the Provincial Water Act, and the federal Fisheries Act. The charges are related to the active mining operations conducted by Banks at and on Banks Island, BC during the period from 2014 to 2016. The court found Mr. Mossman not guilty and acquitted him of all, but two, charges under the EMA and Fisheries Act. For those two minor offences, the court imposed a $15,000 global fine against Mr. Mossman. All charges were dropped against one former employee and against Banks, and the court dismissed all charges against the other former employee.

Subsequent to the decision, the Crown filed an appeal regarding certain of the original determinations as they relate to Mr. Mossman. The summary conviction appeal was heard by the BC Supreme Court in May 2019. In February 2020, the court issued its decision and ordered a new trial in the matter for Mr. Mossman and one of the former employees. However, Mr. Mossman's two convictions and $15,000 fine for minor offenses relating to the incident were also set aside by the court. Counsel for Mr. Mossman sought leave to appeal the BC Supreme Court decision to the BC Court of Appeal, which was dismissed as part of the order for a new trial. The Supreme Court of Canada recently dismissed Mr. Mossman's application to appeal the order for a new trial. The new trial is scheduled to commence on April 11, 2022. Counsel for Mr. Mossman expects the trial to be concluded by October 2022.

In a second trial, the Crown charged Mr. Mossman with obstruction of justice related to the investigation of the underlying charges laid under the EMA and the other provincial and federal environmental regulations. The court acquitted him of that charge on March 6, 2019. No appeal of the acquittal was filed by the Crown.

## LEGAL MATTERS

The validity of the issuance of the Shares offered hereby has been passed upon for us by Securities Law USA, PLLC, Washington, DC.

## INTERESTS OF EXPERTS

The financial statements as of July 31, 2021 and 2020 and for the years ended July 31, 2021 and 2020 incorporated by reference in this prospectus and in the registration statement have been so incorporated in reliance on the report of Davidson & Company LLP, an independent registered public accounting firm, incorporated herein by reference, given on the authority of said firm as experts in auditing and accounting.

None of the above experts has received, or is to receive, in connection with the offering, a substantial interest, direct or indirect, in our company or any of our subsidiaries nor were they connected with our company or any of our subsidiaries as a promoter, managing or principal underwriter, voting trustee, director, officer, or employee.

## WHERE YOU CAN FIND MORE INFORMATION

We have filed with the SEC a registration statement on Form S-1, including exhibits and schedules, under the Securities Act with respect to the Shares of Common Stock to be sold in this offering. This prospectus and any prospectus supplement which form a part of the registration statement do not contain all of the information set forth in the registration statement or the exhibits and schedules filed therewith. For further information about us and the securities covered by this prospectus, please see the registration statement and the exhibits filed with the registration statement. Any statements made in this prospectus or any prospectus supplement concerning legal documents are not necessarily complete and you should read the documents that are filed as exhibits to the registration statement or otherwise filed with the SEC for a more complete understanding of the document or matter.

We file annual, quarterly and current reports, proxy statements and other information with the SEC. You may read, without charge, and copy, at prescribed rates, all or any portion of the registration statement or any reports, statements or other information in the files at the public reference room at the SEC's principal office at 100 F Street NE, Washington, D.C., 20549. You may request copies of these documents, for a copying fee, by writing to the SEC. You may call the SEC at 1-800-SEC-0330 for further information on the operation of its public reference room. Our filings, including the registration statement, are also available to you on the Internet website maintained by the SEC at http://www.sec.gov.

## INFORMATION INCORPORATED BY REFERENCE

The SEC allows us to incorporate by reference into this prospectus the information in documents we file with it, which means that we can disclose important information to you by referring you to those documents. The information incorporated by reference is considered to be a part of this prospectus, and information that we file later with the SEC will automatically update and supersede this information. Any statement contained in any document incorporated or deemed to be incorporated by reference herein shall be deemed to be modified or superseded for purposes of this prospectus to the extent that a statement contained in or omitted from this prospectus or any accompanying prospectus supplement, or in any other subsequently filed document which also is or is deemed to be incorporated by reference herein, modifies or supersedes such statement. Any such statement so modified or superseded shall not be deemed, except as so modified or superseded, to constitute a part of this prospectus.

We incorporate by reference the documents listed below and all future documents that we file with the SEC under Section 13(a), 13(c), 14 or 15(d) of the Exchange Act prior to the termination of the offering of the Shares:

- our Annual Report on Form 10-K for the year ended July 31, 2021, filed on October 29, 2021;
- our Quarterly Report on Form 10-Q for the quarter ended October 31, 2021, filed on December 15, 2021;
- our Quarterly Report on Form 10-Q for the quarter ended January 31, 2022, filed on March 16, 2022, and
- our Current Reports on Form 8-K filed on January 4, 2022; January 13, 2022, January 31, 2022; February 8, 2022 (two reports); February 10, 2022; February 14, 2022; February 22, 2022;

We do not, however, incorporate by reference in this prospectus any documents or portions thereof that are not deemed "filed" with the SEC, including any information furnished pursuant to Item 2.02 or Item 7.01 of our Current Reports on Form 8-K unless, and except to the extent, specified in such Current Reports.

We will provide to each person, including any beneficial owner, to whom a prospectus is delivered a copy of any of the filings incorporated by reference (other than an exhibit to such filings, unless the exhibit is specifically incorporated by reference into the filing requested) at no cost, if you submit a request to us by writing or telephoning us at the following mailing address, email address or telephone number:

**INFORMATION NOT REQUIRED IN PROSPECTUS**

**Item 13. Other Expenses of Issuance and Distribution.**

The following table lists the costs and expenses for which we have assumed sole responsibility and that we have paid or will pay in connection with the offering of securities covered by this prospectus, which do not include any sales commissions or discounts. All amounts are estimates except for the SEC registration fee.

| | Amount (US$) |
|---|---|
| SEC registration fee | $ 714.07 |
| Accounting fees and expenses | 2,500 |
| Legal fees and expenses | 15,000 |
| Printing fees and expenses | 2,000 |
| Transfer agent and registrar fees and expenses | 2,500 |
| Miscellaneous expenses | 1,000 |
| Total | $ 23,714.07 |

**Item 14. Indemnification of Directors and Officers.**

Nevada corporation law provides in Nevada Revised Statutes ("NRS") 78.7502 that:

- a corporation may indemnify any person who was or is a party or is threatened to be made a party to any threatened, pending or completed action, suit or proceeding, whether civil, criminal, administrative or investigative, except an action by or in the right of the corporation, by reason of the fact that the person is or was a director, officer, employee or agent of the corporation, or is or was serving at the request of the corporation as a director, officer, employee or agent of another corporation, partnership, joint venture, trust or other enterprise, against expenses, including attorneys' fees, judgments, fines and amounts paid in settlement actually and reasonably incurred by the person in connection with the action, suit or proceeding if (a) the person is not liable pursuant to NRS 78.138, or (b) the person acted in good faith and in a manner which he or she reasonably believed to be in or not opposed to the best interests of the corporation, and, with respect to any criminal action or proceeding, had no reasonable cause to believe the conduct was unlawful;

- a corporation may indemnify any person who was or is a party or is threatened to be made a party to any threatened, pending or completed action or suit by or in the right of the corporation to procure a judgment in its favor by reason of the fact that the person is or was a director, officer, employee or agent of the corporation, or is or was serving at the request of the corporation as a director, officer, employee or agent of another corporation, partnership, joint venture, trust or other enterprise against expenses, including amounts paid in settlement and attorneys' fees actually and reasonably incurred by the person in connection with the defense or settlement of the action or suit if (a) the person is not liable pursuant to NRS 78.138, or (b) the person acted in good faith and in a manner which he or she reasonably believed to be in or not opposed to the best interests of the corporation. Indemnification may not be made for any claim, issue or matter as to which such a person has been adjudged by a court of competent jurisdiction, after exhaustion of all appeals therefrom, to be liable to the corporation or for amounts paid in settlement to the corporation, unless and only to the extent that the court in which the action or suit was brought or other court of competent jurisdiction determines upon application that in view of all the circumstances of the case, the person is fairly and reasonably entitled to indemnity for such expenses as the court deems proper; and

- to the extent that a director, officer, employee or agent of a corporation has been successful on the merits or otherwise in defense of any action, suit or proceeding referred to in the two paragraphs above, or in defense of any claim, issue or matter therein, the corporation shall indemnify him or her against expenses, including attorneys' fees, actually and reasonably incurred by him or her in connection with the defense.

NRS 78.7502.3 provides that we may make any discretionary indemnification pursuant to NRS 78.7502 only as authorized in the specific case upon a determination that indemnification of the director, officer, employee or agent is proper in the circumstances. The determination must be made:

- by our stockholders;
- by our board of directors by majority vote of a quorum consisting of directors who were not parties to the action, suit or proceeding;
- if a majority vote of a quorum consisting of directors who were not parties to the action, suit or proceeding so orders, by independent legal counsel in a written opinion;
- if a quorum consisting of directors who were not parties to the action, suit or proceeding cannot be obtained, by independent legal counsel in a written opinion; or
- by court order.

The indemnification pursuant to NRS 78.7502 and advancement of expenses authorized in or ordered by a court pursuant to NRS 78.751.2:

- does not exclude any other rights to which a person seeking indemnification or advancement of expenses may be entitled under the articles of incorporation or any bylaw, agreement, vote of stockholders or disinterested directors or otherwise, for either an action in the person's official capacity or an action in another capacity while holding office, except that indemnification, unless ordered by a court pursuant to NRS 78.7502 or for the advancement of expenses made pursuant to NRS 78.751.2, may not be made to or on behalf of any director or officer finally adjudged by a court of competent jurisdiction, after exhaustion of any appeals taken therefrom, to be liable for intentional misconduct, fraud or a knowing violation of law, and such misconduct, fraud or violation was material to the cause of action; and
- continues for a person who has ceased to be a director, officer, employee or agent and inures to the benefit of the heirs, executors and administrators of such a person.

Our bylaws provide that:

- The directors of the Company shall cause the Company to indemnify a director or former director of the Company and the directors may cause the Company to indemnify a director or former director of a corporation of which the Company is or was a shareholder and the heirs and personal representatives of any such person against all costs, charges and expenses, including an amount paid to settle an action or satisfy a judgment, actually and reasonably incurred by him or her including an amount paid to settle an action or satisfy a judgment in any criminal or administrative action or proceeding to which he or she is made a party by reason of his or her being or having been a director of the Company or a director of such corporation, including an action brought by the Company or corporation. Each director of the Company on being elected or appointed is deemed to have contracted with the Company on the terms of the foregoing indemnity.
- The directors of the Company may cause the Company to indemnify an officer, employee or agent of the Company or of a corporation of which the Company is or was a shareholder (notwithstanding that he or she is also a director of the Company) and his or her heirs and personal representatives against all costs, charges and expenses incurred by him or her and resulting from his or her acting as an officer, employee or agent of the Company or the corporation. In addition, the Company shall indemnify the secretary or assistant secretary of the Company (if he or she is not a full time employee of the Company and notwithstanding that he or she is also a director of the Company) and his or her respective heirs and legal representatives against all costs, charges and expenses incurred by him or her and arising out of the functions assigned to the secretary by law or the articles of incorporation of the Company, and each secretary and assistant secretary, on being appointed is deemed to have contracted with the Company on the terms of the foregoing indemnity.

- The directors of the Company may cause the Company to purchase and maintain insurance for the benefit of a person who is or was serving as a director, officer, employee or agent of the Company or as a director, officer, employee or agent of a corporation of which the Company is or was a shareholder and his or her heirs or personal representatives against a liability incurred by him as a director, officer, employee or agent.

**Item 15. Recent Sales of Unregistered Securities.**

During the past three years, we have issued the following securities without registration under the Securities Act outside the United States pursuant to the exclusion from registration provided under Rule 903 of Regulation S and inside the United States pursuant to the exemptions from registration provided Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder, in each case in reliance upon the representations received from the purchasers of those securities.

On July 3, 2019, we completed the sale of an aggregate of 1,036,813 units at a price of $0.50 (C$0.70) per unit for gross proceeds of $552,000 (C$725,769). Each unit consisted of one share of our Common Stock and half of one non-transferable share purchase warrant, each whole warrant exercisable into one additional share of Common Stock at a price of $0.80 (C$1.00) until July 3, 2022. We issued the shares and warrants underlying the units sold in reliance on Rule 903 of Regulation S for offers and sales outside of the United States and Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder for offers and sales in the United States and to U.S. persons. Our reliance on Rule 903 was based on the fact that the securities were sold in offshore transactions. We did not engage in any directed selling efforts in the United States in connection with the sale of the securities, and none of the purchasers of those securities was a U.S. person or acquired the securities for the account or benefit of any U.S. person. Our reliance on Section 4(a)(2) and Rule 506(b) was based on the fact that the U.S. investors provided us with written representations regarding their investment intent and status as an accredited investor, and that neither we nor anyone acting on our behalf engaged in any general advertising or general solicitation.

On August 19, 2019, we completed the sale of an aggregate of 4,582,644 units at a price of $0.53 (C$0.70) per unit for gross proceeds of $2,412,281 (C$3,207,850). Each unit consisted of one share of our Common Stock and half of one non-transferable share purchase warrant, each whole warrant exercisable into one additional share of Common Stock at a price of $0.80 (C$1.00) until August 19, 2022. We issued the shares and warrants underlying the units sold in reliance on Rule 903 of Regulation S for offers and sales outside of the United States and Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder for offers and sales in the United States and to U.S. persons. Our reliance on Rule 903 was based on the fact that the securities were sold in offshore transactions. We did not engage in any directed selling efforts in the United States in connection with the sale of the securities, and none of the purchasers of those securities was a U.S. person or acquired the securities for the account or benefit of any U.S. person. Our reliance on Section 4(a)(2) and Rule 506(b) was based on the fact that the U.S. investors provided us with written representations regarding their investment intent and status as an accredited investor, and that neither we nor anyone acting on our behalf engaged in any general advertising or general solicitation.

On August 21, 2019, we granted a total of 751,284 incentive stock options pursuant to our stock option plan to various directors, officers and consultants including: 461,284 to our Chief Executive Officer, Benjamin W. Mossman; 75,000 to John Proust, a member of our Board of Directors; 40,000 to Thomas I. Vehrs, a member of our Board of Directors; 40,000 to Murray Flanigan, a member of our Board of Directors and 100,000 to Lawrence W. Lepard, a member of our Board of Directors; 10,000 to Vince Boon, our Chief Financial Officer; and 10,000 to Eileen Au, our corporate secretary. The remaining 15,000 options were granted to some of our consultants who were eligible to participate in our stock option plan. Each option vested immediately and is exercisable into one share of our Common Stock at a price of $0.50 (C$0.70) per share until August 21, 2024. We granted the options in reliance on Rule 903 of Regulation S for grants outside of the United States and Section 4(a)(2) of the Securities Act for grants in the United States and to U.S. persons. Our reliance on Rule 903 of Regulation S was based on the fact that the securities were offered and sold in an offshore transaction. We did not engage in any directed selling efforts in the United States in connection with the grant of the securities and none of the persons receiving those securities was a U.S. person, nor did they acquire the securities for the account or for the benefit of any U.S. person. Our reliance on Section 4(a)(2) was based on the availability to the grantees of the incentive stock options of information regarding our company and our properties and operations and the private nature of the transactions.

On September 9, 2019 in conjunction with a debt financing, we issued 1,150,000 share purchase warrants to a lender as partial consideration for a secured $1,000,000 (C$1,316,450) loan. Each warrant entitles the holder to acquire one share of Common Stock at an exercise price of $0.80 (C$1.00) until September 9, 2022. We issued the warrants in reliance on Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder. Our reliance on Section 4(a)(2) and Rule 506(b) was based on the fact that the lender provided us with written representations regarding its investment intent and status as an accredited investor, the availability to the lender of information regarding our company and our properties and operations, and the private nature of the transaction.

On March 17, 2020, we granted 75,000 incentive stock options pursuant to our stock option plan to a consultant eligible to participate in our stock option plan. Each option vested immediately and is exercisable into one share of our Common Stock at a price of $0.50 (C$0.70) per share until March 17, 2023. We granted the options in reliance on Rule 903 of Regulation S for grants outside of the United States and Section 4(a)(2) of the Securities Act for grants in the United States and to U.S. persons. Our reliance on Rule 903 of Regulation S was based on the fact that the securities were offered and sold in an offshore transaction. We did not engage in any directed selling efforts in the United States in connection with the grant of the securities and none of the persons receiving those securities was a U.S. person, nor did they acquire the securities for the account or for the benefit of any U.S. person. Our reliance on Section 4(a)(2) was based on the availability to the grantees of the incentive stock options of information regarding our company and our properties and operations and the private nature of the transactions.

On July 31, 2020, we completed the sale of an aggregate of 4,363,833 units at a price of $0.75 (C$1.00) per unit for gross proceeds of $3,272,875 (C$4,386,200). Each unit consisted of one share of our Common Stock and half of one non-transferable share purchase warrant, each whole warrant exercisable into one additional share of Common Stock at a price of $1.00 (C$1.30) until July 31, 2022. We issued the shares and warrants underlying the units sold in reliance on Rule 903 of Regulation S for offers and sales outside of the United States and Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder for offers and sales in the United States and to U.S. persons. Our reliance on Rule 903 was based on the fact that the securities were sold in offshore transactions. We did not engage in any directed selling efforts in the United States in connection with the sale of the securities, and none of the purchasers of those securities was a U.S. person or acquired the securities for the account or benefit of any U.S. person. Our reliance on Section 4(a)(2) and Rule 506(b) was based on the fact that the U.S. investors provided us with written representations regarding their investment intent and status as an accredited investor, and that neither we nor anyone acting on our behalf engaged in any general advertising or general solicitation. In conjunction with this investment, we issued 43,435 share purchase warrants as a finder's fee. Each finder's warrant entitles the holder to acquire one share of Common Stock at an exercise price of $1.00 (C$1.30) until July 31, 2022. We issued the finder's warrants in reliance on Rule 903 of Regulation S. Our reliance on Rule 903 was based on the fact that the finder's warrants were issued in an offshore transaction. We did not engage in any directed selling efforts in the United States in connection with the sale of the securities, and the purchaser of the securities was not a U.S. person and did not acquire the securities for the account or benefit of a U.S. person.

On September 21, 2020, we completed the sale of an aggregate of 333,333 units at a price of $0.75 (C$1.02) per unit for gross proceeds of $250,000 (C$332,733). Each unit consisted of one share of our Common Stock and half of one non-transferable share purchase warrant, each whole warrant exercisable into one additional share of Common Stock at a price of $1.00 (C$1.36) until September 21, 2022. We issued the shares and warrants underlying the units sold in reliance on Rule 903 of Regulation S for offers and sales outside of the United States and Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder for offers and sales in the United States and to U.S. persons. Our reliance on Rule 903 was based on the fact that the securities were sold in offshore transactions. We did not engage in any directed selling efforts in the United States in connection with the sale of the securities, and none of the purchasers of those securities was a U.S. person or acquired the securities for the account or benefit of any U.S. person. Our reliance on Section 4(a)(2) and Rule 506(b) was based on the fact that the U.S. investors provided us with written representations regarding their investment intent and status as an accredited investor, and that neither we nor anyone acting on our behalf engaged in any general advertising or general solicitation.

On September 22, 2020, we granted 1,338,500 incentive stock options pursuant to our stock option plan to our Chief Executive Officer, Benjamin W. Mossman. Each option vested immediately and is exercisable into one share of our Common Stock at a price of $0.90 (C$1.20) per share until September 22, 2025. We granted the options in reliance on Section 4(a)(2) of the Securities Act. Our reliance on Section 4(a)(2) was based on the availability to the grantee of the incentive stock options of information regarding our company and our properties and operations and the private nature of the transaction.

On January 28, 2022, we completed the sale of an aggregate of 6,017,500 units at a price of $0.40 (C$0.50) per unit for gross proceeds of $250,000 (C$332,733). Each unit consisted of one share of our Common Stock and one transferable share purchase warrant, each warrant exercisable into one additional share of Common Stock at a price of $0.60 until January 28, 2024. We issued the shares and warrants underlying the units sold in reliance on Rule 903 of Regulation S for offers and sales outside of the United States and Section 4(a)(2) of the Securities Act and Rule 506(b) of Regulation D thereunder for offers and sales in the United States and to U.S. persons. Our reliance on Rule 903 was based on the fact that the securities were sold in offshore transactions. We did not engage in any directed selling efforts in the United States in connection with the sale of the securities, and none of the purchasers of those securities was a U.S. person or acquired the securities for the account or benefit of any U.S. person. Our reliance on Section 4(a)(2) and Rule 506(b) was based on the fact that the U.S. investors provided us with written representations regarding their investment intent and status as an accredited investor, and that neither we nor anyone acting on our behalf engaged in any general advertising or general solicitation.

On February 7, 2022, we granted a total of 805,000 incentive stock options pursuant to our stock option plan to various directors, officers and employees including: 300,000 to our Chief Executive Officer, Benjamin W. Mossman; 100,000 to John Proust, a member of our Board of Directors; 100,000 to Thomas I. Vehrs, a member of our Board of Directors; 100,000 to Murray Flanigan, a member of our Board of Directors and 100,000 to Lawrence W. Lepard, a member of our Board of Directors; 40,000 to Vince Boon, our Chief Financial Officer; and 40,000 to Eileen Au, our corporate secretary. The remaining 25,000 options were granted to one of our employees who was eligible to participate in our stock option plan. Each option vested immediately and is exercisable into one share of our Common Stock at a price of $0.65 per share until February 7, 2027. We granted the options in reliance on Section 4(a)(2) of the Securities Act. Our reliance on Section 4(a)(2) was based on the availability to the grantees of the incentive stock options of information regarding our company and our properties and operations and the private nature of the transactions.

**Item 16. Exhibits and Financial Statement Schedules.**

(a) Exhibits

The Exhibits filed herewith are set forth on the Index to Exhibits filed as a part of this registration statement beginning on page II-8 hereof.

**Item 17. Undertakings.**

The undersigned registrant hereby undertakes:

(1) To file, during any period in which offers or sales are being made, a post-effective amendment to this registration statement:

(i) To include any prospectus required by Section 10(a)(3) of the Securities Act;

(ii) To reflect in the prospectus any facts or events arising after the effective date of the registration statement (or the most recent post-effective amendment thereof) which, individually or in the aggregate, represent a fundamental change in the information set forth in the registration statement. Notwithstanding the foregoing, any increase or decrease in volume of securities offered (if the total dollar value of securities offered would not exceed that which was registered) and any deviation from the low or high end of the estimated maximum offering range may be reflected in the form of prospectus filed with the Commission pursuant to Rule 424(b) if, in the aggregate, the changes in volume and price represent no more than a 20% change in the maximum aggregate offering price set forth in the "Calculation of Registration Fee" table in the effective registration statement; and

(iii) To include any material information with respect to the plan of distribution not previously disclosed in the registration statement or any material change to such information in the registration statement;

*provided, however*, that paragraphs (i), (ii) and (iii) above do not apply if the information required to be included in a post-effective amendment by those paragraphs is contained in reports filed with or furnished to the Commission by the registrant pursuant to section 13 or section 15(d) of the Exchange Act that are incorporated by reference in the registration statement.

(2) That, for the purpose of determining any liability under the Securities Act, each such post-effective amendment shall be deemed to be a new registration statement relating to the securities offered therein, and the offering of such securities at that time shall be deemed to be the initial bona fide offering thereof.

(3) To remove from registration by means of a post-effective amendment any of the securities being registered which remain unsold at the termination of the offering.

(4) That for determining liability under the Securities Act to any purchaser, each prospectus filed pursuant to Rule 424(b) as part of a registration statement relating to an offering, other than registration statements relying on Rule 430B or other than prospectuses filed in reliance on Rule 430A, shall be deemed to be part of and included in the registration statement as of the date it is first used after effectiveness. *Provided, however,* that no statement made in a registration statement or prospectus that is part of the registration statement or made in a document incorporated or deemed incorporated by reference into the registration statement or prospectus that is part of the registration statement will, as to a purchaser with a time of contract of sale prior to such first use, supersede or modify any statement that was made in the registration statement or prospectus that was part of the registration statement or made in any such document immediately prior to such date of first use.

(5) That, for purposes of determining any liability under the Securities Act, each filing of the registrant's annual report pursuant to section 13(a) or section 15(d) of the Exchange Act that is incorporated by reference in the registration statement shall be deemed to be a new registration statement relating to the securities offered therein, and the offering of such securities at that time shall be deemed to be the initial bona fide offering thereof.

(6) Insofar as indemnification for liabilities arising under the Securities Act may be permitted to directors, officers and controlling persons of the registrant pursuant to the foregoing provisions, or otherwise, the registrant has been advised that in the opinion of the Securities and Exchange Commission such indemnification is against public policy as expressed in the Securities Act, and is, therefore, unenforceable. In the event that a claim for indemnification against such liabilities (other than the payment by the registrant of expenses incurred or paid by a director, officer or controlling person of the registrant in the successful defense of any action, suit or proceeding) is asserted by such director, officer or controlling person in connection with the securities being registered, the registrant will, unless in the opinion of its counsel the matter has been settled by controlling precedent, submit to a court of appropriate jurisdiction the question whether such indemnification by it is against public policy as expressed in the Securities Act and will be governed by the final adjudication of such issue.

**SIGNATURES**

Pursuant to the requirements of the Securities Act of 1933, the registrant has duly caused this registration statement to be signed on its behalf by the undersigned, thereunto duly authorized, in Nevada, California, USA on March 29, 2022.

Rise Gold Corp.
Suite 650 - 669 Howe Street
Vancouver, British Columbia V6C 0B4

Ladies and Gentlemen:

You have requested our opinion with respect to certain matters in connection with the filing with the Securities and Exchange Commission (the "**Commission**") by Rise Gold Corp., a Nevada corporation (the "**Company**"), of a Registration Statement on

SECURITIES LAW USA

March 29, 2022
Page 2

We have also assumed that (i) the Registration Statement and any amendments thereto (including post-effective amendments) will have become effective and will continue to be effective at the time of any resale of the Shares, (ii) if necessary, a Prospectus supplement will have been prepared and filed with the Commission describing any Shares offered thereby by any Selling Stockholders, (iii) all Shares will be sold in the manner stated in the Registration Statement and, if necessary, the applicable Prospectus supplement, and (iv) at the time of the offering, there will not have occurred any changes in the law affecting the authorization, execution, delivery, validity or enforceability of the Shares. The opinion set forth in this letter is limited solely to the federal laws of the United States and the applicable laws of the State of Nevada. We express no opinion with respect to any other laws.

Based upon the foregoing, and in reliance thereon, we are of the opinion that:

1. The Outstanding Shares are validly issued, fully paid and nonassessable.

2. Upon the due exercise of the Warrants in accordance with their terms, the Warrant Shares will be validly issued, fully paid and nonassessable.

3. Upon the due exercise of the Options in accordance with their terms, the Option Shares will be validly issued, fully paid and nonassessable.

We consent to the reference to our firm under the caption "Legal Matters" in the Prospectus included in the Registration Statement and to the filing of this opinion as an exhibit to the Registration Statement. In giving our consent, we do not admit that we are "experts" within the meaning of Section 11 of the Securities Act or within the category of persons whose consent is required by Section 7 of the Securities Act or the rules and regulations of the Commission.

Sincerely,

/s/ SecuritiesLawUSA, PLLC

| | Net Fee Due | | | | | | | $714.07 |

(1) This registration statement also includes an indeterminate number of securities that may become offered, issuable or sold to prevent dilution resulting from stock splits, stock dividends and similar transactions, which are included pursuant to Rule 416 under the Securities Act of 1933, as amended.

(2) Consists of 6,017,500 shares of Common Stock offered by selling stockholders.

(3) Estimated solely for the purpose of calculating the registration fees pursuant to Rule 457(c) promulgated under the Securities Act based upon the average of the high and low prices of the Common Stock as quoted on the OTCQX on March 28, 2022, which was $0.59315.

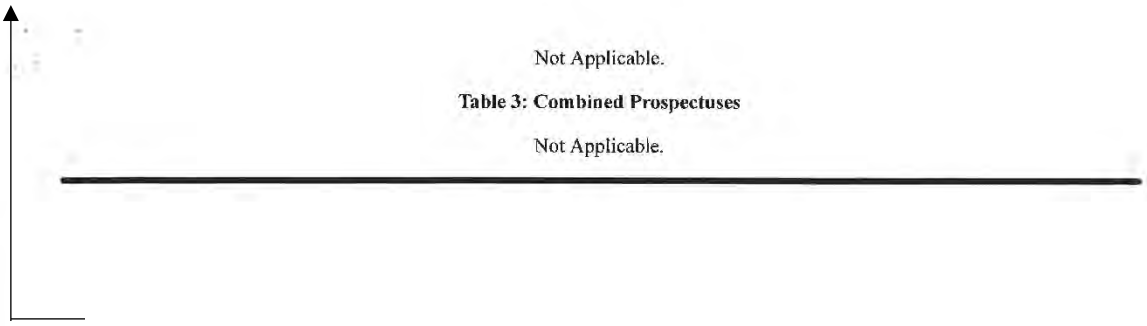
(4) Consists of 6,017,500 shares of Common Stock issuable upon exercise of common stock purchase warrants held by selling stockholders exercisable at $0.60 per share

(5) Consists of 805,000 shares of Common Stock issuable upon exercise of incentive stock options held by selling stockholders exercisable at $0.65 per share.

**Table 2: Fee Offset Claims and Sources**

Form S-1 (the "**Registration Statement**"), including that certain related prospectus to be filed with the Commission (the "**Prospectus**") under the Securities Act of 1933, as amended (the "**Securities Act**"), relating to the resale from time to time by the selling stockholders named in the Prospectus (the "**Selling Stockholders**") of up to a total of 12,840,000 shares of the Company's common stock, $0.001 par value (the "**Shares**"), consisting of up to:

(i) 6,017,500 outstanding Shares (the "**Outstanding Shares**");



(ii) 6,017,500 Shares (the "**Warrant Shares**") issuable upon exercise of common stock purchase warrants issued January 28, 2022 and exercisable at a price per Share of $0.60 until January 28, 2024 (the "**Warrants**"); and

(iii) 805,000 Shares (the "**Option Shares**") issuable upon exercise of incentive stock options issued February 7, 2022 and exercisable at a price per Share of $0.65 until February 7, 2027 (the "**Options**").

In connection with this opinion, we have examined and relied upon the Registration Statement and related Prospectus; the Company's articles of incorporation, as amended to date; the Company's Bylaws as in effect on the date hereof; the form of certificates representing the Warrants; the form of certificates representing the Options; and certain resolutions and minutes of meetings of the Board of Directors of the Company relating to the issuance of the Outstanding Shares, the Warrants, the Warrant Shares, the Options, and the Options Shares and the filing of the Registration Statement.

We have considered such matters of law and of fact, including the examination of originals or copies, certified or otherwise identified to our satisfaction, of such records, documents, certificates, and other instruments of the Company, certificates of officers, directors and representatives of the Company, certificates of public officials, and such other documents as in our judgment are necessary or appropriate to enable us to render the opinion expressed below.

As to matters of fact material to our opinion, we have relied, without independent verification, on certificates and other inquiries of officers of the Company. We have assumed without investigation the genuineness and authenticity of all documents submitted to us as originals, the conformity to originals of all documents submitted to us as copies thereof, and the due execution and delivery of all documents where due execution and delivery are a prerequisite to the effectiveness thereof, the accuracy and completeness of all records made available to us by the Company, and that all offers and sales of the Shares will be made in compliance with the securities laws of the states having jurisdiction thereof.

## INDIVIDUAL LETTER 85: CAROL TODD

### Response to Comment Ind 85-1

The referenced attachment refers to the Project Applicant's financial wherewithal to complete the proposed project, which is outside of the scope of CEQA. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration. In addition, please see Master Response 3 regarding operator responsibility.

### Response to Comment Ind 85-2

Potential impacts related to dust generation and noise associated with the proposed project are discussed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy and Chapter 4.10, Noise and Vibration, of the DEIR, respectively.

### Response to Comment Ind 85-3

See Response to Comment 85-1.

**Individual Letter 86**

February 14, 2022

Nevada County Planning Commission
950 Maidu Avenue, Suite 170
Nevada City, CA 95959

Dear Commissioners Danny Milman, Laura Duncan, Robert Ingram, Mike Mastrodonato, and William Greeno,

**Ind 86-1** I oppose to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I understand that you will be reviewing the Environmental Impact Report and subsequently voting to approve or not approve the project. I have listened to both sides of the argument and find Raise Gold Corporation to be inconsistent, misleading, and manipulative. They fail to mitigate significant negative impacts of this large industrial project on my family, friends, neighbors, and businesses.

There are multiple reasons this mine should NOT reopen. My personal reasons are:

**Ind 86-2** 1- The mine will pollute our air and increase lung disease.
2- Clouds of airborne toxic mining dust, including asbestos, will drift downwards into Grass Valley.
**Ind 86-3** 3- Hard rock mining is the single largest source of toxic waste in the United States.
**Ind 86-4** 4- Trucks hauling 1,000 tons of waste rock, making one hundred trips every day down Brunswick Road, piling it higher that a 6-story building at the Centennial site.
**Ind 86-5** 5- Blasting 7 days a week in the tunnels under 2,585 acres of the Grass Valley area.
6- Crushing of 1,500 tons of waste rock every day, all day, and using massive machines.

**Ind 86-6** I am a resident of Nevada County and observe that Rise Gold Corporation lacks respect for the impact of their mine project on the environment and the people of Grass Valley. I hope you will be among those who will be known to have opposed the well-funded deception Raise Gold Corporation has developed.

Sincerely,

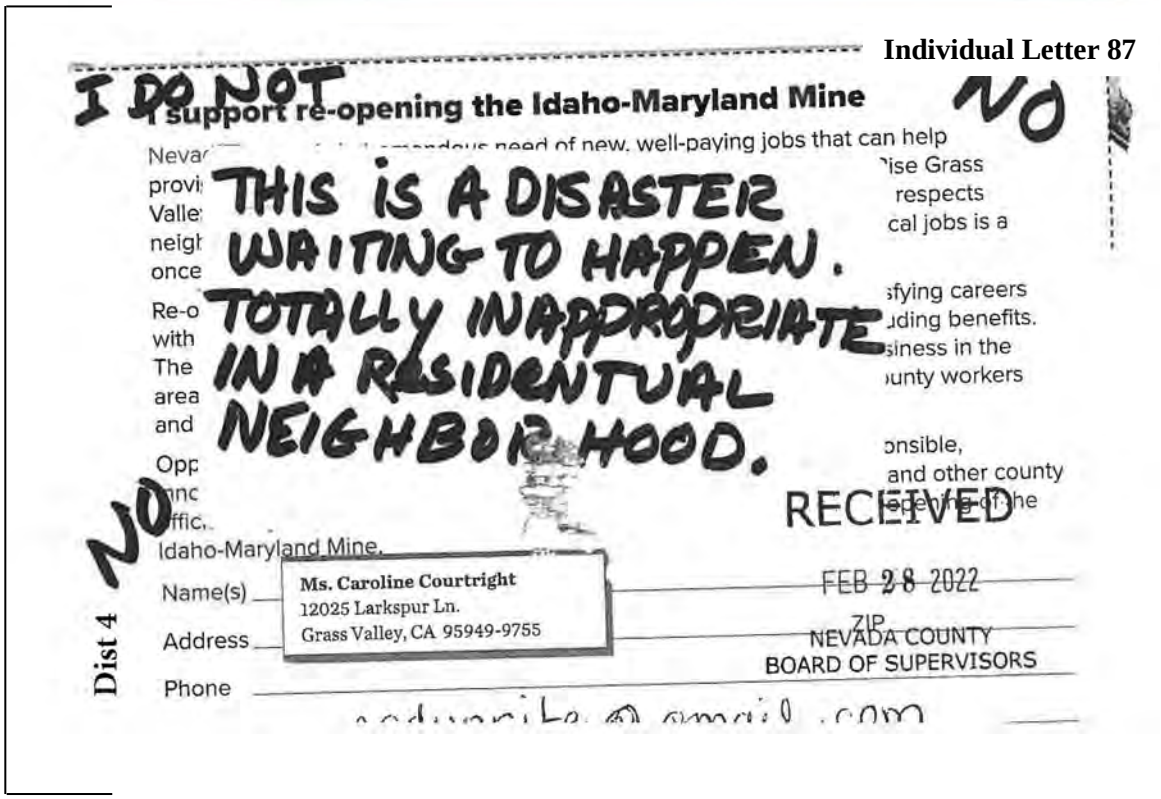
Carolee Weisberg

## INDIVIDUAL LETTER 86: CAROLEE WEISBERG

### Response to Comment Ind 86-1
Please see Master Response 1.

### Response to Comment Ind 86-2
Please refer to Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR for more information related to air pollution. As evaluated under Impact 4.3-2, and shown in Table 4.3-21, emissions of toxic air contaminants (TACs) would not result in health risks to nearby receptors in excess of NSAQMD thresholds. Nonetheless, Mitigation Measure 4.3-2 was included to ensure an Asbestos Dust Mitigation Plan is prepared, as required by the California Air Resources Board (CARB).

### Response to Comment Ind 86-3
Please refer to Chapter 4.7, Hazards and Hazardous Materials, of the DEIR for more information related to mining waste. Please see also Master Response 8.



### Response to Comment Ind 86-4
Please refer to Chapter 4.12, Transportation, of the DEIR for more information related to hauling truck traffic.

### Response to Comment Ind 86-5
Please refer to Chapter 4.7, Hazards and Hazardous Materials, and Chapter 4.10, Noise and Vibration, of the DEIR for more information related to blasting.

### Response to Comment Ind 86-6
Please see Master Response 3.

**Individual Letter 87**

**Ind 87-1**

**Ind 88-1**

I would like a copy of the enclosed letter to go to all 5 supervisors please. But of course especially Susan Hoek, my Dist. 4 supervisor, and Dan Miller Dist.3 Supervisor.
Please deliver this letter to them before the Thursday 3/24 Planning Commission meeting on the subject. Thank you.
Caroline Courtright

**Ind 88-2**

To whom it may concern: 3/9/2022 The Idaho-Maryland Mine Project is a bad idea for the community. I am writing from Philadelphia, PA, and am the son-in-law of a Grass Valley resident, Caroline Courtright. I have been a corporate bond analyst for 16 years, covered the metals and mining sector for roughly 5 years, and that included gold miners. So, my perspective is from a financial analyst. That said, I am writing you on a personal level and not from my employer's perspective. I assume you will hear significant doubts about the negative environmental impacts the mine will have from other concerned citizens. Even though I agree with the opponents of the mine reopening on an Environmental, Social, and Governance (ESG) basis, I wanted to provide doubts on a financial basis. Caroline told me about the potential of the mine reopening about 10 years ago following gold prices rising during that time. I thought it would be a near impossible act to reopen the mine in the middle of two cities then, largely because it would be too expensive to restart and operate the mine among an area that values the environment the way Nevada County residents do. Recently, I learned of the EIR that supports the mine reopening, so I wanted to learn more about the project as a potential investment, after all, Rise Gold is a publicly traded company. I am appalled by the fact that there is so little financial information available from Rise Gold. Other investable gold miners utilize a metric called "All-In Sustaining Costs" (AISC) to describe the cost to produce one ounce of gold. AISC's line items include cost of sales excluding depreciation and amortization, royalties, and production taxes but includes treatment and refinement charges. In addition, AISC's additional costs include sustaining capital expenditures, leases, general and administrative costs, and minesite exploration and evaluation costs. The lowest cost gold miner can operate in the $1,000/ounce area (Barrick Gold) and other higher cost operators (New Gold) operate in the $1,500/ounce range. This variance is largely due to by-product credits (Barrick's mines contain copper as well as gold). Simply put, if gold prices fall below $1,500/ounce, New Gold would stop mining gold because it would be losing money. Rise

Gold has not published its expectations for AISC. I think this information is pertinent because that metric would inform Grass Valley and Nevada City citizens and the potential employees of Rise Gold when the mine can be expected to operate. Rise Gold has not published a feasibility study for the Idaho-Maryland mine. The goal of a feasibility study is to demonstrate the project is economically viable if it is designed, constructed and operated in accordance with the concepts set forth in the study. The feasibility study will define the Ore Reserves, the mining methods, the mineral processing concepts, and the scale of the project. To my knowledge, Rise Gold has commented on the mining methods, mineral processing concepts, and some aspects of the scale (1,000 tons/day). Every other gold miner I covered performed a feasibility study in order to convince investors the investment in a new project was a good one. The process can take up to 7 years. The fact Rise Gold has not performed a feasibility study is concerning not only for potential investors but also the community does not know if the mine can operate profitably. If Rise is promising 300 jobs once the mine is fully operational, we do not know the time frame of the mine opening, the time to full production, nor do we know how long the mine can operate. Every gold miner publishes in its 10-K and Annual Report its Reserves and Resources. Those numbers provide the mine life to investors (the calculation is simply Reserves/Annual Production). The fact Idaho-Maryland operated from 1866-1955 would suggest the Reserves and/or the Resources might be minimal. This should be disclosed to everybody. Here, I note that the Reserves and Resources change every year with the price of gold. Some gold reserves at different mines are more costly to extract than others; therefore, a gold miner has to annually adjust its Reserves and Resources. Aside from the lack of AISC, the lack of Reserves, and the lack of a total project cost, which makes Rise Gold a poor investment, Rise Gold has a complete lack of capital for a full scale mine. Rise Gold stated it would pay 300 people an average of $90,000/year during full production. Those would be nice jobs to have in Nevada County, but how can Rise Gold pay those people $27 million/year when its market capitalization is $15.8 million? Rise's most recent equity financing totaled $2.4 million. I do not know what that Use of Proceeds are, but this financing as well as recent other investments in Rise Gold amount to kicking the can down the road. Due to Rise Gold's poor capital position, I would question the Company as a going concern and its ability to fund the operations. On the ESG front, I do not see how one could invest in Rise Gold. On an environmental basis, it is impossible for the environment to benefit with a gold mine operating in the populated area. There are too many operational risks that could occur even for an experienced miner, let alone the CEO of Rise Gold. Local high paying jobs is the only social benefit. On governance, the CEO appears to be untrustworthy based on his previous experiences with trying to mine gold in other parts of North America. The CEO is the only employee of the Company according to Rise Gold's 10-K, so he has no checks and balances. He has little expertise on operating a mine which does not bode well for the likely failure of mining operations in an area where catastrophe could occur and create unwanted or unexpected fallout. In sum, Rise's inability to produce basic gold mining fundamental operating costs, reserves, and project cost forecasts should limit its ability to produce from Idaho-Maryland forever. If history is any guide, gold prices will remain volatile, and Rise Gold will over promise and under deliver. It would be a disgrace to allow Rise Gold the opportunity to mine anything from Nevada Country over 5 years, let alone 80 years. Sincerely, Mike Frey Idaho.mmeir@co.nevada.ca.us

## INDIVIDUAL LETTER 88: CAROLINE COURTRIGHT

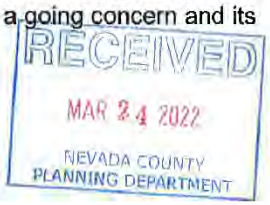
### Response to Comment Ind 88-1

The comment is an introductory remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

### Response to Comment Ind 88-2

The commenter's concerns are in regards to the Project Applicant's financial wherewithal to complete the proposed project, which is outside of the scope of CEQA. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration. In addition, please see Master Response 3 regarding operator responsibility.

**Individual Letter 89**



Submitted by Caroline Courtright, resident of Grass Valley 21 years, small business owner, and NID agricultural customer. (DISTRICT 4.) 12025 LARKSPUR LN, GRASS VALLEY 95945

I am appalled by the fact that there is so little financial information available from Rise Gold. Other investable gold miners utilize a metric called "All-In Sustaining Costs" (AISC) to describe the cost to produce one ounce of gold. AISC's line items include cost of sales excluding depreciation and amortization, royalties, and production taxes but includes treatment and refinement charges. In addition, AISC's additional costs include sustaining capital expenditures, leases, general and administrative costs, and minesite exploration and evaluation costs. This information is pertinent because that metric would inform Grass Valley and Nevada City citizens and the potential employees of Rise Gold when the mine can be expected to operate. If gold prices fall below $1500/ounce range the company will stop mining gold because it would be losing money.

**Ind 89-1**

Rise Gold has not published a feasibility study for the Idaho-Maryland mine. The goal of a feasibility study is to demonstrate the project is economically viable if it is designed, constructed and operated in accordance with the concepts set forth in the study. The feasibility study will define the Ore Reserves, the mining methods, the mineral processing concepts, and the scale of the project. To my knowledge, Rise Gold has commented on the mining methods, mineral processing concepts, and some aspects of the scale (1,000 tons/day). Most other gold mines performed a feasibility study in order to convince investors the investment in a new project was a good one. The process can take up to 7 years. The fact Rise Gold has not performed a feasibility study is concerning not only for potential investors but also the community does not know if the mine can operate profitably. If Rise is promising 300 jobs once the mine is fully operational, we do not know the time frame of the mine opening, the time to full production, nor do we know how long the mine can operate. All gold miners publish in its 10-K and Annual Report its Reserves and Resources. Those numbers provide the mine life to investors (the calculation is simply Reserves/Annual Production). The fact Idaho-Maryland operated from 1866-1955 would suggest the Reserves and/or the Resources might be minimal. This should be disclosed to everybody. Here, I note that the Reserves and Resources change every year with the price of gold. Some gold reserves at different mines are more costly to extract than others; therefore, a gold miner has to annually adjust its Reserves and Resources.

Aside from the lack of AISC, the lack of Reserves, and the lack of a total project cost, which makes Rise Gold a poor investment, Rise Gold has a complete lack of capital for a full scale mine. Rise Gold stated it would pay 300 people an average of $90,000/year during full production. How can Rise Gold pay those people $27 million/year when its market capitalization is $15.8 million? Rise's most recent equity financing totaled $2.4 million. I do not know what that Use of Proceeds are, but this financing as well as recent other investments in Rise Gold amount to kicking the can down the road. Due to Rise Gold's poor capital position, I would question the Company as a going concern and its ability to fund the operations.

On the ESG front, I do not see how one could invest in Rise Gold. On an environmental basis, it is impossible for the environment to benefit with a gold mine operating in the populated area. There are too many operational risks that could occur even for an experienced miner, let alone the CEO of Rise Gold. Local high paying jobs is the only social benefit. On governance, the CEO appears to be untrustworthy based on his previous experiences with trying to mine gold in other parts of North America. The CEO is the only employee of the Company according to Rise Gold's 10-K, so he has no checks and balances. He has little expertise on operating a mine which does not bode well for the likely failure of mining operations in an area where catastrophe could occur and create unwanted or unexpected fallout.

In sum, Rise's inability to produce basic gold mining fundamental operating costs, reserves, and project cost forecasts should limit its ability to produce from Idaho-Maryland forever. If history is any guide, gold prices will remain volatile, and Rise Gold will over promise and under deliver. It would be a disgrace to allow Rise Gold the opportunity to mine anything from Nevada Country over 5 years, let alone 80 years. \

**Ind 89-2**

This may sound like it addresses only the financial aspects of the Rise Gold project, yet realize the above information deeply portrays the environmental damage such a project poses to our community. It would be awful for Rise Gold to start the project, dewater and make a mess, then file for bankruptcy and leave. They would leave devastated environmental damages and also will likely not have the money to clean-up the Superfund site. This is the most likely scenario for a company that is only a 18 million cap company.

This shows that the DEIR is incomplete. Accountability for cleaning-up the Superfund site is missing.

**Ind 89-3**

Also the DEIR is incomplete because there is no feasibility study.

**Ind 89-4**

Also the DEIR is incomplete because an 80 year permit is unreasonable and avoids accountability. NID even said 40 years involved too much guess work to be a reliable risk assessment study.

**Ind 89-5**

Say NO, it is the only way to go. An industrial gold mine with its potential for polluting toxins and drying up or contaminating local wells has no right in our residential community.

Also the EIR is incomplete because it does not show how this industry will ruin our local tourist industry with it pollution and destruction of natural creek habitat of Wolf Creek and even the Yuba River.

### Response to Comment Ind 89-3
Please see Response to Comment Ind 89-1.

### Response to Comment Ind 89-4
The comment expresses a general opinion that the 80-year permit is unreasonable and avoids accountability, but does not provide specific examples that would allow for a detailed response. For further information regarding operator responsibility see Master Response 3.

### Response to Comment Ind 89-5
Please see Master Responses 1 and 2.

**Individual Letter 90**

**From:** Steve and Carolyn Battaini
**To:** Idaho MMEIR
**Subject:** Idaho-Maryland Mine Project opposed to the proposed reopening
**Date:** Saturday, February 12, 2022 7:17:16 AM

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Mr. Kelly,

**Ind 90-1** Our family is totally opposed to the proposed reopening of the IM mine. **In today's world, water is the new gold. Gold is for investors, and water is for life. No water, no life. Period. There are so many significant impacts for the State of California & CEQA environmental areas, that there is no valid reason to continue on with this proposal.** Stop it now.

**Ind 90-2** If the Use Permit were approved, it is critical that any and all damages and costs associated with impacts of the mining operations are completely born by the mine operators and not the property owners and residents of the community. This is made difficult because of the long duration of the proposed project and the many unknowns. There is probably not enough money to cover the damages and costs, ever by any entity ..... Rise Gold certainly doesn't have these deep pockets. The County doesn't have deep enough pockets. I don't think the State has deep enough pockets either.

**Ind 90-3** **We are on a well,** close by the site. The potential dewatering impacts on the region include, but are not limited to, reduction in well water levels, reduction in well yield, degradation of water quality, well failure, impacts to land values, habitat, and personal property.

**Ind 90-4** There are numerous domestic wells directly over the mineral rights area, but the de-watering impacts on the groundwater and wells may extend well beyond the boundaries of the mineral rights.
Providing safeguards for well owners in the area of the proposed mine is challenging and requires careful and detailed consideration. I think you'll find that it's too much risk, too many unknowns, and vast devastation that cannot be corrected in centuries of cleanup. The points considered identified many but certainly not all of the issues, as some are not yet anticipated.

**Ind 90-5** **In addition, with our wildfire risk (now all year long) and climate change reducing our water hydration, who can say we have enough water to just pump it out of the ground, and dewater our county aquafirs?** I don't think we can afford this devastation to our county.

**Ind 90-6** **There are SOOOO many significant impacts, on so many levels, that this is JUST WRONG to continue consideration of this Maybe it would have been OK 100 years ago, but NOT NOW in this day and age.**

Respectfully yours,
Carolyn & Steve Battaini
14027 Liquidambar Ln

Dear Sirs,

92-1

We oppose the Idaho Maryland Mine because it's a short-sighted, profit driven project with long-term consequences for this community, for local flora and fauna, the air, the water, and our quality of life. We also know well the harmful impacts of mining.

Water is the new gold. It's the lifeblood of every living creature. This project will pump it out of our county, into the watershed with the potential of heavy metal pollution to all downstream users.

We are living in a time of climate crisis and ecological emergencies. The idea itself is absurd, let alone the consequences it will have many generations into the future.

This unconscious greed for gold requires no regard to the unforgiving impacts it leaves in the wake of the destructive operations to get it out of the ground, literally, under our homes. In a nutshell, mining devastates communities, water and the environment, and should never be considered an option where people live nearby or downstream.

Please consider the horrible consequences of this ill advised project to the area, California, United States and the world.

Thank you for your consideration.

Sincerely,

Carolyn Battaini

Carolyn & Steve Battaini

**Please fill out and return the attached postcard today!**

**Detach the support card on the right and fill out the reverse side.**

We'll use these cards later to show the Board of Supervisors the strong support throughout the community for re-opening the Idaho-Maryland Mine.

**I support re-opening the Idaho-Maryland Mine.**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

NO to Rise Gold and NO to the Idaho-Maryland Mine.
We must commit to slowing climate change NOT contributing to it and this mine would have extreme, devastating environmental impact:

"Rise Gold proposes to generate significant amounts of carbon and greenhouse gasses every year. If you take their estimates at face value, they would create over 3,500 metric tons of CO2 during construction, and over 9,000 metric tons during operations. These emissions would be new to our community, and they would undermine state of California climate goals." -David J Whitehead

David J Whitehead explains in more detail here

**Ind 93-1**

NO to wasting billions of gallons of water.
NO to polluting the atmosphere.
Rise Gold is acting out of selfish gain and meaningless speculated profit. This will not achieve what you want, it will only make everything worse. You wont have a planet to inhabit if your payday comes.

Please support our environment and communities and STOP this mine.
Thank you,

--
Carrie

Nevada Co Supervisors,

My husband and I moved to Nevada County 10 years ago. We are raising our family here. We have purchased several pieces of property in Nevada City and Grass Valley and own a local business. We also volunteer and donate locally.

**Ind 95-1**

We are active and invested in this community because we believe in it's locally minded, forward thinking citizens and culture. If Nevada County wants to continue to grow it's economy, let's not do it in a way that compromises our attraction to the higher end earners and white collar investors looking to relocate here. Let's not resort to the same plan as the poverty stricken rural areas of Alaska, West Virginia, and Kentucky. If we decide to begin mining again it isn't moving forward, it's moving backwards.

And our family will become very doubtful of our investments here.

Thank you for your time,
Cate Keller

**To:** Idaho MMEIR
**Subject:** Draft Environmental Impact Report for the Idaho-Maryland Mine Project - Comments

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley:

Firstly, thank you for your professionalism and attention to such a complex and tedious project.

In principle, I strongly object to this project being considered simply because there was a similar land use operation more than half a century ago.
As a property owner and resident living literally on top of and close to the Empire Mine, I can only imagine what it would be like to have that mine or any mine for that matter activated for mining purposes. Environmentally and economically, it does not make sense, as the benefits to the county and city residents of Nevada County are minimal, and the impacts, very long-term significant.

**Ind 96-1**

My specific concerns are related to the following areas:

**Air Quality**
**Transportation and Traffic**
**Hazards and Hazardous Materials**
**Noise and Vibration**
**Hydrology/Water Quality**
**Water Supply Analysis**
**Economics**

All of these areas overlap one another and in particular Transportation and Traffic, Hazards and Hazardous Materials .
With regard to the transport of explosives, hazardous materials, contaminated soils, and accident conditions and the transport
of these materials everyday, over a 16-hour period (6:00 AM to 10 PM) for years using using local feeder roads to State Highway 49 and 20,
has there been or will there be a "worst case scenario" analysis of what happens should a road accident incident occur causing a spill of hazardous waste?
How will 100 trips per day impact safety for those making their way to work everyday?

**Ind 96-2**

Please make my email to you as part of the public comment period for this Draft Environmental Document.

Sincerely,

1

Catherine Criss Flowers

?

## INDIVIDUAL LETTER 96: CATHERINE FLOWERS

### Response to Comment Ind 96-1

Please see Master Response 1. With regard to specific concerns related to hazards and hazardous materials, please see Chapter 4.7 of the DEIR. With regard to concerns related to the water supply analysis please see Master Response 14. Concerns related to economic impacts are addressed in Master Response 2.

### Response to Comment Ind 96-2

Impact 4.7-1 of the Hazards and Hazardous Materials chapter of the DEIR analyzed whether the proposed project would create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. As discussed therein, the proposed project could create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, specifically related to construction activities, explosives, and use and storage of various chemicals. As such, Mitigation Measures 4.7-1(a) through 4.7-1(d) were included to ensure that the risk from transport, underground storage, and use of explosives at the Brunswick Industrial Site would be reduced to a less-than-significant level.

Impacts related to increased trips on local roadways as a result of the proposed project were discussed in Chapter 4.12, Transportation, of the DEIR.

DEIR Comment Email: idaho.mmeir@co.nevada.ca.us
Comments on the Draft Environmental Impact Report for the Idaho-Maryland Mine Project

To All Concerned:

**Ind 97-1** As a homeowner and resident of Nevada County for over 35 years I appreciate the opportunity to provide public comment on the Draft Environmental Impact Report (DEIR) released by Nevada County for public review on January 4, 2022, addressing the environmental impacts of re-opening and operating the Mine for the next 80 years. My family has long roots in the mining history of this area, but I feel the negative effects of the proposed Idaho-Maryland on the important values that this community holds dear are far too costly.

I am concerned about the long-lasting environmental impacts that the Mine Project would cause and the inadequacy of the environmental analysis of the DEIR. A number of key points for me are provided here. There are MANY in the DEIR.

**Ind 97-2** I am concerned about water quality in the area. The drill core testing for water quality impacts is inadequate. There was an insufficient quantity of drill core. rock analyzed to determine the mine's true impact on water quality. Only 0.68% of the rock core that was drilled were submitted for analysis and minimal information is available. The DEIR refers to a "separate report" but there is no report available. Additionally, the samples did not have a proper chain of custodies (COC) processes. It is impossible to determine the accuracy of the samples and thus the accuracy of the analysis based on the samples. This needs investigation.

**Ind 97-3** I am concerned about air quality. Air quality is an issue we already struggle with in the county. The DEIR provides no evidence that the project's long-term NOx, ROG, and PM10 emissions will be mitigated to a less-than-significant level. The DEIR fails to adequately mitigate the Project's air quality impacts. It relies on a bare minimum of mitigation measures recommended by the Northern Sierra Air Quality Management District (NSAQMD) to address air quality impacts, and these measures only address emissions during a one year period of construction. The mitigation measures do not address the long-term emissions that will result from 80-years of mining operations associated with the Project. As a result, there is no evidence that the Project's

long term emissions have been mitigated to a less-than-significant level, as concluded by Baseline Engineering Consultants (Baseline).

**Ind 97-4**

I am concerned about groundwater. The proposed Project would significantly affect local groundwater resources by dewatering the mine, lowering groundwater levels. The dewatered groundwater resources would be converted to surface water that is discharged into existing creek channels and quickly conveyed out of the area. An incorrect assumption was made in the groundwater model used to predict dewatering impacts, which led the DEIR to significantly underestimate groundwater drawdown, both in magnitude and areal extent. The revised DEIR must rely on a corrected groundwater model in order to accurately predict. the extent of the well drawdown caused by the predicted 80 years of mine-dewatering and dewatered maintenance.

Thank you again for this opportunity to comment. I am opposed to the reopening of the mine.

Catherine Hardy
15232 Honeycomb Ranch Rd
Nevada City, CA

## INDIVIDUAL LETTER 97: CATHERINE HARDY

### Response to Comment Ind 97-1

This comment is introductory in nature and the commenter is concerned about potential long-term impacts of the project. Please see Master Response 1. Responses to the commenter's specific comments on the inadequacy of the DEIR are provided below.

### Response to Comment Ind 97-2

The commenter states that drill core testing for water quality impacts is inadequate, that the samples did not have a proper chain of custodies process, and that sampling accuracy could be inadequate. The commenter is referred to Master Response 8 - Mine Waste Characterization. The commenter states that the DEIR refers to a "'separate report' but there is no report available" but provides no specifics on what report or where the DEIR refers to this separate report. Therefor no response is possible nor provided.

### Response to Comment Ind 97-3

The commenter states the DEIR provides no evidence that emissions of NOx, ROG, and PM10 emissions will be mitigated to a less than significant level because mitigation is only required during construction. The commenter is referred to Master Response 19 - NSAQMD Criteria Pollution Thresholds during Operations.

### Response to Comment Ind 97-4

The commenter states that an incorrect assumption was made in the groundwater model but provides no details or evidence on which assumption is incorrect. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) and Appendices K.2 and K.3 of the DEIR. Please also see Master Response 14 – Adequacy of Groundwater Model. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 98**

**From:** Catherine Stifter
**To:** Idaho MMEIR
**Cc:** DEIRcomments@cea-nc.org
**Subject:** Comments on the DEIR for the re-opening of the the Idaho Maryland Mine
**Date:** Saturday, February 12, 2022 7:17:16 AM

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Mr. Kelley,

**Ind 98-1**

As the Nevada County Planning Commission reviews the Draft Environmental Impact Report for the proposed re-opening of the Idaho Maryland Mine, I request that you keep in mind the "rich" historical record of gold mining in Nevada County from the 1840s through the 1950s and into the present day. Based on what we already know to be unavoidable environmental and cultural impacts due to the ordinary and expected operations of a gold mine, I believe the DEIR has correctly identified Alternative 1, the No Build, No Project plan as the way to not move forward to re-open the mine.

**Ind 98-2**

As a 34-year resident of Nevada County, who lived for decades within just a few miles of Malakoff Diggins hydraulic mine site and was involved in opposing the San Juan Ridge Mine, I know and continually experience the impacts to the lands and waters where I live, work and play. As a volunteer naturalist guide for SYRCL's educational Salmon Expeditions conducted each Autumn for school age children from Nevada, Yuba and Sutter Counties, I teach about ongoing water quality impacts from legacy mining that have reduced the fall runs of Chinook salmon to all-time lows. I am also a contributing member of the Ancestral Homelands Reciprocity Project of the Nevada City Rancheria Nisenan Tribe. The Rise Gold property and proposed mine exist within the Nisenan traditional and ancestral homelands.

One year ago, I moved to the Union Hill area of Grass Valley, adjacent to the Empire Mine State Park, throughout which evidence of mining impacts is abundantly clear. My home is .9 mile from the Brunswick Industrial site. I will comment on just two of the issues that about which I am most concerned and have educated myself by reading the DEIR.

**Ind 98-3**

I am concerned about the significant impacts to Native Tribes whose traditional and ancestral homelands contain the proposed mine sites, primarily the Nevada City Rancheria Nisenan Tribe. Impacts described in Sections 4.5-2 through 4 on Table 2-1 of the Executive Summary (pages 2-61-63 of the DEIR) refer to "substantial adverse change in the significance of an archeological resource, tribal cultural resources or disturbance of any human remains." The mitigation measures call for consultation ONLY IF and WHEN construction or mining activities uncover resources or remains. Consultations with cultural resources experts in coordination with the Nevada County Planning Department should also be become part of this mitigation strategy PRIOR TO the commencement of any project activities on any of the construction sites to prevent destruction of cultural materials and sites.

**Ind 98-4**

I am also concerned about significant impacts to surface and ground water quality described in Section 4.8-1. As a paddler, swimmer and hiker who lives and recreates in the Bear River watershed and as a resident whose home and water system are within one mile of the mine, my concern is that the water treatment plant design and operations described in the mitigation

measures, as well as the required quarterly monitoring reports would not be able to prevent pollution and contamination of the mine property, Wolf Creek and subsequently all other waterways downstream, beginning with the Bear River. Both Wolf Creek and the Bear River are still in the process of returning to fully functioning ecosystems after suffering heavy impacts of historic gold mining. The risk of hazardous constituents in waste water discharged into Wolf Creek is too great. The solution to this concern is the adoption of Alternative 1, No Project (No Build) alternative whether or not it meets any of the project objectives.

**Ind 98-5**

As a private citizen, I have just spent 4.5 hours reviewing the DEIR and responding in this letter. I'm neither a scientist nor a contractor, but I do understand that elements of this DEIR are flawed and need to be addressed by the Planning Committee.

Sincerely,

Catherine Stifter (she/her)
10371 Mercury Drive
Grass Valley, CA 95945
530-277-6310
cstifter2@gmail.com

## INDIVIDUAL LETTER 98: CATHERINE STIFTER

### Response to Comment Ind 98-1

Please refer to Master Response 1. The DEIR determined that the No Project (No Build) Alternative would be the environmentally superior alternative. As noted on page 6-42 of the DEIR, "Identification of the environmentally superior alternative is an informational procedure and the alternative selected may not be the alternative that best meets the goals or needs of the County."

### Response to Comment Ind 98-2

The comment is a general description of the commenter's credentials, and does not address the adequacy of the DEIR.

### Response to Comment Ind 98-3

As described in the Method of Analysis section of Chapter 4.5, Cultural and Tribal Cultural Resources, of the DEIR (see page 4.5-19), reparation of the Historic Properties Inventory and Finding of Effect prepared for the proposed project included a cultural records search, literature review, consultation with the Nevada County Landmark Commission (NCLC), consultation with the Native American Heritage Commission (NAHC), and a field survey. In addition, consistent with CEQA Guidelines and Assembly Bill 52, as part of the DEIR process, local tribes were notified and invited to consult on the proposed project, and such information was presented in the DEIR.

### Response to Comment Ind 98-4

Impacts to surface and groundwater quality are addressed in Chapter 4.8, Hydrology and Water Quality, of the DEIR. In addition, see Master Response 35, regarding discharge into South Fork Wolf Creek.

### Response to Comment Ind 98-5

The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration. In addition, please see Master Response 1.

**Ind 100-1**

Hello. I am a resident of Nevada County since 1978. My husband and I raised our kids here. We own a construction company here and have been successful in our profession and the raising of our kids in Nevada County. Our kids live, work and have their own children. It's a good life for all of us and that's the way I want to keep it. We don't need this mine in our county. We have been there and done that. Just look around at how mining changed the landscape in not a good way. Empire Mine with its toxic water and tailings is one example. This idea is horrible. We don't have the water it takes to make it happen. Also, as houses and neighborhoods are being built who would want a working mine next store? Not to be critical of the county, but the infrastructure is severely lacking in an emergency situation. Look at how things failed when a fire was close by and in December when the big storm hit. I don't want to risk failure when the county falls apart when the mine fails. I say NO to the mine for sake of my grandkids. It's a terrible idea. Thanks for listening.
Sincerely,
Catherine Boyle-Dowd

**Individual Letter 101**

Cathy Edger
15319 Chinook Lane
Grass Valley, CA 95945

Mr. Mathew Kelly, Senior Planner
Nevada County Planning Department
950 Maidu Ave, Ste 170
Nevada City, CA 95959-1423

February 12, 2022

Dear Mr. Kelley,

**Ind 101-1** I worked for many years as a Park Ranger for a water district in the Bay Area. I live in the upper Rattlesnake Road area. I first visited Grass Valley on a Gold Country history trip when I was in high school, and have been connected via family to the town since the 70's.

I was alarmed when I first heard the possibility of Rise reopening the Idaho Maryland Mine. Add my name to those who strenuously object to the reopening of the mine. My objections?

**Ind 101-2** 1. Water. My primary (and only) residence depends on well water for all household and landscape use. I put no credence in the claims of Rise that the aquifers upon which wells depend will not be affected by mining activities.

**Ind 101-3** 2. Noise. Our home is in a serenely quiet area. The quiet is something our friends comment on as we sit on our patio and visit. I have learned over the course of my life that quiet is a quality of life issue that all too many people disrespect, especially when it conflicts with their agenda. The noise generated by mining activities will affect the quality of our life and our neighbors as well.

**Ind 101-4** 3. Community character. The last mine in the area closed a long time ago, and Grass Valley has transitioned from a mining community to a community of small businesses, light industry, agriculture, and tourism. It is a gem of a town. To disrupt it with the grit of mining activity would be a quality of life shift in a negative direction.

**Ind 101-5** 4. Economy. Rise likes to promote the idea that the mine will bring jobs with them. I doubt it. In my life (in one chapter of my life I was also a landscape designer, and my dad was a general contractor) I have see all too often how people discount the skill or training required to perform what Mike Rowe calls "dirty jobs". I think the evidence will show that most of the high paying jobs will probably go to those who have already been in the mining business, not local businesses

**Ind 101-6** 5. Traffic. Big trucks on 174 at all hours? How does that benefit residents living in that corridor? It does not. In any way. Life experience and observation lead me to predict increased noise, congestion (which is getting worse all the time), dust, and air quality.

Let Rise Grass Valley go elsewhere to do their dirty work.

Best Regards,

**Ind 101-7**

Cathy Edger

**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## INDIVIDUAL LETTER 101: CATHY EDGER

### Response to Comment Ind 101-1
This comment is introductory in nature and the commenter opposes the project. The commenter's opposition to the project is noted for decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 101-2
The commenter disagrees with DEIR's finding regarding impacts to groundwater wells but does identify how the DEIR is inadequate. The DEIR analyzed impacts to groundwater wells in Chapter 4.8 of the DEIR (Hydrology and Water Quality). Please also see Master Response 14 – Adequacy of Groundwater Model, and Master Response 15 – Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 101-3
The commenter states that the project will result in adverse noise impacts but does not identify how the DEIR is inadequate. The DEIR analyzes noise impact in Chapter 4.10 (Noise and Vibration). Regarding quality of life concerns, please see Master Responses 1 and 2.

### Response to Comment Ind 101-4
The commenter states that the project will result in adverse impacts to community character but does not clarify what is meant by "community character" and does not identify any inadequacies with the DEIR. To the extent the commenter is concerned with social impacts to the community, the commenter is referred to Master Response 2 – Social and Economic Impacts. If the commenter is discussing aesthetic impacts, those impacts were analyzed in Chapter 4.1 (Aesthetics).

### Response to Comment Ind 101-5
The commenter states that the DEIR overstates the project's benefits to local employment. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 101-6
The commenter states that the project will result in adverse impacts to traffic, noise, and air quality but does not discuss how the DEIR's analysis of these resource areas is inadequate. The DEIR analyzed traffic in Chapter 4.12 (Transportation), air quality impacts in Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), and noise impacts in Chapter 4.10 (Noise and Vibration).

### Response to Comment Ind 101-7
The commenter states that the Project Applicant should go elsewhere. The commenter's opposition to the project is noted for decisionmakers. Please see Master Response 1 - Non-EIR/Administrative Issues.

Re: DEIR Comment: Hazards and Hazardous Materials (Chapter 4.7)

**Ind 103-1**

I am writing to bring attention to the DEIR section on hazardous materials, specifically explosives. The second paragraph on page 4/13-21 states that the transportation, storage and use of explosives will comply with Federal and State laws, and "given that storage and use of explosives would only occur underground at the Brunswick Industrial Site, an unexpected explosive event would not be likely to exacerbate above-ground wildfire risks."

This statement does not address the matter that to be stored underground, the explosives must of course be transported by trucks from distributing centers in Sacramento* (see Table 7). Presumably, these trucks would use I-80 to connect with the winding road of Highway 174, passing though approximately 10 miles of residential area. Also not addressed is, once arrived at the mine, there is the time involved in transferring these explosive materials from truck to the storage area underground. How can anyone offer failsafe assurances that these trucks will not be involved in a road mishap of any sort during transit? The explosives being transported are powerful enough to wipe out entire areas when ignited. Risks would increase during high tension mass vehicular evacuations that occur more frequently now during threat of wildfires and power outages. The results of such an accident would be devastating, as noted in *The New York Times* in January of this year when a truck transporting explosives to a town near Ghana, Africa, collided with a motorcycle, wiping out the town. See the following link: https://www.nytimes.com/2022/01/20/world/africa/ghana-explosion-mining-truck.html.

The risk involved in the transport of deadly explosives should be enough to give pause. The other obvious disturbing corollary to this scenario is the actual use of these explosives and the impact on this bucolic area of Nevada County.

Please veto this project. Its existence would threaten not only lives but the peace we now take for granted.

Sincerely,

Cecelia Royal

1

Table 7. Operations On-Road Vehicle Trip Assumptions

| Project Vehicle | Trip Length (miles) | Maximum Daily Trips (trips/day) | Maximum Daily VMT (VMT/day) | Annual Trips (trips/year) | Annual VMT (VMT/year) |
|---|---|---|---|---|---|
| ***Year 2022 to Year 2026 – Engineered Fill to Centennial Site*** | | | | | |
| Engineered Fill Haul Trucks | 1.8 | 200 | 360 | 36,500 | 65,700 |
| Freight Trucks | 60 | 6 | 360 | 312 | 18,720 |
| Concentrate Trucks | 145 | 10 | 1,450 | 728 | 105,560 |
| Fuel Trucks | 3.5 | 6 | 21 | 108 | 378 |
| Cement Trucks | 60 | 4 | 240 | 936 | 56,160 |
| Explosives Trucks | 60 | 2 | 120 | 104 | 6,240 |
| Outside Services (light vehicles) | 5 | 8 | 40 | 2,184 | 10,920 |
| Employees | 14.7 | 356 | 5,233 | 120,788 | 1,775,584 |
| ***Year 2027 to Year 2032 – Engineered Fill to Brunswick Site*** | | | | | |
| Engineered Fill Haul Trucks | 0.25 | 200 | 50 | 36,500 | 9,125 |
| Freight Trucks | 60 | 6 | 360 | 312 | 18,720 |
| Concentrate Trucks | 145 | 10 | 1,450 | 728 | 105,560 |
| Fuel Trucks | 3.5 | 6 | 21 | 108 | 378 |
| Cement Trucks | 60 | 4 | 240 | 936 | 56,160 |
| Explosives Trucks | 60 | 2 | 120 | 104 | 6,240 |
| Outside Services (light vehicles) | 5 | 8 | 40 | 2,184 | 10,920 |
| Employees | 14.7 | 356 | 5,233 | 120,788 | 1,775,584 |
| ***Year 2033 to Year 2102 – Engineered Fill to Other Customers*** | | | | | |
| Engineered Fill Haul Trucks | 15.5 | 200 | 3,100 | 36,500 | 565,750 |
| Freight Trucks | 60 | 6 | 360 | 312 | 18,720 |
| Concentrate Trucks | 145 | 10 | 1,450 | 728 | 105,560 |
| Fuel Trucks | 3.5 | 6 | 21 | 108 | 378 |
| Cement Trucks | 60 | 4 | 240 | 936 | 56,160 |
| Explosives Trucks | 60 | 2 | 120 | 104 | 6,240 |
| Outside Services (light vehicles) | 5 | 8 | 40 | 2,184 | 10,920 |
| Employees | 14.7 | 356 | 5,233 | 120,788 | 1,775,584 |

Notes: VMT = vehicle miles traveled
For 2022, a haul truck trip length of 1.8 miles was assumed based on the estimated distance from the Brunswick Industrial Site to Centennial Industrial Site.
For 2027, a haul truck trip length of 0.25 miles was assumed based on the estimated distance from the ore processing facility to the engineered fill drop-off area on the Brunswick Industrial Site.
For 2033, haul truck trip length of 15.5 miles was assumed based on the estimated distance from the Brunswick Industrial Site to various other customers.
Fuel assumed to be trucked from Robinson Fuels Cardlock a distance of approximately 3.5 miles from the Brunswick Site.
Freight, cement, and explosives trucks were assumed to have an average 60-mile distance assuming that these materials would come from distribution facilities in Sacramento California.

2

## INDIVIDUAL LETTER 103: CECELIA ROYAL

### Response to Comment Ind 103-1

A detailed analysis of impacts associated with explosives is included in Chapter 4.7, Hazards and Hazardous Materials. Specifically, Impact 4.7-1 addresses whether the proposed project would create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. As discussed therein, for transportation purposes, explosives are classified by the Department of Transportation (DOT) in accordance with 49 CFR and under these regulations all explosives are listed as Hazard Class 1 materials. Explosives would be transported directly to the site by licensed explosive suppliers that possess the requisite permits, including a California Highway Patrol (CHP) hazardous materials transportation license and DOT hazardous materials permits. Numerous regulations are in place to ensure safety in the transport of explosives and a summary of these are provided in Table 4.7-2 of the DEIR. All companies and individuals transporting explosives to the site would be required to comply with all regulations provided in Table 4.7-2.

**Sent:** Wednesday, March 30, 2022 10:28 PM
**To:** Idaho MMEIR
**Subject:** Comment on the Idaho-Maryland Mine Project

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Hello,

This is a comment on the Idaho-Maryland Mine Project. I would like to focus on the aspect of the reopening of the mine and job creation. Rise Gold estimates that the mine would create 300 well-paying jobs. However, the creation of those new jobs should be balanced against what those jobs could mean to other jobs and industries in the community.

If you look at this report on Nevada County's economic and workforce opportunities, you can see that the three largest employment sectors are health care and social assistance (5,515 jobs), retail trade (3,999 jobs), and accommodation and food services (3,841 jobs):

https://ncerc.org/wp-content/uploads/2020/04/Nevada-County-Economic-and-Workforce-Opportunity-Profile-March-2020.pdf

Health care and social assistance - jobs grew 30% from 2008 to 2018.
Retail trade - jobs decline by 3.5% in the same period
Accommodation and food services - 23.7% job growth in the same period.
There are only 38 jobs in Mining, quarrying, and oil and gas extraction, a decrease of 50% since 2008.

**Ind 105-1**

Even if the mining jobs increased to 338 jobs, that would still be a small fraction of the total jobs. And why does this matter to the other jobs? It's because people live in Nevada County, and Grass Valley, because of the quality of life here, the sense of community, and the beautiful nature and cultural life. The daily activities of the mine - the trucking, the explosions, the potential for poorer water quality - put all of the other jobs at risk.

People visit our area for the same reason that others live here. But what if instead Grass Valley being known as a cultural, historical destination of natural beauty, it becomes known as the place with the noisy trucks, the place where the water quality is questionable, and instead of a quaint historical mining past, a place of modern mining destruction? Is it worth the risk? For 300 jobs? As the report states, there are so many other industries worthy of our investment, industries that have a future. Grass Valley's brand is a cozy community with a historic district - should that be risked for a mine that will not in any serious way move the economy forward? It's a gamble we don't need to and shouldn't take.

Best regards,

Chad Henderson
446 Glenwood Road

**Individual Letter 107**

Nevada County Planning Commission

950 Maidu Ave. Suite 170

PO Box 599002

Nevada City, Ca. 95959

Re: Reopening of Idaho Maryland Mine

Dear Planning Commission:

**Ind 107-1** I am writing to express my strong opposition to the reopening of the Idaho Maryland Mine (IMM)! As a resident of Nevada County since 1974, Past President of the Nevada County Board of Realtors, Realtor Emeritus, founding Board Member of the Nevada County United Way, founding board member and past board president of The South Yuba River Citizens League, past Assistant Superintendent of the Nevada County Juvenile Hall, past assistant Director of the Nevada County Council on Alcoholism, and past Chairperson of the Nevada County Juvenile Justice Commission I believe I have a very clear understanding of what makes Western Nevada County the desirable community it is. Reopening of IMM will cause permanent damage not only to our local environment and unique quality of life, but also have a long term negative effect on real estate values throughout Western Nevada County.

**Ind 107-2** I have spent the last several weeks reviewing the Draft Environmental Impact Report completed for Rise Gold. Draft EIR there are numerous findings defined as having "SIGNIFICANT AND UNAVOIDABLE IMPACTS", See pages 1006 – 1009. The final sentence of this section referring to traffic cues reads " Thus, the EIR conservatively concludes that the impact would be significant and unavoidable. A careful reading of all impacts in this section are in fact significant and UNAVOIDABLE! As I understand the EIR rules we are supposed to just accept these unmitigable impacts?? The current Draft EIR makes reference to numerous unknown, and seriously scary, potential impacts, solutions for which will need to be developed AFTER the mine is up and running. In numerous places throughout the DEIR (pgs. 577, 543, 544, 1016 to note just a few), the report refers to potential future problems which would need to be dealt with once the project is operating. I was heartened to see that Rise proposed using "sawdust and kitty litter" when petroleum products are leaked into the Wolf Creek Watershed. In the section called "Collapse" (pg.573) it is noted that significant impacts could occur for which mitigation measures would have to be developed "prior to construction". Dewatering of the mine raises many unknowns which could only be dealt with at the time of failure. (In fact this type "solution" is referenced throughout the DEIR. Rise Gold repeatedly states that they will deal with issues as they arise, we are being asked to trust that they will. (Nowhere does Rise share with us their financial capability to remediate any of the potential problems of this project.)

**Ind 107-3**

**Ind 107-4**

**Ind 107-5**

**Ind 107-6** Please also note that within the DEIR Rise asks for the right to amend Final Parcel Map #85-7 recorded 1/87. They do not state why they want to ammend this map. This is a subdivision map illustrates near surface workings, where a home built on one of the parcels suffered a major collapse. The map also makes reference to faults in the area. Given Rise's desire to move ahead I do not trust their motives for

requesting the map change. On page 567 of the Draft EIR it states "Therefore, a significant impact could occur with respect to being located on a geological unit of soil that is unstable, or that could become unstable as a result of the project, and potentially result I an off-site landslide, lateral spreading, subsidence, liquification or collapse...."

Last month Ben Mossman sent a letter to Realtors throughout Nevada County touting the safety and lack of risk delineated in the DEIR. Clearly that is how he sees this project. I could enumerate many additional questionable conclusions and assumptions of this DEIR – they run throughout the document.

**Ind 107-7** In my humble opinion, the reopening of the Idaho Maryland mine will negatively impact, and irreparably harm the future Western Nevada County.

Thank you.

Charles Brock

PO Box 269, Nevada City, Ca. 95959 – 530.362.0490

## INDIVIDUAL LETTER 107: CHARLES BROCK

### Response to Comment Ind 107-1

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 107-2

The commenter states that the DEIR identifies six project impacts in Section 5.6 that are considered significant and unavoidable.

The DEIR states that, before approving a project, the lead agency shall certify that the Final EIR has been completed in compliance with CEQA, and that the Final EIR has been presented to the decision-making body of the lead agency, which has reviewed and considered the EIR. (DEIR, p. 1-9.) The lead agency shall also certify that the Final EIR reflects the lead agency's independent judgment and analysis. (*Ibid.*) The findings prepared by the lead agency must be based on substantial evidence in the administrative record and must include an explanation that bridges the gap between evidence in the record and the conclusions required by CEQA. (*Ibid.*) If the decision-making body elects to proceed with a project that would have significant unavoidable impacts, then a Statement of Overriding Considerations explaining the decision to balance the benefits of the project against unavoidable environmental impacts must also be adopted. (*Ibid*.)

### Response to Comment Ind 107-3

The commenter states that numerous places in the DEIR refers to future problems which would need to be dealt with when the project is operating and refers to page 543 and 544 (related to closure of near surface workings), page 577 (submission of grading plans and closure of near surface workings), and page 1016 (hazardous materials). The referenced pages relate to mitigation measures that require subsequent governmental approvals before further actions can be taken. Compliance with a regulatory permit or other similar process may be identified as mitigation if compliance would result in implementation of measures that would be reasonably expected, based on substantial evidence in the record, to reduce the significant impact to the specified performance standards (CCR Title 14 Section 15126.4)

### Response to Comment Ind 107-4

The commenter asserts that it is problematic that Mitigation Measure 4.6-3(a) of the DEIR requires that grading plans be developed and reviewed by a geotechnical engineer subsequent to project approval, and implies that such plans should be finalized prior to project approval. Grading plans contain engineering-level detail and this level of detail is not required in an EIR. (*Dry Creek Citizens Coalition v. County of Tulare,* (1999) 70 Cal.App.4th 20, 26.)

### Response to Comment Ind 107-5

The commenter states that there is no guarantee that the Project Applicant will comply with mitigation requirements, specifically with regard to dewatering, but does not explain how the DEIR is inadequate. The Idaho-Maryland Mine Groundwater Monitoring Plan is designed to predict impacts to domestic water wells before they occur. Please see Master Response 15 - Adequacy of Groundwater Monitoring Wells. Regarding compliance with mitigation measures and other permit requirements, please see Master Response 3 - Operator Responsibility. CEQA does not require an analysis of an applicant's financial capability; however, some governmental permits and approvals have financial assurance requirements (e.g., the Surface Mining and Reclamation

Act requires a mine operator to post a bond or other financial assurance to guarantee reclamation of site disturbance on the surface).

## Response to Comment Ind 107-6

The commenter states that the DEIR identifies an amendment to a final map as one of the requested discretionary approvals for the project, but claims the DEIR does not state the reason for the request. As discussed in Chapter 4.6 (Geology, Soils, and Mineral Resources) of the DEIR, based upon the substantial evidence in the record, the project includes a request to amend the Final Map for Bet Acres Subdivision, recorded in February 1987 in Book 7 of Subdivision Maps at Page 75 to remove the "200' Building Setback From Fault", as shown on Sheet 4 of Final Map #85. (DEIR, p. 4.6-31.)

In addition, a management plan was prepared pursuant to the Nevada County LUDC, Section L-II 4.3.8, to address potential seismic hazards associated with the previously-identified inferred fault alignment. It is NV5's professional opinion that the subject fault, identified on the property in Map 85-7, does not qualify as a seismically active area as defined by Nevada County LUDC Section L-II 4.3.8.B, and the proposed development within the designated building setback fault zone is generally feasible from a geotechnical engineering standpoint. (DEIR, p. 4.6-32.)

While the analysis, including peer review by the County's independent expert, shows that an active fault likely does not exist, out of an abundance of caution, the County has concluded that a significant impact could occur without mitigation. Mitigation Measure 4.6-1 requires that prior to approval of Improvement Plans, the design recommendations from the Brunswick Industrial Site Geotechnical Report (November 18, 2019) shall be incorporated into the Plans to the satisfaction of the Nevada County Building Department. (*Ibid.*)

## Response to Comment Ind 107-7

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 108**

**From:** Charlie Landau <charlie@charlielandau.com>
**Sent:** Friday, March 25, 2022 3:46 PM
**To:** Idaho MMEIR
**Subject:** Require a bond

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Do not click links or open attachments unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

There are many uncertainties regarding the plan to reopen the Idaho-Maryland Mine. Rise Gold has made several claims and promises regarding both expected and unexpected impacts.

My concern is that Rise Gold is clearly undercapitalized and does not have the resources to make good on these claims and promises. If there is a problem, the people of Nevada County will be left holding the bag.

**Ind 108-1**

If the county wishes to move forward with the mine, these concerns can be addressed by requiring Rise Gold to put up a bond sufficient to cover the cost of monitoring compliance and mitigating any unmet promises. For example, if more wells are dewatered than planned, the bond would pay the costs of mitigating that. If Rise Gold stands by their promises, they should not object to putting up a bond. If on the other hand they are unable or unwilling to obtain a bond, then they do not have access to the capital to make good on their promises and the project should not move forward.

Sincerely,
Charles Landau
North San Juan

Greetings Ladies and Gentlemen,

Frankly Rice Gold's proposal is a terrible idea; a ghastly step backwards into the 19th century. Please table this issue forever.
Letters, other voices and opinions, by learned professionals, write daily to The Union on a myriad of problems arising: Mossman and Rice Gold's financial instability, history of failed enterprises, environmental contamination and debt. A truly appalling track record.

Infrastructure damage and environmental degradation: For EIGHTY YEARS (yes we won't be alive but our childens' grandchildren will be) Unthinkable dust and noise and really no beneficial trade off for Nevada County's citizens.

**Ind 112-1**

WATER: Truly more precious than gold. VITAL in fact. This enterprise threatens property values and water tables - Really, imagine losing your well - your only water supply.

The Draft Environmental Impact Report lists 83 severe impacts to our area. Surely enough facts to table this issue once and for all time.; We can use that above ground space for expansion and economic growth 21st century style

Please, look to the Future not backwards.

Respectfully,
Charmian Railsback
231 Depot Street,
Grass Valley

**Individual Letter 113**

**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $112,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

I **strongly object to the Rice Mining project .**

**Ind 115-1** Reopening this mine makes no sense and will destroy the quality of Nevada Co. and the uniqueness of our forested, artistic small town residential environment. A gold mine on the edge of the city limit of Grass Valley!? Please, you can't be seriously considering this. Nothing good for our county comes of this at this time.

The gold mining boom here of 1849 which peaked around the end of the 19th century and was basically over by the middle of the 20th century was a different time, fundamentally a very different place, and absolutely a different culture.

**Ind 115-2** On any given day we can hear the average car/truck traffic on Brunswick Road. I can't imagine what the commercial sized trucks coming our of the mine will sound like at all hours and how they will impact us. The road traffic the mine project trucks will add to the two lane roads in the Grass Valley/ Union Hill, Glenbrook Basin, Nevada City and all of Western Nevada Co. are beyond anything this resident of Nevada County considers other than insane. The mine project just simply would take this area back 100 years and return Western Nevada County to that time of dusty, dirty, noisy, congested roads, and underground mine shaft manual workers I doubt can be found in this day and age.

**Ind 115-3** Today people live here to enjoy the forested beauty, the small Northern Ca. town charm, the gorgeous clean streams and rivers, and the quiet clean environment. We have promoted the arts, and tourism and that is the focus of a large percent of our town businesses. None of this is promoted by a large hard rock mine operation near the edge of the Grass Valley city limit.

I urge you to not approve moving this project forward.

Cheryl Balmain

Mr. Matt Kelley, Senior Planner
Nevada County Planning Department

Dear Mr. Kelley,

**Ind 116-1** I am a long time resident of Nevada County, and have owned our property here since 1971.
I am very concerned about this proposal to reopen the Idaho Maryland Mine.
Rise Gold should not be impacting our community with its plan to make profits by extracting gold. This will come with a negative impact on air quality, water quality, noise levels, and future unknown dangers to our beautiful county.
Sincerely,
Cheryl Borad

## INDIVIDUAL LETTER 116: CHERYL BORAD

### Response to Comment Ind 116-1

Please see Master Response 1.

**Individual Letter 117**

February 11, 2022

Nevada County Planning Commission
Eric Rood Administrative Center
950 Maidu Avenue, Suite 170
Nevada City, CA 95959

Dear Commissioners Danny Milman, Laura Duncan, Robert Ingram, Mike Mastrodonato, and William Greeno,

**Ind 117-1** I am writing to voice my opposition to the reopening of the Idaho-Maryland Mine as proposed by the Rise Gold Corporation. I know you are receiving much input about the negative public health, environmental, and quality of life impacts from this enormous project, and I share those objections, but I am focusing today on its negative impacts on mental health, both at the individual and the community level.

I am a Licensed Clinical Social Worker with many years of clinical experience. Nevada County already has a higher rate of depression and suicide than the California average, combined with a lower percentage of mental health providers per capita, as documented in the 2019 Community Health Needs Assessment. (www.mynevadacounty.com/DocumentCenter/View/27995)

The pandemic has led to an even greater demand for mental health services, and there has been an alarming increase in overdose deaths, many involving fentanyl. County behavioral health staff and private practitioners have been operating at capacity for several years, with no end in sight.

**Ind 117-2** It is clear from the number of people mobilized in opposition to the mine, as well as newspaper articles and letters, and numerous private conversations, that the prospect of the mine has already led to a great deal of anxiety in the community. Worry about property values, loss of well water, the prospect of noise and traffic impacts, and anticipated increased health problems, especially respiratory, is widespread.

Additionally, the possible reopening of the mine is yet another divisive issue in the community. At a time when our cohesiveness is challenged on many fronts, this is an issue for which there is a clear solution, and that is to deny the Rise Gold proposal.

I strongly urge you to NOT accept the DEIR.

Sincerely,

Cheryl Thomas, LCSW

Cheryl Morris, LCSW 113 Defiant Way, Grass Valley, CA 95945 (530) 273-1990

RE: Public Comment on The Draft Environmental Impact Report (DEIR)

Dear Mr. Kelley,

**Ind 118-1** We write to you today to address the deeply flawed DEIR that is currently under review. While there are many causes for concern with the flawed DEIR and its potential to pave the way for the mine to reopen, I wish to point out the concerns with 24/7 operations that will change forever the peaceful community we all love.

**Ind 118-2** The noise impacts on our community are distorted by the fact the operations and the underground blasting are not addressed as a whole, but instead broken out into two separate studies. We respectively request that further analysis be done that looks at the combined impacts in one study and that this new study be paid for by the County, not the proposed mine operator Ben Mossman & Rise Grass Valley, Inc.

**Ind 118-3** Cheryl worked for environmental firm for many years and we are both aware that reports that are paid for by the party with an interest in moving forward with an environmentally impactful project are written to persuade unwitting parties to agree with the findings and approve projects with incomplete or biased data. The Bollard Acoustical Consultants, Inc. (BAC) Noise and Vibration Analysis is insufficient since the underground blasting impacts are not considered as a part of this study and are evaluated in a separate study by another firm, IDC-PBS (BAC Noise and Vibration Analysis Report, dated March 8, 2021 Overview, pg. 35). The impacts on our vibrant residential community and county will not be separated. The noise from both operations (BAC Noise and Vibration Analysis Report, dated March 8, 2021 Table 9, Hours of Operation pg. 39) will occur simultaneously with underground blasting. What is required is a full study that looks at all the noise and vibrations together, not broken out to satisfy a paying client's interest in "cherry picking" data for the analytical data they want.

**Ind 118-4** We respectively request that the planning department not move forward with this flawed DEIR and reject the proposed project to reopen the Idaho Maryland Mine. Let's move forward not backwards, and leave gold mining in our past and create a multi-use environmental and economically favorable project for our residential community that meets the goals of the Nevada County's own Environmental Plan.

Kind regards,

Cheryl & Byron Zook

cc: Sue Hoek, Chair, Supervisor, District 4
cc: Ralph Silberstein, President of CEA Foundation

## INDIVIDUAL LETTER 118: CHERYL AND BYRON ZOOK

### Response to Comment Ind 118-1

This comment is introductory in nature. The comment generally alleges that the DEIR is "deeply flawed," but provides no specific evidence – Please see Master Response 1. The commenter's specific comments are discussed in the following responses to comments.

### Response to Comment Ind 118-2

The commenter would like blasting and noise studies to be combined and paid for by the County. The blasting and vibration analysis is significantly different from noise and vibration and are better understood independently. The Environmental Factors of Blasting Report (Appendix M of the DEIR) analyzes transient vibrations from the use of explosives underground, while the Noise and Vibration Analysis (Appendix L of the DEIR) analyses vibrations and noise from the surface equipment. Each has the potential to affect the environment differently. Additionally, vibrations produced from these different sources are not cumulative, and therefore a combined analysis of vibrations is not necessary and risks confusing the public.

Regarding County payment for reports, to avoid burdening the public with the cost of permitting private projects, the applicant must fund the studies necessary for an EIR. California law allows the applicant to submit technical, or other data, to the County for consideration and the County must consider all information and comments received. To avoid any appearance of possibility of impropriety, both of these reports were independently peer-reviewed by the County's consultant, Saxelby Acoustics, and determined to be adequate. The EIR represents the County's independent judgment and analysis and was prepared by the County's independent consultant Raney Planning and Management. As a result, a new study is not required. (DEIR p. 1-9.)

### Response to Comment Ind 118-3

The commenter objects to the noise and blasting reports being completed by separate firms and states that CEQA requires only one report covering blasting and noise together. The blasting and noise reports were independently peer-reviewed by the County's consultant, Saxelby Acoustics, and were found to be satisfactory and adequate upon certain revisions made in response to peer review comments (see page 4.10-26 of the DEIR).

Vibrations produced from blasting and surface equipment sources are not cumulative. (see response to Comment Ind 118-2 above.) These activities take place in different locations (surface vs. underground), and comprise independent potential impacts.

The commentor alleges that noise from both activities, underground blasting and surface equipment, will occur simultaneously. However, these activities also take place at different times of the day. Blasting is typically done between working shifts (7:00AM or 7:00PM) and would be completed within seconds. Surface equipment placing and compacting engineered fill operates from 7:00 AM to 3:30 PM. Other activities such as mineral processing are continuous over the entire day. A schedule of working hours for various activities is provided in Table 3-7 of the DEIR. The evaluation of impacts from blasting noise is based on the worst-case maximum noise levels at the nearest receptors due to the short duration of this noise source (see page 58 of Appendix L). Therefore, blasting noise is not cumulative to continuous noise sources from other activities taking place on the surface, which are evaluated both on maximum noise (Lmax) and average noise (Leq). The County reviewed all reports independently with its own consultants and experts and the DEIR represents the County's analysis of the analytical data. The County must certify that the Final EIR reflects its own independent judgement and analysis. (DEIR p. 1-9.)

## Response to Comment Ind 118-4

This comment generally requests the DEIR not move forward and the County to reject the proposed Idaho-Maryland Mine Project. Please see Master Response 1.

I am 100% opposed to the re-opening of the Idaho-Maryland Mine by Rise Grass Valley Inc.

**Ind 119-1** My family moved here in the early '70's and has seen the poorly regulated growth in Nevada County and the City of Grass Valley, Ca. Ever since. And how can the decision to reopen fall on the shoulders of the Board of Supervisors? I have knowledge that one member is moving out of the County. How unjust is that? Vote and leave? Really?

**Ind 119-2** Rise Mine and any other names it is doing business under is not to be trusted. They have proven it in the past. There are still pending lawsuits. Printing expensive glossy brochures touting the benefits of the mine is not proof. In fact in 'The Science Is Clear' flyer there are two sentences that embodies RISE GRASS VALLEY INC philosophy. "The results are exactly what we've said all along. The mine will be safe, modern, well-regulated and environmentally sound." That is bullshit!

**Ind 119-3** My sister lives in Cypress Hills area and I live off the freeway on Dorsey. The Freeway noise is constant and getting worse. We do not need up to a 100 huge rock trucks adding to the traffic and noise level. The traffic circle with huge rock trucks will be a disaster! The reports on environmental impact are lacking. This I proposal is not what we need or want!

I am 100% opposed to the re-opening of the Idaho-Maryland Mine by Rise Grass Valley Inc.

**Ind 120-1**

Hello I am a Nevada County resident writing to express my opposition to the reopening of the Mine. The Environmental impact will be devastating and will surely affect everyday life for all living creatures in the vicinity. My life and quality of life will also be negatively affected at my home on Greenhorn Rd. The increased truck traffic, constant noise, and impact on our roadway infrastructure alone is enough reason to never allow such a project to happen again near a residential area. The water that must be pumped out of the existing mine shaft shall never be expelled and brought to surface to harm the invaluable wildlife and residents of this area and county. I am beyond disappointed that this project has even made it this far. We must focus on living up to our true potential here in this county and regressing back to mining is NOT progress, we can do so much better than this.

Christopher Colbert

## INDIVIDUAL LETTER 120: CHRIS COLBERT

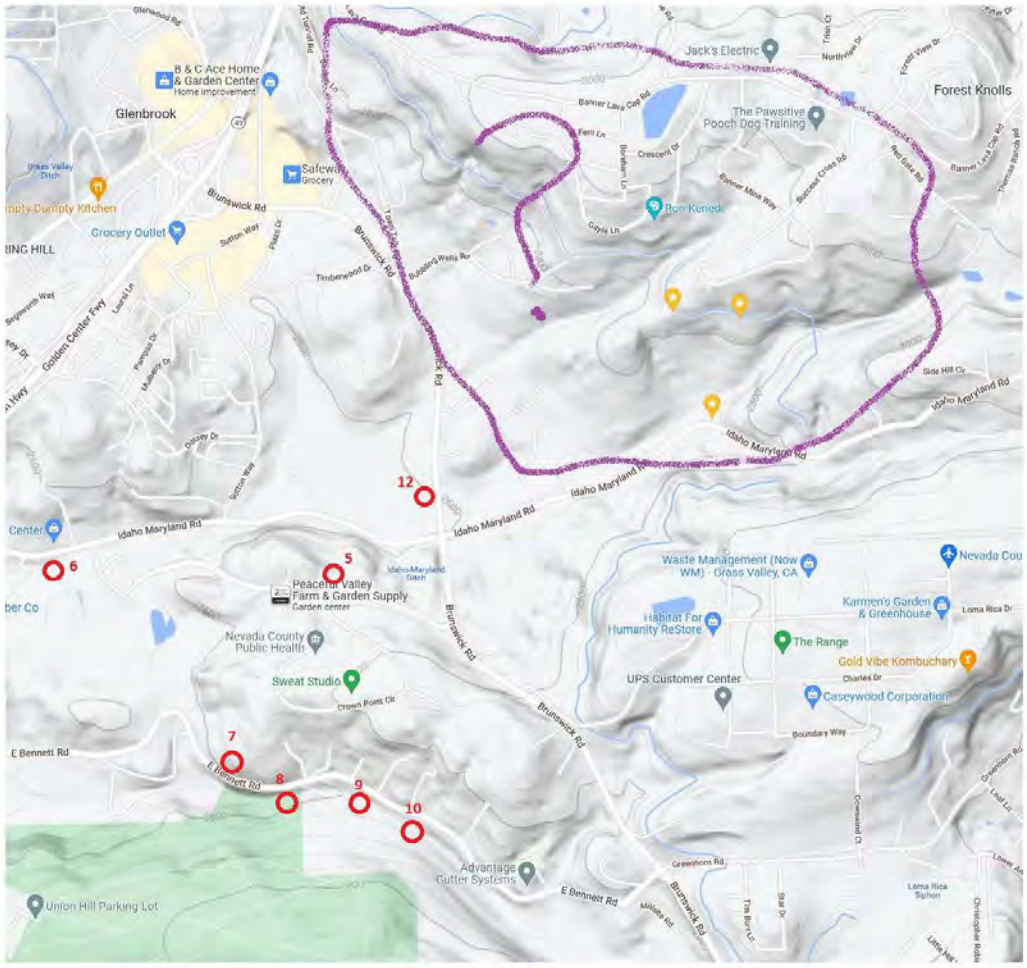
Nevada City, CA 95959

Mar. 23, 2022

RE: Deficiencies of Idaho-Maryland Mine Draft EIR



Matt Kelley
Senior Planner Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902
Idaho.MMEIR@co.nevada.ca.us

Dear Mr. Kelley,

I am a resident of lower Banner Mountain. I have previously written to you regarding my intense opposition to the re-opening of the Idaho-Maryland mine. No need to elaborate on that here, but my main concern is the impact of construction and traffic noise.

**Ind 121-1**

The DEIR fails to study noise impact on lower Banner Mountain, where there are many residences. Sound travels from the basin up the hill. Traffic from Brunswick Rd. between Idaho Maryland and Hwy. 49 is audible. We can hear any large truck or motorcycle that passes by. Below, I have superimposed approximate noise and vibration measurement locations, from the DEIR Fig. 4.10-3, onto a topographical map from Google. I have circled the area that will be affected and that has been neglected from the study.

**Ind 121-2**

Further, the DEIR uses general formulae and standards to determine whether noise impact is "significant" or not. Present the data any way you want in terms of averages and peaks, etc. in DEIR section 4.10, but adding noise from heavy trucks averaging 50 trips a day, 7 days a week, for the next 80 years will be audible and significantly impact residents' enjoyment of our properties. There is a large swath of residential area that has been left out of this study.

Sincerely,

Chris Themelis

CC: planning@co.nevada.ca.us

## INDIVIDUAL LETTER 121: CHRIS THEMELIS

### Response to Comment Ind 121-1

The commenter is a nearby resident and is opposed to the project. The commenter's opposition to the project is noted for the decisionmakers. The commenter is concerned about the effect of project noise on residences located on lower Banner Mountain, northeast of the project site. As shown in DEIR Table 4.10-15 and Table 4.10-16, the addition of project traffic would not result in a significant increase in noise levels at receptors along Brunswick Road, between Idaho Maryland Road and Highway 49 (i.e., the area adjacent Banner Mountain). It should be noted that this analysis assumes full production traffic levels of 200 daily truck trips rather than the average anticipated 100 truck trips (DEIR, p. 4.10-35). Given that noise is attenuated by distance and the presence of buildings, trees, and vegetation between the noise source and the noise receptor, noise levels would be reduced with greater distance from the roadway. While overall traffic on Highway 49 may be audible from residences on Banner Mountain, project traffic would represent a small portion of overall traffic and would not significantly increase noise levels.

### Response to Comment Ind 121-2

Please see the above response. The comment has been forwarded to the decisionmakers.

**Individual Letter 122**

April 2, 2022

Mr. Matt Kelley
Senior Planner
Nevada County Planning Department

Via email:Idaho.MMEIR@co.nevada.ca.us

Re:Comments regarding the Idaho-Maryland Mine Project EIR

**Ind 122-1**

Section 4.8 covers Hydrology and water quality. This is one of many critical areas for residents of Nevada County. In 4.8.1, the concern of water quality is addressed. The mitigation measure that is suggested is that the Central Valley Regional Water Quality Control Board monitor the water standards by receiving water samples provided to them, apparently by the mine. In addition, the mine is to provide quarterly water quality reports.

It is insufficient for our water quality to be sampled by the mine. Independent sampling and testing, occurring on recurring and random cycles should be secured by the Central Valley Regional Water Control Board. Water quality is too critical to depend on the mine to secure the tests to be analyzed. Results need to be independently obtained and tested.

Nevada County is a small, wonderful community that would be devastated if our water quality deteriorated. Please do not allow that to happen.

Sincerely,

Christie Gillison

### Response to Comment Ind 125-1

Please see Master Response 1.

**Individual Letter 126**

April 4, 2022

Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-8617
Sent via email to: Idaho.MMEIR@co.nevada.ca.us

Dear Mr. Kelley,

**Ind 126-1** The Idaho-Maryland Mine Project Draft Environmental Impact Report (DEIR) contains several flaws that render it inadequate as it does not meet CEQA standards. As such, it should be rejected and a new Draft Environmental Impact report should be prepared and re-circulated for public comment and review. Based on my personal experience as an environmental planner I see that among other items, the DEIR: 1) fails to accurately describe the Project and 2) fails to provide sufficient credible information necessary to determine the Project's potential impacts to both groundwater and surface water quality as a result of the Project.

**Failure to adequately describe the Project:**

**Ind 126-2** The DEIR's project description is legally inadequate because it improperly excludes the required cleanup of existing contamination on the Centennial Site from the scope of the Project. The DEIR uses the post-cleanup conditions of the Centennial site as the baseline for the impact analysis despite this not being an accurate portrayal of the existing conditions of the site. The Project proposes to create a fill pad at the Centennial Site that would cover an area of 44acres and contain 1.6 million tons of mine waste in a location that requires remediation, but does not include that remediation effort as part of the Project. CEQA Guidelines § 15125(a)(3) clearly state that "existing conditions baseline shall not include hypothetical conditions, such as those that might be allowed, but have never actually occurred, under existing permits or plans, as the baseline." An EIR's failure to accurately determine existing baseline conditions "renders the identification of environmental impacts legally inadequate and precludes a determination that substantial evidence supports"

**Failure to adequately evaluate impacts to groundwater and surface water:**

**Ind 126-3** The DEIR fails to adequately evaluate how the Project would affect groundwater levels or the impact to groundwater quality in the Project vicinity. Alterations to groundwater levels or groundwater quality could severely affect water availability within and near the community of Grass Valley, particularly for those in the community that rely exclusively on well water. The need to protect limited groundwater supplies and the quality of those supplies are critical, particularly as Northern California is experiences more frequent and severe drought conditions as a result of climate change that further limit the availability of surface water supplies. The Project relies on extremely limited data to model groundwater levels that does not adequately take into consideration the fluctuations that occur during different seasons and different climatic extremes that are likely to occur during the lifetime of the proposed Project. Additionally, the Project fails to provide any model to indicate the water quality impacts to

either groundwater or the surface water quality of Wolf Creek, where the Project proposes to discharge water pumped from the Project site. The additional water discharged into Wolf Creek has the potential to substantially alter the water chemistry, including the temperature and dissolved oxygen levels of the creek, which can negatively affect fish and wildlife; however, this is not adequately addressed in the DEIR. The DEIR fails to, but must, disclose the potential water quality impacts that have the potential to harm human health and the health of fish and wildlife.

Sincerely,
Christine Alford
224 Lloyd Street
Grass Valley, CA 95945

## INDIVIDUAL LETTER 126: CHRISTINE ALFORD

### Response to Comment Ind 126-1

The commenter states the DEIR is inadequate. Responses to more specific comments are provided below.

### Response to Comment Ind 126-2

The commenter states that the DEIR is legally inadequate because it excludes the cleanup of the Centennial Industrial Site from the scope of the project. The commenter is referred to Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 126-3

The commenter states that the DEIR inadequately addresses the impact to groundwater supplies and quality, especially in the context of drought and climate change. The commenter is also concerned about potential impacts to South Fork Wolf Creek. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, Master Response 16 - Drought and Climate Change, Master Response 32 - Temperature of Mine Water Discharge, and Master Response 35 - Discharge to South Fork Wolf Creek.

Grass Valley CA 95945

Dear NC Board of Supervisors,
I do not support this mine effort

# THE IDAHO-MARYLAND MINE: A PROUD HISTORY

The Idaho-Maryland Mine was one of the most productive and best-known gold mines in the United States, producing approximately 2.4 million ounces between 1866 and 1955. The mine closed in 1956 as the fixed price of gold at $35 per oz made the mining of American gold unprofitable.

Rise Grass Valley will reinitiate mining and will do so with a focus on green-friendly practices and minimizing the impacts to neighbors. The project will use modern, clean, state-of-the-art mining equipment and proven techniques to produce "green gold." The result is a project that has no significant impacts to water, air quality, and the natural environment or from noise or vibrations during operations.

When in full operation, Rise Grass Valley's Idaho-Maryland Mine project will create hundreds of good-paying jobs and realize broad economic benefits for Nevada County.

**Please fill out and send back to us your support for the Idaho-Maryland Mine**

I DO NOT SUPPORT
**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

## INDIVIDUAL LETTER 127: CHRISTOPHER CARPENTER

### Response to Comment Ind 127-1

Please see Master Response 1.

**Individual Letter 128**

From: Chris Hall
12235 Rocker Road
Nevada City, CA 95959| chall14@sierracollege.edu

To: Mr. Matt Kelley
Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902 (530) 265-1423

Dear Mr. Kelley,

**Ind 128 -1**

I am writing you to share my concerns regarding the Draft Environmental Impact Report for the proposed reopening of the Idaho-Maryland Mine in Grass Valley. I am a local college professor and father, and I am deeply invested in the place I live—not for my own sake alone, but also for the sake of my children and their children after them. As someone who was fortunate enough to grow up in Nevada County and who has returned here to raise my own family, I find the 83 impacts identified in the report disheartening and believe that the report names several impacts that are impossible to mitigate adequately. The report as written (indeed the very project itself) appears incompatible with the natural and cultural features that grant Nevada County its unique rural, small-town character.

**Ind 128-2**

I attended the Nevada County Planning Commission on March 24th and know that many have already raised similar concerns to those I voice here. I can only hope that you will weigh our comments and call for further assessment of the project. To my mind, the unavoidable impacts to aesthetics, traffic, and noise point to the need for significant revisions to the DEIR at the least (and ideally adopting the "No-Build" option).

**Ind 128-3**

When I learned from KVMR host Martin Webb's program that the project would require an 80-year exception to County zoning and maximum heights of buildings limitations, I was alarmed. Digging into the report I confirmed the enormity of impact on the beauty of the area for myself. I have driven past the site several times, and to imagine a "64-foot-tall process plant, the proposed 165-foot-tall headframe for the Brunswick shaft, the proposed 80-foot-tall headframe for the proposed service shaft, and the proposed 50-foot-tall hoist buildings associated with the two mine shafts" (DEIR, p. 4.4-15) is to imagine a project that shatters the rural and scenic qualities of Grass Valley. On a similar note, though I know an economic impact report is not required at this time, the impacts of such major industrial construction on tourism seem well worth considering. Beyond this, as noted in the report "the overall changes to aesthetics Cumulative buildout in the geographic area would result in a change in the visual character of the region, which would be considered a significant cumulative impact. Therefore, the project's incremental contribution to the significant cumulative impact would be cumulatively considerable and significant and unavoidable." For those of us who call this place home, significant and unavoidable feel like euphemisms for disastrous in terms of impact to the natural and cultural beauty of Nevada County.

**Ind 128-4**

On a similar note, the impact to traffic at three key areas is significant and is reason for further review of the project. As stated on p. 4.12-61 of the DEIR, "The proposed project would increase traffic through three intersections already identified as operating unacceptably under Existing and EPAP Conditions. Thus, a significant impact to the Brunswick Road/Idaho Maryland Road, Brunswick Road/SR 174, and Idaho Maryland Road/Centennial Drive intersections would occur under the EPAP Plus Project." I acknowledge that signalization and traffic control may mitigate some of the impact to traffic identified in the report during and after the construction phase, but each of these solutions also further alters the unique quality of our home (and does not fully or adequately address the probably impact on traffic in the three key areas identified above).

**Ind 128-5**

Noise from the project—both from construction and operation—have been downplayed by Rise Gold from the start. Sadly, these impacts also appear to be downplayed in the DEIR, and adequate mitigations are not proposed. As the report points out, while noise generated during construction is "exempt from Nevada County LUDC noise standards," (DEIR, p. 4.10-30) it is nevertheless, "considered substantial pursuant to CEQA." Moreover, while the DEIR presents an analysis of noise during operations and claims the impact from this noise can be mitigated with a vibration monitoring program and additional mitigation measure, further analysis of these areas is necessary. As with the impact to aesthetics and traffic, for those of us who live here, "significant and unavoidable" is a gross understatement when one considers the level of noise construction and operation of the project will entail.

**Ind 128-6**

**Ind 128-7**

**Ind 128-8**

In addition to aesthetics, traffic, and noise, several other areas of concern arise. Critical data of accurate hydrological models is missing from current DEIR—300 wells will be affected, not to mention groundwater. Air pollution is at least one aspect not adequately addressed by DEIR. Mitigations for increase in greenhouse gas emissions from the project are unacceptable—the report fails to include cement manufacturers emissions. Moreover, the County's goals for climate mitigation will be nearly 100% undone by the mine should the project go ahead as planned. The Centennial cleanup site is not even

**Ind 128-9**

included in project description. A workplan is needed for this aspect of the project. The cleanup site should not be segmented from the overall project. Any one of these concerns is grounds to revisit the report and points toward the No-Build option as the only option that will preserve the unique natural and cultural character of Nevada County.

**Ind 128-10**

Nevada County is a place defined by its unique rural, small-town character. Significant and unavoidable impacts to noise, traffic, and aesthetics are reason enough alone to revisit the DEIR and endorse the No-Build option. Mining is part of our history, but if history has taught us anything it is that mining is not our future—a fact proven by mining's toxic legacy, a legacy toxic to both culture (evidenced by the impact on indigenous peoples and others exploited in operation of mines) and nature (as evidenced by streams and groundwater still poisoned by mining). While mining practices have changed, the DEIR reveals that this project would only mean more damage to our community in the name of gold extraction. Clearly, the reopening of the mine—not to mention 80 Years of planned operation—Involves impacts far beyond the scope of the mitigation measures outlined in the current draft EIR.

Thank you for your time,

Chris Hall

## INDIVIDUAL LETTER 128: CHRISTOPHER HALL

### Response to Comment Ind 128-1

This comment is introductory in nature and the commenter opposes the project. The commenter is also concerned with the project's impacts that cannot be mitigated to less than significant. Significant and unavoidable impacts from the project are summarized in Section 5.6 of the DEIR. The commenter's opposition to the project is noted for decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 128-2

The commenter states that the project's significant and unavoidable impacts should be the basis for the County not approving the project. Significant and Unavoidable impacts from the project are summarized in Section 5.6 of the DEIR. In order for the Board of Supervisors to move forward with certifying this EIR and approving the project entitlements, due to the significant and unavoidable impacts that would occur with implementation of the project, the Board would be required to adopt a Statement of Overriding Considerations. The Statement of Overriding Considerations would publicly disclose the process by which the Board weighs the environmental impacts of the project against any other factors. As enumerated in Section 15093 of the CEQA Guidelines, factors to be balanced by the Board when considering projects that would result in a significant and unavoidable environmental impact include economic, legal, social, and technological benefits of projects as well as region-wide or statewide environmental benefits. The commenter's opposition to the project is noted for decision makers. Please see Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 128-3

The commenter is concerned that the project structures required for the Brunswick site would have adverse aesthetic impacts. The commenter also states that the aesthetic impacts to tourism are worth considering. Chapter 4.1 (Aesthetics) of the DEIR also concludes that the project would result in a significant and unavoidable aesthetics impact. Regarding economic issues, the commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 128-4

The commenter references Chapter 4.12 (Transportation) of the DEIR and the significant traffic-related impacts the project would cause. The commenter does not state how the DEIR is inadequate. Chapter 4.12 concludes that the project's traffic impacts would be less than significant after mitigation, with the exception of traffic at the SR 174 and Brunswick Road intersection and the northbound left lane at the Brunswick Road and Sutton Way intersection, which would be significant and unavoidable due to the uncertainty of the mitigation measures identified in the DEIR. Regarding quality of life issues, the commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 128-5

The commenter states that further analysis of noise impacts is necessary in the DEIR but provides no specifics or evidence and does not identify how the DEIR is inadequate. Chapter 4.10 (Noise and Vibration) of the DEIR concludes that noise impacts will be less than significant after mitigation, with the exception of the installation of the East Bennett potable water line, which would be significant and unavoidable.

## Response to Comment Ind 128-6

The commenter states that critical data regarding groundwater wells is missing from the DEIR but does not identify what data is missing or how the DEIR's groundwater analysis is inadequate. The commenter is referred to Master Response 7 - Location of Future Mining Areas, Master Response 14 - Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 128-7

The commenter states that air pollution is not adequately addressed in the DEIR but provides no specifics or evidence. The commenter is referred to Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy) of the DEIR.

## Response to Comment Ind 128-8

The commenter states that the DEIR omits the emissions caused by cement manufacturers. The commenter is referred to Master Response 26 - Life Cycle GHG emissions.

## Response to Comment Ind 128-9

The commenter states that the Centennial Industrial Site cleanup must be included in the DEIR. The commenter is referred to Master Response 4 – Cleanup Project is a Separate Project Under CEQA.

## Response to Comment Ind 128-10

The commenter opposes the project and states that it is incompatible with the surrounding community. The commenter's opposition to the project and support for the "No-Build option" is noted for decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

Comment Meeting (Move to Come by April 4)

RECEIVED
MAR 24 2022
NEVADA COUNTY PLANNING DEPARTMENT

**Regarding: Well owners in the vicinity of the Idaho-Maryland Mine request better safeguards**

Hi. My name is Christy Hubbard. I'm Grass Valley homeowner and representative for the Wells Coalition, a group of well owners in the vicinity of the mineral rights area of the Idaho-Maryland Mine.

**Ind 129-1** After reviewing the DEIR, we feel the Well Mitigation Plan is not adequate. A key concern is that the County has failed to adequately define the true area of potential impact. The report repeatedly acknowledges the high level of uncertainty in hydrological models. And yet, the applicant has a mitigation plan for only 30 properties. There is no acknowledgement of risk – or plan to safeguard – domestic wells in the surrounding area.

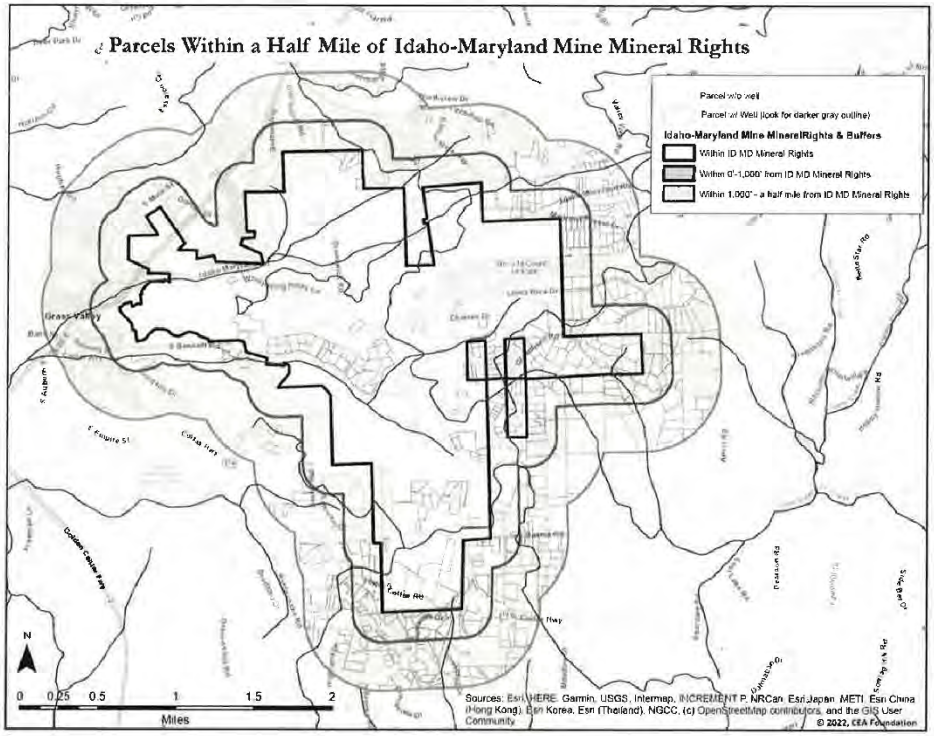
Since public records tell us there are roughly 525 private wells within a ½ mile of the mineral rights boundary, this is a significant concern. Bear in mind that this project is asking for an 80-year use permit, and there is no reason to believe Rise Gold will constrain their mining to one small area for that entire amount of time.

**Ind 129-2** Consider this scenario. One day, a homeowner turns on the tap and there's no water. It would be nearly impossible to prove that the mining operation caused damage because there is no plan to keep a reliable record of their well history. Neighborhoods would need to find immediate funding for water trucks and likely hundreds of thousands of dollars to connect to NID for a long-term solution. Based on current estimates, it would take years to restore water service. Furthermore, selling their house would not be an option because a home without water is of no value.

**Ind 129-3** This is not the first time Nevada County has faced concerns about wells in the area. The last time it happened however, the County provided a much more comprehensive system of safeguards for nearby residents. In 1996, Emperor Gold was granted a Use Permit to dewater the mine for exploration which required protections for all wells in a designated "Study Area".

In addition to NID hookups for the homes on E. Bennett Road, it included: multiple years of well monitoring, a community relations program, retention of an independent groundwater consultant, pre-approval of all NID connection permits, and cash, bonds, and security to cover expenses for replacement water. All of this was done for 5 years of exploration. It did not include 80 years of mining.

**Ind 129-4** On behalf of myself and well owners in the vicinity of the mine, we respectfully request that the final report provide significantly better safeguards for well owners. The potential impacts to well owners has been recognized by experts and these impacts must be addressed under CEQA. The final report must fully identify the potential area of impact and articulate a complete set of safeguards to protect this community. This County has



provided far better protection for us in the past. Given the enormous scope of this project, we need a more comprehensive plan to protect us in the future.

Thank you for your time.

Christy M. Hubbard for the Wells Coalition

Attachment: Parcels within a Half Mile of Idaho-Maryland Mineral Rights

Note: This map is based on best-available information. Data was sourced from Nevada County parcel records, which rely on information from the Water Board. A PDF version of this map is available online at https://www.minewatchnc.org/post/idaho-maryland-mine-mineral-rights-map

## INDIVIDUAL LETTER 129: CHRISTY HUBBARD

### Response to Comment Ind 129-1

The commenter states that the DEIR is inadequate, specifically the Well Mitigation Plan, because it does not accurately depict the area in which private wells may be impacted. The commenter reasons that the approximately 525 wells within the mineral rights boundary may be impacted by the dewatering of the mine. The commenter is referred to Master Response 7 - Location of Future Mining Areas, Master Response 14 - Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells. As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

### Response to Comment Ind 129-2

The commenter poses a scenario in which a private well not included in the mitigation plan is impacted by the project. The commenter is referred to Response to Comment Ind 129-1. Regarding impacts to property values, the commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 129-3

The commenter references a previously proposed project at the project site. The commenter is referred to Master Response 13 - Historic Hydrogeologic Assessments, and Response to Comment Ind 129-1.

### Response to Comment Ind 129-4

The commenter reiterates the concerns with the scope of the potentially impacted area. The commenter is referred to Response to Comment Ind 129-1. The commenter's opposition is noted for the decisionmakers.

Dist 2

# THE IDAHO-MARYLAND MINE: A PROUD HISTORY

The Idaho-Maryland Mine was one of the most productive and best-known gold mines in the United States, producing approximately 2.4 million ounces between 1866 and 1955. The mine closed in 1956 as the fixed price of gold at $35 per oz made the mining of American gold unprofitable.

Rise Grass Valley will reinitiate mining and will do so with a focus on green-friendly practices and minimizing the impacts to neighbors. The project will use modern, clean, state-of-the-art mining equipment and proven techniques to produce "green gold." The result is a project that has no significant impacts to water, air quality, and the natural environment or from noise or vibrations during operations.

When in full operation, Rise Grass Valley's Idaho-Maryland Mine project will create hundreds of good-paying jobs and realize broad economic benefits for Nevada County.

**Please fill out and send back to us your support for the Idaho-Maryland Mine**

**I ~~support~~ OPPOSE re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 500 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 500 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

This mine threatens our ground water. We are dependent on the water table. I do not support this mine! I have friends on the ridge whose lives and chidrens' lives were turned upside down by mine activity. Stop this mine! NO MINE!!

**TRUE GOLD is of the HEART**

TRUE GOLD is of the heart dear sir, NOT the economy
Precious is this land to us, where grows true LOVE not greed.
Take my hand and walk with me, I'll show you our TRUE GOLD
Each day we wake shines a golden SUN, a treasure to behold.

**Ind 131-1**

Sun comes up, Sun goes down PURE GOLD for you and me.
The HEART of our universe beating rhythmically

Community can only thrive dear sir, on clean water, food and air.
Upon NATIVE lands we reside, with respect -we steward and care.
Throw your shovels to the winds, take your mining machines AWAY!
True Gold is of the HEART Mr. Mossman, we strike it EVERY DAY.

SUN comes up, SUN goes down PURE GOLD for you and me.
The HEART of our universe beating rhythmically

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

I oppose the opening of the Rise-Goldmine

Why?
Water pollution
Well-water threat
Noise above ground
Noise and vibration from underground
Dust
Wear and tear on the roadways
Past history of Rise-Gold's Ben Mossman's environmental and economic history
Likelihood that Rise-Gold's bonds won't be enough to cover damages and cleanups.

Sincerely,
Clay Olson

**Ind 133-1**

I oppose approval of the Rise Gold mining venture. Although I would love more jobs to be created locally, I live in a residential town in which the majority of the living quarters and residents showed up after 1849. Anyone with a certain degree of sensitivity to noise and dust and the stress caused by the increasing traffic in Grass Valley, will have second thoughts about this venture. And anyone who wants our water, both in wells and in our creeks, to be cleaner and available, will want to vote against this venture.
Sincerely,
Clay Olson

Hello Matt
I am writing to you to express my extreme concern about the re-opening of the Idaho-Maryland Mine.

We live 3 miles from the site and are worried that our well water quanity and quality are going to be damaged by this project.....there seems to be no way to really tell what will happen.
Other concerns are the noise and traffic with the frequency of trucks coming and going.

**Ind 136-1**

Our community is MUCH larger now than it was when gold mining was an every day happening around here; now there are many more people to be impacted. Many do NOT view this with warm and fuzzy nostalgia of a return to yesteryear.
Please, take care of this community and do not allow this endeavor.

Thank you
Colleen Carson

**Subject:** Our biggest concerns re: Idaho Mine DEIR

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Do not click links or open attachments unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To Matt Kelly and the Nevada County Planning Department,

My husband and I have a number of concerns regarding the proposed Idaho-Maryland Mine. After reviewing the DEIR, I am very concerned about the following issues:

**Ind 137-1**

1. Groundwater - the model used is troubling from the beginning. The assumptions made by the baseline data used make the analysis misleading. We already have some local problems with wells and loss of ground water. Climate change will make this issue worse. It is not fair to add the burden of the mine's water demands to NID's already increasing water demands. Why would we do this, endanger our water supply.

**Ind 137-2**

2. Greenhouse gas emissions - the latest climate change goals state that the threshold should be "net Zero' not some arbitrary limit.
Our county's air quality is already a grade "D". With increasing hot temperatures throughout the years will increase as it is. Why add more pollution by approving this mine.

Please be very careful in considering the long term effects on our citizens and community environment. Please make Rise Gold accountable on all issues brought forth by numerous and knowledgeable speakers at the March 24 meeting.

**Ind 137-3**

Thank you for your attention,
Collette Castro and Michael McLean

Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902

Dear Mr. Kelley:

The information about the environmental effects of reopening the Idaho Maryland Mine mention in passing, briefly, that "the ore will be processed on site." That is, most probably, a stamp mill, smashing the rock to release the gold.

Stamp mills are VERY NOISY, 24 hours a day. Guess why all the houses on Anchor Lane and Liquidambar Lane, and all the houses on Greenhorn from there to Brunswick, were built since 1960? The stamp mill, only half a mile away, was no longer there.

**Ind 138-1**

PLEASE get the EIR to discuss this! I can't imagine all these houses having any resale value at all with a stamp mill pounding away all day, all night.

I didn't know about stamp mills until I visited Ichthyosaur State Park in Nevada, which also includes a closed mine. The ranger/guide described the sound of the stamp mill as ground-shaking and relentless. He asked us to picture how much weight, at how much height, it would take to smash rock.

## INDIVIDUAL LETTER 138: CONNIE FINSTER

### Response to Comment Ind 138-1

Noise impacts associated with mineral processing were addressed in Impact 4.10-3 within Chapter 4.10, Noise and Vibration, of the DEIR. As discussed therein:

> The project processing equipment located within the processing building would consist of the SAG mill (primary grinding), ball mill (secondary grinding), concentrator, cyclones and screens, and filter presses. The noise transmission loss of the proposed metal building ranges from 31 dB at 125 Hz to 75 dB at 4,000 Hz. In addition, the metal building would have double doors (i.e., airlock) to prevent sound escaping when one set of exterior doors are open.
>
> Using information provided by the Project Applicant for similar facilities, the noise generation from such processing equipment is expected to be 105 dBA $L_{eq}$ with maximum noise levels of approximately 110 dBA $L_{max}$.
>
> The reference noise level data for both the noise source and building enclosure were used as inputs to the SoundPlan model to calculate processing plant operations at the nearest receptors (see Figure 4.10-6). The results of those calculations are provided in Table 4.10-17. Because such processes are anticipated to occur at all hours, the most restrictive, nighttime noise criteria were applied.
>
> Based on the data presented in Table 4.10-17, the mineral processing operations would generate noise levels below the applicable nighttime standards of significance at each of the nearest sensitive receptor locations. As such, noise-related impacts from mineral processing would be less than significant.

Based on the above, impacts related to mineral processing noise were adequately addressed in the DEIR.

**Individual Letter 139**

## IDAHO-MARYLAND MINE PROJECT
## DRAFT EIR COMMENT FORM

To document the author of comments received, please provide the following information. Thank you.

Name: Constance Dwright

Address: 196 Northridge Dr

Organization (if applicable): Unitarian UU CM of the Mountains

Please provide us with your written comments on the Idaho-Maryland Mine Draft EIR by **5:00 PM, April 4, 2022**. Comments may be placed in the comment box located in the back of the Board of Supervisors Chambers during the Special Public Meeting of the Nevada County Planning Commission. Written comments may also be submitted (email or hardcopy) to the address below:

**Matt Kelley, Senior Planner**
**Nevada County Planning Department**
**950 Maidu Avenue**
**Nevada City, CA 95959-8617**
**Idaho.MMEIR@co.nevada.ca.us**

Ind 139-1

I am very concerned about the air pollution the new mine would bring in. Also, I am worried about the traffic that would emerge. There are just 2 of the issues.

**To:** Idaho MMEIR
**Subject:** Idaho-Maryland Mine Project DEIR comments

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Matt Kelley,

**Ind 140-1** I'm a lifelong Californian who enjoys the Yuba River every summer, attends Grass Valley's Cornish Christmas and Nevada City's Victorian Christmas every December, and makes weekend day trips as often as I can. I love Nevada County and want to share my comments on the DEIR for the proposed Idaho-Maryland Mine as a concerned neighbor of the county and regular customer of Nevada County businesses.

I'm particularly concerned about how this proposed project will affect (1) Nisenan cultural heritage; (2) wildlife and wildlife habitats and (2) dewatering and water contamination impacts.

**Ind 140-2** 1. Impacts to the Nisenan
On page 4.5-10, the DEIR states that InContext made attempts to contact 4 tribes via mail, email and phone from Sept 2019-Dec 2020 and did not receive responses. I'm concerned about whether sufficient effort was put into reaching each tribe. How many contact attempts were made over that period of time? Is InContext certain they had the correct information? How were these attempts to communicate framed by InContext? Can there be additional, perhaps more concerted, efforts to solicit tribal responses before the FEIR?

**Ind 140-3** 2. Impacts to wildlife
On pages 4.4-31 through 4.4-35, only 5 species of special concern are considered and all, except for the Western pond turtle, are described as having "very low" presence. How does the DEIR account for future presence of these species due to increased urbanization and increased wildfires? Why are trout and other aquatic species not considered? These species, along with benthic macro invertebrates, should be addressed in the FEIR.

**Ind 140-4** 3. Impacts to water
How did the DEIR decide upon 15 wells to estimate impacts on water supply wells, and where are those monitoring wells located? Why, on page 4.8-67, does the DEIR state that "A projected water-level impact assessment for individual domestic wells shall be performed once dewatering of the underground mine workings commences"--how can an accurate assessment be made if it doesn't start until after dewatering begins? Finally, trying to rely solely on modeling in a fractured rock system is difficult at best, and foolhardy from a long-range perspective.

**Ind 140-5** In general, it seems to me that a revised DEIR should seek out input from additional expert opinions and data from researchers not hired by Rise Gold in order to be in full compliance with CEQA requirements.

Sincerely,
Corinna Fish

## INDIVIDUAL LETTER 140: CORINNA FISH

### Response to Comment Ind 140-1

The commenter is concerned with cultural, wildlife, and hydrological issues. Responses to specific comments are provided below.

### Response to Comment Ind 140-2

In addition to the informal tribal outreach efforts performed by InContext, the County complied with AB 52 tribal consultation requirements for the proposed project. As discussed in Response to Comment Grp 14-2, the County complied with the above requirement, despite the fact that the Nevada City Rancheria Nisenan Tribe was not added to the Native American Heritage Commission Contact/Tribal Consultation list until March 21, 2022.

As stated in the Cultural Resources chapter of the DEIR "On November 25, 2019, Nevada County sent project notification letters with offers to consult pursuant to AB 52 to the Tsi Akim Maidu Tribal Council, Shingle Springs Band of Miwok Indians, **Nevada City Rancheria Nisenan Tribe**, and UAIC. The Tsi Akim Maidu Tribal Council, Shingle Springs Band of Miwok Indians, and **Nevada City Rancheria Nisenan Tribe did not respond within the 30-day consultation period**." (DEIR p. 4.5-21, emphasis added) Additionally, the Project Proponent's cultural resource consultant, InContext, attempted to contact the Tribe on December 1, 2020 by letter, phone and email, and on December 16, 2022 by phone and email, with no response. The correspondence was addressed and sent directly to Shelly Covert, the Tribal Secretary of the Nisenan Tribe. In sum, despite a lack of recognition from the NAHC at the time, the Nisenan Tribe was still treated as a recognized tribe by the Project Proponent and the County. The Tribe received notices and was provided an opportunity to consult under AB 52.

### Response to Comment Ind 140-3

The future movement of special status species to the project sites due to increased urbanization and wildfire is speculative and CEQA does not require the analysis of speculative impacts. As stated in CEQA Guidelines Section 15384, "[a]rgument, speculation, unsubstantiated opinion or narrative, evidence which is clearly erroneous or inaccurate, or evidence of social or economic impacts which do not contribute to or are not caused by physical impacts on the environment does not constitute substantial evidence." However, Mitigation Measures 4.4-2(a) through 4.4-2(f) require pre-construction surveys, and if present, additional mitigation measures for special-status species. Trout, benthic macro invertebrates, and other aquatic species are considered in the DEIR. The commenter is referred to Chapter 4.4 and Appendix F.8 and F.10 of the DEIR and Master Responses 34 – Resident Fish, 36 – Foothill Yellow Legged Frog and California Red Legged Frog, and Response to Comment Grp 31-12 regarding benthic macroinvertebrates.

### Response to Comment Ind 140-4

The commenter states that the DEIR's analysis is inadequate with regard to impacts to groundwater wells and questions where monitoring wells will be located. The commenter is referred to Master Response 15 - Adequacy of Groundwater Monitoring Wells. Well monitoring locations are discussed and shown in Appendix K.8 of the DEIR. As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

## Response to Comment Ind 140-5

The commenter states that the DEIR would benefit from additional expert opinion. The DEIR already incorporates expert opinion from consultants not hired by the Project Applicant and peer review of technical reports was conducted by consultants hired by the County, including Raney Planning and Management, Madrone Ecological Consulting, ECM, West Yost, Saxelby Acoustics, and TJKM.

Hello,

I am concerned about the proposed reopening of the mine. The environmental concerns appear to be downplayed and presented as inconsequential by Rise Gold when discussed. There were lots of things in the report that made me worry. One of the most troublesome is the idea of de-watering the tunnels and what impacts known or unknown that will cause. Seems like a pretty big roll of the dice to me.

My experience with living around active gold mines is ( I grew up in Northern Nevada) yes they provide a few well paid jobs but the company is only concerned with extracting the resource. The bottom line is everything, the jobs are dangerous and the cleanup is minimal and the land affected is never what it was before. The mines leave when the gold price goes down and the community is left with the consequence. I can't imagine what a mining operation would be like so close to houses and our town! It's right smack in the middle of a really populated area!

**Ind 141-1**

I understand there is nostalgia for the gold mining days but do we really want to go back there? Nevada County is still dealing with the leftover environmental degradation from the last round. I do not trust this Canadian company to look out for our community interest. The CEO doesn't seem to have a good track record and footage I've watched of him drumming up investors paints a picture like they expect to roll right over us as our local board is the only thing in their way.

I hope that we as a community decide to keep mining in our past (not so distant if you consider what happened to the water supply near Grizzly Hill school from a mine a few years ago). I hope that we build on the new economy that has been developing here that works with our natural resources like mountain biking, and local companies and farms that are the moving with the times to a greener future. Lets not go backward, this is a terrible time to hope that some sort of environmental tragedy wont occur. We have enough to worry about in the foothills these days. Jobs can be created in other ways, we can't just bring back the land to it's former glory as we can see by the mining scars all over already, and polluted water still being cleaned from the last round.

I'm no scientist but I can understand the increased air pollution, noise and possible horrific changes to our areas water supply this mine will bring. I hope the good folks reviewing these proposals and impact reports will stand up for the citizens of this county and think of the future and our quality of life here.

Please, no mine

Thank You,

Corrine Parker Jones

**Individual Letter 142**

**From:** Craig Arthur
**To:** Idaho MMEIR
**Subject:** Idaho Maryland Mine EIR
**Date:** Sunday, March 27, 2022 9:13:41 AM

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Me Kelly,

I am writing you to express my concerns about the potential opening of the Idaho Maryland mine. I live on Greenhorn Road, approximately one mile from the mine site. My number one concern is what could happen to my well water. It is my understanding that Rise Gold will be supplying treated NID water service to homes on Bennet Street that are directly adjacent to the mine. This is great for those property owners but what happens to everyone else if their wells are impacted by dewatering? Like all other homeowners who depend on well water, if my well goes dry, my house is worthless. My entire life savings is tied up in my house. There are numerous studies showing significant negative impact on well water quality and yield due to dewatering. To my knowledge there are no provisions to provide water to the hundreds of homes that could be negatively impacted by the dewatering of the mine.

**Ind 142-1**

I belive it is critical that the EIR considers impacts of dewatering not only on properties immediately adjacent to the mine but rather on all properties in the region.

Sincerely,

Craig Arthur

**Individual Letter 143**

Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA. 95959-7902

March 16, 2022

Dear Mr. Kelley:

By this letter, I would like to express my strong opposition to the reopening of the Idaho Maryland Mine.

**Ind 143-1**

The draft EIR shows a long list of potential problems and negative impacts, many of which I would consider significant on a stand-alone basis: Air pollution, disturbance of asbestos and other toxic substances, potential soil and water contamination, dewatering impacts (by design), settlement and subsidence concerns, increased noise, vibration and traffic, and increased demand for public services, utilities and infrastructure wear and tear. The attempt at mitigation may be partially successful, but it is highly doubtful that anything approaching complete mitigation will be possible in many of these areas.

**Ind 143-2**

Mining operations are part of our area's historical heritage. They were successful and appropriate for the time in which they existed. But the nature of Grass Valley has changed with the passage of years and the continuance of such operations with their obvious detrimental impact on the quality of life is no longer reasonable.

I live in the Peardale area. Every time I go to the bank or grocery shopping, or to the hardware store, I will have to contend with increased traffic, noise and pollution. This change in character will have a detrimental impact on home prices in the area and the appeal our area may currently have as a quaint, picturesque and historic getaway for tourists.

I strongly urge that acceptance of this project be denied.

Sincerely,

Craig D. Crebbin

## I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Ind 144-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

**Ind 145-1**

Hi,
I live 2 miles from the mine site. I feel sick about the possible reopening of the mine. We don't want the mine. None of our neighbors want the mine. Noise and traffic at night are just 2 things we don't need. Our quality of life will be reduced and our property values will certainly decline. Our well may be affected. We don't want to leave Nevada County but we will surely sell if the mine reopened. We have been part of this community for 40 years. Please please please NO MINE!!

**Individual Letter 149**

**From:** Danielle Boucher <danielle@acupuncturespot.com>
**Sent:** Monday, April 4, 2022 1:02 PM
**To:** Idaho MMEIR
**Cc:** DEIRcomments@cea-nc.org
**Subject:** opposition to the mine

**CAUTION**: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Mr Matt Kelley,

Thank you for taking the time to hear from the community about our thoughts on the reopening of the Idaho-Maryland Mine. I am writing in firm opposition to reopening the mine. I went into the process of looking at the impact of the mine with an open mind, and soon realized that the cons far outweigh any pros.

**Ind 149-1**

My biggest concern is the environmental impact, and, as a practitioner, how that in turn would also impact the health of our community. Water is a valuable resource, especially these days in times of drought, and any potential danger to our water sources should not be a risk we are willing to take. This has been an issue with mining in the past, the not so distant past, and is something that no company can guarantee won't be an issue again. Opening ourselves up right now to more potential environmental issues does not seem like the right direction we should go, especially at a time when the impacts of global warming are becoming even more apparent and we should be focusing on how to fix the problems we already have. I'd love to see our resources and community effort go towards protecting the nature we love and protecting our community in sustainable ways against wildfires. As a recent transplant to the Nevada County area, I came up here for the community and nature. I'm proud to see this community coming together to stand up against a business proposition that could cause us so much harm, and that threatens the nature that keeps us all dedicated to this area.

**Ind 149-2**

In addition, RISE Gold has a horrible track record of their business practices and involvement in communities, there is no guarantee that they won't come in, make a mess, and leave us all to clean up their mess. I'd love to see our efforts going towards building more sustainable, community and nature focused opportunities rather than ones that can cause damage, destruction and health issues.

Thank you for your time.

Warmly,
--

| **Ind 150-65** | 13 | Wildfire | What is the maximum number of people who would be on site at any given time? What is the evacuation plan for them? |
| **Ind 150-66** | 13 | Wildfire | How has the more pronounced dry/wet cycles been taken into account in the wildfire plan? |
| **Ind 150-67** | Alternatives | Alternatives | What alternate sites are there for disposal of the tailings? |
| **Ind 150-68** | Alternatives | Alternatives | What alternate mixed used projects were considered? |
| **Ind 150-69** | Alternatives | Alternatives | What is a typical permit term for a gold mine in other localities? |
| **Ind 150-70** | Alternatives | Alternatives | Why was the previously approved Industrial Center not included? |
| **Ind 150-71** | Alternatives | Alternatives | What other alternatives has the County Planning staff considered for this site? |

## INDIVIDUAL LETTER 150: DANNY MILMAN

### Response to Comment Ind 150-1
The commenter has prepared specific comments after listening to public comments and reviewing the DEIR. The comment is noted. Responses to comments are provided below.

### Response to Comment Ind 150-2
The commenter asks what criteria will be used to measure the project's performance in the future. It is assumed that the commenter is referring to the project's compliance with regulatory standards and implementation of mitigation measures. A mitigation monitoring and reporting program will be required to enforce all mitigation measures imposed in the DEIR (see Chapter 4 of this Final EIR).

### Response to Comment Ind 150-3
The commenter asks how the project's performance goals will be measured. It is assumed that the commenter is referring to the project's compliance with regulatory standards and implementation of mitigation measures. As stated on page 4.6-22 of the DEIR, Nevada County General Plan Policy 17.7 states that each project shall have a periodic review for compliance with the use permit by the County Planning Department. In no case shall such review time period exceed five years. Said review shall be funded by the Project Applicant. The commenter is also referred to Master Response 3 - Operator Responsibility.

### Response to Comment Ind 150-4
The commenter asks what penalties the County will impose if regulatory standards or mitigation measures are not adhered to. The commenter is referred to Master Response 3 -Operator Responsibility.

### Response to Comment Ind 150-5
The commenter asks why various portions of the DEIR assume the cleanup of the Centennial Industrial Site will be completed prior to commencement of the project. The commenter is referred to Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 150-6
The commenter asks where the regular monitoring results are taken since the Project Applicant purchased the site that could be used to set baselines for future monitoring. The specifics of which monitoring results are not provided by the commenter; therefore, a response is not possible.

### Response to Comment Ind 150-7
The commenter asks how other nearby projects were taken into account and included in some type of cumulative impacts evaluation. Cumulative Impacts and projects taken into account for analysis of cumulative impacts are discussed in Section 5.3 (Cumulative Impacts) of the DEIR. A cumulative impact evaluation, specific to each CEQA topic, is included at the end of each technical chapter of the DEIR.

### Response to Comment Ind 150-8
The commenter asks why the DEIR information does not match the filing with the SEC. The commenter does not specify what information in DEIR does not match the SEC. The Project Applicant's filings with the SEC have no relevance to the analysis of the DEIR. The commenter is

referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 150-9

The commenter asks what plans are in place to conserve resources and reduce long term use, but does not specify which resources; therefore, a response is not possible. For conservation of biological resources, see Chapter 4.4 of the DEIR.

## Response to Comment Ind 150-10

The commenter asks if the operations will be required to meet new standards as they are put into place, or will the project be grandfathered in for the entire 80 years. The project mitigations and conditions of approval will not change throughout the length of the Conditional Use Permit. However, the project will be required to meet any state or federal regulations or standards imposed over the life of the project.

## Response to Comment Ind 150-11

The commenter asks how the traffic model take a rural population into effect when a road is deemed minor. The DEIR's traffic model uses traffic counts to analyze impacts and does not consider "roads deemed minor" in the analysis. The County has different minimum levels of service for Rural Regions and Community Regions of the County, as discussed on page 4.12-19 of the DEIR.

## Response to Comment Ind 150-12

The commenter asks how nighttime lights affect the surrounding residential uses. As stated on page 4.1-29 of the DEIR, the project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area, and a less than significant impact would occur. As stated on page 4.1-24 of the DEIR:

> Based on the proposed lighting types and locations discussed above, a Photometric Plan was prepared for the Brunswick industrial Site by a registered professional electrical engineer (M. Niels Engineering, Inc.). Figure 4.1-2 through Figure 4.1-5 present the Photometric Plan and increases in visible light that are estimated to occur following implementation of the proposed exterior lighting plan. Key considerations include effects to the night sky, which are addressed through the lighting types proposed, as discussed above. The other key consideration are the lighting intensities at the property boundaries near locations where existing sensitive receptors are in close proximity.
>
> As shown in the figures, the lighting intensities at the northern property line, near East Bennett Road, are at 0.0 foot-candles[9], and thus, light spillover is not projected to occur off-site. The nearest proposed pole-mounted LED, which is International Dark Sky Association compliant, would be located approximately 100 feet from East Bennett Road. Thus, the existing sensitive receptor along New Brunswick Court would not be impacted by light spillover from the proposed on-site lighting. Similar conclusions can be made for the remainder of the property boundaries, based on the Photometric Plan; no light spillover is projected to occur at the property boundaries.

## Response to Comment Ind 150-13

The commenter asks how nighttime lights are shown in the aesthetic impacts. Figures 4.1-2 through 4.1-5 of the DEIR show lighting photometric drawings.

## Response to Comment Ind 150-14

The commenter asks how a 165-foot tower (the Brunswick headframe) would not be visible from several viewpoints. The commenter is referred to Chapter 4.1 (Aesthetics) and Appendix D of the DEIR.

## Response to Comment Ind 150-15

The commenter states that the "After" renderings show the majority of the complex is hidden by new landscaping and asks how long landscaping would need to grow before the complex is hidden to that degree. As stated on page 4.1-14 of the DEIR, photographic simulations were prepared to illustrate conditions at completion of all proposed structures (18 months after construction begins) and at completion of the engineered fill pads with vegetated slopes (five to six years after fill placement begins). Vegetation planted at the time implementation of the project begins would be five to six years old when each engineered fill pad reaches its ultimate size; thus, planted vegetation is represented at five to six years old in the simulations. This age of vegetation is shown in Figures 4.1-11 through 4.1-20 in the DEIR. As stated on page 4.1-16 and 4.1-17 of the DEIR, the planted would trees reach maturity in approximately 30 years which is shown in figures annotated as “full vegetation growth” in Appendix D.

## Response to Comment Ind 150-16

The commenter asks how the DEIR’s air quality models take the region's existing poor air quality into account. The commenter is referred to Master Response 18 - Air Quality Thresholds. The NSAQMD established thresholds of significance for CEQA purposes to achieve and maintain the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS). Because an AAQS is based on maximum pollutant levels in outdoor air that would not harm the public’s health, and air district thresholds pertain to attainment of the AAQS, a project that complies with the thresholds established by a local air district, such as the NSAQMD, would not result in adverse effects to human health related to criteria pollutant emissions.

## Response to Comment Ind 150-17

The commenter asks how the filtration systems take the asbestos dust into account from crushing serpentine rock. Air filtration is contemplated in Section 6.1 of the ASUR Plan (Appendix E.2) when planned tunnelling in barren rock is projected to result in the Asbestos Inventory 3-month rolling average to exceed 0.01% by mass of equivalent PCM units. Asbestos emissions are controlled by utilizing dust collection (air filtration). If such tunneling were to be undertaken, the rock would not be crushed as described in Section 6.1 of the ASUR Plan.

## Response to Comment Ind 150-18

The commenter asks how the air quality impacts to the region (as opposed to the immediate site) are measured and mitigated. As discussed on page 4.3-41 of the EIR, the NSAQMD establishes thresholds of significance for CEQA purposes to achieve and maintain the National and California Ambient Air Quality Standards (AAQS). Because an AAQS is based on maximum pollutant levels in outdoor air that would not harm the public’s health, and Air Quality Management District thresholds pertain to attainment of the AAQS, a project that complies with the thresholds established by a local Air Quality Management District, such as the NSAQMD, would not result in adverse effects to human health related to criteria pollutant emissions. Regarding the health risk assessment, the threshold of significance for exposure to toxic air contaminants is based on an incremental increase in cancer and non-cancer risk associated with a project. As such, the baseline concentration does not factor into this impact determination.

## Response to Comment Ind 150-19

The commenter asks if 700K metric tons of greenhouse gas emissions will be generated over 80 years, why will there only be 2,444 carbon offsets. Mitigation Measure 4.3-7(b) requires the applicant to offset construction emissions below the 1,100 metric ton carbon dioxide equivalent per year construction threshold. As discussed on page 4.3-94 of the DEIR, the project would not exceed the applied threshold of 10,000 MT $CO_{2e}$ per year during operations and reclamation. Therefore, no carbon offsets are required for operations. The commenter is also referred to Master Response 27 - Greenhouse Gas Thresholds.

## Response to Comment Ind 150-20

The commenter states that many videos online show a variety of wildlife at or near the site and asks why these animals were not taken into account in the report. The commenter is referred to Response to Comment Ind 585-18.

## Response to Comment Ind 150-21

The commenter asks what type of bird survey was done for the DEIR and if the survey done early when there are likely to be birds. The commenter is referred to Chapter 4.4 (Biological Resources) of the DEIR, Master Response 30 - Biological Study Technical Adequacy, and Master Response - 37- Birds and Raptors.

## Response to Comment Ind 150-22

The commenter asks how the conservation easement downstream is included in the evaluation of impacts. It is assumed the commenter is referring to the "Bennett Street Grasslands" on South Fork Wolf Creek. The legal status of the conservation easement owned by the Bear Yuba Land Trust is not relevant to the analysis of the DEIR. The commenter is referred to Responses to Group Letter 2. The commenter is also referred to Master Responses 32 – Temperature of Mine Water Discharge, Master Response 33 - Groundwater Dependent Vegetation, Master Response 34 – Resident Fish, Master Response 35 – Discharge to South Fork Wolf Creek, Master Response 36 – Flows in South Fork Wolf Creek, Master Response 37 – Birds and Raptors, and Master Response 38 – Foothill Yellow Frog and California Red Legged Frog.

## Response to Comment Ind 150-23

The commenter asks why recent surveys of wildlife, birds, and plants were not taken into account in the DEIR, but provides no specifics on which surveys are not taken into account. The commenter is referred to Chapter 4.4 (Biological Resources) of the DEIR and Master Responses 30 – Biological Study Technical Adequacy, Master Response 31 – Rare Plants, Master Response 37 – Birds and Raptors, and Master Response 38 – Foothill Yellow Legged Frog and California Red Legged Frog.

## Response to Comment Ind 150-24

The commenter asks how the habitat restoration bond amount is calculated but provides no details as to what habitat restoration bond is referenced. No response is possible, nor is bonding required to be addressed in the DEIR.

## Response to Comment Ind 150-25

The commenter asks what state of restoration is required to meet the bond but provides no details as to what bond is referenced. The commenter is referred to the Reclamation Plan in Appendix C of the DEIR.

## Response to Comment Ind 150-26

The commenter asks what the impacts to fish and wildlife are, such as fish swimming upstream. The commenter is referred to Chapter 4.4 (Biological Resources) of the DEIR and Master Response 34 – Resident Fish.

## Response to Comment Ind 150-27

The commenter asks what the project's cumulative impacts to wildlife are. The commenter is referred to Chapter 4.4 (Biological Resources) of the DEIR, Impact 4.4-6.

## Response to Comment Ind 150-28

The commenter asks where the existing surface water quality is documented. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) and Appendix K.2 of the DEIR.

## Response to Comment Ind 150-29

The commenter asks what is the shallowest depth where explosives will be used, and if this depth is taken into account in the modeling and vibration information. As discussed in Appendix M of the DEIR, blasting would take place 500 feet and deeper, except for the service shaft, which would breakthrough to the surface. Blasting vibrations were calculated for the service shaft and for drifting and longhole blasting at 500 feet below ground surface and deeper.

## Response to Comment Ind 150-30

Page 4.6-4 of the DEIR states:

> NV5 believes the feature [inferred fault in Brunswick vicinity] formed during the Mesozoic era, at least 65 million years ago. They consider it inactive and designate it as a Type C fault zone "with a low seismicity and a low rate or occurrence". Based on ECM's knowledge of the geology of the area, we are in agreement with NV5's conclusion, and no evidence has been found that suggests there might have been any recent fault movement in the general site area. In support of NV5's and ECM's conclusion, further review of the Chico quadrangle map shows that Saucedo and Wagner's interpretation of the fault shows it to terminate at the north edge of mapped Tertiary volcanics (MPv), at a location a little over a half mile south of the New Brunswick Shaft. Since the map does not show the fault crossing the volcanic unit, we conclude that there has been no fault movement to break the overlaying Miocene volcanic rock since its deposition in the Miocene Epoch 5 to 23 million years ago. If otherwise, the overlying Miocene volcanic unit would also be displaced, or at least fractured.

As discussed in Section 4.5-1 of the DEIR, based upon substantial evidence in the record, the project includes a request to amend the Final Map for Bet Acres recorded in February 1987 in Book 7 of Subdivision Maps at Page 75 to remove the "200' Building Setback From Fault", as shown on Sheet 4 of Final Map #85.

In addition, a management plan was prepared pursuant to Nevada County LUDC Section L-II 4.3.8 to address potential seismic hazards associated with the previously-identified inferred fault alignment. It is NV5's professional opinion that the subject fault, identified on the property in Map 85-7, does not qualify as a seismically active area as defined by Nevada County LUDC Section L-II 4.3.8.B, and the proposed project development within the designated building setback fault zone is generally feasible from a geotechnical engineering standpoint. The County's independent consultant, ECM, concurred with this determination.

While the analysis shows that an active fault likely does not exist, out of an abundance of caution, the County has concluded that a significant impact could occur without mitigation. Mitigation Measure 4.6-1 requires that prior to approval of Improvement Plans, the design recommendations from the Brunswick Industrial Site Geotechnical Report (November 18, 2019) shall be incorporated into the Plans to the satisfaction of the Nevada County Building Department.

## Response to Comment Ind 150-31

The commenter asks what the plan for accidents is, the level of accidents that are anticipated, and what impact should be expected when that happens. CEQA does not require the analysis of speculative impacts. As stated in CEQA Guidelines Section 15384, "[a]rgument, speculation, unsubstantiated opinion or narrative, evidence which is clearly erroneous or inaccurate, or evidence of social or economic impacts which do not contribute to or are not caused by physical impacts on the environment does not constitute substantial evidence." As this comment amounts to speculation, no further response is necessary.

## Response to Comment Ind 150-32

The commenter asks what the odds are of a tunnel collapse. Near surface workings were evaluated in Chapter 4.6 (Geology, Soils, and Mineral Resources) of the DEIR and were found to be a less than significant impact after mitigation. (DEIR, p. 4.6-29.) The commenter is also referred to Master Response 29 – Near Surface Workings.

## Response to Comment Ind 1150-33

The commenter asks how the past history of environmental impacts to the region was taken into account but provides no further details. The commenter is referred to Master Response 4 - Cleanup Project is a Separate Project Under CEQA, and Master Response 9 - Historical Mine Waste at Centennial Site.

## Response to Comment Ind 150-34

The commenter asks how hexavalent chromium, sulfuric acid, and other chemicals will be stored. The project does not propose to use or store hexavalent chromium. The details of volumes of reagents located on-site are not required for the analysis of the DEIR and further, engineering level detail is not required in an EIR. (*Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.) As stated on page 4.7-31 of the DEIR, implementation of Mitigation Measure 4.7-1(d) requires that prior to the transport, storage, or use of hazardous materials, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials on-site.

## Response to Comment Ind 150-35

The commenter asks how workers will be protected from the asbestos silica in the rock. Occupational (worker) health and safety in mines is governed by the U.S. Mine Safety and Health Administration (MSHA). Please also see Master Response 21 – Silica Health Risk.

## Response to Comment Ind 150-36

The commenter asks how the DEIR addresses wells that are not indicated on the State's online database. All available details about well construction and testing in the area of impact have been reviewed and tabulated from well completion reports, which are available for the majority of properties. Additional well information will be collected, if necessary, as part of the Well Mitigation Plan (Appendix K.9), which has been revised to clarify this and is attached to the Final EIR as Appendix D.

The commenter states that NID records show that more mines exist, even in the area of the 30 properties to be connected to the NID. The commenter provides no information regarding the referenced NID records or evidence of more mine workings that have not been included in the analysis; and therefore, no response is provided.

## Response to Comment Ind 150-37

The commenter states that NID estimates of the number of affected wells differs substantially from the DEIR. The commenter provides no information on the referenced NID estimate. The commenter is referred to responses to Agency Letter 10 and Master Response 13 - Historic Hydrogeologic Assessments.

## Response to Comment Ind 150-38

The commenter asks how the hydrology has changed in the last 15 years since the studies were done. Water level data has been collected for many years over a period spanning two decades. As stated on page 26 of Appendix K.2, monitoring of water level in wells for up to 79 wells was undertaken from 1995-2001 and 2003-2007. As noted in the report, no long-term increasing or decreasing trends are observed in the data. Therefore, the age of the sample data does not limit the usefulness of this data. The commenter is also referred to Master Response 13 – Historic Hydrogeologic Assessments.

## Response to Comment Ind 150-39

The commenter asks how hydrology-related impacts will change over 80 years, the life of the project. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality), Appendices K.2 and K.3 of the DEIR, and Master Response 14 – Adequacy of Groundwater Model.

## Response to Comment Ind 150-40

The commenter asks how the hydrology model accounts for the rock if it turns out not to be homogenous. The groundwater model does not assume that rock is homogenous and includes geological units, faults, and changes in hydraulic conductivity with depth. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) and Appendices K.2 and K.3 of the DEIR. The commenter is also referred to Master Response 14 - Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 150-41

The commenter asks what the acceptable limit is for the lowering of the water level in neighboring wells. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) and Appendices K.2 and K.3 of the DEIR. The commenter is also referred to Master Response 15 - Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 150-42

The commenter asks to what extent within the mineral rights boundary the dewatering of the mine will draw down water levels. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality), Appendices K.2 and K.3 of the DEIR, and Master Response 14 – Adequacy of Groundwater Model.

## Response to Comment Ind 150-43

The commenter asks how many water samples were taken and were they representative of the different tunnels. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) and

Appendices K.2 of the DEIR, as well as Master Response 35 – Discharge to South Fork Wolf Creek.

## Response to Comment Ind 150-44

The commenter asks why NID water usage is estimated at 0.4 gallons per minute but capped at 400 per day instead of 576. The commenter is referred to Response to Comment Agcy 10-4.

## Response to Comment Ind 150-45

The commenter asks what will happen to the water, land, and tunnels once the mine has closed. The commenter is referred to the Reclamation Plan, Appendix C of the DEIR.

## Response to Comment Ind 150-46

The commenter asks why the mine does not reuse the treated water from dewatering efforts. As discussed on pages 3-39 and 3-40 of the DEIR, treated groundwater is used for mine service water, dust suppression at the Brunswick site, and for makeup water in the process plant. As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water available downstream if it desired to.

## Response to Comment Ind 150-47

The commenter asks why the payment for NID water would not transfer to future homeowners. The commenter is referred to Response to Comment Agcy 10-6.

## Response to Comment Ind 150-48

The commenter asks if the neighboring wells be sampled and measured in advance for a baseline. Water quality baseline will be sampled in advance of dewatering at monitoring wells and not in domestic water wells. The commenter is referred to Master Response 15 - Adequacy of Groundwater Monitoring Wells. As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

## Response to Comment Ind 150-49

The commenter asks if the connection to NID will be made in advance of the dewatering. Mitigation Measure 4.8-2(c) requires that prior to commencement of initial mine dewatering, the Project Applicant shall implement the Well Mitigation Plan by connecting 30 properties in the East Bennett Road area to the NID potable water system.

## Response to Comment Ind 150-50

The commenter asks if new impervious surfaces (paving, roofing, etc.) are accounted for in the hydrology and runoff reports. As stated on page 4.8-73 of the DEIR, the hydrologic calculations and detention studies for both sites anticipate runoff at potential future industrial development levels, though industrial development is not proposed at this time, and separate environmental review and permitting through the County would be required prior to any on-site industrial development. Therefore, the sizing of the detention basins is conservative.

## Response to Comment Ind 150-51

The commenter asks how the project would be a net water producer as stated in the DEIR. As discussed on page 10 of Appendix N of the DEIR, the project will produce a surplus of water from the natural groundwater flow into the ground workings. Once the initial dewatering is completed, approximately 1,224,000 gallons per day are estimated to be pumped to the surface on an on-going basis and treated at the water treatment plant to maintain the dewatered mine. The groundwater consumed during operations is estimated to be 84,000 gpd.

## Response to Comment Ind 150-52

The commenter asks what is the shortest amount of time that a permit could be issued where the Project Applicant would still move ahead with the project. The investment criteria of the applicant are not known or required to be analyzed in the DEIR. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 2 - Social and Economic Impacts. Nevada County General Plan Policy 17.7 states that "Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses." (DEIR, p. 4.6-22.)

## Response to Comment Ind 150-53

The commenter asks how ambient noise levels at the neighboring properties will be less after the mine goes into production, day and night. The noise analysis was not intended to imply that the project would result in an overall decrease in existing ambient noise levels at any sensitive receptors in the project vicinity. Rather, it estimates that the noise generation of the project by itself would be below existing ambient noise levels experienced at the nearest residences. The commenter is referred to Response to Comments Ind 585-2 and 585-4.

## Response to Comment Ind 150-54

The commenter asks what the impacts are of sustained noise over months and years. The commenter is referred to Chapter 4.10 (Noise and Vibration) and Appendix L of the DEIR.

## Response to Comment Ind 150-55

The commenter asks why the allowed noise differs from the already established noise regulations. The project would be compliant with established noise regulations. The commenter is referred to Chapter 4.10 (Noise and Vibration) and Appendix L of the DEIR.

## Response to Comment Ind 150-56

The commenter asks how the DEIR takes into account the County's goals for energy conservation and GHG reduction. The commenter is referred to Master Response 25 – Nevada County Energy Action Plan, and Master Response 27 - Greenhouse Gas Thresholds.

## Response to Comment Ind 150-57

The commenter asks if the anticipated GHG emissions meet Senate Bill 32 limits. Senate Bill 32 is a statewide GHG emissions plan. The commenter is referred to Master Response 27 – Greenhouse Gas Thresholds. As a basis for choosing 10,000 MT $CO_2e$ as the threshold of significance for operational GHG emissions, the DEIR provided the following reasoning: "For operations, because the project is an industrial project that includes stationary sources (i.e., diesel generators used for emergency power), the project's GHG emissions were compared to the 10,000 MT $CO_2e$ per year quantitative threshold, which, as described above, is used by SMAQMD, PCAPCD, BAAQMD, and SCAQMD for industrial and/or stationary source emissions

of GHGs. The substantial evidence for this GHG emissions threshold is based on the expert opinion of various California air districts, which have applied the 10,000 MT $CO_2e$ per year threshold in numerous CEQA documents where those air districts are the lead agency." (DEIR, p. 4.3-43.)

With respect to PCAPCD's use of the MT CO2e per year operational threshold, it is noted that on October 13, 2016, the PCAPCD adopted GHG emissions thresholds, which were designed to analyze a project's compliance with applicable State laws including AB 32 and SB 32.[1] Insofar as the project's operational emissions are below the above-stated threshold (DEIR, Table 4.3-23), the project's emissions would not impede attainment of SB 32 goals. Additionally, Mitigation Measure 4.3-7(b) of the DEIR requires the purchase of carbon offsets for construction GHG emissions to reduce the impact to a level of insignificance.

## Response to Comment Ind 150-58

The commenter asks whether the project includes plans are electronic vehicles, reuse of water, solar energy, or other renewable sources of energy.

All of the underground mine vehicles would be electric vehicles, as discussed in Chapter 3 (Project Description), Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), and Appendix E.1 of the DEIR. The proposed parking lot includes 14 electric vehicle charging spaces, as shown in Table 3-6 of the DEIR.

As discussed on pages 3-39 and 3-40 of the DEIR, treated groundwater is used for mine service water, dust suppression at the Brunswick Industrial Site, and for makeup water in the process plant. As stated on page 3-39 of the DEIR, the process plant would run on a closed circuit (recycling of all process water). As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water available downstream if it desired to.

Regarding a solar energy system, while solar panels are not currently proposed as part of the project, the roof space of the project buildings may be available in the future for installation of solar panels to reduce the project's reliance on the energy grid. However, any such solar power generation would be small in comparison to the requirements of the project. Notably, the GHG emissions presented in the DEIR are conservative, since California regulations will reduce GHG emissions overtime. For instance, Senate Bill 100 requires that zero carbon energy resources supply 100% of electric retail sales to customers by 2045. Neither this requirement, nor the progressive steps to achieve it (i.e., 44% of electricity by 2024, 52% by 2027, and 60% by 2030 be procured from renewable energy sources) were accounted for in the GHG analysis.

## Response to Comment Ind 150-59

The commenter asks what the project's traffic impacts are during evacuations. The commenter is referred to Master Response 5 – Evacuation Zones.

## Response to Comment Ind 150-60

The commenter asks whether the trucks are included in the impacts in the other categories such as air quality and noise or just in the traffic. Trucks are analyzed in both the air quality and noise

[1] Placer County Air Pollution Control District. *California Environmental Quality Act Thresholds of Significance: Justification Report*. October 2016.

Chapters of the DEIR. The commenter is referred to Chapters 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy) and 4.10 (Noise and Vibration) of the DEIR.

## Response to Comment Ind 150-61

The commenter asks how explosives will be stored on site and protected in the case of wildfire. Explosives will be stored underground as described in Chapter 4.7 (Hazards and Hazardous Materials) of the DEIR. As discussed at length in Chapter 4.7 of the DEIR, transport, storage, and use of explosives is highly regulated by all levels of government. In addition, as stated on page 4.7-31 of the DEIR, implementation of Mitigation Measure 4.7-1(d) requires that prior to the transport, storage, or use of hazardous materials, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials on-site. Mitigation Measure 4.13-2 requires the applicant to submit a comprehensive Vegetation Management Plan, inclusive of the Centennial and Brunswick Industrial Sites, for the review and approval by the County Fire Marshall's Office. The applicant shall implement all provisions of the Vegetation Management Plan during the project construction, operations, and reclamation activities.

## Response to Comment Ind 150-62

The commenter asks whether the 24,000 gallons of diesel stored on site will be protected in the case of wildfire. As stated on page 4.7-29 of the DEIR:

> The tanks would be located in the industrial building complex area. Diesel fuel is considered a Class II liquid, and as such, the tanks would be regulated in accordance with Chapter 23 of the California Fire Code (CFC). Chapter 23 of the CFC includes robust design requirements for above-ground fuel storage tanks, including but not limited to requirements for overfill protection, spill containment, and dispenser emergency shutoff valve. Compliance with CFC requirements, as determined by the Fire Marshall's Office, at time of improvement plan review, would reduce fire hazards, including potential leaks, related to on-site fuel storage tanks.

In addition, as stated on page 4.7-31 of the DEIR, implementation of Mitigation Measure 4.7-1(d) requires that prior to the transport, storage, or use of hazardous materials, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials on-site. Mitigation Measure 4.13-2 requires the applicant to submit a comprehensive Vegetation Management Plan, inclusive of the Centennial and Brunswick Industrial Sites, for the review and approval by the County Fire Marshall's Office. The applicant shall implement all provisions of the Vegetation Management Plan during the project construction, operations, and reclamation activities.

## Response to Comment Ind 150-63

The commenter asks what the project's traffic impacts are during wildfire evacuation. The commenter is referred to Master Response 5 – Evacuation Zones.

## Response to Comment Ind 150-64

The commenter asks how chromium and other chemicals will be stored on site and protected in the case of wildfire. The project does not propose to use or store chromium. The details of chemical storage located on-site are not required for the analysis of the DEIR and further, engineering level detail is not required in an EIR. (*Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.). As stated on page 4.7-31 of the DEIR, implementation of Mitigation Measure 4.7-1(d) requires that prior to the transport, storage, or use of hazardous

materials, the mine operator shall prepare a Hazardous Materials Business Plan (HMBP). The County shall review and approve the HMBP prior to the use or storage of hazardous materials on-site. Mitigation Measure 4.13-2 requires the applicant to submit a comprehensive Vegetation Management Plan, inclusive of the Centennial and Brunswick Industrial Sites, for the review and approval by the County Fire Marshall's Office. The applicant shall implement all provisions of the Vegetation Management Plan during the project construction, operations, and reclamation activities.

## Response to Comment Ind 150-65

The commenter inquires about the maximum number of project employees that would be on site at any given time and what is the evacuation plan for them. The DEIR indicates that a maximum of 111 employees are expected during a shift at the Centennial or Brunswick Industrial Sites. (DEIR, Table 3-8, p. 3-37.) The commenter is also referred to Master Response 5 – Evacuation Zones.

## Response to Comment Ind 150-66

The commenter asks how the DEIR has accounted for the more pronounced dry/wet cycles in the wildfire plan. The commenter is referred to Master Response 16 - Drought and Climate Change.

## Response to Comment Ind 150-67

The commenter asks what alternate sites are available for the disposal of the tailings. The commenter is referred to Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets.

## Response to Comment Ind 150-68

The commenter asks what alternative mixed-used projects were considered. No alternative mixed-use projects were considered in the DEIR. The reasonable range of alternatives considered in the DEIR are discussed in Section 2.4 and Chapter 6 of the DEIR.

## Response to Comment Ind 150-69

The commenter asks what the typical permit term for a gold mine is in other localities. This comment is too general for a response. Nevada County General Plan Policy 17.7 states that "Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses." (DEIR, p. 4.6-22.)

## Response to Comment Ind 150-70

The commenter asks why the previously approved Industrial Center was not included. The Nevada County Business and Industrial Centre was analyzed as part of the No Project alternative and is discussed on pages 6-11 through 6-13 of the DEIR.

## Response to Comment Ind 150-71

The commenter asks what other alternatives the County Planning staff considered for this site. All alternatives considered in the DEIR are discussed in Section 2.4 and Chapter 6 of the DEIR.

**Individual Letter 151**

**From:** Daun Langston

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

**Ind 151-1**

The Porter-Cologne Act, also known as the California Water Code, Section 7, describes 31 separate elements that must be monitored before discharge into a creek. One example (31) elements that must be monitored is temperature of the discharge water in comparison to the temperature of the creek. The standards set within these regulations require the creek to be measured upstream prior to discharge and then the temperature or the creek post discharge. The regulations state the total divergence of the net temperature must not be more than five degrees. This indicates the net change in creek temperature can not change practically than 4.4 degrees Fahrenheit. That is the difference between the measured water temperature upstream and same downstream minus the accuracy of the measurement device warranting a difference of no more than five degrees allowed by regulation.

In the case of the Empire Mine Study in 1969, this was found to be nearly impossible to comply because of the volume of water being discharged in comparison to the volume of water in the creek and the large amount of heating the water was exposed to by treatment on the surface.

The EIR must describe in detail how compliance with the California Water Code, Section 7, will be achieved. It must describe the instrumentation for compliance in detail. To recall, the proposed discharge will fill Englebright Lake every eighteen months.

**Ind 151-2**

The primary contamination element in the water is Realgar is not addressed once in the EIR. Realgar, a sulfides of arsenic, was the primary water contaminate mentioned in the Empire Mine 1969 Study by Newmont conducted by Stanford Research Inst. on behalf of Newmont Mines for the proposed reopening of the Empire Mine. At that time, it was determined that Realgar, which always occurs with gold in the area of the Empire mine is safe and stable until it is exposed to free oxygen and light at around 715 nm in wavelength. Only under these conditions Realgar converts to a free form of water-soluble arsenic. The current proposed plan to treat this form of arsenic is not known reduce this form of arsenic in solution with water. The only suitable and safe method proposed in the Newmont Report for the Empire is an ionic exchange with resins specially designed and ion loaded to bond with the resins and metal sulfides. There are other less concerning sulfides which are safe and stable until exposed to free oxygen. These are not addressed. This subject of Realgar must be addressed in detail. Apparently, the draft has no knowledge of the occurrence of metal sulfides in gold bearing hydro vents which is the reason why gold is present. Metal bearing sulfides

are required chemically to transport gold in thermal hydro vents. It is always assumed metal sulfides are present unless the gold has been exposed to light and air for a period of time of several hundred years. This is a very basic engineering premise of USGS when dealing with hydro vent gold structures and water. To not deal with this issue exposes the lack of detailed knowledge of the authors of the EIR have concerning the treatment of water in Sierra Gold Strata.

The water treatment plan is required to have some comprehensive cogent presentation on how the metal sulfides presents in the dewatered mine, once the area is open to free oxygen and light, will be processed when the formally stable sulfides are converted to a water-soluble form.

**Ind 151-3**

The EIR for a mine is required to state the entire list of water components being monitored and how the monitoring will be made ready to ensure continued compliance. There is no mention of the standards required by the Cal-EPA for water test laboratory testing, licensing, and compliance. The Empire proposed a one site licensed laboratory for the testing of discharge water and the publication of monthly compliance reports.

**Ind 151-4**

The EIR however does make a point of a requirement to comply with the lighting standards of the International Dark Sky Association (IDA) since the mine is located in a rural area. The reviewer is appreciative of this acknowledgement.

**Ind 151-5**

I was a student in graduate school when I was drafted by my Stanford professor to work on the Empire Mine study in 1968-69. The treatment plan was one of the reasons it was proposed to transport water via a pipeline to an NID plant for mixing demineralized water with ditch water on Brunswick Hill. The apparent cost of reopening the mine was the primary reason Newmont decided to give the land to the state and not reopen the mine.

I worked in semiconductor processing as an engineer, was a design engineer specializing in compression and modulation of digital signal processing and was the US representative to the UN ITU-R (International Telephone Union) in Geneva during the Clinton-Obama administrations and I am now retired.

## INDIVIDUAL LETTER 151: DAUN LANGSTON

### Response to Comment Ind 151-1

The commenter implies that the project will not be able to comply with regulatory requirements regarding temperature of discharged water from the mine dewatering. However, the project is able to and will be required to comply with the regulatory requirements for mine water discharge. Please see Master Response 32 – Temperature of Mine Water Discharge, and Master Response 35 – Discharge to South Fork Wolf Creek.

### Response to Comment Ind 151-2

The commenter asserts that the DEIR did not adequately analyze realgar, a sulfide of arsenic, which is asserted to be of concern at the Empire Mine. The 1969 study referenced by the commenter is not provided or available for review and therefore no comment can be provided on this study. The mineral realgar is not mentioned in published geological studies of the Empire Mine nor any other mines in the Grass Valley area (see page 36, The Gold Quartz Veins of Grass Valley, Johnson USGS 1940). Arsenic is noted to occur in arsenopyrite in the Empire Mine and certain other mines, but was rarely observed in the Grass Valley area. Arsenopyrite was noted to be more common in the Nevada City area. The proposed water treatment plant is capable of treating arsenic in water and the Empire Mine is currently discharging treated mine water using a similar water treatment method (aeration and oxidation). Please see Master Response 35 – Discharge to South Fork Wolf Creek.

### Response to Comment Ind 151-3

The commenter asserts that the DEIR's water treatment plan is required to provide more information on how sulfides will be treated. The DEIR discusses metal sulfides and water treatment constituents and requirements in detail. Please see sections 4.8 and Appendices K.2 and K.4 of the DEIR. Also see Master Response 35 – Discharge to South Fork Wolf Creek. The design and function of the proposed water treatment plant was analyzed by the County's independent consultants, who concluded that the water treatment plant would be capable of treating the water produced from dewatering to regulatory standards for water quality. The commenter requests more information on treatment of water and specifically sulfides of arsenic; however, adequate information is provided in order to assess the environmental impacts of the project, and engineering level detail is not required in an EIR. (*Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.)

### Response to Comment Ind 151-4

The comment does not address the adequacy of the DEIR. Comment noted.

### Response to Comment Ind 151-5

The commenter provides background on the Empire Mine proposed reopening and the commenter's professional background. Comment noted.

RECEIVED
MAR 09 2022
NEVADA COUNTY
BOARD OF SUPERVISORS

**Dist 1**

To: Nevada County Board of Supervisors
From: Dave and Dianna Connell
Regarding: Idaho-Maryland Mine

If you were building a new home, would you give that job to a contractor of questionable character? A company that went bankrupt with court cases continuing? The obvious answer is "No Way!" Yet here we are with Rise Gold wanting to reopen and work the Idaho-Maryland Mine for 80 years! This contractor is on shaky ground (literally and figuratively).
We are definitely opposed to this mine reopening under any circumstances. There are many questionable issues surrounding the reopening of the mine for which we have concerns: noise pollution, air pollution, wells being depleted, dump trucks running 24/7, employment promises that are highly suspect, and a deceptive company running the show. Sounds like a recipe for disaster! Let's avoid this one!

NO MINE! NO MINE

## INDIVIDUAL LETTER 152: DAVE AND DIANNA CONNELL

### Response to Comment Ind 152-1

Please see Master Responses 1 and 3.

**Individual Letter 153**

**I support re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also support an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

No Way!

**Ind 154-1**

No mine we need to have water

Dave

## INDIVIDUAL LETTER 154: DAVE TAYLOR

### Response to Comment Ind 154-1

Please see Master Response 1.

**Individual Letter 155**

**From:** David Agran <david@agranconsulting.com>
**Sent:** Wednesday, March 30, 2022 5:37 AM
**To:** 'David Agran'
**Cc:** Idaho MMEIR; Planning
**Subject:** Agran - Banner Mtn 13 year resident and WELL owner - Concerns for further study in EIR of Rise Gold Folly

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley

I would like to officially submit my concerns to the DEIR Process – and ask for further study as part of the Rise Gold (folly),

**Ind 155-1** I own a single family home on 13755 Quaker Hill Cross Road (closest intersection Crystal Wells). It is a single family home with a well. I have been in residence for 13 years. On initial inspection the well was low producing at 3gpm. Anecdotally, I believe that my well is more tenuous than it was 13 years ago. My house is near the top of Banner Mtn at an elevation of 3600 '. The edges of the East boundary of the Mineral rights are around 3 miles from my property at an elevation of roughly 3000'. Water flows downhill, I have significant concern that dewatering the mine of millions of gallons of water and then maintaining a dry mining environment for the next 85 years, will potentially significantly decrease the longterm sustainability of my well and all of the wells in the vicinity. I do realize lots of studies have been conducted.... BUT WHAT IF THEY ARE WRONG??? How will the Board of supervisors protect us, the community members they are elected to serve if their data, and assumptions and all of the unknowns and uncertainties of this kind of analysis and assessment is WRONG. (It is even more troubling given the legal problems, pollution problems that Rise Gold and its current management are facing in Canada... there are serious impact going on with our Northern neighbors on their last project...so clear proof that "Someone was wrong" and "and something seriously went wrong" (and that poor community is now dealing with the aftermath... don't let that be us.).

**Ind 155-2** This is especially dire given the very real impacts that Climate Change is having, and will continue to have on an escalating basis over the next 85 years as the duration of this permit allows.

There are many other areas where the significant impacts of reopening Rise Gold are pure folly, but I will address my comments to those that immediately affect me as a homeowner and citizen reliant on my functioning well for life and sustainance. **Chapter 4.8 Hydrology and Water Quality Report**

**Ind 155-3** I was startled to read on Regional Groundwater Occurrence page 8, where The EMKO study showed Well draw downs in a 1-2 mile area.... This permit is for 85 years. Further study considering those at higher elevations on Banner Mtn must be studied. Also well mitigation plans need to be put in place for all those wells that may be impacted over an 85 year permit duration. Water flows downhill, there are 72.8 miles of tunneling (pg 17), and no assurances that other abandoned tunnels from other mines may not also be impacted by the dewatering.
Sustainable groundwater preservation act (page 32)

**Ind 155-4** As written in the
**Nevada County General Plan**

Mineral Management (Pg 35)
Goal 17.1
Policy 17.24 Regardless of the General Plan designation, subsurface mining shall be conditionally permitted throughout the County. **Said mining shall be allowed only after impacts on the environment and affected surface land uses have been adequately reviewed and found to be in compliance with CEQA. Of particular importance shall be the impact of the operation on surface land uses, water quantity and quality, noise and vibration, land subsidence, and traffic associated with surface access. All other related impacts shall also be addressed.**

**Ind 155-5** Water and sustainably producing wells of existing homeowners is prime. Rise Golds needs are subservient to this right, and should be clearly mitigated by the County and Rise Gold for the entire 85 years of this permit duration.

**Ind 155-6** **Predictive Simulations (p.38).** Where it is possibly useful assessing historical data going back to 1956 when the IM Mine stopped operations, I do not see any predictive assumptions made or studied that include the realities of Climate change. Our county is dryer, hotter, less snow, more fire danger, more drought- less water secure than at the turn of the 1900's and in 1956. All of this affects our groundwater and wells. Studies that accurately factor in the real and escalating effects of Climate change should be studied.

**Ind 155-7** **Where the mining scenario is for 25 years. The permit is for 85 years. They may not be mining in year 86, but my house will still be standing and will require a sustainable well. Rise Gold and the County must have an ironclad guarantee that the community's water supply is protected**

**Ind 155-8** **P 55)** Thus, the water level within the mine workings would eventually decrease as much as 3,200 feet due to the project.

What impact does this have on the wells at higher elevations and near their boundaries? What if their assumptions, and science is wrong…? and the mine adversely affects our wells? How is the community protected by the county and insured by Rise Gold of this very real possibility. We are at the top of the mountain, appropriate study on well impacts beyond their mineral rights is the responsible thing to do.

**Ind 155-9** **P 62** It is also noted that public concerns have been expressed regarding a scenario in which mining operations encounter a fractured bedrock aquifer and drain out the water, thus, impacting groundwater supply wells. Fractures or geologic discontinuities decrease with depth due to the weight of overlying geologic materials. The mining would occur in the deeper geologic units where the fractures, if present, are closed or have smaller apertures, which would not transmit significant quantities of water. The scenarios addressed in the Itasca modeling cover a wide range of probable situations that may be encountered and the potential impacts to groundwater levels.

How do we know this is true, if studies considering the higher elevation of Banner Mountain wells is not being considered?

**Ind 155-10** Pg 66 the applicant has prepared a Well Mitigation Plan (February 2, 2021) that would connect up to 30 properties in the East Bennett area to the NID potable water system. The properties would have the option to be connected to the potable water system prior to commencement of initial mine dewatering. The Well Mitigation Plan will obligate the applicant to fund the engineering, permitting, construction, and installation of main water piping and water meters to each property, as well as NID water charges for ongoing water supply.

2

If the folly of Rise Gold is allowed to continue, this well mitigation needs to be expanded and protected for all community members so impacted by Rise Gold dewatering (so that declaring bankruptcy which allows them to walk away and the homeowners and county left holding the dry-well fetid bag can NOT happen.

**Ind 155-11**

And I am not even touching upon the pollution counter to the county's Green goals, the noise and traffic and air pollution around brunswick basin, or the risks to the habitat and water resources near and below the mind. Mining was part of our historical facts (which we are still cleaning up), but should NOT be part of our glorious future.

Thank you Mr. Kelley for your attention to this very real issue. Water is life, don't allow Rise Gold take advantage of the community so they can get filthy rich and leave behind us to deal with the filth

**Ind 155-12**

Respectfully submitted,

David Agran M.Ed BCC
Banner Mountain
13755 Quaker Hill Cross Road
Unincorporated Nevada County

## INDIVIDUAL LETTER 155: DAVID AGRAN

### Response to Comment Ind 155-1
The commenter is concerned that the project's dewatering of the Idaho-Maryland Mine could negatively impact private wells and is concerned about the ramifications if the technical studies are wrong. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model and Master Response 15 - Adequacy of Groundwater Monitoring Wells. Please also see Master Response 3 – Operator Responsibility.

### Response to Comment Ind 155-2
Please see Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 155-3
The commenter requests further study of well drawdown considering higher elevations at Banner Mountain. However, no groundwater drawdown is predicted in this area as shown on Sheet 12 of Appendix K.2 to the DEIR. The commenter is referred to Chapter 4.8 and Appendices K.2 and K.3 of the DEIR. The commenter is also referred to Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Sheet 16 attached to the Final EIR as Appendix L.

### Response to Comment Ind 155-4
The commenter provides an excerpt of the Nevada County general Plan. Consistent with the referenced General Plan policy (Policy 17.24), the impacts on the environment and affected surface land uses have been adequately reviewed in the DEIR. As noted in Policy 17.24, of particular importance shall be the impact of the operation on surface land uses (see Chapters 4.4 (Biological Resources) and 4.5 (Cultural and Tribal Cultural Resources)), water quantity and quality (see Chapter 4.8, Hydrology and Water Quality, and Master Response 15 – Adequacy of Groundwater Monitoring Wells), noise and vibration (see Chapter 4.10, Noise and Vibration), land subsidence (see Chapter 4.6, Geology, Soils, and Mineral Resources), and traffic associated with surface access (see Chapter 4.12, Transportation and Circulation).

### Response to Comment Ind 155-5
The commenter states that the Project Applicant should mitigate for any groundwater impacts for the life of the project but does not state how the DEIR is inadequate. The commenter is referred to Master Response 15 - Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 155-6
The commenter questions the utility of historical data from the Idaho-Maryland Mine in light of climate change but does not state how the DEIR is inadequate. The commenter is referred to Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 155-7
The commenter states that the DEIR should analyze impacts to groundwater wells over the life of the project rather than 25 years. The commenter is referred to Master Response 14 – Adequacy of Groundwater Model and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 155-8
The commenter asks about groundwater level impacts at higher elevations and near the mineral rights boundaries. The commenter is also referred to Master Response 7 – Location of Future

Mining Areas, Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Sheet 16 attached to the Final EIR as Appendix L.

## Response to Comment Ind 155-9

The commenter requests further study of well drawdown considering higher elevations at Banner Mountain. However, no groundwater drawdown is predicted in this area as shown on Sheet 12 of Appendix K.2. The commenter is referred to Sheet 12 of Appendix K.2 and Chapter 4.8 and Appendices K.2 and K.3 of the DEIR. The commenter is also referred to Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Sheet 16 attached to the Final EIR as Appendix L.

## Response to Comment 112-10

The commenter states that the DEIR underestimates the number of private wells potentially impacted by the project but does not state how the DEIR is inadequate. The commenter is referred to Master Response 15 - Adequacy of Groundwater Monitoring Wells. In addition, please see Appendix D to this Final EIR for an updated Well Mitigation Plan.

## Response to Comment Ind 155-11

The commenter states that gold mining is part of the County's past and not its future. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, regarding their generally expressed concerns.

## Response to Comment Ind 155-12

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 156**

**From:** David Agran
**To:** bdofsupervisors
**Subject:** I DO NOT Support our community taking the SIGNIFICANT RISKS of Opening Rise Gold... bad idea any way you slice it.
**Date:** Saturday, March 19, 2022 10:05:05 PM

**Dist 1**

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Honorable County Supervisors,

I am deeply concerned by the movement to open the significantly risky Rise Gold Mine. Nevada City and Nevada County has had a glorious history as a Gold Mining Community... That is our past. IT IS PURE FOLLY to consider it as our Future. Why???

**Ind 156-1**

1. How can we TRUST the Rise Gold Corporation and certainly not its Principle snake oil salesman corporate executives. They will certainly make millions off of Rise Gold... if not from the gold, than from the capitol investors, they are already reeling in... and if they aren't, they declare bankruptcy and move on as they did in Canada, leaving behind the mess and clean up and no resources to put things right.... They get all the benefit, the community takes on all the risk... How does anyone or group or community or county protect themselves from the downside of a decades and decades long project, with tons of uncertainty, plus the challenges compounding by drought and climate change and being in an area where WATER is essential for survival, in short supply, and getting scarcer. Most importantly, there is no easy Plan B for us holding the bag. One needs water to live. Of course they want to make mega millions.... But their risk is minimal... the long term – decades and decades and decades and decades of risk we the community take -- is forever.

**Ind 156-2**

How does one trust them?:

- The press releases, and spin and marketing for raising money whether espousing the results from the EIR, or the NID meeting, or their paid consultant reports, or their severely limited poll of 500 people( that didn't even include people around the mine site), shares all the great news that supports their position, but leaves out the significant questions (i.e. concerns raised by NID), and the concerns and limitations and questions raised by the EIR, especially those areas requiring more study. If they are already stretching the truth, and showing their mastery of spin...how can we trust them, now and certainly into the future. God forbid some chemical spill or pollutant leak or other catastrophe strikes, how can we trust them that they will act ethically and tell the truth and clean up their messes.... They haven't shown that proclivity in the past, or now, once they are green lit, why should they in the future.
- How can we trust them... a Canadian company, set up in Nevada (to avoid the more stringent oversight of CA law), with pollution and catastrophe and litigation and

massive clean-up in Canada from their last project... where they just declared bankruptcy and they walk away leaving the community to deal with their mess. (It is a strategy that worked for them in Canada, why not in Nevada County. If the Rosy projections fall short or when "the ohh shits" happen they just pack up and move on.

- Or they sell out their interests and move on, leaving a new owner /operator to deal with it and one where the county does not have the fail safes and contractual obligations as they did with the original permit holders.
- How does the county protect themselves and our communities and our water and our environment if they do that. They reap the rewards and we take on all the risk.
- How can we trust them when so much is at stake if anything goes wrong.

2. Water is a scarce and precious commodity, which only is getting scarcer with the uncertainty's of climate change.

- I live on the top of Banner Mtn. I have a low producing well, that has degraded further during the 13 years I have been here. If they drain out millions of gallons of water below me.... The simple laws of gravity kick in and my well becomes less producing... How am I protected and all the other well owners sitting adjacent and above their mineshafts from this potential eventuality... what if it takes 10 years for that to happen given geologic faults and cracks etc... Yes their hydrologists report said it wont impact me and my well... BUT WHAT IF THEY ARE WRONG, what if their assumptions are wrong, what if their science is wrong, what if their data analysis is wrong. How do you our sworn elected officials protect us from that? I do not have an NID pipe underground along Quaker Hill Cross Road that I can easily tap into ... I am screwed!... I'm selling my property at a massive loss, spending thousands on a water tank and thousands more to have water trucked and delivered to my house weekly for basic survival needs.

**Ind 156-3**

- Even inconsistencies from the 25 year old EIR study for Emgold said 100 wells could be impacted... Current EIR claims only 7 or maybe 30... WHAT IF THEY ARE WRONG. And in the 90's Climate change and our perpetual droughts and fires were not even on anyones radar. Please actively consult and work with NID... to get their honest take on what could go wrong and how to mitigate for it if that is even possible.

**Ind 156-4**

- Other than the scarcity of water, there is a huge concern of arsenic and other heavy metals leaching out and spoiling our wells, our streams our hapitat

**Ind 156-5**

- Gold sure is bright and shiny and makes you rich, but you sure cant drink it, or bath in it, or put forest fires out with it.....

**Ind 156-6**

- Your decision literally effects people's LIVES. Physical and economic

**Ind 156-7**

- Please consider the economic loss of people who have saved for decades buying their most precious asset... their homes, their houses, the roof over their families heads... what happens to the value of those houses if their wells run dry or get contaminated, and NID is not an option??? Economic ruin. How do you protect us from that risk... even looking out the decades that this permit will allow.

**Ind 156-8**

I don't live adjoining the mineral rights, or along that part of the county that will see the real impacts of noise, traffic, pollution... regardless what they say -- their industrial waste, their cement processing, their gold mining processing, their trucks will have a significant visual, noise, air and water impacts on the community for miles around, and everyone who is frequenting the shops in

**Ind 156-9**

Brunswick basin. Doesn't The County have longterm Green goals in place for our county?... It seems like Rise Gold sets those back significantly.

**Ind 156-10**

Please consider what the elected officials of NC and GV think also, we are a collective community. This is too big a community wide, county wide issue to have the voices of only 5 people make this decision. Please listen to the positions of our elected city officials, and the professional, hired City leaders and managers on these impacts.

I know the potential jobs and tax revenue must leave County Supervisors salivating at the possibilities – but you please can not pimp out the community and risk the health and safety and longevity of our community to decades of pollution, dry wells, economic and environmental risk and uncertainty.....

**Ind 156-11**

And if your common sense is on the wane and you decide to support this Ponzi scheme folly... I hope you are smart enough to protect our interests, our longterm health and water and community for decades into the future. Maybe a security bond of hundreds of millions funded before they start mining, solid contracts protecting and insuring everyone's water supplies for a hundred years into the future, maybe profit sharing on the resources to compensate all the county residents (Similar to the checks every Alaskan resident gets every year)???

If the community is going to suffer the calamity, please make sure that Rise Gold is fully protecting and compensating the community for the pillage, and mitigating ALL the RISKS decades into the future so we are not left holding the fetid, rotten bag... as they drive out of town with millions in the bank and not a care in the world.

Sincerely and respectfully submitted,

David Agran M.ED BCC

## INDIVIDUAL LETTER 156: DAVID AGRAN

### Response to Comment Ind 156-1
The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues. The commenter also references the Project Applicant's reputation. The commenter is referred to Master Response 3 - Operator Responsibility.

### Response to Comment Ind 155-2
The commenter is referred to Master Response 3 - Operator Responsibility.

### Response to Comment Ind 155-3
Please see Response to Comment Ind 155-1.

### Response to Comment 155-4
The commenter references a prior draft Environmental Impact Report for the Idaho-Maryland Mine. The commenter is referred to Responses to Nevada Irrigation District Comment Letter Agcy 10, Master Response 13 - Historic Hydrogeologic Assessments, Master Response 14 – Adequacy of Groundwater Model, Master Response 15 – Adequacy of Groundwater Monitoring Wells, and Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 155-5
The commenter is concerned that the project will contaminate groundwater wells with arsenic and other heavy metals. Because the mining activities will only lead to the drawdown of groundwater and thus not provide recharge to the domestic wells, the mining activities at the project site should not affect the water quality of the domestic wells. The commenter is referred to DEIR Appendix K.8, page 14.

### Response to Comment Ind 155-6
This comment does not address the adequacy of the DEIR but has been forwarded to the decisionmakers.

### Response to Comment Ind 155-7
The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 – Social and Economic Impacts.

### Response to Comment Ind 155-8
The commenter is concerned about the project's potentially negative impacts to property values and private wells. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues. Regarding impacts to property values, the commenter is also referred to Master Response 2 - Social and Economic Impacts. Regarding impacts to private wells, the commenter is referred to Master Response 14 – Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 155-9
The commenter is concerned about impacts top aesthetics, noise, air quality, and hydrology but does not comment on the adequacy of the DEIR. The commenter is referred to Master Response

1 and DEIR Chapters 4.1 (Aesthetics), 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), 4.8 (Hydrology and Water Quality), and 4.10 (Noise and Vibration).

## Response to Comment Ind 155-10

The comment does not address the adequacy of the DEIR. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

## Response to Comment Ind 155-11

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 3 - Operator Responsibility.

**Ind 159-1**

I am absolutely opposed to the opening of Rise Mine in Nevada county. I am a voter of this county since 1979. I have paid property taxes and sales tax here all these years. I believe the mine opening will harm our air quality as well as our traffic and water quality. Water is a precious resource and should not be used on mining in this county. Sincerely

Matt Kelley, Senior Planner April 2, 2022
950 Maidu Ave, Suite 170
Nevada City, CA 95959

I live on Cedar Ridge near the Idaho Maryland Mine. I have lived in this neighborhood about 20 years and we are raising our family here.

**Ind 160-1** I believe after reading a great deal of the DEIR that No Project would be the best decision the Board of Supervisors could vote for. The report stated on page 2-7

"Based on the preceding alternatives analysis, the No Project (No Build) Alternative would be the environmentally superior alternative. "

But if the Board decides to consider points that discuss the possible re-opening, then please also consider not authorizing the building variance.

**Ind 160-2** The Planning Department's Project Description included this statement:

"the project would also include the following entitlements: Variance to the Building Height Limits to allow for the construction of several structures up to a height of 165 feet, where 45 feet is the maximum height limit allowed pursuant to the Light Industrial Zoning District." (Nevada County LUDC, Section L-II 2.5 – Industrial Uses, Table L-II 2.5.E).

I think on this request - to not follow the rules already in place and receive variance that is so much greater than the maximum height limit - is another reason not approve the re-opening of the mine.

**Ind 160-3** The mining operation regardless of how it is described is not a "light industrial" business.

The county defines M1 (light industry) code as:

The M1 District provides areas for the production, repairing, distribution, and warehousing of goods and equipment, along with supporting businesses and services. Uses should provide for buffering from adjacent land uses to minimize incompatibility and should have convenient, controlled access to arterial or major collector roads without passing through residential areas.

A gold mine in the middle of a residential area is NOT compatible with the current adjacent land uses. Before the mine closed in 1956, the number of people in the area were far fewer and much less was known about the short and long term consequences of this type of mining on water, the habitat, noise, air pollution, traffic, to identify a few. But luckily, we have learned a lot about the pros and cons of hard rock mining.

Blasting new tunnels will disturb the surrounding neighborhood, similar to the what happened when Rise's test drilling created noise and vibrations which disturbed many of the residents on Bennett and nearby homes. The residents finally had to convince the powers to be to make RISE stop the blasting overnight so they could sleep. A resident on Bennett published a letter to the Union (August 25, 2020) about the disruptive vibrations during the exploratory drilling. Rise proposes to blast 24/7 in a larger area. I don't understand how blasting and then removing 1000 ton of rock each day is light industry.

The mining operation is not engaging in production, repairing, distribution or warehousing of goods and equipment. US Legal (https://definitions.uslegal.com/l/light- industry/) describes

1

"light manufacturing activity that uses moderate amounts of partially processed materials to produce items of relatively high value per unit weight. Light industries require only a small amount of raw materials, area and power. The value of the goods produced is relatively low and they are easy to transport. Light industries cause relatively little pollution when compared to heavy industries. As light industry facilities have less environmental impact than those associated with heavy industry zoning laws permit light industry near residential areas. It is a criterion for zoning classification. The manufacturing of clothes, shoes, furniture, consumer electronics and household items are a few examples of light industries."

Certainly, this does not describe a full-scale mining operation.

The mining operation will be processing tons of rock daily, crushing and hauling it to its Centennial Site for a few years and then the waste rock will collect it at Brunswick until it can be hauled to contractors to use it elsewhere in the county and state. This "distribution" is daily for 50-plus round trips by heavy trucks that will haul the waste tailings, 1000 tons daily for years and years. These trucks will be passing through residential areas. Heavy polluting trucks will also haul the waste rock to highway 49 or down 174 for further transport to other parts of the region and state. The noise, dust and exhaust will affect the citizens' quality of life in the county and surrounding region. This type of "distribution" is not the delivery of newly assembled items from light industry, its characteristic of a heavy industry.

To break apart the ore which may or may not contain gold, requires that rock be crushed (stamped) and possible findings be removed and sent on for processing. To do this, buildings will be built that are nearly 4 times taller than what is allowed in a "light Industrial" M1 zone.

Table 4.11-2 Building Summary provides the height of proposed structures:

Headframe max height 165 feet
Hoist Building 50 feet
Process Plant 64 feet
Shaft Service
Headframe in shaft building 80 feet
Hoist 50 feet

These would not be compatible with the surrounding land use that is mostly residential and a very few commercial buildings that are mostly 1 story. The current 65-foot shaft is an eye-sore that is already 20 feet higher than what is currently allowed. The proposed headframe is 2.5 times taller than the current out of compliance shaft. It would be almost 4 times taller than what the current regulations allow. The proposal also asks for a hoist building allowance of 50 feet AND a process plant 64 feet in height, 19 feet too tall.

Highway 174 to Brunswick is a major gateway into Grass Valley. It is not designated as "scenic" but it is attractive as residents and tourist approach and enter the city. The noise, the dust, the diesel fumes from the mining operation and the too tall structures would create a negative impact on the traveler. As a resident of the area, these are not acceptable trade-offs. The mine "wins" and we get to breath dust, fumes, diesel particulate matter and see the out of compliance structures as we wait in more traffic. These are NOT acceptable variances in a M1 Light industrial zone.

The DEIR states: "The Brunswick Industrial Site is currently zoned Light Industrial (M1) with Site Performance Combining District (SP). Implementation of the project would include rezoning the Brunswick Industrial Site to Light Industrial with Mineral Extraction Combining District (M1-ME). The primary purpose of the Mineral Extraction Combining District is to inform the public of the potential for mineral extraction. However, the base zoning district of M1 would remain unchanged." (4.3-72 pdf 364)

The mining operation is clearly not a light Industrial company. It is an industry that does NOT meet the definition or intent of the policy of establishing a light industry project. Rezoning it with ME (mineral extraction) added doesn't work because the industry is not truly a M1 project.

I don't think the rezoning is so the public is better informed about "the potential of mineral extraction, it is because without the rezoning the mining operation can't occur.

The rezoning of M1 - light industrial to M1-ME does not support the county policy of what M1 is and what kind of activities should and should not occur on the site.

Respectfully,
David Figuly
Cedar Ridge, CA

2

## INDIVIDUAL LETTER 160: DAVID FIGULY

### Response to Comment Ind 160-1

The commenter urges the County to adopt the "No Project" alternative. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 160-2

The commenter requests that the County reject the height limit variance for the project's structures. The commenter's request is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 160-3

The commenter offers their opinion of what should be allowed in M1 light industrial zoning. However, as discussed on page 4.9-16 of the DEIR, subsurface mining is allowed in all base districts, including the M1 base district, subject to approval of a Use Permit. Surface mining is allowed in the M1 base district and where the property is zoned ME. The commenter also states that the project is not compatible with adjacent residential land uses. The project's effects on the nearest residences are evaluated throughout the technical chapters of the DEIR. The comment is noted for the decisionmakers.

The commenter states that the project will result in adverse impacts to water, habitat, noise, air pollution, and traffic but offers no additional information on which to formulate a response. The commenter is referred to DEIR Chapters 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), 4.4 (Biological Resources), 4.8 (Hydrology and Water Quality), 4.10 (Noise and Vibration), and 4.12 (Transportation and Circulation).

The commenter states that underground blasting will disturb the surrounding community. The DEIR concludes that noise- and vibration-related impacts from blasting would be less than significant (DEIR, p. 4.10-38, 51.) The commenter also states that blasting would occur 24 hours a day, 7 days a week. The DEIR states that blasting activities are proposed to take place twice daily with blasting between shifts at 7AM and 7PM with 3 to 4 drift rounds blasted every 12 hours between shift changes and longhole blasts of approximately 3,300 tons of rock taking place once every 3-4 days. (DEIR, p. 4.7-28.) The commenter states that the applicant previously disturbed the surrounding neighborhood with overnight blasting. However, no such previous blasting has taken place.

The commenter's concerns regarding aesthetics are noted. Chapter 4.1, Aesthetics, Impact 4.1-2, of the DEIR evaluates the effects of the project's structures on the visual character or quality of the site and its surroundings as viewed from public viewpoints. Based on the photographic simulations prepared for the project, the DEIR concludes that the proposed project would substantially degrade the visual character or quality of the site and its surroundings, and while the DEIR includes mitigation to address the impact to the extent feasible, the project's aesthetic impacts would remain significant and unavoidable. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

David & Victoria Hardy
Bourbon Hill Road
Nevada City, CA 95959

Nevada County Planning Commission
950 Maidu Avenue, Suite 170
PO Box 599002
Nevada City, CA 95959-7902

Dear Commissioners,

I am a retired government employee from a large County in California where I served for about 30 years. I say this having the perspective of managing a large budget of taxpayer funds and making recommendations on public policy to elected officials.

My wife and I wanted to write to you to support you making your objective decisions regarding the Rise Gold Idaho-Maryland Project. Living in Nevada City, we began to see the "No Mine" signs popping up all over the County and as property owners, voters, and citizens we decided to research the issue thinking it was a ballot measure or similar and wanted to be informed.

We looked into the project objectively and it seemed to have the potential for significant impact on our County both good and bad. As we tried to do this research we kept slamming into some outrageous and alarming claims from people and the group opposed to the project. As we dug in further, using objective sources, we found these claims are completely exaggerated and downright preposterous and from our perspective were crafted to whip up hysteria.

Ind 162-1

**While hopefully our opinion will not matter to you, my wife and I strongly support this project.** I say this with all due respect and deference to the science and fact based decision you are making. My research showed a very strong and convincing prospect for significant economic benefits and environmental improvements to our County and that prospect didn't match up with the cult-like opposition and their claims.

I describe it this way because as I discovered the social media side of this discussion, I realized it wasn't a discussion at all. Social media was an echo chamber of alarmism. I was confronted by claims like "We don't know if the mining will cause earthquakes" and "All of our wells will go dry like (insert unrelated project here)" and the "CEO of Rise wants to destroy our land and is a terrible incompetent person." (Some paraphrases).

When I attempted to counter some of these claims publicly with actual evidence and facts, a cult like mob descended on me and my family. I was called names, my right to have an opinion on the subject was questioned, and I was accused of

1

being an employee of the project for even suggesting anything good could come of it. I also discovered a large number of folks feel like we do who contacted me privately for having courage to speak up. They support the economic and environmental benefits of the project but they choose to keep it to themselves for fear of the mob.

Having spoken to folks who live close to the mine site, I have heard their legitimate concerns about oversight and the mitigation measures. They have a legitimate need to be heard. I was disgusted that the concerns of these legitimate stakeholders were being drowned out by false information being peddled in an attempt to drum up hysteria by armchair activists wanting to appear virtuous on social media.

So I put myself in your shoes, where before you even have deliberated on the matter you are publicly accused in social media of taking bribes based on the outcome, and you are threatened with political consequences if you do not bow to the hysteria. Knowing that you must make an objective decision and that you must use facts and evidence to make this decision, I want to tell you you are supported in doing so!

We have read the DEIR, and support the project permits being issued. We are satisfied that the mitigation measures and oversight described in that document will be sufficient to address any risk proposed by this project. We look forward to having a thriving, modern, safe, and clean mining enterprise in our County.

-David and Victoria Hardy

## INDIVIDUAL LETTER 162: DAVID AND VICTORIA HARDY

### Response to Comment Ind 162-1

Please see Master Response 1.

**Individual Letter 163**

**Section Comment on HYDROLOGY AND WATER QUALITY**

**Commenter: DAVID HERBST, PhD, stream research scientist**

**University of California, Sierra Nevada Aquatic Research Lab, UC Santa Barbara and UC Santa Cruz**

Representing my own opinion and expertise as a stream scientist expert on acid mine drainage impacts and recovery of stream ecosystems of the Sierra Nevada.

I am a permanent resident of Nevada City as of 2021 (10696 Cement Hill Road)

Background:

**Ind 163-1**

I have been research scientist with the University of California since 1986, affiliated with the institutions above and hold degrees from Oregon State University and the University of California at Davis. My work as a scientist has been related mostly to the ecology of streams and the influence of a variety of types of disturbance from climate change and drought, to water diversions, sediments, livestock grazing, introduced species, wildfire, and notably the effects of acid mine drainage on stream ecosystems. It is this latter subject that I draw on to inform the comments on the next pages.

Thank you for the opportunity to comment on this DEIR.

This is an important issue to the community and important that we are all given the chance to make comments. This is a highly technical issue and requires deep reading and understanding to really get at the core of potential problems. As such I find it particularly offensive that the proponent RiseGold would send a glossy brochure to the entire community claiming that "the science is clear" and that the "DEIR confirms that the Mine will not...cause water quality or quantity impacts". I disagree. The DEIR is incomplete and naive at best and misleading at worst. As the Planning Commission and County BOS representatives I hope you will be careful and thorough in your review of the real facts or lack thereof.

**Ind 163-2**

**Issue Identified:**
**Stream hydrology and the augmentation of flows to South Fork Wolf Creek by inputs from the dewatering of the mine**

How would the natural flow regime of this stream be affected is the basic concern here. Page 4.4-69 reports an estimate of the flow range for S. Fk. Wolf Crk - showing that adding 5.6 cfs (first 6 months of pumping) would about double the natural peak flow of winter runoff, and far more at other times. The range of natural background flow in this creek is about 0.2 cfs baseflow to 6.5 cfs peak winter runoff (p.466). Winter storm flows were noted by Balance Hydrologics (2020 report) at 11-17 cfs, and claimed that these flows did not generate erosion or sediments. However, this was not accompanied by any quantitative analysis of turbidity or suspended matter transport during the course of this event so it is not possible to actually quantify the potential for erosion with persistent higher flows that are unnatural to this channel. More important is that this does not assess the impact of altered flows on benthic macroinvertebrate populations, the foundation of food webs in streams supporting other aquatic life such as fish, amphibians and riparian wildlife. Data regarding aquatic life is absent and erosion is estimated based on theory rather than observation. Even the long-term dewatering pumping after the initial 6-month period is estimated to be 1.9 cfs and thus would be about twice the flow that is typical of mid-range hydrograph. The flows added by NID to this same water body can be substantial but are periodic and short-term.

**Ind 163-3**

**Action Needed**
Significant biological impact assessment needs to consider benthic macroinvertebrates (BMIs) and the organic matter/algae that are the foundation of the food chain in this section of the creek and downstream of the project. The post-project NPDES permit would require BMI biomonitoring but this does not satisfy the need to assess what the effects would be before the project is implemented. At that point it's too late and this is an inadequate measure if damages are already done. Page 472 does indicate the project could have a significant adverse impact (but that it could be mitigated, though again this has not been adequately ascertained for lack of data). These flows are effects that cannot be mitigated. Studies need to be done to determine how the drainage dewatering of the mines could alter what currently lives in the natural stream of S.Fk.Wolf Crk, so these need to be surveyed to evaluate vulnerability to these wastewater discharges. This concerns not only flow alteration, but chemical and metals water quality as expressed in the next issue (below). Such a biological survey of the BMIs should be expressed in terms of the highest taxonomic resolution (genus, species where possible). Detailed data on the aquatic invertebrate community in the South Fork and mainstem of Wolf Creek would be needed simply to set a baseline for whatever happens in the future. Turbidity monitoring, stream gauging and better studies of the distribution of sediments in the channel are also needed.

**Ind 163-4**

**Background**
The natural flow regime of mountain streams from winter and spring runoff to summer and fall baseflow are an important sort of clock for the successful timing of life cycles, growth and reproduction of aquatic life. When the natural hydrograph is disrupted, so too are these cycles and the natural processes of streams (Yarnell et al 2010). Erosion and scouring and downstream deposition of sediments can present further problems for organisms living on stream bottoms, another common legacy of hard rock mining.

**Relevant References in the DEIR: Section 4.8**

**Issue Identified**
**Water quality of discharges and chemical/metals constituents and their toxicity**

According to the report, p.466: ***proposed project will discharge a maximum of 5.6 cubic feet per second (cfs) of treated mine water to South Fork Wolf Creek and such discharges will be in compliance with the waste discharge requirements of General Order R5-2016-0076, National Pollutant Discharge Elimination System (NPDES) No. CAG995002 for Tier 3 Dischargers: Discharges of wastewater from hard rock mines.***

Table 12 in the guidance from the State above includes their technology-based effluent limitation for hard rock mining, which may not be as stringent as water quality-based criteria, but in any case, are not appropriate to evaluating the effects of metals on aquatic invertebrates.

Table 4.8-2 concentrations report NO quantitative values for the "after-treatment" proposed discharge water but the amounts of at least Fe and Mn shown for untreated water of the existing shaft are at levels toxic to aquatic life. In Appendix K2 Table 3.6 does give data on different depths sampled in the Brunswick Shaft but these are mostly restricted to values for Fe and Mn, while other metals that can be signifiicant toxic constituents are unreported. Toxicity should be expressed in terms of how it alters the viability of stream life when exposed continuously as in this case. So chronic tests rather than short-term acute testing of mortality (as was done in the case of the trout reported Appendix K2 of the DEIR) are what is needed to evaluate true toxicity. Life cycle exposures should be done with the most sensitive organisms present in the natural stream community.

Regarding the sampling methods used to collect and analyze stream water are not described in enough depth to tell where and in what numbers data was taken. What is the underground architecture of the abandoned mine shafts, how deep and how branched are these shafts? They should be checked thoroughly in case there are pockets with differing contaminant levels.

**Ind 163-5**

Table 4.8-2, p. 667 (and Appendix K2 Table 3.6) gives the analysis of Tier 3 effluent limits (acute drinking water exposure limits) but these report only single values, or more often not given as a value below the "screening level", and so does not represent the range of value over time and space of the "mine shaft" sampled. The "screening level" appears to be a low sensitivity analysis (cannot find if the analytical instruments used are even specified or their analytical precision). The Table fails to give values below that level and are inadequate for a true quantitative analysis. What's more, these limits have nothing to do with chronic exposures to the aquatic life present in the mine shafts to be dewatered.
Fortunately, in a recently published scientific paper with colleagues we show data bearing on this question that comes from long-term field investigations (Clements et al. 2021). Studying the chronic metals impacts on BMI communities from 4 long-term (20+ yrs) Superfund restoration projects from across the western US (in CA, CO, ID, MT) we found the threshold at which the EPT community (the sensitive mayflies, stoneflies, caddisflies) diversity unravels. This level corresponds to the lab bioassay estimates for chronic exposures producing sublethal damages to growth and reproduction of test organisms, so our field data validated this concentration of combined metals as the limit to the vitality of aquatic life. Importantly these are chronic sublethal effects rather than the acute lethal mortality limits that the trout bioassays used. Those are not how you'd want to evaluate these problems because they are short exposures and look for mortality only instead of the continuous exposures (chronic tests)

that are both realistic and look for how metals/chemistry produce life function impairments. Acute testing is completely inappropriate to assessing the problem. More appropriate to know is that the action of metals toxicity is additive and chronic, so all should be combined as units expressing the total effect-levels rather than individual chemical concentrations. We call these units for each metal/toxicant the criterion continuous concentration CCCs (or aquatic life criteria), and in combination as a sum, the cumulative criterion units (CCUs). Using CCUs recognizes that toxicity is additive and you cannot protect aquatic life only meeting the limits of individual metals since they act together to produce toxicity (as demonstrated in the study cited). At CCU=1 is the limit beyond which sublethal effects produce impaired function and that's exactly what we found in those field studies, so is the best predictor for combined metals toxicity from mines. So, what we need are better data on all the metal constituents as their exact values (and ranges) and how variable these concentrations might be in different shaft compartments.

According to calculations of CCUs, the existing shaft water is toxic (CCU > 5), and after treatment also appears to be toxic but cannot be determined when the screening limits show only "<300" for Fe for example, which at that level alone would exceed CCU=1. So the analysis is inadequate in providing data that is quantitative and sensitive enough in resolution of concentrations of metals, and does not show the variations in the distribution of constituents. As a separate issue the concentration of total ionic solutes (conductivity) is reported at ~400 µS in the existing shaft and no values given for after treatment. This often cannot be controlled by treatment and represents what may be a very high value compared to the background natural level of specific conductance in S. Fk. Wolf Creek which is typically in the range of 50-100 µS (Table 3-8 of Appendix K2). Conductivity of 400 is quite high for Sierra streams and studies have shown it is another factor that can limit BMIs.

**Action Needed**
Basically the data shown is not sensitive enough and does not even report real numbers for many of the toxic metals. The RWQCB standards for Tier 3 hard rock mine effluent is also negligent in not including many of the toxic constituents from hard rock mines. So we need that data to calculate the CCUs after treatment, and need to validate the method used to determine what those concentrations would be for the treatment proposed. Bottom-line the water quality data needs improvement in detection levels and thorough sampling. Data must also include sulfate concentrations (SO4), acid generating capacity, and acid neutralizing capacity. Seepage from existing or new tailings should be included along with chemical analysis of samples mine shaft compartment waters. Chronic toxicity tests with native organisms should be included with these analyses (not acute tests).

**Ind 163-6**

**Background**
There is a long history of the use of aquatic invertebrate communities to assess the extent of damages to resources produced by mine drainage, and recovery of streams undergoing restoration.

## INDIVIDUAL LETTER 163: DAVID HERBST

### Response to Comment Ind 163-1

This is an introductory comment and does not provide a specific comment on an environmental issue associated with the project. Comment noted.

### Response to Comment Ind 163-2

The commenter states that erosion is estimated based on theory rather than observations. However, as discussed in Sections 4.6, 4.7, 4.8 of Appendix K.1, Balance Hydrologics, Inc. conducted channel reconnaissance where they evaluated channel and bed conditions, collected sediment samples, characterized bed sediment size and delineated SF Wolf Creek into distinct reaches based on geomorphic metrics. Observations during baseflow preceded observations and measurements made during elevated flows in January 2020.

The commenter states that a quantitative analysis of turbidity or suspended matter transport at flows from 11-17 cfs was not conducted. However, as stated on page 4.8-36 of the DEIR, the purpose of the geomorphic analysis is to determine if the project will cause substantial erosion or siltation on or offsite. Contrary to the commenter's assertion, as discussed in Appendix K.1 and shown in Table 5.5 of Appendix K.1, the predicted range of streamflow when bed sediment mobility will occur was calculated using quantitative methods. As stated on page 54 of Appendix K.2, turbidity values were also higher in the upstream location, at the proposed treated water discharge point, than they were at the downstream location. This finding suggests that there are existing sources of fine sediment located upstream of the proposed discharge location and additional runoff that enters South Fork Wolf Creek as the flow moves downstream tends to dilute the turbidity from upstream. As shown in Table 3-10 of Appendix K.2, turbidity at Reach B was 79 NTU at 9.7 cfs flow and at reach F was 48 NTU at 17.3 cfs. As demonstrated by the data, the increase in flow, similar to the maximum proposed discharge, past the proposed discharged point (Reach B) decreased turbidity. As such, the data provided in the DEIR suggests that the maximum 5.6 cfs discharge into South Fork Wolf Creek, which will meet basin plan turbidity standards as required by the RWQCB, will dilute turbidity caused by upstream sources rather than add turbidity to the creek. Mitigation Measure 4.8-1(a) requires the applicant to submit a Notice of Intent (NOI) to the Central Valley Regional Water Quality Control Board (RWQCB) and the Notice of Applicability (NOA) shall be received before initial mine dewatering can begin. Water quality standards, enforced by the RWQCB, include total suspended solids and turbidity. Therefore, mine water discharge will not exceed turbidity thresholds.

The project would not cause substantial erosion or siltation and would be required to meet water quality goals per Mitigation Measure 4.8-1(a). Therefore, impacts to aquatic invertebrates and benthic macroinvertebrates would also not be significant. Please see Master Response 36 - Flows in South Wolf Creek, and Master Response 35 - Discharge to South Wolf Creek, regarding the discharge flow volumes and quality, potential for erosion, and species impacts. Please also see Response to Comment Grp 31-12 regarding benthic macroinvertebrates.

### Response to Comment Ind 163-3

The commenter asserts that the project could cause impacts to benthic macroinvertebrates. The biological impact to benthic macroinvertebrates (BMI) from mine water discharge to South Fork Wolf Creek has already been analyzed in the DEIR. (see DEIR, p. 4.4-70.) The commenter provides no information as to why the specific impact to organic matter/algae would be necessary in the analysis of the DEIR. The project's discharge would meet all water quality goals per Mitigation Measure 4.8-1(a) and would not cause substantial erosion or siltation. Therefore, it

would not have a significant impact on sensitive aquatic resources. Please see Master Response 36 - Flows in South Wolf Creek, Master Response 32 - Temperature of Mine Water Discharge, and Master Response 35 - Discharge to South Wolf Creek, regarding the discharge flow volumes, temperature, and quality, potential for erosion, and species impacts. Please also see Response to Comment Grp 31-12 regarding benthic macroinvertebrates.

The commenter states that the post-project NPDES permit would require BMI biomonitoring and therefore detailed baseline data on BMI is required. However, no such monitoring is required under NPDES CAG995002 Order R5-2022-0006 waste discharge requirements for limited threat discharges to surface water. As discussed on page 4.8-31 of the DEIR, the Regional Water Board adopted a Water Quality Control Plan, Fifth Edition, for the Sacramento and San Joaquin River Basins (the Basin Plan). The requirements of NPDES CAG995002 are designed to implement the goals of the Basin Plan. The Basin Plan designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters addressed through the Plan. These beneficial uses include WARM, COLD, and WILD uses which specifically consider preservation and enhancement of aquatic invertebrates. As shown in Table 2-1 of the Basin Plan, these beneficial uses, also applicable to South Fork Wolf Creek, are as follows:

- Municipal and domestic supply (MUN)
- Agricultural supply, including stock watering (AGR)
- Hydropower generation (POW)
- Water contact recreation, including canoeing and rafting (REC-1)
- Non-contact water recreation, including aesthetic enjoyment (REC-2)
- Warm freshwater habitat (WARM) – Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.
- Cold freshwater habitat (COLD) – Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.
- Wildlife habitat (WILD) – Uses of water that support terrestrial or wetland ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats or wetlands, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.

## Response to Comment Ind 163-4

The commenter states that the flow regime of mountain streams is an important sort of clock for timing of life cycles, growth, and reproduction or aquatic life and that when the natural hydrograph is disrupted so too are these cycles. However, the project would only increase baseflow through the discharge of treated mine water and would not change the natural hydrograph with higher flows in winter and lower flows in summer. Please also see Response to Comment Grp 2-5.

The commenter states that erosions and scouring and downstream deposition of sediments can present further problems for organisms living on stream bottoms. However, the project would not cause substantial erosion or siltation and therefore would not impact these organisms. Please see Master Response 36 - Flows in South Wolf Creek.

The commenter states that technology based effluent limitations are not appropriate for evaluating the effects of metals on aquatic invertebrates. However, as stated on page D-19 of NPDES

CAG995002 Order R5-2022-006, Section 301(b) of the Clean Water Act require permits to include conditions meeting the applicable technology requirement at a **minimum**, and any more stringent effluent limitation necessary to meet water quality standards. (see Mitigation Measure 4.8-1(a).)

The commenter also states that no quantitative values are provided for iron and manganese after treatment in Table 4.8-2. However, Table 4.8-2 shows that iron must be less than 300 ug/L and manganese must be less than 50 ug/L. The commenter states that the amounts of iron and manganese before treatment are at levels toxic to aquatic life. However, the water would be treated before discharge per Mitigation Measure 4.8-1(a) and therefore the pre-treatment values are not relevant to the analysis. Furthermore, neither iron nor manganese have maximum contaminant levels for the protection of aquatic life and the water quality goals are based on the secondary drinking water standards (for taste and odor)[2]. The commenter states that a different toxicity text (chronic rather than acute) should be performed on water currently in the mine shaft and that pockets of different water quality could exist in the underground architecture of branching mine shafts. However, such a test and analysis are not required for the analysis because existing water in the mine working would be treated prior to discharge, and treated mine water must meet all water quality objectives prior to discharge (see Master Response 35 - Discharge to South Fork Wolf Creek).

The commenter states that sampling methods used to collect and analyze stream water are not described in enough depth to tell where and in what numbers data was taken. However, the DEIR contains voluminous baseline surface water quality data. The baseline surface water quality data are described within Section 3.4.1.2 and presented in Tables 3.5 through 3.10 of Appendix K.2 of the DEIR. The baseline data include results from samples collected from the underground workings, from drains that discharge water from the underground workings, from Wolf Creek, and from South Fork Wolf Creek. The results include field parameters, general water chemistry parameters, and metals. In particular, Table 3-8 of Appendix K.2 contains pH, temperature, dissolved oxygen (DO), electrical conductivity, and oxidation-reduction potential (ORP) measurements from three locations along South Fork Wolf Creek and two locations on the former SPI site that discharge to South Fork Wolf Creek. Table 3-8 of Appendix K.2 presents laboratory analytical results for 18 general water chemistry parameters and 19 different metals from two samples collected along South Fork Wolf Creek at locations that will be upstream and downstream of the proposed treated water discharge location. Table 3-10 of Appendix K.2 provides field measurements of flow, temperature, specific conductance, pH, and turbidity for two locations (upstream and downstream) along South Fork Wolf Creek measured during five different storm flow conditions, including summer baseflow, early-season post-storm (comparable to first-flush) flows, winter baseflow, rising flows during a "qualifying rain event of 1.25 inches, and peak flows during the same "qualifying rain event". Additional details regarding flow conditions and baseline water quality conditions in South Fork Wolf Creek are also provided in Appendix K.1 of the DEIR. Further analysis of the baseline water quality data is provided in Section 3.4.2 of Appendix K.2 of the DEIR. In particular, data from South Fork Wolf Creek are presented on Figures 3-12 and 3-19 while the baseline data from the underground workings, drains, and Wolf Creek are presented on Figures 3-12 through 3-18. As such, the DEIR presents substantial evidence on the data associated with water quality, sufficient to support the conclusions of the DEIR.

[2] https://public3.waterboards.ca.gov/wqgapps/WQ_view.jsp?backUrl=iron&chemName=Iron
https://public3.waterboards.ca.gov/wqgapps/WQ_view.jsp?backUrl=Manganese&chemName=Manganese

## Response to Comment Ind 163-5

The commenter states that Table 4.8-2 of the DEIR provides only single values and not ranges of values for current water quality in the mine shaft and screening levels in the table are insufficient for a true quantitative analysis and that recently published scientific papers (Clements et al 2021) and chronic tests (criterion chronic concentrations) should be used to determine water quality requirements for the mine water discharge. The commenter also states that the California Regional Water Quality Control Board (CVRWQCB) standards for Tier 3 hard rock mine effluent (as described in NPDES CAG99500) are negligent for not including many of the toxic constituent for hard rock mines. However, the water quality requirements for treated mine water are determined by the CVRWQCB, which is the responsible agency for the regulation of the mine water discharge. As discussed on page 4.8-31 of the DEIR, the Regional Water Board adopted a Water Quality Control Plan, Fifth Edition, for the Sacramento and San Joaquin River Basins (the Basin Plan) that designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters addressed through the Plan. Mine water discharge must be treated to meet water quality goals that are protective of aquatic life and other beneficial users. Please see Master Response 35 – Discharge to South Fork Wolf Creek.

The commenter states that conductivity of water in the shaft is high and cannot be controlled by treatment. There are no US EPA water quality criteria for the protection of aquatic life for electrical conductivity, total dissolved solids, and sulphate (see page D-34 of Order R5-2022-0006). However, the secondary MCL for electrical conductivity of 900 umhos/cm is the recommended level for the protection of agricultural supply by the Central Valley Water Board (see page D-34 and D-35 of Order R5-2022-0006). As discussed on page 4-5 of Appendix K.4, electrical conductivity (EC) is associated with Total Dissolved Solids (TDS). Appendix K.2 listed EC values for the New Brunswick Shaft water as approximately 385 µS/cm. The mobilized divalent ions from the carbonate and sulfide minerals would add to that specific conductance, although it would require significant contributions of Ca, Mg, and SO4 to surpass the NPDES CAG995002 screening level of 900 uS/cm. However, if treatment is deemed necessary for TDS mitigation at some point during mining operations, mobile ion exchange water softeners would be deployed as opposed to building additional permanent infrastructure that may not be needed or only needed for relatively short periods. These mobile units are readily available, and various vendors offer the service of replacing them as necessary as the resin becomes spent and in need of regeneration. Additionally, the resins used for these constituents are common throughout the industry for softening water and do not pose a health or environmental risk. Therefore, the proposed water treatment plant is capable of ensuring that conductance of discharged mine water meets water quality goals and the required Notice of Applicability would ensure compliance (see Master Response 35 – Discharge to South Fork Wolf Creek).

The commenter states that seepage from existing or new tailings should be tested for sulfate concentrations, acid generating capacity, and acid neutralization capacity. Please see Master Response 4 - Cleanup Project is a Separate Project Under CEQA, Master Response 9 - Historical Mine Waste at Centennial Site, and Master Response 8 - Mine Waste Characterization.

**Section Comment on HYDROLOGY AND WATER QUALITY**

**Commenter: DAVID HERBST, PhD, stream research scientist**

**University of California, Sierra Nevada Aquatic Research Lab, UC Santa Barbara and UC Santa Cruz**

Representing my own opinion and expertise as a stream scientist expert on acid mine drainage impacts and recovery of stream ecosystems of the Sierra Nevada.

I am a permanent resident of Nevada City as of 2021 (10696 Cement Hill Road)

Background:

I have been research scientist with the University of California since 1986, affiliated with the institutions above and hold degrees from Oregon State University and the University of California at Davis. My work as a scientist has been related mostly to the ecology of streams and the influence of a variety of types of disturbance from climate change and drought, to water diversions, sediments, livestock grazing, introduced species, wildfire, and notably the effects of acid mine drainage on stream ecosystems. It is this latter subject that I draw on to inform the comments on the next pages.

Thank you for the opportunity to comment on this DEIR.

This is an important issue to the community and important that we are all given the chance to make comments. This is a highly technical issue and requires deep reading and understanding to really get at the core of potential problems. As such I find it particularly offensive that the proponent RiseGold would send a glossy brochure to the entire community claiming that "the science is clear" and that the "DEIR confirms that the Mine will not...cause water quality or quantity impacts". I disagree. The DEIR is incomplete and naive at best and misleading at worst. As the Planning Commission and County BOS representatives I hope you will be careful and thorough in your review of the real facts or lack thereof.

**Issue Identified:**
**Stream hydrology and the augmentation of flows to South Fork Wolf Creek by inputs from the dewatering of the mine**

**Ind 164-2**

How would the natural flow regime of this stream be affected is the basic concern here. Page 4.4-69 reports an estimate of the flow range for S. Fk. Wolf Crk - showing that adding 5.6 cfs (first 6 months of pumping) would about double the natural peak flow of winter runoff, and far more at other times. The range of natural background flow in this creek is about 0.2 cfs baseflow to 6.5 cfs peak winter runoff (p.466). Winter storm flows were noted by Balance Hydrologics (2020 report) at 11-17 cfs, and claimed that these flows did not generate erosion or sediments. However, this was not accompanied by any quantitative analysis of turbidity or suspended matter transport during the course of this event so it is not possible to actually quantify the potential for erosion with persistent higher flows that are unnatural to this channel. More important is that this does not assess the impact of altered flows on benthic macroinvertebrate populations, the foundation of food webs in streams supporting other aquatic life such as fish, amphibians and riparian wildlife. Data regarding aquatic life is absent and erosion is estimated based on theory rather than observation. Even the long-term dewatering pumping after the initial 6-month period is estimated to be 1.9 cfs and thus would be about twice the flow that is typical of mid-range hydrograph. The flows added by NID to this same water body can be substantial but are periodic and short-term.

**Action Needed**

**Ind 164-3**

Significant biological impact assessment needs to consider benthic macroinvertebrates (BMIs) and the organic matter/algae that are the foundation of the food chain in this section of the creek and downstream of the project. The post-project NPDES permit would require BMI biomonitoring but this does not satisfy the need to assess what the effects would be before the project is implemented. At that point it's too late and this is an inadequate measure if damages are already done. Page 472 does indicate the project could have a significant adverse impact (but that it could be mitigated, though again this has not been adequately ascertained for lack of data). These flows are effects that cannot be mitigated. Studies need to be done to determine how the drainage dewatering of the mines could alter what currently lives in the natural stream of S.Fk.Wolf Crk, so these need to be surveyed to evaluate vulnerability to these wastewater discharges. This concerns not only flow alteration, but chemical and metals water quality as expressed in the next issue (below). Such a biological survey of the BMIs should be expressed in terms of the highest taxonomic resolution (genus, species where possible). Detailed data on the aquatic invertebrate community in the South Fork and mainstem of Wolf Creek would be needed simply to set a baseline for whatever happens in the future. Turbidity monitoring, stream gauging and better studies of the distribution of sediments in the channel are also needed.

**Background**

**Ind 164-4**

The natural flow regime of mountain streams from winter and spring runoff to summer and fall baseflow are an important sort of clock for the successful timing of life cycles, growth and reproduction of aquatic life. When the natural hydrograph is disrupted, so too are these cycles and the natural processes of streams (Yarnell et al 2010). Erosion and scouring and downstream deposition of sediments can present further problems for organisms living on stream bottoms, another common legacy of hard rock mining.

**Relevant References in the DEIR: Section 4.8**

**Issue Identified**
**Water quality of discharges and chemical/metals constituents and their toxicity**

According to the report, p.466: *proposed project will discharge a maximum of 5.6 cubic feet per second (cfs) of treated mine water to South Fork Wolf Creek and such discharges will be in compliance with the waste discharge requirements of General Order R5-2016-0076, National Pollutant Discharge Elimination System (NPDES) No. CAG995002 for Tier 3 Dischargers: Discharges of wastewater from hard rock mines.*

Table 12 in the guidance from the State above includes their technology-based effluent limitation for hard rock mining, which may not be as stringent as water quality-based criteria, but in any case, are not appropriate to evaluating the effects of metals on aquatic invertebrates.

Table 4.8-2 concentrations report NO quantitative values for the "after-treatment" proposed discharge water but the amounts of at least Fe and Mn shown for untreated water of the existing shaft are at levels toxic to aquatic life. In Appendix K2 Table 3.6 does give data on different depths sampled in the Brunswick Shaft but these are mostly restricted to values for Fe and Mn, while other metals that can be signifiicant toxic constituents are unreported. Toxicity should be expressed in terms of how it alters the viability of stream life when exposed continuously as in this case. So chronic tests rather than short-term acute testing of mortality (as was done in the case of the trout reported Appendix K2 of the DEIR) are what is needed to evaluate true toxicity. Life cycle exposures should be done with the most sensitive organisms present in the natural stream community.

Regarding the sampling methods used to collect and analyze stream water are not described in enough depth to tell where and in what numbers data was taken. What is the underground architecture of the abandoned mine shafts, how deep and how branched are these shafts? They should be checked thoroughly in case there are pockets with differing contaminant levels.

**Ind 164-5**

Table 4.8-2, p. 667 (and Appendix K2 Table 3.6) gives the analysis of Tier 3 effluent limits (acute drinking water exposure limits) but these report only single values, or more often not given as a value below the "screening level", and so does not represent the range of value over time and space of the "mine shaft" sampled. The "screening level" appears to be a low sensitivity analysis (cannot find if the analytical instruments used are even specified or their analytical precision). The Table fails to give values below that level and are inadequate for a true quantitative analysis. What's more, these limits have nothing to do with chronic exposures to the aquatic life present in the mine shafts to be dewatered.
Fortunately, in a recently published scientific paper with colleagues we show data bearing on this question that comes from long-term field investigations (Clements et al. 2021). Studying the chronic metals impacts on BMI communities from 4 long-term (20+ yrs) Superfund restoration projects from across the western US (in CA, CO, ID, MT) we found the threshold at which the EPT community (the sensitive mayflies, stoneflies, caddisflies) diversity unravels. This level corresponds to the lab bioassay estimates for chronic exposures producing sublethal damages to growth and reproduction of test organisms, so our field data validated this concentration of combined metals as the limit to the vitality of aquatic life. Importantly these are chronic sublethal effects rather than the acute lethal mortality limits that the trout bioassays used. Those are not how you'd want to evaluate these problems because they are short exposures and look for mortality only instead of the continuous exposures (chronic tests)

that are both realistic and look for how metals/chemistry produce life function impairments. Acute testing is completely inappropriate to assessing the problem. More appropriate to know is that the action of metals toxicity is additive and chronic, so all should be combined as units expressing the total effect-levels rather than individual chemical concentrations. We call these units for each metal/toxicant the criterion continuous concentration CCCs (or aquatic life criteria), and in combination as a sum, the cumulative criterion units (CCUs). Using CCUs recognizes that toxicity is additive and you cannot protect aquatic life only meeting the limits of individual metals since they act together to produce toxicity (as demonstrated in the study cited). At CCU=1 is the limit beyond which sublethal effects produce impaired function and that's exactly what we found in those field studies, so is the best predictor for combined metals toxicity from mines. So, what we need are better data on all the metal constituents as their exact values (and ranges) and how variable these concentrations might be in different shaft compartments.

According to calculations of CCUs, the existing shaft water is toxic (CCU > 5), and after treatment also appears to be toxic but cannot be determined when the screening limits show only "<300" for Fe for example, which at that level alone would exceed CCU=1. So the analysis is inadequate in providing data that is quantitative and sensitive enough in resolution of concentrations of metals, and does not show the variations in the distribution of constituents. As a separate issue the concentration of total ionic solutes (conductivity) is reported at ~400 µS in the existing shaft and no values given for after treatment. This often cannot be controlled by treatment and represents what may be a very high value compared to the background natural level of specific conductance in S. Fk. Wolf Creek which is typically in the range of 50-100 µS (Table 3-8 of Appendix K2). Conductivity of 400 is quite high for Sierra streams and studies have shown it is another factor that can limit BMIs.

**Action Needed**
Basically the data shown is not sensitive enough and does not even report real numbers for many of the toxic metals. The RWQCB standards for Tier 3 hard rock mine effluent is also negligent in not including many of the toxic constituents from hard rock mines. So we need that data to calculate the CCUs after treatment, and need to validate the method used to determine what those concentrations would be for the treatment proposed. Bottom-line the water quality data needs improvement in detection levels and thorough sampling. Data must also include sulfate concentrations (SO4), acid generating capacity, and acid neutralizing capacity. Seepage from existing or new tailings should be included along with chemical analysis of samples mine shaft compartment waters. Chronic toxicity tests with native organisms should be included with these analyses (not acute tests).

**Background**
There is a long history of the use of aquatic invertebrate communities to assess the extent of damages to resources produced by mine drainage, and recovery of streams undergoing restoration.

Dear Supervisors,
My name is David Kimmel, I live on Lake Forest Drive in Lake Wildwood in District 4.
Thank you for considering my comments.
I am convinced this mine project would be a very bad decision for our county because:
1) Mines are known for being destructive to the surrounding environment. This one would be close to the center of Grass Valley not in a far off isolated location. Why risk it?
2) Rise Gold has never opened a mine and has never made a profit. Their current CEO's prior venture polluted the local environment, went bankrupt and left the local community with a big cleanup bill. Does it make any sense to place our county's welfare in such a person's hands? Why risk it?
3) Do you really know the economic impact in terms of discouraging tourism, making our county less attractive to high tech businesses, damaging wells, and decreasing property values? The current environmental review process doesn't include any analysis or study of those economic impacts. Please follow due diligence and include an economic analysis in the Draft Environmental Impact Report (DEIR).
Don't allow our community to be harmed!
Thank you.
David Kimmel

Matt Kelley:

As a long-time resident of Nevada County, I have recently learned more about historical and modern-day mining than I ever cared to know. While the advertised benefits for reopening the Idaho-Maryland mine, particularly well-paying jobs, have a potential benefit for the area, I am more concerned about the quality of life in the heavily populated areas that will be impacted for years to come.

**Ind 166-1**

The results of de-watering the mine shafts may cause consequential and unwanted results; the heavy trucks with their many daily trips through essential arteries will be a major nuisance with the resulting noise and pollution; the disposal of the water from the mining operations could cause damage to existing streams and embankments;...there are so many negatives associated with the mine reopening that I fail to see how anyone could approve an IER with so many unresolved issues.

Please save the citizens of Nevada County from having to face this ordeal.

David Morris

I am gold miner I am third Generation Gold miner in my family. I Grew up in Sierra County Alleghany, CA. I have over 50 years plus under my Belt in mining. We need mining it will put more people to work. I am in favor For the Idaho-maryland mine To start up we are short on minerals we need TO mine our own minerals. Don't Get minerals Somewhere Else. Every day in Life we use some type miners, Here just a few Cell Phones Cars Computers Lites medicine This just few things what minerals play Big part make Everything in Life To make it run.

**Ind 168-1**

I'm a land owner and resident of Nevada County. While the proposed re-opening of the Idaho Maryland Mine would not directly affect me or my property, I'm still opposed to it. I have read quite a bit about the positives and negatives of this endeavor and I think the cheeks in the minus column dwarf the ones in the plus column. Restarting a mining operation that shut down over 70 years ago when the immediate nearby population has grown by leaps and bounds not a wise choice in my book.

I understand the need to provide good paying jobs in order to bolster our county's economy but at what expense will these jobs cost in clean air and water as well as the health and well being of the population in general? Also, how many current local residents benefit from these jobs?

**Ind 168-2**

The track record for Rise Gold is pretty sketchy at best and the mining industry in general is not exactly known for cleaning up the damage they have done to the environment. Rise has undertaken a large public relations campaign to try and convince Nevada County residents, yourself and the other members of the Board of Supervisors with in my opinion are some very dubious claims. I've looked over the draft Environmental Impact Report for the Conditional Use Permit and Reclamation Plan for reopening the mine and it left a lot of questions in my mind.

**Ind 168-3**

I feel that our county would be much better served by welcoming businesses like farming, ranching, tourism and high tech that embrace other aspects of our heritage. I know mining is a big part of the history in our county but frankly, after studying quite a bit of this history and the impact it still has on our environment even after the last mine ceased operation 65 years ago.

**Individual Letter 170**

**From:** David Unterman <dance7@gmail.com>
**Sent:** Saturday, April 2, 2022 6:01 PM
**To:** Matt Kelley; Clerk of Board
**Subject:** DEIR alternatives section is unrealistic

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Mr. Kelley and Supervisors,

**Ind 170-1** I'm a Nevada County resident since 1979, with experience in property development and environmental review. I raised a family here and have owned homes.

The draft EIR's Chapter 6, on alternatives to developing the mine, makes speculative, unsupported statements about alternative development. This broad-brush treatment is not the final word on other uses for the property.

**Ind 170-2** Pages 6-11 to 6-13 summarize the maximum buildout of the property as industrial uses, office park, and service business light manufacturing. Then it notes downsides to these uses. On page 6-13 it states, "auto dismantling yards and milling and planing facilities would potentially create noise impacts similar to or greater than the proposed project."

**Ind 170-3** Likewise, the DEIR notes that other uses permitted in the current M1-SP zoning would have their own impacts on noise, aesthetics, traffic and air quality. Smaller projects wouldn't get this level of environmental review, so they could cumulatively have worse impacts. However, the maximum development proposed by the DEIR is totally speculative.

**Ind 170-4** These alleged bad neighbors are not real. Heavy equipment repair businesses are not eager to locate in Nevada County. Lumbering is on the decline.

**Ind 170-5** The draft mentions office uses and fitness centers. There are already vacant retail spaces being converted for fitness centers and offices.

**Ind 170-6** The DEIR suggests that large warehouse and distribution centers would locate on the site. But the site wouldn't be suitable. In reality, this county gave birth to Mountain Peoples Warehouse, but it later moved away, since Placer County has much easier access to both highways and rail lines.

In summary, the Alternatives Analysis is flawed. It invents other uses that would never actually occur, then it compares impacts from those uses to the impacts from the mine. That's a meaningless comparison.

**Ind 170-7** The draft points out that gradual, piecemeal development at the current M1SP zoning would have impacts. That's correct, but zoning could change in the future. The County has ways to regulate alternative development. Just zoning the property for industry doesn't mean the industry will locate here.

## INDIVIDUAL LETTER 170: DAVID UNTERMAN

### Response to Comment Ind 170-1

The comment is an introductory statement and does not address the adequacy of the DEIR.

### Response to Comment Ind 170-2

The comment expresses a general opinion that the discussions in Chapter 6, Alternatives Analysis, of the DEIR are speculative, and cites pages 6-11 through 6-13 of the DEIR. As detailed on page 6-11 under the No Project (Alternative Use) heading, in the event that the proposed project is not developed, a Project Proponent could choose to develop the Brunswick Industrial Site consistent with the existing zoning. Development of the Brunswick Industrial Site with industrial uses, consistent with the current M1-SP zoning, could reasonably be expected to result in above-ground uses that are more intensive in certain respects than the proposed project. Page 6-13 of the DEIR provides the following:

> As shown in the above list of permitted uses for the existing property zoning, intense uses such as Auto Dismantling Yards, Wholesaling and Distribution Facilities are already permitted without the need for a discretionary County permit. As such, under existing zoning, uses are allowed by right that potentially could cause substantial noise, traffic, aesthetic and air quality impacts without the need for further CEQA review or mitigation. Notably, the permitted use such as Distribution Facilities and Office/Professional would likely have substantial traffic impacts. The permitted uses including Auto Dismantling Yards and Milling and Planing Facilities would potentially create noise impacts similar or greater to the proposed project.

With respect to Auto Dismantling Yards and Milling and Planing Facilities, the comment does not provide specific examples of how the above uses would not potentially create noise impacts similar or greater to the proposed project. It should be noted that the operative phrase in the above passage is “potentially create.” Absent an equal-level analysis of a hypothetical use facilitated by the current M1-SP zoning, which is not required under CEQA, “potentially create” is the accurate way of describing potential impacts that could result from uses facilitated by the current zoning. As such, the discussions and analyses in the DEIR are adequate.

Furthermore, CEQA Guidelines Section 15126.6(a) requires that an EIR describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. Consistent with CEQA Guidelines Section 15126.6(a), the alternatives evaluated in the DEIR serve to foster informed decision-making and public participation and provide enough information to enable the County to make a reasonably informed judgement about the relative merits of the alternatives.

The CEQA Guidelines do not require an equal-level analysis of alternatives, relative to the assessment of the proposed project. The level of specificity at which the DEIR analyzes project alternatives is sufficient to provide adequate comparison of potential impacts that would occur from implementation of each alternative, relative to those identified for the proposed project. Thus, the DEIR provides enough information to enable the County to make a reasonably informed judgement about the relative merits of the alternatives. To the extent that the Alternatives Analysis chapter of the DEIR provided more specific information for each evaluated alternative, such as

analysis potential noise levels or modeling of GHG emissions, such data would not change the conclusions of the Alternatives Analysis chapter.

## Response to Comment Ind 170-3

Pursuant to CEQA Guidelines Section 15126.6(e)(3), an analysis of a "no project" alternative must discuss what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services. As detailed on page 6-11, the DEIR discusses development that could be facilitated by the current M1-SP zoning for the Brunswick Industrial Site in the event that the proposed project is not approved, which is consistent with the requirements set forth by CEQA Guidelines Section 15126.6(e)(3). Therefore, the discussions and analyses in the DEIR are adequate.

Please see Response to Comment Ind 170-2.

## Response to Comment Ind 170-4

Please see Responses to Comments Ind 170-2 and 170-3.

## Response to Comment Ind 170-5

As discussed, the DEIR discusses development that could be facilitated by the current M1-SP zoning for the Brunswick Industrial Site in the event that the proposed project is not approved, which is consistent with the requirements set forth by CEQA Guidelines Section 15126.6(e)(3). Please see Responses to Comments Ind 170-2 and 170-3.

**Ind 171-1**

Dear Board members, my name is David Ward. I love living in Nevada City! This mine proposal has me a little upset. I know the area where it is proposed and I can not imagine more traffic in that area or on our local hwys. With the new housing that is being built in the Loma Rica Basin makes me wonder why a project of this size is even being thought about. Any addition of large trucks driving on hwy 174 or hwy 20 would make those hwys very dangerous and bog down already congested roads. I appreciate you listening and hearing my opposition to this project. I moved here to be in the country and not near an environmental liability that this most development will certainly be.
Best regards,
David

**Individual Letter 173**

**From:** Dawna Johnson <bmergirl61@gmail.com>
**Sent:** Monday, April 4, 2022 4:46 PM
**To:** Idaho MMEIR
**Subject:** Comment on the DEIR for the reopening of the Idaho-Maryland Mine

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To: Members of the Nevada County Planning Commission, Nevada County Board of Supervisors, and Nevada County Planning Department Staff

To All Concerned:

**Ind 173-1** I live in Grass Valley and have for over 11 years. I have ties to this community back to the 1970's, which led me to eventually move here.

This application to re open the Idaho-Maryland Mine actually surprised me, given the growth that has happened, especially above and around the applicable sites, and the hundreds of new residences that have been approved and/or are in various stages of construction. Then there was the recent issues from the Siskon Mine on the San Juan Ridge .. why would we even entertain this?

**Ind 173-2** My background is nearly 4 decades in construction, CFO and owner of a general contracting corporation to be specific, and mortgage lending, underwriting and processing. I have varying levels of experience in building codes, permitting, zoning, ordinances, bonding, set backs, mineral rights, easements, etc. I'm no scientist, engineer, hydrologist, etc but I am capable of seeing a document ( subject DEIR ) that appears to be woefully inadequate and lacking in many areas. First thought was, where is the mention of the Centennial site? It's my understanding, this document assumes that work has been done, but it has not, and will have a myriad of impacts of its own. That must be addressed since it was being considered as a super fund site.

**Ind 173-3** As to my real estate experience, I am especially concerned about property values. As it is for many of us, our home is our largest asset. I trust the disclosure to potential new home owners is adequate, especially on the new construction contracts that are very nearby the subject site.

**Ind 173-4** There are so many areas with deficiencies that many other people brought up at the March 24, 2022 meeting, which I attended, and my hope is that you will address every one of them, as you said you would. My concerns are all of the many negative impacts across the board from air to water ( specifically wells, especially during a sever drought and here in high risk fire area ), fire impact and evacuation, noise, road degradation, and the local tourist economy ( which I hope will be adequately addressed in the Economic Impact Report forthcoming ) Even with mitigation, much of it remains significant and unavoidable, leaving a degraded Quality Of Life for every single resident of this county, current and future, and anyone who works or visits here.

1

**Ind 173-5**

From my experience with bonding, and the history of the applicant, there is no amount that would be enough, if he can even get one, having forfeited in the past. Regarding the proposed well mitigation alone, no cost should fall upon current or future homeowners affected. I witnessed the NID meeting and heard the General Managers statement. They have concerns. The approval given was conditional, most notably the statement that they would re visit the subject if there are any changes to the DEIR.

**Ind 173-6**

I am of the opinion that this report needs a complete overhaul or be completely redone. I recommend NOT approving this report to the Board of Supervisors.

Sincerely,
Dawna Johnson

Please see Master Response 2.

### Response to Comment Ind 173-4
While the DEIR concluded that significant and unavoidable impacts would occur as a result of the proposed project, according to CEQA Guidelines Section 15093, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." As such, the County would be required to adopt a Statement of Overriding Considerations to address the aforementioned significant and unavoidable impacts. Please see also Master Response1.

### Response to Comment Ind 173-5
Please see Master Response 3.

### Response to Comment Ind 173-6
The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

Hello,

Writing as a Nevada County resident and a senior manager for the State of California.

If this project were to come across my desk for unbiased comment in the form of a Legislative Questionnaire, my comments would be as such:

Grid has been proven unable to support current consumption; additional consumption unacceptable
Environmental impact unacceptable
Impact to quality of life unacceptable
Impact to local businesses unacceptable
Impact to local wildlife unacceptable

**Ind 174-1** This sends the state backwards in terms of environmental impact and negatively impacts the economy of Grass Valley, as a boutique community and tourist destination built on the back of its natural beauty and the engagement the area offers with the environment.

This is no longer a mining town. Residents who have built the community and positively benefited the economy of the county over the past several decades did not sign up for this. It is the responsibility of local and state government - you and I - to advocate for our constituents and to be the voice of the people.

Per the draft EIR, this is a business endeavor that risks harm to the community of Grass Valley in multiple ways and returns little to nothing to the community. Ask yourself - if you or your parents or your child were looking to purchase a home or business directly adjacent to this project - would this project improve or devalue that property?

Your job is to vote on behalf of the community who gave you the opportunity and privilege to speak on their behalf. Your job is to vote no.

To the Planning Commission of Nevada County

**Ind 175-1** There are many issues that I am concerned with on this project but the main issue for me is air quality. Greenhouse gas emissions.....the report excluded elements that would put
the project over an arbitrary threshold limit but recent climate change goals say the threshold should be net zero.
Remember we all breath the same air.
Please do not recommend the reopening of the Idaho Maryland Mine.
Thank you
Deb Armanino LeBlanc

NEVADA COUNTY
BOARD OF SUPERVISORS

**March 20, 2022**

**Debbie Lindh**
**642 Partridge Rd.**
**Grass Valley, Ca 95945**

**To: Nevada County Board of Supervisors**
**950 Maidu Ave.**
**Nevada City, Ca 95959**

**Dear Board of Supervisors,**

**Ind 176-1**

**I am writing you out of concern regarding the Rise Gold Corporation's attempt to reopen the Idaho-Maryland Mine. My family and I are absolutely against this proposal. Please take into consideration this company's history at other sites that they have mined. They have left those sites in horrible condition and are in fact being sued by previous victims of Rise Gold's promises. I have always found that words are meaningless for determining what a person and/or entity is like, it is actions that tell you the truth. The actions of this company have left disasters in their wake. This is not a trustworthy company.**

**I also am genuinely concerned about our property values and the quality of our water. We are and continue to be in a drought. We do not need a business that will rely on water usage. Please care about your community and do not support this proposed project. Minning is our history, please leave it there, in history!**

**Sincerely,**

Debbie Lindh

Nevada County Planner Matt Kelly

**Ind 177-1** Below are my humble thoughts of the reopening of the Idaho mine.

If you consider the recent digging at Chernobyl in Ukraine and the illness caused to soldiers in a "thought to be safe area" ,you have to consider the toxins known and unknown that would be dug up from the Idaho mine. Is gold worth the health of the citizens of Nevada county?

**Ind 177-2** If you look around Nevada County and see the scars left from mining .You have to consider the permanent damage that will be left 5miles from town and beyond the county's borders. Are 300 possible jobs worth destroying beautiful Nevada County forever?

**Ind 177-3** Considering that we are in a drought, is taking giant volumes of precious water destroying wells and creeks ,uprooting the habitat of plants and animals worth gold? This is beyond reasoning.

**Ind 177-4** Noise and traffic pollution will destroy the quality of life and discourage tourism.

**Ind 177-5** All of this will decrease the value of property ,and decrease property taxes to the county.

**Ind 177-6** Rise gold company has a long history of destroying the environment and not cleaning it up.

Leave the Idaho mine as history . Encourage modern businesses to come to Nevada county.

**Ind 177-7** Please save our beautiful Nevada County and do not allow this mine to be reopened.
Thank-you,
Debbie McKitrick
14934 Greenhorn rd.

**Ind 178-1**

My backyard is literally across the street from the mine. 12655 Gem Ln, Grass Valley, CA 95945

I am opposed to the opening of the mine due to noise, air and water quality issues. I have lived in my home over 20 years and will have to sell if the mine opens. Already the noise at Brunswick & Greenhorn intersection is obnoxious.

With proposed 24 hour operation of the mine my quality of life will be greatly reduced. If I have to sell my property, it will be at a reduced price, due to this mining operation.

I implore you to vote NO on allowing this mining operation to happen.

I propose that Nevada County buy this property, and make a park, storage facility, RV park for temporary travelers. Something can be accomplished with this property other then the mining for gold!

Vote NO!

THANK YOU

Deborah Churchill
12655 Gem Ln, Grass Valley, CA 95945
530-961-2825

## INDIVIDUAL LETTER 178: DEBBIE CHURCHILL

### Response to Comment Ind 178-1

Please see Master Response 1.

**Individual Letter 179**

**From:** Deborah Curtis <knit.pony@gmail.com>
**Sent:** Saturday, April 2, 2022 5:47 PM
**To:** Idaho MMEIR
**Subject:** Comment on Mine DEIR

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

**Ind 179-1**

I am a resident of Grass Valley. I moved to Nevada County 20 years ago to raise my children close to nature.

I am very concerned about the mine project. I feel the projections in the Draft EIR are poorly calculated. I believe more water will be required to "wet down" the toxic pilings each day than what is presented in the DEIR. Questions have not been answered. What happens during drought? What if we are all evacuated for a wildfire? Will the pilings still get watered down? I am concerned that toxic particles will get into our air in Grass Valley and that it will no longer be a desirable place to live. I own my condo in downtown Grass Valley, close to Brunswick, and I am concerned that its value will plummet.

Please ask for a more thorough EIR and answers to our questions.
Deborah Curtis
196 Rockwood Drive,
Grass Valley CA

## INDIVIDUAL LETTER 179: DEBORAH CURTIS

### Response to Comment Ind 179-1

The comment expresses a general opinion that more water would be required to wet down toxic pilings, but does not provide specific examples that would allow for a detailed response. For further discussion of water supply during drought conditions, see Chapter 4.8, Hydrology and Water Quality, as well as Chapter 4.11, Public Services and Utilities, of the DEIR. In addition, impacts related to Wildfire are addressed in Chapter 4.13 of the DEIR. Furthermore, as discussed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR, the proposed project would be required to prepare an Asbestos Dust Mitigation Plan to ensure underground mining activities and use of project-generated fill would not result in the emission of asbestos containing dust.

**Individual Letter 180**

March 30, 2022

RECEIVED
APR 01 2022
NEVADA COUNTY
PLANNING DEPARTMENT

Dear Mr. Matt Kelley and
Members of the Planning Commission,

Some elements of history are highly valued and worth investments. Items like custom-made furniture or heirloom seeds; even a hand-written letter.

Other historic experiences are never never worth repeating: massacring native Americans, clearcutting forests, and polluting our planet.

**Ind 180-1**

Do NOT reopen the Idaho-Maryland Mine. We the people BEG you to choose health, safety, water and the wellness of our Planet. Our Woods beg you. Our local horses with wells beg you. Our health officials protecting our air beg you.

Choose the people over any potential profit or gain. Please listen to the voices of this community and say no to those wanting to further pillage the planet.

Respectfully yours,
Deborah Pinto

(Dist 1) (Dist 2) (Dist 3) (Dist 4)

(Dist 5)

CC: Cea NC. Org
To Whom it may concern:

**Ind 181-1**

We Oppose the RE-OPENING of the IDAHO MARYLAND MINE.

We have been residents of Grass Valley, living off Greenhorn Rd for the past 40 years. We vehemently oppose the proposal to open the Idaho Maryland Mine, that is being spearheaded by Ben Mossman of Rise Gold Co.

We believe that the re-opening of this mine, if granted would have devastating and catastrophic effects on this community.

**Ind 181-2**

The environmental affects it would have on our water, atmosphere and wildlife, through the emissions of chemicals in the mining process, would result in the

contamination of ground water, surface water and soil. The atmosphere will have significant detrimentals effects on humans, animals and vegetation.

**Ind 181-3** Should the mine be allowed to re open the endangered species cohabitating in this area, in particular, the yellow leg frog and the pacific ficher will become extinct .

**Ind 181-4** Statistically mining kills and injures more workers than any industry, nearly 15,000 per year.

**Ind 181-5** There are estimations of 47,000 abandon mines spread throughout every county in California, leaving the land decimated, contaminated, and abandoned.

**Ind 181-6** Mining is currently responsible for 4-7% of Green house gases. Consider the impact of radioactive gases, such as the radon that is

emitted from the sludge in a tailing pond.
Other concerns , would be the possibility of sink holes and earthquakes.

"Mining accounts for the high number of human induced earthquakes worldwide. The removal of the earth can cause instability, leading to sudden collapses that trigger earthquakes".National Geographic 2017.

**Ind 181-7** Furthermore , tectonic earthquakes can also collapse mine openings and tunnels with weak infrastructure.

Mining would impact and lower the water table causing the overlying rock and soil to collapse.
As is well known, sink holes are appearing more frequently each winter in Nevada County. Brunswick Rd, adjacent to the mine site, had a massive sink hole several years ago. There have been several others as well.

How is it that , Mr. Ben Mossman, CEO of Rise Gold Co. was able to acquire permits to potentially re-open this mining project, with.

**Ind 181-8** NO investigation of his previous business history?

Records show that he abandoned the Hechate Strait Mining project on Bank Island in Canada and then filed Bankruptcy .

He has many violations and fines according to the Canadian Fisheries Environmental Management and Water Acts.

The investigation of that project shows again ,that he violated the environmental management act by dumping mine debris in the woods at the site. He was also sited for failure to report spills that affected the safety of fish and food.

Consequently , Ben Mossman is facing charges for damages caused. Mr Mossman has already shown his disdain and disregard for this community by not complying with the Timber Harvest Plans rules and regulations.

Mr Mossman also ignored riparian set back requirements for streams in Nevada County at his East Bennett project site.

**Ind 181-9** Property values in the vicinity of East Bennett, Brunswick, Idaho Maryland and Greenhorn will decrease drastically.

**Ind 181-10** If we should have a fire disaster such as the devastating fire that happened in Paradise Ca, a sufficient water supply will not be available .

**Ind 181-11** DRAINS OUR WATER. "Water is one of the most precious resources we have, but Rise Gold plans pump out 3.6 million everyday for 6 months and another 1.2 for up to 80 years - flooding creeks, destroying habit, and putting 300 plus private wells at risk." CEAF

**Ind 181-12** Traffic congestion , noise pollution and damage to roads (that will be continuous for 24 hours a day, 7 days a week, for a projected 80 years). Are crucial issues as well.

**Ind 181-13** This proposal with all the toxic chemicals involved, the explosive materials being trucked shipped and stored, is simply an accident waiting to happen.

Rise Gold estimates 70 jobs will be provided for local residents.

**Ind 181-14** The Gold profits leave this community , but the decimated quality of life will remain.

This community will gain nothing in return for the environmental destruction it will be left with.

This horrendous plan of reopening this mine with all the detrimental damage it will cause is Unthinkable and Unacceptable .

Please STOP the CARNAGE that the proposed re-opening of this mine will bring to this community.

Thank you for your attention to this very important matter. Deborah Shriver

Maureen Miranda
Email: mozophoto1@yahoo.com

## INDIVIDUAL LETTER 181: DEBORAH SHRIVER AND MAUREEN MIRANDA

### Response to Comment Ind 181-1
The commenter believes the project would have adverse impacts to the community. The commenter's opposition to the project is noted for the decisionmakers. Please see Master Response 1 – Non-EIR/Administrative Issues.

### Response to Comment Ind 181-2
The commenter lists a variety of environmental concerns but does not provide any specific comments. Please see Master Response 1.

### Response to Comment Ind 181-3
The commenter asserts that project implementation would result in endangered species in the project area becoming extinct, including the foothill yellow-legged frog and the pacific fisher. Potential impacts to special status plant and wildlife species are evaluated in DEIR Chapter 4.4 (Biological Resources) and are each mitigated to a less than significant level. With regards to foothill yellow-legged frog, the commenter is referred to Master Response 38 - Foothill Yellow-Legged Frog and California Red-Legged Frog. The pacific fisher does not inhabit the project area.

### Response to Comment Ind 181-4
The commenter states that mining accidents cause 15,000 injuries or deaths per year. The comment is noted for the decisionmakers but does not address a specific environmental concern or the adequacy of the DEIR.

### Response to Comment Ind 181-5
The commenter states that California has approximately 47,000 abandoned mines, leaving land decimated and contaminated. The comment is noted for the decisionmakers but does not address a specific environmental concern or the adequacy of the DEIR.

### Response to Comment Ind 181-6
The commenter states that project will emit radioactive gases, such as radon, from the sludge in a tailings pond. The project does not include a tailings pond. The project's potential to emit greenhouse gas emissions is addressed in DEIR Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy). The impacts were found to be less than significant after mitigation.

### Response to Comment Ind 181-7
The commenter states that the project would result in ground collapse or sinkholes. Ground collapse is discussed in Chapter 4.6 (Geology, Soils and Mineral Resources) beginning on DEIR page 4.6-44. As described in this section, "sink holes" occur within limestone environments and are caused by the dissolution of the stone itself creating a cave just below the ground surface. This type of ground collapse would not be expected in the project area which is granitic. Instead, mine-related collapse in the project area could occur where a vein outcrops on the surface and around mineshafts and other near surface mining features. A Geotechnical Assessment of Near Surface Mine Features conducted for the project recommended closure of several near surface features prior to development. Mitigation Measure 4.6-3(c) requires closure of these features under the direction of licensed geotechnical engineer and would reduce the potential for collapse

to a less than significant level. The commenter is also referred to Master Response 29 - Near Surface Workings.

## Response to Comment Ind 181-8

This comment concerns the reputation and prior mining projects of the Project Applicant. The comment is noted for the decisionmakers but does not address a specific environmental concern or the adequacy of the DEIR. The commenter is referred to Master Response 3 – Operator Responsibility.

## Response to Comment Ind 181-9

The commenter states that the project would have adverse impacts on property values. CEQA does not require the EIR to consider economic impacts such as decreased property values. The commenter is referred to Master Response 2 - Social and Economic Impacts.

## Response to Comment Ind 181-10

The commenter states that a sufficient water supply will not be available to fight a devastating fire if the project is implemented. The commenter provides no substantial evidence that the project will result in a lack of sufficient water supply for firefighting purposes. Water used for firefighting in the project area would be provided by Nevada Irrigation District which obtains its water supply from surface waters. The commenter is further referred to Master Response 6 - Wildfire Impacts.

## Response to Comment Ind 181-11

The commenter states that dewatering the mine would have a number of adverse impacts to the community. Project impacts related to drainage and potential flooding are addressed under Impact 4.8-3, beginning on DEIR page 4.8-69. Project impacts on wildlife habitat are addressed under Impact 4.4-2, beginning on DEIR page 4.4-68. Project impacts on groundwater levels and recharge are addressed under Impact 4.8-2, beginning on DEIR page 54. Please also see Master Response 15 – Adequacy of Groundwater Monitoring Wells, and Master Response 36 – Flows in South Fork Wolf Creek.

## Response to Comment Ind 181-12

The commenter states that the project will result in traffic and noise pollution but does not state how the DEIR is inadequate. Project impacts related to traffic congestion and noise pollution are addressed in DEIR Chapter 4.12 (Transportation) and Chapter 4.10 (Noise and Vibration), respectively. Mitigation Measure 4.12-6(a) requires the project's construction phase traffic control plan to include monitoring for roadbed damage and specify timing for completing needed repairs. Mitigation Measure 4.12-6(b) requires that prior to commencement of engineered fill hauling, the Project Applicant shall enter into separate road maintenance agreements with Nevada County and the City of Grass Valley to provide the project's fair share of funding for maintenance of roadways commensurate with the project's impact to pavement conditions on both Nevada County and Grass Valley roadways, including Brunswick Road between E. Bennett Road and SR 49, and E. Bennett Road between project driveway and Brunswick Road.

## Response to Comment Ind 181-13

The commenter states that the project is an accident waiting to happen because of the project's use of "explosive materials" and "toxic chemicals", but the commenter does not state why the DEIR is inadequate with regard to analyzing potential hazards. Further, the commenter's reference to "toxic chemicals" is unclear. For example, it is noted on page 3-25 of Chapter 3 that mercury or cyanide would not be used in gold mineral processing. Potential hazards associated

with the use, transport, and storage of hazardous materials and explosives during project operation are addressed in detail in Chapter 4.7 (Hazards and Hazardous Materials).

## Response to Comment Ind 181-14

The commenter states that the project's adverse impacts outweigh its benefits. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Comment 2 - Social and Economic Impacts.

**Individual Letter 182**

Feb 2,2022

Governor Newsom,

We are writing about your California Comeback Plan, AB1346.

**Ind 182-1** We have attempted to call your attention to the proposed re-opening of the Idaho Maryland Mine, in Grass Valley, Ca. 60 miles northeast of Sacramento.

This project of the proposed re-opening of the mine will have much more of a devastating effect on California's air pollution & water resources than gas powered tools & vehicles will ever have.

**Ind 182-2** This mine if allowed to reopen will use on a daily basis, 1200 gallons of fuel per day and 120 METRIC TONS of CO2 will be released into the atmosphere.

**Ind 182-3** This is just the tip of the iceberg, as to the pollutants this mine has the potential capability of releasing into the air & water in this community.

**Ind 182-4** As you are aware Governor Newsom the drought situation is wreaking havoc on the Sierras and the Foothill Forest. However, Ben Mossman CEO of Rise Gold Co, Formally ( Yellow Giant gold mine south of Prince Rupert on Banks Island), estimate the use of,

1 MILLION GALLONS of water per day, effecting our wells. What with the extreme risks of wildfires in this area this leaves NO water supply to effectively protect this community.

Governor Newsom, we need your HELP to make the banning of this mine a priority. We need to be a part of this $ 15 Billion Dollar climate package investment plan.
We firmly believe that there will be Catastrophic & Devastating lasting effects on this community.

**Ind 182-5** You and your constituents, listed below , who also supported your AB 1346 Bill neglected to respond to our letter dated (Oct 16, 2021).

CC: Assembly Member: Jim Wood (AB-9)

## INDIVIDUAL LETTER 182: DEBORAH SHRIVER AND MAUREEN MIRANDA

### Response to Comment Ind 182-1
This letter is addressed to Governor Newsom and opposes the project. In the interest of CEQA's public participation goals, the County construes this letter as a comment on the project. The commenter's opposition to the project is noted for the decisionmakers. Please see Master Response 1 – Non-EIR/Administrative Issues.

### Response to Comment Ind 182-2
The commenter is concerned about the potential air quality impacts of the project but does not identify any inadequacies of the DEIR. The commenter is referred to DEIR Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy).

### Response to Comment Ind 182-3
The commenter is concerned about the project's potential hydrological impacts to private wells but does not identify any inadequacies of the DEIR. The commenter is referred to DEIR Chapter 4.8 (Hydrology and Water Quality).

### Response to Comment Ind 182-4
The commenter is concerned about the project's potential hydrological impacts to private wells in light of the drought, but does not identify any inadequacies of the DEIR. The commenter is referred to DEIR Chapter 4.8 (Hydrology and Water Quality) and Master Response 16 – Drought and Climate Change. The commenter appears to reference the Project Applicant's reputation. The commenter is referred to Master Response 3 – Operator Responsibility.

### Response to Comment Ind 182-5
The commenter's opposition to the project is noted for the decisionmakers.

**Individual Letter 183**

February 5,2022,

Members of the Senate and Assembly,

Lena Gonzalez (SB40), Nancy Skinner (SB170), Bill Dodd (SB109),
Robert Hertzberg (SB273), Josh Becker (SB596), Henry Stern (SB423).

The information contained in the emails in regards to your
California Comeback Plan AB 1346.

The re-opening of the Idaho Maryland Mine proposal should be included
as a PRIORITY .

**Ind 183-1**

It encompasses all of the issues you are to attempting to address.

~WATER QUALITY~

~WILDLIFE~

~GREENHOUSE GAS~

~ZERO EMISSIONS~

Grass Valley is one of the vulnerable communities you speak of protecting.
PLEASE , do not overlook this potential disaster.

Thank you
Deborah Shriver
Maureen Miranda mozophoto1@yahoo.com

## INDIVIDUAL LETTER 183: DEBORAH SHRIVER AND MAUREEN MIRANDA

### Response to Comment Ind 183-1

This comment is a copy of a letter addressed to members of the California Legislature referencing various proposed legislation and broadly listing potential environmental impacts of the project. In the interest of CEQA's public participation objectives, the County construes this letter as a comment on the project. The commenter references potential impacts to water quality, wildlife, GHG emissions, and reducing emissions. The commenter does not identify any inadequacies with the DEIR and is referred to the following DEIR Chapters: 4.8 (Hydrology and Water Quality), 4.4 (Wildlife), and 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy).

Should the mine be allowed to re open the endangered species cohabitating in this area, in particular, the yellow leg frog and the pacific ficher will become extinct .

Statistically mining kills and injures more workers than any industry, nearly 15,000 per year.

There are estimations of 47,000 abandon mines spread throughout every county in California, leaving the land decimated, contaminated, and abandoned.

Mining is currently responsible for 4-7% of Green house gases.
Consider the impact of radioactive gases, such as the radon that is emitted from the sludge in a tailing pond.

Other concerns , would be the possibility of sink holes and earthquakes.

"Mining accounts for the high number of human induced earthquakes worldwide. The removal of the earth can cause instability, leading to sudden collapses that trigger earthquakes".National Geographic 2017.

Furthermore , tectonic earthquakes can also collapse mine openings and tunnels with weak infrastructure.

Mining would impact and lower the water table causing the overlying rock and soil to collapse.
As is well known, sink holes are appearing more frequently each winter in Nevada County. Brunswick Rd, adjacent to the mine site, had a massive sink hole several years ago. There have been several others as well.

How is it that , Mr. Ben Mossman, CEO of Rise Gold Co. was able to acquire permits to potentially re-open this mining project, with.
NO investigation of his previous business history?

Records show that he abandoned the Hechate Strait Mining project on Bank Island in Canada and then filed Bankruptcy .
He has many violations and fines according to the Canadian Fisheries Environmental Management and Water Acts.

The investigation of that project shows again ,that he violated the environmental management act by dumping mine debris in the woods at the site. He was also sited for failure to report spills that affected the safety of fish and food.

Consequently , Ben Mossman is facing charges for damages caused. Mr Mossman has already shown his disdain and disregard for this community by not complying with the Timber Harvest Plans rules and regulations.
Mr Mossman also ignored riparian set back requirements for streams in Nevada County at his East Bennett project site.

Property values in the vicinity of East Bennett, Brunswick, Idaho Maryland and Greenhorn will decrease drastically.
If we should have a fire disaster such as the devastating fire that happened in Paradise Ca, a sufficient water supply will not be available .

DRAINS OUR WATER. "Water is one of the most precious resources we have, but Rise Gold plans pump out 3.6 million everyday for 6 months and another 1.2 for up to 80 years - flooding creeks, destroying habit, and putting 300 plus private wells at risk." CEAF

Traffic congestion , noise pollution and damage to roads (that will be continuous for 24 hours a day, 7 days a week, for a projected 80 years). Are crucial issues as well.

This proposal with all the toxic chemicals involved, the explosive materials being trucked shipped and stored, is simply an accident waiting to happen.

Rise Gold estimates 70 jobs will be provided for local residents.

The Gold profits leave this community , but the decimated quality of life will remain.

This community will gain nothing in return for the environmental destruction it will be left with.

This horrendous plan of reopening this mine with all the detrimental damage it will cause is Unthinkable and Unacceptable .

Please STOP the CARNAGE that the proposed re-opening of this mine will bring to this community.

Thank you for your attention to this very important matter.

Deborah Shriver

## INDIVIDUAL LETTER 184: DEBORAH SHRIVER AND MAUREEN MIRANDA

### Response to Comment Ind 184-1

This letter is identical to Individual Comment Letter 181. The commenter is referred to Responses to Comments Ind 181-1 through Ind 181-14.

**Individual Letter 185**

**From:** Deborah Van Stone
**To:** Idaho MMEIR
**Subject:** Mine
**Date:** Thursday, January 6, 2022 8:04:06 AM

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

**Ind 185-1**

Please cancel this mine. We in the community do not want it for numerous reasons. Environmental impact traffic on small roadways, overpopulation in our area. These are some of our main concerns.
There also will be little financial benefit for our community as you're not even a local or USA company.
Sincerely
Deborah Van Stone-Stapleton

## INDIVIDUAL LETTER 185: DEBORAH STONE-STAPLETON

### Response to Comment Ind 185-1

Please see Master Response 1.

**Individual Letter 186**

**From:** Debra Dworaczyk <debradworaczyk@gmail.com>
**Sent:** Monday, April 4, 2022 12:27 PM
**To:** Idaho MMEIR
**Subject:** No Mine

### Response to Comment Ind 186-1

Please see Master Response 1.

**Individual Letter 187**

RECEIVED
FEB 07 2022
NEVADA COUNTY
BOARD OF SUPERVISORS

EACH SUPERVISOR REC'D

February 11, 2022

Supervisors Susan Hoek, Chair, Heidi Hall, Ed Scofield, Dan Miller, Hardy Bullock
Nevada County Board of Supervisors
Eric Rood Administrative Center
950 Maidu Avenue, Suite 200
Nevada City, CA 95959

**Dist 1**

Dear Nevada County Supervisors:

We are strongly opposed to the Rise Gold Mine project based on decades as medical practitioners and researchers. The proposal from Rise Gold Mine, Inc. to reconstruct a large gold mining industry in Nevada County presents a serious public health risk.

**Ind 187-1**

**It is our professional opinion that the medical impacts on residents of the Grass Valley area will be unacceptable, resulting in public health and respiratory damage.**

Of the impacts analyzed, air pollution is most likely to physically harm residents. Asbestos alone has required huge national expenditures to remediate because it causes cancer.[i]

**Ind 187-2**

As with many impacts in the DEIR, it asserts that impacts can be mitigated resulting "in less-than-significant health effects". But "since *asbestos was found in lab samples* from the mine, APM-AQ-3 (Asbestos, Serpentinite, and Ultramafic Rock Management Plan (ASUR Plan[ii])) would be implemented and an Asbestos Dust Mitigation Plan would be required to limit potential exposure."

**Ind 187-3**

Acceptable levels of public health and safety rely on mitigation plans that consultants like Dudeck, a firm in Sacramento, prepare. In this most dangerous case, the mitigation of cancer-causing toxins such as asbestos and silica depend on containment (trapping, isolating and filtering contaminated air). It's not plausible to sufficiently trap the toxic particles *that are in the 1-5 micron size range* from surface processing and trucking (100 trips per day) serpentine tailings.[iii] The trucking alone is an unacceptable vulnerability: how could trucks carrying 20 tons of tailings down Brunswick and Whispering Pines Rd. be loaded and sealed for the trip and the dumping? And this is all within typical air movement distance from mine trucking and dumping sites to several medical facilities including our hospital. This is to say nothing of the diesel exhaust which now is planned for additional state-wide regulation.

**Ind 187-4**

Nevada County residents, particularly those in the vicinity of the mine, are becoming aware that their lungs and overall health are likely to be damaged by the continuous mining operations. Overall, the proposed Rise Gold Mine will be a source of not only obvious impacts for your constituents but also known specific health hazards like asbestos and excessive noise.

**In conclusion**, we predict that the respiratory damage from air borne toxins such as asbestos will have a significant health impact in our County. Air pollution alone is sufficient cause to reject the mine proposal, and it cannot be mitigated because airborne asbestos fibers are too small to be filtered by Rise Mine's proposed mitigations.

We urge you to not vote to approve the Rise Gold Mine. It would be the worst project to ever occur to our County in post-mining era times. Furthermore, the opposition is so large in numbers of voters and legal clout that it would be serious political folly – and a terrible legacy for your years of County service.

**Ind 187-5**

## INDIVIDUAL LETTER 187: DENIS AND BARBARA DREW

### Response to Comment Ind 187-1

The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

The commenter states that the health risk to the public from the project, including asbestos, is unacceptable but does not state how the DEIR is inadequate. The commenter is directed to Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy) of the DEIR. The analysis of the DEIR has concluded that the health risk to the public is less than significant after mitigation.

### Response to Comment Ind 187-2

The commenter is concerned about the potential for asbestos emissions. The DEIR analyzes impacts associated with asbestos and includes mitigation measures to reduce impacts to less than significant. (DEIR, Chapter 4.3.) The commenter is referred to Master Response 22 – Conservatism of Asbestos Assumptions. Mitigation Measure 4.3-2 of the DEIR requires the submission of an Asbestos Dust Mitigation Plan (ADMP) to the Northern Sierra Air Quality Management District (NSAQMD) for review and approval. The ADMP has minimum requirements as described in the mitigation measure. Additional measures, such as air monitoring if required by the NSAQMD, would be detailed in the ADMP. As discussed on page 4.3-61 of the DEIR, the applicant has prepared an Asbestos, Serpentinite, and Ultramafic Rock Management Plan (ASUR Plan), which is designed to exclude asbestos containing material, serpentinite, or ultramafic rock from the engineered fill produced as part of the project (see Appendix E.2). Additionally, the ASUR Plan is designed to minimize asbestos content in the engineered fill produced by the project and from rock mined and processed.

### Response to Comment Ind 187-3

The commenter states that the DEIR does not take into account the possible asbestos emissions when engineered fill is transported to the Centennial Industrial Site. Mitigation Measure 4.3-2 of the DEIR requires an Asbestos Dust Mitigation Plan which requires that trucks used for hauling material off site shall be maintained such that spillage cannot occur from holes or other openings. All loads to be hauled off site shall be adequately wetted to prevent visible dust from escaping during transportation and shall either be completely covered with tarps or have at least six inches of freeboard on the sides of the bed of the vehicle, with no excavated material extending above the edges of the vehicle bed at any point. The commenter is also referred to Response to Comment Ind 187-2, and Master Response 22 – Conservatism of Asbestos Assumptions.

The commenter is also concerned about diesel exhaust from project trucks. Diesel exhaust has been analyzed in the health risk assessment for the project. The commenter is referred to DEIR Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy).

### Response to Comment Ind 187-4

The commenter is concerned about potential asbestos-related health impacts to residents living near the project site. The commenter is referred to Response to Comments Ind 187-1 through 187-3. The commenter is also concerned about noise impacts generated by the project. Noise from mining operations and trucking has been analyzed in the DEIR and found to be less than significant after mitigation. The commenter is referred to DEIR Chapter 4.10 (Noise and Vibration).

## Response to Comment Ind 187-5

The commenter is concerned about potential asbestos-related health impacts generated by the project. The commenter is referred to Response to Comments 119-1, 119-2, and 119-3. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - (Non-EIR/Administrative Issues).

**Individual Letter 188**

**From:** Denise Bellas <dbellas@royalplywood.com>
**Sent:** Saturday, April 2, 2022 3:12 PM
**To:** Idaho MMEIR
**Subject:** Comments on the DEIR FOR IM MINE

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Mr. Kelley,

**Ind 188-1** Many of the community were not able to attend the March DEIR review, due to the event being held during working hours. Otherwise, I think you would have seen triple the attendance.

I would imagine that the County is under pressure to bring in more money for development, and fear of legal ramifications, for not allowing this to go thru. As I cannot imagine many other reasons the county would be considering this mine. The community does not want it in their City or County limits, for so many obvious reasons.

**Ind 188-2**

1. I would like to know if Rise Gold is going to clean up the existing toxic conditions prior to any further steps of mining being taken. Why should that not be a mandate?

**Ind 188-3**

2. This area would need to be re-zoned for mining. Who would get to approved that and on what basis? This area has grown, over many decades, in to a residential area primarily. Otherwise, maybe Rise Gold would be required to offer to purchase each of those homes at market value prior to mining. As once the mining starts those home values will drop significantly.

**Ind 188-4** It is difficult for me to understand why a County would not value the support the desires of their community. This is a step in the wrong direction. Have Mr. Mossman mine some area that is not in the middle of our town.

Denise Bellas
13797 Allison Ranch Road
Grass Valley, CA 95949

1

## INDIVIDUAL LETTER 188: DENISE BELLAS

### Response to Comment Ind 188-1
Please see Master Response 1.

### Response to Comment Ind 188-2
As discussed in Section 1.3, Approach to Centennial Industrial Site Baseline, of Chapter 1, Introduction, of the DEIR, separate CEQA review of a Remedial Action Plan (RAP) for the Centennial Industrial Site is being conducted with DTSC as the CEQA lead agency. DTSC released the CEQA document (Initial Study/Mitigated Negative Declaration [MND]) for the "Centennial M1 Property Clean-Up Project Remedial Action Plan" project, SCH# 2021070473) for public review on July 26, 2021. The IS/MND identifies mitigation measures with which Rise, as the property owner responsible for implementing the Centennial M1 Property Clean-Up Project Remedial Action Plan (Centennial Clean-Up Project) would need to comply, prior to and during remedial activities associated with the RAP, that would ensure that physical impacts to the environment are mitigated to a less-than-significant level. For further discussion of this separate remedial project see Master Response 4.

### Response to Comment Ind 188-3
Approval of the Rezone for the proposed project is a discretionary action subject to approval by the Nevada County Board of Supervisors. In regard to concerns related to property values decreasing, see Master Responses 1 and 2.

### Response to Comment Ind 188-4
The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

**Individual Letter 189**

**Ind 190-1**

Thank you for the opportunity to comment. Just briefly, the environmental impact alone appears to be far-reaching and possibly never-ending. This community cannot afford to exist under those terms. My specific additional concerns are: the use and impact of hazardous materials and water issues related to the actual mining operation; and potential impact on air quality, which is already an issue in this county.

**Ind 190-2**

Lastly, this company brings with it a checkered past, to say the least.

Thank you,
Denise Ilmanen

**Ind 191-1**

Why on earth would any logical person even consider allowing this mine when we already have so many environmental issues. Air pollution, arsenic in our water, fires, etc. Not to mention we are already in a drought, and our infrastructure is stressed. So does granting permission to a business which will tax that even further. make any sense whatsoever?

**Ind 191-2**

Can Rise Gold be trusted with such a deplorable history not to contribute to the problems of this fragile community? If they operate as they have in the past and are not able to protect our community with all the promises made they fold their business and leave us to clean up their mess. How will the EPA be able to contend with further destruction to our environment? There are already major toxic waterways just in this community alone, and the EPA has no budget to deal with existing issues. It seems that allowing this could very possibly be sending us in a critically wrong direction.

**Ind 191-3**

I have read a bit about what it will do to property values, but that does not address what it will do to already astronomical insurance costs, and then how that will affect real estate sales? Who would choose to live here, and then what does that do to our local economy?

If you allow this to move forward I believe it will be at the peril of all of us who call this home.

*Character can be judged by the way one treats those who can neither hurt you or help you.*

**Ind 192-1**

I oppose the reopening of the Idaho-Maryland Mine.

My family & I moved to Nevada County from the Bay Area more than 20 years ago. We have enjoyed a cleaner, quieter life here. We plan to continue to live in our home in Rough and Ready through our retirement years.

Any resumption of mining activity in the county can only serve to strain our inadequate infrastructure, and degrade the quality of life for all residents and visitors.

**To:** Idaho MMEIR
**Cc:** DEIRcomments@cea-nc.org; dianarunnels@yahoo.com
**Subject:** Idaho-Maryland Mine Project Concerns

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To Whom It May Concern,

I am pleased to have this opportunity to express my concerns about the Mine Project.

**Ind 193-1** There are so many concerning facets about the project relating to the flawed and inconclusive DEIR presented to our community. I will focus on the first that come to mind, but please know that all the topics represented thus far, by so many, including County and private professionals and consultants, are absolute concerns as to why this project looms as a disaster situation for our community.

**Ind 193-2** Hydrology is a priority concern, personally having experienced drilling a deeper well just a few years ago. This was a huge expense: the drilling operation itself; the subsequent need to purchase a more powerful well pump due to the deeper depth. There is no "aquifer mapping". We have a water shortage and we have been warned about ongoing drought conditions. None of us can feel comfortable with our wells continuing to support our needs. But! We can anticipate the absolute fact that the Mine Project will pump water at a high volume continually: this is part of the mining process. There is no way any testing that has been performed to date can be presented as evidence and justification for the assumed impact of the Mine Project. This is a fact.

**Ind 193-3** Furthermore, the pumped water that will be added to Wolf Creek...the hazardous materials, contaminated water...and other unknown hydrological impacts has unknown environmental impacts. Other parts of the hydrological studies presented are short-sighted. We do have the very visible Empire Mine "ponds", the mining influenced water (WIW) project that represents the contaminants that resulted from mining in our area. We should learn from this incredibly costly "fix".

**Ind 193-4** One cannot anticipate sinkholes once water is depleted. There are many examples of sinkholes in our gold country in general, knowing of the extensive mining, tunneling that occurred when mining was extensive. Sinkholes are dangerous and there have been more incidents within our drought years, without intentionally pumping more existing water from the ground.

**Ind 193-5** All the issues that are now being documented will impact properties in our community. We hear of new employment opportunities adding to the tax base in our county. But the costs of doing business (allowing the Rise Gold mining operation) will have immediate negative impact. If a mine is in operation, it will only be a short time until there will be economic impact: real estate sale dependent disclosures of potential mining impact; increased home insurance costs, living in an already high-risk fire area; real estate values will drop.

1

**Ind 193-6**

Rise Gold still faces litigation that looms as an example of how another mining project has been severely mismanaged. This fact in itself should be a glaring factor as to why our county should not approve another mining endeavor.

Regards,
Diana Runnels
13797 Sontag Hill Road
Grass Valley

## INDIVIDUAL LETTER 193: DIANA RUNNELS

### Response to Comment Ind 193-1
The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 193-2
The commenter is concerned about the project's impacts to private wells, especially in light of the drought, but does not state how the DEIR is inadequate with respect to hydrology impacts. The analysis in the DEIR concluded that impacts to domestic wells is less than significant after mitigation. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR, Master Responses 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 193-3
The commenter is concerned about the project's discharge of treated water to South Fork Wolf Creek but does not state how the DEIR is inadequate with respect to hydrology impacts. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) of the DEIR and Master Response 35 - Discharge to South Fork Wolf Creek.

### Response to Comment Ind 193-4
The commenter is concerned about ground collapse and sinkholes from the dewatering of the Idaho-Maryland Mine. The commenter is referred to Master Response 29 – Near Surface Workings.

### Response to Comment Ind 193-5
The commenter is concerned the project will negatively impact property values in the community. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 193-6
The commenter references the Project Applicant's former projects. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 3 - Operator Responsibility.

**Individual Letter 194**

No name/address

~~I support re-opening the Idaho-Maryland Mine~~

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

WE ARE COMPLETELY OPPOSED TO THE MINE Reopening. THANK YOU

**Individual Letter 195**

**From:** Diane Figuly <difiguly@gmail.com>
**Sent:** Sunday, April 3, 2022 10:18 PM
**To:** Idaho MMEIR
**Subject:** No Mine

**CAUTION**: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Matt Kelley,

I have lived in Grass Valley my whole life. I live on Cedar Ridge that adjoins the Brunswick site. I have lots of concerns about the mine's possible reopening. I want to focus on air quality because I use an inhaler. Pollutants and particles in the air affect my health and my family's. Rise's operation will add more than significant pollutants to the air.

The International Agency for Research on Cancer (IARC; part of the World Health Organization) classifies Diesel engine exhaust classified as "carcinogenic to humans". Rise expects Diesel trucks to make 100 trips a day to load and unload engineered fill once the mine is operating. Table 4.3-9 (pdf page 345) estimates 10,196,310 on road vehicle trip miles for the first 5 years of delivery to Centennial, 11,841,310 miles for the next 6 years and 291,450,740 for the remainder of the mines operation (70 years). Added to that is the construction phase pollutants and all the deliveries of other goods and services to the mine adding to the pollution.

**Ind 195-1**

The American Lung Association rates California air with an F grade for high ozone days. (https://www.lung.org/research/sota/city-rankings/states/california) The California Air Resources Board states that "DPM (Diesel Particulate Matter) is typically composed of carbon particles ("soot", also called black carbon, or BC) and numerous organic compounds, including over 40 known cancer-causing organic substances. Examples of these chemicals include polycyclic aromatic hydrocarbons, benzene, formaldehyde, acetaldehyde, acrolein, and 1,3-butadiene. Diesel exhaust also contains gaseous pollutants, including volatile organic compounds and oxides of nitrogen ($NO_x$). $NO_x$ emissions from diesel engines are important because they can undergo chemical reactions in the atmosphere leading to formation of PM2.5 and ozone. " (ww2.arb.ca.gov › resources › overview-diesel-exhaust-and-heal

It seems like the Conclusion in the DEIR (pdf page 393) sums up Rise's position on Greenhouse Gases. It says "the proposed project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Consequently, the project's impact is less than cumulatively considerable." With miles and miles of Diesel trip and other equipment adding vast amounts of pollutants, the Rise solution is to say "oh well" if the county, state and federal agencies doesn't have a clear regulation, then adding this pollution over time is not a problem. I disagree with the narrow thinking. The possible amount of pollution the 80 years the project will add to the declining air quality must be substantially reduced from the beginning by Rise and not just depend on other's efforts at more "green" energy generation.

1

As I read the 4.3 chapter, it seems like Rise's choice of mitigations were usually minor like keeping equipment tuned up or buying Tier 4 engines in the Rise vehicles. These are least possible conservation solutions kept many of the predicted pollution readings often under the maximum load limit for the region. Thinking of it in a different way, Rise can/will produce a lot of pollution and greatly impact the environment and on health locally.

As I read the chapter 4.3 I found that the discussion was focused on

- the "conservative assumptions"
- (example: pdf page 341, 351, 363, 386, 387)
- or "conservative approach" (example pdf page 336, 353),
- conservative
- *something else*
- (example: pdf page 352, 389, 395)

**Ind 195-2**

- use a "common sense" approach
- (example: pdf page 357)
- "where feasible"
- *use this instead of that*
- (example: pdf page 387)

This allows the discussion to be focused on the best-case scenarios. For example, Rise will decrease pollution from diesel trucks by tuning them up regularly, not idling more than 5 seconds and more. This doesn't seem to balance the huge amount of $CO_x$, $NO_x$, $PM_x$ and other pollutants they are releasing with the mining operation. Adding 80 years of pollution described on Table 4.3-19 showing daily mitigated totals of emissions, there are 8,889,940 lbs produced in Rise's own estimates, almost 9 million pounds.

Rarely in this section did I find a range of best-case to worse-case situations provided except one in addressing a PSPS power shutoff. (pdf page 395) In that case, diesel generators would run the following equipment during a grid power outage:

**Ind 195-3**

- for dewatering
- ventilation

2

- compressed air system
- electric locomotion
- lighting
- hoist operations
- processing plant slurry
- water treatment

Imagining the snowstorm this past Dec 25th with an 8 day stretch without PGE electricity, I would have imagined Rise doing the following: use the generators to make sure everyone is safely out of the mine and shut down operations. That's what my neighbors and I did - we did use our generators after turning off everything we could, reducing the house temperature drastically, and getting by. Why would it be necessary for Rise to keep the slurry going so the materials don't "fall out"? Why is it ok for them to use a significant amount of diesel so there is little to no delay in getting the gold? Their data built 10 days of generator use into their charts but using diesel for 8 days to do the processes they describe seems more than wasteful after making sure the employees are safe.

**Ind 195-4**

The data is sparse or uses data that is not truly reflective of the area. The NSAQMD - the Air District for Nevada, Plumas and Sierra counties is located on Litton near Briar Patch (a mile away). It's unclear in the data presented if that was the only sensor site used for the baseline for $O_3$ and $PM_{2.5}$ (pdf page 302) The other pollutants (such as CO, $NO_x$, $PM_{10}$) were evaluated from data collected in Yuba City, 31 miles away. The footnote for Table 4.3-4 says: "The data collected at these stations are considered generally representative of the air quality experienced in the project vicinity." With the possibility of producing so much emission pollution from the diesel round trips dumping tailings, why wasn't baseline data collected locally and then monitored locally? How does Yuba City air reflect what is happening along Brunswick? Is it *generally representative*?

**Ind 195-5**

It is unclear how data was arrived at in another example. The difference in pollution was reduced by some unknown type of mitigation compared in Table 4.3-17 (amounts estimated before mitigation) and Table 4.3-19 (amounts estimated after mitigation are applied). (pdf pages 360 and 365) When these two tables are compared, it appears the only difference is in the Off-Road Equipment rows.

OFF ROAD EQUIPMENT - year 2021 Construction Phase

| Pollutant identified *Maximum - pounds/day* | 4.3-17 chart value - before mitigation | 4.3-19 chart value - after mitigation |
|---|---|---|
| ROG | 6.71 | 3.25 |
| NOx | 53.84 | 15.97 |
| CO | 50.83 | 54.08 |
| $PM_{10}$ | 2.30 | 0.60 |
| $PM_{2.5}$ | 2.15 | 0.60 |

In that section, what accounted for the dramatic change in the amount of pollutions produced daily wasn't evident. Finally, in the Mitigation section (pdf page 369) DEIR stated the 2nd chart reflects the reductions that would occur with implementation of APM-AQ-1 and APM-AQ-2 and associated with Mitigation Measure 4.3-1(b), which would result in a reduction in construction contractors' equipment exhaust criteria air pollutants during project construction (year 2021). Footnote 39 indicates the construction contractors would buy equipment with Tier 4 engines. This is a best-case scenario but life is messy and many contractors may not have this new equipment to use or not enough to bring down the pollution levels given in the tables. What happens then? Rise can blame the contractors and not be at fault?

Mitigation Measures 4.3-1(b) is to submit a plan - Construction Exhaust Emissions Minimization Plan. This plan will include recommending 1) using alternative sources of power so portable diesel engine use is greatly reduced. 2) Diesel engines bigger than 50 hp should use a Tier 4 engine or if not a 25 hp should have a 3 Tier engine.

**Ind 195-6**

Bullet point A explains: "For purposes of this mitigation measure, "commercially available" shall mean the availability of the Tier 4 Final equipment, taking into consideration factors such as critical path timing of construction and geographic proximity of the equipment location to the project sites." (pdf page 369). Bullet point B says someone will keep records of this effort to comply.

Does this mean that if no one worked out the details, Rise's construction contractors can/will use construction equipment that is available but not necessarily to the desired code and efficiency? What happens when monitoring doesn't match the very conservative assumptions given in the charts?

Overall, these are the areas where the DEIR is inadequate:

**Ind 195-7**

- The Plan tends to reflect conservative assumptions that aren't a comprehensive reflection of what might happen and what will be a possible solution to the best case and the worse-case situations.

**Ind 195-8**

- The plan doesn't address how it will remove pollutants the construction or operation of the mine generate. It does try to limit some but overall adds vast quantities of polluting gases and particles to the local area and the region.

**Ind 195-9**

- It doesn't fully address how some people's health will be impacted and the consequences be address

4

- in treatment and financial support. (Example asbestos entering air and cumulatively cause asbestosis.)

**Ind 195-10**

- Some of the mitigations are "iffy", the DEIR used the phase "common sense". For example, if a contractor's equipment is older and doesn't have a Tier 4 engine, it is "common sense" to used anyway and ignore the higher levels of pollution that is generated. The shift of responsibility is from Rise to the sub-contractor in the construction phase. Clear concise alternatives need to be included in the DEIR if Rise is using the mitigation to claim the pollutant level will be in the attainment level.

**Ind 195-11**

- The extended use of diesel generators when grid power electricity wasn't near by the work area and when the electrical grid goes down cancels some of the few efforts to reduce these pollutants in the atmosphere in other phases of the mining operation.
- The overall amount of pollutants with successful mitigation used as described is still too much to add to the cumulative effect of climate change, more severe weather events, more intense wildfires, and decline in air quality. What can be done to lower the pollution much more over the 80 years.

Respectfully,
Diane Figuly

## INDIVIDUAL LETTER 195: DIANE FIGULY

### Response to Comment Ind 195-1

The commenter provides information regarding the health effects of diesel and criteria air pollutants and disagrees with conclusions in the DEIR regarding air quality impacts. The County acknowledges the comment and notes it expresses the opinions of the commenter and does not raise a specific issue related to the adequacy of the analysis of the DEIR. The comment is part of the Final EIR for review and consideration by the decision-makers prior to a final decision on the project. No further response is required or necessary.

### Response to Comment Ind 195-2

The commenter asserts that the mitigation measures applied in the DEIR to reduce air pollutant emissions were usually minor and suggests that the emissions associated with the entire life of the project would be substantial. As discussed on page 4.3-41 of the DEIR, the Northern Sierra Air Quality Management District (NSAQMD) established thresholds of significance for CEQA purposes to achieve and maintain the National and California Ambient Air Quality Standards (AAQS). Because an AAQS is based on maximum pollutant levels in outdoor air that would not harm the public's health, and air district thresholds pertain to attainment of the AAQS, a project that complies with the thresholds established by a local air district, such as the NSAQMD, would not result in adverse effects to human health related to criteria pollutant emissions. Criteria air pollutant emissions from the project, including ozone precursors and particulate matter, have been analyzed in the DEIR and have been found to be less than significant after mitigation. The commenter's opinion that the analysis is based on the "best-case scenarios" does not raise a specific issue related to the adequacy of the analysis of the DEIR. Conversely, the DEIR's air quality analysis was not based on best-case scenarios, but rather was based on conservative assumptions. The County has included the comment as part of the Final EIR for review and consideration by the decision-makers prior to a final decision on the project. No further response is required or necessary.

### Response to Comment Ind 195-3

The commenter asserts that the DEIR should analyze a worst-case scenario for generator use, and the associated air pollutant emissions. However, the use of emergency backup generators is speculative and is not required to be analyzed under CEQA. (see CEQA Guidelines Section 15384.) The CEQA Guidelines state that if a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact (14 CCR 15145). California courts have consistently held that "an EIR is not required to engage in speculation in order to analyze a worst case scenario." (see Napa Citizens for Honest Government v. Napa County Bd. of Supervisors (2001) 91 Cal.App.4th 342, 373.). Additionally, the commenter asserts that use of diesel fuel for generators may be wasteful, but does not provide evidence of why such use would be wasteful. The potential for wasteful use of energy was analyzed in Impact 4.3-4 of the DEIR, and the County determined that the project would not result in wasteful use of energy. Please also see Response to Comment Agcy 8-17.

### Response to Comment Ind 195-4

The commenter questions the selection of ambient air quality monitoring stations summarized in the "Local Air Quality Monitoring" section of the DEIR, Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy). The ambient criteria air pollutant data are presented for context and are used to determine the NSAQMD's compliance with the AAQS and to set applicable thresholds of significance. Therefore, they are provided for context, but were not directly used in the analysis of the project's impacts from criteria air pollutants. Significance determinations in the DEIR are

based on comparison to the NSAQMD thresholds, which were developed based on compliance with AAQS. Further, the NSAQMD reviewed all versions of the Air Quality and Greenhouse Gas Technical Report (included as Appendix E.1 in the DEIR) and did not identify issues regarding the ambient air monitoring stations selected.

## Response to Comment Ind 195-5

The commenter questions the validity Mitigation Measure 4.3-1(b) included in the DEIR based on Tier 4 equipment availability. Tier 4 engines for horsepower between 11 horsepower and 75 horsepower were available starting in 2008. For engines with horsepower between 75 and 175, Tier 4 engines were available starting in 2012. For engine horsepower between 175 and greater than 1,200, Tier 4 engines were available starting in 2011. As such, equipment engines that meet Tier 4 emission standards are currently available at the time of this analysis, and would continue to be available during the project's construction year. Please refer to the US EPA's Nonroad Compression-Ignition Engines: Exhaust Emission Standards for details (available: https://nepis.epa.gov/Exe/ZyPDF.cgi?Dockey=P100OA05.pdf).

Based on the California Air Resources Board's OFFROAD2017 model, which uses past data on the adoption rate of previous engine Tiers after their introduction to forecast future year adoption rates, the 2019 statewide construction fleet would include 41,862 pieces of diesel equipment meeting Tier 4 Final emission standards, representing approximately 30% of the statewide construction fleet. Tier 4 Final equipment fleet populations would grow to 50,886 and 61,039, representing 36% and 42% of the 2020 and 2021 construction fleets, respectively. Project construction was assumed to commence in January 2021 and end in December 2021. Project construction may begin at a later date, in which case the supply of Tier 4 Final equipment would be higher. California Air Resources Board's OFFROAD2017 inventory shows more than 40,000 pieces of Tier 4 Final equipment are included in California's construction fleet and cleaner engines, including Tier 4 Final, would be integrated into large and medium fleets to meet CARB regulations for off-road diesel vehicles. Therefore, it is feasible for the project to utilize and incorporate Tier 4 Final equipment for project construction.

The commenter questions what will happen if contractors do not use Tier 4 engines as assumed in the DEIR; however, those engines are currently available, and the DEIR requires use of Tier 4 engines, if available. Mitigation Measure 4.3(b) requires a Construction Exhaust Emissions Minimization Plan. As stated in the mitigation measure (page 4.3-77 of the DEIR), this Plan must be submitted to Nevada County for review and approval. The mitigation measure requires the applicant to maintain and submit records to Nevada County concerning its effort to comply with this requirement. This mitigation measure is clear on the requirement of the applicant and its contractors to use Tier 4 F engines and the involvement of the County to ensure compliance. The applicant is responsible for the oversight of contractors or sub-contractors who perform work on the project site. Moreover, the County has ample authority to revoke the project's permits if the operator does not comply with the required mitigation measures and conditions of approval. Please see Master Response 3 – Operator Responsibility.

## Response to Comment Ind 195-6

This comment also pertains to Mitigation Measure 4.3-1(b) included in the DEIR. Please see Response to Comment Ind 195-5 above.

## Response to Comment Ind 195-7

The commenter suggests that the air quality analysis included in the DEIR is not a comprehensive analysis and does not reflect a worst-case scenario. Please see Response to Comment Ind 195-3 above regarding worst-case scenario analysis. The commenter's opinion that the analysis is not

comprehensive does not raise a specific issue related to the adequacy of the analysis of the DEIR. CEQA requires a good faith effort to estimate emissions from the project during construction and operation. As such, estimation of emissions during the construction and operation of the project are based on the best project-specific information and industry-standard emission factors that were available at the time of analysis, as thoroughly described in the "Method of Analysis" of Chapter 4.3 of the DEIR, beginning on page 4.3-44.

## Response to Comment Ind 195-8

The commenter suggests that the air quality analysis in the DEIR does not address the air pollutant emissions generated by the project. Chapter 4.3 of the DEIR and the attached Health Risk Assessment (included in Appendix E.1) address the criteria air pollutant emissions from the project, as well as the toxic air contaminant (TAC) emissions and associated potential health risk impacts, which have been analyzed in the DEIR and have been found to be less than significant after mitigation.

## Response to Comment Ind 195-9

The commenter states that the air quality analysis in the DEIR does not address how some people's health will be impacted by air pollutant emissions generated by the project. A Health Risk assessment has been completed for the project (see Appendix E.1 in the DEIR) and the DEIR determined that public health impacts from exposure to project TAC emissions (including asbestos in fugitive dust) will be less than significant after mitigation.

## Response to Comment Ind 195-10

The commenter questions the "common sense" aspect of mitigation in the DEIR. Notably, the phrase "common sense" is used once in Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy) within the context of Applicant Proposed Measure (APM)-AQ-1 and applies to the minimization of construction equipment idling. The complete text is on page 4.3-65, as follows:

> Unnecessary construction vehicle idling time shall be minimized. The ability to limit construction vehicle idling time is dependent on the sequence of activities and when and where vehicles are needed or staged. Certain vehicles, such as large diesel-powered vehicles, have extended warm-up times following start-up that limit their availability for immediate use. Where such diesel-powered vehicles are required for repetitive construction tasks, these vehicles may require more idling time. The project shall apply a "common sense" [emphasis added] approach to vehicle use such that idling is reduced as much as possible below the maximum of 5 consecutive minutes required by regulation (13 CCR 2449 and 2485). If a vehicle is not required for use immediately or continuously for activities or for other safety-related reasons, its engine shall be shut off.

As indicated in this APM, the "common sense" approach to vehicle use is to limit idling as much as possible below the maximum of 5 consecutive minutes required by regulation (13 CCR 2449 and 2485). However, this does not supersede or contradict the provisions of the regulatory requirement. This APM does not relate to Mitigation Measure 4.3-1(b) and the use of higher tier engines during construction. Please see also Response to Comment Ind 195-5 above.

## Response to Comment Ind 195-11

The commenter states that extended use of emergency diesel generators cancels some of the project's efforts to reduce air pollutant emissions and contends that the project results in too much overall pollutants "to add to the cumulative effect of climate change, more severe weather events, more intense wildfires, and decline in air quality." Firstly, the analysis of the extended use of emergency diesel generators is speculative and beyond the reasonable control of Rise Grass Valley, Inc., and as such, is not required under CEQA. Nonetheless, for purposes of the HRA,

diesel emergency generators were assumed to operate for up to 100 hours per year. (see DEIR, p. 4.3-79.) The commenter's opinion that the project results in too much overall air pollutants does not raise a specific issue related to the adequacy of the analysis of the DEIR. The County has included the comment as part of the Final EIR for review and consideration by the decision-makers prior to a final decision on the project. No further response is required or necessary.

**Individual Letter 196**

**~~I support~~ DO not re-opening the Idaho-Maryland Mine**

Nevada County is ~~in tremendous need of~~ new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

**Ind 196-1**

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Hello,

**Ind 198-1** I support the position of CEA FOUNDATION & MIneWatch Coalition and strongly recommend a NO VOTE for the proposed reopening of the Idaho-Maryland Mine.

I'm concerned how this proposal impacts wells in the area. The FEIR needs to analyze all the wells potentially impacted by the project. The impact analysis on wells in the DEIR is inadequate, underestimates impacts, and proposes inadequate mitigation measures.

**Ind 198-2** I worked in the field of Electronics Wafer Fabrication and am familiar with disposal and 'cleaning/filtering" of chemicals, acids, and gasses used to manufacture silicon circuits. Roof mounted "Scrubbers" emitted gasses that had passed through filters and were claimed to be safe for the environment. Yet, many employees found the paint peeling on their cars which were parked in the company parking lot. Spent chemicals/acids were "filtered" and "treated", then released into sewer storm drainage and many years later, unsafe contamination levels were found in the waterways in the surrounding areas.

**Ind 198-3** The discussion of water quality impacts related to loss of wetland vegetation on DEIR page 5-7 is inadequate because potential loss of cover vegetation due to road widening required near the creek is not discussed. Mitigation should include a 100 foot centerline [or more] of creek setback from the road construction zone.

**Ind 198-4** My husband and I planned our Retirement in Grass Valley, are now ful time residents, and built a home, hiring local contractors to do the work, buying materials locally, membership/participation in local Clubs/Organizations, and patronizing many local businesses throughout the years.

We Love Nevada County. In our view, The Idaho-Maryland Mine will not bring economic gains to the County, as claimed, nor enhance Quality of Life for the good citizens.

--
Regards, Diane Graham

## INDIVIDUAL LETTER 198: DIANE GRAHAM

### Response to Comment Ind 198-1

The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues. The commenter states that the analysis of impacts to domestic water wells in the DEIR is inadequate but does not provide evidence of such. The commenter is referred to Chapter 4.8 of the DEIR, Master Responses 14 - Adequacy of Groundwater Model, and Master Response 15 -Adequacy of Groundwater Monitoring Wells.

### Response to Comment Ind 198-2

The commenter states that electronic wafer fabrication facilities have damaged cars and chemicals entering storm drains contaminated local water ways in their experience. The project does not include electronic wafer fabrications. Air quality impacts from the project have been analyzed in the DEIR and have been found to be less than significant after mitigation. The commenter is referred to Chapter 4.3 of the DEIR. Water quality impacts are addressed in Chapter 4.8 and found to be less than significant after mitigation.

### Response to Comment Ind 198-3

The commenter states that the discussion of water quality impacts related to loss of wetland vegetation on page 5-7 of the DEIR is inadequate because loss of vegetation due to road widening near the creek is not discussed and that the mitigation should include a 100-foot setback from the creek. The page number provided by the commenter does not appear to be correct. Disturbance to wetlands and vegetation communities from the project, and management plans for work within 100 feet of perennial streams, are discussed and analyzed in Chapter 4.4 of the DEIR.

### Response to Comment Ind 198-4

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 - Social and Economic Impacts.

**Individual Letter 199**

Dianna Suarez
suareztribe@yahoo.com

April 4, 2022

Mr. Matt Kelley
Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902 (530) 265-1423

Dear Sir, I have lived in this area since 1974 when my parents moved to Lake Wildwood. I have lived in both Nevada City and Grass Valley and within the Bear River watershed since that time. I retired from the US Forest Service as a Forester. Since my retirement, I have been involved in learning all I can about our watersheds and rivers. I am concerned about many issues with the mine. One of my concerns is dewatering of local groundwater to reopen Idaho Maryland Mine, by the Rise Gold Corporation

Let's start with some facts:

- According to the Nevada Irrigation District website, 1 million gallons of water equals 3.07 acre feet. An acre foot of water is a volume the size of an acre, 1 foot deep.
- According to the Rise Gold Technical Report, inflow to the mineshaft is estimated to be 1,375 acre feet per year, and 2,500 acre feet of water currently fills the mine workings.(This differs from the Hydro report by 3 af)
- According to an internet search including the NID website, the value of an acre foot of water varies greatly but averages from $50 to $70 locally. It is currently $400/af in the valley, and going for up to $2000/af to desperate farmers.

**Ind 199-1**

The following statements of fact are based on information from Rise Gold's website, and personal research.

- The mining company plans to pump out the 2,500 acre feet during the first 6 months to drain the shaft, (Groundwater and Hydrology Analysis Report for the Idaho Maryland Mine by EMKO for Rise, page 13)
- and (1.224 million gallons per day x 3.07 af/million gallons) x (365 days/yr = 1,372 acre feet/yr) (page 15) annually to maintain it.
- The permit is for 80 years.
- They will use Wolf Creek as a conveyance. Wolf Creek is a tributary to Bear River below Combie Reservoir and upriver from Camp Far West Reservoir owned by South Sutter Water District.
- The water that Rise Gold plans to pump is groundwater that would otherwise be used by the People with wells for free, local creeks, ponds, wildlife, trees, and vegetation.

Dianna Suarez
suareztribe@yahoo.com

April 4, 2022

- NID has a diversion from Wolf Creek into the Tarr Ditch below where the water would enter Wolf Creek. The Tarr Ditch has around 20 customers who take water for $12 per acre foot because of a legacy easement, including NID Director Rich Johansen and Nevada County Supervisor Sue Hoek.

So, based on these facts, and as we enter another dry period where the value of water is rapidly increasing; we must look at what this may mean in loss of value to our communities.

- During the first 6 months, the mine operators will discharge between $125,000 and $175,000 worth of water down Wolf Creek into Bear River. (2,500 acre feet x $50-$70/af)
- The next six months will see $34,300 to $48,000 down the creek and between $68,600 and $96,000 will flow down the creek annually for up to 80 years (1,372 af x $50-$70/af).
- In the first decade, a whopping $776,700 to $1,087,400 of valuable water will be lost to this community. That is over a million dollars worth of water down the creek in the first decade!!

The next decade will see an additional $687,500 to $962,500 down the creek, and for the next 60 years thereafter; for a grand total of between $5.6 and $7.8 million dollars worth of valuable water down the creek and out of our communities. Meanwhile, local citizens whose wells have been dewatered will pay ever increasing rates for water that was once free.

Another fact: In only 35 years Rise Gold will have dewatered and discharged enough water down Wolf Creek to fill Scotts Flat Reservoir to capacity.

(2,500 af + 686 af = 3,186 af first year,
+ 1,372 af/year thereafter. 3,186 + 9(1,372) = 15,534 af first decade
+ 13,720 af second decade + 13,720 af third decade = 42,974 af
+ 6,860 af next 5 years = 49,834 af
Scotts Flat capacity is 49,000 af)

**Ind 199-2**

Please address the following:

1. How will the monetary costs of lost groundwater value be returned to the community?

Dianna Suarez
suareztribe@yahoo.com

April 4, 2022

**Ind 199-3** 2. How will the groundwater and dependant ecosystems be restored from the loss of 49,000 acre feet of water after 35 years?

**Ind 199-4** 3. What are the cumulative impacts over 35 years, of 49,000 acre feet of groundwater deficits, to the ecology of the Bear River watershed?

**Ind 199-5** 4. Where is the risk assessment for drier landscapes and increased wildfire as a result of groundwater removal over 35 years and 49,000 acre feet of depletion?

**Ind 199-6** 5. The Bear River is already impacted with point source pollution from legacy mining. Where is the risk assessment to Bear River from further arsenic and other mine pollutants?

**Ind 199-7** 6. Will Rise Gold pay for water quality monitoring in Bear River?

**Ind 199-8** 7. What is the response time to enforcement when water quality monitoring determines that mine runoff exceeds acceptable levels of pollution?

**Ind 199-9** 8. As Rise Gold pumps out groundwater under their private land, what is the impact to other private parcels' groundwater adjacent to the property?

**Ind 199-10** 9. Does Rise Gold have the rights to groundwater belonging to the citizens of Grass Valley?

**Ind 199-11** 10. Where does Rise Gold's groundwater end and the groundwater protected by the Public Trust Doctrine begin?

**Ind 199-12** 11. What is the beneficial use provided by the water that Rise Gold pumps out of the mine shafts? Will they need a water right to do this?

**Ind 199-13** 12. Please consider that Rise Gold may eventually need a water right to pump and dispose of groundwater. Are you prepared to grant this water right, that is covered by the Public Trust Doctrine, to a private corporation?

**Ind 199-14** Just because fractured rock aquifers are not currently well understood, does not mean that the cumulative effects of groundwater depletion are not significant. The fact that they are **not** well understood, raises this issue to a significant risk that currently has no mitigation.

Thank you for considering my comments.
Sincerely,
/s/ Dianna Suarez
suareztribe@yahoo.com

## INDIVIDUAL LETTER 199: DIANNA SUAREZ

### Response to Comment Ind 199-1

The commenter provides an estimate of the value of water which will be discharged to South Fork Wolf Creek and asserts that the project will take this water away from the community. However, the groundwater which would be pumped from the proposed underground mine and treated at the surface is not currently available for use by surface users, as it is far deeper than groundwater wells in the project area. As discussed on page 10 of Appendix N of the DEIR, the proposed project will have a surplus of water from the natural groundwater flow into the ground workings. Once the initial dewatering is completed, approximately 1,224,000 gallons per day are estimated to be pumped to the surface on an on-going basis to maintain the dewatered mine. The groundwater consumed during operations is estimated to be 84,000 gpd. Notably, the water that will be discharged into South Fork Wolf Creek is not lost and can be used by downstream water users, including Nevada Irrigation District.

Economic benefits or water prices are not required to be analyzed by CEQA in the DEIR. Please see Master Response 2- Social and Economic Impacts.

### Response to Comment Ind 199-2

Please see Response to Comment Ind 199-1. The water that will be discharged into South Fork Wolf Creek is not lost, as asserted by the commenter, and can be used by downstream water users, including Nevada Irrigation District. Please see Master Response 2- Social and Economic Impacts.

### Response to Comment Ind 199-3

Groundwater dependent vegetation will not be significantly impacted by the project and therefore no restoration is proposed. Please see Master Response 33 - Groundwater Dependent Vegetation.

### Response to Comment Ind 199-4

The commenter asks what the cumulative impacts to the Bear River Watershed would be of 49,000-acre -feet of groundwater deficits. The South Fork Wolf Creek is a tributary to Wolf Creek and Wolf Creek is a tributary to the Bear River. As discussed on pages 4-8-65 and 4-8-65 of the DEIR, mine dewatering is estimated to reduce baseflow in South Fork Wolf Creek by up to as 0.1 cfs and in Wolf Creek by up to 0.75 cfs. During maintenance dewatering, 1.9 cfs would be added to the baseflow of South Fork Wolf Creek. Therefore, the baseflow in Wolf Creek and the Bear River would increase by approximately 1 cfs and the project would not create an impact from groundwater deficits, cumulative or otherwise, to the Bear River watershed.

### Response to Comment Ind 199-5

The commenter asks for a risk assessment related to drier landscapes and increased wildfire from groundwater removal. As stated on page 4.13-21 of the DEIR, the dewatering of the mine would not affect the available moisture for vegetation in the project area because the existing depth to groundwater is already below the typical rooting depths in higher topographic areas while adequate flows would occur in South Fork Wolf Creek and Wolf Creek to maintain groundwater levels in the lower topographic areas. The dewatering would not, therefore, increase fire risk due to reduced groundwater levels. Please also see Master Response 33 - Groundwater Dependent Vegetation.

## Response to Comment Ind 199-6

The commenter asserts that the Bear River is impacted from legacy mining pollution including arsenic, and asks for an assessment of risk to Bear River from the project's pollutants. Please see Master Response 35 - Discharge to South Fork Wolf Creek. The DEIR analyzes water quality impacts to South Fork Wolf Creek and Wolf Creek from the project, which flow into the Bear River. (see DEIR, Chapter 4.8.) The Regional Water Board adopted a Water Quality Control Plan, Fifth Edition, for the Sacramento and San Joaquin River Basins (hereinafter Basin Plan) that designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve those objectives for all waters addressed through the Plan. The Basin Plan at page 2.3 states that the "…beneficial uses of any specifically identified water body generally apply to its tributary streams." The Basin Plan does not specifically identify beneficial uses for South Fork of Wolf Creek but does identify present and potential uses for the Bear River, to which the South Fork of Wolf Creek and Wolf Creek are tributary. As discussed on page 4.8-31 of the EIR, the beneficial uses of Bear River and South Fork Wolf Creek are identical and therefore the potential downstream impacts to the Bear River are already analyzed in the DEIR.

## Response to Comment Ind 199-7

The commenter asks whether the applicant will pay for water quality monitoring in Bear River. Water monitoring requirements will be specified in the Notice of Applicability for the water discharge. Please see Master Response 35 - Discharge to South Fork Wolf Creek. It is unlikely that water monitoring in the Bear River would be required, as the discharge from the project is far upstream of Bear River, in the South Fork Wolf Creek, and monitoring points would likely be placed closer to the discharge point. Any required water monitoring would be paid for by the applicant.

## Response to Comment Ind 199-8

The commentor asks what the response time to enforcement would be if water quality monitoring determines that mine runoff exceeds acceptable levels of pollution.

Mitigation Measure 4-8-1(b) requires that prior to commencement of construction activities, the applicant shall submit a Notice of Intent (NOI) to the Central Valley RWQCB for coverage under the Construction General Permit applicable for any site on which construction is to occur, and prepare a Construction Stormwater Pollution Prevention Plan (C-SWPPP) and reporting requirements. The SWPPP must be complied with until such time as terminated as a result of the completion of construction and permanent site stabilization or until an Industrial SWPPP becomes applicable to the site pursuant to Mitigation Measure 4.8-1(c). Mitigation Measure 4.8-1(c) requires that prior to commencement of operations at the Brunswick Industrial Site, the applicant shall submit a Notice of Intent (NOI) to the Central Valley RWQCB for coverage under the Industrial General Permit for the Brunswick Industrial Site and prepare an Industrial Stormwater Pollution Prevention Plan (I-SWPPP).

Any water quality monitoring requirements and reporting requirements would be specified in the C-SWPPP and I-SWPPP. The response and response time to enforcement would be determined by the Central Valley RWQCB.

In addition, as discussed in Master Response 35 – Discharge to South Fork Wolf Creek, a Notice of Applicability (NOA) for the water discharge into South Fork Wolf Creek is required by Mitigation Measure 4.8-1(a). As stated in the mitigation measure, the owner shall be required to submit quarterly monitoring reports to the Regional Water Quality Control Board. Upon receipt of the complete Notice of Intent (NOI), if the discharge is deemed eligible for coverage under the General Order, the CVRWQB will issue a Notice of Applicability (NOA). The NOI shall include evaluation

of potential constituents of concern and demonstrate that water treatment plant (WTP) design shall successfully treat mine water to meet the water quality standards and treatment goals. The NOA will specify monitoring and reporting program requirements. All NPDES permits are required to specify requirements for recording and reporting monitoring results. General monitoring provisions of the General Order require that samples taken for the purpose of monitoring be representative of the monitored activity. Records of monitoring must be kept and maintained and reports to the CVRWCB quarterly. Any noncompliance which may endanger health or the environment must be reported orally within 24 hours from the time the Discharger becomes aware of the circumstances. A report shall also be provided within five (5) days of the time the Discharger becomes aware of the circumstances. If the discharge is not deemed eligible for coverage under the General Order, the mine operator would need to apply for project-specific waste discharge requirements to achieve water quality that meets applicable water quality standards; however, it is expected that the discharge will qualify for coverage under the General Order based on the available industry standard methods to reduce iron and manganese (and potentially ammonia and arsenic) and the existing use of the General Order for the nearby Empire Mine and North Star Mine water discharge.

## Response to Comment Ind 199-9

The impact to groundwater in private parcels in the mine area has been extensively analyzed in the DEIR. Please see Chapter 4.8 of the DEIR and Master Response 15 – Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 199-10

Rise Gold owns subsurface mineral rights and has the right to dewater the underground works to access the valuable minerals subject to a permit from the County. Moreover, Rise Gold has appropriate water rights on its properties.

## Response to Comment Ind 199-11

The public trust doctrine applies to navigable waters, but not to groundwater in subsurface mine works.

## Response to Comment Ind 199-12

As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water available downstream if it desired to. The beneficial uses for water in South Fork Wolf Creek are provided on page 4.8-31 of the DEIR. Rise Gold owns subsurface mineral rights and has the right to dewater the underground works to access the valuable minerals subject to a permit from the County. Moreover, Rise Gold has appropriate water rights on its properties.

## Response to Comment Ind 199-13

Rise Gold owns subsurface mineral rights and has the right to dewater the underground works to access the valuable minerals subject to a permit from the County. Moreover, Rise Gold has appropriate water rights on its properties. The public trust doctrine applies to navigable waters, but not to groundwater in subsurface mine works.

## Response to Comment Ind 199-14

The commentor suggests that fractured rock aquifers are not well understood. Please see Master Response 14 - Adequacy of Groundwater Model. The commenter also appears to allege that there is no mitigation provided with regard to groundwater depletion. However, the DEIR requires implementation of Mitigation Measures 4.8-2(a), 4.8-2(b) and 4.8-2(c) to mitigate water supply

impacts related to dewatering. Please also see Master Response 15 – Adequacy of Groundwater Monitoring Wells.

**Individual Letter 200**

**From:** Natana Spohler
**To:** BOS Public Comment
**Subject:** the proposed mine
**Date:** Monday, March 21, 2022 2:26:34 PM

Dist 4

**CAUTION**: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Nevada County Supervisors,

**Ind 200-1** My name is Diedra Spohler and I live on Lake Forest Drive in Penn Valley, District 4. I have lived in our beautiful county for over 20 years now and consider myself very fortunate to have discovered such a special and beautiful location.

I am very concerned about the proposed mine for the following reasons:

**Ind 200-2** 1. Mines are known for being destructive to their surrounding environment. This one would be close to the center of Grass Valley not in a far off isolated location and would disturb residences with the noise pollution.

**Ind 200-3** 2. It would lower the water table during a time of drought when water is already a rare and precious commodity.

**Ind 200-4** 3. The increased traffic and pollution from the diesel trucks would make this a less desirable location to live in.

**Ind 200-5** 4. Rise Gold has never opened a mine and has never made a profit. Their current CEO's prior venture polluted the local environment, went bankrupt and left the local community. This does not inspire trust that they care about their impact nor that they are willing to take responsibility for cleaning up the messes they make.

**Ind 200-6** 5. It is likely that the mine would discourage tourism and also make our county less attractive to high tech businesses and decrease property values. The current environmental review process doesn't include any analysis or study of the economic impacts. Please follow due diligence and include an economic analysis in the Draft Environmental Impact Report (DEIR).

**Ind 200-7** Don't allow our community to be harmed!

Thank you,
Diedra Spohler

## INDIVIDUAL LETTER 200: DIEDRA SPOHLER

### Response to Comment Ind 200-1
The comment is an introductory remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

### Response to Comment Ind 200-2
Please see Master Response 1.

### Response to Comment Ind 200-3
Please see Master Response 16.

### Response to Comment Ind 200-4
Please see Master Response 1.

### Response to Comment Ind 200-5
Please see Master Response 3.

### Response to Comment Ind 200-6
Please see Master Response 2.

### Response to Comment Ind 200-7
The comment is a closing remark and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

**Individual Letter 201**

March 30, 2022

Dear Board of Supervisors,

I appreciate the opportunity to provide input on the Idaho-Maryland Mine DEIR. Thank you for taking the time to consider my comments.

My wife and I have lived on Cedar Ridge Dr. since 2008. Some of the characteristics that attracted us to this area include: natural beauty of the area, cultural resources, responsible government, and volunteering opportunities. We are both active in the community as volunteers, donate thousands every year to local charities, we buy local and use local contractors for all work done on our property. We will move if this project is approved.

**Ind 201-1**

Every community member commenting on the DEIR has unique experience and background, and hopefully that is taken into consideration by those reviewing the DEIR comments. I have over 30 years experience as an engineering manager and have successfully scoped and managed several multi-million dollar programs during my career. My point is I understand technical and financial risk and I have background scoping large projects.

I can also spot BS when I see it.

Rise Gold Corp's proposal to open Idaho Maryland presents a host of economic, quality of life, and ecological threats to our community. The DEIR has uncovered some of the issues we would face should this project be approved and in this letter I will be focusing on some of these concerns.

**General observations:**

**Ind 201-2**

- Out of date data used throughout the document. We understand it takes awhile to generate these reports. However, a lot of the data is four years old and does not reflect the changes our community is undergoing.

**Ind 201-3**

- The DEIR is reliant on reports commissioned by Rise Gold. Another set of experts should be used to generate unbiased reports. Peer review is not enough.

**Ind 201-4**

- The DEIR fails to address the Centennial site clean up effort that Rise has committed to do. It needs to be included in this DEIR since this DEIR is dependent on the clean up being done properly. The DEIR needs to be redone with the Centennial plans taken into account. Furthermore, this project shouldn't be approved until Centennial is cleaned up or there is at a least funding in place for the work.

1 Haislet DEIR Comments

**Significant and Unavoidable Impacts Cited in DEIR**

We've all seen the categories cited in the DEIR with "significant and unavoidable" impacts. The staff report did a good job of summarizing those sections. Here's my opinion:

**Ind 201-5**

**4.1-2 Aesthetics**
As noted in this section of the report, the tall structures that will be as much as 165 Ft. high and the tailing dump sites will alter the landscape in a very negative way. Brunswick road is a gateway to the county. Residents and visitors travel that road every day and would be subjected to these views.

I don't see a way around this issue, so based on this the DEIR should be rejected.

**Ind 201-6**

**4.1-4 Aesthetics**
As noted in this section of the report, this project would have "significant and unavoidable" cumulative impacts due to build out in the area. I strongly disagree with the assertion in the report that the Brunswick site is surrounded by industrial zoning, it is residential zoning. This error needs to be corrected as it is misleading to reviewers.

**Ind 201-7**

Also the section on lighting is incorrect. With the addition of facility lighting, trucks running until 10PM, employee traffic, etc., light pollution will increase dramatically. Those living near the mine will see it, those farther away will see fewer stars due to the light pollution.

Again, based on the results of this section, the project should be rejected.

**Ind 201-8**

**4.10-1 Noise and Vibration**

The report states that noise and vibration during construction of the pipeline would be "significant and unavoidable" impacts even after mitigation. In fact, this entire section glosses over the effect of noise and vibration on the surrounding neighborhoods. All the discussion about "growler" beepers, etc is not going to happen. In addition, Rise has no control over their contractors.

This section is one of my greatest concerns. We have a little road noise in the area, but not nearly the scale that the mine would impose on the neighborhood. Any noise over the current levels would be a nuisance and health risk. Trucks would be running 6AM-10PM so we would only be able to sleep between 10PM-6AM.

Our quality of life would go down, perhaps that is not considered an environmental impact?? Regardless, the community has concerns about the noise and vibration due to the mine operation and this needs to be looked at in detail.

**Ind 201-9**

**4.12-1, 4.12-8, and 4.12-10 Transportation**

The report states that the impact of traffic would be "significant and unavoidable" on several intersections in the area. This is true! Furthermore, the report understates the impact because it doesn't take into account vendor traffic, etc..

Based on results of the this section, the DEIR should be rejected.

**Sections of DEIR that need more work**

**Ind 201-10** After reviewing the document I found the following sections that need to be addressed. As I've stated, my impression is that Raney and their consultants didn't take this document seriously, they should not have used the reports commissioned by Rise Gold.

**4-3 - AIR QUALITY, GREENHOUSE GAS EMISSIONS, AND ENERGY**

**Ind 201-11** It is difficult to respond to this section due to the following issues:

1. Data presented in the DEIR is outdated, uses info from 2018.
2. **Ind 201-12** Yuba City was used as a location for some of the air quality data. Yuba City is not representative of Nevada County. It isn't part the Mountain Counties Air Basin (MCAB), either. This demonstrates that the team that prepared the DEIR is not familiar with our area.
3. **Ind 201-13** There is a lot of "boilerplate fluff" info presented (all about climate change, regulations, etc) that appears to be filler meant to increase the length of the document. IMO that could be in an appendix as it obscures the basic message that the project would make air quality worse.

**Ind 201-14** **I do not believe Raney took this section seriously. It needs to be redone. Raney needs to use accurate air quality data and correct locations when evaluating the air quality impact on our community.**

**Ind 201-15** Here's what is true: Air quality has been terrible in Nevada County for the past few years. Furthermore, our PM and Ozone levels often exceed acceptable levels. The truck and employee traffic will further reduce our air quality.

"Sensitive Receptors" on page 4.3-11 doesn't address the issues properly. First of all there are many elderly people living near the mine site and along the truck routes. Also, there are at least two pre-schools in Cedar Ridge that would be sensitive receptors.

**Ind 201-16** Further more, the DEIR states in section 4.3-4 that the mine would have a "less than acceptable" result in the inefficient or wasteful use of energy. The mine would consume power equivalent to 5000 homes. How is that not wasteful?

**4.4 - Biological Resources**

**Ind 201-17** My comment here is that the authors have not addressed the fact that there are many species of animals living in the Brunswick site area. For example, the authors state "The field surveys did not record any observations of deer". This is not factual, especially at the Brunswick site. There is currently a herd of deer in the area. Furthermore, bear, fox, and mountain lions live in the area. We have a saying in industry: "Show your work", meaning the report writer should explain how they arrived at the conclusions.

More work is needed in this section.

**4.7-1 Hazards and Hazardous materials**

**Ind 201-18** The DEIR states that the level of significance after mitigation would be "Less than Significant". According to the DEIR, around 14 tons of explosives would need to be transported to the

Brunswick site every 14 days. 365 tons of explosives/year, equivalent to 30K tons over the life of the project.

In my opinion, the DEIR did not adequately address the risk of transporting so much explosive material through our community. For example:

- What would happen if one of the trucks detonated in transit?
- What is the risk to the surrounding area if explosives detonate at the job site before they are stored underground? I would expect at a minimum wildfire would be a concern.

**Ind 201-19** On the subject of evacuation routes, the document incorrectly states: "Brunswick Road is considered a secondary evacuation route." For many residents it is the primary evacuation route. It is as if Raney didn't take a look the fact that many people live near the site. If the mine goes in the traffic from trucks and employees during an evacuation would be significant.

More work is needed in this section.

**4.8 Hydrology and Water Quality**

**Ind 201-20** This section fails to adequately address the potential impacts to wells in the area. Past experience (North San Juan) has made clear that we simply do not know how the mine will impact wells. Since past experience shows that mine operators often go bankrupt, a substantial bond with a factor of safety of 2X need to be required from Rise.

**Ind 201-21** The bottomline is that the claim only 31 homes would be impacted is a flawed premise. 100s of wells serving homes and business could be impacted according to other sources. The models used in the DEIR need to be reviewed and updating.

**Ind 201-22** Furthermore, it makes no sense to pump millions of gallons from under ground when we are in a long term drought. We will be sending our water down the hill.

This entire section should be redone with current data.

**4.9 - Land Use and Population and Housing**

**Ind 201-23** Table 4.9-1 and Figures 4.9-1, 4.9-2, and 4.9-3 illustrate the problem with the Brunswick site clearly: The proposed mine is surrounded by low density residential zoning. Furthermore, homes are in all those areas. Hard rock mining is not compatible with this location. The fact that the zoning would need to be changed to accommodate the mine makes this clear.

**Ind 201-24** On Page 4.9-9 Table 4.9-5 presents Housing Vacancy rates. Again, this info is at least 3 years old. Vacancy rates are lower and prices are going up. This needs updating with current information.

**Ind 201-25** Page 4.9-25 section 4.9-3 (Population growth) glosses over the impact on population growth in the area. Here again the authors of the DEIR show ignorance about Nevada County by claiming 22% vacancy rate. They lump in the 51% vacancy of the Truckee numbers (those are probably air B&Bs) in there and the data is over 3 years old.

**This section needs to be redone.**

**4.11 - Public Services and Utilities**

**Ind 201-26** The project would require the county to change the Brunswick site zoning from light industrial to light industrial with mineral extraction. The surrounding area is zoned as residential. It is obvious to even casual observers that hard rock mining is not compatible with the surrounding area. It wold be a bait and switch for those of us that bought here with the understanding that mineral extraction was prohibited.

**Thus the zoning change should not proceed.**

**4.13 - Wildfire**

**Ind 201-27** As noted in the DEIR, the mine will be a source of ignition (welding, trucks, explosives, etc). So the mine would add wildfire risk to the community. We happen to live above the Brunswick site and if a fire started it would no doubt impact our neighborhood.

I feel this section doesn't adequately address the risk to the community.

**Ind 201-28** I am sure many more qualified organizations and individuals will comment on this DEIR. All I can provide is my own opinion. My hope is that we can close this matter quickly so our community can focus on growing our economy in ways that don't harm the environment, lower property values, and impact our quality of life. Once this attempt to open the mine is rejected, the property should be re-zoned to prohibit mining.

Thank you again for taking the time to read my comments. You have a lot of responsibility on your shoulders, I trust you will make the right decision for the community.

**Ind 201-29** Regards,

Don Haislet

P.O. Box 1462
Cedar Ridge, 95924

## INDIVIDUAL LETTER 201: DON HAISLET

### Response to Comment Ind 201-1
This comment is introductory in nature. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 – Social and Economic Impacts.

### Response to Comment Ind 201-2
The commenter states that out-of-date data is used in the DEIR but does not specify which data and how it affects the analysis of the DEIR. No specific response is possible – Please see Master Response 1.

### Response to Comment Ind 201-3
The commenter states that reports commissioned by the Project Applicant are biased and that independent, third-party consultants should also produce reports. The DEIR incorporates expert opinion from consultants not hired by the Project Applicant and peer review of technical reports was conducted by consultants hired by the County including Raney Planning and Management, Madrone Ecological Consulting, ECM, West Yost, Saxelby Acoustics, and TJKM. The commenter provides no information as to why they believe the peer review is insufficient and therefore no response is provided. CEQA also allows a lead agency to accept a DEIR prepared by the Project Applicant or Project Applicant's consultant. (CEQA Guidelines, § 15084(d)(3).) In this case, the DEIR was not prepared by the Applicant, but rather certain technical information that was independently peer-reviewed by the County's team of consultants.

### Response to Comment Ind 201-4
The commenter states that the DEIR fails to address the Centennial Industrial Site cleanup. The commenter is referred to Master Response 4 - Cleanup Project is a Separate Project Under CEQA.

### Response to Comment Ind 201-5
The commenter states that the County should not approve the project based on the significant and unavoidable aesthetic impacts. Aesthetics has already been determined to be a significant and unavoidable impact, in part due to the visibility of the proposed headframe. (DEIR, p. 4.1-15.) The commenter's concerns have been forwarded to the decisionmakers.

### Response to Comment Ind 201-6
The DEIR does not assert that the Brunswick site is surrounded by industrial zoning. Chapter 4.1 of the DEIR states there are existing industrial sites within the vicinity of the project location. (DEIR, p. 4.1-22.) The commenter is also referred to Figure 3-5 (Existing General Plan Land Use Designations), Figure 3-6 (Existing Zoning Designations), and Table 3.2 (Surrounding Land Uses and Closest Receptors) of the DEIR.

### Response to Comment Ind 201-7
The commenter states that the DEIR's discussion of aesthetic impacts is incorrect because the addition of vehicle and facility lighting will dramatically increase light pollution. Vehicle lights have been analyzed in the DEIR. As stated on page 4.1-23 of the DEIR, all work at the Centennial Industrial Site would be done between 6:00 AM and 10:00 PM. Hauling and dumping of engineered fill at the Centennial Industrial Site would occur between 6:00 AM and 10:00 PM. Placement, compaction, and grading of the engineered fill would occur between 7:00 AM and 3:30 PM. The project would not include the installation of any new lighting elements on the

Centennial Industrial Site. Lighting during nighttime hauling and dumping of engineered fill would be limited to haul truck headlights. On-site mobile equipment would not include the addition of substantial reflective surface that would affect the surrounding area. Therefore, the potential for the project to create a new source of substantial light or glare that would adversely affect day or nighttime views in the vicinity of the Centennial Industrial Site would be less than significant. With regard to the Brunswick Industrial Site, vehicles would be entering and exiting the site mostly during daytime hours, considering shift changes at 7:00 AM, 3:30 PM, and 7:00 PM. While hauling of materials off-site would occur until 10:00 PM, which would add light from vehicle headlights, such lighting sources would not result in substantially increased light pollution relative to existing vehicle traffic on local roadways. Placement, grading, and compaction of engineered fill at Brunswick Industrial Site would not occur during nighttime hours.

Facility lighting has been analyzed in the DEIR. Please see Pages 4.1-24 through 4.1-29. As stated in the DEIR, based on the photometric plan prepared for the Brunswick Industrial Site, the lighting intensities at the northern property line, near East Bennett Road, are at 0.0 foot-candles, and thus, light spillover is not projected to occur off-site. The nearest proposed pole-mounted LED, which is International Dark Sky Association compliant, would be located approximately 100 feet from East Bennett Road. Thus, the existing sensitive receptor along New Brunswick Court would not be impacted by light spillover from the proposed on-site lighting. Similar conclusions can be made for the remainder of the property boundaries, based on the Photometric Plan; no light spillover is projected to occur at the property boundaries.

## Response to Comment Ind 201-8

The commenter states that the DEIR understates the noise impacts of the project but does not state how the DEIR is inadequate. Noise impacts from the project, with the exception of construction noise related to the installation of the potable water pipeline, have been found to be less than significant after mitigation. (DEIR, p. 4.10-31.) The commenter states that certain mitigation measures (e.g., “growler” beepers for trucks) will not be implemented. On the contrary, Mitigation Measure 4.10-1 requires all mobile equipment to be fitted with broad-band “growler” type back-up warning devices rather than the conventional “beeper” devices. All mitigation measures are included in the mitigation monitoring and reporting program (MMRP), which is included as Chapter 4 of this Final EIR. The MMRP would be adopted along with EIR certification, should the Board of Supervisors take these actions. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 3 - Operator Responsibility.

## Response to Comment Ind 201-9

The commenter states that vendor traffic has not been considered in the DEIR. The commenter is incorrect; the DEIR accounts for vendor traffic and the impacts were found to be less than significant. (DEIR, p. 4.12-56. Table 4.12-7.)

## Response to Comment Ind 201-10

The commenter states that DEIR should not have used consultants commissioned by the Project Applicant.

The DEIR incorporates expert opinion from consultants not hired by the applicant and peer review of technical reports was conducted by consultants hired by the county including Raney Planning and Management, Madrone Ecological Consulting, ECM, West Yost, Saxelby Acoustics, and TJKM. The commenter provides no information as to why they believe the DEIR is insufficient and therefore no response is provided.

## Response to Comment Ind 201-11

The commenter states that out-of-date data is used in the DEIR but does not specify which data and how it affects the analysis of the DEIR. No specific response is possible – Please see Master Response 1.

## Response to Comment Ind 201-12

The commenter states that the DEIR utilized Yuba City as a location for air quality data, which the commenter states is not representative of Nevada County. As stated on page 4.3-10 of the DEIR, because the Grass Valley station only monitors ozone (O3) and PM2.5, additional measurements were taken from the Yuba City monitoring station (773 Almond Street, Yuba City, CA 95991), approximately 31 miles west of the project sites. The data collected at these stations are considered generally representative of the air quality experienced in the project vicinity. Further, this information is not used to model the project's emissions, and thus, has no bearing on the findings of the analysis.

## Response to Comment Ind 201-13

The commenter states that regulatory background information in the DEIR is only included to increase the length of the DEIR. The information provided in Chapter 4.3 of the DEIR is to provide information sufficient to evaluate the impacts of the project in accordance with CEQA Guidelines. It is not included in the DEIR in order to increase the length of the document.

## Response to Comment Ind 201-14

The commenter states that Chapter 4.3 of the DEIR needs to be redone but provides no information of what deficiencies are present in the analysis. The commenter is referred to Chapter 4.3 of the DEIR and Response to Comment Ind 201-12.

## Response to Comment Ind 201-15

The commenter mentions certain sensitive receptors, including elderly people living near the mine site and along the truck routes, as well as two preschools in Cedar Ridge. As discussed in Section 2.1 of the Health Risk Assessment, the cancer risk accounts for the higher sensitivity of infants and children by applying age-specific daily breathing rates and age-sensitivity factors (ASFs). Accordingly, the HRA evaluates and reflects conservative, health-protective methodologies to assess health impacts to adults, as well as infants, children, and other sensitive subpopulations.

As stated on page 27 of the Health Risk Assessment (Appendix E1 of the DEIR), the maximally exposed individual residence (MEIR) would be the nearest existing residence to the north of the Brunswick Industrial Site. Emissions would be dispersed as distance increases from the emission source. Given that the Health Risk Assessment presents the health risk levels at the maximally exposed individual, all other receptors in the vicinity of the project, including the above-mentioned receptors, would have less exposure and consequently less potential health risk than the MEIR.

## Response to Comment Ind 201-16

The commenter states that project would result in wasteful energy usage. As stated on page 4.3-88 of the DEIR, APM-AQ-1 and Mitigation Measure 4.3-1(b) would ensure that only high-efficiency off-road equipment is used during project construction, operation, and reclamation. Electrically powered equipment used on-site would primarily be served by grid-supplied electricity, which would originate from an increasingly renewably sourced mix of energy, and, if emergency power is required, the emergency generators would be Tier 4 Final compliant engines. On-road vehicles are required to meet stringent state and federal requirements related to fuel efficiency. All project vehicles would be required to comply with the existing requirements, which would ensure that on-road vehicles would be operated in an energy efficient manner. Accordingly, the proposed project

would not result in an inefficient, wasteful, and unnecessary consumption of energy, and the impact would be less than significant. (DEIR, p. 4.3-86.) Please also see Response to Comment Agcy 8-17.

## Response to Comment Ind 201-17

The commenter states that the DEIR's biological surveys do not account for all of the species living in the area. The commenter is referred to Response to Comment Ind 585-18.

## Response to Comment Ind 201-18

The commenter is concerned that the project's transport and storage of explosives could lead to an accident. Please see Master Response 10 – Explosives, Reagents, and Brunswick Fill. CEQA does not require the analysis of speculative impacts. As stated in CEQA Guidelines Section 15384, "[a]rgument, speculation, unsubstantiated opinion or narrative, evidence which is clearly erroneous or inaccurate, or evidence of social or economic impacts which do not contribute to or are not caused by physical impacts on the environment does not constitute substantial evidence."

## Response to Comment Ind 201-19

The commenter states that the DEIR incorrectly identifies Brunswick Road as a secondary evacuation route and not a primary evacuation route. As stated on page 4.7-11 of the DEIR, primary evacuation routes in Nevada County consist of the major interstates, highways, and principal arterials identified on the Nevada County General Plan Land Use Map. The routes designated on the General Plan Land Use Maps as minor arterial or major collector routes shall be considered secondary evacuation routes on a Countywide basis. These routes supplement the primary evacuation routes, and provide egress from local neighborhood and communities.

## Response to Comment Ind 201-20

The commenter states that the DEIR underestimates the number of private wells that could be impacted by the project. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model and Master Response 15- Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 201-21

The commenter states that the DEIR underestimates the number of private wells that could be impacted by the project. The commenter is referred to Master Response 14 - Adequacy of Groundwater Model and Master Response 15- Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 201-22

The commenter states that it is unwise to dewater the mine in light of the drought. The commenter is referred to Master Response 16 -Drought and Climate Change.

## Response to Comment Ind 201-23

The commenter states that residential zoned parcels near the Brunswick site make the project unsuitable for the area. As discussed on page 4.9-16 of the DEIR, subsurface mining is allowed in all base districts, including the M1 base district, subject to approval of a Use Permit. Surface mining is allowed in the M1 base district and where the property is zoned ME.

## Response to Comment Ind 201-24

The commenter states that the DEIR requires updated housing vacancy data. The vacancy rates shown in Table 4.9-5 of the DEIR are derived from the 2019 Nevada County Housing Element Update and is the most current information available for use in the analysis of the DEIR.

## Response to Comment Ind 201-25

The commenter states that the DEIR inaccurately portrays vacancy rates in the County. The vacancy rates shown in Table 4.9-5 of the DEIR are broken down by area and 22.5% is the average vacancy rate for Nevada County. Vacancy rates range from 8% in Grass Valley and Nevada City to 51% in Truckee. This data, derived from the 2019 Nevada County Housing Element Update, is the most current information available for use in the analysis of the DEIR.

## Response to Comment Ind 201-26

The commenter states that the project is not compatible with surrounding land uses. The potential incompatibilities resulting from mine operation (e.g., noise, dust) are evaluated throughout the technical sections of the DEIR. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

## Response to Comment Ind 201-27

The commenter states that the DEIR inadequately addresses the project's effect on wildfire risk. As stated on page 4.13-22 of the DEIR, the incorporation of defensible space around proposed structures at the Brunswick Industrial Site, as well as designing buildings in conformance with Chapter 7A of the CBC, would help to slow the spread of wildfire moving through the area. In addition, proposed improvements at both Sites would reduce the vegetation fuel load in the area. Nevertheless, vegetation would remain on both Sites and would need to be managed on an ongoing basis and Mitigation Measure 4.13-2 requires the applicant to submit a comprehensive Vegetation Management Plan, inclusive of the Centennial and Brunswick Industrial Sites, for the review and approval by the County Fire Marshall's Office. The applicant shall implement all provisions of the Vegetation Management Plan during project construction, operations, and reclamation activities. Implementation of this mitigation measure would reduce the above potential impact to a less-than-significant level.

## Response to Comment Ind 201-28

The commenter urges the County to not approve the project. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

## Response to Comment Ind 201-29

The commenter thanks the County for taking the time to review the comments within the letter. The comment is noted.

**Individual Letter 202**

**From:** Don Madden
**To:** Idaho MMEIR
**Subject:** My public comment is that it will be a MISTAKE to reopen that mine in town. I want to go on record.We oppose the opening of this mine. To degrade our town, our sweet little town, would be a very big mistake.

dond@aja.com
kwvoors1@gmail.com

Mr. Matt Kelley
Senior Planner

Nevada County Planning Department
950 Maidu Avenue
Nevada City, CA 95959-8617

Dear Sir,

I am a long-term resident of Nevada County, living most of the last 30 years in Nevada City. I am troubled by the consideration of a project with such a potential to degrade the quality of life in our town. I am against the mine project. With the potential of such mediocre returns to the community, I don't understand why such a project would even be considered.

**Ind 203-1**

During my time in Nevada County, I lived briefly in a community that allowed a major employer to build and staff a number of buildings. While the community was assured the infrastructure would be addressed for the increased traffic, agreements made as part of the installation did not cover the actual costs. The community was forced to spend millions to maintain its infrastructure.

I see no reason in the DEIR to believe this would not be the case with the IDAHO MARYLAND GOLD MINE PROJECT. In section 4.12-1 of "Project-Specific Impacts and Mitigation Measures", the DEIR says "However, even after mitigation, the project's impact to the Brunswick Road/SR 174 intersection would be significant and unavoidable." And its conclusion is as follows:

> **Conclusion** *Based on the above, under both Scenarios #1 and #2 the proposed project would increase traffic through three intersections already identified as operating unacceptably under Existing and EPAP Conditions. Thus, a significant impact to the Brunswick Road/Idaho Maryland Road, Brunswick Road/SR 174, and Idaho Maryland Road/Centennial Drive intersections would occur under the EPAP Plus Project Conditions.*

1

With such conclusions, I feel the project is unreasonable for our community and, in the least, requires legal assurances the community would not be required to maintain its infrastructure for the benefit of the applicant.

Respectfully Submitted,

Donald and Karen Davis

## INDIVIDUAL LETTER 203: DONALD AND KAREN DAVIS

### Response to Comment Ind 203-1

Please see Master Response 1. While the DEIR concluded that significant and unavoidable impacts would occur associated with level of service (LOS) at the Brunswick Road/Idaho Maryland Mine Road intersection, SR 174/Brunswick Road intersection, and the Idaho Maryland Mine Road/Centennial Drive intersection, according to CEQA Guidelines Section 15093, if the specific economic, legal, social, technological, or other benefits, including region-wide or statewide environmental benefits, of a proposal project outweigh the unavoidable adverse environmental effects, the adverse environmental effects may be considered "acceptable." As such, the County would be required to adopt a Statement of Overriding Considerations to address the aforementioned significant and unavoidable impacts.

To: Matt Kelley

I am Donald Gagliasso at 14035 Diamond Court, Grass Valley 95945
We are one of the "30 wells" that will supposedly be impacted by this project.

I am opposed to the mine for all the usual reasons. I do have some questions if the mine is opened. **Ind 204-1**

1) Who is paying for the water when the wells run dry? I heard the mine is going to bring water up East Bennett but not sure who pays to supply it to the residents. Is it the retired fixed income residents? Is it Nevada County tax payers? Is it the Canadian Gold Mine who supposedly is going to make millions on the project?

2) I have been in construction trucking for over 55 years. The mine wants to haul 1500 yards a day. Is that 1500 loose yards or in place yards (big difference in load count)? Depending on what type of truck the mine uses that 75 to 150 loads a day. I would image the mine will use the most economical loading equipment. A good loading operator can load over 200 loads in 8 hours. Going to the Centennial site a truck should make 4 loads an hour so in an 8 hour day they would need +/- 5 trucks for an 8 hour shift. Why do we need 24 hour working permit? **Ind 204-2**

3) The mine hopes to send dirt to construction sites. What jobs in Nevada County need import? The jobs I see are either a balance site or an export site. If there is a construction site, is Nevada County going to let that job operate 24 hours a day 7 days a week? **Ind 204-3**

1

**Ind 204-4** 4) The only jobs that may need import would be in the valley. Since it takes an hour to get to Roseville in a car it will take longer for a truck. Most cities will not allow a construction site to work 24 hours a day, Saturdays are iffy and Sundays are not allowed. The only jobs that work at night are Cal Trans projects. Again why 24/7 work days? A contractor is lucky if they can work a 10 hour day. Is the County going to make the trucks use a designated truck route? A truck will only be able to haul 3 loads or less in an 8 hour day. That would be a minimum of 50 trucks a day leaving Nevada County with what kind of a traffic problem?

**Ind 204-5** 5) If the mine plans on hauling 500,000 yards a year, what happens to the dirt if there is no construction projects to accommodate them? Are there going to be piles of tailings left all over the site?

**Ind 204-6** 6)It the mine does haul to other construction sites owners are very leery of taking material that has certain contaminated materials even if they are within the States limits. I have had jobs where any arsenic dirt would not be allowed. They do not want to take the risk. So if Rise Gold cannot find a place to take the dirt where is it going to go?

**Ind 204-7** 7) Construction sites do not work in wet conditions and depending on the storm could take weeks to dry up. What is the mine going to do with the dirt if they cannot haul? The construction industry for dirt hauling has always planned on a 200 day work year. Again why 24/7 work hours?

There are two environmental specs on contaminated materials, residential jobs and commercial jobs. Residential jobs are more restrictive than commercial.

**Ind 204-8** 8)) As far as digging in the tunnels, unless the mine is using wheel barrels, an operator can dig 1500 yards in a 10/12 hour day depending on the material. Again why 24/7?

**Ind 204-9** 9) Rise Gold talks about using only tier 4 equipment. Two things are misleading with this statement. All off road construction equipment by State of California law must be tier 4. All on road trucks do not have a tier rating. Again by law they must be complying with a pollution spec from a specific year. Today I believe that all trucks must comply with a 2010 year engine or newer to operate and be licensed in California.

**Ind 204-10** 10) Just received a letter from Rise Gold about NID water. They said they will pay to have NID piped to our address. Is this only before they de-water or can we wait to see if our well is impacted by them and have it done after

2

losing our well? Why should Rise Gold pay our monthly water bill but not the person to whom we sell? How will that effect our selling price? Can we have Rise Gold pipe NID water to our location and not hook up to the service?

Donald Gagliasso
donaldgagliasso@comcast.net

## INDIVIDUAL LETTER 204: DONALD GAGLIASSO

### Response to Comment Ind 204-1
The commenter is opposed to the project. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues. The commenter asks who will pay for NID service to the properties along East Bennett Road identified in the DEIR. As stated in Mitigation Measure 4.8-2(c) of the DEIR, prior to commencement of initial mine dewatering, the Project Applicant shall implement the Well Mitigation Plan by connecting 30 properties in the East Bennett area to the NID potable water system. The Project Applicant shall be responsible for fully funding reimbursement for water charges, for monthly fixed service charges and use of up to 400 gallons per day, will continue until the sooner of the following occurs: 1) the property is sold by the owner after the NID connection is accomplished and paid for by Rise; or 2) the property is annexed into the City of Grass Valley.

### Response to Comment Ind 204-2
The commenter questions the number of truck trips necessary to transport the engineered fill. As stated on page 3-28 of the DEIR, the average transport of engineered fill will be 1,000 tons per day or 365,000 tons per year. A maximum transport rate of up to 2,000 tons of engineered fill per day is required to make up for periodic weather or operational delays. Truck payloads will be approximately 20 tons per truck and therefore will require up to 100 round trips per day and an average of 50 round trips per day. As shown in Table 3-7 of the DEIR, trucking of engineered fill is proposed for 16 hours per day.

### Response to Comment Ind 204-3
The commenter questions whether there will be a local/regional construction market for the engineered fill. The commenter is referred to Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets.

### Response to Comment Ind 204-4
The commenter reiterates concerns with the project's ability to market engineered fill in the local/regional construction markets. The commenter also asks whether the DEIR identifies a specific trucking route, states that the trucking will cause traffic impacts, and questions the need for trucking 24 hours per day, 7 days a week. Regarding using engineered fill for the local/regional construction markets, the commenter is referred to Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets. The project also does not call for trucks to run 24/7. As shown in Table 3-7 of the DEIR, trucking of engineered fill is proposed for 16 hours per day. Trucking routes are shown in Figure 3-13 of the DEIR. Lastly, Chapter 4.12 (Transportation) analyzed traffic impacts with a maximum of 100 round trips per day and found the impacts to be less than significant after mitigation, with the exception of traffic at the SR 174 and Brunswick Road intersection, and Brunswick Road/Sutton Way, where impacts would be significant and unavoidable even with implementation of mitigation.

### Response to Comment Ind 204-5
Please see Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets.

### Response to Comment Ind 204-6
Please see Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets.

## Response to Comment Ind 204-7

Please see Master Response 11 - Engineered Fill Utilized in Local and Regional Construction Markets.

## Response to Comment Ind 204-8

The commenter asks why some of the project components will operate 24 hours a day, 7 days a week. This comment does not pertain to the adequacy of the DEIR. However, a reduced hours alternative where the Idaho-Maryland Mine would operate 12 hours a day was considered but rejected because the Alternative is not anticipated to reduce a significant project impact. (DEIR, p. 6-13–14.)

## Response to Comment Ind 204-9

The commenter states the DEIR is misleading because it states that all off-road construction equipment will be required to utilize Tier 4 Final engines, despite the fact that the State already requires this. Regulations regarding diesel engines are discussed on page 4.3-23 of the DEIR. Contrary to the commenter's assertion, Tier 4 Final engines are not required for all off-road construction equipment in California.

## Response to Comment Ind 204-10

The commenter asks when NID water service would be connected to the property and why the Project Applicant will not pay for a subsequent purchaser of the Property. As stated in Mitigation Measure 4.8-2(c) of the DEIR, prior to commencement of initial mine dewatering, the Project Applicant shall implement the Well Mitigation Plan by connecting 30 properties in the East Bennett area to the NID potable water system. As stated in the Well Mitigation Plan (Appendix K.9 of the DEIR), it is unlikely that the reduction in water column of wells in the E. Bennett area will make these wells unusable. Therefore, property owners may decide to retain and continue using their water wells.

The commenter states that the applicant should pay for water for any parcel connected to NID water supply for the life of the mine, even after the parcel is sold. The Well Mitigation Plan (Appendix K.9 of the DEIR) takes a conservative approach and presumes that an owner who decides to connect to the NID system has been impacted by and at the fault of the mining operation, even if no impact to groundwater well supply has occurred. As such, the Well Mitigation Plan was designed to be even more conservative than Nevada County General Plan Policy 17.12, which requires an impact as a prerequisite to the obligation to pay for water, which policy states "If it is determined that the operator is at fault, impacted owners shall be compensated by the operator." A new homeowner would not be impacted because the impact would have previously occurred, and the cost of purchasing water from NID for that new homeowner would be the same as buying any other home connected to NID's water supply. The provision of free water as a selling feature to a new buyer is not contemplated by the policy.

April 2, 2022

LETTER TO BOARD OF SUPERVISORS OPPOSING REOPENING IDAHO-MARYLAND MINE

Dear Board of Supervisors:

**Ind 206-1** I am not a scientist or an expert of any kind in environmental matters. I have read the draft EIR and the CEA Foundation's response. While the latter certainly represents, at the very least, a difference of opinion regarding the potential environmental impact of reopening the Idaho-Maryland mine, the bottom line for me is that I see VERY LITTLE potential benefit to the Grass Valley community versus a GREAT DEAL OF POTENTIAL RISK.

**Ind 206-2** The regional drought and water issues alone cause me enough concern to SAY NO to reopening the mine. This is a long-term commitment: 80 years. Climate change even now is inflicting untoward and unexpected consequences in Nevada County. If the extreme draught conditions continue – and there is nothing to say that they won't – water will become a scarce commodity. Then what?

**Ind 206-3** At this point, I endorse the findings of the CEA Foundation. Air pollution, noise pollution, water pollution and dumping of harmful substances are all issues that will affect not only the health of human beings and other creatures living in the Grass Valley area, but also many other aspects of quality of life. Clearly, property values will not be enhanced by the close proximity of a gold mine operating 24 hours a day, although that is of less concern to me than the human impact.

**Ind 206-4** Reopening the mine may look like a quick fix to some who are decrying the loss of income from growing marijuana, for example. But such notions are simply short-sighted and lack vision for the future. This is step backward into a past that resulted in all of the detriments folks are concerned about. A self-serving ERI by a company whose reputation is already highly questionable and has no incentive to do any more than the meet the minimum standards of mitigation, is no substitute for the creativity needed to develop new industries to carry us forward.

PLEASE SEE THE ARTICLE BELOW:

### Response to Comment Ind 206-5
The referenced article refers to climate change in the American west, and does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decision makers for their consideration.

**Individual Letter 207**

**From:** Donna Taggart <donnataggart@icloud.com>
**Sent:** Monday, April 4, 2022 4:02 PM
**To:** Idaho MMEIR
**Cc:** DEIRcomments@cea-nc.org
**Subject:** Proposed Rise Gold Mine

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Do not click links or open attachments unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To The Nevada County Planning Commission:

I am writing to express my opposition to the proposed Rise Gold Mine. Although I am not an expert I realize how much impact this operation will have on our community for years to come.
I am especially concerned about the environmental impacts. Although the Draft Environment Impact Report is trying to address mitigation measures to all the environmental problems this operation will create I don't believe all the negatives can be addressed. As an example, the depletion of the water table (especially during a drought) with the solution being to put some residents on NID water is hardly a solution. The water loss will affect residents elsewhere and the Wolf Creek and other streams.

**Ind 207-1**

There is so much more possible pollution to water, air quality, noise levels, and traffic.
Please consider how this will affect quality of life for all residents in our community including wild life and plant life. We all need clean air, water and peace where we live.

Thank you for your help and consideration.

### Response to Comment Ind 207-1

Please see Master Response 1, as well as Master Response 16.

**Individual Letter 208**

Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902

March 12, 2022

Subject: Comments on draft EIR for the Idaho-Maryland Mine Project (State Clearinghouse No. 2020070378)

Dear Mr. Kelley,

**Ind 208-1**

From the first time I heard of the proposal to reopen this old mine my gut reaction was that this was the wrong project in the wrong place. Mining operations satisfy a necessary part of our industrial needs but putting an industrial drill and blast mining operation under and around our homes and businesses seems an obvious mismatch.

Although there are a number of good reasons to deny this project, I will focus on a few of the more onerous issues.

**Dewatering - Wasting Potable Water**

Rise Gold is proposing to pump (dewater) and discharge, into a nearby creek, 3.6 million gallons of ground water every day during their initial dewatering of the mine site. This will be a six month time period. After the first six months they intend to pump 1.2 million gallons of water per day thereafter for as many years as the mine produces profitable gold. They need to remove the water so they can get workers and equipment to the ore bodies.

**Ind 208-2**

According to the CA Legislative Analyst's Office the average water use in California is 85 gallons/person/day. So, during the initial 6-month dewatering phase of this project , Rise Gold will be pumping and dumping enough of our drinking quality ground water to supply 42,000 people with potable water every day. During the operational phase, which will go on indefinitely, enough water will be pumped to supply 14,000 people with potable water every day. This is more than the entire population of Grass Valley. This jaw dropping waste alone, of our most valuable resource, should disqualify this project from further consideration.

In a region where our rainfall and groundwater recharge are becoming more unpredictable every year, (Lake Oroville was unable to produce electricity last summer due to the lowest lake level ever recorded) the idea of discarding this large volume of precious drinking water, relied upon by many of our residents, so a foreign company can cash-in on a mineral resource, is obscene.

**Dewatering - Effect on Residential Wells**

**Ind 208-3**

The mining company has paid for a report that predicts dewatering will have a minimal effect on domestic wells. It is important that we understand that the modeling methods used by Rise Gold generate

yield will be predetermined to define "well damage". Extent/seriousness of measured well damage will trigger pre-determined remedies. Development of well monitoring program will be made an actionable condition of approval. Paid for by Rise Gold and managed by Nevada County Environmental Health Department.

- Rise Gold to provide financial securities, either bonds or cash account, to be used to rectify well damage identified by the well monitoring program. Nevada County will administer funding accounts and determine when use of funds are justified.

- This well monitoring program should allow any and all means to rectify well damage caused by Rise Gold, including installation of piped water systems, property buyouts or mining operational modifications.

**Ind 208-4**

I believe that we should reject this project. But if we don't, we need strong/no nonsense protections in place for our community. Rise Gold needs to back-up their claims that they will not pollute or damage residential and business properties with meaningful financial assurances on top of their promises and marketing puff.

Sincerely,

Doug Farrell, Nevada County Resident

## INDIVIDUAL LETTER 208: DOUG FARRELL

### Response to Comment Ind 208-2
Potential impacts related to whether the proposed project would substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin are addressed under Impact 4.8-2 in Chapter 4.8, Hydrology and Water Quality, of the DEIR. As discussed therein, with the implementation of mitigation, impacts would be less than significant. In addition, an assessment of both project-level and cumulative impacts on potable water supplies is included in Chapter 4.11, Public Services and Utilities of the DEIR. As noted on page 4.11-50, notwithstanding the potable demand of 26.4 acre-feet per year associated with the project, the proposed project would be a net contributor of water to the NID water system as a result of the project's discharge of treated mine dewatering water to South Fork Wolf Creek (850 gpm or about 1,371 ac-ft/yr).

For further detail regarding groundwater related to drought and climate change conditions, see Master Response 16.

**Ind 209-1**

Having been around here since the 1960's I have seen a whole lot of what was attractive about this area change for the worse. Unfortunately reopening the Idaho Maryland mine would be yet another polluting eye sore with more traffic, noise and potential water issues for any one in the area.
I encourage the commission to stand behind the majority of the residents in NOT Approving the reopening of the mine.
Best Regards, Doug Haussler
(home owner in the Greenhorn road area)

**Individual Letter 210**

Matt Kelley, Senior Planner
NC Planning Department
950 Maidu Ave. Suite 170
Nevada City, Ca 95959

March 15, 2022

Dear Nevada County Board of Supervisions,

**Ind 210-1** I am writing this letter in opposition to the reopening of the Idaho-Maryland Mine. I was raised in Grass Valley and my husband and I are registered voters here in Nevada County and we are deeply concern about Rise Mining Company intentions.

We have a number of concerns and here is why we are opposed to the reopening of the mine: The depletion of our well water. We live on Greenhorn Road, just one mile from the mine site. The real possibility that we could lose or end up with contaminated water is very real.

**Ind 210-2** Traffic. What a traffic nightmare it will be if the planned 100 trucks coming and going 24/7 comes to fruition, let alone the damage to our roads. The congestion for people going to work and school will be horrendous, besides the potential of accidents. This will cause significant traffic issues on East Bennett St, Brunswick Road and Hwy 174.

**Ind 210-3** We are also concerned about the Greenhouse gases and noise pollution that mining will produce.

**Ind 210-4** Keep our county an area that people want to live in. Clean living, water, air and less traffic. Is the pursuit of gold really worth the environmental destruction? The real potential for significant and unavoidable auto accidents with 20 ton trucks and the cars and school buses that travel this route is a valid concern for everyone.

**Ind 210-5** We believe that gold being removed by a foreign company who has no interest in our community should be avoided at all costs and ask the everyone vote NO to Rise Mining Company.

Sincerely,
Ed and Lynette Cepeda
13663 Greenhorn Road
Grass Valley, CA 95945

## INDIVIDUAL LETTER 210: ED AND LYNETTE CEPEDA

### Response to Comment Ind 210-1
Please see Master Response 1.

### Response to Comment Ind 210-2
Regarding concerns about increased traffic resulting from the proposed project, please refer to Chapter 4.12, Transportation, of the DEIR. As discussed on page 4.12-67 of the DEIR, all segments along Brunswick Road and E. Bennett Road would continue to operate at LOS D or better under EPAP Conditions, while the SR 174 segment would continue to operate at LOS E. However, the proposed project would have minimal effect on the segment of SR 74 from EPAP Conditions. As such, the DEIR concluded that impacts to study roadway segments under the EPAP Plus Project Condition would be considered less than significant.

### Response to Comment Ind 210-3
Please see Master Response 1.

### Response to Comment Ind 210-4
The DEIR addressed impacts regarding whether the project would substantially increase hazards to vehicle safety under Impact 4.12-6, and concluded that with Mitigation Measures 4.12-6(a) through 4.12-6(f), a less-than-significant impact would occur. Therefore, impacts related to hazardous roadway conditions were adequately addressed in the DEIR.

**Individual Letter 216**

**From:** EJ Sheffner <edsheffner@gmail.com>
**Sent:** Monday, April 4, 2022 3:57 PM
**To:** Idaho MMEIR
**Cc:** DEIRcomments@cea-nc.org
**Subject:** Comments on DEIR for Idaho Maryland Mine

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Do not click links or open attachments unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

I am a tax payer in Nevada County and part time resident, although my family has resided in the county since the 1970's. My primary concerns about the DEIR are as follows:

**Ind 216-1** • The report acknowledges that the operation of the mine will have an impact on environmental factors including air quality, water quality, traffic, noise etc, but it does not consider the cumulative impact of all those factors on the quality of life. The mitigation factors considered for each element of the report will, at best, reduce the impacts, but will not eliminate them. The cumulative effect of the fully mitigated impacts is not described or considered, and the final EIR should do so.

**Ind 216-2** • The DEIR appears to rely on existing state and federal environmental regulatory agencies to assure that the mine operation meets the environmental standards established in the use permit(s) and that those agencies will take appropriate action in a timely manner to alter or shut down the mine operation if necessary. If that is the approach recommended it is likely to be inadequate and the final EIR should include more comprehensive and timely monitoring and enforcement mechanisms.

**Ind 216-3** • The DEIR appears to assume that any environmental standard of the mine operation not met will be discovered quickly (if not immediately) and that corrective action will be taken. The report does not describe how that monitoring will occur or the potential impact should, for example, air quality or water quality standards be exceeded for weeks, months or longer.

Edwin Sheffner
13920 Miller Road
Nevada City
edsheffner@gmail.com

1

## INDIVIDUAL LETTER 216: EDWIN SHEFFNER

### Response to Comment Ind 216-1

As described on page 5-3 of the DEIR, CEQA Guidelines Section 15130 requires that an EIR discuss the cumulative and long-term effects of the proposed project that adversely affect the environment. A discussion of cumulative impacts is provided in each of the technical Chapters of the DEIR, and further information regarding the cumulative analysis and the cumulative setting used within the DEIR is provided in Chapter 5, Statutorily Required Sections, of the DEIR. As such, cumulative impacts were adequately addressed within the DEIR.

### Response to Comment Ind 216-2

Please refer to Master Response 1. Where a comment provides the opinion, preference, or observation of the commenter (e.g., opinions on the merits of the project that are unrelated to its environmental impacts), without substantiation, this is acknowledged for the record, and no further response is provided. All comments, whether substantiated by facts or simply reflecting the position of the commenter, will be considered by the County throughout this process.

### Response to Comment Ind 216-3

Please refer to Master Response 1. As discussed under impact 4.3-1 in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR (see page 4.3-73), according to the NSAQMD, implementation of recommended mitigation measures for Level A and B thresholds (included as Mitigation Measure 4.3-1[b] below) would reduce project impacts to a less-than-significant level during all years of project construction, operations, and reclamation. Impacts to water quality are addressed in Chapter 4.8, Hydrology and Water Quality, Impact 4.8-1, of the DEIR. As discussed therein, all potential sources that could result in water quality degradation are proposed to be managed in a manner that would minimize potential water quality impacts. Furthermore, these activities would be regulated and monitored through permitting by the RWQCB, which would be required prior to the onset of mine dewatering and construction. Mitigation Measures 4.8-1(a) through 4.8-1(e) were included within the DEIR to ensure compliance with the aforementioned requirements.

FEB 24 2022

NEVADA COUNTY
BOARD OF SUPERVISORS

February 22, 2022

To: The Nevada County Board of Supervisors

Re: Re-opening the Idaho Maryland Mine

I am writing to the Board to express my concerns about the plan to re-open the Idaho Maryland Mine property by a company calling itself Rise Grass Valley.

My family and I have lived in Nevada County for more than 40 years. Grass Valley has been our home and the community environment surrounding our place has been a good, positive space to raise our children and now our grandchildren.

The Environmental Impact Report has been published and widely distributed by Rise Gold, which now is naming itself, Rise Grass Valley . The report claims no significant impacts will occur to water, air quality, and the natural environment from noise or vibrations during mine operations. Where is the conversation about whether this type of business is appropriate for Nevada County? Where are the details on how long it will take this business to achieve the positive economic impact stated in their ads and brochures? What recourse does Nevada County have if operations don't proceed as proposed by the company?

**Ind 217-1**

Spending money to publish ads in The Union and sending brochures in the mail to generate support for their project has not been looked upon as a way to gain confidence. They are using the history of past mining of the Idaho Maryland Mine as a reason to accept the idea of a profitable repeat of the mine experience. There are legitimate concerns about correcting mistakes, cleaning up accidents, and acting responsibly in the wake of possible mismanagement of the project. The reputation of Rise Gold is not trustworthy.

**This not a business that Nevada County needs or wants operating in our communities.**

I ask that you vote **"no"** on this matter when it comes before you. The people of Nevada County will not be able to cast their vote except through your actions – so consider well your important responsibility of representing the voters.

We depend upon the Planning Commission and the Board of Supervisors to look after the best interests of the communities of Nevada County. This project does not further the goals stated by the Board of Supervisors.

Elaine Westfall 557 Blight Rd. Grass Valley 95945

**Individual Letter 219**

**From:** swoolman
**To:** Idaho MMEIR
**Cc:** swoolman
**Subject:** EIR Idaho-Maryland Mine Project
**Date:** Saturday, February 5, 2022 8:15:20 AM

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hello Mr. Kelley,

I have waded through the Draft EIR for the Idaho-Maryland Mine proposal, the arguments against allowing the mine to go forward and the arguments put forth by Rise Gold in favor of their project.

And, have concluded that the many highly negative impacts and potential risks for an extremely long time outweigh any of the benefits to the community that the mine might have.

**Ind 219-1**

So..I suggest that the proposed mine use of the property be denied.

Thank You,

Elaine Whooley

20493 New Rome Road
Nevada City, CA 95959

As a side note... the use of the term, "no significant impact," in the EIR seems to be a very subjective, or at least limited, assessment in what should be an objective presentation of facts.

**Ind 219-2**

## INDIVIDUAL LETTER 219: ELAINE WHOOLEY

### Response to Comment Ind 219-1

Please see Master Response 1.

### Response to Comment Ind 219-2

As discussed in Section 4.0.4, Determination of Significance, in Chapter 4.0, Introduction to Analysis, of the DEIR (see page 4.0-2), four categories of impacts were used for the project-specific impacts within the DEIR: no impact, less than significant, significant, and significant and unavoidable. The CEQA Guidelines require that the determination of significance be based on scientific and factual data. The specific criteria for determining the significance of a particular impact are identified within in each technical chapter of the DEIR, and are consistent with significance criteria set forth in the CEQA Guidelines, based on the professional judgment of the EIR preparers, or supported by substantial evidence in the record considered by the County as the CEQA Lead Agency. As such, the DEIR adequately addressed all impacts based on significance criteria set forth in the CEQA Guidelines.

**Individual Letter 220**

**Ind 220-1**

I do not support

**I ~~support~~ re-opening the Idaho-Maryland Mine**

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for the next and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

**Ind 221-1**

Acid mine drainage is still prevalent in Wolf Creek today from mining activities that ceased decades ago. The "Reclaimed Condition" section (pg. 8-50) states that "Once mining is completed, dewatering ceases, and the underground workings are allowed to flood with groundwater, the same reducing conditions that occur under existing conditions within the mine workings would develop again, preventing oxidation of sulfide minerals". This statement neglects the fact that sulfide minerals will be exposed to air during the 80 years of mining operations. When dewatering ceases, acid mine drainage will inevitably reoccur.

1

## INDIVIDUAL LETTER 221: ELI DUBER

### Response to Comment Ind 221-1

The commenter states that acid rock drainage is still prevalent in Wolf Creek from historic mining and would reoccur once dewatering ceases. The commenter also states that oxidation would occur after the mine is dewatered and during the 80-year project, which would lead to acid rock drainage. It is important to note that acid rock drainage has not occurred from historic mining of the Idaho-Maryland Mine. (Master Response 9 – Historical Mine Waste at Centennial Site.) Although oxidation of sulfide minerals may occur after the dewatering process, carbonate minerals in the project host rock, would quickly neutralize any acid. (DEIR, p. 4.8-49; Appx. K.2, p. 13.) Further, mitigation measures require the applicant to submit a Report of Waste Discharge (RoWD) and receive approval of Waste Discharge Requirements (WDRs) from the Central Valley Regional Water Quality Control Board (CVRWQCB) prior to the placement of cemented paste backfill (CPB). (see Mitigation Measure 4.8-1(d) relating to CPB and for engineered fill (barren rock and sand tailings) see Mitigation Measure 4.8-1(e)). The CVRWQCB will determine the appropriate method of rock testing for the purposes of developing WDRs. Please also see Master Response 8 – Mine Waste Characterization.

As discussed on page of Appendix K.2 of the DEIR, the restoration of the post-mining discharge through the drains would be comparable to existing conditions and, thus, not an impact under CEQA. (DEIR Appx. K.2, p. 109.) However, once the mine discharge from the drains resumed, compliance measures may be required by the CVRWQCB to address the Basin Plan, antidegradation, and other water quality standards. These measures might include sealing off areas of the underground workings that are the primary source of arsenic in the existing drain water, sealing the underground workings sufficiently to prevent seepage of water from the connected mine workings, obtaining an Individual NPDES permit upon closure, or treating of the mine water seeps after closure.

**Individual Letter 222**

**From:** Eli Ferrier
**To:** Idaho MMEIR
**Subject:** Idaho Maryland Mine statement
**Date:** Monday, April 4, 2022 9:50:29 AM

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Senior Planner Matt Kelley,

**Ind 222-1** I live in a neighborhood very near the mine site. I am about 2-3 miles away and in the wolf creek drainage. Our well is a shallow well (80ft deep) and my concerns about the impact of the proposed mine have not been assuaged by reading the EIR from Rise Gold company. The low number of wells that is stated would be affected by the massive hydrologic changes to the area would not include my home or my neighbors. Yet, following the basics of hydrology, It seems likely that my well would very likely be dewatered by a lowering of the water table due to the pumping proposed mine site.

**Ind 222-2** I firmly believe that the mine is a foolish and short sighted venture that will lower property values and would be the final straw for born and raised locals, myself and my family, to finally give up on this place and move away. The impacts of noise and truck traffic in our rural neighborhood seem inescapable and these impacts, when coupled with the high stress of fire season, I would likely leave and take my two businesses with me.

Please stop this mine.

Many Thanks,

Eli Ferrier

**Subject:** Idaho-Maryland Mine DEIR Comments
**Date:** Sunday, April 3, 2022 1:04:49 PM

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley,

**Ind 223-1** My husband, Ken, and I have been residents of the Wawona Madrono subdivision of Grass Valley for over 5 years. Our house is located just outside the northeastern border of the Idaho-Maryland Mine mineral rights area and is under a mile, as the crow flies, from both the Centennial and Brunswick Industrial sites. After reviewing the DEIR, we believe the Report to be inadequate for the reasons noted below.

**Ind 223-2** Our first major concern is water. One of the biggest risks posed by the mine is the possibility of damaging or destroying our wells, yet the DEIR only includes protections for 30 well owners off of Bennett Road and even those protections are inadequate as they cover the first 5 years, not the full 80 years of mining planned. The Report repeatedly acknowledges the high level of uncertainty in hydrological models. Yet, there is no acknowledgement of risk or plan to safeguard the roughly 525 private wells within a ½ mile of the mineral rights boundary which includes our well. We rely on our well as the cost to hook up NID water was prohibitive for us. Given the effects from mine dewatering, probable contamination, and drought, the Report's proposed mitigations are invalid and inadequate.

**Ind 223-3** Our second major concern is noise and glare. The mine will be operating 24/7 with many mine operations occurring during the night. Sound carries, especially at night, so we fully expect the noise decibel and light level to increase exponentially disrupting sleep. Moreover, the plans for blasting don't follow the U.S. mining guidelines that restrict blasting during evening hours. Thus, in this area too, the DEIR fails to correctly address these matters.

**Ind 223-4** Our next major concern is air pollution and traffic. Trucks traveling between the industrial sites will be spewing toxic dust particles into the air. Traffic safety too along Brunswick, an already busy and dangerous road, will be adversely impacted. Just in the last 12 months, there was a fatal accident at the intersection of Brunswick and Loma Rica. Yet, the DEIR has downplayed the traffic volume and called Brunswick a low-traffic road.

Finally, the potential negative impacts to our water, air, land, health, property, and environment as a whole cannot be understated. The final EIR must fully and accurately identify the risks posed to the entire area within the mineral rights boundary and a complete set of safeguards to protect our community now and in the future.

**Ind 223-5** Thank you for your attention and consideration to this critical matter.

Sincerely,

Elise and Ken Stupi

13068 Madrona Leaf Court
Grass Valley, CA 95945

## INDIVIDUAL LETTER 223: ELISE STUPI

### Response to Comment Ind 223-1

This comment is introductory in nature and the commenter states that the DEIR is inadequate. Responses to specific comments are provided below.

### Response to Comment Ind 223-2

The commenter states that the DEIR understates the number of private wells potentially impacted from the dewatering of the mine and is generally concerned about dewatering the mine during a drought. The commenter is referred to Master Response 7 - Location of Future Mining Areas, Master Response 14 - Adequacy of Groundwater Model, Master Response 15 - Adequacy of Groundwater Monitoring Wells, and Master Response 16 - Drought and Climate Change. As noted in Master Response 15, the applicant has now provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

### Response to Comment Ind 223-3

The commenter states that the project would cause adverse noise and glare impacts, especially with regard to operations at night, but does not identify how the DEIR is inadequate in this regard. The DEIR analyzes noise from operations, including during the night, and found the impacts to be less than significant after mitigation. The commenter is referred to Chapter 4.10 (Noise and Vibration) of the DEIR and Response to Comment Grp 21-130.

Regarding the impacts from glare, the DEIR states that the project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area, and a less than significant impact would occur. (DEIR, p. 4.1-29.) As stated on page 4.1-24 of Chapter 4.1:

> Based on the proposed lighting types and locations discussed above, a Photometric Plan was prepared for the Brunswick industrial Site by a registered professional electrical engineer (M. Niels Engineering, Inc.). Figure 4.1-2 through Figure 4.1-5 present the Photometric Plan and increases in visible light that are estimated to occur following implementation of the proposed exterior lighting plan. Key considerations include effects to the night sky, which are addressed through the lighting types proposed, as discussed above. The other key consideration are the lighting intensities at the property boundaries near locations where existing sensitive receptors are in close proximity.
>
> As shown in the figures, the lighting intensities at the northern property line, near East Bennett Road, are at 0.0 foot-candles[9], and thus, light spillover is not projected to occur off-site. The nearest proposed pole-mounted LED, which is International Dark Sky Association compliant, would be located approximately 100 feet from East Bennett Road. Thus, the existing sensitive receptor along New Brunswick Court would not be impacted by light spillover from the proposed on-site lighting. Similar conclusions can be made for the remainder of the property boundaries, based on the Photometric Plan; no light spillover is projected to occur at the property boundaries. Furthermore, the proposed buildings would be painted with nonreflective, nonmetallic paint, which would not cause glare. Lighting or reflective surfaces would not be added upon reclamation of the Brunswick Industrial Site, and reclamation activities would not occur at night.

Lastly, the commenter states that project does not adhere to federal mining guidelines for blasting during nighttime hours. The commenter is referred to Response to Comment Grp 21-144.

## Response to Comment Ind 223-4

The commenter is concerned about air pollution and traffic and states that the DEIR understates the amount of traffic on Brunswick Road. Traffic impacts from trucks are evaluated in Chapter 4.12 (Transportation) of the DEIR and are less than significant after mitigation, with the exception that the impact to the intersection at SR 174/Brunswick Road would be significant and unavoidable even after implementation of mitigation. Air emissions from the project are less than significant after mitigation. The commenter is referred to DEIR Chapter 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy). Mitigation Measure 4.3-2 of the DEIR requires an Asbestos Dust Mitigation Plan which requires that trucks used for hauling material off site shall be maintained such that spillage cannot occur from holes or other openings. All loads to be hauled off site shall be adequately wetted to prevent visible dust from escaping during transportation and shall either be completely covered with tarps or have at least six inches of freeboard on the sides of the bed of the vehicle, with no excavated material extending above the edges of the vehicle bed at any point.

## Response to Comment Ind 223-5

The commenter generally states that impacts to water, air, land, and health must be fully analyzed but provides no additional information and does not state how the DEIR is inadequate. The commenter is referred to Chapters 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), 4.4 (Biological Resources), and 4.8 (Hydrology and Water Quality) of the DEIR. The commenter is also referred to Master Response 7 - Location of Future Mining Areas. The commenter also states the project will impact property values. The commenter is referred to Master Response 2 - Social and Economic Impacts.

**Ind 224-1**

Good afternoon,
I am writing to ask that Matt Kelley, Senior Planner, be encouraged to comment on the Draft Environmental Impact Report submitted by Rise Gold. It is imperative that all components of this project are well researched and deeply considered. The health of our water and our children rests on this decision.
Please do what is best for the health of your community. There are other ways to improve our employment rates/job availability. We must learn from the mistakes of the Past and make better decisions for our Future.
Most sincerely,
Elise Zink

## INDIVIDUAL LETTER 224: ELISE ZINK

### Response to Comment Ind 224-1

The comment does not address the adequacy of the DEIR. Please see Master Responses 1 and 2. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

Nevada City, CA 95959-7902

Re: Comments on the DEIR on the Idaho-Maryland Mine Project
Dear Mr. Matt Kelley,

**Ind 225-1**

I am writing to you to express my opposition to the possibility of the Rise Grass Valley (subsidiary of Rise Gold) project moving forward. We moved our family to the Nevada City area 7 years ago, attracted by the thriving local communities in Grass Valley and Nevada City, which include a strong and balanced economy of retail, industry, construction, professional jobs, and arts. The area's natural beauty, slowly won back since the original mining devastated the area, attracts tourists and new residents.

It is foolish and short-sighted, not to mention unnecessary, to reintroduce mining into the community. We need to focus economic activity in our community on businesses that will be here for the long haul, not here to mine gold briefly and leave behind a legacy of environmental degradation as Rise Gold CEO Benjamin Mossman has done at his bankrupt Banks Island Gold site in British Columbia. Those of us who live here have a vested interest in ensuring the long-term health of the community. Rise Gold does not.

**Ind 225-2**

Community health is predicated on having clean water and air. The DEIR (pg 201) indicates that the project will use 1,224,00 gallons per day of water. The DEIR goes on to detail that only a small part of this water will come from NID. The Well Mitigation Plan (Appendix K9) indicates that the 'expert opinion' of Rise Golds hydrology analysis is that only 1 well may be negatively impacted by the mines water use (Appendix K9, pg 1). Yet the firms used to develop the analysis and reports are firms that cater to the industry – it is in their best interest to make the project possible for Rise Gold!

The findings of the 'expert opinion' are highly suspect; they did not include any actual well monitoring during the dewatering done for mine exploration (5-year project beginning in 1996).

Those of us who live here in Grass Valley and Nevada City will shoulder all the risks, but we are being asked to put our trust in Rise Gold that they will follow through on all the testing described in the DEIR. We are also expected to trust that no one outside of the underground activity area will be impacted, since all monitoring wells, except one, detailed in the DEIR (Appendix K8, Figure 1) are within the Mineral Rights Boundary.

**Ind 225-3**

In addition to water availability issues around the massive water use by the mine, I also wonder where all this water will go. Table 2-1 of the DEIR indicates mitigation measures are not required to deal with expanded "water, wastewater treatment, or storm water drainage" (Impacts 4.11-6 and 4.11-8) needs due to the mine. Pages 177-180 then goes on to detail an on-site water treatment facility to treat water before it is dumped into South Fork Wolf Creek. This treatment being planned for implies that the mine *will* produce wastewater that

1

requires treatment. However, the plan never addresses how this system will deal with extreme weather events. One spill of toxic wastewater can lead to irreparable harm to downstream ecosystems.

Consider a snow event followed by rain, which would lead to a rapid melting of the snowpack and massive runoff. When a severe flood event hits, how will the mine deal with all the water coming through their treatment ponds? Our community will be stuck with the aftermath, just as the Gitxaala Nation was stuck with the mess from mine waste overflowing into the surrounding environment at Benjamin Mossman's bankrupt Banks Island Gold site after heavy rains hit the site June 24-25 of 2015.

It's common civil engineering practice to design to the 25-year flood event. Unfortunately, severe weather events are becoming more common. The DEIR makes no mention of planning for flood events, certainly not 100-year flood events, not even 25-year flood events. This shows a callous disregard for the communities his mines operate in. He and his mine are no friend to our community.

**Ind 225-4**

Grass Valley and Nevada City already have bad air as we receive pollution from Sacramento and the Bay Area. We don't reap their tax dollars, but we do get their air pollution. If the Idaho-Mayland Mine is approved we will enjoy the pollution from all the heavy trucks and machinery, the dust created by this operation. This dust that will contain asbestos, and silica among many other harmful contaminants that will affect us all, but especially children and those with asthma and other illnesses. According to the California Air Resources Board (CARB) "identified DPM (Diesel Particulate Matter) as a toxic air contaminant based on published evidence of a relationship between diesel exhaust exposure and lung cancer and other adverse health effects." And "these effects include premature death, hospitalizations and emergency department visits for exacerbated chronic heart and lung disease, including asthma, increased respiratory symptoms, and decreased lung function in children. Several studies suggest that exposure to DPM may also facilitate development of new allergies. Those most vulnerable to non-cancer health effects are children whose lungs are still developing and the elderly who often have chronic health problems."

(https://ww2.arb.ca.gov/resources/overview-diesel-exhaust-and-health) The DEIR claims no significant impact coming from mine operations. It is patently absurd to think that all the diesel exhaust, asbestos, silica and other contaminants that will soon be in our air (and lungs) if mine operations begin will have no impact or be less than significant (Table 2.1). This is so outrageous it would be laughable–if it weren't for the fact that our community will suffer the health impacts for decades to come.

**Ind 225-5**

One last item – traffic. Let's pick just one traffic issue from the DEIR, the SR-174/Brunswick Road intersection. The DEIR indicates significant impact. The mitigation "project's fair share contribution toward the improvements necessary to improve intersection operations to an acceptable level. The Agreement shall include the fair share calculations and total payment amount. Based on the Caltrans methodology to assess fair share, it is estimated that the fair share percentage is 14.9%." So Rise Gold will be paying just 14.9% of the mitigation costs at this one intersection? Residents of the region will be suffering the result of all this truck traffic, including the impediment to rapid emergency response by our firefighters and emergency workers – and *we'll* also be footing most of the bill for the mitigation!

**Ind 225-6**

These issues with the DEIR are just the tip of the iceberg. I urge you to see this DEIR for what it is, a document crafted to hide and obfuscate the damage this mine will do in order to get the project approved. There are hundreds of millions of dollars at stake for Rise Gold, and they will do what it takes to try to get this approved. This community, and its elected and appointed officials, need to see through the disingenuous claims of no harm that are repeated throughout the DEIR. In our own community we are still cleaning up from the prior generation of hard rock mining, and in communities throughout the globe, hardrock mining leaves a wake of devastation to the environment and communities as it mines profits at our expense.

Sincerely,
Elissa Preston, RN
Benjamin Preston, teacher
Nevada County residents

## INDIVIDUAL LETTER 225: ELISSA AND BENJAMIN PRESTON

### Response to Comment Ind 225-1

This comment is introductory and the commenter opposes the project and references the project Applicant's prior mining project. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues, and Master Response 3 – Operator Responsibility.

### Response to Comment Ind 225-2

The commenter states that DEIR and supporting studies are biased in favor of the Project Applicant. However, the DEIR notes that an independent consultant, West Yost, peer reviewed several hydrology-related studies and after implementation of certain revisions, agreed with their findings. (DEIR, p. 4.8-40.) The commenter is referred to Master Response 7 - Location of Future Mining Areas, Master Response 14 - Adequacy of Groundwater Model, and Master Response 15 - Adequacy of Groundwater Monitoring Wells. The analysis provided in Section 4.8-2 of the DEIR concludes that the proposed mining operations could result in adverse effects to seven domestic water supply wells in the East Bennett area during the life of the mining operation. No significant impacts to domestic water wells are predicted in other areas. The predictions include the use of a 100% safety factor, multiple sensitivity scenarios, and have been peer reviewed by the County's independent expert consultant.

### Response to Comment Ind 225-3

The commenter is concerned that an extreme weather event could overwhelm the onsite wastewater treatment system before the mine water is treated. As discussed on page 4.8-73 and -74 of the DEIR:

> Based on a 2019 survey by Nevada City Engineering, Inc., the volume of the pond with two feet of freeboard below the elevation of the emergency overflow spillway is 23 acre-feet. The freeboard volume is 6.6 acre-feet. The spillway is also two feet below the lowest point on the berm surrounding the pond. At the maximum mine dewatering rate of 2,500 gpm, the pond has the capacity to hold the volume of water that would be dewatered during two days of pumping. At the maintenance dewatering rate of 850 gpm, the pond has the capacity to hold the volume of water that would be pumped over more than six days. The total runoff from the 6.4 acre watershed for the pond resulting from a 100-year, 24-hour storm would be approximately 5.7 acre-feet. Thus, the freeboard volume is more than adequate to retain the runoff from an extreme storm event. Overall, the existing clay-lined pond has more than adequate capacity to accommodate operational flexibilities for dewatering and water treatment, and to retain stormwater runoff from the area surrounding the pond.[39]

### Response to Comment Ind 225-4

The commenter states that the DEIR incorrectly states air quality impacts will be less than significant but does not explain why the DEIR is inadequate. The commenter is referred to Chapter 4.3 of the DEIR which provides the analysis of air quality impacts and health risk assessment. As discussed in Section 2.1 of the Health Risk Assessment for the project, implementing the OEHHA Guidance, as was done for the project, reflects conservative, health-protective methodologies to assess health impacts to adults, as well as infants, children, and other sensitive subpopulations. For example, the reference exposure levels (RELs) used in the evaluation of non-cancer risk are designed to protect the most sensitive individuals in the population, including infants and children, by selecting appropriate toxicological data and including margins of safety. Accordingly, the evaluation methods are assumed to protect children and other sensitive subpopulations (groups

of more highly susceptible individuals) from adverse health effects in the event of exposure. A similar approach was taken for cancer risk, which accounts for the higher sensitivity of infants and children by applying age-specific daily breathing rates and age-sensitivity factors (ASFs), as well as conservative exposure period, fraction of time at home, and cancer potency factors as recommended by OEHHA.

Asbestos and silica release have been evaluated in the DEIR. Please see Master Responses 21 and 22.

## Response to Comment Ind 225-5

The commenter takes issue that the Project Applicant's fair share contribution towards transportation improvements is 14.9%. As stated in CEQA Guidelines Section 15041(a), Authority to Mitigate:

> A lead agency for a project has authority to require feasible changes in any or all activities involved in the project in order to substantially lessen or avoid significant effects on the environment, consistent with applicable constitutional requirements such as the "nexus" and "rough proportionality" standards established by case law

As stated above, the mitigation obligation of the project must be roughly proportional to the project's contribution toward the impact.

Regarding impeding firefighters and emergency workers, the commenter is also referred to Master Response 5 - Evacuation Zones.

## Response to Comment Ind 225-6

The commenter concludes with a general statement of opposition to the project. The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 226**

Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902

RECEIVED
MAR 30 2022
NEVADA COUNTY
PLANNING DEPARTMENT

March 2022

Dear Planning Commission and Board of Supervisors,

I write to express my complete disapproval of the plan to reopen the Idaho-Maryland Mine. The reasons are many.

**Ind 226-1** While Nevada County has it's history based on mining, that time has come and gone. Nevada City/Grass Valley has transitioned into a tourist destination and a quiet, residential community. A mine destroys all of that. Mining is loud, pollutes, does not create as many jobs as Mossman's group would have us believe, and our roads are not equipped to handle the amount of traffic the mine would generate. These are small towns that would be forced to put up with 24/7 operations starting early in the am and lasting well into the evening.

**Ind 226-2** It is surprising that we would even consider this option presented by Ben Mossman who has a proven track record for his deceitful and irresponsible, i.e., criminal, actions with his mine in Canada. Let me remind you that he was convicted of environmental crimes in Canada, which he is currently appealing. You have allowed him to present an "independent" draft EIR that hardly addressed the many problems this mine would create. Their tactics for swaying the community to be in favor are slick at best. It was a fine PR campaign but they have lied to all of us on their shiny brochures and they have solicited input from a wide circumference of communities that would not be impacted. Let's focus on how the immediate community would be affected. You had an enormous outpouring of the local community at the March 24th hearing which spilled outside of the building even though you met on a workday morning. The Board of Supervisors need to listen to the people they were elected to represent. They must be honest and represent us.

**Ind 226-3** In addition to the above, the timing seems preposterous to consider opening a mine, which will require a significant amount of water, during a historic and ongoing drought. Not only does this affect the wells of the people near the mine, it is also an extremely important factor considering we live in an area of extreme fire danger. You have had experts present on this. Please listen to this. Not only is it our water source that we need to protect, you also need to consider the additional amount of pollutants added to an area that is already heavily exposed to contaminants every single time we have a fire and our air quality is hazardous. The health considerations for our community are tremendous.

This proposal is for an 80 year commitment. Think about that, most of us will be dead by the time that contract expires. Our children won't be or maybe they will be

from the health consequences. Or, they might simply move away because the environment will have become intolerable.

I ask that you please follow the desires of this community by not allowing this project to move forward.

Sincerely,

Elizabeth Mendelsohn
13186 Nob Hill Dr.
Nevada City, CA 95959
elizabeth@photoncreative.com

## INDIVIDUAL LETTER 226: ELIZABETH MENDELSOHN

### Response to Comment Ind 226-1

The comment does not address the adequacy of the DEIR. Please see Master Responses 1 and 2. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 226-2

Please see Master Response 3. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

### Response to Comment Ind 226-3

Please see Master Response 16 in regard to drought and climate change. In addition, wildfire impacts are addressed in Chapter 4.13, Wildfire, of the DEIR, as well as Master Response 6. Air quality is addressed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

**Individual Letter 227**

**From:** Liza Barron <lizabarron88@gmail.com>
**Sent:** Monday, April 4, 2022 1:16 PM
**To:** DEIRcomments@cea-nc.org; Idaho MMEIR
**Subject:** Comment on Idaho-Maryland Mine DEIR

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Good Afternoon,

I'm Elizabeth Barron. I wanted to express my concern about the potential re-opening of the Idaho-Maryland mine. I have lived in Grass Valley for nearly 6 years and I intend to make this my home for a very long time. After reviewing the DEIR I am concerned about noise, and air pollution.

**Ind 227-1**

I live only 1.5 miles from the mine and the DEIR does not sufficiently assess or mitigate potential noise impacts. Per the *Idaho-Maryland Mine Project, Nevada County, CA Acoustical Comments on Draft Environmental Impact Report Salter Project 22-0039*, "nighttime noise is not adequately addressed in the DEIR. It outright dismisses the potential for noise impacts due to sleep disturbance and inappropriately excludes this consideration from the analysis." As a Registered Nurse I work and night and sleep during the day. If noise levels are above acceptable levels at night, how will they be during the day when I am trying to sleep between shifts?

Aside from noise, I care more about the health and we'll being of me and my neighbors.

**Ind 227-2**

The DEIR does not adequately address toxic material mitigation like asbestos. According to a review by Pam Heard RRT, "Just because Rise believes that they will be able to control the distribution of material to 0.01% asbestos content does NOT mean that they can control the amount of asbestos in the actual mined material. The content of asbestos in the serpentinite is unknown until tested-this requires blasting, excavation, crushing, skipping, conveyance to the surface, deposition and storage to then be followed by testing. Ventilation from the mine during these underground processes will emit asbestos to the ambient environment. This quantity of asbestos emissions is unknown and CANNOT be assumed to be only 0.01%.... The World Health Organization (WHO) concurs that there is no safe level of asbestos exposure."

There are several other issues not addressed in the DEIR. Inadequate estimates of mining impact will put peoples health at risk. In a community that has an large percentage of elders with chronic health problems like cancer and cardio-pulmonary disease, we don't need it to get worse.

**Ind 227-3**

We need to protect our community. Thank you for taking the time to read my comments.

Elizabeth Barron
408-410-1465

## INDIVIDUAL LETTER 227: ELIZABETH BARRON

### Response to Comment Ind 227-1

The commenter states that the DEIR's analysis of noise impact are inadequate with regard to sleep disturbance. The commenter is referred to Response to Comment Grp 21-130.

### Response to Comment Ind 227-2

The commenter states that the DEIR inadequately addresses the risks poses by asbestos emissions. The commenter is referred to Response to Comments Grp 7-6, 7-7 and Master Response 18 - Air Quality Thresholds.

### Response to Comment Ind 227-3

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Individual Letter 228**

**From:** elisabeth linsky <seenskincare@gmail.com>
**Sent:** Monday, April 4, 2022 10:25 AM
**To:** Idaho MMEIR
**Subject:** The Mine

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To Whom it May Concern,

**Ind 228-1** I am deeply concerned about plans to reopen the Idaho Maryland Mine. It will be incredibly destructive to our local lands. We should not be considering damaging our lands for the sake of profit. There are countless ways the mine could have damaging effects reported in the DEIR that concern me.

-The poor air quality. We already navigate dangerous air quality during fire season.

-A potential loss of water. California can't afford to lose any more water!

**Ind 228-2** -Potential contaminants and hazardous materials. The process to reopen the mine requires pumping water from the existing mine, filtering and releasing it into our beloved Wolf Creek. What about the chemical compounds used in mines? It's just dangerous. We know better.

**Ind 228-3** -The impact on the flora and fauna of the area.

**Ind 228-4** -What about the quality of life for the neighborhoods nearby?

**Ind 228-5** If the company were to go bankrupt or abandon its interests, which has historically often happened, it will be up to us locals to repair what remains. Our county has a long history of dissemination of our beautiful lands in the name of greed. We can't let history repeat itself once again. We need to take a stand for our future.

Fifteen year resident and business owner in our dear Nevada County,

Elisabeth Linsky
seenskincare@gmail.com
415-745-0826

## INDIVIDUAL LETTER 228: ELISABETH LINSKY

### Response to Comment Ind 228-1

Please see Master Response 1. Air quality is addressed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR. Please also see Master Responses 13 through 16 regarding groundwater. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 228-2

Please refer to Chapter 4.7, Hazards and Hazardous Materials, of the DEIR for more information related to mining waste. In addition, please see Master Response 35 – Discharge to South Fork Wolf Creek. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 228-3

Please refer to Chapter 4.4, Biological Resources, of the DEIR for more information related to impacts on flora and fauna. In addition, Master Responses 30 through 38 provide additional responses to biological resource comments. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 228-4

The comment does not address the adequacy of the DEIR. Please see Master Responses 1 and 2. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

### Response to Comment Ind 228-5

The comment does not address the adequacy of the DEIR. Please see Master Response 3. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

**Individual Letter 229**

**From:** Ellen Davis <winterlaurel@gmail.com>
**Sent:** Monday, April 4, 2022 4:31 PM
**To:** Idaho MMEIR
**Subject:** NO to the mine!

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

To whom it may concern,

I would like to voice my objection to the Idaho-Maryland Mine Project. The impact of the mine would be detrimental to the local environment and quality of life of the residents.

The toxic waste could easily get into the groundwater, they would use up a huge amount of water when we are already in drought conditions, and the dust in the air would really degrade the quality of the air- which is already bad because of the pollutants that drift up from the valley, and imagine how much worse it would get during smoke season!

The constant noise, vibrations from heavy trucks and equipment would ruin the peace and quiet of the neighborhoods. Quiet should not be underrated - noise has a significant impact upon the health and well-being of those exposed to it. I have a friend who lives in the neighborhood and is selling their house because of the proposed mine project. If they wait and see, then they would get less for their home, and may not be able to afford another home in this area.

**Ind 229-1**

And how much of this money would actually go back into the community? How many jobs and revenue would it actually bring to locals? I used to live in Alaska and the oil, gas, and mining companies have reaped huge profits and have had negative impacts upon the wild landscape. While the residents do get some oil dividends through the Permanent Fund Dividend (PFD) that amount is a tiny fraction of what gets taken out of the state in profits, and the politicians have been trying to get their grubby hands on the PFD. Even if it was a lot more - is the money still worth ruining the environment? There are no jobs on a dead planet.

Thanks for listening,
Ellen Davis

1

## INDIVIDUAL LETTER 229: ELLEN DAVIS

### Response to Comment Ind 229-1

The comment does not address the adequacy of the DEIR. Please see Master Responses 1 and 2. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

**Individual Letter 230**

**From:** Ellen Johnson
**To:** Sue Hoek; bdofsupervisors
**Cc:** Heidi Hall; Ed Scofield; Dan Miller; Hardy Bullock; Jeff Foster
**Subject:** Rise Gold Mine Concerns
**Date:** Saturday, February 19, 2022 1:37:12 PM

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Sue Hoek and Supervisors of Nevada County,

**Ind 230-1** My husband and I live in Nevada County having moved here approximately 5 years ago with our businesses and to create a small farm. Part of our attraction to this area was the beauty and pristine nature of the environment. However, it has recently come to our attention that you are considering offering the company, Rise Gold Mine, an opportunity to open and do mining in our county. **We are concerned and strongly opposed for many reasons.**

**Ind 230-2** Those include: Soil pollution, groundwater pollution, deforestation, depletion of natural resources, destruction of habitats, endangerment of species, loss of biodiversity, landslides, ecological imbalance, traffic, noise issues, effects on our already drought and high-fire risk, high amounts of particulate matter caused by the crushing and compacting of gravel putting our community at higher risk for lung and breathing problems not to mention the dangers and poor working conditions in the mines.

To quote other sources on the detrimental impact on gold mining:

*"Gold mining is one of the most destructive industries in the world. It can displace communities, contaminate drinking water, hurt workers, and destroy pristine environments. It pollutes water and land with mercury and cyanide, endangering the health of people and ecosystems. Producing gold for one wedding ring alone generates 20 tons of waste."*

**Ind 230-3** **Links:**

6. https://www.nbcnews.com/id/wbna28596948#.VEfObYvF95k

**Ind 230-4** **Our own community has raised a number of concerns regarding the exploratory operations and non-compliance issues:**

- **Ind 230-5** Violation of timber harvest regulations; in constructing an equipment storage area, RISE removed a healthy stand of timber, including ponderosa pine, incense cedar, and big leaf maple, without a timber harvest plan.
- **Ind 230-6** Multiple violations of the 100' riparian setback from a perennial stream (in this case South Wolf Creek, a tributary of Wolf Creek, which runs in close proximity to this site).
- **Ind 230-7** Failure to follow the approved grading plan.
- **Ind 230-8** Multiple violations of StormWater Management best practices.
- Violation of a subsequent Comprehensive Management Plan.

**Additional concerns with the exploratory operations:**

**Ind 230-9**

- Advances in drilling technologies allow directional drilling and drilling to greater depths. The drilling equipment being operated by RISE (24 hours per day, 7 days per week) is essentially a super-sized well-drilling rig. It can drill a mile deep and is multi-directional, so it can "explore" under neighboring properties.

Drilling operations can continue for many months.

**Ind 230-10** • Multiple shafts penetrate the impermeable rock layers that underlie local shallow aquifers. The potential damage to residential water wells, local aquifers, and the adjacent perennial stream is unknown.

**Ind 230-11** • Repeated noise complaints from residents with homes near the mine site.

**Ind 230-12** • Repeated light pollution complaints due to bright floodlights. And dust.

**Ind 230-13** • Hundreds of gallons of drilling fluid compounds and lubricants are used. Strong odors of solvents reported by passing cars.

**Ind 230-14** • Since no permit is required for exploratory drilling, there is no prescribed oversight from County officials, enforcement action is driven by complaints.

**Ind 230-15** • There are no requirements for restoration or reclamation plans.

**Ind 230-16** • There is no bonding, licensing, or insurance required.

**Documents filed by RISE reveal some objectionable aspects of the planned mining operation. These include the following:**

**Ind 230-17** • The project would remove forested areas and deposit massive amounts of waste rock and tailings on two Grass Valley sites, ultimately covering 75 acres to depths of up to 90 feet. Haul trucks would run on Brunswick Road and Whispering Pines Lane up to 100 round trips daily 16 hours a day. Residential neighborhoods in the area would be significantly impacted with noise, dust, traffic, and the prospect of living adjacent to large processing facilities and continuous gravel operations involving bulldozers, graders, and compactors.

**Ind 230-18** • The project would consume a quantity of PG&E electricity equal to what is used by approximately 5000 homes and emit around 9,000 tons of greenhouse gas emissions annually. In this time of climate crisis this is inexcusable.

**Ind 230-19** • The dewatering of the mine would require a purification system to run forever to remove pollutants. Wells are at risk. The outflow would put South Fork Wolf Creek at flood stage with multiple impacts to riparian habitat and to the Grass Valley drainage systems.

We insist, for the betterment of our communities, that you **stop this mining operation** before it begins any exploratory or other purpose. Nevada County can find other job opportunities that will have a healthier and sustainable impact on our beloved California area.

**Ind 230-20** Thank you for the opportunity to express our opinions which are shared by a large number of this community.

Sincerely,

Ellen Johnson & Jeff Foster
Big Oak Valley residents

## INDIVIDUAL LETTER 230: ELLEN JOHNSON

### Response to Comment Ind 230-1
This comment in introductory in nature and the commenter opposes the project. The commenter's opposition to the project is noted for decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 230-2
The commenter generally lists a variety of perceived adverse impacts associated with the project such as groundwater pollution, traffic, and noise, but does not specifically state why the DEIR is inadequate or provide any other information on which to formulate a more specific response. All of the issues raised by the commenter have been analyzed in the DEIR. The commenter is referred to Chapter 4 of the DEIR and Master Response 1.

### Response to Comment Ind 230-3
The commenter alleges that gold mining in general is ecologically destructive and provides web links to articles on gold mining. This comment does not address the adequacy of the DEIR. For that reason, the County provides no further response to this comment other than to note that page 3-25 of Chapter 3, Project Description, of the DEIR states mercury or cyanide would not be used in gold mineral processing.

### Response to Comment Ind 230-4
This comment does not address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

### Response to Comment Ind 230-5
This comment does not address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

### Response to Comment Ind 230-6
This comment does not address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

### Response to Comment Ind 230-7
This comment does not address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

### Response to Comment Ind 230-8
This comment does not address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

### Response to Comment Ind 230-9
This comment does not address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

### Response to Comment Ind 230-10
The impact to groundwater levels from mine dewatering and mining is extensively analyzed in the DEIR. See Chapter 4.8 of the DEIR, Master Response 14 – Adequacy of Groundwater Model, and Master Response 15 – Adequacy of Groundwater Monitoring Wells.

## Response to Comment Ind 230-11

This comment does not appear to address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration. With respect to noise associated with potential future operations of the project, see Chapter 4.10, Noise and Vibration.

## Response to Comment Ind 230-12

This comment does not appear to address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration. With respect to lighting associated with potential future operations of the project, see Chapter 4.1, Aesthetics.

## Response to Comment Ind 230-13

This comment does not appear to address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration. With respect to hazardous materials associated with potential future operations of the project, see Chapter 4.7, Hazards and Hazardous Materials.

## Response to Comment Ind 230-14

This comment does not appear to address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration.

## Response to Comment Ind 230-15

This comment does not appear to address the adequacy of the DEIR and has been forwarded to the decisionmakers for their consideration. Regarding the Reclamation Plan for the project, see Appendix C to the DEIR.

## Response to Comment Ind 230-16

The commenter states that the project does not require any bonding, licensing, or insurance. The project requires an approved Reclamation plan. To ensure that reclamation will proceed in accordance with the approved Reclamation Plan, the County shall require as a condition of approval Security that will be released upon satisfactory performance. The applicant may pose Security in the form of a surety bond, trust fund, irrevocable letter of credit from an accredited financial institution, or other method acceptable to the County and the State Mining and Geology Board as specified in State regulations, and which the County reasonably determines are adequate to perform reclamation in accordance with the mining operation's approved Plan. The commenter is referred to page 4.6-24 of the DEIR and Appendix C of the DEIR.

A mitigation monitoring and reporting program has been prepared and is included as Chapter 4 of this Final EIR. The mitigation measures and conditions of approval will be enforced by the County. To the extent the applicant receives permits from other state and federal agencies, those agencies will be responsible for their enforcement.

## Response to Comment Ind 230-17

The commenter references several impacts associated with the project such as the placement of engineered fill, noise, and traffic, but does not provide any specific comments on the adequacy of the DEIR. All issues raised by the commenter are analyzed in the DEIR. Please see Chapters 4.3 (Air Quality, Greenhouse Gas Emissions, and Energy), 4.4 (Biological Resources), 4.10 (Noise and Vibration), 4.12 (Transportation) of the DEIR.

## Response to Comment Ind 230-18

The commenter states that the project's energy usage in inexcusable, especially in the context of the climate change. The commenter is referred to Master Response 25 – Nevada County Energy

Action Plan, Master Response 27 - Greenhouse Gas Thresholds, and Response to Comment Agcy 8-17.

## Response to Comment Ind 230-19

The commenter states that the dewatering of the mine would require a permanent purification system to remove contaminants and that the discharge to South Fork Wolf Creek would place the creek at "flood state." As stated on page 4.8-51 of the DEIR, after mining is completed, and as underground mine workings fill with groundwater, water from the underground mine workings would begin to seep from the existing drains. The water that would seep from the underground workings is anticipated to have similar water quality to the water that currently discharges from the existing drains. Specifically, it may contain elevated levels of iron and manganese. Therefore, the conditions after mining is completed would be similar to existing, or baseline, conditions, such that re-activation of the seeps would not represent a potentially significant impact under CEQA. Although part of the existing environmental setting, some of the seeps have elevated arsenic levels that could pose a threat to human health or the environment. However, despite these existing discharges from the drains, the reported concentrations of all metals and other constituents in the Wolf Creek samples are well below the NPDES water quality standards.

The mine water discharge would not put South Fork Wolf Creek at "flood stage". The commenter is referred to Chapter 4.8 of the DEIR and Master Response 36 - Flows in South Fork Wolf Creek.

## Response to Comment Ind 230-20

The commenter urges that the County not approve the project. The commenter's opposition to the project is noted for decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

April 3, 2022

From: Ellen Macdonald
10581 Bragg Avenue
Grass Valley, CA. 95945

Re: Proposed Rise Gold Mine Project

My name is Ellen Macdonald and I have lived at the above Grass Valley location since 1997.

**Ind 231-1** My reading and understanding of the Environmental Impact Report (EIR) have been restricted to the hazards of the proposed project with particular attention to those hazards to our watershed, wildfire risk, and air quality. These three areas were all considered to have significant impacts from the proposed project unless there were mitigations made by one of the four alternatives listed.

The first alternative was "NO Build", no mine project at all, and of course has little to no impact on our environmental quality. The elimination of the Centennial Industrial Site, alternative 2, has fewer impacts than the other two. I think the two other alternatives, #'s 3 & 4 , should not be considered at all since both are just as hazardous to water and air quality or are worse than the original proposal.

**Ind 231-2** That leaves #'s 1 & 2 alternatives to the original proposal. I am still concerned about this proposed mine even with the mitigation from the elimination of the Centennial Industrial Site. For me, it comes down to simply why mess with our watershed at all when we are already in another drought cycle, with the likelihood of yet another summer of wildfires all around us and the resulting poor air quality from those fires. There is no reason to believe that next year will not be another dry one. These more frequent and longer drought periods seem to be the climate pattern now for Northern California.

**Ind 231-3** What makes this mine proposal even worse to me is that it's all for gold for a private company. I think we would be taking too many risks to the environment if the mine is approved and all that for gold. If we were all discussing a public works project, such as the Centennial Dam, we would be having an entirely different conversation.

I realize that I am not saying anything that you on the Planning Commission don't already know or haven't already heard from others in the community. Lord knows I could never be as articulate about the EIR as those citizens who so knowledgeably spoke to you on the 24th of March at the public hearing at the Rood Center. But I still feel as strongly as everyone else in opposition to the proposal of this mine reopening.

Thank you,
Ellen Macdonald

## INDIVIDUAL LETTER 231: ELLEN MACDONALD

### Response to Comment Ind 231-1

The mitigation measures proposed to reduce impacts to a less than significant level in Section 4 of the DEIR are not reliant on the alternatives discussed in Chapter 6 of the DEIR. The Alternatives Analysis chapter of the EIR (Chapter 6 of the DEIR) includes consideration and discussion of a range of reasonable alternatives to the project, as required pursuant to CEQA Guidelines Section 15126.6. The primary intent of the alternatives evaluation in an EIR, as stated in Section 15126.6(a) of the CEQA Guidelines, is to "[…] describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives."

A comparison of environmental impacts for project alternatives is provided in Table 6-1 of the DEIR. Alternatives 3 and 4 would have similar or fewer air quality impacts than the project and similar or greater hydrology and water quality impacts as the project.

### Response to Comment Ind 231-2

The commenter is concerned about the project's hydrological impacts in light of the drought and climate change but does not state why the DEIR is inadequate. The commenter is referred to Chapter 4.8 (Hydrology and Water Quality) and Master Response 16 - Drought and Climate Change.

### Response to Comment Ind 231-3

The commenter urges the County not to approve the project. The commenter's opposition to the project is noted for decisionmakers. Master Response 1 - Non-EIR/Administrative Issues.

Hi Matt,
Thanks for sending a copy of the Todd 2007 report.

Attached please find a pdf of a 4-page critique of Groundwater Modeling and Analyses in the Rise Gold draft EIR, which I am submitting for review and consideration into the final EIR.

Kindly let me know that you received and are able to open and read the pdf file.

Sincerely,

Elliot Schneiderman

Hi Matt,

I just spoke with you by phone about the document:

Todd Engineers. (2007). Hydrogeologic Assessment Idaho-Maryland Mine, Prepared for Idaho-Maryland Mining Corporation Grass Valley, CA. Emeryville, California.

This document is referenced in the Rise Gold EIR and appendix k2 as the source of key hydraulic conductivity parameters used in the groundwater modeling and analyses. The derivation of these parameters are not provided in the EIR, and the groundwater modeling and associated analyses cannot be properly evaluated without knowing how these parameters were derived. The Todd 2007 report should be added to the EIR. Please let me know if, when and how this report will be made available.

Sincerely,

Elliot

Critique of Groundwater Modeling and Analyses in Rise Gold Draft EIR

Elliot M. Schneiderman, PhD
Senior Research Scientist, New York City Water Supply, Retired
March 26, 2022

**Ind 232-2**

Rise Gold performed numerical groundwater modeling and analyzes based on an underlying conceptual model of groundwater flow in fractured bedrock (Appendix K2 Sect. 3.5). A critical assumption inherent in the conceptual model is that groundwater flow in the fractured rock aquifer can be treated as equivalent to flow in a porous media aquifer. In a porous-media aquifer groundwater flows through the gaps between small particles as laminar flow, and forms a hydrologic continuum whereby average values of aquifer properties can be used to accurately characterize the flow system. Darcy's Law (and models including MINEDW based on Darcy's Law) generally holds only for flow through porous media. As stated in the Appendix K3 (p22): *"The groundwater flow model [MINEDW] is only designed to simulate the groundwater flow through porous media based on Darcy's law"*.

Groundwater in a fractured rock aquifer typically flows through complex pathways in fractures surrounded by non-porous solid rock. The flow regime tends to be more heterogeneous, anisotropic, and discontinuous than in porous media. A good deal of research has focused on the specific conditions under which fractured rock can be treated as equivalent to a porous media. As pointed out in NRC (1996), three factors must be considered in determining whether an equivalent porous media approach is justified to evaluate groundwater flow in a fractured rock aquifer: (i) the geology of the fractured rock, (ii) the scale of interest and (iii) the purpose for which the model is being developed. Briefly, the number of fractures and their interconnections must be so numerous and interconnected throughout the area of interest such that flow in individual fractures averages out similarly to the behavior of porous media.

Since the groundwater flow regime in fractured rock is by nature discontinuous, it cannot simply be assumed to be equivalent to flow in porous media. The USGS (Risser and Barton 1995) and the USEPA (1991) provide procedures for determining if a fractured rock aquifer can be reasonably treated as equivalent to porous-media. These procedures include (i) evaluating fracture density by mapping, geophysical investigations, and borehole flow metering; (ii) aquifer testing to demonstrate continuity of hydrologic response over the area of interest; and (iii)evaluating the continuity and smoothness of the water level surface in observation wells, where anomalously high or low water levels could indicate hydraulic discontinuities, and in which case the equivalent porous-media approach is not appropriate.

The Rise Gold Draft EIR simply assumes that the fracture rock aquifer flow regime can be treated as equivalent to a porous media aquifer, with no justification provided for this critical assumption. Fracture density, interconnectivity and patterns within the area of interest have not been evaluated, and aquifer testing to demonstrate hydraulic continuity has not been performed. The Draft EIR does present water level data in observation wells within the mineral boundary of the mine and in outlying areas, but does not address the continuity of the water

**Ind 232-3**

level surface. Figure 1 below shows the depth to water in observation wells in the Greenhorn Area and Outlying Areas (from appendix K2 tables 4.3 and 4.4). These data reveal significant discontinuity and lack of smoothness of the water level surface in observation wells throughout the area of interest.

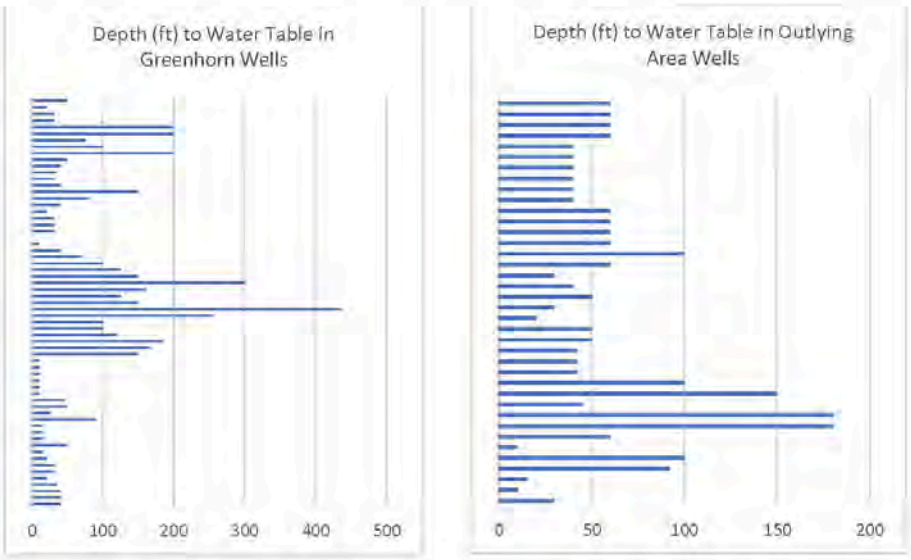

Figure 1: Depth (ft) to top of water column in Greenhorn Wells and Outlying Area Wells, displayed in order of Rise Well Id #'s (see Appendix K2 tables 4.3 and 4.4)

Todd (2007) analyzed well hydrograph data from 1994 – 2007. Their data analysis revealed significant hydrologic discontinuity in both depth to water and seasonal drawdown in adjacent observation wells. Average water levels in wells located within 800 ft of each other were found to vary by more than 100 feet, and seasonal drawdown patterns vary significantly (figure 2 below). These analyses clearly indicate a degree of hydrologic discontinuity that is incompatible with behavior of a porous-media aquifer, and shows that at the scale of the study area the equivalent porous-media assumption is not valid for this fractured rock aquifer.

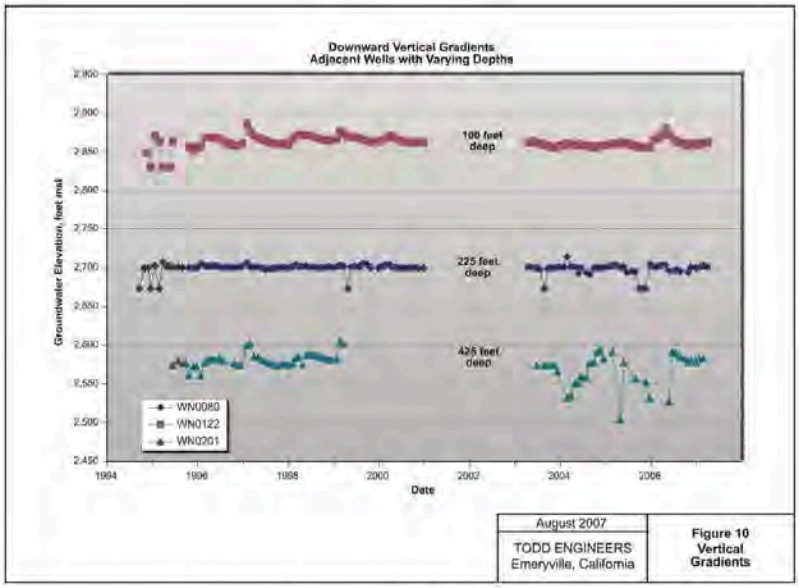

Figure 2: Hydrographs of adjacent observation wells (Todd 2007, figure 10)

The hydrologic discontinuities of the fractured rock aquifer revealed in the water level and hydrograph data for observation wells imply that the details of individual fracture sets (location, density, orientation, interconnections, aperture, and channeling properties of fractures) are important determinants of groundwater flow to individual wells. In the equivalent porous-media approach the details of individual fracture sets are ignored in favor of hydraulic coefficients that represent the volume-averaged behavior of many fractures within the fractured rock body. There are approaches to evaluating groundwater flow in fractured rock aquifers that account for the heterogeneity and discontinuities in the flow regime (Cook 2003, Risser and Barton 1995), including the discrete model approach where fracture properties and flow path geometry are explicitly characterized and accounted for; and the statistical model approach where fracture properties and geometry are measured on representative samples of bedrock and scaled up to generate plausible fracture maps of the study area which are then analyzed statistically. The Draft EIR does not consider either of these alternative approaches that might be applicable to the Rise Gold aquifer.

**Ind 232-4**

The lack of hydrologic continuity and failure to meet the critical assumption of porous-media equivalency essentially invalidates the results of the MINEDW modeling and associated analyses based on Darcy's Law, and thus call into question the validity of predicted drawdown isopleths based on the groundwater model (appendix K3); the groundwater monitoring plan (appendix K8) which locates wells based on the model predicted drawdown isopleths; the well mitigation plan (appendix K9) that identifies 30 individual wells that may be impacted based on model results;

the proposed mitigation measures (Draft EIR table 2.1, 4.8-2(a)) that include development of potentiometric surface contour maps based on the groundwater monitoring plan (a.3), and projecting impacts for individual wells (a.4); and the peer review by West Yost (Appendix K9) which is lacking in not addressing the critical assumption of porous media equivalency in the Rise Gold conceptual model of groundwater flow in fractured bedrock.

## INDIVIDUAL LETTER 232: ELLIOT SCHNEIDERMAN

### Response to Comment Ind 232-1

This comment is a cover letter regarding the submission of Individual Letter 232. No response is required.

### Response to Comment Ind 232-2

The commenter asserts that the model used by Itasca to analyze groundwater flow for the DEIR assumed a porous nature for the bedrock without any support for that assumption, and failed to consider three factors set forth in a National Research Council (NRC) report to determine whether such assumption was appropriate. However, the three items that the commenter referenced from the NRC (1996) document were considered by Itasca in the formulation of their conceptual and numerical models. The conceptual model used by Itasca, in simple concepts, assumes that the shallow bedrock is significantly fractured so that it behaves hydraulically like a porous media. Below the shallow, fractured bedrock is the intact bedrock whose fractures are closed due to the vertical stresses caused by the overlying bedrock. The intact bedrock also behaves as a porous media in that groundwater flow is primarily through the extremely small pores in the rock. Itasca assigned low hydraulic conductivities and storage coefficients to the intact bedrock in which mining will occur, but higher hydraulic conductivities to the fractured bedrock closer to the surface. These assumptions were not based on mere speculation, but on observations from historic groundwater data and local geology as discussed in Section 2.4 of Appendix K.3 to the DEIR.

Because of the large scale of the area considered by Itasca in their conceptual and numerical models, and observations of groundwater and geologic data, a porous media approach was followed. This was the most reasonable approach to take due to the scale of the model area and observed data. In addition, Itasca considered the purpose of the model, which is to estimate groundwater flow and drawdowns due to mining. This approach is acceptable, as noted by the NRC (1996), a reference used by the commenter. On page 310 of this book, the following is presented:

> "The level of detail required in the conceptual model depends on the purpose for which the model is being developed—for example, whether it will be used to predict fluid flow or solute transport. Experience suggests that, for average volumetric flow behavior, predictions can be made with a relatively coarse conceptual model provided data are available to calibrate the simulation model. Thus, a continuum approximation may be used to predict well yields with sufficient accuracy, even if a fracture network is poorly connected."

The continuum approximation mentioned in this paragraph, from the NRC report referenced by the commenter, is a porous media approximation. As such, the authority cited by the commenter (NRC) actually supports the approach taken for the DEIR's analysis. The application of a continuum (porous media) approximation is applicable to mining projects in that it is used generally to estimate flows from the mine and drawdowns in water levels due to dewatering, a situation similar to predicting well yields as discussed by the NRC (1996).

A porous media approach is appropriate for the purpose of the model. It should be noted that the USEPA (1991) document has two case studies that involve numerical modeling to assess the extents of capture zones resulting from pumping wells. The purposes of the modeling were for wellhead protection, and this involves determining what portions of the aquifer contribute groundwater to a well, a situation that is similar to modeling drawdowns as the result of dewatering

from an underground mine. In both of the case studies discussed in the USEPA (1991) document, the numerical models assumed an equivalent porous media as their basis, similar to the DEIR's analysis. As such, the approach followed by Itasca is the same as that used by the USEPA.

## Response to Comment Ind 232-3

The commenter provides Figure 1 to support its argument that the differences in depths to water are an indication that the shallow bedrock in which the wells are screened is highly heterogeneous and discontinuous. However, the data presentation can be misleading because it is based on the depth to groundwater. In areas with appreciable topographic variation, the depth to water can be simply a function of the ground-surface elevation and depth of the well and not necessarily indicative of substantial variations in the groundwater table. In addition, the data include a mix of the depth to first-encountered water during drilling and the depth to the static groundwater level once drilling was completed and the water level was allowed to equilibrate. The static depth to water is representative of the groundwater table at the well location. However, not all of the Well Completion Reports for the wells listed in Tables 4.3 and 4.4 of Appendix K.2 provided the static depth to water. Finally, as noted above, the depth to water measurements were made at the time each well was drilled. As noted in Appendix K.2, seasonal fluctuations in individual wells can vary by up to 30 feet, and in other areas can vary by up to 50 feet. These fluctuations are not reflected in the data from the Well Completion Reports because the wells were drilled at different times of the year. Notwithstanding the above limitations, the chart below shows the groundwater surface elevations for wells in which the static water level after drilling was reported in the Well Completion Reports. The groundwater surface elevation is within a band ranging from about 2,740 feet above mean sea level (ft amsl) to 2,855 ft amsl in all but three wells. This range is consistent with the variability that would occur due to the gradient of the groundwater table. While there is certainly some variability within the fractured bedrock, the extent and magnitude of that variability is limited and not as widespread as inferred by the commenter.

The above discussion shows the importance of obtaining the measured water levels from designated monitoring wells, which is required for the project as part of the groundwater monitoring plan. The measured water levels from the domestic wells and drill boreholes show that the variability in water levels is not necessarily due to heterogeneity but can be due to other factors. These factors include whether the water-level measurement was made before or after pumping the well and where the well is located in the groundwater flow system.

It should also be noted that there appear to be some plotting errors on the commenter's provided charts. For example, in the chart for the Greenhorn area wells, there are six wells in sequence where the commenter has plotted a depth to water of approximately 10 feet. Reviewing the data from Table 4-3 of Appendix K.2 reveals that there are not six wells total with a reported depth to water of 10 feet, let alone six in a row by Rise well number. Thus, the commenter's graphs do not accurately represent the data and do not substantiate the commenter's opinion.

The commenter uses Figure 2 to substantiate his opinion that a porous media approach is not valid for understanding groundwater flow in shallow bedrock. All three of these wells are located in the E. Bennett area nearby the Old Brunswick Mine shaft, which is dewatered (empty void) to an elevation of ~2,500 ft amsl. It must be noted that these wells are not adjacent, but up to 800 feet apart.

As noted on page 23 of the EMKO hydrology report, W19 (previously called WS122), W7 (previously called WS80), and WS201 are within the predicted 2019 drawdown cone created by the historical mining as denoted in Figure 5-3 of Itasca's groundwater flow model report (Itasca

2020). Well WS201 is drilled within feet of the Old Brunswick Shaft in the center of the predicted drawdown cone and experiences the greatest drawdown (water level in the well is ~90 feet above the water level in the mine). WS122 and WSS80 are at a similar position in the drawdown cone, but WS80 is located in the gully of an ephemeral creek, while WS122 is on a hillside. The formation of a drawdown cone, predicted by Itasca's groundwater flow model (Itasca 2020) and confirmed by the measured water levels in these three wells, substantiates that the model methodology (assuming a porous media approach) is a valid approach. .

The differences in water levels in wells does not by itself indicate whether the geologic materials behave as a fractured or a porous media. However, the fact that field-measured water levels match those predicted by the numerical groundwater flow model used by Itasca supports the assumption of using a porous media approach.

A porous media representation is an appropriate way to model a fractured bedrock system at the scale of this project. However, the DEIR acknowledges that without the implementation of a groundwater monitoring program and well mitigation plan, the project could result in a significant impact to groundwater supplies. A Groundwater Monitoring Plan (GMP) is required for the project under Mitigation Measure 4.8-2(a). As described on page 4.8-66 of the DEIR the measurements of water levels in the monitoring wells can be used to verify the groundwater drawdowns as dewatering progresses to provide sufficient time to predict adverse impacts to domestic wells before they occur so that appropriate mitigation measures can be implemented. As stated in Section 3.0 of the GMP, the dewatering of the existing mine workings, prior to the commencement of actual mining, is analogous to a largescale pumping test that is a common tool in the field of hydrogeology to assess how drawdowns in the water-bearing zones. Monitoring wells in closer proximity to the mine will generally experience drawdowns before wells farther away. The measurements of water levels in the monitoring wells can be used to verify the groundwater drawdowns as dewatering progresses to provide sufficient time to predict adverse impacts to domestic wells before they occur so that appropriate mitigation measures can be implemented. Please see Master Response 14 - Adequacy of Groundwater Model and Master Response 15 - Adequacy of Groundwater Monitoring Wells.

As noted in Master Response 15, the applicant has also provided a Domestic Well Monitoring Plan to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

## Response to Comment Ind 232-4

This comment summarizes the commenter's prior arguments and has been addressed in the previous responses. Please see Responses to Comments Ind 232-1 and Ind 232-3.

**Individual Letter 233**

3/24/2022

225 S. Auburn Street
Grass Valley, CA
95945

950 Maidu Avenue, #170
Nevada City, CA
95959

Mr. Matt Kelley: Nevada County Planning Department,

**Ind 233-1**

Do you realize that Rise Gold plans to reopen the Idaho-Maryland Mine for **80 years**? That's almost an entire lifetime! Do you want your children and grandchildren to suffer through the noise and pollution of the mine for decades? The Idaho-Maryland Mine will, additionally, contaminate the precious air and water of our beautiful county. It will likely cause thousands of people to move away because of noise, traffic, pollution, and decreases in property values. Even the people out there who support the mine don't want their property values to go down! I believe that you should stop the mine because it would pollute the air, it would destroy our valuable water, and especially because it would ruin our quality of life.

**Ind 233-2**

Do you want to poison our air? According to MineWatch NC, "Grass Valley already gets an "F" for air quality today. The mine will only make it worse." Grass Valley most likely gets an F because of all the smoke during the summer. Can you imagine having smoke **and** a mine at the same time for 80 years? The mine would unearth, move, and crush hundreds of tons of rock. All that dust would go into the air and add to pollution. That could severely impact the lives of people in Nevada County with health problems like asthma and chronic lung disease. Mercury used in the mine for a variety of reasons can also become airborne. Inhaling mercury vapor can harm the nervous, digestive, and immune systems, kidneys, and liver. Mercury can even be fatal (World Health Organization). I can't imagine living in an area where I would have to deal with that but I will if the mine is reopened. "In addition, mine tailings, which may contain finely ground and even toxic waste, can become airborne…" (WMAN). That would also harm many people and could make many day-to-day activities impossible. I don't want my air to become contaminated.

**Ind 233-3**

Water is the most treasured resource in the world. It would only be wasted by the mine and its need for water. According to Environmental Risks of Mining, mines need a lot of water for extraction, processing, and waste disposal. Research also shows that Rise Gold plans to dump **3.6 million gallons** of water every day for 6 months and then **1.2 million gallons** after that for the better part of 80 years (MineWatch NC). All that wastewater depletes groundwater and pollutes nearby water sources. I feel sick thinking about what effects that much water will have on the Yuba River, Nevada County, and the state as a whole. The state has also been in a drought for years and that makes water even more valuable. American GeoSciences has shown that waste rock often contains pyrite. When pyrite is exposed to air or water, it goes through a process known as oxidation. That process is acidic and can make entire areas bare. If water gets into contact with pyrite-laden waste rock, the oxidation that results can acidify the water. All that from just the waste. According to MineWatch NC, the mine's effects on water would also put 300+ private wells at risk. I know many people with private wells, including myself, and the

results of so many people getting cut off from fresh water could be disastrous. Don't let Rise Gold poison our water.

**Ind 233-4** Have you thought about how the Idaho-Maryland Mine would affect our life? According to MineWatch NC, the mine would use up **12%** of Nevada County's power, erasing all plans to curb climate change. All the effort that Nevada County has put into conserving energy would go down the drain. That seems like a waste to me. Some people might argue that opening the mine creates many more job opportunities. However, all those workers would have a high risk of getting sick. "National cancer statistics also have shown elevated death rates from

**Ind 233-5** cancer—particularly lung, bronchial, and trachea cancer…" (WMAN). Reopening the mine isn't worth it when so many innocent people are at risk. Constant traffic and noise from the mine will wreck our neighborhoods. Some people might say that the tax money from the gold would pay for that. That is incorrect. The mine would cause property values to go down by tens of millions

**Ind 233-6** (GoPetition). The trucks the mine would use would wear down the roads, forcing the county to repair them and lose yet more money. In the long run, Nevada County would, eventually, lose money. Save our neighborhoods from the mine.

**Ind 233-7** You should say no to the mine because it pollutes our air and water and destroys our well-being. Think about all the people out there with lung diseases. If the mine reopens, those people would be put at risk of getting badly sick. Do you want people to die because of you? I love Nevada County, but if Rise Gold restarts the mine, I will be forced to move. Are you willing to let hundreds of people move away just so you can get a little money? Your decision affects every single person in this community. Thousands of people look to you to make the right decision. Say no to Rise Gold and save our community!

Sincerely,

Elsa Burt

Elsa Burt

## INDIVIDUAL LETTER 233: ELSA BURT

### Response to Comment Ind 233-1
The comment does not address the adequacy of the DEIR. Please see Master Response 1. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 233-2
Potential impacts related to dust generation are discussed in Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy of the DEIR. In addition, please see Master Response 12 – Chemical Dust Stabilizers and Master Response 20 – Conservatism of Metals Assumptions. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 233-3
Potential impacts related to water quality and groundwater depletion are discussed in Chapter 4.8, Hydrology and Water Quality, of the DEIR. In addition, please see Master Response 16 – Drought and Climate Change and Master Response 35 – Discharge to South Fork Wolf Creek. Please also see Response to Comment Ind 221-1 regarding oxidation and acidification.

### Response to Comment Ind 233-4
Please see Master Response 25 – Nevada County Energy Action Plan. The commenter expresses general concerns regarding the impacts of the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible, nor required.

### Response to Comment Ind 233-5
The comment does not address the adequacy of the DEIR. Please see Master Responses 1 and 2. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

### Response to Comment Ind 233-6
The comment does not address the adequacy of the DEIR. Please see Master Response 2. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

### Response to Comment Ind 233-7
Please see Master Response 1 – Non-EIR/Administrative Issues. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

Matt Kelley and team,

I am writing to you in STRONG opposition to the reopening of the Idaho Maryland mine, as I'm sure many of my community members are today.

**Ind 234-1** Our community does NOT want or need Idaho Maryland mine to reopen, this would be extremely detrimental and disastrous, as you well know.

Have some humanity, please listen to us, we want to talk, not to fight.

I urge you to take a deep look at what you are doing. Be a human.

## INDIVIDUAL LETTER 234: EMILIE ROSE

### Response to Comment Ind 234-1

The comment does not address the adequacy of the DEIR. Please see Master Response 1 – Non-EIR/Administrative Issues. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

**Individual Letter 235**

**From:** Weissman, Emily <Eweissman@nff.org>
**Sent:** Monday, April 4, 2022 4:42 PM
**To:** Idaho MMEIR
**Cc:** Benito Santos
**Subject:** Comments to Idaho Maryland Mine Environmental Impact Report

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Mr. Kelley,

I am writing to raise my concerns about the proposed Idaho-Maryland Mine and draft EIR. Please note that I had attended the County meeting about the environment impacts of the mine, but had to leave in the afternoon and missed my spot (#102) to speak.

**Ind 235-1**

My husband and I live at 12300 Allison Ranch Road, which is along Wolf Creek and across from the mine treatment ponds. The EIR outlines so many concerns that will impact myself and my neighbors and community. Here are two concerns which I believe the EIR does not address:

1) I am very concerned about the huge amount of additional treated water that will now flow through Wolf Creek and the treatment ponds on Allison Ranch Road. In reading the EIR, I believe there wasn't sufficient study done on the potential impact to our properties along Wolf Creek if the water treatment system and treatment ponds were to fail due to the heavy volume. Also, I believe there wasn't sufficient study done on whether Wolf Creek can accommodate this heavy volume for the next 80 years. I am worried that if the treatment system and treatment pond were to fail, which can occur sometimes, that those of us living along the creek could have heavy metal contamination in our soil and water.

**Ind 235-2**

Page. 674 of the EIR states that the "proposed project's construction and operations involve multiple activities that could result in adverse effects on water quality, including but not limited to the discharge of mine water containing iron and manganese, discharge of construction area dewatering water". The report outlines ways to minimize potential water quality impacts, but still says that "the impact is considered significant for the purposes of this analysis and mitigation"

**Ind 235-3**

2) I believe the EIR should address the very significant impact to property values of our homes, not just homes in the Idaho-Maryland area, but also homes along Wolf Creek. Those of us along Wolf Creek will need to disclose the existence of mining activities next to our houses and this will impact the price of our homes, should we move at some point in the next 80 years or after.

**Ind 235-4**

My neighbors and community and I are being asked to accept this project which will have significant negative impact on our daily lives, our livelihood, our home values, and potentially our health. I ask you to please consider the community ahead of Rise Gold.

**Ind 235-5**

Thank you very much and appreciate the feedback process.

Regards,

1

Emily Weissman
12300 Allison Ranch Road

## INDIVIDUAL LETTER 235: EMILY WEISSMAN

### Response to Comment Ind 235-1

This comment is introductory and the commenter has concerns about the project. The commenter's opposition to the project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

### Response to Comment Ind 235-2

The commenter is concerned about the discharge of treated water to South Fork Wolf Creek and the treatment ponds on Allison Ranch Road. The commenter also states the DEIR is inadequate in regard to the potential failure of the Brunswick site treatment pond and whether the South Fork Wolf Creek can tolerate the additional flows from the project. Regarding the treatment ponds near the commenter's residence, the project does not propose to discharge water to the treatment ponds on Allison Ranch Road.

Regarding the risk of overflow or the treatment pond failing, at the maximum mine dewatering rate of 2,500 gpm, the pond has the capacity to hold the volume of water that would be dewatered during two days of pumping. At the maintenance dewatering rate of 850 gpm, the pond has the capacity to hold the volume of water that would be pumped over more than six days. The total runoff from the 6.4-acre watershed for the pond resulting from a 100-year, 24-hour storm would be approximately 5.7 acre-feet. Thus, as stated on page 4.8-74, the freeboard volume is more than adequate to retain the runoff from an extreme storm event.

The geotechnical stability of the water treatment pond was evaluated in Chapter 3.6 of the DEIR. Mitigation Measure 4.6-3(b) requires the applicant to submit a grading plan, cross sections, and a slope stability analysis of proposed the clay-lined pond dam repair work, for review and approval of the Nevada County Building Department. The submittal shall be prepared and stamped by a licensed geotechnical engineer. The grading plan and cross sections shall depict typical temporary cut slope gradients, excavation depths, maximum water surface elevation, and earthwork volume estimates, and any additional geotechnical engineering methods, such as shoring, to mitigate potential slope instability.

Regarding the water treatment plant and the additional flows to South Fork Wolf Creek, the commenter is referred to Chapter 4.8 and Appendix K.4 of the DEIR and Master Response 35 - Discharge to South Fork Wolf Creek.

### Response to Comment Ind 235-3

The commenter references Impact 4.8-1 and points out that the DEIR states the impact of referenced activities would be significant. (DEIR, p. 4.8-51.) However, below that conclusion, the DEIR provides Mitigation Measures for Impact 4.8-1, which would reduce the referenced impacts to less than significant. (DEIR, pp. 52-53.)

### Response to Comment Ind 235-4

The commenter states the DEIR should address the potentially adverse impact to property values. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues and Master Response 2 - Social and Economic Impacts.

### Response to Comment Ind 235-5

The commenter's opposition to the proposed project is noted for the decisionmakers. The commenter is referred to Master Response 1 - Non-EIR/Administrative Issues.

**Ind 236-1**

District 1 homeowner and full time employee at a local business. We need to learn from the past and stop this mine from moving forward. Any short term gains of wealth be it gold, jobs, taxes, or anything else can be worth the long term detrimental effects of this project. Look no further than Ben Mossman's history of cutting and running in Canada and leaving the local community to deal with the environmental and financial fallout. Do not be so bold as to think that somehow the outcome here will be any different. We don't need more gold. We need clean water. Over 800,000 visit the Yuba each year. This is but a small example of where the true value our community now holds - it's in the nature we are surrounded by. Let's not ruin it.

Sincerely,
--
Eric Dunn

ebdunn@gmail.com

## INDIVIDUAL LETTER 236: ERIC DUNN

### Response to Comment Ind 236-1

The comment does not address the adequacy of the DEIR. Please see Master Responses 1 through 3. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

**Individual Letter 237**

Date: April 3, 2022

To: Mr. Matt Kelley, Senior Planner

From: Eric Jorgensen, 11065 Peaceful Valley Road, Nevada City

Re: Idaho Maryland Mine DEIR Public Comment

Hello. I'm a resident of Nevada County and a retired Academic Advisor for the University of California Cooperative Extension. In retirement, my activities include founding of the Greater Champion Neighborhood Association, service as a Fire Safe Council Defensible Space Advisor; and most recently, a member of the Nevada County Energy Action Plan citizen committee.

**Ind 237-1**

I'm currently opposed to Mine's development as the Mine proposal and County DEIR response fail to adequately address energy consumption, greenhouse gases, and toxic emissions in both plan and mitigation.

**Idaho Maryland Mine (Mine) DEIR: 4.3-1 Air Quality, Greenhouse Gases Emissions, and Energy**

"4.3-9 Result in the inefficient or wasteful use of energy or conflict with a State or local plan for renewable energy or energy efficiency." "LC" (Less than Significant).

The Nevada County Energy Action Plan (EAP) "provides an analysis of the energy use within the unincorporated county limits by the community and County operated facilities as well as a roadmap for accelerating energy efficiency, water efficiency, and renewable energy efforts already underway in Nevada County. It is designed to assist the County in implementing the energy and water-energy related goals and policies in the County's General Plan and Housing Element, and inform the community of cost-effective programs and best practices that will help them save energy and money." The EAP was accepted 5-0 by the Board of Supervisors on February 12th, 2019.

EAPs were also adopted by Grass Valley and Nevada City as part of a State-wide EAP planning process structured to achieve each entity's fair share of the statewide reduction goal established by California Senate Bill (SB) 32, which requires a statewide reduction of 40 percent below 1990 GHG emissions by 2030.

**Ind 237-2**

The DEIR selects education options within the County's EAP to arrive at "LC". In doing so the DEIR ignores the 3 primary goals and the State's 40% GHG reduction goal. EAP goals are to:

1) "Improve Energy Efficiency in Buildings, Facilities, and County Operations"
2) "Expand the Utilization of Renewable Energy and Resilience Measures" and
3) "Encourage the Efficient and Safe Transportation and Use of Water Resources".

Further the Executive Summary "found that the community - including residential, non-residential, county, and public agencies - consumed 344,045,975 kilowatt hours (kWh) of electricity and 2,943,632 therms of natural gas in 2017. This is a decrease of 2% in electricity use and a decrease of 14% in natural gas use from the 2005 baseline of 349,789,663 kWh and 3,433,874 therms." County operated public lighting energy consumption dropped 11%. Non-residential and non-government electric consumption (industry, manufacturing) dropped 11%. Consumption dropped in all categories but "waste water" energy consumption, which increased 79% and largely offset overall County gains. The Mine proposes to double electric energy consumption for non-residential, industrial – manufacturing uses in the County. How does this energy increase offset GHG emissions?

The **Energy Action Plan** is addressed in the Draft DEIR, but largely dismissed by examination of educational actions, residential solar, etc., rather than examining the intent expressed in the EAP's goals. DEIR Table 4.3-22 Project Consistency with Nevada County Energy Action Plan Energy Reduction. Measures "Encourage energy storage and grid optimization infrastructure projects that support local renewable energy systems and community resilience." This analysis is dismissed as not applicable saying this "Pertains to energy storage and grid optimization infrastructure projects." This dismissal is amplified by "Not applicable to the project because the project consists of mining activity and industrial type development." The EAP goals and delineation of electrical consumption for industry are clear. A doubling of County industrial and business electric energy consumption by the Mine certainly pertains to grid optimization infrastructure projects and County EAP goals. In mitigation measures, the issue of energy backup storage and grid (energy production and delivery) is addressed by carbon credits and diesel backup systems for storage. Alternative solutions are largely ignored.

---

Impact: "4.3-1 Conflict with or obstruct implementation of the applicable air quality plan." Level "S", after "LS". 4.3-8 Conflict with an applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of GHGs" LCC )Less than Cumulatively Significant). "4.3-9 Result in the inefficient or wasteful use of energy or conflict with a State or local plan for renewable energy or energy efficiency." "LC" (Less than Significant). Together these impacts are cumulatively significant as pertains to the County's EAP. There are significant energy alternatives, which are not proposed nor analyzed.

1) A Mine Electric Energy Plan. Require Mine to address consumption and storge backup requirements for development and operation in electrical mechanical operational terms with elimination of diesel. Include in plan electric green energy production requirements or mitigation of GHG in electric production as current plan doubles all current non-residential industrial electrical consumption in the County. A plan would address all energy production and storage components. The planning goal of zero net energy is becoming a standard widely addressed in climate planning by banks, corporations, cities and states. Why not the Idaho Maryland Mine?

**Ind 237-3**

2) Transport Energy. All above ground and in mine hauling and excavation equipment (trucks, loaders, etc.) be required to be electric. Examples: https://www.epiroc.com/en-us/products/loaders-and-trucks/electric-trucks. The equipment is available and in use. Why not require it in this 80 year project? It will certainly be used inside the mine. Why not on the surface for hauling?
3) Backup Energy. Utilizing stationary diesel generators is recognized as a huge source of GHG emissions. Power generation solutions such as Fuel Cell power products (example: https://www.ballard.com › backup-power-systems) or commercial Battery Power backup systems, (example: https://www.backupbatterypower.com), are compatible and available. Big investments in the wrong products (i.e. diesel trucks and diesel generators) with a mine life of 80 years runs contrary to County's Energy Action Plan and available backup alternatives.
4) Electric Energy Production. In California, approximately 1/3 of greenhouse gas (GHG) emissions are generated from electricity production. Carbon trading is not sufficient to address this issue when proposing to double Nevada County's non-residential electrical consumption. The Mine should develop local solar and wind offsets to mitigate this enormous increase in electrical consumption. Afterall, a mine full of gold can pay for 21st Century climate energy requirements.

5) Grandfather Clauses. The Mine operation of 80 years and construction preparation over the next decade should not be grandfathered into current law, but rather required to meet rapidly changing GHG energy standards. A project of this size and impact should not grandfather in diesel trucks or generators for the life of this equipment. A Mine zero net energy plan would address this.

The County DEIR response to energy consumption, hydrocarbons, and toxic greenhouse gas release is short term in response, dismissive of the County EAP, and uses yesterday's standards for a world requiring rapidly changing standards to address climate impacts and community threat. Please protect Nevada County citizen.

## INDIVIDUAL LETTER 237: ERIC JORGENSEN

### Response to Comment Ind 237-1

This is an introductory comment. The commenter expresses opposition to the project and states generally that the DEIR fails to address energy consumption, greenhouse gases and toxic emissions, but does not point to specific examples in the DEIR. With regard to the commenter's opposition to the project, please see Master Response 1 - Non-EIR/Administrative issues.

### Response to Comment Ind 237-2

As stated on page 4.3-89 of the DEIR, The Energy Action Plan (EAP) is not a Qualified GHG Emissions Reduction Plan under CEQA pursuant to the requirements outlined in the CEQA Guidelines, Section 15183.5(D); therefore, no CEQA document can tier from the County EAP. Nevertheless, the compliance of the project with EAP strategies has been analyzed and found to be consistent with the EAP. Please see Master Response 26 - Nevada County Energy Action Plan. Batteries are not necessary for the project as they would not avoid or lessen a significant project impact.

### Response to Comment Ind 237-3

The commenter asserts that the project's air quality impacts, GHG impacts, and energy use impacts are significant. The commenter then proposes several "energy alternatives" including a net-zero mine electric energy plan, use of all electric vehicles below and above ground, backup energy solutions such as fuel cells and battery power, and onsite electric energy production. All underground equipment and mineral processing will be powered by electricity. The commenter's proposed energy alternatives are not necessary because they would not reduce any significant impact of the project. Please see Master Response 26 - Nevada County Energy Action Plan.

**Individual Letter 238**

**From:** Ericha Liberty Woolley <erichaliberty@gmail.com>
**Sent:** Monday, April 4, 2022 10:45 PM
**To:** Idaho MMEIR
**Subject:** personal comment & request on the mine

**CAUTION:** This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

**Ind 238-1**

I grew up living in auburn, often coming up to visit grass valley & nevada city to enjoy the beautiful forest, the lively sweet rivers and streams. After graduating highschool in 2017, a big part of my journey has been to explore other places, communities, cultures along the west coast. In my travels, I have found that I am repeatedly drawn back to this special culture, feeling a strong inspiration to return again and again to this precious land. It's the living beauty of this land & the free thinking, creative & vibrant culture that I find to be so attractive & invite a sense of home. When I heard about the resurrection of this mine, I felt sad to imagine the environmental impacts that the mine would have on the land, water and wildlife.

**Ind 238-2**

I'm concerned that the proposal, if accepted and put into action, would impact the health of the water including the wells in the area. To honor integrity, it is necessary that the FEIR analyzes all the waterways including wells potentially impacted by the project. The impact analysis on wells in the DEIR is inadequate & underestimates impacts. There also needs to be clarification of the true impact on the local ecology. The discussion of water quality impacts related to loss of wetland vegetation on DEIR page 5-7 is not accurate because potential loss of cover vegetation due to road widening required near the creek is not looked at or mentioned. We need to honor that mitigation should include a 100 foot centerline of creek setback from the construction zone on the road.

**Ind 238-3**

I would love to see a higher level of integrity & empathy demonstrated through honoring the honest environmental impacts the mine would have, and choosing to not go through with this proposal. With all the efforts and energy that has been going into proposing the rise of the mine, I imagine that if all of that power was to be redirected and invested into regenerative solutions for more sustainable living within this local area, we would reap much better fruits. For example, investing in more money to encourage existing & new local organic farms, introducing more evolved educational strategies within the schools here that include social emotional learning, supporting the youth with fresh locally grown wholesome nutrition, etc. There are so many more important places to be investing time, energy, attention, and resources into that would greatly impact the wellbeing of future generations in an immensely positive way. We need to invest resources into projects that truly consider the mental, emotional, and relational health of the community, along with sustainable, restorative ecological practices and regenerative solutions.

Sincerely,Ericha Liberty Woolleyerichaliberty@gmail.com530 557 5949

## INDIVIDUAL LETTER 238: ERICHA WOOLLEY

### Response to Comment Ind 238-1

The comment does not address the adequacy of the DEIR. Please see Master Response 1 – Non-EIR/Administrative Issues.

### Response to Comment Ind 238-2

The comment expresses a general opinion that the impact analysis on wells in the DEIR is inadequate and underestimates impacts, but does not provide specific examples that would allow for a detailed response. Please refer to Chapter 4.8, Hydrology and Water Quality, of the DEIR for information related to impacts on waterways and wells in the area. See also Master Responses 13 through15 that further clarify groundwater concerns. Impacts to local ecology are discussed in Chapter 4.4, Biological Resources, of the DEIR. Specifically, Impact 4.4-3 addresses whether the proposed project would have a substantial adverse effect on riparian habitat or other sensitive natural community, or State or Federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means, and concluded that with implementation of Mitigation Measures 4.4-3(a) through 4.4-3(d) impacts would be less than significant.

The commenter's reference to page 5-7 is unclear. The commenter is referred to page 4.4-15 of the DEIR, where roadside drainages are discussed along East Bennett Road, and one 0.09-acre roadside wetland along East Bennett Road is identified. As shown in Table 4.4-10 of the DEIR, the roadside wetland will not be impacted by the proposed project improvements.

### Response to Comment Ind 238-3

The comment does not specifically address the adequacy of the DEIR. Nonetheless, the commenter's concerns have been noted for the record and forwarded to the decisionmakers as part of their consideration of the proposed project.

**Individual Letter 239**

Dr. Erika Gaylor
11548 Alta Vista Ave
Grass Valley, CA 95945
Email: erikagl@gmail.com

April 3, 2022

Mr. Matt Kelley, Senior Planner
Nevada County Planning Department
950 Maidu Avenue, Suite 170
Nevada City, CA 95959-7902
Email: Idaho.MMEIR@co.nevada.ca.us
phone: 530-265-1423

Dear Mr. Kelly:

I am a 10-year Nevada County resident who lives near the proposed Idaho-Maryland Mine project. I own my home in the Alta Street area of downtown Grass Valley and have an 8 year old who attends public school in Grass Valley. I also have family that live near the San Juan Ridge Mine opened by Siskon Mining in 1994 and have seen first-hand the negative impacts of mining on the health and safety of workers, the landscape and environment, and finally the quality and quantity of well water, including the local public school's (Grizzly Hill) well which failed due to mining.

**Ind 239-1**

Based on my review of the letter that Minewatch/CEA wrote in response to the DEIR, I have the following significant concerns about the proposed Idaho-Maryland mine project:

(1) Re-opening and operating the Mine will have detrimental impacts on the quality of life for local citizens and the ability of the county to continue to grow economically into a desirable community to raise the next generation. It is estimated that these negative impacts will continue for at least the next 80 years and most likely accumulate over time.

**Ind 239-2**

(2) The DEIR is not a thorough and comprehensive report; thus, it should not be considered definitive.

**Ind 239-3**

(3) Many community members moved here because of the proximity to nature and outdoor recreation and the corresponding small-town feel and quiet solitude in which to enjoy nature. The report underestimates the impact of the reopening on noise, traffic, air, etc.

**Ind 239-4**

(4) As a Grass Valley town local, I'm concerned about the impact of reopening the mine on asbestos exposure in the community (in particular, near the mine but also transported to and from the mine), contaminants from the mining of heavy metals, and very importantly, the unknown impact of mining on water quantity and quality. Again, what many people in our community have experienced is acute and long-term negative impacts from mining and this report does not adequately address these real and perceived (but unknown) concerns.

Thank you for your time and consideration.

Sincerely,

Erika Gaylor, Ph.D., Education Researcher, Nevada County Resident

## INDIVIDUAL LETTER 239: ERIKA GAYLOR

### Response to Comment Ind 239-1

The comment does not address the adequacy of the DEIR. Please see Master Responses 1 and 2.

### Response to Comment Ind 239-2

The comment expresses a general opinion that the DEIR is not a through and comprehensive report, but does not provide specific examples that would allow for a detailed response. Where a comment provides the opinion, preference, or observation of the commenter, without substantiation, this is acknowledged for the record, and no further response is provided. All comments, whether substantiated by facts or simply reflecting the position of the commenter, will be considered by the County throughout the process.

### Response to Comment Ind 239-3

The comment does not specifically address the adequacy of the DEIR. Please see Master Responses 1 and 2. The commenter expresses general concerns regarding the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible nor required.

### Response to Comment Ind 239-4

Please refer to Chapter 4.3, Air Quality, Greenhouse Gas Emissions, and Energy, of the DEIR for more information related to air pollution. Further information regarding the assumptions used when conducting the Health Risk Assessment for the proposed project is included in Master Responses 20 through 22, including asbestos and metals. In addition, please refer to Chapter 4.8, Hydrology and Water Quality, of the DEIR for information related to impacts on water quality and quantity. Master Responses 13 through 15 provide further clarification on wells and groundwater. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

NEVADA COUNTY
BOARD OF SUPERVISORS

Dear Nevada County Supervisors;

Businesses, homeowners, and conservationists in Nevada County are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. We, urge the Board of Supervisors to reject this destructive proposal and instead protect our community.

**Ind 240-1**

We face new environmental challenges and this project seems to be a step in the wrong direction. Our duty is to protect our land and natural resources and not exploit them to their limit. As a mother I urge you to think about what world we want for out next generations and encourage you to look at our past and at the past of this Rise Gold. This is not what we want for our community.

In gratitude for your service,

2/16/2022

**Subject:** My comment for Idaho Maryland Mine

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

**Do not click links or open attachments** unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Hello,

My name is Erika Neeley and I am a Nevada City resident. I wanted to make sure that I voiced my opinion about the possibility of this mine opening up. I STRONGLY disagree with the idea of a mine reopening in our city, and county. I still see the devastating impacts from previous mines in the area. The polluted waters, the desert like landscaping where they used water for mining, the trash that's been left behind. I know that it will bring down the value of our homes, and bring down the value of life for our local wildlife and environment.

**Ind 241-1**

The releasing of toxic chemicals from mining polluting our air, we don't need anything else to bring down the quality of our air and water. The DEIR has not done enough to discuss impacts to water quality, they also need to do more to analyze how this will impact our wells, and what they plan to do to mitigate damage. Rise Gold is a new company that has never opened a mine, and never made a profit. How can we trust them to do it 'right' here? Are you willing to let our beautiful city and county be a test ground for their mining? They want to put a toxic hardrock mining plant in the middle of a residential community that goes 24 hrs a day, 7 days a week, for 80 years. Imagine all the things that could go wrong- the impact on that community- the people, the land, the wildlife.

DO NOT open this mine!!! The cons WAY OUT WEIGH the pros of this.

Thank you for listening to the concerns of the people here.

Erika Neeley

NEVADA COUNTY
BOARD OF SUPERVISORS

Nevada County Board of Supervisors
950 Maidu Avenue, Suite 200
Nevada City, CA. 95959
March 1, 2022

Dear Supervisors Hall, Scofield, Miller, Hoek, and Bullock
I am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I have listened to and researched the arguments from Rise Gold Mine. They continue to talk about how it will benefit our community, but shy away from the possible negative impacts a project of this size could/will have on our County.

Starting in 2021, as I drive around our local communities, I see very large building projects. Homes and apartments under construction on Ridge Road, Alta Street, Old Tunnel Road, at the intersections of Ridge Road and Gold Flat, and the monster project at Dorsey and Sutton Way. These projects were approved by you, so you have deemed them valuable and necessary for the improvement of the Nevada County citizens. You have considered the traffic, and water needs for these projects.

**Ind 244-1**

Now you are asked to put these projects and our current homes and business at risk of not having enough water because the Idaho-Maryland Mine Project is going to need more water than is being realized. It is also hard to imagine that the mine is going to produce the number of jobs that Rise Gold is calming.
I encourage you to vote against this project and protect the community and citizens of Nevada County.
Sincerely,

Eugene E. Gilligan

To whom it may concern,
I am a homeowner in Grass Valley in the You Bet area. My husband grew up in Colfax but we relocated to Grass Valley from Oakland two years ago.

**Ind 246-1**

We are extremely concerned with the environmental impact of the proposed gold mine. We are passionate about healing and honoring the beautiful ecosystem we call home. The impact of fires and drought are a tremendous stressor on this ecosystem, and it stands to get worse, according to scientists. The environmental report does not properly take these stressors into account. Fires and drought could very well be much worse than are currently projected.

We simply cannot risk this project in a delicate, rapidly changing region.

We must protect these lands. Please don't choose gold over the appropriate conservation behaviors that this cherished and troubled landscape deserves. Every living thing deserves better than this pathetic scheme.

Thank you
Eva Saelens

CAUTION: This email originated from outside of County of Nevada email system. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Nevada County Supervisors,
Our family is asking that you strongly reject the Rise Gold proposal to re-open the Idaho-Maryland Mine. We urge the Board of Supervisors to reject this destructive proposal and instead protect our community.

**Ind 247-1**

We are a family who recently relocated to the area from the Bay Area but my husband is from Weimar and went to Colfax High. We came back to this area because we are passionate about the ecosystem and consider the natural beauty of the foothills to be our greatest wealth. We feel a spiritual commitment to the healing of this land after gold mining's dirty and cruel legacy. We feel that we have a responsibility to make it right and to take indigenous responsibility into consideration when in relationship to this land.

This gold mine is a nightmare and continues the legacy of pain that this region still suffers from. We don't need this mine. We don't need the many problems that will spring from it. Please don't make the horrible mistake of falling for Rise Gold's song and dance. This is a supremely divine place and we must fight the instincts of those who want to exploit it.

Thank you

Idaho.mmeir@co.nevada.ca.us

RE: Idaho Maryland Mine EIR Commentary

Dear Sue Hoek and Nevada County Board of Supervisors,

**Ind 248-1** I oppose the opening of the Idaho Maryland Mine for myriad reasons- a lack of professionalism on behalf of Rise Gold, the sheer absurdity of removing millions of gallons of groundwater in a mega drought (LA Times February 2021; Nature Climate Change, February 2021), the claim that the mine water is "immune" from the drought, and the resulting catastrophic erosion events from the discharge of 850gpm into South Wolf Creek potentially mobilizing mercury into the greater Wolf Creek Watershed.

Also at risk is the available groundwater below the town of Grass Valley, CA. According to California's State Water Board,

**Ind 248-2**

> Groundwater pumping can locally exceed recharge from rainfall, percolation through streams, and other sources. Excessive groundwater pumping can overdraft aquifers, emptying them faster than natural systems can replenish them. Overdraft can result in wells going dry,... depletion of surface water supplies, and cause the land to collapse (i.e., subsidence).
>
> Ensuring sustainable management of groundwater's quality and quantity is essential for meeting California's future water supply needs. Climate change and the threat of prolonged drought highlights the need for improving groundwater recharge and storage in some groundwater basins, and protecting or restoring groundwater quality and quantity throughout the state.
>
> The close connections between groundwater and surface water in land use, human activity, water quality, and water suppliers must be coordinated and communicated to promote wise, balanced, and sustainable use of California's groundwater resources.
> https://www.waterboards.ca.gov/water_issues/programs/groundwater/gw_basics.html

1

Thus, I find the current Draft EIR scientifically unsound. In addition to my concerns above, please address these issues:

1.Nevada Irrigation District treated water supply to dewatered residences:

a)*Address the discrepancy between Nevada County's requirement for the Certificate of Occupancy, where the

"well can produce at least 3.0 gallons per minute sustained production rate. The well ordinance will grant approval for the Certificate of Occupancy for well production as low at 1.5 gallons per minute with a required minimum 1000 gallon holding tank" (mynevadacounty.com)

and Nevada County Irrigation District provided a use factor of 0.4 gallons per minute (gpm)/dwelling unit. This use factor was provided by e-mail from Tonia Herrera, Nevada Irrigation District, July 22, 2020.

**Ind 248-3**

b)A maximum of 31 dwelling units to be connected to the District pipeline, if dewatered or experiencing non-potable water.

*What are the provisions for dewatered domestic wells above and beyond the suggested maximum of 31?

*How were the 31 dwelling units determined

*How were the hydrogeologic factors, unique to these 31 well settings, used to determine the spatial and temporal variances in these 31 wells?

*How was specific rock type and relative storativity and transmissivity applied?

*How was the resulting cone of depression interpreted?

c)Average depth of Nevada County wells approximates 400ft.

**Ind 248-4**

*Since dewatering and drilling will take place within this zone, explain how it was determined that only 31 wells would be dewatered?

*Address why more wells both within the Rise Gold operational footprint and outside the mining property boundaries would not be affected.

2.Dewatering millions of gallons of groundwater from below the town of Grass Valley, CA.

**Ind 248-5**

a)Address the inability to fully assess available groundwater in fractured rock.

b)Address the nature of recharge to fractured rocks in mega drought settings. (LA Times February 2021; Nature Climate Change, February 2021)

**Ind 248-6**

c)Address the stresses on groundwater and surface water connectivity when under creating rapid draw down of millions of gallons of groundwater per day in the first 6 months, and then the approximate one million gallons of groundwater removal per day thereafter.

**Ind 248-7**

d)How did the dewatering assessment address the potential for a region-wide dewatering based on an active cone of depression from daily withdraw of millions of gallons of groundwater for 80 years?

**Ind 248-8**

e)Explain why the millions of gallons of groundwater removed from the mine "should be immune from drought years", according to the Raney Planning and Management Idaho Maryland Mine Water Supply Assessment Dec 2021, pg. 23.

2

3.Causative Results from dewatering millions of gallons of groundwater from below the town of Grass Valley, CA.

a)Address the removal of millions of gallons of groundwater as it relates to California State Water Boards' directive to protect available groundwater resources:
"Ensuring sustainable management of groundwater's quality and quantity is essential for meeting California's future water supply needs. Climate change and the threat of prolonged drought highlights the need for improving groundwater recharge and storage in some groundwater basins, and protecting or restoring groundwater quality and quantity throughout the state. The close connections between groundwater and surface water in land use, human activity, water quality, and water suppliers must be coordinated and communicated to promote wise, balanced, and sustainable use of California's groundwater resources."
(https://www.waterboards.ca.gov/water_issues/programs/groundwater/gw_basics.html)

**Ind 248-9**

**Ind 248-10** b)Address the potential for mobilizing mercury and increasing erosion when discharging 850gpm into South Wolf Creek.

**Ind 248-11** c)Address the potential for an increase in fire risk due to decline in forest health as result of dewatering millions of gallons of water from below the town of Grass Valley, CA.

**Ind 248-12** d)Address the potential for increased seismicity in our county due to rapid extraction of millions of gallons of groundwater (Amos et al, 2014, doi:10.1038/nature13275)

**Ind 248-13** e)Address the potential for subsidence of residences and roadways due to rapid extraction of millions of gallons of groundwater. (Amos et al, 2014, doi:10.1038/nature13275)

Thank you for your time and consideration on these important factors.

Sincerely,

*Evelyn Soltero*

## INDIVIDUAL LETTER 248: EVELYN SOLTERO

### Response to Comment Ind 248-1

The commenter opposes the project, asserts that Rise Gold lacks professionalism, and opposes dewatering the mine in a "mega drought". Further, the commenter states that it disagrees that the mine is "immune" from the drought and asserts that the project will result in catastrophic erosion events from the discharge of 850gpm into South Fork Wolf Creek, potentially mobilizing mercury. With regard to the commenter's opposition to the project, please see Master Response 1 – Non-EIR/Administrative Issues. Contrary to the commenter's statement, the DEIR states that based on the water level monitoring data from private domestic wells (presented in Appendix B of Appendix K.2 of the DEIR), the amount of recharge appears to be consistent from year to year and is not substantially affected by drought or wet cycles (Chapter 4.8 at page 4.8-12) and that there are no apparent annual variations in groundwater levels due to drought or above-normal rainfall years (Chapter 4.8 at page 4.8-11).

In addition, the commenter does not provide any data or evidence to support the assertions that dewatering the mine and discharging treated water to South Fork Wolf Creek would cause "catastrophic" erosion or mobilize mercury. The geomorphology study presented in Appendix K.1 of the DEIR demonstrates that peak storm flows that exceed the discharge rate to South Fork Wolf Creek are normal events and have not caused excessive erosion. Laboratory analytical data presented in Appendix K.2 of the DEIR do not provide any evidence of the presence of mercury in the materials to be mined or within the South Fork Wolf Creek watershed in the project area. Please see Master Response 36 – Flows in South Fork Wolf Creek, and Master Response 16 – Drought and Climate Change.

### Response to Comment Ind 248-2

The potential effects of groundwater pumping are addressed in detail in Appendix K.2 and Appendix K.3 of the DEIR and in Section 4.8.4 of the DEIR. California Department of Water Resources' planning requirements related to sustainable groundwater management are identified as part of the Regulatory Context in Section 4.8.3 of the DEIR.

The commenter does not provide any specific data or evidence related to the risk to groundwater below the town of Grass Valley, CA, as stated in this comment. In particular, there is no evidence available to support the assertion that the project would cause "overdraft" of local groundwater supplies. Regardless, the DEIR concludes that there may be a potentially significant impact on the water supply in individual wells and provides mitigation requirements to address such impacts if they occur. (see Mitigation Measures 4.8-2(a) through 4.8-2(c).)

### Response to Comment Ind 248-3

The certificate of occupancy requirements and NID's use factor are parts of unrelated regulatory requirements that apply to different water supply sources. The commenter's questions about these requirements do not relate to the adequacy of the DEIR.

The commenter asks how the number of parcels to be connected to NID service was determined, and what would occur if additional domestic wells were impacted. The number of hookups to NID water service in the E. Bennett area is shown to be 30, not 31, in the evaluation of Impact 4.8-2 in the DEIR. The number of initial connections is based on the number of parcels in that area, as shown on Figure 1 and in Table 1 of the Well Mitigation Plan, which is Appendix K.9 of the DEIR. Mitigation Measures 4.8-2(a) and 4.8-2(b) describe the procedures to be followed to determine whether additional wells become impacted and the actions that must be taken to mitigate those impacts, if they occur. Please also see Master Response 15 – Adequacy of Groundwater

Monitoring Wells, for an updated description of the proposed monitoring approach, which now also includes a proposal by the applicant to monitor domestic water wells within or nearby the predicted 1-ft drawdown isopleth of the project. These 378 properties are listed in Table 1 and shown in Figure 1 of Master Response 15. To provide property owners additional assurance, a condition of approval will be imposed on the project requiring this domestic well monitoring.

The commenter also asks questions regarding the hydrogeologic factors used to determine the zone of dewatering impact. The hydrogeologic factors used in the analysis are described in Appendix K.2 and Appendix K.3 of the DEIR. These studies provide substantial evidence on dewatering impacts, and the impact analysis in the DEIR relies upon these studies and the independent, third-party peer review described in Section 4.8.4 of the DEIR, at pages 4.8-40 to 4.8-41.

## Response to Comment Ind 248-4

The commenter states that the average depth of Nevada County wells is approximately 400 ft, and then asks why only 31 wells will be impacted. The number of wells that are expected to be impacted was based on a groundwater model (see Appendix K.3 of the DEIR), and a threshold of 10%, such that a reduction in water column in a groundwater well of 10% or more was considered to be a significant impact (see Section 4.2 of Appendix K.2). Only 7 wells were found to have a significant impact based on the 10% threshold as applied to the dewatering drawdown calculated by the groundwater model. The DEIR requires mitigation, including connecting 30 parcels to NID potable water supply, even though only 7 wells were predicted to be potentially impacted. In response to commenter's questions, more wells are not expected to be impacted because the groundwater model did not predict a reduction in water level over 10% for those wells. The actual depths of the wells considered in the evaluations that support the DEIR are shown in Tables 4-1 through 4-4 of Appendix K.2 of the DEIR. The well locations are shown on Sheet 12 of Appendix K.2 of the DEIR and Figure 2-6 of Appendix K.3 of the DEIR.

Potential dewatering effects in the operation and perimeter areas are discussed in Appendix K.2 and Appendix K.3 of the DEIR.

## Response to Comment Ind 248-5

The commenter asks the County to address the assessment of available groundwater in fractured rock and address the nature of recharge to fractured rock in drought settings. Fractured bedrock conditions are discussed in Section 4.8.1 of the DEIR (at page 4.8-8), in Appendix K.2 of the DEIR throughout Section 3.3, and in Section 2.0 of Appendix K.3 of the DEIR.

Recharge of the fractured bedrock is discussed in Section 3.3 of Appendix K.2 of the DEIR. Water level hydrographs from numerous wells in the project vicinity show that the amount of recharge each year is relatively constant since almost all of the wells maintain a consistent magnitude of seasonal fluctuation from year to year and there are no long-term trends observed in most of the wells that can be correlated to variations in annual water-year rainfall.

## Response to Comment Ind 248-6

The commenter asks about the impacts of the project's proposed dewatering on groundwater and surface water connectivity. Section 5.3 of Appendix K.3 of the DEIR and Section 4.1 of Appendix K.2 of the DEIR discuss project effects on surface water, including effects related to lowering of groundwater levels. It is important to note that any reduction in surface water flows in the South Fork Wolf Creek watershed would be more than offset by the discharge of treated water. Flow reductions would also occur in Wolf Creek because the drains would no longer discharge while the mine workings were dewatered. As described in Section 4.3 of Appendix K.2 of the DEIR, the

loss of drain flow to Wolf Creek would be in the range of 0.13 cubic feet per second (cfs) to 0.16 cfs, while the base flow in Wolf Creek ranges from 10 cfs to 50 cfs. Thus, the reduction in flows in Wolf Creek would be de minimis.

## Response to Comment Ind 248-7

The commenter asks how the DEIR assessed the potential for a region-wide dewatering based on the cone of depression caused by the project. The assessment's approach to evaluating a potential region-wide drawdown cone is described in Section 4.2.2 of Appendix K.2 of the DEIR and in Sections 4.3 through 4.5 of Appendix K.3 of the DEIR. To evaluate a region-wide potential drawdown cone, the bulk fractured bedrock was assumed to be isotropic and homogeneous on a very large scale, consistent with a region-wide analysis. For more localized conditions related to individual wells, a somewhat different approach and set of assumptions were used, as described in Section 4.2 of Appendix K.2 of the DEIR.

## Response to Comment Ind 248-8

The commenter states that it disagrees that the mine is "immune" from the drought. As described in Section 3.3.2.2 of Appendix K.2 of the DEIR, the water levels in the private domestic wells have seasonal fluctuations that may range from 10 feet to 50 feet between wet and dry times of the year but remain relatively consistent from year to year within each individual well. During the monitoring period, several years with below normal rainfall occurred (2001, 2004, and 2007), multiple years with above normal rainfall occurred (1995-1998 and 2006), and several years of near-normal rainfall occurred (1999, 2000, 2002, 2003, 2005). Despite large variations in annual rainfall from year to year, the seasonal water level cycles in individual wells remain consistent over time and the overall water levels shown on the hydrographs for each well do not fluctuate based on wet or dry climatic cycles. Based on the lack of changes in the individual well hydrographs between wet and dry climatic cycles, the amount of recharge, as described in Section 3.2, appears to be consistent from year to year and is not affected substantially by drought or wet cycles. The referenced statement is made on page 2 and page 18 of the Raney Water Supply Assessment, which is Appendix N of the DEIR, not page 23 as stated in the comment. Please also see Master Response 16 – Drought and Climate Change.

## Response to Comment Ind 248-9

California Department of Water Resources' planning requirements related to sustainable groundwater management are identified as part of the Regulatory Context in Section 4.8.3 of the DEIR. The potential effects of groundwater pumping are addressed in detail in Appendix K.2 and Appendix K.3 of the DEIR and in Section 4.8.4 of the DEIR.

Please also see Response to Comment Ind 248-2.

## Response to Comment Ind 248-10

The commenter asks about the potential for mobilizing mercury in South Fork Wolf Creek. The geomorphology study presented in Appendix K.1 of the DEIR demonstrates that peak storm flows that exceed the discharge rate to South Fork Wolf Creek are normal events and have not caused excessive erosion. Laboratory analytical data presented in Appendix K.2 of the DEIR do not provide any evidence of the presence of mercury in the materials to be mined or within the South Fork Wolf Creek watershed in the project area. Please see Master Response 36 - Flows in South Fork Wolf Creek. As the project is not expected to cause significant erosion impacts and there is no evidence of mercury in the watershed or project area, there is no potential for impacts related to mobilization of mercury.

Please also see Response to Comment Ind 248-1.

## Response to Comment Ind 248-11

Please see Master Response 33 – Groundwater Dependent Vegetation. As stated on page 4.13-21 of the DEIR, it can be reasonably concluded that the dewatering of the mine would not affect the available moisture for vegetation in the project area because the depth to groundwater is already below the typical rooting depths in higher topographic areas, while adequate flows would occur in South Fork Wolf Creek and Wolf Creek to maintain groundwater levels in the lower topographic areas. The dewatering would not, therefore, increase fire risk due to reduced groundwater levels.

## Response to Comment Ind 248-12

The reference cited in this comment (Amos et al., 2014, DOI:10.1038/nature13275 – abstract available at https://pubmed.ncbi.nlm.nih.gov/24828048/) specifically relates to alluvial aquifers within the Central Valley of California. Please see Response to Comment Grp 8-51 regarding the expected rate of drop in water levels in the mine.

## Response to Comment Ind 248-13

The reference cited in this comment (Amos et al., 2014, DOI:10.1038/nature13275 – abstract available at https://pubmed.ncbi.nlm.nih.gov/24828048/) specifically relates to alluvial aquifers within the Central Valley of California. The California Department of Water Resources has specifically identified the potential for subsidence due to groundwater extraction to be related to irreversible compaction and consolidation of sedimentary clay layers between alluvial aquifer units within sedimentary groundwater basins (California's Groundwater, Department of Water Resources Bulletin 118, January 1994, pages 118-119, and Bulletin 118 2020 Update, page 5-20, available at https://data.cnra.ca.gov/dataset/calgw_update2020/resource/d2b45d3c-52c0-45ba-b92a-fb3c90c1d4be). Such conditions do not apply to the bedrock conditions in the project vicinity. In fact, the reference cited in this comment concludes that the reduction in mass within the land surface due to groundwater extraction has actually resulted in uplift, not subsidence, in the Sierra Nevada bedrock surrounding the Central Valley.

NEVADA COUNTY
PLANNING DEPARTMENT

# THE IDAHO-MARYLAND MINE: A PROUD HISTORY

The Idaho-Maryland Mine was one of the most productive and best-known gold mines in the United States, producing approximately 2.4 million ounces between 1866 and 1955. The mine closed in 1956 as the fixed price of gold at $35 per oz made the mining of American gold unprofitable.

Rise Grass Valley will reinitiate mining and will do so with a focus on green-friendly practices and minimizing the impacts to neighbors. The project will use modern, clean, state-of-the-art mining equipment and proven techniques to produce "green gold." The result is a project that has no significant impacts to water, air quality, and the natural environment or from noise or vibrations during operations.

When in full operation, Rise Grass Valley's Idaho-Maryland Mine project will create hundreds of good-paying jobs and realize broad economic benefits for Nevada County.

Ind 249-1

**Please fill out and send back to us your support for the Idaho-Maryland Mine**

WE OPPOSE

**I support re-opening the Idaho-Maryland Mine**

NO MINE!

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Name(s) FERNANDO & ROJO - NANCY ROJO

Phone 5302747336
Email Address nancytrojo@gmail.com

**Need more details on our plan to re-open the Idaho Maryland Mine? Want to join our team? Please visit RiseGrassValley.com/contact and sign up.**

ALL LIES!

# DEIR CONFIRMS: Mine will NOT drain local wells, will not cause water quality or air quality impacts.

Concerns about mining impacts to local wells, water and air quality have been put to rest by the county's independent Environmental Impact Report. The Draft EIR confirms that the wells will NOT be adversely impacted outside of the E. Bennett area above the mine. Rise Grass Valley will install a new NID potable waterline to the E. Bennett area - paid for in full by RGV. In addition, studies released in the Draft EIR confirm no significant impact to water quality, air quality, public health or traffic.

LIES

## YOUR SUPPORT IS CRITICAL

*Tell the Board of Supervisors that you support Rise Grass Valley's re-opening of the Idaho-Maryland Mine.*

**Please fill out and return the attached postcard today!**

1. **Detach the support card on the right and fill out the reverse side.**
   We'll use these cards later to show the Board of Supervisors the strong support throughout the community for re-opening the Idaho-Maryland Mine.
2. Visit RiseGrassValley.Com for complete project details. Use our **"Take Action"** tool to send a message directly to the County Board of Supervisors through our website.

Hi,

**Ind 250-1**

My name is Florence Themelis, I live in Forest Knolls, Nevada city. I oppose the reopening of the mine as digging will happen directly under my neighborhood. Why are we considering the reopening of a mine under a town full of people? It's just pure madness. We live in a beautiful community and the mine will destroy it.
We're talking a mine operating 24hrs/a day, 7 days a week for 100 years! No more peace during the day, no more sleep at night. I worked very hard to pay for my home, and my property value will plummet if the mine reopens.

**Ind 250-2**

We keep experiencing very serious droughts, it keeps getting worse, we're told to save water year after year. Somehow the reopening of the mine which will waste billions and trillions of gallons of water is considered?? We can live without gold, not water!
We're extremely lucky to have beautiful swimmable rivers. We moved here because of it. We can't let the mine pollute our creeks and rivers.
The destruction the mine reopening will do can NEVER be undone.
Please say NO to the reopening of the mine.
Thank you.
Florence THEMELIS.

## INDIVIDUAL LETTER 250: FLORENCE THEMEMLIS

### Response to Comment Ind 250-1

The comment does not address the adequacy of the DEIR. Please see Master Response 1 – Non-EIR/Administrative Issues. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

### Response to Comment Ind 250-2

Please refer to Chapter 4.8, Hydrology and Water Quality, of the DEIR for information related to impacts on water usage and water quality. Please also see Master Responses 13 through 16 regarding groundwater and Master Response 35 – Discharge to South Fork Wolf Creek. The comment expresses general concerns regarding the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible nor required.

**Individual Letter 251**

Idaho Maryland Mine

If the mine were to reopen we would lose basic qualities of life that we have been accustomed to living here in the Nevada City area.

**Ind 251-1**

Areas of Concern:
NOISE
WATER
AIR

Back in the early/mid 80's there was an effort to reopen the Lava Cap mine. The mining company had a crew out to our home on Banner to measure the depth of our well. They said basically "that there are 16 different reasons for a well to go dry and only one of them is mining. So, you prove it". We lucked out; the mine reopening was voted down. Will we be so lucky again?

**Ind 251-2**

QUALITY OF LIFE: All of this is going to affect tourism. Having mining vehicles and miners on the streets. Additional traffic on the roads and highways. I have heard that we have been called the jewel of the Sierra. I think with the mining we would lose that distinction.

**Ind 251-3**

Frank Gould

Re: Comments on the Draft Environmental Impact Report, Idaho-Maryland Mine Project

Dear Nevada County Planning Department:

I am a 23-year resident of Nevada County, and hereby respectfully submit these comments on the Draft Environmental Impact Report ("DEIR") for the proposed re-opening of the Idaho-Maryland Mine ("Project" or "Mine"). The DEIR is deficient in countless ways. The DEIR's analysis of the Project's impacts on water quality and quantity – particularly in the midst of the worst drought in this area in 1200 years, *see* https://www.nature.com/articles/s41558-022-01290-z and https://www.nytimes.com/2022/04/04/opinion/environment/california-drought-wildfires.html -- is woefully inadequate. The same is true for the impacts on air quality and public health, environmental hazards and hazardous materials, waste management, seismic hazards, greenhouse gas emissions, biological and aquatic resources, aesthetics, traffic, and noise pollution, among many other issues. The DEIR's proposed mitigation measures for all these impacts are wholly inadequate. The DEIR's overwhelming deficits have been documented by others in extensive comments, specifically including those of the Community Environmental Advocates, which I incorporate by this reference as if fully set forth herein.

**Ind 252-1**

As a lawyer with more than 30 years of experience representing Indian tribes in California, I will focus my comments on the DEIR's insufficiency with respect to the Nevada City Rancheria Nisenan Tribe ("Tribe"). The Project proponent and the County's environmental consultant failed entirely to consult with the Tribe. The Tribe recently was added to the California Native American Heritage Commission's Tribal Consultation List and is therefore entitled to meaningful consultation as a matter of State law, including SB 18, AB 52, and provisions of the California Environmental Quality Act ("CEQA"). *See, e.g.*, Cal. Pub. Res. Code §§ 21074, 21080-21084; Governor's Office of Planning and Research, *Technical Advisory: AB 52 and Tribal Cultural Resources in CEQA* (June 2017) (available at https://www.google.com/search?q=CEQA+consultation+requirements&client=firefox-b-1-

**Ind 252-2**

d&channel=tus5&ei=0EFLYpWFHdqgkPIPpM2c-AM&ved=0ahUKEwiVrf2njfv2AhVaEEQIHaQmBz8Q4dUDCA0&uact=5&oq=CEQA+consultation+requirements&gs_lcp=Cgdnd3Mtd2l6EAM6BAgAEEdKBAhBGABKBAhGGABQ-QVYkQxgrQ9oAHACeACAAVqIAawBkgEBMpgBAKABAcgBCMABAQ&sclient=gws-wiz). The DEIR recites that its authors sought to contact the Tribe, but that half-hearted, feeble effort fails to meet CEQA's requirements, policies, or purposes requiring ***meaningful*** consultation. Indeed, the DEIR's Ethnographic Overview ***fails to even acknowledge the present-day existence of the Tribe and its members***. *See* DEIR p. 4.5-2. In fact, the Nisenan people have existed here since time immemorial, and this century has seen a revitalization of the Tribe's governmental and cultural activities. *See* https://www.nevadacityrancheria.org/.

The Legislature provided in Assembly Bill 52 that:

"In recognition of California Native American tribal sovereignty and the unique relationship of California local governments and public agencies with California Native American tribal governments, and respecting the interests and roles of project proponents, it is the intent of the Legislature, in enacting this act, to accomplish all of the following: (1) Recognize that California Native American prehistoric, ***historic***, archaeological, cultural, and sacred places are ***essential elements in tribal cultural traditions, heritages, and identities***. (2) Establish a new category of resources in the California Environmental Quality Act called "tribal cultural resources" that considers the ***tribal cultural values*** in addition to the scientific and archaeological values when determining impacts and mitigation. (3) Establish examples of mitigation measures for tribal cultural resources that uphold the ***existing mitigation preference for historical and archaeological resources of preservation in place***, if feasible. (4) Recognize that California Native American tribes may have expertise with regard to their tribal history and practices, which concern the tribal cultural resources with which they are traditionally and culturally affiliated. Because the California Environmental Quality Act calls for a sufficient degree of analysis, ***tribal knowledge about the land and tribal cultural resources at issue should be included in environmental assessments for projects*** that may have a significant impact on those resources. (5) In recognition of their governmental status, establish a ***meaningful consultation*** process between California Native American tribal governments and lead agencies, respecting the interests and roles of all California Native American tribes and project proponents, and the level of required confidentiality concerning tribal cultural resources, at the earliest possible point in the California Environmental Quality Act environmental review process, so that tribal cultural resources can be identified, and culturally appropriate mitigation and mitigation monitoring programs can be considered by the decision making body of the lead agency. (6) Recognize the ***unique history of California Native American tribes*** and uphold existing rights of all California Native American tribes to participate in, and contribute their knowledge to, the environmental review process pursuant to the California Environmental Quality Act (Division 13 (commencing with § 21000) of the Public Resources Code). (7) Ensure that local and ***tribal governments***, public agencies, and project proponents ***have information available, early in the California Environmental Quality Act environmental review process, for purposes of identifying and addressing potential adverse impacts to tribal cultural resources*** and to reduce the potential for

delay and conflicts in the environmental review process. (8) Enable California Native American tribes to manage and accept conveyances of, and act as caretakers of, tribal cultural resources. (9) Establish that a substantial ***adverse change to a tribal cultural resource has a significant effect on the environment***."

AB 52, § 1 (Gatto, 2014) (emphasis added). Nevertheless, ***without any Tribal consultation whatsoever***, the DEIR simply concludes that "Tribal Cultural Resources were not identified for the project site." DEIR p. 4.5-11.

**Ind 252-3**

The utter lack of Tribal consultation also fails to meet the promises the County made to the Tribe in Resolution No. 20-533 "recognizing the Nevada City Rancheria Nisenan Tribe's historical, cultural and continued significance to Nevada County and California …." *Id.* In that Resolution, the County recognized that gold mining here led to "the displacement of the Tribe and its members." *Id.* The County also acknowledged the "Tribe's continuous existence as an indigenous tribe in Nevada County, and further recognizes the Tribe's historical, cultural and continued significance to Nevada County and California." The County also "supports ***future collaboration and agreement between the County and the Tribe*** that strengthen each of their governments, for their mutual benefit and to ***ensure that local land use impacts on tribal and county governments, including their citizenry, services, lands, and infrastructure, are maintained and mitigated for the benefit of all***." *Id.* (emphasis added).

**Ind 252-4**

The DEIR fails entirely to assess the Mine's impacts -- historical, present, and future -- on the Tribe, its members, its ancestral lands, and its cultural resources. It fails to assess the theft of Tribal water resources and ancestral lands, the loss of hunting and gathering grounds, and impacts on Tribal cultural resources caused by the Mine and that will be perpetuated by the Mine's proposed re-opening. Moreover, the DEIR fails to assess the Mine's impacts in causing and perpetuating the genocide against the Tribe and its members, as well as the related impacts of the proposed Mine re-opening, including the badges and incidents of the genocide and its lingering intergenerational trauma. There are no mitigation measures proposed to compensate the Tribe for the genocide and its continuing impacts on the Tribe, its members, its lands, and its cultural resources. Indeed, as noted in the U.S. National Archives and Records Administration, California's gold rush was in significant part responsible for the failure to ratify the California Indian treaties, including the Camp Union Treaty of 1851, to which the Tribe's ancestral leader was a signatory. *See* L. Miller, *The Secret Treaties with California Indians*, https://www.archives.gov/files/publications/prologue/2013/fall-winter/treaties.pdf ("in the wake of the gold rush, white Californians strongly objected to the treaties"). The Mine is responsible for the theft of the Tribe' ancestral lands, and the proposal to re-open it must include mitigation for that calamitous impact.

**Ind 252-5**

The DEIR lacks the information and analysis required to identify all the Mine's potentially significant impacts on the Tribe, its members, and its ancestral homelands, and its cultural resources. As noted by other commentors, the DEIR also lacks an accurate Project description, relies on an incomplete baseline for evaluating the Project's environmental impacts, lacks data and analyses needed to make informed determinations, underestimates or omits impacts and fails to provide effective and feasible mitigation measures.

**Ind 252-6**

The DEIR fails to satisfy CEQA's requirements. It also fails to meet the County's obligations to the Tribe undertaken in Resolution No. 20-533. The Tribe has the right under State and County law to be fully and meaningfully consulted on the Project. The DEIR must at a minimum be revised accordingly and recirculated, with a full analysis of the Mine's impacts on the Tribe, its members, its ancestral lands, and its Tribal cultural resources. The revised DEIR must propose meaningful mitigation for the badges and incidents of the genocide, the theft of Tribal ancestral lands, the theft and destruction of Tribal natural and cultural resources, and the destruction of the Tribe's traditional way of life.

Sincerely,

Frank Lawrence, Esq.

www.franklawrence.com 578 Sutton Way | No. 246 | Grass Valley, CA 95945

## INDIVIDUAL LETTER 252: FRANK LAWRENCE

### Response to Comment Ind 252-1

Commenter alleges the DEIR is deficient in "countless ways," briefly lists multiple resource areas and generally states that the proposed mitigation measures are inadequate, citing comments of Community Environmental Advocates. The comment is introductory in nature and alleges no specific defects, requiring no specific response from the County. To the extent the commenter incorporates the comments from Community Environmental Advocates, the commenter is referred to the County's responses to Group Letter 7 and Group Letter 8.

### Response to Comment Ind 252-2

Please see Response to Comment Grp 14-2.

### Response to Comment Ind 252-3

Please see Responses to Comments Grp 14-2 and Grp 14-3.

### Response to Comment Ind 252-4

All cultural resources impacts are fully disclosed in Chapter 4.5 of the DEIR, which addresses known historic and archaeological resources in the project vicinity, as well as the potential for previously unknown resources to occur within the overall project site. (DEIR p. 4.5-1.) Additionally, the Nisenan Tribe is specifically cited in the Ethnographic Overview (DEIR p. 4.5-2) and Mitigation Measure 4.5-3 (DEIR p. 4.5-31) pertains to potential human remains. Importantly, the project does not propose taking any water or land owned by the Tribe or its members and the commenter does not provide any citation or evidence that the project would take either water or land owned by the Tribe or its members or that the Project Proponent's property is currently a hunting or gathering ground for the Nisenan Tribe.

Finally, the commenter was not specific as to any allegation against the project or the Project Proponent of damage or harm to the Nisenan Tribe or its members. As required by Section 15121 of the CEQA Guidelines, the EIR will (a) inform public agency decisionmakers, and the public generally, of the significant environmental effects of the project, (b) identify possible ways to minimize the significant adverse environmental effects, and (c) describe reasonable and feasible project alternatives which reduce environmental effects. (DEIR p. 1-2.) In other words, CEQA is concerned with a project's impact on the environment, and not "lingering intergenerational trauma" not associated with this project. Rather, the commenter cites to general allegations that the California gold rush, as opposed to the proposed project, was responsible for California not ratifying various treaties. The DEIR does, however, acknowledge that traditional lifeways were disrupted and Native people were displaced with the onset of the Gold Rush in the mid-nineteenth century. (DEIR 4.5-2.) Aside from the current project's impacts to any cultural resources on the project site, the remainder of the cited issues are not environmental concerns recognized by CEQA. No further comment required.

### Response to Comment Ind 252-5

Commenter states that the DEIR does not identify the project's potentially significant impacts on the Tribe, its members, homelands and cultural resources. Commenter also alleges that the Project Description is not accurate and relies on an "incomplete baseline" and does not provide feasible mitigation measures.

The scope of an EIR is limited to a local agency's evaluation of potentially significant environmental impacts of a project, which by definition are limited to physical conditions, rather

than social or economic conditions. (Pub. Res. Code § 21060.5; CEQA Guidelines § 15360.) The project's potential impacts to cultural resources is extensively detailed in Chapter 4.5 of the DEIR along with proposed mitigation. However, the comment is not specific regarding any undisclosed harm to cultural resources, or precisely how the DEIR's proposed mitigation measures fail to protect cultural resources. The commenter is also referred to Master Response 2 regarding Social and Economic Impacts.

Regarding the general allegation that the Project Description is inaccurate, the commenter is referred to Chapter 3 of the DEIR. There the DEIR provides a comprehensive description of the project in accordance with the CEQA Guidelines. (DEIR p. 3-1.) Other than the general allegation that the Project Description is inaccurate, the commenter does not point to any specific shortcoming of the Project Description, nor any missing information or changes that would make the Project Description more accurate.

For the comment's statement that the County relied on an incomplete baseline or lacks data sufficient to evaluate the project's environmental impacts, the County notes that the DEIR contains a complete description of the physical environment and all conditions in the vicinity of the project. As noted by CEQA Guidelines Section 15125(a), "This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant." As the commenter does not cite any specific shortcoming of the DEIR's description of the physical environmental conditions, nor describe how the baseline is "incomplete," the County refers the commenter to the discussion of the baseline in the DEIR. (see DEIR pp. 1-3 through 1-7.)

On a similar note, the comment alleges that the DEIR "lacks data and analyses" needed to make informed determinations, underestimates or omits impacts and fails to provide effective and feasible mitigation measures. However, the commenter only makes this general allegation, and provides no examples or references to what data is lacking, what analyses remains unaddressed, which impacts are underestimated or omitted or what mitigation measure is ineffective. In addition to the commenter's failure to identify any specific problem with the DEIR, the commenter similarly does not posit any changes to mitigation measures nor propose new or additional measures that would remedy a perceived problem. Without specific criticisms of the DEIR that can be addressed or remedied, the County cannot be sure what changes the commenter wishes the DEIR to incorporate or how it fails to meet legal adequacy.

## Response to Comment Ind 252-6

Regarding consultation requirements under CEQA and County Resolution No. 20-533, the commenter is referred to Responses to Comments Ind 252-3, Ind 252-4, and Ind 252-5 above.

Dist 3

EACH SUPERVISOR REC'D

March 4, 2022

RECEIVED
MAR 07 2022
NEVADA COUNTY
BOARD OF SUPERVISORS

Nevada County Board of Supervisors
950 Maidu Avenue, Suite 200
Nevada City, CA 95959

Dear Supervisors Heidi Hall, Ed Scofield, Dan Miller, Susan Hoeck, and Hardy Bullock,

**Ind 253-1** I am a resident of Grass Valley and would like to join my voice to the chorus of local people who oppose the re-opening of the Idaho-Maryland mine. Allowing a ponderous extraction industry within the city of Grass Valley invites a multitude of risks to the health, stability, and sustainability of our community. The risks to health and environment are numerous and include damage from toxic mining dust, diesel exhaust, and toxic residues such as mercury, cyanide, and lead in our downstream ecosystems.

**Ind 253-2** The prospect that more than 80 mitigations in the DEIR can be resolved is naive. Those living close to the mine will be forced to suffer the noise and congestion from 100 trips per day of trucks hauling waste rock and incur well water depletion or perhaps even loss of their wells. At their last meeting the NID board members expressed their concerns of this becoming a bigger problem than the DEIR presents and Rise Gold claims.

**Ind 253-3** The risks are also financial. Residents near the mine will likely see a drop in the value of their homes, affecting the area's real estate market. Rise Gold is new to gold mining and therefore has no history of success. Rise Gold's CEO Ben Mossman has filed for bankruptcy in a past mining adventure. Should this happen again here the consequences could be disastrous. Who cleans up the waste left behind? Who pays costly legal fees to secure action? Demand for gold tends to be speculative, and there are indicators that gold may become less attractive to investors (The Economist, January 8, 2022, page 66). This does not bode well for the future of gold mining.

**Ind 253-4** Furthermore, the mine will sap our electricity supply by using the equivalent of 12% of county consumption or an estimated 5,000 homes. Can our community afford to dispense such a valuable resource when facing an increasingly precarious energy future for decades hence?

**Ind 253-5** And where will the mine's imported workers live? Housing in our community is already severely limited.

**Ind 253-6** As you deliberate on whether to approve or deny the Rise Gold mine project, please consider this as not just a Grass Valley matter but as a county matter. Our town is a vital component of the county's financial well-being, one of its major hubs for the arts and culture, and a launch pad for people who come to explore the county's natural beauty. Help keep it so.

**The risks are many and the benefits few. I urge you not to approve this dubious, multi-generational 80 year project. Current residents and their descendants will thank you.**

**Sincerely,**

**Fred Pohlmann**
**55 Rockwood Drive**
**Grass Valley, CA 95945**
**831-338-2488**
**pohlmannfred10@gmail.com**

## INDIVIDUAL LETTER 253: FRED POHLMAN

### Response to Comment Ind 253-1
The comment does not specifically address the adequacy of the DEIR. Please see Master Response 1 – Non-EIR/Administrative Issues. The comment expresses general concerns regarding the project but does not specifically address the adequacy of the DEIR. Thus, a detailed response is neither possible nor required.

### Response to Comment Ind 253-2
The comment expresses a general opinion that the it is naïve to assume all mitigations within the DEIR can be resolved, but does not provide specific examples that would allow for a detailed response. Please see Master Response 1, as well as Master Responses 14 and 15.

### Response to Comment Ind 253-3
Please see Master Responses 2 and 3.

### Response to Comment Ind 253-4
Please see Master Response 25.

### Response to Comment Ind 253-5
Please see Chapter 4.9, Land Use and Population and Housing, of the DEIR regarding impacts related to housing future mine workers. As discussed on page 4.9-25, as of 2018, Nevada County has 53,745 total housing units with a 22.5 percent vacancy rate (12,098 vacant housing units). The unincorporated area of Nevada County has a total of 32,182 housing units with 4,645 vacant housing units (14.4 percent vacancy rate). Therefore, it is reasonably anticipated that the addition of 312 persons as a result of increased employment generated by the proposed project could be accommodated by existing housing stock in Nevada County.

### Response to Comment Ind 253-6
The comment is a closing remark and does not specifically address the adequacy of the DEIR. The comment has been noted for the record and will be forwarded to the decisionmakers as part of their consideration of the proposed project.

RE: Objections to the Draft Environmental Impact Report ("DEIR") SCH #2020070378 for the Idaho-Maryland Mine Project dated December 2021 (the "Project") In Response to the County of Nevada (the "County") Community Development Department's Related Notice dated February 7, 2022 (the "County DEIR Notice").

Dear Matt:

**Ind 254-1**

I have enclosed my objection to the Draft Environmental Impact Report dated December 2021, in response to your County DEIR Notice. As one of the thousands of local community residents and voters living on Banner Mountain above or around the 2585-acre underground mine at issue, I look forward to meeting with you and your team to address various critical errors, omissions, and deficiencies in the DEIR. As I demonstrate in detail in my Objection, the disputed DEIR generally neglects our local concerns and often incorrectly treats the CEQA mine "project" as if it were just the Brunswick Industrial Site and 30 or so wells along East Bennett Road or (if the DEIR incorrectly permitted to split them) the Centennial Industrial Site. The reality is that many of the most serious mine impacts affect those of us living above and around the 2585-acre underground mine. As the legal and political dispute processes persist until the 24/7/365 mining stops, hopefully long before its disputed 80-year proposed endgame, I suspect that we are among the objectors with the most enduring legal and political resistance to this DEIR and its mining plan. Since approval of the DEIR or the mine will also trigger significant law reform efforts by us affected locals, I would like to discuss such law reform efforts with you in order best to determine where we might find some common ground in our efforts to better regulate any such mine and reduce the problems stated in my and other objections.

**Ind 254-1**

The thousands of us such local residents and objectors above and around the 2585-acre underground mine who are at risk of such serious burdens, problems, and harms, often undisclosed or insufficiently addressed in the DEIR, dwarf those imagined new jobs for workers from who knows where. Also, the DEIR mine caused real estate value decreases would cost our area many good constructions jobs. My extensive, attached analysis demonstrates why locals like me decline to suffer this mine underneath us. It is not practical to even list those objections here, much less explain them, but my attached Objection often uses the words of the DEIR itself, as well as other proof, to expose many errors, omissions, and deficiencies. These concerns are about more than only the traditional CEQA environmental issues, such as regarding depletion of our groundwater by the mine dewatering and other traditional issues addressed by me and many other objectors. I also urge your attention to those additional problems in which I have some special expertise, such as my experienced opinions from 50 years of legal practice dealing with hundreds of failing, bankrupt, or abandoned mines and their failed or their overwhelmed insurance or surety companies. That experience suggests to me that you should study closely not just the disputed DEIR, but also the current SEC Forms 10K and 10Q on the Rise Gold Corp. website, since assurances in the DEIR about compliance, safety, and mitigation are meaningless if the miner lacks the working capital and resources to perform them timely. Saying something in a DEIR does not make it so, or feasible, or credible. If Rise cannot afford to accomplish even the insufficient DEIR safety, mitigation, and other work described in the DEIR, then the whole DEIR project is not feasible and cannot be feasible, credible, or approved.

Also, while financial consequences may be considered an indirect impact by the DEIR proponents, who ignore, understate, or otherwise fail satisfactorily to address such matters in the DEIR, opponents like me have reasonable cause for concern about such mine operations trashing our real estate values above and around the mine. These facts creating such a real estate value depression are not often revealed in the DEIR as required and are never adequately explained, even in the more obscure and surprising places where I found clues mentioned in the DEIR. Consider under these circumstances what a home seller living above or around the 2585-acre mine could say to a buyer about these issues, since we all regard the disputed DEIR as containing material errors, omissions, and deficiencies, and we still have no sufficient understanding of the unhappy realities we expect to be created underneath us if the DEIR mine were approved. In any event, such negative financial consequences explain another of many reasons why us locals' resistance will be so resolute and persistent.

The only practical solution for us locals to avoid the burdens, risks, and harms from this no net benefit DEIR mine is to defeat the DEIR and to stop the mine from reopening. If that sounds like hyperbole, like our disputes over the mine's depletion of our surface owner shared groundwater harming our already, climate change-stressed forest and plants above and around the 2585-acre underground mine, try this more scandalous example. As I demonstrate in the Objection from the DEIR's own words, this 2585-acre underground mine plans to shore up its 24/7/365 digging, tunneling, blasting, dewatering, and other mining activities for 80 years with toxic HEXAVALENT CHROMIUM (CR+6) in its cement paste. Except (perhaps) the DEIR proponents, who rarely mention the Cr+6 and never acknowledge any toxic controversy in the DEIR, everyone likely knows how a certain utility paid a giant settlement after hexavalent water pollution turned Hinkley, CA, into a ghost town with huge cemeteries from alleged CR+6

pollution of the groundwater, as illustrated in the famous reality-based, semi-horror movie *Erin Brockovich*. Whatever you may think about the science at issue with Cr+6, that danger is going depress our real estate values and scare away people who reasonably fear this mine will turn our community into another Hinkley. Most residents (like me) will be more trusting of scores of relevant EPA reports, studies, and data on its toxic substances' website, as well as the European Union's announced ban on hexavalent chromium, than on anything this DEIR now has to say about this previously unanalyzed risk.

Why has the disputed DEIR failed to warn us even about the existence of such risk and controversy, much less evaluate the science damning Cr+6? Even if that risk were somehow contained, which would first require that risk to be revealed and fairly addressed in DEIR, imagine trying to explain this risk to a prospective home buyer (or, if you're a brave buyer, your lender, or its appraiser), when your house is above or around the 2585-acre underground mine held together by hexavalent chromium cement added daily 24/7/365 for 80 years. Note, this dangerous CR+6 is not yet in the mine as far as we know, so this miner will be fully accountable for its addition to the mine. But any governmental authority approving this DEIR or mine will also be responsible since my Objection and others now give fair warnings.

Since I and others demonstrate in objections why we believe there is no net benefit to the mine, especially in our suburban (not rural, as the DEIR claims) community, the decision to reject the DEIR and mine should be easy. As you compare the disputed DEIR and my Objection rebuttals, please consider at least three other common deficiencies, errors, and omissions that my Objection demonstrates in this fatally flawed or worse DEIR and its mine pitch:

**Ind 254-1**

First, whenever the DEIR addresses a controversial issue (eg, like its incorrect and unsubstantiated assumptions about our future groundwater recharge rate), the DEIR incorrectly assumes that one can judge the next 80 years [although the DEIR stops its occasional attempts at analysis by 2040] of 24/7/365 mining based on the nonpredictive past, ignoring the "new normal" of climate change causing unprecedented, chronic dryness, drought, and other environmental problems. (eg, The DEIR projects groundwater recharge based on the average annual rain between 1967 and 2017, which is not predictive of our future groundwater recharge at issue, especially since the dewatering from our **shared local** groundwater is being disposed of downriver somewhere else in the Wolf Creek).

Second, the disputed DEIR claims that any analysis of its mining beyond the next 20 years [or sometimes 15 years or cutting off at 2040, depending on the topic] is "speculation," so that the DEIR incorrectly claims that CEQA allows it to avoid discussion of any burdens, risks, or problems in the last 60 years of its mining (or after 2040) until it closes the mine. How can any responsible government blindly permit that kind of "leap of faith" for an undesirable mine without any net benefit to the community managed in this kind of situation with such admitted financial challenges by its operator, especially as every quality scientist assures us that the next 80 years will become progressively worse and drier for our climate, our weather, and our quality of life? Who, besides this disputed DEIR's advocates, will dare put our community at such unknown risk for the last 60 years [or after 2040] based on the incorrect and unsubstantiated DEIR assumption that such 60 years (or after 2040) must be the same as the next 20 years (or until 2040), which period data, in turn, is based on the climate change denying assumption that that next 20 years (or until 2040) will match the average rain between 1967 and 2017?

**Ind 254-1**

Third, even apart from demanding disputed DEIR approval without sufficient, reliable data, time and again my Objection reveals that the disputed DEIR incorrectly assumes, without sufficient proof or even realistic logic, that the past is predictive of our "new normal" future. It is not just the DEIR's rebutted claim that the last 60-years after the next 20-years (of 80-years) must be the same as those first 20-years, but the disputed DEIR also contends that nothing will have changed between either (i) the closing and flooding of the mine in 1956 and now, or (ii) now and what happens underground as they mine in new and expanded places and deeper without knowing what conditions and substances they will encounter or what problems they will unleash on our community. Maybe the arsenic, asbestos, and other hazardous chemicals that were insufficiently addressed in the DEIR will get even worse in the new, expanded, and deeper mining, or maybe they'll encounter and unearth new and worse threats. The point is that the DEIR allocates that risk of the unknown in such 24/7/365 mining for 80-years on us neighbors above and around this undesirable, no net benefit, 2585-acre underground mine. Those kinds of risk belong instead solely on the foreign controlled mine owner, whose profits will not stay in our community, and whose CEQA obligation is to address those and other errors, omission, and problems identified in my and other objections.

Because the March 24, 2022, hearing incorrectly excluded evidence that the DEIR and its miner is not economically feasible, I will also be submitting a CEQA brief to support my request for your reconsideration of that exclusion. Apart from the merits there are several additional considerations requiring such rebuttal evidence. First, the DEIR itself (at 6-14) admits that the mine is not likely feasible economically if its operation is limited to a 12-hour day, thus entitling us to explain from the SEC Form 10K and 10Q filings on the Rise Gold Corp website why that is an even bigger feasibility problem that the DEIR reveals. Second, the DEIR (at 4.3-103—104) adds a disputed, deficient, and incorrect "Non-CEQA Related Analysis" to which we must be able to object with our own rebuttal data that some incorrectly may consider outside CEQA boundaries. Third, I present legal authority that require good faith truth and reality in a DEIR that lacks them in certain cases addressed in my Objection for reasons that some seem to consider beyond the CEQA boundaries. Since many such rebuttals in my Objection expose the problems using the DEIR's own often inconsistent or contrary words or those in Rise's current SEC filings, that should be permitted legal impeachment to avoid allowing such incorrect data into the record.

While there is much more of concern to discuss, I urge you to read them in my Objection and others that I incorporate. Thank you for considering my views.

Sincerely,

*// Larry Engel*

II. Some Key Illustrations of Mining Disputes, Water Depletion And Quality, Toxic Substances (eg, Hexavalent Chromium, Asbestos, Arsenic, Etc), Air Quality, And Related Issues, Including Financial Feasibility. ..... 31

(a). Some Basic Mine Data And Illustrative, Related DEIR Errors, Omissions, And Deficiencies, Including Failure Adequately To Disclose the Surface Locations Above the 2585-Acre Underground Mine. ..... 31

B. Some Illustrations of Specific Such DEIR Errors, Omissions, And Deficiencies In That Context. ..... 35

C. Admitted (But Obscured) Use of Hazardous Chromium Without Warning Or Analysis. (See more detailed discussion in later subsections G and H below). ..... 38

**Ind 254-2**

D. An Introduction To DEIR Admitted Water Data, While Also Concealing Massive Unaddressed Issues, Errors, And Omissions And Failing To Reveal The Underlying Assumptions And Artificial Limitations on Which the DEIR Bases Many Flawed Conclusion, Contentions, And Assumptions We Dispute..... 40

E. "Hiding the Ball" in the DEIR Is Not Compliance with CEQA And Other Applicable Law, And That Practice, Especially As To Water and Hexavalent Chromium Issues, Destroys Any Hope of Credibility For the DEIR Or Mine With Us Thousand At Risk of Water Impacts Living Above Or Around the 2585-Acre Underground Mine That the DEIR Tries To Obscure By Distracting Attempts To Limit The CEQA "Project" And The Related Water Issues..... 45

I. Introductory Comments To Expose Some Consistent Flaws In the DEIR Analysis To Clarify My Disputes With the DEIR, Especially Where the DEIR's Errors, Omissions, And Deficiencies Create "Apples vs Oranges" Disputes..... 45

II. General Overview of the Disputed DEIR's Errors, Omissions, And Deficiencies Regarding Water Demands, Supply, Depletion, "Recharge," "Balancing." And Related Concerns. ..... 48

III. Misleading DEIR Mining Data That Incorrectly Assumes the Past Predicts the Future Without Sufficient DEIR Proof And Massive Omissions Relating To the "New Normal" Created by Chronic Drought And Dryness From Climate Change..... 52

IV. The DEIR's Distraction And Evasion of the Real Concerns With Groundwater Depletion And Its Consequences For Us Thousands Living Above And Around the 2585-Acre Underground Mine, Especially Because the DEIR Fails To Address The Underground Realities Of That Mine Closed And Flooded Since 1956 And Now Being Subjected To New, Expanded, And Deeper Mining Without Adequate DEIR Analysis. ..... 55

V. DEIR Errors, Omissions, And Deficiencies In Addressing Imagined "Recharge" And "Balancing" of Our Depleted Groundwater Owned By Thousands Of Us Above And Around the 2585-Acre Underground Mine ..... 57

VI. DEIR Water Depletion Mitigation Ideas Ignore DEIR Errors, Omissions, And Deficiencies And Fail Even Under Their Own Disputed Terms..... 61

F. One Illustrative Dispute Over Groundwater Depletion by the Mining. ..... 64

G. The DEIR's Disputed Errors, Omissions, And Deficiencies Also Include Water Quality, Especially Relating to Hexavalent Chromium (Remember *Erin Brockovich*?). ..... 66

H. Some Technical Comments About Hexavalent Chromium, Since The Disputed DEIR Fails To Even Discuss the Existence of Controversy, Much Less The Ugly Realities And Toxic Risks And Stigmas To Thousands of Neighbors (Like Me) Who Fear Us Becoming Another "Hinkley" As Mourned By The *Erin Brockovich* Movie..... 67

I. A Brief Plea For Responsible Government, And For Environmental Security And Peace for Our Community..... 70

J. Illustrative Air Quality Concerns That the DEIR Ignores Or Underestimates. ..... 71

**Ind 254-2**

K. Because the DEIR Fails To Comply With CEQA in Many Ways (see, eg, my # 14), The Strange DEIR "Non-CEQA Related Analysis" (#4.3-103+) Is A Revealing Admission About Some of What the DEIR Should Have Disclosed About What Happens When The Mine Starts And Then Stops, Whether From Lack of Funding Or Gold, From Our Local Legal Or Political Resistance And Law Reforms, Or Otherwise. ..... 74

L. Consider The What The DEIR Is Not Disclosing (eg, my # 3.E and M and 14) And The Questions That The DEIR Is Not Answering, Because Those Of Us Impacted Or At Risk Will Assume the Nondisclosures And Answers Require Continuous Resistance To the Mine (See my #'s 3.N, 4, and 14)..... 77

M. Among the Biggest DEIR Disputes Is About Timing of Facts When Making This Decision About An 80 Year Plus Future Impact, Risk, And Burden, When We Know That The Past Is A Faulty And Largely Irrelevant Guide To Predicting The "New Normal," Which the Disputed DEIR Fails To Do So Either (i) By Its Almost Exclusive Focus On That Unhelpful Past Data, Or (ii) Its Limitation To (At Most) Occasional And Deficient Looks At The Fantasy The DEIR Imagines In The Next 20 years (Or Until 2040)..... 78

N. Political Dynamics, Law Reforms To Protect the Community, And Consequences From Starting The Mining Before We Stop It And More Risks, Impacts, And Harms Occur, Even Some Admitted By The DEIR, Although, As Usual, In An Obscure Place at 4.3-103-04 Called The "Non-CEQA Related Analysis." ..... 85

4. There Is No Net Benefit To Justify Approving This Mine Or It's DEIR, Especially When One Gives Appropriate Weight To The Objections Of The Burdened And Harmed Locals At Risk Of Worse..... 89

A. A General Discussion of Some of the Many Negatives Decreasing Any Imagined Benefits From the Mine, Applying Some Legal And Political Self-Defense Rights And Counters Expected From Those Of Us At Risk Living Above Or Around the 2585-Acre Underground Mine. ..... 90

B. Some Other Ways To Illustrate And Calculate Examples Of The Many Risks, Burdens, And Detriments That Reduce Any Alleged Mine Benefits..... 97

C. Why Imagined Mine Benefits Are Less Than Alleged In the Disputed DEIR Or Illusory..... 99

5. Even the Disputed DEIR's Own "Hydrology And Water Quality" Admissions (eg, #4.8, and other scattered DEIR data analyzed by my #'s 3.D, E, F, and M, and D, G, and H, as to the CR+6 Threats) Illustrate the DEIR's Comprehensive Errors, Omissions, And Deficiencies Regarding Supply, Depletion, "Drawdown," "Recharge," And Other Water Problems Much More Wide-Spread And Serious Than the 30 East Bennett Road Dry Wells: Some Inconvenient Truths The DEIR Ignores About the Dangerous Future "New Normal" Of Drought And Climate Change Worsened By Underground Blasting, Tunneling, Rock Removal, And Other Mining, And Also By NID Water Waste For 24/7/365 For 80-Years, Etc..... 102

A. An Introductory Overview Illustrating Some of the Many Water Related Objections To the DEIR That Evade the Real Burdens, Risks, And Harms In Our "New Normal" By Pretending the Past Is A Reliable Guide To the Future (See my # 3.M). ..... 102

Ind 254-2

B. Admitted DEIR Water Data Conceals Massive Unaddressed Issues, Errors, And Omissions, And the DEIR Fails To Reveal The Underlying Assumptions And Artificial Limitations On Which the DEIR Bases Many Flawed Conclusions, Contentions, And Assumptions We Locals Dispute. 108

C. Nondisclosures, Errors, And Disputes Regarding Future Risks And Problems From New, Expanded, And Deeper Underground Mining Operations in the 2585-Acre Mine Beneath Our Local Surface Objectors. 112

D. Opportunity Costs If the Mine Is Approved And Prevents More Beneficial Community Uses of the Land, Water, And Other Resources, Including Our New Competing Wells And Air Quality Capacity 115

6. "Geology, Soils, And Mineral Resources" at DEIR #4.6 Again Ignores the Critical 2585-Acre Underground Mining Issues Over Which Locals Like Me Will Continue To Object 116

7. The DEIR "Hazards And Hazardous Materials" Discussion at its # 4.7 And Elsewhere Is Deficient, Omitting Entirely At Least One Serious Hazardous Material (Hexavalent Chromium/Cr+6 of Erin Brockovich Movie Infamy For Turning Hinkley, CA Into a Ghost Town at Great Cost to Local Victims And Property As Explained In My #'s 3.C, G, and H) 118

8. Land Use And Population And Housing" DEIR at # 4.9 121

9. "Noise And Vibration" DEIR at 4.10 122

1. **Statement Of My Interests And Why The County And Other Decisionmakers Should Accept My Objections And Reject the DEIR and The Mine, Including Some illustrative Opinions About the Errors, Omissions, And Deficiencies In the DEIR.**

    A. **I Am A Neighbor Personally Impacted By the 2585-Acre Underground Mine, As Well As A Voting Member of The Local Community That Will Suffer Mine Burdens, Risks, And Problems Either Ignored Or Deficiently Addressed In the DEIR.**

I, G. Larry Engel, reside in my retirement house near and uphill from Idaho Maryland Road and Wolf Creek in a significantly populated, normal suburban environment. My Banner Mountain community is not the "rural" area that the disputed DEIR implies is expendable to its objectionable mining goals. My "Section 20" three-acre property could be on the surface above the **2585-acre underground mine** at issue in the core of this dispute but neglected in the DEIR analysis. However, I think that I am just nearby the mysterious surface boundary of that underground mine, although I will be in the **"impact zone"** for the depletion of my groundwater and other environmental harms, as well as in the **"stigma zone"** where proximity is sufficient to depress the value of my property and thousands like me in such relevant CEQA impact and stigma zones ignored in the disputed DEIR. We cannot be dismissed or mistreated, as the DEIR does, as if we were just a small "rural" group in the small area addressed by the DEIR around the Brunswick and Centennial sites or the 30 well owners along East Bennett Road. **The DEIR maps and the Rise public filings I've seen carefully obscure surface identifiable locations above and around that mine, and, as far as I can determine, Rise has failed to notify any of us property owners or users above or around those underground 2585-acres to be blasted, dewatered, and mined 24/7/365 for 80-years in accordance with a disputed and incorrect DEIR.**

**Ind 254-3**

**As I demonstrate in this Objection, those of us in the impact and stigma zones are exposed to many negative mining impacts, risks, and burdens, especially as to our shared groundwater that the mining would pump away downriver somewhere else by the disputed DEIR dewatering plans. Neither I nor any of my thousands of neighbors should have to guess about the surface vs underground boundaries for the many conflicts and competitions to come if the DEIR and mine are mistakenly approved.** (The best and still imprecise data readily available to me that I used in this Objection [see my # 2 below] comes from the Rise Gold Corp. current SEC Form 10K from its website, which interestingly provides better information than the DEIR on various mine and related issues; not because the 10K was required to do so, but rather because the related DEIR data was so insufficient.) Such omissions and lack of notice to surface residents are assumed by us to be a tactic to avoid provoking us until after the DEIR had some momentum to weather the coming storms, as such surface users realize the threats to themselves, their properties and trees (eg, besides environmental harms, especially to our groundwater, also the mine stigma that will harm our real estate values), and their community way of life for such a no net benefit mine. See, eg, my # 4. The decisionmakers considering this DEIR should not tolerate, much less reward, such tactics.

**The disputed DEIR contains grossly deficient discussion of the many burdens, risks, and harms that would be suffered by thousands of us above or around that 2585-acre**

**underground mine. My adverse risks and affects from the mine, particularly but not exclusively from the 2585-acre underground mine, would include many things addressed in my Objection that are ignored, understated, or inadequately addressed in the DEIR. Without limiting what is a long list of potential grievances, those include (i) depression of my real estate values for 80 years plus, (ii) depletion of my groundwater by dewatering that the mine sends it off downriver somewhere else with the unsubstantiated and false assurance by the DEIR that somehow, despite climate change future dryness and drought, the ground will somehow recharge, because that is what used to happen with average rainfall between 1967 and 2017, threatening the long term survival of my many (48 plus) tall trees and other plants, (iii) the threat of toxic hexavalent chromium in cement paste used to shore up that 2585-acre underground mine below or near me, and (iv) the risks of subsidence from loss of lateral or subjacent support, nuisance level noise and vibration from blasting and mining beneath or nearly beneath my property (not farther away, where the irrelevant DEIR monitor devices are located around the Brunswick and Centennial surface sites), traffic burdens from 50 to 100 trucks a day on the same key local roads 24/7/365 for 80 years, and many other problems addressed below.**

**Ind 254-3**

**I keep stating the "2585-acre" reference to that underground mine, because a casual reader would imagine from the DEIR that the only thing that mattered was the Brunswick site, a few adjacent East Bennett Road properties with 30 or 31 wells, and (although the DEIR incorrectly tries to cast it as a separate CEQA "project") the Centennial site. If the DEIR is approved, the key battles that will endure against the whole CEQA "project," as long as the mine is a threat as described in this Objection, will include the defense and competition from thousands of residents and voters living on or around the surface of the 2585-acre underground mine, many times more than the mine workers imagined coming from who knows where.** See my # 14. I note that this is not just about enforcement of our competing legal rights to defeat the DEIR and stop the mine. If we suffer the loss of the water that we need from NID, we locals will exercise our rights to sink our own wells to compete for our groundwater to supply ourselves and save our forest trees and plants. (If NID does not like that idea of its customers taking whatever allowance NID provides in the coming drought cutbacks, while drilling thousands of defensive wells that interfere with the mine's dewatering, they should reassess the politics of thousands of local voters exercising their rights to elect correct thinking officials and use initiatives to clarify our competing rights.) See my # 3.F. The point is that when people discover these realities and organize to defend their homes, their community quality of life, and their peace of mind against an undesirable mine adding no net value to our community, us local defenders must prevail. No one will sacrifice their rights, property, or quality of life for such a mine however long it takes for justice to be done in the various legally and politically proper counters.

**FOR THE RECORD, NOTHING IN THIS OBJECTION SHOULD BE INTERPRETED AS A THREAT THAT I OR ANYONE ELSE WILL SUE RISE OR ANYONE ELSE, SINCE IT IS PREMATURE TO MAKE THAT KIND OF COMPLEX DECISION, AND ANY SUCH PREMATURE LEGAL ACTION WOULD NOT BE "RIPE" YET AS A JUSTICIABLE CAUSE OF ACTION. A DISCUSSION REACTING TO SOMEONE'S THREATENED FUTURE CONDUCT BY IDENTIFYING OBJECTIONS AVAILABLE FUTURE REACTION OPTIONS IS NOT A THREAT TO EXERCISE THOSE OPTIONS. FOR EXAMPLE, THIS IS ONLY A DRAFT ENVIRONMENTAL IMPACT REPORT THAT MUST GO THROUGH A**

2

**Ind 254-3**

**COMPLEX PROCESS BEFORE THE MINING STARTS, AND MANY IMPROVEMENTS AND REFORMS ARE POSSIBLE THAT MAY REDUCE THE NEED FOR SUCH LOCAL SELF-DEFENSE FROM SUCH FORESEEABLE DEIR/MINING BURDENS, RISKS, AND HARMS. THE REASONS FOR THIS OBJECTION COUNTER DISCUSSIONS OF POSSIBLE REACTIONS AND DISPUTE REMEDIES INCLUDE TO EXPLAIN WHY, IF IT PROCEEDS, THE DEIR NEEDS TO BE REDONE TO CORRECT ERRORS, OMISSIONS, AND OTHER DEFICIENCIES. The reasons for the urgent or strong commentary about local reactions now is that history of such conflicts shows what could follow involving legal, political, and competitive self-defense possibilities that have commonly occurred in similar such situations, which discussions reflects a desire to assure that the DEIR advocates and decisionmakers: (i) take our local concerns seriously, (ii) improve the next version of the DEIR, if any, and (iii) address more comprehensively and appropriately the local issues and concerns in this and other objections, including all those appropriate concerns voiced at the March 24, 2022, County hearing. What we want is peace and the status quo.**

**What this Objection also does, as lawyers do, is to correct the DEIR on some of its many disputed express and implied legal assertions and illustrate the need for technical reforms in the DEIR and mining by reporting about the litigation, political, and competitive options from examples of other such unrelated mining and environmental approval disputes with some similar circumstances. See my #'s 4 and 14. In other words, the goal of this Objection is to reduce in advance the issues in dispute here for our common good, rather than just to combat problems in appropriate ways after the mining begins and the burdens, risks, and harms become actual instead of theoretical and require appropriate counters.**

**Besides us defending ourselves, our property, and our local environment, we are also defending our larger community. Even for those distant from many, direct mine impacts, the community suffers a harmful "opportunity cost" from allowing this mine for no net benefit, as explained in my #4. It is part of the CEQA noncompliance that is most frustrating in the DEIR errors, omissions, and deficiencies, where the DEIR is supposed to address the cumulative effect of the whole mine "project," including the 2585-acre underground mine, on key issues. There is a margin for what our community environment can safely tolerate as environmental impacts. This no net benefit mine (see my #4) exhausts that margin more and faster than the DEIR reveals or admits, leaving less margin for what else could be tolerated by competing uses by us residents and by desirable businesses that benefit our community. Each of the cumulative impacts of the whole mine deplete our safety margin of what can be tolerated, and, if government decisionmakers now give away to this DEIR mine for 24/7/365 operations for 80 years (of which only the first 20 [or up to 2040] is even attempted to be analyzed by the DEIR), then the inevitable result would be political and legal reforms (see my #3.N) and legal enforcements of our surface rights that eventually stop the mine, whether by appropriate counters or by allowing our competing uses and law reforms against the disputed DEIR mining plan. As explained below, if the mine is not stopped, more undesirable and exploitive opportunities will follow, as happened in the Bay Area with Richmond after Chevron and Benicia after Valero.**

**What happens then?** If government insisted that the DEIR be made more realistic, correct, compliant, and useful, the DEIR itself would prove the obvious: if this disputed DEIR mine (which must include the 2585-acre underground mine the DEIR often ignores) is allowed

3

Ind 254-3

to start, when the aroused local political and legal actions stop it, everyone and our environment will wish that mining had never started. There is an old fable about "Pandora's box" that applies to reopening this mine here, and we urge you decisionmakers not to start down a path that has only a "dead end" and undeserved misery and division for our community.

For example, I focus below (eg, my #3.E) on one illustration of that general failing of the DEIR, such as the fact that the disputed DEIR groundwater depletion analysis mistakenly only focuses on 30 or so competing wells on East Bennett Drive, when the obvious and bigger threats are to the hundreds of wells that compete underground for the same water in the area above or around the 2585-acre underground mine being dewatered 24/7/365 to dispose of that precious water for 80-years somewhere else downriver. See my #'s 3.E and N. More importantly for this example of the many opportunity costs discussions throughout this Objection, **all of us thousands who do not currently have wells and who are ignored by the DEIR but living on the surface above or around the 2585-acre underground mine also have competing groundwater rights. We would also begin to drill wells and compete for that same groundwater that when NID is unable to satisfy our needs (whether from climate change chronic drought shortages or governmental reallocation of our water elsewhere). The opportunity cost is that the mine may (incorrectly) claim that it was depleting our shared water supply first, so that we cannot exercise our groundwater rights, leaving us harmed and our already drought and climate changed forests and plants short of the water they need. Obviously, that kind of miner argument is not only legally incorrect, flawed, and worse, but it ignores the political reality that all of us suffering voters would tolerate such abuse where a no net benefit mine denies us (ie, the "opportunity cost") the right to save ourselves and our environment for the profit of generally foreign shareholders. Stated another way, the future will be hundreds of new wells from the surface above and around the 2585-acre underground mine competing for their own groundwater, just like people all over the central valley and elsewhere have already been doing when the surface supply is insufficient. Therefore, besides the inevitable legal and political turmoil from such disputes, the conflict for governmental decisionmakers is: what are the real environmental consequences of those wells and others defeating the disputed groundwater assumptions and erroneous mine claims in the DEIR? Note that at least us locals will use the local water locally, rather than dumping it into the Wolf Creek for some other destination. See my #'s 4, 5, and 3.N.**

As you read through this Objection, please note that the DEIR insists that every inconvenient truth the DEIR chooses to ignore, understate, or otherwise deficiently address is called or treated as "speculative," such as, for example, (i) climate change effects like chronic dryness and drought, and (ii) everything that happens after 2040 or in the last 60-years of its 80-years of 24/7/365 blasting, mining, dewatering and disposition of our precious groundwater downriver somewhere, and other abuses of our environment. See my # 3.A, B, D, F, and M and 5. Instead, the DEIR relies exclusively on the past data and assumes (without proof and contrary to climate science) that the future must be the same as that nonpredictive past, such as, for example, that the rainfall it assumes will be recharging our groundwater for 80-years, despite the massive mine dewatering depletion of our local groundwater, will continue to be what it was in the past between 1967 and 2017 (see my #3.M rebuttal). Reality, as accepted by most responsible scientists, governments, and businesses, is that climate change will impact us to

Ind 254-3

create a "new normal," where the easier DEIR past does not predict the more dangerous future. So, how is it that, while every responsible scientist, business, and government official is planning based on climate change, the DEIR ignores such "inconvenient truths" as "speculative?"

Most businesses I know would be afraid not to correctly address such climate change and related realities, because they would be afraid that their projections would make their securities and other public filings false and misleading and inspire litigation. Note that the SEC has just proposed mandatory climate change disclosure rules on March 21, 2022, to supersede existing voluntary rules. 17 CFR 210,229,232, and 249, RIN 3235-AM87. Soon, we will be all be reading (as I already do here in my # 2) SEC filings to catch what is missing in environmental impact statements and other disclosures, since most reporting companies like this are more afraid of errors, omissions, and noncompliance in SEC filings than in environmental filings like this DEIR. Do government decisionmakers here wish to go on the record approving this disputed and defective DEIR, and thereby denying climate change and continuing drought, in effect joining the DEIR in the illusion that the next 80-years of rainfall here will be the same as the average between 1967 and 2017? See my # 3.M. For current climate change data ignored by the DEIR, see, eg, "Climate Change 2022: Impacts, Adaption And Vulnerability. "Working Group II Contributing to the IPCC Sixth Assessment Report and scores of current studies and reports cited therein, as briefly summarized in "Climate Risk Disclosure Becoming the New Standard For Business," Forbes 3/22/22.

**B. My Credentials And Experience Qualify Me As An Authority On Some of These Issues As A Result of 50 Years of National And Cross-Border Bankruptcy And Insurance Insolvency Work Involving Hundreds of Bankrupt, Failing, Or Abandoned Mines And Their Failed Or Liquidated Insurers.**

I am a California licensed, bankruptcy lawyer who, until I retired here in 2015, practiced the following relevant specialties, working nationally as a leading partner of a leading national and international law firm working nationally out of the San Francisco office: big case US business bankruptcy and cross-border insolvency cases, as well as insurance insolvency resolutions. Those specialties often combined to give me substantial experience and expertise in dealing with hundreds of mines that failed, filed bankruptcy and/or cross-border insolvency cases. (For example, there is a common mining industry situation for disappointing local victims and communities when a foreign based mining company files a foreign insolvency proceeding and a related US Chapter 15 and/or 11 case.) In some situations, the mines were otherwise abandoned and liquidated (as, for example, when the owner flees to a foreign venue, files a US Chapter 7 for the "shell" US operating company miner, and the appointed Chapter 7 trustee abandons the mine, leaving it to the EPA and other governmental authorities to clean up the worthless mess). In certain situations, my mining experiences involved my insurance insolvency expertise, as, for example, when I worked for years as lead counsel liquidating (during the savings and loan crisis era) the major California insurer which had issued the surety bonds for much of the mining industry risks and closing reclamations. In the mid-1990's I also represented major business creditors of mining and other environmentally dangerous insured policyholders in the asbestos and environmental crisis restructuring of Lloyds of London (Equitas). Such work

and other experiences resulted in my selection to the global bankruptcy "clubs" of leading players, the American College of Bankruptcy and its international counterpart, the International Insolvency Institute, as well as the American College of Commercial Finance Lawyers (as to my distressed company financing expertise). In those group interactions I often learned the unwritten stories and lessons from and about many relevant cases from the best players working them and judges resolving them. Such things led to my serving for a time as the Chair of the American Bar Association/Business Law Section Task Force on Insurance Insolvency, where we developed a new generation of insurance insolvency model laws to improve creditor and policyholder recoveries, again enabling me to learn more "behind the scenes" about failing mines and their owners.

I have applied that experience here. I have read the DEIR, and I am familiar with the entire mine area, including the 2585-acre underground mine about which the disputed DEIR shares too little risk data and planning. This Objection reflects my opinions based on my such experiences and qualifications, which include having read hundreds of such unrealistic or optimistic plans and reports for mines that failed when their reality was exposed. There are many serious errors, omissions, and deficiencies in this disputed DEIR, as my Objection and others demonstrate. The DEIR is about some "alternative reality," while the hundreds of local objections, such as those voiced at the March 24, 2022, County hearing reflect the applicable realities.

**Ind 254-3**

**While I am not a scientist, I know from such long experience that a mine like this does not belong here. That would be true even if this were what the DEIR incorrectly calls a rural or semi-rural area, but certainly not where I and thousands of others live above or around the 2585-acre mine, which is actually a normal, quality suburban community. For example, opposition here will increase as people begin to understand the DEIR's plan, for example, using hexavalent chromium cement paste to shore up the new mining, and depleting our groundwater 24/7/365 for 80-years during what climate change is causing to be a "new normal" of perpetual dryness and drought. The confusion created by this objectionable DEIR relates in significant part to the fact that the core of this CEQA "project" is the 2585-acre underground mine largely ignored by the DEIR, not just the small Brunswick Industrial Site or its East Bennett Drive site for 30 or so replaced wells (or the Centennial site the DEIR incorrectly claims as a separate "project.") Because residents like me will be battling to save our homes, environment, and quality of life above and around that 2585-acre underground mine, which is never adequately analyzed by the DEIR, we locals are an unaddressed problem for the mine advocates that cannot be evaded. The stresses of the coming continuous conflicts, disputes, and competition must be addressed now by government DEIR decisionmakers, because the problems cannot be solved by the unaffordable (see my # 2), nonresponsive, and inadequate mitigations proposed in the DEIR. Because the DEIR refuses to recognize such real problems as CEQA requires (see my # 14), the DEIR cannot hope to mitigate them as the law requires.**

What is predictable from my experience is that, when properly informed, **the thousands of local community residents and voters living like me above or around the 2585-acre underground mine at issue, will resist this mining until it stops, exercising our many appropriate legal and political remedies and means of competition. See my #'s 3.N and 4. Why so organize and resist? Because even if the DEIR were correct, compliant, and sufficient**

**(which it is not) and even if the miner were capable of timely and safely accomplishing the DEIR goals (which I doubt, see my # 2), the mine still adds no net value to our community (see my # 4), creates burdens, risks, problems, and stigmas that disrupt our lives, harm our property and environment, depress our real estate values, and add other burdens, risks, and problems ignored by the DEIR that perpetually would disrupt the quality of our lives. That conflict by thousands of us locals protecting our homes, environment, and the quality of our lives and community cannot be mitigated by this disputed DEIR. Since we have surface property competition, legal, and political rights to resist that cannot be impaired by an approval of the DEIR or the mine, this mining will be stopped sooner or later. What my such experience with other mines has shown is that the longer it takes to stop a mine, the worse the impacts will be on all concerned when it finally stops. One of many key missing and deficiently analyzed factors in the DEIR is: what happens when the DEIR insistence on 24/7/365 mining for 80 years is overcome? See the DEIR admission at 6-14 that a normal 12-hour day makes the project unfeasible and my counters in my # 13 and elsewhere.**

**Also, while it may be considered an indirect impact by the DEIR proponents who ignore, understate, or otherwise fail satisfactorily to address such matters, opponents like me have reasonable cause for special concern about such mine operations trashing our real estate values above and around the mine. These facts creating such real estate value depression are not often revealed in the DEIR as required (see my #'s 4 and 14) and are never adequately explained, even in the more obscure places where I found some admitted in the DEIR (see 4.3-103--104.) However, the existence of lethal threats and risks (eg, hexavalent chromium discussed in my #'s 3.C, 3.G and H, and 7) also explains why our locals' resistance can be expected to be so resolute and persistent. The good news here for local resistance is that in my experience such mining interests like Rise in these circumstances simply do not have the capacity in a long term political, law reform, and legal competition to prevail over the impacted locals, once they are informed, aroused, and organized. See my # 3.M.**

**Ind 254-3**

Successful resistance in other past situations (unrelated to Rise or this mine) generally followed a predictable pattern, where the local victims begin insisting on fixing the errors, omissions, and deficiencies in the disputed draft environmental impact reports in a continuing process of challenges, which at each stage cause reforms making the mining process less risky, harmful, and problematic, often with the side effect that such mine operating plans become slower and more expensive for good causes. If those reforms are not sufficient and such mine continues, then local political and law reform efforts often accelerate to enact new self-defense laws and regulations and to elect stricter official enforcers committed to protecting the community from the threatened mine risks, burdens, and noncompliance. See my # 3.N. Those efforts are often accompanied as well as by such local victims' other legal challenges, such as both the usual nuisance, inverse condemnation, and other tort and equity claims, as well as (where the circumstances are feasible) a traditional set of surface owner nuisance, trespass, and quiet title claims (eg, groundwater rights battles), claims to prevent subsidence by loss of subjacent and lateral support, and various declaratory relief and equitable claims by impacted surface owners working to confirm their competing legal and equitable rights against excessive underground mining burdens, risks, and harms (eg, the right to drill more wells for using the surface owners' own groundwater being wasted and removed by such underground mining) and requiring more sufficient mitigation by the miner. Usually, if not before then, by that stage

Ind 254-3

of such other historical battles and competition often either the miner attempts some bankruptcy (eg, in bigger and well-funded conflicts often involving cross-border bankruptcies to help mine insiders shield their exported profits) and other related maneuvers to escape justice, or else they sooner or later abandon the mine, either (i) if they cannot find a buyer, even using the special sale free and clear of liens, claims and, encumbrances provisions in 11 USC #365(f) or in Bankruptcy Code Chapter 15 accommodating foreign insolvency law maneuvers, or (ii) if the locals use their creditor counter rights effectively (in coordination with community oriented governmental officials) to block such sales to keep dangerous history from repeating itself. See my #'s 3.N, 8, 14, and 15 below.

**Mine advocates may attempt to argue that such comparisons sound aggressive or hyperbolic, such as our dispute with the DEIR regarding our fear of the mine's groundwater depletion (without sufficient local recharge or balancing) harming our already climate change stressed forest and plants above and around the 2585-acre underground mine (see my #'s 3.D, 3.F, and 5). Where this disputed DEIR and mine will likely confront an early challenge in my experience is from the more lethal, scandalous stigma example from hexavalent chromium (remember the movie, *Erin Brockovich*?) that would certainly also trash our local real estate values and community reputation, even scaring away tourists. See, eg, my #'s 3.C, 3.G and H, 7, and 8. As I demonstrate below from the DEIR's own words (although in obscure places where they would be less likely noticed), this 2585-acre underground mine plans to shore up its 24/7/365 digging, dewatering, and blasting areas for 80 years with toxic HEXAVALENT CHROMIUM (CR+6) in its cement paste. Since everyone (apparently except the DEIR proponents) likely knows how a certain utility paid a giant litigation settlement to turn its alleged victims, turning Hinkley, CA, into a ghost town with huge cemeteries from CR+6 poisoning of its groundwater from settling ponds, as illustrated in the famous reality-based movie *Erin Brockovich.* Whatever you may think about the science at issue here, that Cr+6 danger is going scare away people who reasonably fear this mine will turn our community into another Hinkley.**

Why? Many will be more trusting of scores of scary mass of EPA data on its toxic substances' website, plus the European Union announced ban on hexavalent chromium, than on anything this miner or its public relations/lobbyists can possibly say in the disputed DEIR, promotional materials, or other excuses. Even if that toxic risk were somehow purportedly contained, which would first require that risk to be revealed and fairly addressed in a CEQA compliant DEIR (since this risk is not presently disclosed), imagine being a home seller trying to explain this to a prospective buyer (or, if you're a brave buyer, explaining to your lender, or its appraiser) when your house is above or around the 2585-acre underground mine supposedly held up by Cr+6. Note, this dangerous CR+6 is not yet in the mine, as far as we know, so this miner will be fully accountable for its addition to the mine. But any governmental authority approving this DEIR or mine would also be responsible as the whole (now alerted) community watches, and, since I and others prove there is no net benefit to the mine (see my # 4), especially in our community. The decision to reject the DEIR and mine should be easy.

**C. My Credentials And Experience Qualify Me To Contest Some of the Issues As A Result of 50 Years of National And Cross-Border Bankruptcy Experience And Insurance Insolvency That Includes Dealing with Hundreds of Bankrupt, Failing, Or Abandoned Mines And Their Failed Or Liquidated Insurers.**

**Ind 254-3**

I am a California licensed, bankruptcy lawyer who, until I retired here in 2015 practiced the following relevant specialties working nationally out of the San Francisco office as a partner of a leading national and international law firm: big case business bankruptcy, cross-border insolvency cases, and insurance insolvency. Those specialties often combined to give me substantial experience and expertise in dealing with hundreds of mines that failed, filed bankruptcy and/or cross-border insolvency cases (for example, when a foreign based mining company files a foreign insolvency proceeds and a related US Chapter 15 and/or 11 case), or were otherwise abandoned and liquidated (as, for example, when the owner flees to a foreign venue, files a US Chapter 7 for the "shell" US operating company miner, and the appointed Chapter 7 trustee abandons the mine, leaving it to the EPA and other governmental authorities to clean up the worthless mess). In certain situations, this connects with my insurance insolvency expertise, for example, when I worked for years as lead counsel liquidating (during the savings and loan crisis era) the major AAA rated California insurer who issued the surety bonds for much of the mining industry. During that same era of financial stress for many even imagined to be dominant insurers, for example, I also represented major non-mining business creditors of mining and other environmentally dangerous insureds in the restructuring of Lloyds of London (Equitas). Such work and experiences resulted in my selection to the global bankruptcy "clubs" of leading players, the American College of Bankruptcy and its international counterpart, the International Insolvency Institute, as well as the American College of Commercial Finance Lawyers (as to my distressed company financing expertise), where I often learned the unwritten stories and lessons from and about many relevant cases from the best players working them. Such things led to my serving for a time as the Chair of the American Bar Association/Business Law Section's Task Force on Insurance Insolvency, where we developed a new generation of insurance insolvency model laws to improve creditor and policyholder recoveries.

I have read the whole DEIR, and I am familiar with the entire relevant area. This Objection reflects my opinions based on my such experiences, which include reading many such unrealistic or optimistic reports on failed mines that departed from reality. There are many serious errors, omissions, and deficiencies in this DEIR, as my Objection and others demonstrate. While I am not a scientist I know from such long experience that a mine like this does not belong in even in what the DEIR incorrect calls a rural or semi-rural area, but certainly not where I live above or around the 2585-acre mine, which is actually a normal, quality suburban community, especially using hexavalent chromium and depleting our groundwater in what climate change is causing to be a "new normal" of perpetual dryness and drought. **The confusion created by this objectionable DEIR relates in significant part to the fact that the core of this CEQA "project" is the 2585-acre underground mine largely ignored by the DEIR, not just the small Brunswick Industrial Site or its East Bennett Drive site for 30 or so replaced wells (or the Centennial site the DEIR incorrectly treats as a separate CEQA "project".)** Because we will be battling to save our homes and quality of life above and around that

underground mine, which is never adequately analyzed by the DEIR, we are a problem for the DEIR mine that cannot be evaded. The stresses of the coming continuous conflicts, disputes, and competition must be addressed by government decisionmakers, because they cannot be solved by the paltry and inadequate mitigations in the disputed DEIR. Because the DEIR refuses to recognize such problems, it cannot hope to mitigate them as the law requires.

What is predictable from my experience is that, when properly informed, the thousands of local community residents and voters living like me above and around the 2585-acre underground mine at issue, will resist this mining until it stops, exercising appropriate legal and political remedies. Why? Because even if the disputed DEIR were correct and sufficient (which it is not) and the miner were capable of timely and safely accomplishing the DEIR goals (which I doubt as explained in my # 2), the mine still adds no net value to our community (see my # 4), creates stigmas that depress our real estate values, and adds burdens, risks, and problems that perpetually would disrupt the quality of our lives until we organize and stop it. That conflict by thousands of us locals protecting our homes and environment and the quality of our lives cannot be mitigated or, since we have legal and political rights that cannot be impaired by an approval of the DEIR or the mine, this mining will stop sooner or later. What my such experience with other mines has shown is that the longer it takes to stop a mine, the worse the impacts on all concerned when it is finally stopped. Therefore, a key missing and deficiently analyzed factor for more discussion in the DEIR is: what happens when the insistence on 24/7/365 mining for 80 years is overcome? See, eg, the DEIR's own admissions at 6-14 and 4.3-103—104 and my responses below.

**Ind 254-3**

Also, while it may be considered an "indirect" impact by the DEIR proponents who ignore, understate, or otherwise fail satisfactorily to address such matters, opponents like me have reasonable cause for concern about such mine operations trashing our real estate values above and around the mine. These facts creating such real estate value depression are not often revealed in DEIR analysis as required and are never adequately explained in the more obscure places where I found some mentioned in the DEIR. However, their existence explains why our locals' resistance can be expected to be so resolute and persistent, since the only solution for us is to defeat the DEIR and stop the mine reopening. In my experience where the mining interests simply do not have the capacity to overwhelm their aroused local victims, the resisted mine is first slowed and its operations made more expensive for good causes and legal compliance that should have been addressed earlier by an adequate DEIR and sufficient mitigation. At that stage of the battles either the miner usually attempts some bankruptcy related maneuvers to escape justice, or else they abandon the mine, either (i) if they cannot find a buyer, even using the special sale free and clear of liens, claims and, encumbrances provisions in 11 USC #365(f) or in Bankruptcy Code Chapter 15 accommodating foreign insolvency law maneuvers, or (ii) if the locals use their creditor defensive rights (in coordination with community oriented governmental officials) to block the sale. See my discussion of industry tactics below.

**D. What Is the CEQA "Project" At Issue, Since The DEIR Largely Ignores Most Impacts From The 2585-Acre Underground Mine That Will Rally Some of the Largest And Most Intense Local Opposition?**

It should be revealing to governmental decisionmakers that the DEIR generally ignores and neglects our local and other concerns and treats the CEQA "project" as if it were just the Brunswick Industrial Site and 30 or so wells along East Bennett Road, and (or, if the DEIR were incorrectly permitted to split it off) the Centennial Industrial Site. See, eg, my #'s 3.E, L, and M. I mention those thousands of us with such surface, groundwater, and other rights above and around the 2585-acre underground mine, because we (including me and others on Banner Mountain) are among the larger opposition forces. We not only have the same legal and political concerns as any county voter distant from the mine, but we locals also have direct competing legal rights and standing against the mine as "surface owners" that are not addressed in the DEIR as required. See, eg, my #'s 3.F and N. The reality is that many of the most serious impacts are on those of us living above and around the 2585-acre underground mine. See, eg, my #'s 3.A, B, C, D, L, and N, and 4. As our local legal and political dispute processes and resource competitions persist until the 24/7/365 mining stops (hopefully long before the DEIR's disputed 80-year proposed endgame), I suspect that many other errors, omission, and problems will be exposed by such disputes, competitions, and conflicts mentioned in this and other objections. See, eg, my #15 illustrating hard questions evaded by the disputed DEIR, as well as my rebuttal in # 14 about omitted CEQA disclosures.

**Ind 254-3**

That local resident competition by voters like me is best illustrated by the fact that those of us "surface owners" living above or around the 2585-acre underground mine have our competing groundwater rights. See, eg, #'s 3.F and 5. When (contrary to the incorrect DEIR) climate change dryness and drought (and consequent future reallocations and shortages of NID water) lower our local water table and impact the health of our forests and plants and our access to sufficient water for human and other needs, we locals will sink hundreds of competing new wells for our groundwater, and, if necessary, will change or clarify the laws to accommodate our wells. See my # 3.N. Since it is our ground water too, the related errors and omissions in the DEIR about groundwater recharge will now become much more serious if, instead of 30 East Bennett Road dry wells competing with massive 24/7/365 mine dewatering for 80 years, the mine must compete, if it can, with even the hundreds of new wells used by the thousands of us living on Banner Mountain alone. The DEIR proponents may try to argue that and other such competitions between us surface owners and users and the disputed DEIR 2585-acre underground mine are somehow "speculative" (the disputed DEIR's favorite answer for attempting to evade CEQA by ignoring inconvenient realities). See my #'s 14 and 15. In my experience that DEIR maneuver must fail, as shown in the public records that such groundwater competition has been happening everywhere (eg, the Central Valley, Bakersfield, etc.) where there is insufficient surface water. Competition between surface owners and the DEIR mine is far less "speculative" or "remote" than the DEIR's assumption of no resistance. We are confronting a long-term water shortage from climate change ignored by the DEIR, and sooner or later even these DEIR will be compelled to admit that it will be massively depleting our local groundwater and sending it downriver somewhere else in Wolf Creek. Few of us locals will tolerate being dependent on "recharge" and "balancing" illusions in the disputed DEIR based on the indefinite continuance for 80 plus years of the no longer predictive average rainfall between 1967 and 12017. See my # 3.D, E, F, M, and 5 below.

**This is a persistent flaw in the DEIR, where it ASSUMES that somehow the past predicts the future here for a mine closed since 1956. See my # 3.M. Not only does climate**

11

**change create a "new normal, but the disputed DEIR abandons any effort to assess the impact of 24/7/365 mining beyond the first 20 years of its 80-year mining harms (stopping analysis at 2040). See my # 3.M. To the contrary of the DEIR's false operating premise that "what we don't know won't hurt us," which no informed local will accept, we expect to counter that "we are better off being safe than sorry." So, the question for government decisionmakers is whether to make a better-informed decision by requiring the disputed DEIR and miner to fairly address this and other Objections as required (see my # 14), or whether to allow this undesirable mine the undeserved benefit of the doubt it seeks on every disputed issue, despite the mine adding no net benefit to our community. See my #'s 3.E and N, 4, and 8.** While there may be modest employment of mine workers from somewhere, they are hugely outnumbered by the thousands of us resolute resistance locals living above and around the 2585-acre underground mine who are committed to the defense of our homes and ways of life from the burdens, risks, threats, and harms addressed in this and other objections. While the mine may pay some taxes and spend some money before exporting its profits to Canada or other distant places (see my #'s 2 and 4 below), the burdens, risks, and problems suffered locally will far exceed any such benefit for a net deficit. See my # 4. The costs and consequences of using 50 to 100 heavy trucks 24/7/365 for 80 years on our busiest, key roads will by themselves overwhelm any possible benefit.

**Ind 254-3**

Under the reality circumstances explained in this and other objections and ignored, understated, or misstated in the disputed DEIR, my experience is that this mine could not long endure under the circumstances the kind of legal and political resistance and competition it will encounter. See, eg, my # 3.N, 2, and 8. **Therefore, the government should at a minimum insist in detail now on the disputed DEIR being reformed to comply with CEQA and disclose better and comprehensively the consequences of stopping and then stopping the mine. See my #'s 3.N, 8, 12, 13, 14, and 15. Remember that, in considering the alternatives (DEIR vs my #'s 13 and 2), the economics of this mine are so fragile that the DEIR admits (at 6-14) it is not viable operating on a normal 12-hour day. See my # 13. Normal realities, court rulings, and political/law reform changes can obstruct what conditions the disputed DEIR insists must be available. See my #'s 2, 3.N, and 13. Then what? See my #'s 3.N, 4, and 13.**

**E. Request For The Lead CEQA Agency To Reconsider Its Position Resisting Economic Feasibility Counters To The DEIR Both At the Public Comment Hearing 3/24/2022 And Apparently In Its Upcoming Economic Study.**

**At the public hearing on March 24, 2022, the County began by incorrectly excluding all consideration of evidence and argument regarding the financial condition and character of the DEIR miner and the financial feasibility of accomplishing key safety and mitigation results assumed in the disputed DEIR, contrary to this and other objections. Since the County had not yet heard any arguments about why that position is incorrect under these particular facts and circumstances, I ask the lead CEQA Agency to reconsider for reasons stated in this section and section 14, as well as in the more technical brief that I expect to prepare before the end of the comment deadline. That is especially important to rebut where the DEIR itself makes financial feasibility statements that this Objections counters with admissions by the DEIR or**

**Ind 254-3**

**by Rise in its SEC 10K and 10Q filings about this mine (which is its only significant asset). See my # 2.** Perhaps the County's such ruling was influenced by thinking that objectors might have a more efficient forum for such excluded objections in connection with the County's coming so-called economic study. But I later learned that study also may be too narrow, focused on other things, and may also mistakenly exclude those considerations. Therefore, I urge the County to expand that economic study as well for these and even more of such objections by me and others. See my # 14.

I am aware of the kinds of **factually distinguishable** court decisions where such challenges failed **under different circumstances than these**, and I invite the County to consider my counter authorities in a supplemental legal argument filing soon in support of my position. Please note here, however, that even Rise's own favorite cases do not allow "bad faith" DEIR claims, such as which are illusory or speculation or bogus assumptions. That is what appears to exist here, since my # 2 proves that Rise currently cannot afford to perform the DEIR and mitigations, even as they proposed them, as distinct from what more will ultimately be required by government or courts or local law reforms if the mine proceeds. That fact, largely based on Rise's own SEC filing admissions (see my # 2), makes the DEIR "illusory" and suggests a lack of "CEQA good faith." That is especially true given all the DEIR's other "strategic" errors, omissions, and deficiencies exposed in this Objection without any good excuse, such as the DEIR occasionally mentioning the use of hexavalent chromium in the mine shoring cement paste in obscure places without any mention of it or its dangers in the DEIR's "Hazards And Hazardous Materials." See also my # 3.E and M, where I illustrate other examples of obscuring data, insufficient data, strategic omissions, and other inappropriate tactics prohibited by CEQA cases like *Banning Ranch Conservancy v. City of Newport Beach* (2017), 2 Cal.5th 918, 940-41 ("**Banning**"), and *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007), 40 Cal.4th 412, 442 ("**Vineyards**"), each insisting on "a good faith reasoned analysis," rather than scattered or buried data, and unexplained data in exhibits. See my # 14.

In any event, under the applicable facts and circumstances in this case and a correct interpretation of CEQA and its Guidelines and relevant (as distinct from distinguishable or other lower court decisions to be corrected by the California Supreme Court), I urge that everything in this Objection be considered. I will explain that position in more detail in a supplemental brief to be submitted before the deadline. (The DEIR contained their disputed legal interpretations of various CEQA requirements, and so it's only fair and appropriate for the CEQA lead agency to consider my counters.) In the meantime, I believe that the disputed DEIR is irreconcilable with the following example California decisions (and other relevant cases, statutes, and Guidelines) cited therein, among others to be explained in my supplemental brief. *E.g.*, Sierra Club v. County of Fresno (2018), 6 Cal.5th 502; Concerned Citizens of Costa Mesa, Inc v. 32nd Dist. Ag. Ass'n (1986), 42 Cal.3d 929; POET. LLC v State Air Resources Bd. (2013), 218 Cal.App. 4th 681; Gray v. County of Madera (2008), 167 Cal. App. 4th 1099.

**Please remember, even if the lead CEQA Agency were to disagree with me on the technical CEQA merits of such legal disputes, there is one additional reason no agency or court should ever resist full consideration of this and other objections: legal "impeachment" rebuttal (ie, the use of evidence to contradict false or misleading claims) and especially by the use some of the DEIR's and Rise's own words to rebut others. What my Objection does, and other objections could do, is expose with such evidence DEIR's many internal omissions,**

13

**Ind 254-3**

**inconsistencies, and contradictions to prevent the DEIR from prevailing inappropriately by exposing contrary or inconsistent statements either (i) within the DEIR, or (ii) in the current Rise SEC Form 10K or 10Q (which, as I show in my # 2, discusses many of the same mining related issues as the DEIR, but in different, inconsistent, or even contradictory ways.** The California Supreme Court's most important lesson about CEQA is the need for both clarity and truth; ie, reality. Objectors like me are entitled to challenge such a DEIR that "crosses those lines." Especially at times like this in our divided world's larger conflicts, where constant barrages of false news/propaganda seek to create "alternative realities" (eg, Russia's distortions and worse about Ukraine), it is important to remember that the rule of law itself depends on ruling by one, clear and truthful reality. The disputed DEIR often can be shown to fail that test, and it needs to be redone to clarify the actual realities versus this DEIR's objectionable mine. To do that requires corrections and edits to the DEIR consistent with this and similar objections.

**Furthermore, the County should also allow appropriate consideration of accepted matters to which courts take "judicial notice" as matters of fundamental logic or reality, to prevent obviously false or misleading claims from being accepted by denying contrary such proof. For example, if Rise were to say, "Don't worry about any environmental health or safety rules, because I'll just pay any victims to make them whole" (an exaggerated version of the disputed DEIR claim to cover anyone whose well dries up, which my #2 proves is equally illusory or speculative), that implies that Rise had the financial ability to accomplish that false claim. Why? Because such miners are not allowed to just invent nonrealities contrary easily proven facts in the real reality, especially by admission from the person asking a court or government official to join in that fantasy to officially (but incorrectly) pronounce it to become real. When the rule of law applies (and as CEQA must apply here, as I explain in my # 14), no naked "emperor" is allowed to insist that he's wearing a fancy suit, because we allow people to say the clear truth that "this emperor has no clothes." This is what my Objection and other objections seek to do regarding this DEIR: expose the comprehensive reality. For example, the Rise admissions I cite in my #2 should be allowed to rebut that illusory DEIR assurance that somehow, without even knowing the huge number of affected old and new wells over even a shorter period than 80 years, the miner will supply the needed replacement water (at DEIR 4.8-66). Recall that at the March 24 hearing and in follow-up written comments, even NID wanted more protections than the DEIR offered.**

**Please remember that the DEIR itself put its financial feasibility into issue for rebuttal by claiming (at DEIR page 6-14) that limiting mining to a 12-hour day made the project economically infeasible. Since DEIR uses that claim to defeat better "Alternatives" and mitigation, the law requires consideration of such rebuttals in my Objection and others.** That admission by the DEIR itself at page 6-14, by manipulating the data on "Alternatives" thereby legally "opened the door" for all my economic feasibility arguments, and it illustrates the DEIR's inconsistency. The DEIR cannot have it both ways, as when the DEIR wants to plead poverty (like that does), but then it also wants to make implied or express promises of being able to afford whatever mitigation may become necessary (eg, providing water to all dry well owners). We must be able to expose that nonreality one way or the other. See, eg, my #'s 2, 13, and 14. Yet, when the DEIR discusses (eg, 4.8-66) replacing wells the dry up (besides the 30 along East Bennett Road), Rise's current financial condition and questionable future prospects discussed in

my #2 prove (including by Rise admissions in its current SEC 10K and 10Q filings) that it does not currently have the financial capacity to accomplish such mitigation, especially as the climate change the DEIR ignores forces many of us to drill competing wells to reach our own groundwater as NID supplies are reduced. See, eg, my #'s 3.D, E, F, M, N, 4, 5, 8, 13, and 14. Indeed, that is what the DEIR itself admits it cannot accomplish (at 6-14), if it's limited to a 12-hour workday, as objectors will still demand. A CEQA compliant DEIR (see my # 14) would have to disclose such realities, and when (as here) the DEIR fails to do so objectors must be allowed to expose them.

Furthermore, **another DEIR "opening of the door" to my less CEQA-traditional rebuttals is the DEIR's "Non-CEQA Related Analysis" at 4.3-103-04, incorrectly purporting an attempt to show "good faith," but allowing us to prove the opposite if we are allowed to do so. My point on this also includes this related DEIR admission: that some of what the DEIR and apparently the County consider to be outside some disputed CEQA boundary is needed for essential clarity. This means one of two, alternative, admitted things, either the disputed DEIR's CEQA "boundary" is wrong, or essential clarity of purpose and what they incorrectly consider "good faith" requires going beyond the CEQA constraints, as explained in my # 14. Either way, if the DEIR can include what they call "Non-CEQA Related Analysis," then we objectors must be able to respond and counter in kind.**

**Ind 254-3**

**This cannot be a one-sided process where the DEIR can make any nonfeasible, false, or misleading claims they wish, while objectors are not permitted to rebut and expose those claims. See my # 14 and the supplemental brief. The reality is that in many cases the DEIR fails to comply with applicable law, because its purported safety and mitigation assumptions and so-called facts, goals, and contentions addressed in this Objection and others are not only incorrect, deficient, and otherwise noncompliant with CEQA, but also are illusory. See my # 2. The CEQA lead agency must allow us to prove those wrongs by accepting our substantial evidence to the contrary, including fatal admissions by the DEIR and the miner, including as to economically infeasibility. As I prove in my #2 above, Rise and its accountant admit that there are "going concern" financial issues that make its performance at best too speculative for the DEIR's unqualified claims and at least as to some things admittedly infeasible. When a miner's accountant warns its investors to beware that its mining plans may to be feasible for lack of sufficient funds, how can any responsible government not at least test at least the more obvious DEIR illusions by allowing objections like this? See # 2 and 14.**

F. **The DEIR Does Not Address Serious Questions About Rise's Financial Condition Appearing Even From Its Own SEC 10K and 10Q Filings (See My # 2), And My Related Experience Is That There Are Dangers In Relying On Infeasible Promises From Miners Whose Ability To Perform Or Comply Is Uncertain (Or In This Disputed DEIR, Too Often Just Unsubstantiated Assumptions), Instead of Requiring Meaningful Assurance of Performance And Capabilities To Perform. Also, Some Comments On Foreign Dynamics And Possible Miner Tactics.**

15

**Ind 254-3**

**The DEIR advocates implicitly assume (incorrectly) that the miner's financial condition is irrelevant to the CEQA environmental analysis, but Rise has admitted in its SEC Form 10K and !0Q weak financial circumstances that I address at #'s 2 and 14 in this Objection. Basic economics are critical, because nothing the disputed DEIR promises or assumes for timely CEQA or environmental compliance and mitigation is real, feasible, or credible, if (as appears to be the case) Rise cannot afford to satisfy such DEIR and legal compliance requirements. Moreover, governmental decisionmakers should not have to speculate about how (or if) anything merely assumed in the DEIR actually will happen. (When read closely, many of what DEIR wants to appear as somehow logical deductions, are really just flawed assumptions.) And, if what us local voters and parties-in-interest fear and expect to confirm in other proceedings where such financial infeasibility can be exposed, then everyone will be worse off for now allowing this mine threat to continue. Our environmental protections are only meaningful if they are timely accomplished. Empty and nonfeasible promises or false assumptions of things that will never be accomplished would leave us exposed to mine horrors that CEQA was supposed to prevent.** To quote that old fable, this wannabe DEIR "emperor has no clothes" and he's ugly.

I cite my background above in # 1.B, because it qualifies me to offer informed opinions on various matters relevant here. For example, government decisionmakers need to do extensive due diligence on this miner, its parent corporation (Rise Gold Corp), and its "insiders" (a broad bankruptcy term that includes officers, directors, controlling shareholders, control groups, and others in sophisticated leverage positions of practical control). See my #2. I suggest that you begin by considering at least the public record about the financial condition and financial performance capabilities of Rise Gold Corp. from its current filed SEC Form 10K and 10Q annual and quarterly reports on its website. I quote illustrations with disturbing information in my # 2 below, including Rise's own management discussing its accountant's "going concern" warning in its financial statements. That alone should raise questions about how this company wishing to be a miner with this one and only speculative mine with uncertain prospects, insufficient and limited reported working capital and credit resources at present could timely perform and accomplish what is contemplated by the disputed DEIR, not to mention affording many other mitigations and changes that should be required or be triggered in response to this Objection and others. I give additional examples in my #'s 2, 3.N, 13, 14, and 15, which combined cause me to consider the risk of lending or financing this mine, even as insufficiently contemplated in the DEIR, to be highly speculative or worse. That suggests that, besides evaluating this miner's ability to perform and comply, government decisionmakers should also investigate whether this may be a "flip" situation, where some successor or new controlling party "behind the curtain" will become the real miner in this situation. See, eg, my #'s 2, 14, and 15.

**I complain repeatedly in this Objection about the many times the disputed DEIR declines to "speculate" about the future, in effect demanding blind and undeserved trust to it unsubstantiated assumptions or opinions. See, eg, my #'s 3.E and M and 14. For example, consider the DEIR's excuse for only providing limited and insufficient information on key issues, and declining to discuss the mine water risks beyond the first 20 years of its 80 year of threatened operation (or after 2040), despite the scientific realities predicting that progressive climate change and global warning droughts will make the future cumulatively**

16

**and progressively worse here. See my # 3.E and M. There is far more reason to expect that the last 60 or 65 years of its 80 years (or after 2040), for which the disputed DEIR makes no meaningful CEQA comments, to be much worse than such first 20 years (or until 2040) that are inadequately addressed in the DEIR and for that first 20 years (and until 2040) to be much worse than the prior history (eg, average rain between 1967 and 2017) on which the disputed DEIR incorrectly attempts to rely. See my # 3.M. My experience is that what matters is not what is promised by some miner (note that all the owners of the more than 40,000 abandoned California mines on the EPA list made such promises), but rather what is proven with evidence to be feasible and credible to be performed and accomplished. The key question for you decisionmakers is what you can reliably expect the miner to accomplish timely. See, eg, my #'s 2, 3.E and M, and 15. Since this DEIR miner admits currently to have deficient funding compared to its plans (see my # 2), it is at best unreliable speculation to rely on the DEIR. Hopefully, our government will share the cynical expectations/fears of the thousands of locals like me living above or around the 2585-acre underground mine, who are facing all the burdens, risks, and problems described in this Objection and others from someone whose performance and mitigation is so uncertain. See my #'s 2, 4 and 14. Remember that there is only downside for us locals from this no net benefit mine (eg, my # 4), making such risks on the DEIR worse than foolish.**

**Ind 254-3**

Rise Gold Corp and its subsidiary are both Nevada corporations, a common strategic liability defense practice historically in the mining and other industries. However, the controlling parent company is headquartered (and where the Rise Grass Valley subsidiary appears to have its key office) in Vancouver, British Columbia, and the senior officers and most directors in control of the enterprises are based in Vancouver. I refer to **"Rise"** collectively because the Grass Valley mine subsidiary appears controlled by its Canadian parent operating their primary common asset: this mine closed and flooded since 1956. See my # 2. While they may have complex legal and tax strategies for two such companies operating one mine and related equipment as their only major record significant asset, I will treat them in this Objection (as I expect CERCLA and adversaries will do) as one enterprise.

I also refer to Rise as a **"foreign"** enterprise because its senior management is controlled from Canada, and many of its shareholders appear to be non-US persons, although there appear to be some US private equity or hedge funds involved from places distant from Grass Valley. As a cross-border insolvency lawyer, the issue for me is have they arranged the capacity for a Canadian CCAA and/or Nevada insolvency proceeding, if they were later to choose that defense. Thus, Rise is "foreign" in many senses of the word that combine for the functional point that they are not a typical, "local" Grass Valley business, in the sense that most or all the profits Rise distributes to shareholders will be enjoyed by many non-US persons and distant US persons and cannot be expected to benefit the local economy of our community. See my #'s 2 and 4.

As a general matter before considering this DEIR miner (who may be an exception but has made no case in the DEIR for being an exception), my experience suggest caution. Should any miner (especially such a "foreign" miner in a financial condition similar to what Rise admits in my # 2) ever need protection from creditors, or exhaust its working capital and credit, or wish to arrange a distress sale of the mine, or seek to block creditors from enforcing claims against insiders, the common, historical mining industry practice in that situation (if it had sufficient

Ind 254-3

funds for such tactics) would be to file a CCAA insolvency case in Canada, likely with a related US Chapter 15 case and perhaps a related US bankruptcy case in Nevada (although they would prefer the Southern District of New York, if they wish to gamble on a venue fight). These traditional mining industry arrangements and related tactics have been successful in many prior mining distress situations in frustrating and disappointing local US mining creditors and their mine's communities. If one were to backtrack down the trail of abandoned mines on the EPA list, including the more than 40,000 in California, one would find that to be a common pattern. However, if there is no buyer or sufficient financing for the mine, the historical miner practice may have simply been to elect the cheapest escape route by filing a US Chapter 7 liquidation, in which the court appointed trustee usually exercised his or her right to abandon the assets, leaving a no asset shell, whose bankruptcy can frustrate pursuit of insider claims, which are the often unmotivated trustee's exclusive right to pursue, although such trustee could perhaps sell the Chapter 7 estate claims cheap to someone friendly to the defendants. My point here is that many miners in such other historical cases have successfully used these and other tactics to achieve a result in which the shareholders and insider defendants (especially foreign persons) end up keeping their profits, and the local victims and communities recover much less and are almost always disappointed and frustrated. Local governmental authorities, who must then deal with the mess when the abandoned mining stops, are also harmed and burdened. These tragic, history lessons are one reason why savvy governmental authorities are very careful about with whom they deal in such risky mining situations, and insist on extensive due diligence, particularly as to character, track record, and financial responsibility. See my #'s 2, 3.N, 14, and 15.

**G. Disclaimer Of Personal Experience With Rise, But Rather with Experience As To The Mining Industry From Hundreds of Other Failed Mines That Lead Me to Suggest More Hard Questions (see, eg, my #'s 2, 3.N, 14, and 15) And Due Diligence Before Tolerating This Disputed And Insufficient DEIR Or Approving This Mine Reopening.**

As explained in the preceding subsection, there are more than 40,000 abandoned mines on the EPA list in California alone for common reasons, one of which is that their miner ran out of money, another is that they completed or disappointed in their local economic exploitation and retreated to a foreign location with their mining profits (often leaving a mess without promised reclamation or restoration), and another is that they were frustrated by local political and legal enforcement and resistance or water competition by local victims and then retreated, using a common pattern of technical legal bankruptcy and other maneuvers to protect the responsible insiders and disappoint the local creditors and mine neighbors. See the preceding subsection and my #'s 1.D, 3.N, 4, 14, and 15.

In any case, as to the future performance capabilities of this DEIR miner, government decisionmakers are not required to speculate on whether, when, or to what extent this miner could raise the necessary cash and working capital to even accomplish timely the insufficient things that are contemplated in the disputed DEIR. The burden of proof and persuasion on such financial and other feasibility are on this DEIR for mining plan performance and CEQA compliance. However, the rest of us local residents who are threatened by this DEIR plan are

Ind 254-3

entitled to ask government decisionmakers to ask this DEIR miner, how and when is this miner going to raise sufficient working capital, and is this really just an effort to set up the mine for a "flip" to an undisclosed successor to replace them or to another controlling person behind the curtain? See, eg, my #'s 2, 4, 14, and 15. Who does this DEIR mining matters, because in my experience there are many historical horror stories in this mining industry about devastated local communities. Surprisingly for someone whose DEIR omits essential disclosures apparently to reduce controversy (see, eg, my # 3.E), this disputed DEIR revealed its planned use of hexavalent chromium, although in obscure places, creating water pollution risk that makes people wonder if this will become "another Hinkley" (featured in the *Erin Brockovich* movie), as discussed in my #'s 3.C, G, and H, and 7.

**I add this disclaimer that I do not address my generalizations about the mining industry and other historical situations as personal challenges to Rise, since I only know what is on the public record about the DEIR and Rise team (and only some of that). Perhaps Rise is different from the other miners with whom I and others have had unsatisfactory prior experiences. However, there are many errors, omissions, and deficiencies in this DEIR as addressed in this and other objections, whatever else may or may not be in controversy by association with an industry with a history of objectionable or worse players leaving over 40,000 abandoned mines in California on the EPA list. In any case, when addressing a particular unknown company or person in any such risky situation, like reopening a mine closed and flooded since 1956 with limited reported funds and information (eg, my # 2), it is prudent for government to ask questions, especially in doing due diligence about anyone in an industry that history has shown often to conflict with local communities for what the residents consider to be good cause.** While the mining industry has many "players" who should never be allowed to operate here, considering their record, a reason to ask questions about the risk of a Rise "flip" to some other miner or some change in control to someone "behind the curtain," I do not know Rise Gold Corp or its only subsidiary or their insiders personally. Therefore, it is possible that they are somehow an exception to the often-problematic standards of the mining industry, although that does not excuse the flaws in this DEIR or the questions about their financial circumstances and other issues in this Objection. Hint: if a miner tells us that it is doing something by the "industry standard," insist, instead, that it be done in accordance with the higher standard of applicable law. In my experience the loose concept of "industry standards" were cited and misused by many of those more than 40,000 abandoned California mines.

**H. Preview of Coming Attractions in This Objection And the Hard Questions (See, eg, My #'s 15 and 3.E) Ignored in the Disputed DEIR That Cannot Properly Be So Evaded Or Deficiently Addressed.**

The organizing principle of this Objection begins with this discussion of the players and some general concerns (like those illustrations summarized in this opening section) that should be in the readers' minds as they consider the more detailed and specific objections that follow. For example, as government decisionmakers read the DEIR and my Objection, please consider at least three important common errors, omissions, and deficiencies that I demonstrate below in the flawed or worse DEIR mine pitch. First, whenever the DEIR addresses a controversial

issue (eg, like its incorrect and unsubstantiated assumptions about the groundwater recharge rate or "balancing" versus realities described in my #'s 3.D, E, F, and M, and 5), the DEIR incorrectly assumes that one can judge the next 80 years of 24/7/365 mining based on the past (or, as to inapplicable NID data, for what happens after 2040 from what happened earlier). See my # 3.M. Such DEIR assumptions ignore the "new normal" of climate change causing unprecedented, chronic dryness, drought, and other environmental problems (eg, the DEIR projects groundwater recharge based on the average annual rain between 1967 and 2017, which is not predictive of the future at issue, especially since the dewatering from our shared groundwater is being disposed of downriver somewhere else by the miner). See, eg, my # 3.D, E, F, and 5.

Second, the DEIR claims (and we dispute) that any analysis of its mining beyond the next 20 years (or 2040) is "speculation," so that they incorrectly claim CEQA allows them to avoid discussion of any burdens, risks, or problems in the last 60 years of its mining (or after 2040) until they close the mine. See my # 3.M and 14 and my supplemental brief. How can any responsible government gamble on that kind of "leap of faith" or "wishful thinking" for an undesirable mine without any net benefit to the community (see, eg, my # 4) managed in this kind of situation with such admitted financial challenges (see, eg, my # 2), especially as every quality scientist assures us that the next 80 years will become progressively worse for our climate, our weather, and our quality of life. See, eg, my # 1 and 3.M.

**Ind 254-3**

Third, even apart from mine advocates' meritless demands for DEIR approval, despite such errors, omissions, and deficiencies and without sufficient reliable data, time and again my Objection reveals that the disputed DEIR assumes, without sufficient proof or even valid logic, that the past is predictive of the future. But see my #'s 3.M and 14. Despite my such documented rebuttals and others, the disputed DEIR insists both that the last 60 years after the next 20 years (of 80) (or after 2040) must be the same as those first 20 (or before 2040), and also that nothing has changed between either (i) the closing and flooding of the mine in 1956 and now, or (ii) now and what happens underground as they mine in new and expanded places and deeper without knowing what substances and problems they will encounter. See, eg, my #'s 3.E and M. For example, maybe the arsenic, asbestos, and other hazardous chemicals that were insufficiently addressed in the DEIR will get even worse in the new mining, or maybe they'll encounter and unearth new and worse toxins. See my #'s 6 and 7. The point is that the disputed DEIR speculation allocates that risk of their unknowns onto us neighbors above and around this undesirable, no net benefit, 2585-acre underground mine, instead of correctly assigning those risks to the mine owner whose profits will not stay in our community. See, eg, my #'s 3, 4, 6, 7, 8, and 14.

What follows such discussions is a detailed analysis in my #'s 3 – 13 of my top 50 plus specific errors, omissions, and deficiencies in the DEIR. My typical approach is to quote or cite such an objectionable DEIR provision, and then expose corresponding illustrative errors, omission, and deficiencies, often by reference to my more detailed analysis in a following section of this Objection addressing a particular threat topic, like groundwater depletion, hexavalent chromium, or other hazardous materials, etc. In many cases I use the DEIR's own inconsistent or conflicting words against the DEIR, since the DEIR reads like it was written by different people whose coordination was imperfect and some were less connected to reality than others.

**Ind 254-3**

What follows that demonstration of DEIR errors, omissions, and deficiencies is a summary list in my # 15 of hard questions evaded or inadequately addressed in the disputed DEIR, as a practical means of an illustrative summary that may be useful to the decisionmakers. If such hard questions (and others in my #15 for follow up) are not addressed in this process, and if the DEIR and mine are allowed to proceed to the next challenge stage, triggering more resistance in other forums and in the political realm, these questions will ultimately be asked and answered in the resistance processes to come. That creates an "I told you situation" that is best to avoid, not just for the sake of harmony in our community and lives, but also because the longer this doomed mine approval process continues before it stops the mine, the worse off we all will be. And that is the final question that DEIR decisionmakers must ask: what happens if the mining starts and then stops, whether from the resolute local opposition, or from the simple, inability of the mine to endure overlooked burdens and consequences of inconvenient reality and truth, from orders of a court, or from resistance, law reform and other political changes (see, eg, my # 3.N), or otherwise.

In assessing such perpetual legal and political conflicts that approval of the disputed DEIR or mine would unleash, I ask the decisionmakers to consider the practical realities and the effects of local competition from us locals against the mine, such as over our owned groundwater. See my # 3.N. This was a highly speculative effort by a small, risky, and financially challenged Canadian based miner with just this one mine. See my # 2. When adequately informed of the realities, the whole of the impacted local community can be expected to join what is already a substantial resistance, as demonstrated at the March 24 County hearing. See, eg, my #'s 3.N and 8. No public relations games by this DEIR mine could possibly overcome the concerns of those thousands of us living on the surface above or around this 2585-acre underground mine, when they discover the burdens, risks, and harms already now identified in objections like this one, threatening our homes, our environment, our forests, our suburban (not rural) community, and the way of life we have long enjoyed. When *Sunset Magazine* named Nevada City one of the best retirement places in California just before I retired in 2015 and moved up here, no one imagined such threats from a mine closed in 1956. Therefore, the decisionmakers should consider the common pattern and consequences of such local residents and voters enforcing their legal and political rights and competing for shared resources until the mine stops. Our numbers of such local residents and other objectors at dwarfs those few imagined new jobs for workers from somewhere. See, eg, my #'s 4 and 8.

The long analysis that follows demonstrates some of the many reasons why we decline to suffer this mine underneath us, and it is not practical to even list objections here, much less explain them, which is why I incorporate other objections below. These concerns are about more than just the traditional CEQA environmental issues, such as about hexavalent chromium, depletion of our groundwater by the mine dewatering without the illusory recharge and balancing theory of average rainfall between 1967 and 2017, and other issues addressed here and by many objectors. I also urge your special attention to these disputes where my special expertise becomes relevant. That experience inspires me to suggest that you should study closely not just the disputed DEIR, but also the current SEC 10K and 10Q on the Rise Gold Corp. website (see, eg, my # 2), since assurances in the DEIR about CEQA and legal compliance, safety, and mitigation are meaningless, if the miner lacks sufficient working capital and resources to perform timely even what it assumes in the disputed DEIR, much less the additions

**Ind 254-3**

for which us locals will be advocating, as described in my # 3.N. In all my decades of bankruptcy, cross-border insolvency, and insurance insolvency cases, I can count on two hands the number of times when victim creditors and communities have achieved recoveries they considered adequate, even from companies with much stronger balance sheets than this miner. Cross-border mining cases are usually especially disappointing. The time to save our community from such grief is now, not later when resistance ultimately stops the mine, and we must then confront the residue.

**I. Incorporation By Reference of Other Objections And Comments.**

**Ind 254-4**

Except for only a few less relevant or compatible comments that violated the civility or personal character challenge rules of the Commission, as to which I express no opinion, I was impressed by almost all the hundred plus comments presented at the March 24, 2022, Planning Commission hearing. I incorporate those such appropriate DEIR opposition comments at the hearing, as well as their speakers' relevant follow-up written filings further expressing and expanding on such oppositions, particularly these comments and filings I specifically incorporate of: the Community Environmental Advocates Foundation (aka the CEA Foundation) and its constituent group allies opposing the mine; Minewatch Nevada County and its coalition members, including the Sierra Cub, Wolf Creek Community Alliance, San Juan Ridge Taxpayers Association, the South Yuba River Citizens League, and others; and Friends of Banner Mountain. When the transcript is available and I have access to the other written objections on the record of what is filed by the April 4, 2022, deadline, I will be more specific about what else I incorporate for the record. But apart from the occasional personal attacks on our adversaries, as distinct from the attacks on the DEIR and the Rise public data (eg, its SEC filings and public records addressed in my #2), government decisionmakers should assume until then that all of us affected locals share common interests and concerns in opposition. Our differences are more about our respective individual knowledge, experiences, and qualifications, rather than about our shared opposition to the disputed DEIR, which impacts, hurts, and risks us all in many common ways, although we each may only know presently some of those different ways. As our resistance gets better organized by what we read and hear from each other, we can be more specific about our such incorporations by reference and can arrange better delegations and allocations of commentaries among our respective specialties.

**2. Rise Gold Corp./Rise Grass Valley Inc. Capability of Performance Questions Raising DEIR Feasibility And Credibility Doubts.**

**A. General Reported Financial Condition Concerns And Issues Make the DEIR Assumptions And Projected Accomplishments Speculative At Best.**

**Ind 254-5**

**Because this disputed DEIR mining operation admits to being economically marginal (at 6-14), and even the desired gold revenue is admitted to being speculative, as discussed below, the questionable financial condition and capabilities of the miner, Rise, become even more**

**Ind 254-5**

**important. Absent sufficient assurances of timely funding or credit to perform what is planned or represented, the disputed DEIR is just wishful thinking or worse (or something to flip to who knows who). These economic issues of concern regarding the mine and the mine owner are generally ignored in the disputed DEIR, although relevant as I explain in my # 14. When occasionally something relevant to economics is mentioned in the DEIR (eg, at 6-14 or 4.3-103-104), it is not addressed much or sufficiently. These dynamics cause the disputed DEIR to be fatally flawed and deficient by never discussing the fundamental environmental and other problems and harms that would result from starting and the being unable financially or otherwise to continue mining operations and mitigations as planned, especially while us thousands of resolute and motivated neighbors above and around the 2585-acre underground mine are continuously exercising our legal and political rights to compete and resist the DEIR and mining. However bad that situation may become, any risk/benefit standard would conclude that the DEIR and mine should never have been approved in the first place, especially considering this is a no net benefit mine operation (see my #'s 4 and 14).**

Even if the DEIR were correct, compliant, and sufficient, which I and others dispute, government decisionmakers must decide if it is reasonable to rely on Rise's financial capability timey to perform and accomplish all the many essential things promised or assumed to occur in accordance with the disputed DEIR. A non-feasible DEIR is wishful thinking or worse that does not comply with CEQA and other applicable law. See my # 14. Nothing in this DEIR record reflects any rational basis for assuming DEIR feasibility or credibility, as the DEIR does without any substantial evidence at all, and despite all the contrary admission I address below and elsewhere. **A review of the Rise website posted financial statements filed with its current SEC Forms 10K and 10Q suggests that potential victims of the mine have reasonable questions about the financial credibility of the DEIR's expected mitigations and protections, especially since there is no sufficient discussion about what happens if this DEIR miner has insufficient cash, credit, and resources to timely accomplish what is needed to avoid or mitigate the problems we fear and address in this and other objections. As a bankruptcy lawyer with nearly a half century of experience with failed mines (see my # 1), the lack of timely and sufficient working capital, cash flow, and credit are the most common problem of mine failures. There are more than 40,000 failed and abandoned mines in California alone on the EPA website, for similar reasons. I also suggest financial credibility and performance capability investigations by government decisionmakers about the disputed DEIR and Rise, because, for example, the most recent SEC Form 10Q report dated 10/31/21 on the Rise Gold Corp. website states the following "going concern" admissions first at F-5 and then at F-20:**

> The Company is in the early stages of exploration and, as is common with any exploration company, it raises financing for its acquisition activities. The accompanying condensed consolidated interim financial statements have been prepared on the going concern basis, which presumes that the Company will continue operations for the foreseeable future and will be able to realize assets and discharge liabilities in the normal course of business. The Company has incurred a loss of $212,300 for the three-month period ended October 31, 2021, and has accumulated a deficit of $19,756,777. The ability of the Company to continue as a going concern is dependent on the

23

Company's ability to maintain continued support from its shareholders and creditors and to raise additional capital and implement its business plan. There is no assurance that the Company will be able to obtain adequate financing in the future or that such financing will be on terms advantageous to the Company. However, the Company has been able to obtain such financings in the past. The consolidated financial statements do not include any adjustments that might be necessary if the Company is unable to continue as a going concern. On October 31, 2021, the Company had working capital of $474,447 (vs July 31, 2021 - $956,524), including cash of $376,179. As such, these material uncertainties cast a substantial doubt regarding the Company's ability to continue as a going concern.

Furthermore, the novel coronavirus outbreak ("COVID-19") was declared a pandemic by the World Health Organization in 2020. The situation is dynamic and the ultimate duration and magnitude of the impact on the economy and the Company's business are not known at this time. These impacts could include an impact on the Company's ability to obtain debt and equity financing to fund ongoing exploration activities as well as its ability to explore and conduct business. These consolidated financial statements do not give effect to adjustments that would be necessary to the carrying values and classification of assets and liabilities should the Company be unable to continue as a going concern. (At F-5)

**Ind 254-5**

***

The Company expects to operate at a loss for at least the next 12 months. It has no agreements for additional financing and cannot provide any assurance that additional funding will be available to finance its operations on acceptable terms to enable it to carry out its business plan. There are no assurances that the Company will be able to complete further sales of its common stock or any other form of additional financing. However, the Company has been able to obtain such financings in the past. If the Company is unable to achieve the financing necessary to continue its plan of operations, then it will not be able to carry out any exploration work on the Idaho-Maryland Property or the other properties in which it owns an interest and its business may fail. As such, these material uncertainties cast a substantial doubt regarding the Company's ability to continue as a going concern. (At F-20)

Similar statements were made in the Rise Form 10K SEC annual filing for the fiscal year ended July 31, 2021, also posted on the website, as stated by the Vancouver, Canada, Davidson & Company LLP accountants, including the following at page 49:

The Company has incurred a loss of $1,603,878 for the year ended July 31, 2021, and has accumulated a deficit of $19,544,477. The ability of the Company to continue as a going concern is dependent on the Company's ability to maintain continued support from its shareholders and creditors and to raise additional capital and implement its business plan. There is no assurance that the Company will be able to obtain adequate

24

financing in the future or that such financing will be on terms advantageous to the Company. However, management believes that the Company has sufficient working capital to meet its projected minimum financial obligations for the next fiscal year. The consolidated financial statements do not include any adjustments that might be necessary if the Company is unable to continue as a going concern. ***On July 31, 2021, the Company had working capital of $956,524 (2020—working capital of $3,267,744.)

**Also, note that the Rise 10K at p. 6 states: "As of the date of these consolidated financial statements [7/31/21], the Company has not established any proven or probable reserves on its mineral properties and has incurred only acquisition and exploration costs." (Emphasis added)** That lack of any gold value data prevents lending or investing except on a highly speculative basis. That credit and investment risk becomes even more clear in other statements, such as:

> **No estimates of mineral resources have been prepared for the I-M Mine Property. We are not treating historical mineral resource estimated as a current mineral resource estimate. In addition, there are no mineral reserves estimates for the I-M Mine Project. (10K at 34, emphasis added)**

**Ind 254-5**

**What that means is that, until the mine is dewatered and prepared for operation, so that the ancient, pre-1956 closure data can be updated, the creditworthiness of Rise for raising money appears limited to speculators. That makes the credibility of the DEIR's wishful thinking about sufficient money magically appearing to accomplish its disputed DEIR goals seem even more of a fantasy risk. Even speculators are used to betting against some data about proven or probable reserves.**

**These financial "going concern" issues relate, among other things, to the fact that the reopening of the mine in accordance with the DEIR will require a huge amount of working capital and capital investment which Rise does not presently report and as to which they report no financial commitments.** Indeed, the entire economics of this DEIR project and the miner are mysterious and speculative. Any such financing will be complicated by the existing Rise $1,000,000 loan secured by the mine real estate as reported in some detail in that annual 10K, with less but some updated data in that most current 10Q filing. **Among the consequences of that financial uncertainty (at best, and presumed disability) to accomplish timely the DEIR goals and mitigation promises and assumptions, even as to what little is admitted by the DEIR to be necessary for the commencement of operations, many months after beginning work (eg, months of dewatering and then pre-start work) and follow up new mine work would be necessary before any gold revenue could be received, even if they were able to find sufficient quantities of gold to cover the costs.** Those circumstances raise many questions that are not addressed in the DEIR, such as: **Are we suffering all this just as an option for Rise to market this situation to someone else? Ie, is this just a "flipping" or fronting situation to or for one of Rise's significant shareholders or other Big Mining allies or someone else "behind the curtain"? Why should anyone approve a DEIR that the applicant demonstrates no current ability to afford to perform? What harms are done if the work commences and stops for lack**

25

Ind 254-5

**of funds at different points in time?** What happens to our environment and community if, perceiving their inability to comply and perform, the DEIR miner or its successors were to file Chapter 11 cases in Nevada and/or Canadian "CCAA" insolvency cases with related Nevada or New York Chapter 15 cases to stall for time, while they seek a buyer to use such cases in ways that are likely to provoke and disappoint us neighbors and our community? See also my # 15, addressing many hard questions that the disputed DEIR fails to address satisfactorily or often at all.

Besides these obvious cash flow and working capital deficiencies, the 10K and 10Q financial statements and commentaries raise other concerns. For example, **the 10/31/21 "Plan of Operations" states at F17: "Our plan of operations for the next 12 months is to continue the Use Permit process in Nevada County, California, to re-open the Idaho-Maryland gold mine at the I-M Mine Property." However, there is no identified source of funding for that accomplishment. For the quarter period ending 10/31/21 the 10Q reports a net loss of $212,300 (compared to a 2020 such net loss of $1.025,358), while the 10K reports an annual net loss in 2021 of $1,603,878 (following a net loss in 2020 of $5,471,535) at page 38. Again, there is no explanation of how that DEIR project is possible given limited funds and resources. Note the only significant Rise assets are the mine, already subject to a secured loan of $1,000,000 discussed in the 10K at 58-59.** According to that 10K and the 10Q (at F-7-8) Rise purchased the Idaho-Maryland Gold Mine property in 2017 for $1,950,000 plus stock warrants, plus another contiguous 82 acres for $1,300,000. While Rise states in the 10Q at F-8 that as of 10/31/21 it has incurred cumulative exploration expenditures of $7,224,186, that investment has not created the kind of cash value assets against which even asset-based lenders would extend credit, especially in a second lien position (if that were even permitted by the existing first lien lender) or in a refinancing of the existing debt with additional credit. **See 10K at 45 listing total book value of assets at $5,881,260 ($4,149,053 for the mine and $575,781 for equipment). In my experience this means that this additional funding likely will have to come from some new controlling party, whether as a "last in money" controlling partner, an investor acquiring control by diluting the existing equity, a profit-sharing miner tenant, a "loan to own" lender, or some other change in control transaction. (The theory of Rise raising sufficient equity for what seems to require massive funding needs seems unlikely, because, even if there were enough speculators willing to invest, the dilutive effect of that size of new investment would seem to wipe out the existing investors and incite them to consider the usual legal recourse for such shareholders, which would further complicate Rise's financial situation.) Don't DEIR governmental decisionmakers wish to know with whom you are really going to be dealing? See my # 14.**

**Any serious analyst of the disputed DEIR should also read the Rise Form 10K filing, because it actually contains more useful mining related disclosures on some important mining topics than does the DEIR. See my # 3 - 13.** That reality supports the concerns of many of us that the disputed DEIR may have chosen not to address such inconvenient truths that would reflect badly about the disputed story presented in the DEIR. For example, while the Form 10K is still an inadequate discussion of the facts of concern to those living on the surface above and around the 2585-acre underground mine, the 10K discloses and admits much more

than the seriously deficient DEIR. See, eg, my # 3.E. Why? Apparently, this DEIR miner is apparently more concerned with (what it considers to be) adequate disclosure to the SEC and shareholders than to the governmental decision makers reading the less informative DEIR.

I (like others) ask the governmental decisionmakers to consider what us locals and our community will suffer, if the many predicted problems occur, including some that even the DEIR admits, but somehow nevertheless assumes will be mitigated or solved by the large, necessary amounts of money Rise financials report that it does not now have and (considering the accountant's going concern warning) may never have. We, of course, also worry about the additional problems, risks, and issues identified in this Objection and others (but often omitted or deficiently described in the disputed DEIR) that would require substantial new funding from uncertain sources. Where is that money coming from in time? Yes, Rise perhaps might be able raise money from high-risk speculator type investors in the US or Canada or even some high-risk taking, asset-based lender taking a huge "equity kicker." Yes, Rise might perhaps be able, **eventually** to turn recovered gold into operating cash flow, assuming it had sufficient funding to bridge itself to that distant stage when it could begin to recover gold (and assuming there was sufficient gold there to be extracted), although the closed and flooded DEIR mine production first requires both substantial dewatering and start up time and expenditures and many other expensive activities long prior to any possible gold production and revenue, if they are even able to find commercial amounts of gold in time. No such initial operating reserve cash funds or financing commitments appear on those financial statements. So, where is any proof that any of the DEIR plan is feasible? To the contrary, Rise's own accountant questions its "going concern" capability, recognizing that the whole DEIR is speculative at best. See my # 14. Considering the horrible consequences to our community for a botched mine reopening (eg, see my #'s 3 - 15) and then closing for lack of funding or on account of other reality problems or local resistance or otherwise, it seems irresponsible for government to trust in the DEIR's wishful thinking as to anything in this disputed DEIR being feasible or plausible, even if it were not so full of errors, omission, and deficiencies as are listed in this and other objections.

**Ind 254-5**

What all that likely means is that Rise may need a "money partner" and "change in control transaction" to fund what is contemplated in the disputed DEIR, as well as what more work objectors like me expect the mine to need for funding compliance, performance, and dealing with what more we expect would be required by law or government, but which risk the DEIR fails to address adequately or at all. See my #'s 3.N. and 14. Government decisionmakers here should ask: is this applicant just taking this risky investment in hope of acquiring mining rights that it cannot itself exploit to "flip" the mine to some more viable, but possibly more dangerous or unsuitable company? (Incidentally, that is a not uncommon tactic for earning a return from the real mining company that may emerge from somewhere to do what this applicant cannot financially accomplish by itself as a managing partner, operating tenant for profit sharing, loan to own lender, or etc.) If that is the case, it should matter as much to our governments as it does to us locals who that "real miner" will be. Some miners out in this global industry might be interested in such a "flip" to them of this opportunity, but many are the sort of companies who would be unlikely to have been successful in trying to win direct approval themselves, even though they have ample funding, if our government

decisionmakers did character or track record checks. We all should want to know the suitability, character, financial capabilities, environmental orientation, and track record of whomever wants to mine 24/7/365 beneath our suburban neighborhood for the next 80 years. So, ask yourself, given the Rise financials, who is the "real miner" to be here?

In particular, one historical tactic used by this industry for government scrutiny generally is when a mine owner leases the mine to another even more unsuitable and less safe operator-tenant for a share of the profits and other compensation, and then the tenant does bad things and the landlord claims under older, disputed case law (as to which there are important exceptions and factual distinctions) that the landlord miner is not liable for the (often then bankrupt) tenant's wrongs, as in cases like *Butte Copper & Zinc Co. v. Poaque*, 164 F.2d 201 (9th Cir. 1947). See my #'s 3.N, 14, and 15, where I predict legislation or initiatives that could improve our surface owner and user defenses against such abuses, if any such things were ever attempted here. (Again, I have no idea what this DEIR miner intends to do, but any responsible government mistakenly allowing such 24/7/365 mining for 80-years underneath us needs to protect us surface owners and users above and around the 2585-acre mine from any such possible risks.)

**Ind 254-5**

**WHEN THE DISPUTED DEIR ADDRESSES ALTERNATIVES TO THE MINING OPERATING PLAN AT ITS # 6 (my # 13), IT ADMITS THE FOLLOWING (AT 6-14) IN A DISCUSSION ABOUT ITS ALLEGED INABILITY TO REDUCE ITS 24/7/365 OPERATING PLAN TO A NORMAL 12 HOUR DAY: "CAPITAL AND OPERATING COSTS WOULD INCREASE SUBSTANTIALLY AND LIKELY MAKE THE PROJECT ECONOMICALLY INFEASIBLE." That proves how fragile the operating margins of this mine are expected to be. See, eg, my #'s 4 and 14. The foregoing financial data about Rise show no capacity to handle even essential, mine reopening and initial startup expenses and normal operating costs, much less what happens if (as our local resistance expects) the mine operations sooner cease to operate 24/7/365 for 80 plus years. One way or another Rise cannot expect to prevail in perpetual disputes over groundwater, hexavalent chromium, and other issues in courts and political forums over its operations with the thousands of people living on the surface above and around the 2585-acre underground mine (like me) who daily would feel the adverse consequences predicted in out objections and not resolved by the disputed DEIR.**

**Our losses of real estate values from mine harms and stigma, as well as the other burdens, risks, and problems objected to herein and elsewhere, are not forgivable or tolerable by us surface neighbors. And nowhere does the disputed DEIR deal with the cost and operating effects of such perpetual legal and political conflicts and competitions, even though they should be obvious, because we neighbors have our own legal and political rights to compete against the mine to protect our homes, our groundwater, our environment, our forest and plants, and our quiet enjoyment of our community without such mining. See, eg, my #'s 3.N, 3.D, 3.F, 4, 7, and 14, explaining how our local surface owners expect eventually to compete with hundreds of our own new wells to preserve our property, forest, and human water needs in the coming climate/dryness/drought stressed environment without allowing dewatering water waste by the mine sending our groundwater somewhere else**

28

**Ind 254-5**

**downriver in Wolf Creek in reliance on a disputed DEIR "recharge" or "balancing" fantasy that the nonpredictive, past average rain between 1967 and 2017 predicts our rain in the next 80-years. See, eg, my # 3. D, F, and M and 5.**

**B. Rise, A Functionally Canadian Operation, Can Be Expected To Export Any Mining Profits to "Foreign" Investors, Adding No Net Benefit To Us Locals Or Our Community (See My #'s 2 and 4).**

**For functional and strategic purposes, this is a Vancouver, Canada, enterprise, incorporated in Nevada, but with a Vancouver headquarters where its officers and most of its directors are located. There is no reason to imagine that any of the profits exported to Canada or elsewhere will have any local benefit here. Therefore, as addressed in my # 4, the calculation of any alleged "net benefit" from the DEIR mine must depend on comparing the many harms, risks, and dispute costs to come against only what the mine operation spends locally, including on a small number of local employees (compared to the thousands of resolute and continuous opposition locals, like me, living above and around the surface of the 2585-acre underground mine.) When I describe herein those taking the profits as "foreign investors" (see below), that is what I reference as outsiders, even if some US parties somewhere else in the US acquire some stock and profits. The point is that the profits cannot be fairly counted as a local benefit to our economy here. For example, the 10K financials at 75-77 discuss shareholders, and many are Canadians or other non-US investors. There are some US listed investors like EMA GARP Fund LLP of Wellesley, Mass., but there is no stated or otherwise apparent reason to imagine significant profits returning to our community, if there ever are any profits. That is why I believe my shorthand reference to exporting mine profits to "foreign investor" or Rise as a "foreign" enterprise is appropriate for the risk/benefit analysis. As explained in my # 4, that means there is little but downside here from this mine, and any meaningful upside would benefit outsiders who do not suffer from the things to which us locals object.**

**C. Our Government Decisionmakers Should Do Advance Due Diligence on Both the Initial And Any Ultimate Persons in Control Of the Mine.**

Under the circumstances described above and the risk of a "change in control transaction" to someone even less desirable and suitable for our local comfort, the credibility and track record of the relevant miner players are essential to any responsible evaluation of the disputed DEIR. See my # 14. Stated another way, any approval of the DEIR or mine is premature at best until Rise either (1) demonstrates publicly its capacity to afford to perform and comply with applicable laws and accomplish even the insufficient promises and safety/environmental goals in the DEIR (ie, overcomes its disturbing admissions in its current and past 10K and 10Q filings and what it admits about infeasibility in DEIR 6-14), and (2) reveals who is going to fund and control the mining and such attempted mitigations, compliance, and performance, once the errors, omissions, and deficiencies in the disputed DEIR are addressed with more requirements consistent with applicable laws both now and in the future, when us aroused local voters organize for that enhanced protection of our community. See my #'s 3.N and 14.

29

That should also be true as to the answers to my hard questions not answered by the DEIR, such as those I ask at my # 15 and elsewhere throughout this Objection.

Although I know and suggest nothing about the merits of such matters or Rise or its people beyond the record data mentioned in this Objection, I note that the Rise Form 10K at pages 69-70 describes certain "Involvement in Certain Legal Proceedings" as to an officer and Banks Island Gold Ltd. involving a 2016 bankruptcy matter, and charges of environmental violations in Canadian mining. Track records are especially important to investigate with mining companies, since historically it's an "aggressive" industry, which by its nature is often about removing value from a local community and leaving a worthless (or worse) mine behind. See my # 4, describing no net benefit from this mine to our local community. If there is any doubt about the importance of responsible mining versus unsatisfactory, historical industry practices, I also suggest that the due diligence include communications with the communities around the more than 40,000 abandoned California mines on the EPA list, such as asking those communities whether, if they had it to do over again, they would resist the mine with everything they have. The answer should surprise no one. Many mines leave neighbors disappointed or worse. See my # 1, where I describe my experiences dealing with liquidating or restructuring insurance or surety companies who regretted issuing insurance or surety bonds to miners.

**Ind 254-5**

**3. Some Key DEIR Admissions And Telling Errors, Omissions, And Worse To Lay The Foundation For Specific Objections And Continuing Concerns Beyond the Disputed DEIR.**

**A. Some Key DEIR Admissions, Omissions, And Deficiencies That Fail Either To Comply with CEQA Or To Analyze the Burdens, Risks, And Problems That Concern Us Locals Living On The Surface Above And Around the 2585-Acre Underground Mine, Generally Deficiently Addressed by the DEIR As If That Underground Threat Were Incidental, Rather the Core of the Legal And Political Disputes To Come**

**I. Introductory Statements That Contrast What Is Admitted In the Disputed DEIR In Comparison To What Is Omitted, Misdescribed, Or Worse.**

**Ind 254-6**

**There is grossly insufficient correct and credible DEIR information regarding the 2585-acre underground part of the mine and its operation and effects, as if somehow the DEIR could ignore that part of this CEQA mining "project" beyond the surface owned boundary of the disputed DEIR's so-called "project" at the Brunswick Industrial Site and 30 or so wells along East Bennett Road or at the Centennial Industrial Site (which is claimed to be separate in the DEIR, but is not.) What DEIR information does exist about that 2585-acre underground mine is scattered in pieces throughout the thousands of pages of the DEIR and cross-referenced materials in ways that are not only unhelpful, but often seem grossly deficient, incomplete, misleading, and contrary to CEQA. See my # 14 and my supplemental brief. That**

30

**Ind 254-6**

**is especially true for thousands of us who own or use the surface either above or around that 2585-acre underground mine or live in either the larger "impact zone" or the much larger 'stigma zone' where our groundwater, air quality, and other environmental concerns are at risk as well as our real estate values from that one CEQA project, especially the 2585-acre underground area beneath or near us. Indeed, a casual DEIR reader would incorrectly assume that the DEIR was merely mining below owned surface property, rather than 2585-acres underground beneath or near some unsuspecting homeowner. See the underground mining description in the current Rise 10K discussed in my # 2, which provides better, but still insufficient, data than the DEIR. Is that why the DEIR incorrectly describes us locals as if we were somehow expendable "rural" homeowners, as distinguished from what the law and normal people would consider our normal our suburban housing we own above and around that 2585-acre underground mine taking shared groundwater in which we also have ownership? (As far as I am concerned, no mine victim is expendable wherever they live, and the DEIR trying disproportionately to harm some for the benefit of the many without constitutionally required compensation has been prohibited by the California Supreme Court, as I explain in my # 4.A.)**

**II. Some Key Illustrations of Mining Disputes, Water Depletion And Quality, Toxic Substances (eg, Hexavalent Chromium, Asbestos, Arsenic, Etc), Air Quality, And Related Issues, Including Financial Feasibility.**

Consider the following illustrations of fact (largely from DEIR # 4.8, with selected supplements) that are admitted in various places in the disputed DEIR regarding the 2585-acre underground mine, beginning with water supply, toxic hazards, air quality, and related issues:

**(a). Some Basic Mine Data And Illustrative, Related DEIR Errors, Omissions, And Deficiencies, Including Failure Adequately To Disclose the Surface Locations Above the 2585-Acre Underground Mine.**

**Ind 254-7**

The underground mine 'mineral rights boundary' is described as "approximately **2585 acres** [emphasis added] and generally contains properties surrounding the Brunswick and Centennial Industrial Sites, with the majority of additional land area located north ... and east ... includ[ing] most of the Nevada County Airport and surrounding Air Park, as well as property along both sides of Brunswick Road, Greenhorn Road, and Idaho Maryland Road." DEIR at 2-1 and in various uninformative DEIR maps that do not allow us thousands of local residents and voters above and around that mine to know what underground mining and groundwater depletion is occurring below or near us. (While a better description than the DEIR is discussed below in my # 2 from the Rise SEC Form 10K, that is still insufficient.) **Rise and the DEIR have apparently made no effort to warn such local residents of what is mining planned beneath them, and the DEIR ignores many of the related risks, problems, and disputes the DEIR would be triggering there. In other words, the disputed DEIR contemplates largely deficiently analyzed or explained blasting, tunneling, digging, removing rock, dewatering, and other mining activities directly underneath or near and below thousands of local residents' (and**

**Ind 254-7**

**voters') homes and businesses, all of whom as surface owners have competing legal and political rights that the DEIR generally ignores. For example, us surface residents' rights include protection from subsidence by a right to subjacent and lateral support, as well as to competing access to use our own groundwater in competition with the DEIR miner, who would be dewatering beneath them 24/7/365 for 80 years and possibly drying our surface land without any adequate CEQA or environmental discussion. See, eg, my #'s 3.D, E, F, and M and 5. (The DEIR's disputed assumptions are insufficient, as discussed in my #'s 3.M and F.) It does not take an expert to notice how many trees in our local forests are already dying and creating fire hazards as our soil dries out from climate change. The DEIR groundwater depletion (without the DEIR's incorrectly assumed "recharge" or "balancing") that is disputed below and elsewhere in this and other objections increases such threats to our homes and environments both from fires and fire smoke. See my # 11.**

**Ind 254-8**

**Why does the DEIR not address these risks in any meaningful way? Indeed, why does the DEIR not address the many similar and other risks and harms to those of us in the bigger area around that 2585-acres of underground mining and even those locals in the bigger "stigma zone" around that our impact area (measured, for example, by the decline in our real estate values, either when we tell our buyers about the real mining problems and risks so close beneath or near to them, or when a buyer finds the appraiser for the mortgage lender reacting badly to that reality and stigma)? Stated another way, what informed resident or user of the surface above or around the 2585-acre underground mine will trust their human or property's fates to this disputed DEIR or its advocates, especially considering the admitted, problematic financial condition of Rise described in my # 2, which my # 14 proves is relevant, among other things, because no disputed DEIR promises, assumptions or mitigations have any credence or compliance with CEQA or other applicable laws, if the miner lacks the funding to accomplish them timely. Illusory words do not satisfy CEQA. See my # 14.**

What makes such strategic omissions by the disputed DEIR so frustrating to us locals at risk to such 2585-acre underground mining beneath and around us is that, **while still insufficient, the Rise Form 10K for the fiscal year ending July 31, 2021, provides more useful operational data about the mine than does the DEIR. For example, the 10K at 18-21 discusses "Mineral Rights" with data not revealed in the disputed and insufficient DEIR discussions of the underground mine.** For instance, below and elsewhere I criticize the DEIR for providing little or no meaningful information about surface owner and user rights above and around the 2585-acre underground mine. We locals do not even how to know what surface land is affected, because there is no sufficient surface location detail in the DEIR, and DEIR areal maps are useless for the kind of data us competing surface owners and users need to find our properties versus that 2585-acre mine. For example, the only incidental DEIR description I saw of the area where surface owners and users have *DEIR mining* below them is a dotted line on an aerial photo at Figure 3-2 where trees hide all landmarks, which is utterly unhelpful and uninformative for those of us at risk. The other location maps are even less helpful or useful to those at risk, as is Table 3-2.

**Among the many such problems is that the disputed DEIR addresses the "project" as if were just the 175.64 acre Brunswick Industrial Site plus 30 well properties along East Bennett Road (incorrectly treating the Centennial site as a separate project), rather than the legally mandated and more practically relevant 2585-acres of underground mine where Rise admits**

32

**Ind 254-8**

**that it does not own (and cannot use) the surface and the first 200 feet down. See my # 2.** Thus, DEIR Table 3-2 is incorrect and misleading, as it does not address the vast number of normal residential homes (including many of us above the DEIR mine on Banner Mountain) above and around the 2585-acre underground mine. We need to know (and can't yet tell) if disputed DEIR mining is under our surface land, or whether we are adjacent to and above the underground mining in either the "impact zone" or the "stigma zone," where, for example, our legal rights may be more about our shared groundwater rights and the miner's obligations of subjacent and lateral support. See my # 4. (Of course, if the metaphor of the old musical play and Clint Eastwood movie, *Paint Your Wagon,* about Nevada City mining, becomes prophecy, and our whole area collapses into the mine hole for lack of subjacent and lateral support, even those in the stigma zone may end up having both subjacent and lateral support claims.)

**(b) Legal Underground Mining Details Omitted In The Disputed DEIR, But Admitted In The Rise SEC Form 10K.**

**Ind 254-9**

However, while missing from the DEIR, we learn in Rise Gold Corp's SEC 10K at 18-19, for example, that: "The I-M Mine Property consists of mineral rights on 10 parcels, including 55 sub parcels, totaling 2800 acres ... of full or partial interest, as detailed in Table 2 and displayed in Figure 4." [While still insufficient for matching the surface streets and legal descriptions to the underground mine, those SEC 10K maps are better than anything in the disputed DEIR. Incidentally, notice how that quote said, "full **or partial** interest...," a topic for intense follow up investigations. Is the DEIR omitted discussion of sharing mining rights?] The miner's 10K also describes the deed language and terms and exclusions of the mineral rights that limit Rise mining rights and offer surface owners protections ignored in the DEIR. **For example, the 10K at 19 defined the location of those mineral rights to include "all rights to minerals within, on, and under the land located in portions of Sections 23, 24, 25, 26, and 36 in Township 16 North-Range 8 East MDM, Sections 19, 29, 30, and 31 in Township 16 North-Range 9 East MDM, and Section 6 in Township 15 North-Range 9 East MDM and all other mineral rights associated with the Idaho-Maryland Mine." See Figure 4, the Form 10K map that is more useful than the incomprehensibly vague maps in the DEIR.** While everyone living in or around those surface land "Sections" will now have most cause for alarm, that data will also scare everyone in the adjacent sections (like me in my "Section 20" home), who may suffer from some direct and indirect harms, risks, and stigmas (eg, groundwater and real estate value losses). However, all of us locals share some direct impact from risks to our groundwater losses, air pollution, hexavalent chromium and other mine toxins, and various other impacts and stigmas. See, eg, my #'s 3 - 14.

**Those DEIR mineral rights only begin (as separated from our surface rights) at 200 feet, significantly complicating the DEIR mine's exposures in coming legal and political disputes and groundwater and other competitions, for example, over our surface owner subjacent and lateral support and other surface rights. (For instance, "subsidence" from lack of subjacent and lateral support may include our such 200 feet of "surface.") As so stated in the miner's SEC 10K at page 19: "Mineral rights are severed from surface rights at a depth of 200 ft (61m) below the surface, with all mineral rights being contiguous below 200 ft (61m) of surface." What that means is that there are 200 feet of surface protection rights entitled not**

**Ind 254-9**

to be entered, disturbed, or exploited without the surface owners' consent. (Note, when dewatering the mine drops the water level, that may drop the 200 feet surface, because they're lowering the surface by "subsidence," breaking surface infrastructure and improvements and other harms as already commonly seen everywhere in the Central Valley, Bakersfield, etc, where desperate groundwater pumping is doing exactly such subsidence harms.) Why did the disputed DEIR not address the predictable complications, obstacles, and risks associated with us objecting surface owners above and around their underground mine, such as when we exercise our own legal property and groundwater rights down 200 feet for many purposes and even deeper as to everything besides "minerals?" (Our groundwater is not a "mineral" subject to Rise's mineral deed.)

For example, what happens when the mine dewatering lowers our water table and surface in that first 200 feet to harm our already climate stressed, surface forests and other plants, or when the mining drains existing and future wells there and breaks our surface infrastructure and improvements as the surface "subsides" and changes? What happens when local land near but outside the 2585-acre underground mining boundary begin to sink collective wells even deeper than the mining? (Because of expense, there may be several collective and deeper new wells.) That competition raises some interesting legal and political questions about the scope of nuisance, trespass, conversion, and other torts, and well, as to the extent government becomes involved, inverse condemnation. See my # 4. And again, there will now always be the hexavalent chromium/Erin Brockovich movie disputes this DEIR project cannot ever defeat or escape. See my #'s 3.C, G, and H and 7.

**Ind 254-10**

In any event, for the purposes of the DEIR, these issues include many of the kinds of practical environmental issues, such as the threat to lowering our water table to harming our private, surface forests and plants by depleting our groundwater (since most of us regard the disputed DEIR "recharge" and "balancing" claims as a sad fantasy or worse and, the DEIR's disputed "happy talk" about sending our local groundwater downriver somewhere else in the Wolf Creek to NID is a strategic distraction, because that does nothing to help us locals losing that groundwater in which we own rights). That groundwater depletion also creates massive new fire and fire smoke threats, adding more wildfire smoke ignored in the DEIR mine's air pollution analysis. See, eg, my #'s 3.D, F, and M, 5, 10, and 11. Again, if the mine DEIR has answers for such obvious questions, issues, and concerns, why does the DEIR not address them appropriately, as required by CEQA and other applicable rules? See my # 14. Whatever excuse the DEIR advocates may attempt, such omissions do not seem to be from ignorance or oversight, and, as discussed in my # 2, the DEIR miner shows no financial capacity to compensate its victims (or even to perform its DEIR promises), because the miner admitted some of this in their current 10K filing with the SEC, the lack of any gold value data that would support lending or investing except on a highly speculative basis, such as:

> As of the date of these consolidated financial statements [7/31/21], the Company has not established any prove or probable reserves on its mineral properties and has incurred only acquisition and exploration costs. (10K at 6)
>
> ***

34

> No estimates of mineral resources have been prepared for the I-M Mine Property. We are not treating historical mineral resource estimated as a current mineral resource estimate. In addition, there are no mineral reserves estimates for the I-M Mine Project. (10K at 34)

**When the DEIR addresses alternative to the mining operating plan at DEIR # 6, it admits the following (at 6-14) in a discussion about why reducing its 24/7/365 operating plan to a normal 12-hour day is not feasible: "Capital and operating costs would increase substantially and likely make the project economically infeasible." That proves how fragile the operating margins of this mine are expected to be, and the financial data about Rise exposed at # 2 herein shows no capacity of this miner to handle even essential, mine reopening startup expenses and normal operating costs, much less mitigations and what happens if the mine operations cease to operate 24/7/365 for 80 plus years, as the surface owners dispute and compete perpetually over groundwater and other issues in courts and political forums.**

**Ind 254-10**

**There is no alternative but resistance for the thousands of us people living on the surface above and around the 2585-acre underground mine, who would daily feel the consequences and impacts of what's happening below or near us. The loss of real estate values from mine stigma, as well as the other burdens, risks, and problems objected to in this and other objections, are not acceptable or forgivable by us surface neighbors. Also, nowhere does the disputed DEIR deal with the cost and operating effects of such perpetual legal and political conflicts with us surface owners and neighbors, even though we should be obvious, because, as discussed in my #'s 3.N and 8, we surface neighbors have our own competing legal and political rights against the mine to protect our homes, our groundwater, our forest and plants, our environment, and our quiet enjoyment of our community without such mining.**

**Also, note that the Rise SEC Form 10K at p. 6 states: "As of the date of these consolidated financial statements [7/31/21], the Company has not established any prove or probable reserves on its mineral properties and has incurred only acquisition and exploration costs."** That lack of any gold value data prevents lending or investing except on a highly speculative basis. That credit and investment risk becomes clearer in other statements, such as those above. **What all that means is that, until the mine is dewatered and prepared for DEIR operation, so that at least the ancient pre-1956 closure data can be updated, the creditworthiness of Rise for raising money is limited to speculators. That makes the credibility of the DEIR's wishful thinking about sufficient money magically appearing in time seems even more of a fantasy. Even mining speculators are used to betting against some data about proven or probable reserves, and it appears what this DEIR miner may discover next in its new, expanded, and deeper areas of the 2585-acre mine is an even greater mystery.**

**Ind 254-11**

**B. Some Illustrations of Specific Such DEIR Errors, Omissions, And Deficiencies In That Context.**

35

**In a distant place inside the massive (but often useless) DEIR (at 4.8-17), the DEIR admits that: The Idaho-Maryland Mine encompasses a system of underground tunnels, many raises, numerous winzes, four inclined shafts, and two vertical shafts" for an "estimated equivalent of 72.8 miles ... of underground tunnel ... assuming typical drift dimensions of 7.5 feet x 8.5 feet." See also more data in DEIR at 4.7-2. However, the point of the new mining is to expand and create more and deeper underground depletions of rock (and groundwater) by blasting and removal 24/7/365 for 80 years with more continuous dewatering along those new tunnels and digs. Where does the DEIR discuss the details of that new mining or the funding feasibility and consequences of that future work and promised mitigation? Describing the past before the 1956 closure and flooding is not only incorrect and misleading as to the risks of future problems from drought, climate change, etc, but also, we know DEIR described mining activities are themselves intended to change many burdens, risks, and exposures underground in ways that are not adequately explained or addressed in the DEIR. See, eg, my #'s 3.E, F, and M. To a casual reader, the DEIR would reveal no clear idea how much more would be at risk of burdens, harms, and problems in the future, especially because the DEIR incorrectly assumes our groundwater "recharge" and "balancing" from dewatering based on the old mine and historical data that is already irrelevant and nonpredictive and soon will become even more so. See, eg, my #'s 3. D, E, M and 5.**

**Ind 254-11**

**Note that the DEIR predicts (at 3-19) in 24/7/365 mining there would be "approximately 500 tons per day (182,500 tons per year) of barren rock" removal below "500 feet of the ground surface." Alert: The Rise Form 10K filing with the SEC at page 6 states: The Use Permit application proposes underground mining to recommence at an average throughput of 1000 tons per day." Also, in stating the "Project Objectives" at DEIR page 6-2, it states the goal to be to: "Construct a commercially viable, financeable, major underground gold mine operation that will produce 1000 tons per day (365,000 tons per year) of gold mineralization." Which number 500 or 1000 is correct? (At the March 24 hearing the DEIR advocate said 1000 tons a day.) What are the consequences of one of those numbers being a material misrepresentation, either to the SEC and investors or to our government officials considering the DEIR?** The effects of that mining and dewatering cannot be satisfactorily deduced from history as the DEIR attempts to do (see my # 3.M), including as illustrated in what follows below:

**Ind 254-12**

(i) Such a DEIR focus on narrow admitted financial margins for operations (see at 6-14) may explain the DEIR resistance to not only to reducing such 24/7/354 operations (where a normal 12-hour day is considered economically infeasible at 6-13. See my #'s 2 and 13), but where the DEIR even resists reducing 24-hour truck service in a disputed section at 6-14, where it states the need for: "an average of 50 trucks per day ... 3 trucks per hour ... with a maximum of 100 trucks a day" every day." As discussed in many objections and included in the "no net benefit" from the mine analysis in my # 4, such heavy trucking will prematurely degrade the roads and infrastructure not made for such abuse. Where does the DEIR satisfactorily address the direct and indirect cost of constant road and infrastructure repair, or how key major local roads will frequently be repeatedly dysfunctional during repairs (eg, single lane only) for extended periods? Not where one would expect in DEIR 4.12. See my #'s 8 and 9.

**Ind 254-13**

(ii) Besides the disputed DEIR ignoring the reality that we can no longer judge the future from the past (see, eg, my # 3.M), the DEIR makes an even wilder, disputed, and

36

unproven assumption/guess that mining problems of concern here become less the deeper one mines. Nowhere is that unsubstantiated DEIR assumption proven, and us locals should not have to rely only on such DEIR faulty, so-called logic applied to such admittedly unknown conditions for new, expanded, and deeper mining of unexplored and unanalyzed parts of the 2585-acre underground mine closed and flooded since 1956. Consider this disputed DEIR assurance (at 4.8-51) on which us locals are asked to risk our surface homes and future (for a no net benefit mine from which Rise would export profits, as discussed in my # 4):

> "The proposed mining areas would primarily be at equivalent or deeper depths than the existing underground mine workings, while the potential future expansion areas all involve mining at greater depths, typically more than 1,000 feet below the surface and deeper. At those greater depths, the hydraulic conductivity is several orders of magnitude lower than it is at the depths of the domestic supply wells, due primarily to the lack of open fractures because of the large pressures exerted by the overlying rock mass (ie, the lithostatic pressure). Given that the new mining activity would occur at equivalent or greater depths than the proposed [sic?] mining, there is little or no potential for the proposed mining and mining in the future expansion areas to affect the quality of the groundwater in the domestic supply wells that are completed at much shallower depths."

**Ind 254-13**
