After 95 and a half years of living on this planet I can no longer deal with complicated jabberwocky and prefer to respond with real life situations. The first 20 years were spent dealing with severe asthma in a pollen-infested Midwest followed by multiple hospitalizations caused by extremely polluted air in a large congested inner city. This all was topped by congestive heart failure where I was resuscitated by a very skilled doctor who later confessed that he really had thought that I would be leaving the hospital "feet first". I have learned how important it is to have liveable air!!!

Now I live in a place that has air rated as F with the possibility of it being degraded even more and pay attention to articles relating to pollution. I found this one to share with you today.

Poor sleep can be traced to two widespread pollutants - nitrogen dioxide (traffic related air pollution) and PM.2.5 (fine particle pollution) which disrupt sleep and decrease sleep efficiency (defined as a measure of the time spent actually sleeping as opposed to lying in bed awake). People with the highest PM.2.5 and nitrogen dioxide exposure are 50%-60% more likely to have low sleep efficiency over a five year period compared to those with the lowest exposure. The greater your total pollution exposure, the higher your risk for Cancer! Chronic exposure to air pollution over a longer period of time, however, may result in more chronic and serious conditions including bronchitis, asthma, emphysema, accelerated aging of lung tissue, lung tissue redness and swelling, wheezing, and shortness of breath resulting in premature death. In addition high blood pressure, heart attack, and stroke result in decreased cognitive function.

Another fact to be considered are developmental delays in children as a result of reproductive problems traceable to increased air pollution. More to add to the pot of problems related to re-opening a stagnant mine!

Thank you for your time and patience!!!

Nevada County Board of Supervisors
Supervisor Lisa Swarthout
950 Maidu Avenue, Suite
Nevada County, CA 95959-1423

Dear Lisa,

I commented that the mitigation measures for impacts to the following were inadequate on the DEIR of the IMM project: delineated wetlands; both the regularly occurring native as well as listed plant and animal species; water quality of Wolf Creek and concerns about heavy metals; and finally noise impacts on humans and wildlife. For the sake of time, I will discuss only the first two.

Wetlands

DEIR: Mitigation Measure 4.4-3(b) specifically requires the applicant to prepare a watercourse/wetlands/riparian area management plan a draft of which was included as Appendix F.5. Chapter 4.4 of the DEIR provides a through analysis of protected species and proposed mitigation to reduce impacts to protected species to a less than significant level. Mitigation Measures 4-4-1(b) has been modified in the Final EIR to require that a qualified biologist shall be onsite during all vegetation and ground disturbing activities that are within the vicinity of special-status plants.

FEIR: Watercourse/Wetlands/Riparian Areas Management Plans. The applicant shall implement the mitigation measures identified in the Aquatic Resources Management Plans for the Centennial and Brunswick Industrial Sites, pursuant to Mitigation Measure 4.4-3, which include measures designed to protect aquatic resources and the biological resources they support. Such measures generally include, but are not limited to, ***mitigation for encroachment into non-disturbance buffers, restoration of impacted areas within stream zones, implementation of BMPs during construction, and post construction erosion control****.*

Response to Comment Ind 523-3

A majority of the wetlands on the Centennial Industrial Site will be removed as a resulted of the Centennial M-1 Remedial Action Plan project. Please see Master Response 4 - Clean-Up Project is a Separate Project Under CEQA. The additional wetland impacts associated with engineered fill placement at the Centennial Industrial Site were analyzed in DEIR Impact 4.4-3 and mandatory mitigation reducing the impact to a less than significant level is provided in Mitigation Measure

The FEIR refers us to Master Response 4, which merely states they are mitigated to less than significant.

DEIR Mitigation for fill of wetlands

Mitigation Measure 4.4-3 requires additional state and federal permitting prior to the fill or any jurisdictional water. Negotiation with these agencies will determine avoidance, minimization, and compensatory mitigation requirements for project related disturbance. As stated in Mitigation Measure 4.4-3 "Compensatory mitigation can include but is not limited to the following: onsite and/or offsite wetland creation and/or restoration, purchase or placement of conservation easements, payment of an in-lieu fee, and/or purchase of mitigation credits at an approved Corps wetland mitigation or conservation bank."

Yet there is not attempt at describing what compensatory mitigation would go into effect. At a minimum, this should be in kind mitigation on a 1:2 ratio, meaning for every wetland plant species removed or filled, two more shall be planted, maintained, and monitored with specific end point success criteria in an in-kind wetland.

Of the 14 acres of delineated wetlands mapped on the two sites, some percentage of these will be filled. The above mitigation measures do not compensate for that.

ON THE CENTENNIAL SITE:

My comment 523:

> Mitigation of the significance of impacts to wetlands and thus the habitat of species that depend on them is repeatedly minimized in this DEIR. The mitigation caveat presented in the DEIR of wetland impacts is: "However, in the event that the currently proposed remediation boundary limits are modified by DTSC prior to commencement of remediation, this EIR addresses the possibility that some amount of freshwater emergent marsh wetland habitat may remain on the Centennial Industrial Site post-remediation." This is another example of manipulation of information regarding true mitigation by obscuring it. As proposed mitigation to these sensitive habitats, this is unacceptable

FEIR Response to Comment Ind 523-3

A majority of the wetlands on the Centennial Industrial Site will be removed as a resulted of the Centennial M-1 Remedial Action Plan project. Please see Master Response 4 - Clean-Up Project is a Separate Project Under CEQA. The additional wetland impacts associated with engineered fill placement at the Centennial Industrial Site were analyzed in DEIR Impact 4.4-3 and mandatory mitigation reducing the impact to a less than significant level is provided in Mitigation Measure 4.4-3(a-d).

As the Centennial Industrial Site has been targeted by the U.S. EPA for cleanup since 2002, and discussions regarding cleanup of the Project site were well underway before the IMM Project application was submitted, statements from commenters that the Project is merely a component of a larger plan to develop an underground gold mine (the IMM Project), is factually incorrect. Third, the Clean-Up Project is under the authority of the California Department of Toxic Substances Control.

This is very faulty logic. Rise Gold made a deal to clean up the Centennial site in order to proceed with their proposed project to reopen the mine.

There is more convoluted logic in the FEIR below. We Still DO NOT HAVE A DTSR, so I have many concerns about this site.

First, as a preliminary matter, the Idaho Maryland Mine Project is designed to proceed whether the DTSC clean-up project is completed or is not completed. If the DTSC clean-up project is completed, the Project is designed such that engineered fill will be transported to the Centennial Industrial Site and used to create useable land for future uses consistent with the applicable zoning. Conversely, if the DTSC clean-up project is not completed within the life of the Project, rock material from the Project that would have been transported to the Centennial Industrial Site, instead would be sold in the regional market as construction aggregate. Second, the Clean-Up Project is a separate project from the IMM Project that is independently necessary to remediate site conditions caused by historic operations on the Centennial Industrial Site. The reason for the Clean-Up Project was the identification of the Centennial Industrial Site by the U.S. EPA as potentially requiring environmental cleanup and the later coordination between the property owner and the DTSC to implement a remedial action plan to remediate lead, arsenic, mercury and other metals found onsite. The U.S. EPA first performed a preliminary analysis on the Centennial Industrial Site in June of 2002, nearly two decades before the IMM Project was proposed, and before the IMM Project Site was owned by the current owner

Thank you for time reading through this and grasping the consequences of this mine to our community. Please, just say no, no, no way to the certification of this FEIR and no to the IMM project.

Respectfully,

Marion Blair

NEVADA COUNTY
BOARD OF SUPERVISORS

Good Morning. My name is John Vaughan. I live in District 3.

Since January of 2022, I've been reviewing the Rise Gold proposal. I've studied and responded to the Draft EIR. I've reviewed key parts of the Final EIR responses. I have a detailed understanding of both Economic Reports. I've talked to the primary report author at RDN several times, including meeting with her in person.

The issues with the Rise proposal are not about whether Rise's production and revenue estimates have any basis in current, provable measurements (they do not).

It's not about whether RDN did a good job (they did... but critical parts of the input came from Rise Gold).

It's not about whether there would be some economic benefit (there probably would be, although best case the benefits are half of what's projected).

It's not about whether the economic reports include all costs or the cost of risk (they do not).

It's not about whether some of the Final EIR responses demonstrate a bias towards the applicant (they do).

It is about what risk we, and our elected representatives, are willing to accept in trade for jobs and County revenue.

Over 5,500 individuals and 250 business owners signed petitions and/or wrote letters to the Supervisors opposing the mine. Some people in the "No Mine" camp might be what one Union Editor called "Wild Eyed Opponents". Some may be lacking a full understanding of all the detailed issues.

But the vast majority are thoughtful people who have done their homework, who care about this community and are committed to a better future outcome than what Rise proposes.

If you study the EIR and the Economic Reports you will find risks related to toxic mine waste, air and water pollution, well drawdown, property values, traffic, and many others.

You will find that local jobs, local spending and County revenue are inflated based solely on assumptions provided by Rise Gold.

In trade for the possibility of more jobs and more County revenue:

Are we willing to accept that some toxins may leak into our streams or water supply?
Or a few wells go dry?
Or that property values for some homeowners will go down?
Or a few of our children or grandchildren or great grandchildren may have lung issues from "fugitive" asbestos dust?

Don't be fooled by wild claims of economic benefits and proposed mitigations. The data provided by Rise is designed to sell their story. It is not designed to show the facts.

JUST SAY NO to the Final EIR and the Rise proposal. Thank you.

John Vaughan, 11793 Lower Colfax Rd, Grass Valley, CA 95945, jvaughan1946@gmail.com, 916-807-0430

Idaho-Maryland Mine Greenhouse Gas Emissions Are Significant
Feb 7, 2023

The Idaho-Maryland Mine Final Environmental Impact Report (EIR) is inadequate in its assessment of greenhouse gas (GHG) emissions. A valid threshold for GHG emissions was not set in the EIR.

As stated in the EIR, CEQA Guidelines allow a lead agency to determine its own thresholds for environmental impacts (including GHG emissions), and "explicitly provides that an agency may consider thresholds adopted by other agencies provided that such decision is supported by substantial evidence."[1]

The Northern Sierra Air Quality Management District has not set thresholds for GHG emissions, so, as lead agency, Nevada County simply applied the 10,000 Ton/year [2] carbon-dioxide-emission threshold chosen by some other air districts for this project. However, the justifications for adopting these thresholds are unique to each air district. These other air districts have prepared detailed GHG inventories to identify and evaluate strategies for achieving the statewide GHG reduction goals within their districts.

Nevada County cannot simply assume that the justifications used by other air districts to adopt their thresholds also apply in Nevada County. Hence, the EIR failed to provide "substantial evidence" required by CEQA by just relying other districts for setting the threshold. In fact, the EIR provided no evidence beyond just copying what other districts used.

But this is doubly wrong because the other air districts originally adopted the 10,000 Ton threshold to achieve the older statewide GHG goal under California Assembly Bill 32, which is no longer consistent with the current statewide GHG reductions goals.[3]

In 2015, the California Supreme Court determined that a project's GHG emissions should be evaluated based on its effect on California's efforts to meet its long-term climate goals.[4]

Then, in 2017, the California Air Quality Board Climate Change Scoping Plan stated "Achieving no net additional increase in GHG emissions, resulting in no contribution to GHG impacts, is an appropriate overall objective for new development."[5]

And in 2018, Governor Brown signed Executive Order 55-18, calling for the state to achieve carbon neutrality as soon as possible and no later than 2045, and to achieve and maintain net-negative emissions thereafter.[6] In view of this, the mine's 9000 tons/year of emissions for 80 years should be considered significant and unmitigated.

The mine is proposing an 80 year project, and no consideration was given to meeting the state's GHG emission goals. The EIR should have established a net zero threshold for GHG emissions from the proposed project.

For example, in considering current goals, the recent Draft EIR for another mine - the analogous Sargent Ranch Quarry project within the Bay Area Air District uses a net-zero significance threshold for operational GHG emissions.[7]

This EIR should have done the same. The EIR does not explain why the Project should be exempted.

Nevada County Energy Action Plan

The Nevada County Energy Action Plan's (EAP) goal is to reduce the projected annual grid supplied electricity the county will use in 2035 by 51% and the annual natural gas use by 30% through energy efficiency measures. The mine's electricity use is equal to adding the energy use of 5,575 homes in Nevada County. This almost eliminates the results of any energy-saving measures planned by the county.

This project will consume 49,000 Megawatts of electricity, in direct conflict with the County's energy reduction goals.[8] The FEIR states "...although the EAP is not a Qualified GHG Emissions Reduction Plan under CEQA the project was nevertheless determined to be consistent with the EAP."[9] This statement is essentially false. [10]

In fact, the Mine operation is antithetical to the County's Energy Action Plan. The Nevada County Planning Commission and the Board of Supervisors should ask the question: Are we serious about the Energy Action Plans? If so, this mine should not be approved.

In conclusion, the EIR for the mine fails to correctly identify a valid threshold for GHG emissions by assuming an outdated 10,000 Ton threshold without any substantial evidence, failing to consider the current State goals, and it would also effectively undo a large part of the goals of the Energy Action Plan.

Under CEQA, this EIR is totally inadequate in addressing the significant impacts of greenhouse gas emissions from Rise Gold's proposed mine.

Thank you,

Nevada County Board of Supervisors
950 Maidu Avenue
Nevada City, Ca. 95959

Re. Idaho Maryland Mine

Dear Supervisors,

Thank you for your dedication and service to Nevada County. I oppose the reopening of the Idaho Maryland Mine, and hope that you will all see the wisdom in denying the certification of the Final EIR

In addition to several unmitigable significant impacts noted in the FEIR, the cumulative impacts of many other significant impacts which are purported to be "mitigable", raise serious questions. Please note that CEQA documents do speak to the importance of cumulative impacts.

I believe a careful reading of the County General Plan provides more than sufficient guidance for your "No" vote on this matter. Please find enclosed a copy of Chapter 17 of the General Plan with my highlighted references to what I hope you will consider in your decision making process. AS you review this document please keep in mind that the primary operational site for the mine is surrounded on every side by residentially zoned property. (map included)

While it could be argued that the applicant (with the able assistance of our Planning Department), has done a credible and thorough job in the preparation or the FEIR, I believe the documents raise numerous significant questions and doubts regarding our County's ability to manage a project of this magnitude. Please see attached pages 2-7113 & 7114 of FEIR, wherein I note the presence on the Final Map for the primary Brunswick building site, an approximately 1500' long fault line with 200' setbacks on each side, which Rise Gold has requested removed from the map. County Planning notes "a significant impact could occur without mitigation" and go on to state, that removing the setback is not a problem (based on input from two engineering firms), as long as the County Building Department incorporate the recommendations of the Brunswick Industrial Site Geotechnical Report (November 18,2019). I have included for your review a copy of said Geotechical Report and highlighted for your review, the statement therein: "This report should not be relied upon without review by NV5 if a period of 24 months elapses between the report date shown above and the date when construction begins." I'm sure that the applicant has every intention of updating this now 3+ year old document. My concern is that the County should not have relied on this outdated document to suggest that mitigation of this significant impact could be effected.

Additional reliance has been placed on the engineers to solve both know problems and issues that may arise during course of construction. It is also noted in the FEIR that approximately 200' of the base of the existing dam of a water retention pond at the Brunswick site (built by a previous owner-Bohemia Mill), has been tested and shown to be constructed with sawdust up to 4' deep. We are assured that further testing will be done to remediate whatever additional engineering deficiencies

Brock letter to Supervisors

may be found during course of construction. FEIR also speaks to engineering proposals for steeper slopes to be constructed where the Brunswick site (which is mostly fill dirt), slopes into the S. Fork of Wolf Creek. As a founding director and Past President of the South Yuba Citizen League (SYRCL), I have grave concerns for the threat to the Wolf Creek watershed that this mine operation poses at both the Brunswick and Centennial sites.

As Past President of the Nevada County Board of Realtors I also take issue with the Economic Impact Report done on the mine that concluded no impact on real estate values. I can assure you, after 53 years of selling residential real estate (43 years in Nevada County), it is my humble opinion that the significant impacts will (and in fact have already) negatively affect real estate values. Quality of life issues definitely influence buyers' decisions on where they choose to live. Imagine buying property in Peardale Chicago Park and needing to commute to town on Brunswick Rd. In fact all of Western Nevada County will be affected by this project! Gold mining is our past not our future.

I have spent many hours reading both the Draft and Final EIRs and any related documents I can get my hands on, from CEQA to maps and documents - some referenced in this letter. I will continue my efforts to learn more about what I consider to be this ill-advised project.

Thank you for your time and service to Nevada County, it is greatly appreciated!

Sincerely,

Charlie Brock

which will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, or objects of historic or aesthetic significance (PRC Section 21060.5).

The courts have affirmed this understanding. In the case *City of Hayward v. Board of Trustees of the California State University,* the First District Court of Appeal affirmed that the focus of CEQA analysis should be limited to physical environmental impacts related to a project.[2] The court held that, "The need for additional fire protection services is not an *environmental* impact that CEQA requires a Project Proponent to mitigate."

The commenter does not explain how the project's power consumption or transportation of explosives would result in public services demand that would necessitate the need for new or physically altered governmental facilities, thus potentially causing an environmental impact.

Response to Comment Ind 577-14

The project does not propose any trucking along Highway 174. Please see Master Response 10 - Explosives, Reagents, and Brunswick Fill.

Response to Comment Ind 577-15

Please see Chapter 4.6 of the DEIR and Master Response 29 – Near Surface Workings, and Master Response 7 – Location of Future Mining Areas.

Response to Comment Ind 577-16

Please see Chapter 4.6 of the DEIR and Master Response 29 – Near Surface Workings.

Response to Comment Ind 577-17

Please see Chapter 4.6 of the DEIR regarding seismicity of the project area.

The magnitude of the energy released during mining excavations by rock removal and rock placement is much smaller than the magnitude of energy activation required to trigger the release of a local pre-Holocene fault. No analysis was performed nor is necessary, as there is no potential for inducement of seismic activity on these faults from the proposed mining activity. Please see NV5 Memo attached to the Final EIR as Appendix P.

Response to Comment Ind 577-18

As discussed in Section 4.5-1 of the DEIR, based upon this substantial evidence in the record, the project includes a request to amend the Final Map for Bet Acres recorded in February 1987 in Book 7 of Subdivision Maps at Page 75 to remove the "200' Building Setback From Fault", as shown on Sheet 4 of Final Map #85.

In addition, a management plan was prepared pursuant to Nevada County LUDC Section L-II 4.3.8 to address potential seismic hazards associated with the previously-identified inferred fault alignment. It is NV5's professional opinion that the subject fault, identified on the property in Map 85-7, does not qualify as a seismically active area as defined by Nevada County LUDC Section L-II 4.3.8.B, and the proposed project development within the designated building setback fault zone is generally feasible from a geotechnical engineering standpoint. ECM, the County's independent peer review consultant for this project, concurred with NV5's professional opinion, after reviewing the data.

[2] First District Court of Appeal. *City of Hayward v. Board of Trustees of the California State University.* (November 30, 2015) 242 Cal.App.4th 833.

pg 7197

While the analysis shows that an active fault likely does not exist, out of an abundance of caution, the County has concluded that a significant impact could occur without mitigation. Mitigation Measure 4.6-1 requires that prior to approval of Improvement Plans, the design recommendations from the Brunswick Industrial Site Geotechnical Report (November 18, 2019) shall be incorporated into the Plans to the satisfaction of the Nevada County Building Department. The rezoning and map amendments would be considered at the same hearing as the other entitlements for the project, and contrary to the commenter's suggestion, there is no requirement that such approvals be heard at a separate hearing.

Response to Comment Ind 577-19

In addition to settlement in the water treatment pond, the water treatment plant includes media filtration. Please see Appendix K.4 of the DEIR. The treated mine water discharge will be required to meet regulatory requirements for total suspended solids. Please see Master Response 35 – Discharge to South Fork Wolf Creek.

As stated on Page 4.8-70 of the DEIR, at the Brunswick Industrial Site, a detention basin would be constructed at the downstream toe of the engineered fill placement slopes, above South Fork Wolf Creek. The detention basin for the Brunswick Industrial Site is sized to detain storm flows to compensate for the quantity of treated mine water discharged to South Fork Wolf Creek, in addition to compensating for increased runoff from potential future industrial development of the site. During larger storm events, the proposed detention pond on the Brunswick Industrial Site would reduce the peak flows within South Fork Wolf Creek by much more than 5.6 cfs, as shown in Table 4.8-4. Thus, under project conditions, the overall peak storm flows would be lower than they are under existing conditions and therefore would not contribute to increased flooding downstream.

Response to Comment Ind 577-20

Please see Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 – Social and Economic Impacts.

As discussed on page 10 of Appendix N of the DEIR, the proposed project will have a surplus of water from the natural groundwater flow into the ground workings. Once the initial dewatering is completed, approximately 1,224,000 gallons per day are estimated to be pumped to the surface on an on-going basis to maintain the dewatered mine. The groundwater consumed during operations is estimated to be 84,000 gpd. As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water available downstream if it desired to. The construction of a reservoir large enough to impound this quantity at the project site is not realistic nor feasible and would likely cause additional environmental impacts due to disturbance of other resources on the surface.

Response to Comment Ind 577-21

Please see Master Response 3 – Operator Responsibility.

NV5

Grass Valley, California 95945

Subject: **Geotechnical Engineering Report**

Dear Mr. Mossman:

This report presents the results of our geotechnical engineering investigation for the 119-acre property located at the southwest corner of Brunswick Road and East Bennett Road in Grass Valley, California. As proposed, the project is to include development of industrial facilities associated with proposed underground hard rock mining operations. We anticipate that site improvements will include the construction of multiple new light and heavily loaded structures, embankment mitigation of the existing pond, retrofitting and expansion of the existing New Brunswick shaft, construction of a new service shaft and headframe, construction of an engineered fill pad for future industrial use, and associated infrastructure elements including roadways, storm drains and underground utilities.

The findings, conclusions and recommendations presented in this report are based on the following relevant information collected and evaluated by NV5: literature review, surface observations, subsurface exploration, laboratory test results, and experience with similar projects, sites and conditions in the area. Our opinion is that the project can be completed as proposed, provided the recommendations presented in this report are implemented. Our primary concerns, from a geotechnical engineering standpoint, include:

- The presence of relatively thin layers/pockets of organic material (predominantly sawdust) in the southwestern end of the existing pond dam, which can be mitigated by conventional earthwork methods, including excavation and removal of the organic materials followed by replacement and recompaction of the overlying dam fill.
- The stability of steep temporary cut slopes proposed for construction of deep sub-surface structures, which can be mitigated by conventional geotechnical engineering methods, including temporary cut slope design and/or shoring design for the proposed temporary excavations.
- The presence of undocumented fill material in portions of previously graded areas, which can be mitigated by testing of the fill material, and if necessary, reworking and recompaction of fill that is deemed unsuitable to support site development.
- The presence of thin lenses of expansive fine-grained near-surface soils in areas of proposed infrastructure improvements, which can be mitigated by conventional earthwork procedures (e.g., excavation and removal from areas to support structures or foundation elements).

- The existing corrugated metal pipe (CMP) culvert that conveys water through the Site to South Fork Wolf Creek appears to be approaching the end of its lifespan. Considering the moderate corrosive potential of the Site soils encountered in the vicinity of the culvert, as well as the proposed industrial fill pad to be constructed over the culvert alignment, we recommend replacing the existing culvert prior to construction of the engineered industrial fill pad.
- The potential for naturally occurring asbestos (NOA) in imported fill material generated underground, which can be mitigated by implementation of conventional engineering controls to limit dust emissions during earthwork.

Recommendations for mitigating these concerns are presented in this report. During construction, we should be retained to observe and confirm site conditions and modify our recommendations, if necessary. This report should not be relied upon without review by NV5 if a period of 24 months elapses between the issuance report date shown above and the date when construction commences.

NV5 appreciates the opportunity to provide geotechnical engineering services for this important project. If you have questions or need additional information, please do not hesitate to contact the undersigned at 530-478-1305.

Sincerely,
NV5

F:\1 Projects\5279 Idaho-Maryland Mine\02 Geotechnical\01 Brunswick Site\01 Report\5279.02, IMM Brunswick_Geotech Report_REVISED 11.18.19.docx

3.2 SOIL CORROSION POTENTIAL

The site soil corrosion potential was evaluated by Sunland Analytical. The soil samples tested were collected at a depth of approximately 3.0 feet bgs from trenches BK-2 and T19-12. The test results are summarized in Table 3.2-1 below, and are discussed in Section 5.1.14 of this report.

Table 3.2-1, Summary of Corrosion Potential Lab Test Data

Boring No.	Sample No.	Sample Depth (ft)	Test No.	Description	Test Results
BK-2	BK-2	0.0 - 3.0	CA DOT Test #422m	Chloride	7.5 ppm
			CA DOT Test #417	Sulfate	26.2 ppm
			CA DOT Test #643	PH	4.78
			CA DOT Test #643	Min. Resistivity	5360 ohms-cm
T19-12	T19-12-B1	2.0 - 3.0	CA DOT Test #422m	Chloride	1.7 ppm
			CA DOT Test #417	Sulfate	3.0 ppm
			CA DOT Test #643	PH	5.63
			CA DOT Test #643	Min. Resistivity	4020 ohms-cm

Notes: CA DOT = California Department of Transportation
ppm = parts per million
ohms-cm = ohms-centimeters

4.0 CONCLUSIONS

The following conclusions are based on our field observations, laboratory test results, and our experience in the area.

1. It is NV5's opinion that the site is suitable for the proposed improvements provided that the geotechnical engineering design recommendations presented in this report are incorporated into the earthwork and structural improvement project plans. NV5 should be allowed to review the proposed final earthwork grading plan and structural improvement plans to determine if the geotechnical engineering recommendations have been properly incorporated, are still applicable, or need modifications. Prior to a new phase of development for the project, we should be retained to observe the soil/rock conditions present and confirm or modify our recommendations, if necessary, before grading and construction begins.

2. Our primary concerns, from a geotechnical standpoint include:

    - The presence of relatively thin layer/pockets of organic material (predominantly sawdust) in the southwestern end of the existing pond dam, which can be mitigated by conventional earthwork methods, including excavation and removal of the organic materials followed by replacement and recompaction of the overlying dam fill.

        - Additional borings (B19-4, -5 and -6) advanced along the dam centerline as part of the 2019 drilling program, as well as previous borings (B96-1 and -6) and interview of an equipment operator previously involved with construction of the dam, confirm that a layer of organic fill (sawdust) is present within the southwestern-most 200-foot segment of the dam. Boring logs indicate that the sawdust layer is up to approximately 4 feet thick at the dam centerline at a depth of approximately 12 to 18 feet bgs.

- Based on the original topography of the dam footprint, it is likely that the organic layer thickness decreases towards the inboard section of pond and increases towards the downslope face of the dam. NV5 recommends that the upslope face of the dam (and the associated clay liner) be preserved during the repairs by the construction of a temporary cut slope. Based on soil conditions observed in the upper fill during our drilling program, we anticipate that a temporary cut slope gradient of approximately 1:1, horizontal to vertical (H:V), will be feasible during the repairs, provided that the water level in the pond is managed so that seepage is not present in the cut slope. A grading plan, cross sections and slope stability analysis of proposed cut slopes should be prepared to describe the proposed earthwork repair prior to grading. If desired, raising of the dam embankment to accommodate higher water levels in the pond is potentially feasible and can be incorporated into dam improvement design and grading plans. The plan and cross section should depict typical temporary cut slope gradients, excavation depths, maximum water surface elevation, and earthwork volume estimates.

- Steep temporary cut slopes are proposed for construction of a shaft collar. Potential slope instability can be mitigated by conventional geotechnical engineering methods, including temporary cut slope design and/or shoring design for the proposed temporary excavations.

- The presence of undocumented fill materials in portions of previously graded areas, which can be mitigated by testing of the fill material and, if necessary, reworking and recompaction of fill that is deemed unsuitable to support site development. During our subsurface investigation of the Site, we encountered existing fill and disturbed soil throughout the property that varied in depth up to approximately 20 feet bgs. In general, existing undocumented fill should not be relied upon to support proposed improvements. Heterogeneous fills of unknown origin, quality and method of placement, such as those encountered, can settle and/or heave erratically under the load of new fills, structures, slabs, and pavements. Footings, slabs, and pavements supported on heterogeneous fill could also crack as a result of such erratic movements. Thus, where not removed by planned grading, heterogeneous fills should not be relied upon to support proposed improvements unless it is excavated and replaced as an engineered fill or verified with supplemental evaluation and confirmation of previous compaction testing (if available). These evaluations will be determined on a case-by-case basis. We provide recommendations for existing fill in Section 5.1.3.

- The presence of thin lenses of expansive clayey near-surface soils in areas of proposed infrastructure improvements, which can be mitigated by conventional earthwork procedures (e.g., removal of the potentially expansive clay or approved blending with granular fill materials). Expansive near-surface soils shrink and swell as they lose and gain moisture throughout the yearly weather cycle. Near the surface, the resulting movements can heave and crack lightly loaded shallow foundations (spread footings) and slabs and pavements. The zone of moisture content fluctuation is dependent on the expansion potential of the soil and the extent of the dry season. The detrimental effects of the above-described movements can be reduced by pre-swelling the expansive soils and covering them with a moisture fixing and confining blanket of properly compacted select fill, as subsequently defined or mixed and blended with granular on-site soil at a mixing ratio provided by our firm. In building areas, the blanket thickness required depends on the expansion potential of the soils and the anticipated performance of the foundations and slabs.

- The existing corrugated metal pipe (CMP) culvert that conveys water through the Site to South Fork Wolf Creek appears to be approaching the end of its lifespan. Considering the moderate corrosive potential of the Site soils encountered in the vicinity of the culvert, as well as the proposed industrial fill pad to be constructed over the culvert alignment, we recommend replacing the existing culvert prior to construction of the engineered industrial fill pad.

- The potential for naturally occurring asbestos (NOA) in imported fill material generated underground, which can be mitigated by implementation of conventional engineering controls to limit dust emissions during earthwork. Earthwork and other disturbance of materials containing mafic and ultramafic rocks is regulated by the California Air Resources Board (CARB) and the Northern Sierra Air Quality Management District (NSAQMD). Pursuant to the California Code of Regulations Title 17, Section 93105, an Asbestos Dust Mitigation Plan (ADMP) is typically required to describe material handling protocols to be used during construction to reduce the release of naturally occurring asbestos (NOA) into the atmosphere during earthwork grading and other soil/rock disturbance.

3. NV5 understands that the proposed mine operations will produce blast rock and sand tailings in approximately equal proportions to be transported to the ground surface and then blended prior to placement as engineered fill to support future industrial site development. Based on particle size data provided by Rise Grass Valley, NV5 anticipates that waste rock and tailings generated by the proposed mining operation will meet the geotechnical engineering criteria for structural fill (Section 5.1.6).

4. Based on our site observations, the geology of the region and our experience in the area, our opinion is that the risk of seismically induced hazards such as slope instability, liquefaction, and surface rupture are remote at the subject site. We do not anticipate that the proposed project will result in the destruction, covering, or modification of any unique geological and/or physical features.

5. Based on the site geology and our observation of the surface conditions, we anticipate that grading and excavation onsite will reveal variably weathered, fractured, metamorphic rock. Areas of resistant rock may be encountered which may require ripping, splitting or hammering, to increase the rate of excavation. In addition, spoil resulting from excavation onsite will likely consist of predominantly angular, gravel to cobble-sized rock fragments. This material may be suitable for use as fill, depending on the nominal size of the rock fragments, but will likely require specific recommendations for fill placement and observation to confirm compaction. Preliminary recommendations addressing rock fill placement are included in this report.

6. During our site investigation, we did not encounter ultramafic rock, serpentinite, or NOA minerals. However, the proposed industrial mining operations may encounter serpentinite, an ultramafic rock often associated with naturally occurring asbestos (NOA). If ultramafic rock, serpentinite or NOA-containing minerals are imported to the ground surface of the site, site grading would be regulated under Cal/EPA Air Resources Board Regulation 93105, Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying, and Surface Mining Operations (ATCM) and Placer County Rule 228, Fugitive Dust. We anticipate that, as a minimum, dust mitigation measures such as limiting site access, restricting onsite construction vehicle speeds, covering stockpiled soil, and liberal use of water during grading will be required during grading to prevent the generation of dust from the Site. We can prepare an asbestos dust mitigation plan (ADMP), if required, for project planning and approval purposes.

3. These services were performed consistent with our agreement with our client. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of our services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report. This report is solely for the use of our client unless noted otherwise. Any reliance on this report by a third party is at the party's sole risk.

4. If changes are made to the nature or design of the project as described in this report, then the conclusions and recommendations presented in this report should be considered invalid. Only our firm can determine the validity of the conclusions and recommendations presented in this report. Therefore, we should be retained to review all project changes and prepare written responses with regards to their impacts on our conclusions and recommendations. However, we may require additional fieldwork and laboratory testing to develop any modifications to our recommendations. Costs to review project changes and perform additional fieldwork and laboratory testing necessary to modify our recommendations are beyond the scope of services presented in this report. Any additional work will be performed only after receipt of an approved scope of services, budget, and written authorization to proceed.

5. The analyses, conclusions and recommendations presented in this report are based on site conditions as they existed at the time we performed our surface and subsurface field investigations. We have assumed that the subsurface soil and groundwater conditions encountered at the location of our exploratory trenches and borings are generally representative of the subsurface conditions throughout the entire subject site. However, the actual subsurface conditions at locations between and beyond our exploratory trenches/borings may differ. Therefore, if the subsurface conditions encountered during construction are different than those described in this report, then we should be notified immediately so that we can review these differences and, if necessary, modify our recommendations.

6. The elevation or depth to the groundwater table underlying the subject site may differ with time and location; therefore, the depth to the groundwater table encountered in the exploratory trenches and borings is only representative of the specific time and location where it was observed.

7. The subject site map shows approximate exploratory trench/boring locations as determined by pacing distances from identifiable site features. Therefore, the trench/boring locations should not be relied upon as being exact nor located with surveying methods.

8. Our geotechnical investigation scope of services did not include evaluating the subject site for the presence of historic mining surface features or hazardous materials. Although we did not observe evidence of historic mining activity or hazardous materials within the proposed building area at the time of our field investigation, all project personnel should be careful and take the necessary precautions should hazardous materials be encountered during construction. Possible historic mining excavation not detected during our investigation may impact the proposed improvements.

9. NV5's experience and that of the civil engineering profession clearly indicates that during the construction phase of a project the risks of costly design, construction and maintenance problems can be significantly reduced by retaining a design geotechnical engineering firm to review the project plans and specifications and to provide geotechnical engineering CQA observation and testing services. Upon your request NV5 will prepare a CQA geotechnical engineering services proposal that will present a work scope, a tentative schedule and fee estimate for your consideration and authorization.

If NV5 is not retained to provide geotechnical engineering CQA services during the construction phase of the project, then NV5 will not be responsible for geotechnical engineering CQA services provided by others nor any aspect of the project that fails to meet your or a third party's expectations in the future.

10. All temporary excavations must comply with applicable local, state and federal safety regulations, including the current Occupational Safety and Hazards Administration (OSHA) excavation and trench safety standards. Construction site safety is the responsibility of the contractor, who is solely responsible for the means, methods and sequencing of construction operations. Under no circumstances should the findings, conclusions and recommendations presented herein be inferred to mean that NV5 is assuming any responsibility for temporary excavations, or for the design, installation, maintenance and performance of any temporary shoring, bracing, underpinning or other similar systems.

11. The findings of this report are valid as of the present date. However, changes in the conditions of the property can occur with the passage of time. The changes may be due to natural processes or to the works of man, on the subject site or adjacent properties. In addition, changes in applicable or appropriate standards can occur, whether they result from legislation or the broadening of knowledge. Therefore, the recommendations presented in this report should not be relied upon after a period of two years from the issue date without our review.

4.0 PROPOSED IMPROVEMENTS

We reviewed site plans for the project including a Grading Plan (sheet B-1) prepared by Nevada City Engineering, Inc.; and Infrastructure plan (sheet B101), Biological and Cultural Summary Map (sheet B102), Infrastructure Details (sheet B103) and Section Views (sheet B104) prepared by Rise Grass Valley, Inc. and dated November 2019. Based on our review of these site plans, we understand that the proposed site improvements for the project will likely include the construction of:

- Multiple new light and heavily loaded structures to support industrial mining activities;
- Mitigation of the existing pond dam embankment and liner;
- Retrofitting and expansion of the existing New Brunswick shaft to support industrial mining activities;
- Construction of a new service shaft and headframe to support industrial mining activities;
- Construction of a storm water detention pond;
- Construction of an engineered fill pad for future industrial use; and
- Associated infrastructure elements including retaining structures.

Appurtenant construction will include asphalt concrete paved roads and parking areas, and underground utilities. We anticipate that grading for the project will include cut and fill for building pads, roadways, culvert improvements, dam mitigation, and retaining structures and excavation for underground utilities.

We anticipate that grading for the proposed project will include cut and fill for roadways and engineered fills. In order to achieve the desired grading for the proposed development, existing slopes exceeding 30 percent will be disturbed during grading construction. Due to the proposed development and existing site topography, there is no alternatively feasible location(s) on the subject property that would have less impact on the Site and surrounding areas.

5.0 PURPOSE

We understand that the primary concern is the disturbance of original ground as a result of grading in slope areas exceeding 30 percent, and the potential of sediments and other undesirable materials being discharged into downslope drainages. The purpose of our management plan is to facilitate review and permitting of the proposed improvements within these steep sloped areas, as required by the Nevada County Community Development Agency.

6.0 CONCLUSIONS

The following conclusions and opinions are based on the findings of our site reconnaissance and subsurface investigation, our review of local geologic conditions, and our experience in the area.

1. It is our opinion that the proposed project developments within steep slope areas are generally feasible from a geotechnical engineering standpoint, provided the grading recommendations included herein are incorporated in conjecture with the grading recommendations presented in the Geotechnical Engineering Report for the project dated November 18, 2019.

Chapter 17: Mineral Management

Introduction and Setting

Historically in Nevada County, mining activities have played an important role in not only the local economics, but also in regional, state and national economics. In recent years, conflicts have intensified between interests in renewed mining and interests in the burgeoning growth of urban and suburban uses of the land.

This Mineral Management Chapter, a part of the County's General Plan, provides guidance for identifying, evaluating, and resolving those conflicts. It is not the intent of the Chapter to resolve every conflict; it is the intent, however, to provide policies which can either eliminate obvious conflicts and/or guide the resolution of more obscure conflicts.

The Mineral Management Chapter applies to lands in Nevada County which are outside the administration of the Bureau of Land Management, the Forest Service and other Federal and State land-holding agencies. It recognizes that while mining on said lands may not be prohibited by the County, and thus the County's use permit process will not apply to such activities, such mining is subject to compliance with the County's health, sanitation, building, and environmental regulations (reference is to the U.S. Supreme Court decision in Granite Rock).

The Chapter is compatible with and required by the California State Surface Mining and Reclamation Act of 1975.

The Chapter includes the goals, objectives and policies followed by an appendix identifying State Classification Reports incorporated by reference. A Mineral Management Background Data Report is contained in Volume 2, Section 7 of the General Plan.

Urbanization and increased environmental awareness have resulted in conflicts between non-mining and mining interests in Nevada County. The goal of this Chapter is to outline policies to be used by both planners and private interests to mitigate and resolve these conflicts and to better manage the development of mineral resources in the County. These policies will help to protect

Zoning - Nevada County, CA

0 0.15 0.3 0.6 mi

valuable mineral resources from urban encroachment while assuring that mining operations do not disturb the more developed regions of the County.
Recreational mining is allowed in all Nevada County General Plan designations without County permits. Mine exploration of limited scope and duration is allowed in designations compatible with mining, but is restricted in incompatible designations. Large scale exploration projects, surface mines, and subsurface mines, however, require conditional use permits issued by the County, and most of these activities are disallowed in designations incompatible for mining. Incompatible designations are generally in the more urban areas of the County, whereas compatible designations are generally in the more rural areas.

Mine development is encouraged in compatible areas before encroachment of conflicting uses. The anticipated time until these conflicts arise will be a factor used to determine the permitted duration of operations. Reclamation will be an integral part of any mining operation and must be designed to conserve resources and protect the environment. Thus, new mining operations may result in the reclamation of previously mined and environmentally damaged areas. Water conservation will also be a part of any mine plan, and conservative on-site use as well as measures assuring the quality and quantity of off-site discharge will be required for mine operations. If a proposed venture threatens the environmental quality of public or private property, the County may require a surety to assure mitigation of any damage.

Surface mining is conditionally permitted in compatible designations that are zoned within the "ME" Mineral Extraction Combining District. Such areas are those known to contain potentially significant mineral resources and lie in compatible areas for surface mining. Areas not currently zoned "ME" and that lie in a compatible designation may be rezoned if a significant resource can be shown to be present. The "ME" zone will be used to warn the public that the potential for a future surface mining operation exists and thus this zone will discourage the encroachment of incompatible land uses. Its use will be based on data found in State Classification Reports or similar data identifying significant mineral resource areas.

Subsurface mining is conditionally permitted in all General Plan designations, but in areas whose designation is incompatible with surface mining these mines must assure a minimal impact on surface land uses. Changes in water quality and quantity, noise, vibration, land subsidence, and traffic at the surface access will all be addressed.

Surface access to subsurface mines is conditionally permitted only in areas compatible with surface mining. Minor surface disturbance, such as emergency access or air vents may be permitted in incompatible areas. Surface plants for subsurface mines that may cause significant disruption at the surface are subject to the same policies as surface mines.

This Chapter outlines only part of the regulations to which recreational mining, mineral exploration, and surface and subsurface mines are subject. Mining and related operations must also comply with the other Chapters of the Nevada County General Plan. All mine operations in Nevada County must comply with all State and Federal regulations that may apply. It is the responsibility of the mine developer to meet all regulatory requirements.

c. De-watering will occur or water will be discharged from the site as a result of the operation.

Exploration is conditionally permitted in incompatible General Plan designations providing:

a. Methods of geological survey, geophysical, or geochemical prospecting are used, or
b. Bore holes and trial pits not exceeding 100 cubic yards of overburden or other mineral disturbance per acre may be done.
c. No explosives may be used other than geophysical; there may be no drifting or tunneling and de-watering or water discharge is not allowed.

Policy 17.3 All exploratory operations shall require a reclamation plan unless:

a. Less than 1,000 cubic yards of overburden are disturbed, and
b. The size of the operation in any one location is one acre or less.

In those instances where a reclamation plan is not required, an erosion control plan, approved by the Nevada County Planning Department, and a grading permit shall be required for those operations in which 50 cubic yards or more of overburden are disturbed.

Mine Development and Operation
General

Directive Policies

Policy 17.4 All operations shall comply with the Nevada County General Plan Noise Chapter standards.

Policy 17.5 Nevada County hereby recognizes, accepts, and adopts by reference those State Classification Reports as found in Appendix A of this Chapter providing information on the location of significant mineral deposits within the County.

The General Plan land use map shall include a Significant Mineral Deposit identification reflecting MRZ-2 areas as determined in the Reports and similar studies. At any time a Classification Report is presented to the County, said map shall be amended to reflect the

Report within 12 months. When it is necessary, due to the lack of specificity, to clarify the exact location of this identification, said Reports shall be used.

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.7 Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses. Each project shall have a periodic review for compliance with the use permit by the Planning Agency. In no case shall such review time period exceed five years. Said review shall be funded by the applicant.

Policy 17.8 A reclamation plan, consistent with the State Surface Mining and Reclamation Act standards, is required for all mining operations. Reclamation shall:

1. Prevent, mitigate, or minimize adverse effects on the environment.
2. Encourage the production and conservation of minerals.
3. Provide for the protection and subsequent beneficial use of mined and reclaimed land.
4. Eliminate residual hazards to the public health and safety.
5. Ensure that mined lands are reclaimed on a timely basis to a usable condition that is readily adaptable for alternative land uses.
6. Avoid the environmental and legal problems created by improperly abandoned mines.

Policy 17.9 Encourage the mining of previously mined land, if such land still contains economically mineable minerals, so the land can be reclaimed for alternative uses.

Policy 17.10 Consider the socio-economic impacts associated with proposed mining operations.

Policy 17.11 Recognize the importance of water conservation and quality for the present and future needs of the County by:

1. Requiring the conservation of on-site water during mining operations.

2. Requiring that off-site water discharge complies with State water quality standards.

3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

Policy 17.12 In approving mining projects which according to expert opinion may threaten the existing quality or quantity of surface or subsurface water which supply adjacent homes and businesses, the County shall require the operator to guarantee a comparable supply of water to such homes or businesses through accessible forms of security or alternate sources of water.
Where water quantity and quality problems occur, an immediate water supply shall be provided by the operator until the source of the problem is determined. The burden of proof shall be on the operator to show that the mining operation did not create the water problem. If it is determined that the operator is at fault, impacted owners shall be compensated by the operator.

Policy 17.13 The County shall require satisfactory forms of accessible security, including irrevocable letters of credit, cash deposits, escrowed negotiable securities, or performance bonds, from all mining projects to cover all such damages which may stem from the projects.

Policy 17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Surface Mining

Action Policies

Policy 17.15 Surface mining is conditionally permitted only in compatible General Plan designations as defined herein and on parcels zoned "ME". Said mining shall be allowed only after impacts on the environment and nearby land uses have been adequately reviewed and found to be in compliance with CEQA
Of particular importance shall be the impact of the operation on nearby land uses, water quantity and quality, noise and vibration impacts, and traffic associated with the operation. All other related impacts shall also be addressed.

Policy 17.16 Upon acceptance of the State Classification Reports by the County, all existing and subsequent property owners of MRZ-2 lands shall be notified by the County of the existence of significant mineral deposits and the potential for mining in that area.

Directive Policies

Policy 17.17 The County shall use the "ME" Mineral Extraction Combining District as a means to provide for the public awareness of the potential for surface mining to occur where it has been established that important minerals are present. The "ME" District shall be used only on those lands which are within any of the compatible General Plan designations and which are not residentially zoned.

Policy 17.18 Incompatible land uses relative to surface mining should be discouraged in all areas designated both compatible and MRZ-2.

Policy 17.19 Any proposed residential development, including land divisions and dwelling unit construction, located within 1,000 linear feet from an area zoned "ME" shall be developed to ensure that said development is located as far removed from the area zoned "ME" as is reasonably possible.

Policy 17.20 Zone changes removing the "ME" district from the base district shall be considered by the County only when specific studies similar in nature to State Classification Reports prove that a significant mineral deposit no longer exists.

Policy 17.21 To ensure the protection of significant aggregate deposits, the County may zone "ME" all such identified and potential deposits within compatible General Plan designations and non-residential zoning districts.

Policy 17.22 Aggregate extraction may be allowed in rivers and floodplains provided environmental impacts associated therewith are addressed through the CEQA process.

Action Policies

Policy 17.23 Prepare a comprehensive plan for river and flood plain development that ensures aggregate operations within rivers and floodplains which have the least impact on the environment are developed before more environmentally-sensitive areas are approved and to also ensure that the environmental impacts of proposed aggregate operations within rivers and floodplains may be more readily assessed.

Subsurface Mining

Directive Policy

Policy 17.24 Regardless of the General Plan designation, subsurface mining shall be conditionally permitted throughout the County. Said mining shall be allowed only after impacts on the environment and affected surface land uses have been adequately reviewed and found to be in compliance with CEQA. Of particular importance shall be the impact of the operation on surface land uses, water quantity and quality, noise and vibration, land subsidence, and traffic associated with surface access. All other related impacts shall also be addressed.

Surface Access to Subsurface Mining

Directive Policies

Policy 17.25 Surface access to subsurface mining is conditionally permitted only in compatible General Plan designations as defined herein. However, vent and escape shafts are conditionally permitted in incompatible General Plan designations where surface disturbance is minimal.

Policy 17.26 Surface plants for underground mines differ greatly in complexity and areal extent so evaluation on an individual project basis is required to assess impact on the environment. The simplest case is

a mine portal or shaft collar from which ore and waste are removed from the site for treatment and disposal elsewhere. As a result, the impact on the environment could be minimal. The most complex cases involve stockpiles, crushing and grinding facilities, concentrators and other processing units, shops, warehouses and offices, waste disposal areas, tailings ponds and extended infrastructure. Such operations shall receive the same evaluation as large surface mines.

Appendix A
Classification Reports

The following State Classification Reports are herein incorporated by reference within the Mineral Management Element:

- Mineral Land Classification of the Placer Services Corporation Placer Gold Deposit on San Juan Ridge, 1982.
- Mineral Land Classification of the Joe Chevreaux Company Property for Portland Cement Concrete Grade Aggregate, 1983.
- Mineral Land Classification: Portland Cement Concrete-Grade Aggregate in the Yuba City-Marysville Production-Consumption Region, 1986.
- Mineral Land Classification of Nevada County, California, 1990, Special Report 164.

December 5, 2022

Nevada County
Planning Department
Attn: Mr. Matt Kelley, Senior Planner

Re: Comments on the Niehaus Economic Impact Report of the Rise Gold Proposal to reopen The Idaho Maryland Mine

Page ii of the Executive Summary of the Robert D. Niehaus, Inc. Economic Study states:

"*An extensive literature review did not identify any studies that focused specifically on property value impacts of a modern, underground mineral mine*."

The proposed mine will not be a modern underground mine for the first 11 years of the operation, those which include the placement of fill above ground, and for which a SMARA Reclamation Plan approval is required. Those residents of The County with properties within five or so miles of the mine will listen to large haul diesel trucks, back up beepers, machinery to compact the fill, dust, dirt, traffic (which may last well beyond the first 11 years as Rise Gold is unable to state where the fill will go after the two proposed fill parcels are completed) and other above ground mining impacts. If one has invested savings into a home, ages 40 to 65 or older, they will likely b unable to sell the lands near to a mining operation. This needs to be discussed in the Economic Study.

Another item the County should think about is the process required should violations of the mining operation occur. This is from the Surface Mining and Reclamation Act, violations to the underground portion of the proposed project will fall under other requirements.

Article 14. Appeals of Orders to Comply with the Surface Mining and Reclamation Act of 1975
§ 3940. Purpose of Regulations…

Section 3940 through 3948 describe the process required of filing a notice of violations with the State Board of Mining and Geology. It is entirely possible that any process related to SMARA use be heard by the State Board, not the county Board of Supervisors. Once the Permit to Operate those portions of the mine

subject to the Surface Mining and Reclamation Act, SHUTTING DOWN A MINE FOR VIOLATIONS TO SMARA ARE IN THE HANDS OF THE STATE.

§ 3948. Hearing Procedures – Determination
Following the public hearing, the Board shall determine whether the alleged violations cited in the supervisor's order to comply issued by the supervisor, or the Board's order to comply issued by the Board,are supported by substantial evidence in light of the whole record. If the Board finds that the evidence in the record supports the issuance of the order to comply, the Board shall uphold the order to comply. The supervisor may agree to modify specific terms of the order to comply prior to the Board issuing its determination. If the Board finds that the evidence in the record does not substantially support the order, then the Board shall not uphold the order and shall notify the supervisor of the specific reasons for not upholding the supervisor's order. Notification of the Board's determination shall be made by certified mail or personal service to the appellant and the supervisor within 15 days following the regular business meeting of the board at which the determination is made.
Authority: Section 2755, Public Resources Code. Reference: Section 2774.1, Public Resources Code.

Sincerely,

//S//

Suzanne Smith
Former Nevada County Planning Commissioner

Matt,
Here are comments on the County's Final EIR. The City expects this letter to be provided to your Planning Commission and Board of Supervisors.

Thanks

Also, I am working on collating past comments and requests for the County to include specific conditions to the project. Many of the City's comments on the Draft and Final EIR can also be addressed through conditions of approval.

RE: COMMENTS ON THE IDAHO-MARYLAND MINE PROJECT FINAL ENVIRONMENTAL IMPACT REPORT (DECEMBER 2021) (SCH# 2020070378), NEVADA COUNTY, CALIFORNIA

Dear Mr. Kelley:

The City of Grass Valley ("City") has completed review of the Final Environmental Impact Report ("FEIR") for the Idaho-Maryland Mine Project ("IMMP" or "Project) and Nevada County's ("County") responses to our comments ("County RTC") on the Draft EIR submitted on March 30, 2022. We are dismayed at the quality and tone of the responses which, in many cases, appear to have been written by the applicant's representative rather than an objective senior County staff member. The cavalier tone of some of the responses to a concerned city who will suffer concrete significant impacts as a result of the Project is disappointing. As detailed in our comments below, the City remains vexed by key aspects of this proposed 80-year mining and industrial development Project and believes the FEIR and the County's response have failed to remedy major deficiencies in the assessment of air quality, greenhouse gases, land use, noise, and traffic, and consideration of alternatives which could reduce, or avoid, potentially significant impacts to the City and surrounding County areas. The County responses the City objects to are discussed below.

Agency Response 8.2 The County RTC fails to adequately respond to the City's comment. It is obvious what the Applicant requested. The point of the comment was to have the County set a reasonable limitation given the Applicant's unusually long eight-decade permit request. This is a very unique Project with regional implications that warrant periodic public review of the operations and strategically planned environmental protection measures. Mining

processes and practices have changed dramatically over the past 80 years; therefore, it is reasonable to believe environmental conditions and mining practices and processes will do the same over the next 80 years. The response alludes to 16 periodic reviews of the permit occurring every five years. If that is the case, the review process should be clearly defined with completion dates articulated. One example of a 100-year permit issued for one project in another county in 2016 is not precedential for an entirely separate Project in 2023. To assert the capital investment for the Project requires an 80-year minimum return period for Project viability without providing supporting evidence is baseless and does not meet the requirement that substantial evidence in the record be provided to support such a fundamental conclusion. The assertion is defective and appears to form the basis for most of the findings in the DEIR and the FEIR. Therefore, circulation of a subsequent DEIR is definitely warranted.

Agency Response 8.3 See also response to **Agency Response 8.25** below regarding noise and the City's ordinance limitation of 7am to 7pm six days per week. Project truck traffic will be comprised of one truck every 10 minutes for 80 years between 6am-10pm every day certainly violates the City's noise ordinance and is a significant adverse impact unaddressed in the FEIR. A further study is required.

Agency Response 8.4 Loading, hauling, and unloading of trucks, are essential components of the "construction activity." The County's response evades an adequate response and fails to recognize and address a very significant adverse impact in need of mitigation.

Agency Response 8.5 This County RTC fails to respond to the City's comment. The County should have considered how linked these operations are and the impacts the City will suffer. A further analysis is required.

Agency Response 8.6 The City will submit comments to the CVRWQCB. The other two dischargers cited are existing operations, not new large-scale mining operations with an intent to discharge for 80+ years.

Agency Response 8.8 and Master Response 11: Response 8.8 does not address the City's comment, and MR 11 is evasive treatment of this very serious attribute of the Project. Market demand for waste materials is a CEQA issue in this case since it is the sole "disposal method" proposed for 150,000 tons per year ("TPY") of waste rock for 68 to 75 years. It is only a "product" if a market exists for the "waste rock" for 75 years. Otherwise, it is a huge amount of "waste" with no clear disposal method. The County's response to the City's comment also offers new information of a commitment that if no market exists for the waste materials, the mine will reduce production to reduce generation of waste rock. This serious concern should have been identified in the DEIR and mitigation measures should have been developed and imposed on the Project by the County as a condition of Project approval.

Agency Response 8.10 This County RTC is evasive on this point as well. The word "store" is not used, but storage is described / implied if materials are being staged here for regular (daily/weekly) transport to market, with no further explanation regarding the disposal of this material if market conditions do not support its transport and sale.

Agency Response 8.11. Again, this is not a response to the City's comment. Insurance is not normally a CEQA issue, but in this case, insurance is identified as a mitigating factor for a potentially calamitous event related to explosives transport and storage. The County should therefore define what is "sufficient" mitigation to address this potentially environmentally ruinous event. Further analysis is required.

Agency Response 8.14 The County RTC fails to respond to the City's comment. Contrary to the County's assertion, this is a CEQA issue. The proposed action includes reclamation which is a mandatory requirement of the Project and mining permit. The reclamation plan now calls for buildings to be left behind without any requirement to ensure the quality of what is left behind 80 years later. No provision has been made for non-functioning or derelict buildings to ensure, if any remain, they do not create visual blight and health and safety hazards with the potential to affect the City and surrounding areas. A full detailed study must be performed, and a prospective cure must be put in place.

Agency Response 8-17: The response provides estimated energy usage for construction and operation of the Project, which are now included in Appendix M of the FEIR – *IMM Project Energy Demand Estimates*. However, the discussion of Impact 4.3-4 in the DEIR is not enhanced to discuss whether the energy usage would be considered wasteful, inefficient, or unnecessary. The response does not indicate how diesel-fueled trucks (engineered fill haul trucks, freight trucks, concentrate trucks, and other various heavy trucks) traveling for round trips of 120 to 290 miles is not wasteful, inefficient, or unnecessary. This is especially important post 2032, when engineered fill is assumed to go to other regional customers (120-mile average round trip), which generates an annual VMT of 2,190,000 miles from engineered fill haul trucks alone (as shown in Table 4.3-11 of the DEIR). The Project should consider the use of electric haul trucks, especially for activities post 2032, when Project VMT is significantly higher than other Project phases and when electric haul trucks should be more commercially available.

Agency Response 8-18: The response (and Master Response 25) provides the strategies of the Nevada County Energy Action Plan (EAP) and an analysis of how the Project is consistent with the EAP. While the Project is not inconsistent with the individual strategies of the EAP, it conflicts with the overall goal of the EAP, which is to reduce Countywide annual electricity demand by 51 percent and natural gas consumption by 30 percent in the year 2035, relative to a year 2005 baseline. The mine was not operational in 2005 and was not accounted for in the 2005 baseline in the EAP. So, the significant electricity requirements of the Project will conflict with Countywide annual electricity reduction goals. Likewise, the

Project does not reduce on-site electricity consumption through on-site solar facilities or other means, which is feasible given the scale and lifespan of the proposed Project. Furthermore, the City's original comment made no reference to a request to "tier off" any other environmental document. The EAP is a County-adopted environmental-related policy document that needs to be properly considered in the EIR as it applies to this energy intensive Project.

Agency Response 8-19: The response indicates that the DEIR analyzes the Project's cumulative energy use impacts as combined with other cumulative projects on page 4.3-102 of the DEIR. However, there is no analysis of the Project's cumulative energy use impacts as combined with other cumulative projects. An unsupported statement that cumulative impacts would be less than significant because the cumulative residential and nonresidential projects would be subject to the State's energy efficiency requirements is not sufficient analysis of the cumulative energy use impacts. The issue needs further study and adequate mitigation.

Agency Response 8-20: The response indicates the Project requires the mandatory NSAQMD mitigation but also goes beyond that with the Applicant Proposed Measures (APMs). However, there is no record or indication that the proposed APMs were discussed with the NSAQMD and if the NSAQMD determined the APMs were sufficient to reduce potentially significant operational air quality impacts to a less-than-significant level. As stated previously, the NSAQMD states in their *Guidelines for Assessing and Mitigating Air Quality Impacts of Land Use Projects* (*Guidelines*): "The lead agency should contact the District office to discuss the mitigations before the lead agency commits to a final mitigation plan for each project." (emphasis added). No confirmation has been made that the NSAQMD has considered and approved a final mitigation plan.

Agency Response 8-21: The County's response indicates recirculation is not required because a new significant impact has not been identified that was not already addressed in the DEIR. As discussed throughout these comments to the County's RTC, the Project poses *numerous* potentially significant impacts to air quality, energy, land use, noise and traffic that were not sufficiently addressed in the DEIR and which, absent mitigation, would result in significant and unavoidable impacts that should have triggered revised assessments and recirculation of the DEIR. Recirculation of the DEIR is required to address all of the mentioned concerns.

Agency Response 8-22: The dismissive nature of this response demonstrates a lack of regional understanding, or an unwillingness to adequately consider all potentially significant environmental impacts, since all the project operations and storm drainage waters will be directed towards water courses that flow through the City and will impact City storm drainage control systems. This Project will have a direct impact on City flood control and

conveyance systems, which must be adequately identified and mitigated to a level of insignificance. Further study is required.

Agency Response 8-23: As Lead Agency, it is the County's responsibility to ensure a proper analysis of all potential applicable land use policies, not the commenting agency. Since the early stages of this Project, the City has been very transparent in its request to have the County address all the General Plan conflicts as required by the County General Plan and City/County MOU that addresses joint planning. This has not been accomplished and must be considered before a FEIR is adopted and approved.

Agency Response 8-25: The response indicates that the DEIR already acknowledges and analyzes the loading and dumping of trucks and spreading and compacting of engineered fill material during the relevant hours. The DEIR dismisses the fact that this is in direct conflict with the City's noise ordinance which prohibits construction activities generating significant noise between the hours of 7pm and 7 am, or on Sundays within 500 feet of a residential zone. Claiming hauling and dumping will occur outside of the allowed hours is insufficient. Hauling and dumping of engineered fill is obviously a construction activity of the Project, which will be in direct conflict with the City's noise ordinance by allowing operations outside of the allowed 7 am to 7 pm window. The DEIR indicates that this will occur 16 hours per day, seven days per week for approximately five years. This is a significant unstudied and unanalyzed noise impact. All construction activities associated with engineered fill (hauling, dumping, compacting, etc.) should be limited to 7 am to 7 pm, Monday through Saturday, and should be prohibited on Sunday to be in compliance with the City's ordinance and to avoid such a significant effect on the City. This requirement, at a minimum, should be identified as a mitigation measure and imposed by the County as a condition of Project approval.

Agency Response 8-26: Overall, the County's responses reflect a general failure to recognize this is a very unique Project with unique operational attributes resulting in significant environmental impacts. The County's response repeats the same evasive claim regarding hauling and dumping activities related to engineered fill operations as the **Agency 8-25 Response**. As noted in the comment above, all activities associated with engineered fill (hauling, dumping, compacting, etc.) are construction activities and are required by City ordinance to be limited to 7 am to 7 pm, Monday through Saturday, and are prohibited on Sunday to avoid significant noise impacts. This must be considered before an FEIR is approved.

Agency Response 8.29: VMT analysis has been revised from Home Based Work Attraction VMT / Employee (Grass Valley standard of 13.1, Unincorporated Western Nevada County standard of 13.1) to Total VMT per Service Population (Grass Valley standard of 28.0, Unincorporated Western Nevada County standard of 18.1). The TIA preparer has indicated that a VMT per service population ratio of 14.3 percent below 18.1 would be the impact

criteria. The guidelines offer the option to calculate based upon VMT / Employee or VMT / Service Population. In either case, the estimated Project VMT per service population (employee) has been determined by including the number of Project employees in the Project traffic analysis zone. Interaction with the employees is then extracted using typical modeling procedures. Although this modeling process calculates passenger car VMT activity, truck activity associated with the export of engineered fill from the Brunswick site, as well as off-site transport of gold concentrate do not appear to have been captured in this analysis. Further articulation of these effects must be discussed and, as necessary, mitigated.

Agency Response 8.30: The response indicates that the LOS / Queuing software accounts for PCE, which is true ONLY IF heavy vehicle factors are appropriate to the truck share on study area roadways. Many of the analysis worksheets include 2% heavy vehicles rather than correct truck percentages.

Agency Response 8-33: This road is shown on the City's 2020 General Plan adopted in 1999. The response uses an arbitrary year of 2035 with no basis to dismiss the potential of this road being constructed sooner. Whereas the County is willing to project into the future selectively for this purpose, it must also do so for all other impacts that will be felt in future as a result of the 80-year long project—a matter consistently ignored throughout the DEIR as mentioned in detail by the City here.

Agency Response 8.34: A in **Agency Response 8.30,** this response repeats the claim that the LOS / Queuing software accounts for PCE, which is true ONLY IF heavy vehicle factors are appropriate to the truck share on study area roadways. Many of the analysis worksheets include 2% heavy vehicles rather than appropriate truck percentages. An adequate study must be performed.

Agency Response 8.35: The response indicates that the analysis was updated to include a higher percentage of trucks. However, the appendices still include 2% heavy vehicles for intersections 13 and 14. For intersection 14, the Cumulative and Cumulative plus Project AM still shows 2% heavy vehicles (pdf page 182 and 191 of document 9: Volume IX of IX Appendix N Continued – Appendix R). Intersection 13 includes 2% heavy vehicles for Cumulative plus Project PM (page 193 of document 9) etc. As indicated above, Section XI (Acceleration on Grade) states that along Brunswick Road, trucks currently account for about 6% of all traffic between SR 49 and SR 174, with the truck traffic increasing to about 9% between Whispering Pines Lane and E. Bennett Road.

Agency Response 8.36: As in **Agency Responses 8.30 and 8-34,** this response repeats the claim that the LOS / Queuing software accounts for PCE, which is true ONLY IF heavy vehicle factors are appropriate to the truck share on study area roadways. Appropriate truck percentages do not appear in the Appendices (see 8-34 and 8-35 above). Again, an adequate study must be performed.

Agency Response 8.37 The queueing analysis has not been updated in response to this comment.

Agency Response 8.38: The County's response states that "Service Population is defined in the Nevada County TIAG (page 3) as the total number of residents, employees, and students. The Project does not have residents or students and, therefore, the VMT per Employee is the VMT per Service Population for the project." It is agreed that the Project Service Population is the Project Employment. However, VMT / Employee only includes home-work attraction trips, but VMT / Service Population is based on total trips, so the VMT / Employee does not equal VMT / Service Population. The guidelines do offer the option to calculate based upon VMT / Employee or VMT / Service Population. The VMT / Service Population calculation seems to include all trip types.

Agency Response 8.41 The County's dismissive response to the City's comment is a complete abrogation of the County's requirement to consider the comment. Using data from historic mining to estimate production capacity of the next 80 years is entirely speculative as confirmed in the next paragraph of the response which states that "*the extent is not known and will not be known...*" Since the "*given mass of material*" is not known it is absurd to assert that reduced annual extraction rates will result in 160 years of mining. While still an impact for decades, a shorter permit time period could reduce decades of traffic, noise and waste generation with significant and unavoidable impacts. If a shorter time period was selected, it is possible impacts could more accurately be minimized or avoided. The shorter time period could then be subject to renewal. The County's repeated claim that the capital investment in the project requires an 80-year minimum return period for Project viability, remains unsupported by any substantial evidence in the record.

Agency Response 8.42 This is a contrived response – 100-year permits are not routinely approved in the 21st century, and no other projects in Nevada County have been granted 100-year permits to operate. That one County issued such a permit in 2016 does not set a precedent for the State or for Nevada County and is not evidence that such multi-decadal permits are "*routinely approved*". There is also no relation between an existing above-ground aggregate mine that produces no waste material requiring off-site disposal. The assertion that hundreds of millions in investment requires eight decades to be economically feasible is not supported by any analysis or evidence in the record. Eighty years spans three to four generations. The duration of impacts by permitting the Project for 30 years would be a reduction in effects on the community, with an opportunity of possible permit renewal, and is a very reasonable alternative, which cannot simply be dismissed because the alternative does not meet the economic goals of the applicant. Many technological changes and environmental issues can be reasonably expected to occur over 80 years, which must be considered and studied, or the time period shortened to a reasonable span of time where the effects on the environment and mitigation measures can be reasonably projected. The

County's response shows lack of foresight and any consideration of long-term planning. A thorough analysis must be performed.

Agency Response 8.43 Again, this response is predicated on the unsupported assumption that an 80-year permit term is essential to the Project's economic feasibility. MR-11 claims waste rock material is "product" and that no "storage" is needed. If true, there is no need for this additional "fill," (a misleading term for "long-term storage") if markets are perpetually as robust as claimed in Master Response-11.

Agency Response 8.45 The County's response simply asserts the DEIR does not meet the CEQA criteria compelling revision and recirculation and fails to identify potential impacts related to air quality, land use and waste disposal, energy use, noise, traffic, explosives transport and storage and to underestimate potential impacts or assume they will not occur. The County's DEIR is also fundamentally flawed by its cursory dismissal of reasonable alternatives based entirely upon economic assumptions for which there is absolutely no supporting evidence in the record of this 10,000+ page "FEIR." This is a very significant Project that has the potential to adversely affect the City and all surrounding communities in Nevada County through the end of this century. Simply put, the environmental review for the 80-year project needs to be done right. Once again, the City urges the County to take these comments seriously, revise the analyses as needed for full disclosure of potential adverse impacts, identify rigorous mitigation measures, and to recirculate the DEIR for additional review and comment.

Please call me if you have questions or wish to discuss the City's comments in more detail.

Sincerely.

10591 Salcido Lane

Grass Valley, 95949

408.691.5000 (Call/Text)

Dear Mr. Kelly

Idaho-Maryland Mine Project SCH# 2020070378 Draft Environmental Impact Report

I am writing as a co-owner, with my three sisters, to express my concern with this project. We own the property at 10591 Salcido Lane, Grass Valley. We have owned and cherished this property for 55 years.

I am particularly concerned at the content of table 2.1 Section 4.3-2 Asbestos Dust Mitigation Plan. The Mitigation Measures section states *"Prior to the initiation of any clearing, grading, or construction activities, Rise Grass Valley Inc. shall submit an Asbestos Dust Mitigation Plan (ADMP) to Northern Sierra Air Quality Management District (NSAQMD) for review and approval.'* The measure fails to explicitly state that initiation shall not proceed prior to approval, only that a report is submitted – This is an inadequate mitigation measure.

At 4.3-61 the report states" *Therefore, only the average asbestos emissions that could be generated over the long-term (per year), and associated long-term health risk, has been evaluated herein*." This is an inadequate statistical measure – the report should contain data identifying the spikes and troughs through a typical sample period in order that a baseline can be established and mitigation measures can be assessed against the worst case measure i.e. the highest "spike" – We have all heard of the "once in one-hundred years events" and this project has an eighty year duration

Page 4.3-65 APM-AQ-3: ASUR Plan states "*The ASUR Plan incorporates routine asbestos testing by TEM and an Asbestos Inventory to ensure that **average** mined material and engineered fill contains less than 0.01 percent asbestos by mass of PCM equivalent units"* No details are given on how this average is determined, specifically the periodicity – is it to be averaged after the completion of the 80 years? Once again this omits the possibility of "spikes" occurring which can be concealed by extending the period of averaging. A more exact definition of this "averaging" requires definition.

Page 4.3 80 states "*an ADMP is required to be implemented to **reduce** potential asbestos exposure and protect public health*." I have highlighted ***reduce*** as this is a

qualitative term - it could refer to a 1% reduction or a 99% reduction – the difference is substantial. The term "reduce" therefore needs to have a quantitative statement " not greater/less than…."

Chapter 6 page 6.5 states *"the project could result in emissions of asbestos dust related to on-site ground disturbing activities having the potential to expose receptors to substantial concentrations of asbestos". The report then states* "However, the EIR requires mitigation in order to ensure that the aforementioned impacts are reduced to less-than-significant levels." This mitigation requires detailed explanation to be credible.

Thank you for reading my concerns. I have many other concerns as well but just focusing on this one for now.

Georgie Huff

Nevada County Democrats pass Resolution Opposing the Reopening of the Idaho Maryland Mine

For Immediate Release

Contact: Steve Hurley, Chair
530-210-3865

The Nevada County Democratic Central Committee passed a resolution opposing the reopening of the Idaho Maryland Mine. The local Democratic party has not been one to spend much time writing resolutions, but according to Eric Robins, chair at the time of its passing, “This proposal is too risky for the environment and public health to keep silent on it. Even if you accept the findings of the DEIR (or now FEIR), Rise Gold Grass Valley’s track record shows they cannot be trusted to implement the mitigation measures. They have a history of leaving waste to be cleaned up, had 35 charges filed against them in various courts, and a local bankruptcy judge, in evaluating the economic reports published by the company, thinks bankruptcy is likely.”

Proponents of the mine often site the possible 300 new jobs that could come with it. This job gain would likely be offset by the big risks for the tourism industry, high tech, and medical industry that won’t be able to work in a situation where they are vibrations from underground blasting, the possible loss of hundreds of wells, and lowering of property values. However, right now Nevada County has more jobs available than workers, and very low housing stock.

The loading and dumping of rock would add tremendous pollution to the “F’ Nevada County already earns from the American Lung Associations grading system due to the ozone in our air at times during the heat of the summer.

We could go on, but here is the text of the resolution.

Nevada County Democratic Central Committee

Resolution

Opposing Rise Gold’s proposal to re-open the Idaho Maryland Mine

Whereas, the Nevada County Democratic Central Committee desires to oppose Rise Gold's proposal to open the former Brunswick Mine, in Nevada County; and

Whereas, the CEO of Rise Gold, Ben Mossman, formally the CEO of Banks Island Gold, Ltd and the Yellow Giant Mine was found guilty of Environmental Management Act violations in British Columbia, polluting tribal waters, including 35 provincial and federal charges when officers found evidence that the company was dumping waste into the surrounding woods, creeks and wetland areas, which CEO Mossman failed to report to the regulatory authorities; and

Whereas, Banks Island Gold, Ltd and the Yellow Giant Mine operations went bankrupt and left Canadian citizens with the responsibility and cost for the clean-up; and

Whereas, Mossman is still facing federal charges and a trial in Canada, along with Dirk Meckers, Rise Gold's Chief Geologist. British Columbia's Supreme Court ruled in October 2020 that both Mossman and Meckers must stand trial, a trial that has not yet been scheduled; and

Whereas, quoting from California Judge Jerome T. Newsome, said, "My experience as a U.S bankruptcy judge for 28 years leads me to believe that this company is destined for financial failure;" and

Whereas, evaluation of the Company's SEC filings dated April 30, 2021 reflects only $1,534,934 in cash on hand and an accumulated deficit of $18,969,011, giving rise to serious concerns about the Company's' financial health and viability; and

Whereas, the potential negative environmental impacts of air, noise, water, private residential well loss and contamination, and the proposed 24-hour operations will severely harm the quality of life and property values- because mining operations and the trucking of mine materials are enormous and beyond the scope of what we believe the citizens of Nevada County can or should tolerate; and

Whereas, the proposal to open the mine has severely undercounted the number of private wells that will be impacted. Latest number of impacted parcels in the estimate of local well professionals exceeds 800; and

Whereas, the potential economic losses to homeowners within the mineral rights area has been estimated to exceed $5 million in the value of their homes, with many homes being unsellable; and

Whereas, the jobs Rise Gold purports to be creating to stimulate the local economy will need to be filled by outside labor, as Nevada County no longer has a pool of trained underground miners; and

Whereas, Nevada County and California suffers from a severe housing shortage both in rental and sale properties, leaving imported workers unhoused locally; and

Now, Therefore, be it Resolved, that the above recitals are true and correct to the best of our knowledge and shall serve as findings of the Nevada County Democratic Central Committee.

Be it Further Resolved, that the Nevada County Democratic Central Committee calls upon the Nevada County Board of Supervisors to deny any and all permits for opening and operating the Brunswick/Idaho Maryland Mine, and to protect the citizens of Nevada County from the potential losses and hardships this proposal will cause.

Be it Further Resolved, that the Nevada County Democratic Central Committee opposes the proposal to allow Rise Gold to open the Brunswick/Idaho Maryland Mine and further opposes Rise Gold to operate in Nevada County.

PASSED AND ADOPTED by the full membership of the Nevada County Democratic Central Committee at its meeting held on the 20th day of October, 2021.

NEVADA COUNTY
BOARD OF SUPERVISORS
Dist 1

Public Comment to the Board of Supervisors, August 9 2022 on Idaho-Maryland Mine reopening by Jim Bair[1]

Good morning. I'm Jim Bair, business owner and resident of Nevada County for over 20 years. In my previous comments to you [much appreciation for the opportunities], my objective was to help the Idaho-Maryland Mine decision making process. Today I've expanded my documentation review from the several thousand pages of Rise Mine documents to the County database of "all Draft EIR Comment Letters" up to April 5. This includes a spreadsheet of 2873 commenters often with additional content from the same organization/contact.

Having been an expert witness in software corporation's law suits, I believe this might be evidentiary.

There are 10 categories in the DEIR comments database which contains 2,842 Files [email, letters, and unknown contents]. While reviewing the contents of each of the 10 categories, I have found that many entries are questionable.

Many of the so-called comments <u>are not comments at all</u> -- many are form letters with the same exact content. The most common entry, "Project Support Card" argues "Nevada *County is in tremendous need of new, well-paying jobs …Rise Grass Valley … [is] creating over 600 new jobs…".* Is this even a fact?

The 1132 "Project Support Cards" were created by Rise Mine. They are from a bulk mailer to thousands of County voters, and a subset were mailed prepaid to the County. They show support for the Mine and have no reference to the DEIR (see Exhibit 1).

Other "comment letters" are called "Form Letters", some with no content and others actually contain unique individual commentary on the DEIR. Form Letters A and B (see my attached exhibits) were not intended to be Comments on the DEIR [as defined by the CA Environmental Quality Act (CEQA]).

A second questionable set of "Form Letters [C]" is labeled "Subject Line Only". Entries contain automatic emails <u>faked to be **for** the Mine from individuals **against** the Mine</u> [reported in *The Union* op ed], automatically reused content, duplicates, and emails from an out-of-town contractor "*oneclickpolitics.com*" (Wash. D.C.).

I anticipate I'll find more questionable comments as we continue to review the database [of "all Draft EIR Comment Letters"]. In the meantime, I urge the County to re-organize the database, especially separating DEIR Comments per CEQU from opinion pieces. It might also be prudent to separate legitimate comments from fake, machine generated and content free entries – which Rise Mine is using for PR and investor appeals [available upon request.]

I've given these comments, data, and examples to the County Clerk.

Thanks so much for your attention.

(See Exhibit 4, **example of actual business opposition related to the DEIR,** that might not be counted by the Mine.)

---

[1] Leader, ***Stop the Mine Task Force,*** **Unitarian Universalist Community of the Mountains**, Grass Valley, CA 95945

TABLE: There are 10 top level files in the County database. Here are the labels for the 10 files -- categories-- and the number of individual files in each.

I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Dear Matt Kelley,

As business owners, we are very much in favor of free enterprise. We have lived in the county since 1981 and love the rich history.

We also are realistic and recognize that we are in an historic drought. Depleting our ground water seems to be an illogical step to take if we are looking to improve our county's health.

We are very much opposed to the reopening of the mine. This property could have a use that is not harmful to our quality of life.

Respectfully,

Christopher and Susan Claydon

Re: I support the re-opening of the Idaho-Maryland Mine

Dear Board of Supervisors County,

Sincerely,
Sharon and Guari Delgado
sharondelgado@earth-justice.org
11328 Red Dog Road Nevada City, CA 95959

Jim Bair, 128 Sierra Blanca Ct, Grass Valley, CA 95945

RECEIVED
JUL 12 2022
NEVADA COUNTY
BOARD OF SUPERVISORS

Comment to the Board of Supervisors, July 12, 2022

Hi, I'm Jim Bair (128 Sierra Blanca Ct. Grass Valley). My team has had the opportunity to present our analysis of the Rise Gold Mine Economic Impacts Report to Supervisors Hoek and Hall (thank you!) and **this** is 20 pages of the details. **We** are the *Unitarian Community Stop the Mine Task Force* which includes Stanford scientists and corporate executives like myself, accounting managers, professional hydrologist, PhDs in other fields, engineers, etc.

We are faced with a massive challenge: trying to communicate our analysis to Nevada County, while Rise Gold Mine Inc. has an army of consultants and employees financed by public securities investments. Having been a Director of a Public Company, I know that it is relatively easy to raise millions of dollars on the stock market.

The Mine's money has been used to finance attorneys, staff, PR campaigns, investor solicitations, SEC filings, etc. How can we communicate our expert findings on a par with the Mine? The Mine has full access to the County and even has regular (bi-weekly?) meetings between Mine attorneys and the County Planning Dept.

Having been a Planning Commissioner, I know that huge responsibility falls on the Planning Dept. who will ultimately make recommendations to you [the Board]. But since our Community team has found huge exaggerations, distortions and even falsifications in the Mine's Economic Impact Report, (March 2021), shouldn't we present to the Planning Dept.?

My favorite distorted claim is the creation of 312 jobs in our county. But Rise can't require that employees live in the County. They also claim high pay, but it's an average including top management and far more hours worked than 40 hrs. a week. I've lived and hired here for 20 yrs. and owned 3 businesses, and do not believe that 156 deep tunnel mining jobs with 12 hr., 7 days a week shifts, are going to be attractive to residents.

Perhaps most deceptive is the 300 "induced" County jobs. Really? Gold Minor's Inn will need to double its staff? Wendy's will need twice the waiters? Perhaps Yuba Docs will need more nurses because Mining is one of the most dangerous industries in the world. The 300 induced jobs would be low level and part time, and likely non-resident.

Finally, with over 1000 negative DIER Comments, highlighting enormous environmental impacts, the claimed increase in jobs is 0.7% [zero point 7%] of the 46,000 jobs in the County.

We really do need to present our details to all Supervisors and the Planning Dept.

Dangerous Impacts of the Rise Gold Mine v10.1

The Nevada County Board of Supervisors can vote to stop reopening the Idaho–Maryland Gold Mine by Rise Gold Corp. a Canadian Corp. also incorporated in Nevada.

Approval of Rise Gold Corporation's proposal will result in:

- **A large, heavy-industry factory** on 119 acres on Brunswick Rd. in the middle of hundreds of homes (zoned residential)
- **Crushing and moving 1,500 tons of mine waste every day, all day,** using massive machines
- **Hauling trucks carrying 1,000 tons of waste rock -- 100 round trips every day --** down Brunswick Rd. to a 56-acre location (Centennial toxic dump) less than ½ mile from downtown Grass Valley, piling it higher than a 6-story building
- **Trucks and heavy machinery will produce diesel exhaust from continuous operation**
- **Clouds of mining dust including asbestos** that can move over Grass Valley from digging and dumping 1,500 tons of contaminated waste rock a day
- **Blasting, earth-shaking explosions** 7 days a week in the tunnels under 2,585 acres of the Grass Valley area (including the Hospital) that can be felt inside homes
- **Over 3.5 million gallons per day to start and then 1.2 million gallons per day of waste mine water** dumped into Wolf Creek for the next 80 years
- **12% of Nevada County's electricity will be taken by the Mine, more than all the County businesses combined**

What impacts are predicted if the Mine is approved?[i]

Air pollution will worsen respiratory problems in Grass Valley **and probably increase the death rate** in Western Nevada County (expert conclusion), especially among the most vulnerable such as the elderly (over 7 hospital & senior care facilities are near the Centennial dump site). (https://www.minewatchnc.org/post/dr-newsom-on-health-risks-of-mine)

The South Fork of Wolf Creek will likely have stirred up mercury, toxic residues (like arsenic & lead), and serious erosion.

Real-estate value in the vicinity will drop more than 20% (Realtors' estimate in The Union).

Loss or damage to hundreds of homeowners' wells likely from Mine dewatering.

Few local jobs (less than 1% increase) and little tax revenue. See Martin Webb at Minewatchnc.org and *Rise Gold Project Description* p.26 (mynevadacounty.com)

Inadequate regulation because there are not enough government personnel. Based on history, the fixes for damages will not be enforced (https://www.minewatchnc.org/post/no-state-monitor-for-mine). Attempts at enforcement have led to legal charges against Rise Mine's predecessor in Canada for failure to clean up their toxic sites are in court.

RE: COMMENTS on FEIR for Proposed Idaho-Maryland Mine Project

Community Development Agency
Planning Department
950 Maidu Ave. Suite 170
PO Box 599002
Nevada City, CA 95959-8617

Mr. Matt Kelley, Senior Planner (Idaho.MMEIR@nevadacountyca.gov or (530) 265-1423)

Thank you for the opportunity to comment on the proposed project and the FEIR that was released to the public on December 16, 2022.

1. **The COMMENT PERIOD for the FEIR for this proposed large project with many adverse environmental impacts should be EXTENDED and the PLANNING COMMISSION meetings should be rescheduled at least until March to allow the public to have enough time to review the document and prepare comments on the proposed project.**

2. **The proposals "appear" to generate revenues** according to the RDN Economic Report. As an economist with experience reviewing the costs and benefits of projects, I find the analysis **TOTALLY INCOMPLETE** and assumes that the "Proposed" benefits will occur, while **DISMISSING MANY SIGNIFICANT COSTS**.

a. Promises full-time jobs, but doesn't say exactly how many are actually two PART-TIME JOBS that would NOT PROVIDE BENEFITS. The proposal claims creation of jobs, but in the proponents own **Press Release**, Rise Gold Grass Valley indicates that these are **forward-looking statements are NOT ASSURED!** The quote from Rise follows on page 2.

"*Although the Company believes that the expectations reflected in the forward-looking statements are reasonable, there can be no assurance that such expectations will prove to be correct. Such forward-looking statements are subject to risks, uncertainties and assumptions related to certain factors including, without limitation, obtaining all necessary approvals, meeting expenditure and financing requirements, compliance with environmental regulations, title matters, operating hazards, metal prices, political and economic factors, competitive factors, general economic conditions, relationships with vendors and strategic partners, governmental regulation and supervision, seasonality, technological change, industry practices, and one-time events that may cause actual results, performance or developments to differ materially from those contained in the forward-looking statements. Accordingly, readers should not place undue reliance on forward-looking statements and information contained in this release. Rise undertakes no obligation to update forward-looking statements or information except as required by law*." Rise Gold

Included from: **Rise Gold Announces US$1,600,000 Financing**
Newsfile Corp. Jan. 18, 2023. Rise Gold Announces US$1,600,000 Financing (yahoo.com)

b. **SIGNFICANT COSTS of MITIGATION ARE NOT INCLUDED! WHY NOT? If they are included, the PROPOSAL MAY NOT OPERATE AT THE LEVEL of OPERATIONS, MAY NOT FIND the CLEAN UP and TOXIC MIGIATIONS are FINANCIALLY FEASIABLE for the COMPANY… LEAVING the COMMUNITY, NEVADA COUNTY, the STATE of CALIFORNIA to SUFFER & PAY the CLEAN UP COSTS (not included in this project costs) or have to live with the toxic pollutants left behind after the mine closes.**

c. **There are significant issues identified in Comments submitted by Mr. John Vaughn, that show that REVENUES are likely OVERESTIMATED, in part by assuming the price of gold remains at its near peak level and ignoring fluctuations in gold prices. EXPENSES in the RGV analysis ONLY include payroll and supplier expenses, IGNORING ACTUAL COSTS of buying equipment, depreciation for startup and shut down expenses, and substantial**

mitigation expenses (ALL REAL EXPENSES that should be included in an accurate Income & Expense Statement.).

d. **NOTE: The EXCLUSION of these significant costs DO NOT FOLLOW the STANDARD ACCOUNTING PRACTICIES described in the California Assessors' Handbook, Section 500. WHY DOESN'T the RDN ANALYSIS used to GENERATE ESTIMATES of potential Nevada County TAX REVENUES (& EXPENSES) include these expenses? NOT DOING SO is CLEARLY inaccurate and OVERSTATES TAX REVENUES.**

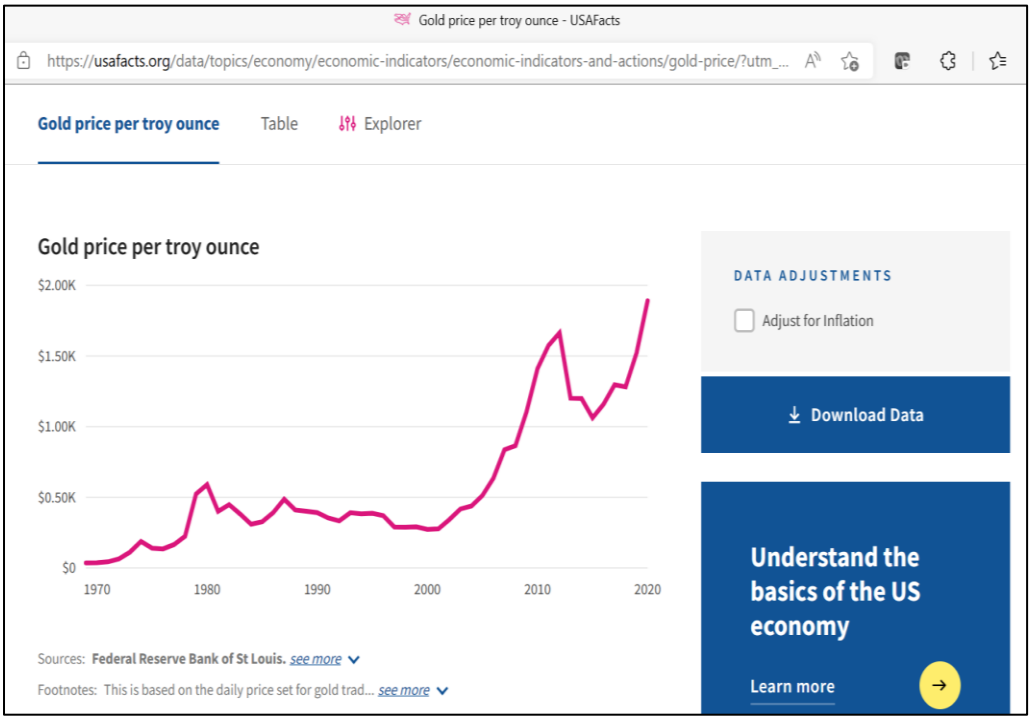
e. **Interesting, the "estimated" NET INCOME of $111.5 million a year (every year?) shows an estimated Return on Investment or ROI of over 60 percent. That is a RED FLAG indicating that this Financial Analysis is SERIOUSLY FLAWED! We do not live in a world of 60% ROI… See bullet g. below.**

f. **Estimation of the cost of the proposed mining operation are ONLY ABOUT HALF of the INDUSTRY AVERAGE! That results in a gross OVERESTIMATE of Mineral Reserves that were then used to estimate potential Nevada County Tax Revenues. AGAIN, this analysis is SERIOUSLY FLAWED!**

g. Haven't RISE GOLD (RGV) project proponents actually recently **opened a mine that failed** after less than a year because of the costs of cleaning up toxic pollutants… Please incorporate ***The Union*** article by bankruptcy expert: Randall J. Newsome: Rise Gold, show me the money | Columns | theunion.com

h. **Prior RISE GOLD project failed without adhering to promises… and pollution laws**… Please include the following op-ed article. ★ Rise Gold Shouldn't Be Trusted. Here's Why. (minewatchnc.org)

i. **PRICE of GOLD… <u>Can Vary Dramatically over Time</u>!**
After a sharp peak, the price of has fallen, declines can be seen in the chart (example around 1980 and 2012) and raises the important question of whether the proposed mine reopening would no longer be financially feasible – that's important, since the potential closing costs (including costs for Nevada County) of mine waste toxics clean up are not included in the financial analysis. ***Please see chart below.***



j. **Costs of CLOSING the MINE are NOT INCLUDED in the COSTS?**
HOW CAN PROPONENTS CLAIM this is a COMPLETE Cost-Benefit Report when it EXCLUDES COSTS that are DIFFICULT to ESTIMATE (but are the same costs that caused the failure of another recent mine opening by the same proposed project proponents. **That isn't a complete Cost Benefit Analysis.** County Planning Officials and County Supervisors should DEMAND an ACCURATE ESTIMATE including Both COSTS & BENEFITS, including all the COSTS & BENEFITS to NEVADA COUNTY.

k. **REAL ESTATE CASE STUDIES of the IMPACTS on EXISTING COUNTY RESIDENTS and nearby HOMES**: AGAIN, the appears to be **COMPLETELY INADEQUATE** given that the NOISE, DUST, TRAFFIC, HEALTHCARE COSTS, DEWATERING COSTS to LANDSCAPING, etc. ARE NOT INCLUDED in the ANALYSIS!

l. **DEWATERING MITIGATION**: The proposed mitigation to provide water lines to homes that rely on wells **MAY NOT BE SUFFICIENT.** Proposed Dewatering of the existing mine CLOSED in the 1950's will undoubtedly lower ground water levels. Existing large vegetation – large trees and landscaping may not survive the change in water availability. Does the EIR include the likely cost of loss of forests and trees in the large are impacted by the proposed dewatering? If NOT, why NOT? Will home owners be compensated for diminished property values arising for dewatering? If not, WHY NOT?

m. **VIBRATIONS: IMPACT on nearby BUSINESSES – Another COST EXCLUDED!** My recollection from an earlier proposal to reopen the Idaho-Maryland Mine raised concerns about VIBRATIONS from underground blasting that would affect nearby "Tech Firms" that were manufacturing products that would be damaged by VIBRATIONS coming from the proposed mine reopening.

n. **CENTENNIAL TOXIC SITE from the Idaho-**Maryland Mine closed in the 1950s. As owners of this site, RISE GOLD, would be responsible for cleaning up the historic toxic pollution from the mining operations. It appears to me, that rather than INCURRING the COSTS of CLEANING UP the CENTENNIAL SITE, RISE GOLD plans to use it to START DUMPING TOXICS from the proposed reopened mine operation. IS THIS ANOTHER WAY RISE GOLD UNDERESTIMATES the COST of reopening the mine?

o. **WILL RISE GOLD REQUIRE A STORMWATER DISCHARGE PERMIT** from the Environmental Protection Agency (EPA) for the water removed from the mine over the next 80 years? If not, why not?

p. **Will RISE GOLD require an EPA Stormwater Discharge Permit** from the existing CENTENNIAL Toxic Dump site it owns? If not, why not?

q. IS THERE A RECLAIMATION PLAN for the proposed project? If NOT, WHY NOT?

r. **Who PAYS for the RECLAIMATION PLAN? What are the risks that Nevada County could end up paying for a CLEAN UP of the proposed site, were it to open and then close, potentially following a change in the Gold Market Price or Failure to Meet Toxic & Clean Up Requirements, or just poor management… or some other economic or financial shock?**

Thank you for the opportunity to comment on the FEIR!

My STRONG PROFESSIONAL RECOMMENDATION to the NEVADA COUNTY PLANNING COMMISSION & the NEVADA COUNTY BOARD of SUPERVISORS is to REJECT this PROPOSED PROJECT, otherwise you may end up paying to clean up the mess it would leave behind !

September 30, 2022

Supervisor Heidi Hall, District 1
950 Maidu Avenue, Suite 200
Nevada City, CA 95959

Dear Supervisor Hall,

I attended the anti-mine forum at the Unitarian church last Tuesday, and became even more alarmed at the destruction and pollutants that would affect our community. Destruction is probably a more accurate word to use.

The opening of the mine would mean a drop in our already compromised air quality, traffic congestion, over use of water which is already drought depleted, noise pollution, financial loss and the affect on the mental health of those of us deluged by these adverse conditions.

This proposed mine would be in effect for 80 years and would greatly lessen the health and quality of life of our children and grandchildren.

There is much at stake in the safety and health of our community. Please oppose the mine.

Thank you,
Ronnie Paul

As requested by Chair Susan Hoek, I am sending a copy of my comments.presented to the Board today. Please distribute to each member of the Board. Thank you, Suzanne Smith

COMMENT TO THE BOARD OF SUPERVISORS JULY 26, 2002

District 3

From 2011 to 2015 I served as a Nevada County Planning Commissioner

From 2000 to 2007 I was a County Senior Planner

1988 to 2000 I was a Resource Planner for the County of Santa Cruz

For Santa Cruz I implemented the Surface Mining and Reclamation Act, processing EIRs, reclamation plans, and financial assurances for eight years.

During my employment the Bonny Soon Limestone Quarry increased production which was consistent with the EIR prepared for the quarry. However, the two neighbors north of the quarry began calling saying the walls of their homes had begun to show cracks since production had increased. I inspected their homes, saw the cracking in their walls, and also watched as the quarry monitored seismic movement of each blast as

required by their permit.

All the quarry work was consistent with the studies prepared in the EIR and the permit.

The owners of the two properties went to arbitration to settle the issue. The result was that the quarry was required to buy their homes, which they did.

Ground vibration monitoring is included in the DEIR for the proposed Idaho Maryland Mine. It is proposed that a blasting consultant will assess the data acquired by the seismographs to model, and this information will be submitted the Nevada County Planning for review. This will occur after the project receives approval. Will this require the reopening of the permit?

But if neighboring homes have walls that start to crack due to the blasting, what will the County do? Shutting a mining operation down is a very difficult process, led by State Mines and Geology.

My second comment is focused on the project's placement of the engineered fill. The mine has asked for an 80 year permit. It will take five years to fill the Centennial site, and six years to fill the Brunswick site.

What happens to the next 69 years of mining operation. The DEIR suggests it will be sold to local project or projects outside of the County.

CEQA has changed and doesn't use big trucks, like mining trucks, in the traffic analysis any more. I believe they were asked to, but the consultant said it would make the EIR "too confusing."

So impacts from the trucks and mining are not included in the DIER. Impacts to our highways and streets only include employees. So potentially 100 trucks a day will be on Hwy 49, 20, or 174 taking the unneeded material from the quarry.

More complete analysis is necessary to include the large mining trucks, and should be included in a Revised Draft EIR.

Subject: Idaho Maryland Mine Niehaus Economic Impact Report

Incompatible Use

The economist representing RDN and the Niehaus Economic Impact Report on the proposal to reopen the defunct Idaho Maryland Mine at the 12/15/22 webinar spoke to their research into comparable projects and the impact of introducing industrial mining on real estate values. RDN stated that there were no comparable studies or approvals of mining enterprises as close to residential neighborhoods as the defunct Idaho Maryland Mine is to the 90 homes with in .5 miles of the proposed industrial site. They also stated they could find no comparable industrial mining enterprises approved or operating 24 hour a day, 7 days a week located as close as .5 miles to residential development. Therefore, they could only speculate on the impact to real estate values. The obvious question is how many proposed industrial mining projects were rejected by governing municipalities because of the adjacency to residential development?

Excerpts From Exhibit A, Draft Statement of Reasons to Permit Development in a Mineral Resource Zone, City of Auburn

Our neighboring city of Auburn approved the Baltimore Ravine Specific Plan that proposed a multi-use residential and commercial development in a Mineral Resource Zone. Within this zone, "the State Geologist has concluded that significant inferred gold resources are believed to exist", however, in spite of potential gold mining tax revenues and jobs, Exhibit A represented that "Mining is Incompatible with adjacent Land Uses". The areas around the Mineral Resource Zone have been developed with low-density residential uses. "Because mining activities would already be incompatible with these developed areas due to noise, dust, traffic and other nuisances, the project site should be developed for non-mining uses." Exhibit A goes on to say that even though mining has been a large part of the past in the area, "mining no linger makes up a substantial portion of

industrial activity in the County". Similar to Nevada County, mining in Placer County represents less than .1% of the economy.

Nevada County would be wise to formally acknowledge that industrial gold mining is part of our past and not part of our future. The current and future economy will be built on a diverse mix of clean manufacturing, construction, wholesale & retail trade, healthcare, education, arts and entertainment, recreation & tourism, non-profits, government and government services. Success will draw on the willingness of County, City, non-profits, State and National Forest, utilities, and private sector leadership to collaborate and partner in solutions that lead us to a sustainable and balanced economic future.

Supervisor Hoek spoke of 2023 as the year of the heart. That is a great beginning. Implementing responsibilities and policy through a lens of heart, green, family, and prosperity for all will serve Nevada County well.

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Theresa Crowell at crowellresa@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Theresa Crowell. I live at 11536 Lower Circle Drive, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I currently live in Alta, Sierra, which may not be severely impacted, but my whole life has been impacted by the legacy of mining here in Nevada county. It is with that that I am reaching out to you today. When I first learned about the mine reopening I wrote a letter, and submitted it to the union newspaper in the opinion section. You can Google

that letter under the name, Theresa Huck. Strangely enough, I received a call from a gentleman at the San Francisco EPA office, asking me if Nevada county ever physically knocked on my door and notified me that I was living on a superfund site. Several days later, I received a call from the head of environmental health, here in Nevada county. She called and asked me if anyone from the San Francisco EPA office had ever knocked on my door and notified me that I was living on a superfund site. Confused by the finger-pointing, I contacted an attorney. This attorney told me that it was in fact Nevada County's job to notify anyone living on a superfund site. I lived on that site, the year that it was filed as a superfund site, and I lived there two years longer without any knowledge of the circumstances surrounding the domicile I was renting. I also found out from that attorney, that I have a hell of a lawsuit that I can file against the county for not notifying me. My well water was contaminated with mercury and arsenic. When environmental health called me, she asked me if I was going to sue, and I told her at that point that if this mine re-opened, that is exactly what I would do. I'm already ill, and what has happened has happened, but to allow another mine to reopen when we can't even handle the legacy already left behind, that is unacceptable. I am writing this letter to let you know, but if you vote to allow this mine to reopen the first thing I will begin to do is to seek in attorney, Nevada county failed, and will continue to fail, and I can't allow this to continue to go on.

Sincerely,

Theresa Crowell

Dear Nevada County Supervisors and Planning Commissioners,

My name is Peter Arpin and I live at 15352 Stonehill Dr. Nevada City 95959.

As a very concerned citizen, I am asking you to "**just say no**" to re-opening the Idaho-Maryland Mine. It will have significant and unavoidable environmental impacts that will endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk!

Just look at what the mining industry has done in Appalachia and Montana for a glimpse of our future. We don't even need to look that far to see the effects of this industry that remain after over 100 years. By their very nature, they are boom then bust once all the want has been taken.

PLEASE don't let the promises of short-term tax revenue blind us to the ongoing and future costs of reopening the mine. There is no place for a heavy industry like this in our community.

Sincerely, Peter Arpin

Dear Supervisors,
I am in opposition to the re-opening of the Idaho Maryland mine.

- Mossman, CEO of Rise Gold has been found guilty of environmental violations serious enough that his previous gold mine was shut down by Canadian authorities. And presently he's being prosecuted again, right now. The old saw, "I'm going to give you a special deal…..why? Because I like you". Uhhh, people always act the same. Only rarely do they change. He was a liar then; he is still a liar, and he cannot be trusted. Would you hire a man like that to manage your personal finances? I don't think so….How about allowing him to threaten this lovely place with a huge industrial enterprise?
- All the information used to prepare the EIR came from Rise Gold. What? And that's supposed to be trustworthy? That's like having a murder suspect control all the information that goes to jury.
- There is no Economic Impact Report, or if there is, it isn't shown to the public.
- This is a huge project, and the amounts of money involved are titanic. Are you ready for Nevada County to be inundated with large mine projects being proposed? Can you imagine we might end up looking like Butte, Montana. Don't know if you've ever been there, but the copper industry has ruined that place. How about West Virginia? You want that? Because if you okay this, the Empire mine will be next or if not that because it's a park, then some place else. It's a certainty if you okay this mine.
- This Rise Gold mine is speculative…another roll of the dice, and we, the public, are supposed to be ready to have our wells drained, and deal with toxic waste so some rich guy can cash in. Sorry, but I'm not on board with that. And what happens if it fails? Who's going to clean up the mess? Probably us. I still haven't see a guarantee they will clean up their mess. It might be useful to remember that the Malakoff diggins is still a Super fund site, after more than a hundred years, and the Sacramento River is still being polluted by another old gold mine.

80 years! Are they mad? How about two years, if you must allow it, and then a new EIR and public review after that?

- Mine tailings. They have enough land to pile the tailing seventy feet deep, and then they want to go to their other site on the Idaho Maryland Road (Centennial site) which even now is a mess. And even if they do, what are they going to do with waste rock after a few years? Oh, yeah, that's right, they say they are going to sell it. Only thing is they don't have a buyer, and we're going to have to deal with a thousand tons of rock being hauled out of here every day? And who's to say this stuff isn't laden with arsenic? They say…Oh, yeah again, the guy who's being prosecuted for dumping mine tailing in the woods and in a wetland in Canada is telling us he'll take care of it. The man who could end up in jail for despoiling a wetland and forest, which STILL hasn't been cleaned up!
- I live on the Ridge, and many of my neighbor's wells drained before the Siskon mine closed up (literally closed up-the floor of the mine went up to meet the ceiling entombing all kinds of machinery and fuels, etc. 300 feet under ground). The BOS has approved two mines up here: Siskon was a train wreck, and Fluor/Bechtel (San Juan Gold) would have ruined this as a place anyone would choose to live. So far the BOS is batting zero in how you've protected us on the Ridge from multinational corporations who couldn't care less about us, about the county, about the state or the nation for that matter.
- It isn't 1849 now. Nevada County has residents gainfully employed and a huge tourist business. I think it's worth reminding you that Butte, Montana and the coal mining areas of West Virginia are not exactly tourist meccas.

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Department,

Please stop the mine! The environmental risks and past damages are obvious, regardless how much money backers to paint their misleading information and is connected to their financial gain.

Global warming and climate change are some of the results of financial interests harming people and our environment. Covid is another example of our lack of attention to animals, water, air, etc.

I live in Nevada City near Pioneer Park and moved from Los Angeles to Marin County and now to Nevada City because financial gains have ruined those communities. Nevada City has been working hard to improve the damages from past mining practices that have deeply harmed the soil, water and all life that had

sustained this land before the gold rush marred this area.

Please STOP the Mining efforts in Nevada County!

March 23, 2022

Mr. Kelley:

The Alliance for Workforce Development, Inc. (AFWD) is Nevada County's local workforce development organization. We are dedicated to enhancing the quality of life throughout the communities we serve.

Our mission is to empower people to find job training and new opportunities to build or expand a career for themselves. Every day we work to help people who are trying to find a new path forward economically, sometimes under very difficult circumstances. We sit on the front lines of the current economic crisis. The effect of COIVD-19 in particular has caused tremendous disruption and displacement for many in the communities we serve.

We met with Rise Grass Valley CEO Ben Mossman to discuss recruiting and job training opportunities available through AFWD. Rise Grass Valley has signaled to us a willingness to recruit a diversified workforce, to conduct extensive on-site job training, and to work with our local schools and colleges to develop essential training programs for potential hires.

In addition to the direct jobs, Rise Grass Valley anticipates that roughly 300 indirect new jobs could be created by the economic multiplier that the mine will demand – anything from related construction work to demand for more restaurants and hotels. This can be a tremendous lift to our entire local economy and workforce.

We are very encouraged that Rise Grass Valley reached out to us to discuss a meaningful collaboration. We count on employers like them to proactively consider their future workforce needs, and to treat their growth in the community as a mutually beneficial partnership. Should the project move forward, we are committed to working with Rise Grass Valley for all their workforce needs.

If you have any questions, please feel free to contact me.

Sincerely,

Kristine ZuaZua

Nevada City, CA 95959

Nevada County Planning Commission
950 Maidu Avenue, Suite 170
PO Box 599002
Nevada City, CA 95959-7902

Dear Commissioners,

I am a retired government employee from a large County in California where I served for about 30 years. I say this having the perspective of managing a large budget of taxpayer funds and making recommendations on public policy to elected officials.

My wife and I wanted to write to you to support you making your objective decisions regarding the Rise Gold Idaho-Maryland Project. Living in Nevada City, we began to see the "No Mine" signs popping up all over the County and as property owners, voters, and citizens we decided to research the issue thinking it was a ballot measure or similar and wanted to be informed.

We looked into the project objectively and it seemed to have the potential for significant impact on our County both good and bad. As we tried to do this research we kept slamming into some outrageous and alarming claims from people and the group opposed to the project. As we dug in further, using objective sources, we found these claims are completely exaggerated and downright preposterous and from our perspective were crafted to whip up hysteria.

While hopefully our opinion will not matter to you, my wife and I strongly support this project. I say this with all due respect and deference to the science and fact based decision you are making. My research showed a very strong and convincing prospect for significant economic benefits and environmental improvements to our County and that prospect didn't match up with the cult-like opposition and their claims.

I describe it this way because as I discovered the social media side of this discussion, I realized it wasn't a discussion at all. Social media was an echo chamber of alarmism. I was confronted by claims like "We don't know if the mining will cause earthquakes" and "All of our wells will go dry like (insert unrelated project here)" and the "CEO of Rise wants to destroy our land and is a terrible incompetent person." (Some paraphrases).

When I attempted to counter some of these claims publicly with actual evidence and facts, a cult like mob descended on me and my family. I was called names, my right to have an opinion on the subject was questioned, and I was accused of

being an employee of the project for even suggesting anything good could come of it. I also discovered a large number of folks feel like we do who contacted me privately for having courage to speak up. They support the economic and environmental benefits of the project but they choose to keep it to themselves for fear of the mob.

Having spoken to folks who live close to the mine site, I have heard their legitimate concerns about oversight and the mitigation measures. They have a legitimate need to be heard. I was disgusted that the concerns of these legitimate stakeholders were being drowned out by false information being peddled in an attempt to drum up hysteria by armchair activists wanting to appear virtuous on social media.

So I put myself in your shoes, where before you even have deliberated on the matter you are publicly accused in social media of taking bribes based on the outcome, and you are threatened with political consequences if you do not bow to the hysteria. Knowing that you must make an objective decision and that you must use facts and evidence to make this decision, I want to tell you you are supported in doing so!

We have read the DEIR, and support the project permits being issued. We are satisfied that the mitigation measures and oversight described in that document will be sufficient to address any risk proposed by this project. We look forward to having a thriving, modern, safe, and clean mining enterprise in our County.

Nevada County Supervisors and Planning Department

Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Colin Irwin. I live at 114054 Penn View Lane, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have re-located to the area because of the natural beauty in Nevada County, not interested in living in an heavy metal industrial location. I've been around that in Southern California. Yes there will be some jobs generated but they will will be low level and I'm sure all the executives will be Canadian imports...friends/associates of the INDICTED head of this scam. Ruin the community, pollute, destroy wells, etc. Then they will all slip away AS HAS HAPPENED BEFORE WITH THIS JOKER.

Sincerely,

Colin Irwin

Dear Board of Supervisors -
Please recirculate the DEIR as there are too many significant negative impacts that cannot be mitigated:
- massive air pollution,
- unacceptable quantities of water needed during a time of extended drought,
- noise and vibration levels way beyond state mandated levels,
- and an earthquaake fault running from North to South along the western border of Grass Valley which itself is riddled with a multitude of tunnels just waiting to implode,
And not forgetting that there are probably new, more explosive materials invented since the mine was closed that are waiting to be tested under our beautiful community!!!

Dist 3 Jim Bair

Jim Bair, Board of Supervisors public comment, Oct. 25, 2022 stopthemine@uugrassvalley.org

Goodmorning

~~Dear~~ Supervisors, County Council and Staff,

(Happy Fall!) Here I am again with a quick update on Stop the Mine activities even in the midst of (election mayhem). For the record, I'm Jim Bair, 21 year County resident, former Planning Commissioner, and business owner in Grass Valley. and Air Force veteran - I appreciate what you are

Did you see the front-page headline in The Union on Sept 28? It was,

*"They [our children] will be around their whole lives breathing this toxic soup' *: Mine impacts scrutinized during public forum".*

The headline was based on Dr. Jeff Kane's presentation on 80 years of air pollution after the Mine's mitigation measures. The news article went on to say that we had a standing -room only attendance at the Universalist Unitarian meeting hall. Attendees included government officials and community leaders.

Approximately 100 ~~of~~ were in attendance and most stayed until 7:30 with ~~lots of~~ comments and questions. Not one was for the Mine.

We have heard some questions repeatably, for example:

"Why is this project even being considered?

"I'll certainly vote against it." (They can't).

"It violates CA State code, why isn't that a show stopper?" [Section 41700 of the CA Health and Safety Code presented by Dr. Chris Newsom]".

A major action item presented was to request that the County **recirculate** the Idaho-Maryland Mine Project DEIR because there are too many significant negative impacts that cannot be mitigated to safe levels (for example, the air pollution as described by Drs. Kane and Newsom at the Forum)"

The success of the Forum pointed to overwhelming county opposition to the Mine.

Thanks, I sincerely appreciate this opportunity.

To attendees: "Raise your hand if a you are against the Mine.

[Thanks to our panelists: DR. Chris Newsom (MD), Dr. Jeff Kane (MD), John Vaughan (CIO), Reverend Sharon Delgado & Head of Earth Justice Ministry, and Tim Ogburn (retired CA State EPA), moderated by me, who all garnered very complimentary feedback, and the Task Force Teams.]

The **Forum slides**, the Mine Economic Impacts Study, and other really neat docs are on the Universalist Unitarians Web site [https://www.uugrassvalley.org/justice/stop-the-mine-task-force/]

CALIFORNIA HEALTH AND SAFETY CODE

- " Section 41700 of the CA Health and safety Code states that a person must not discharge from any source whatsoever quantities of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; or that endanger the comfort, repose, health or safety of any of those persons or the public; or that cause or have a natural tendency to cause, injury or damage to business or property. Section 41700 also applies to sources of objectionable odors."

Using data from the D.E.I.R. the proposed mine will generate 13,000 vehicle trips per month. See calculations below. The major roads into the mine by workers would be Brunswick, Hwy 174 or Bennett.

Each of these have blind turns, only two lanes and traffic feeding in from perpendicular streets. This increases the risk of head on accidents or collisions from merging traffic that has to cross the affected roads. On separate occasions I have narrowly missed having a head on collision AND being broadsided from a person running a stop light while at the intersection of Bennett and Brunswick. Moreover there was a fatal head on accident in 2021 on Brunswick. (See photo). About seven years ago there was another fatal head on collision on Hwy 174 that involved a Hanson Brothers truck.I don't believe our streets were built to safely accommodate the level of existing traffic.The mine will make it worse. If bad weather is added or icy roads, it becomes even more unsafe. From personal experience I can say that Bennett Road has areas where black ice accumulates. I have slid off the road. Luckily, no one was coming in the opposite direction.

After reading the above, a cynic might suggest we ban all business that generate traffic. No. No one will be going to the mine to fill their tank, get groceries, make a deposit etc. The mine does not provide essential services.

Please consider the road safety issue in conjunction with the mine. We are potentially talking about peoples lives.

Tom Behlmer
12448 Old Mine Rd.
Grass Valley

Monthly traffic calculation from pages 883 and 884 of D.E.I.R.

44 x 20 days, employees working five days a week. 44 = employees above ground
134 x 30 days, half of the seven day off, seven day on work force. 134 = half of the underground work force of 268
57 x 30 days, ore truck and ancillary trips with potentially twice this amount during peak periods.

6610 x 2 for the second leg going outbound =13,220 trips in or out per month. Again this could be higher during peak periods.

Dear Nevada County Supervisors and Planning Commissioners,

My name is *Marilyn Nyborg, 14480 Craig Lane, Grass Valley, CA 95945*

I have been writing to you all year it seems, with no reply. Others have been far more articulate quoting real facts and asking important questions. I can't believe we are still doing this.

What comes to mind, if the proposed Idaho-Maryland Mine Goes through:

You are NOT listening to the communities concerns. **Once again its profit over people.**
The traffic and noise issue is pretty obviously a problem.
The use of our limited supply of water!
The promises of the owner are unbelievable.
Additional unhealthy pollution.
THE character of the owner and promotor is highly suspect. Having left legal and environmental issues he violated in Canada, not telling the truth about HIS record.
Another country claiming our earthly treasures.
jobs.is a joke, he will have to recruit elsewhere for miners and adding to the housing loan, medical load and schools that will be needed.
The recent survey did not ask probing questions, likely designed by the investors.
IF it is another Flop, he leaves with investors money in HIS pocket and we get the cost of clean up and toxicity.

I'm done. Pease reread the letters you have been getting, Doctors and scientists who have stated their expertise. AND LISTEN please.

Sincerely, Marilyn Nyborg

I was told by M Gold that my property was out of their preview so when I offered my 2nd never used well for testing they declined & I was told that the mine wouldn't impact me.
Recently I saw an overlay of the existing mine & it runs right down the other side of the street from my property.
I just had my well deepened another 100 feet which cost me $10.000
They are going to dewater the mine 3000' if the aquifer is breached or altered by dewatering or mining activities my water & my property would be worthless.
Even to consider drilling down to water that deep would cost hundreds of thousands of dollars & I would loose everything!
NID only has water for 17 homes in close proximity to the mine site & I'm a mile away.
That overlay map showed the existing old mine running under Cedar Ridge & along Rattlesnake road.
This thing is a monster with tentacles everywhere & no guarantees that if & when things go wrong Rise won't cut & run back to Canada leaving me, this county & this country stuck with a superfund site & litigation for us all just like what happened at the Grand Banks Island mine Mr Mossman's last endeavor & that was in the middle of a very remote location which this is not.
He's still in court over it with nothing resolved yet he has poisoned a river in B.C. & can be assured that he will never be allowed to open or operate another mine in his home country yet he has his eye on us in the middle of essentially a retirement community & for some reason you have the fate of over a thousand households in your hands & if the creek gets contaminated by human error or flooding from any year like this many more homes & lives will be on the chopping block of fate?

Vote your conscience vote for the people you represent & send Mr Mossman back to Canada, let him find a more remote site where his possible failures wouldn't be as consequential nor catastrophic as they would be here.
Thank you, Steven Millard

Re: Use of my name, without my consent by Rise Gold in comments on the DEIR

Dear Members of the Board of Supervisors,

I live in District 3 but I want all of the Supervisors to be informed of my concern and complaint.

Last week I learned that Rise Gold has used my name and address, without my consent, stating I am in support of reopening of the Idaho-Maryland Mine. My name, and many others, appears three times as an official county documents attached to the DEIR, stating I am in support of re-opening the Idaho-Maryland Mine. Nothing could be further from the truth!

I have talked to and written a letter to Matt Kelley asking that the county retract the fallacious comments which have my name on them and to hold Rise Gold accountable. I've asked that my letter to the Planning Department be included in the comments if retracting them is not possible.

I want the Board of Supervisors be aware that Rise Gold, in their efforts to find investors, is now using these falsified numbers to unethically boost their claims that there is huge support for the mine by Nevada County residents. Is this criminal fraud?

I will continue to pursue the matter with Rise Gold and work with other community organizations to fight this unethical company from reopening the mine and bringing harm to our community.

Respectfully,

Martha Turner

RECEIVED

JAN 24 2023

NEVADA COUNTY
BOARD OF SUPERVISORS

The County should deny the Idaho Maryland Mine and should not certify the EIR.

- **The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the mine project.**

- **Denying the mine project does not deprive the applicant of use of the land under its current zoning. It is not a taking.**
  The entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

- **If it denies the Project, the County is under no obligation to certify the EIR.** (Las Lomas Land Co., LLC v. City of Los Angeles (2009)). In this case, the court upheld a decision to stop preparation of an EIR and specific plan where the city determined the project was not consistent with its land use policies.

  There is no reason to continue with the EIR. We believe that continuing the EIR will just cost the County in loss of time and energy as well as that of staff and the community. We can better spend this time on critical issues like wildfire safety and climate change.

  If the EIR is certified as it stands now, even if the project is denied, it will be a flawed EIR in county records that can be used under future applications.

- **The bottom line is that the community overwhelmingly does not want the Idaho Maryland Mine to reopen.**
  The mine will be counter to the adopted General Plan land use policies and vision which the community supports. The County should deny the Idaho Maryland Mine Final EIR and not certify the EIR.

Nevada County General Plan Goals and Policies Justify Denial of the Idaho Maryland Mine

The Idaho Maryland Mine project is inconsistent with numerous Nevada County General Plan goals and policies which provide justification to deny the project independent of the environmental analysis:

Land Use Element

GOAL 1.5 Within Community Regions, ensure that development reflects our small-town character, the characteristics of the land and the natural environment.

GOAL 1.6 Allow for growth while protecting, maintaining and enhancing communities and neighborhoods.

Policy 1.8.3 Within the City/Town spheres of influence, the Nevada County General Plan Land Use Maps will generally reflect the City's/Town's General Plan land use mapping. In some instances, the County may provide for a less intensive land use due to infrastructure capability, environmental constraints or effect on land use and development patterns outside the city's sphere. However, the County's Plan will not preclude implementation of the City's/Town's Plan by providing for a significantly more intensive land use than the City's/Town's Plan.

GOAL 1.8 Coordinate with the cities/town in land use planning and development within their spheres of influence.

Policy 1.7.10 The County shall provide for facilities for the management of hazardous waste produced on-site in the Commercial, Business Park, Industrial, and Public land use designations, and shall provide for facilities for the management of hazardous waste produced on or off-site in the Industrial and Public land use designations. All facilities shall be located in a manner consistent with criteria established in the State-approved Nevada County Hazardous Waste Management Plan approved by the County.

Economic Element

Goal 2.1 Provide for a strong economic base while protecting and maintaining communities and neighborhoods.

Objective 2.4 Encourage economic development which favors a high economic multiplier effect.

Policy 2.9 In support of the County Economic Policy, develop and implement an ongoing, aggressive business recruitment and marketing program featuring the County's strengths in areas such as education and quality of life. Target the program to prospective types of business (particularly those that are entrepreneur-oriented) that are best suited to provide significant long-term job opportunities in industries such as biotechnology, electronics and communications, and energy-related products.

Objective 2.14 Encourage protection and enhancement of the natural scenic beauty of this County in support of the tourist trade.

Safety Element

GOAL CC-10.13 Build Climate-Resilient Communities and Protect Neighborhoods, Public Infrastructure and Natural Resources Through Mitigating Climate Change.

Policy CC-10.13.4 Require new discretionary development to include an analysis of potential affects to climate change impacts and water resources in the project review process. Projects shall reduce or limit impacts as feasible.

GOAL HM-10.5 Protect public health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.

Policy HM-10.5.5 The County will actively promote prompt clean-up or remediation of properties contaminated by mine waste or other hazardous materials and shall not grant any discretionary or ministerial land use approvals to develop or change boundaries or reconfigure parcels believed to be contaminated, unless and until the nature, extent, type and location of the contamination is determined and satisfactory arrangements are made for clean-up or remediation, in accordance with Nevada County standards or State regulations.

Noise Element

GOAL 9.1 Provide for the health, safety, and welfare of the people of Nevada County through a set of policies designed to encourage an environment free of unnecessary and annoying noise.

Policy 9.1.10 Strongly discourage those General Plan amendments and zone changes that would likely create land use conflicts relative to noise.

Aesthetics Element

Goal 18.1 Promote and provide for aesthetic design in new development which reflects existing character.

Water Element

Goal 11.1 Identify, protect and manage for sustainable water resources and riparian habitats.

Policy 11.2 Encourage the protection of resources which produce water for domestic and agricultural consumption.

Objective 11.2 Preserve surface and sub-surface water quality and, where feasible, improve such quality.

Policy 11.4 Cooperate with State and local agencies in efforts to identify and reduce to acceptable levels all sources of existing and potential point- and non-point-source pollution to ground and surface waters, including leaking fuel tanks, discharges from storm drains, Chapter 11: Water Element Volume I - Page 11-4 Nevada County General Plan auto dismantling and dump sites, sanitary waste systems, parking lots, roadways, logging and mining operations.

Objective 11.3 Preserve and, where economically feasible, restore the density and diversity of water dependent species and continuous riparian habitats based on sound ecological principles.

Mineral Management Element

Goal 17.1 Recognize and protect valuable mineral resources for current and future generations in a manner that does not create land use conflicts.

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.11 Recognize the importance of water conservation and quality for the present and future needs of the County by: 1. Requiring the conservation of on-site water during mining operations. 2. Requiring that off-site water discharge complies with State water quality standards. 3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

Policy 17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Legal Background Supporting Denial of Idaho Maryland Mine FEIR Certification and Project

The following background was prepared by attorneys Shute, Mihaly, and Weinberger who represent CEA Foundation on our mine project responses:

The County should deny the Project and should not certify the EIR. The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If it denies the Project, the County is under no obligation to certify the EIR. Las Lomas Land Co., LLC v. City of Los Angeles (2009) 177 Cal.App.4th 83 (upholding decision to stop preparation of an EIR and specific plan where city determined the project was not consistent with its land use policies); Pub. Res. Code § 21080 (a) (CEQA applies only to projects that public agencies carry out or approve.)

Denial of the Project would also consistent with a long line of case law recognizing that public agencies may limit the use of land to protect public values without resulting in a taking of property. Penn Cent. Transp. Co. v. City of New York (1978) 438 U.S. 104, 129 (1978) ("[T]his Court has recognized, in a number of settings, that States and cities may enact land-use restrictions or controls to enhance the quality of life by preserving the character and desirable aesthetic features of a city.") (citations omitted); id. ("[I]n instances in which a state tribunal reasonably concluded that 'the health, safety, morals or general welfare" would be promoted by prohibiting particular contemplated uses of land, this Court has upheld land-use regulations that destroyed or adversely affected recognized property interests."); Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency (2002) 535 U.S. 302, 324 ("Land-use regulations are ubiquitous and most of them impact property values in some tangential way— often in completely unanticipated ways. Treating them all as per se takings would transform government regulation into a luxury few governments could afford.")

The Supreme Court has identified two primary tests to determine whether regulation causes a taking of property. First, a taking may occur if the regulation eliminates all use or value of the property. See Lucas v. S.C. Coastal Council (1992) 505 U.S. 1003. Under that test, there must be no value whatsoever remaining in the property; even a diminution of value of 95% is insufficient. See Tahoe-Sierra, 535 U.S. at 330 (citing Lucas, 505 U.S. at 1019 n.8). The second test involves evaluation of multiple factors, including the severity of the impact of the regulation on the value of the property, the extent of its interference with reasonable investment-backed expectations of use of the property, and the character of the governmental action. See Lingle v. Chevron (2005) 544 U.S. 528, 538-39 (citing Penn Central, 438 U.S. at 124.) Courts have consistently held that Penn Central test requires elimination of nearly all value in the property. The Ninth Circuit has recently recognized that even "diminution in property value because of governmental regulation ranging from 75% to 92.5% does not constitute a taking." Colony Cove Props. LLC v. City of Carson (9th Cir. 2018) 888 F.3d 445, 451; see also Hadacheck v. Sebastian (1915) 239 U.S. 394, 405 (no taking despite diminution in value from $800,000 to a maximum of $60,000, and property could not be used for any purpose permitted under city's ordinance).

In fact, as long as permissible uses exist, a denial would not deprive the applicant of economically viable use of its property. (Shea Homes Limited Partnership v. County of Alameda (2003) 110 Cal.App.4th 1246, 1267 [finding no regulatory taking because agricultural designation allowed single family use if certain County standards were met].) Here, the entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All of these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

Subject: Domestic Well Monitoring Program for Rise Gold's Proposed Reopening of The Idaho-Maryland Mine

The Wells Coalition is a group of well owners near the Idaho-Maryland Mine. Our purpose is to protect our only source of water, our wells.

We are astounded that a comprehensive *domestic* well monitoring program was not established before the Draft EIR for Rise Gold's mine was published. Such a program is a necessary step to establishing the baseline data required by CEQA. We're here today to ask the County to facilitate the development of this program and work with the community to ensure its viability.

Even though there are over 300 properties with wells within 1000 feet of the Mine's mineral rights area, the DEIR did not provide current monitoring data from these domestic wells. It relied only on sparse patches of data from over 15 years ago.

The DEIR's proposed approach is to install just fifteen non-domestic *monitoring* wells in the future to do the job of estimating impacts for all water supply wells. With our complex fractured bedrock spread over thousands of acres, monitoring water levels at fifteen locations could not possibly provide the data needed to precisely and immediately identify or mitigate groundwater impacts across hundreds of wells.

Timing of baseline data collection is another issue. With mine dewatering, previous dry years, and the drought likely to continue, a *domestic* well monitoring program is vital in determining a baseline for groundwater quantity and quality prior to any dewatering of the mine. Collecting data on our wells takes time though, requiring a *minimum* of 3 years before a reliable baseline could be established. Also, this data is critical to assist in determining if mining or drought conditions are the cause of an impact to a well.

CEQA requires that a baseline be established prior to the evaluation of potential impacts. Also, under CEQA a mitigation measure must be achievable, enforceable, and must be capable of actually reducing the Project's impacts.

The DEIR's approach does not achieve any of these requirements. It acknowledges that more groundwater level data is needed to assess potential impacts, but the critical flaw is that it defers development of that data for "later". One place in the report says it would happen after the EIR is finalized. Another place says it would happen *after* dewatering begins. Neither approach is in compliance with CEQA.

Not having a baseline established by a *domestic* well monitoring program before publishing an EIR is unacceptable. Our wells are not currently being monitored. Since it will take several years for Rise Gold to establish a reliable baseline, we request a domestic well monitoring plan be initiated sooner, rather than later. Your response is appreciated.

Sincerely,

Christy Hubbard

December, 13 2022

Nevada County Supervisors
950 Maidu Avenue
Nevada City, CA 95959

Honorable Supervisors,

My name is Sol Henson, I grew up on the San Juan Ridge and hold a master's degree in hydrology. I am the president of the San Juan Ridge Taxpayers Association and speak for the Association today.

I'm here to talk about the importance of baseline monitoring for wells to protect our community from industrial mining impacts.

In 1995 Siskon Gold operated a gold mine in the North Columbia Diggings on the San Juan Ridge. During mining operations, they breached a water bearing fault-line 300 feet underground. This breach led to water quantity and quality impacts to at least a dozen wells including the wells for our middle school and the community Cultural Center. These impacts occurred up to 2 miles from the breached location. This was a disaster for those whose wells were affected, but we still do not know the extent of well impacts in the area. Some wells may have lost 50% capacity or had arsenic levels rise above drinking water standards but without baseline data, owners could not prove that the mine had impacted their wells.

This was a single catastrophic event. Wells are more commonly impacted by the extraordinary amount of water pumped out of mine tunnels just to maintain daily industrial mining operations. Over time, millions of gallons of water a day must be removed from the surrounding fractured bedrock aquifer. In such cases, well impacts can be slow to develop and can be hidden within seasonal cycles.

In 2012, the San Juan Ridge Mine Corporation submitted a new permit application to mine the North Columbia Diggings. Exhibiting due diligence, and with community input, the County helped to create a baseline monitoring program for domestic wells. This program established a baseline through monthly collection of water quantity and quality data before the DEIR was produced. This information would have been invaluable for the environmental review process. Should the mine have been permitted, well owners would have had recourse to say with some confidence if their well had been impacted.

We firmly support the precedent of baseline monitoring for projects of such scale and impact as the Idaho Maryland Mine. Significant monitoring programs have been developed in the past for the IMM site, including for the 1996 permit to dewater the mine for exploration and the 2008 Emgold Mine environmental review process. It is unclear why the current Rise Gold effort to permit the IMM lacks a monitoring plan that would form a baseline for water quantity and quality of domestic wells in the surrounding area. We believe that the community is owed these safeguards and that CEQA requires it. Thank you very much.

Sincerely,

Sol Henson

Subject: the Idaho-Maryland Mine Draft EIR groundwater hydrological model predictions and risk to domestic wells in the area of the Project.

The proposed well mitigations in the Draft EIR for Rise Gold fail to acknowledge risks posed to domestic wells in the surrounding area of the Idaho-Maryland Mine project, and in doing so does not provide protections to those wells from impacts due to dewatering the mine.

The Draft EIR for Rise Gold states:

" All potentially impacted wells are located in the E. Bennett Road area. Domestic water wells outside this area will not be impacted." [1], [2]

But expert opinions contradict the certainty of these statements, citing repeatedly the uncertainties in hydrologic predictions and impacts to wells:

Emgold's 2008 DEIR for the Idaho-Maryland Mine states

"Due to the uncertainties regarding the complex geology and groundwater flow, dewatering ***impacts to domestic water supply wells cannot be accurately predicted."*** [3]

Also, Emgold's project description states

"The geologic formation in which the mine is located is fractured bedrock whose hydrogeology is difficult to predict. *Therefore, reliance on Domestic Well Level Monitoring Program data will be required to assess impacts and discern appropriate* ***mitigation measures for each domestic well*** *owner."* [4]

After reviewing the hydrology computer model from the DEIR for Rise Gold an expert hydrogeologist in groundwater modeling stated

"Even a well calibrated model has a large uncertainty to it, in its predictions. It turns out that this model is not well calibrated, so the uncertainties are almost certainly larger."[5]

A review of the current Draft EIR by Baseline Environmental Consultants states

> ***"there is a high level of uncertainty associated with the groundwater model that was used in the DEIR*** *as justification to identify a very small subset of the domestic wells in the East Bennett area that are likely to be adversely affected by the project, and to characterize impacts to a vast number of other domestic wells in the project vicinity as less than significant.* ***This is a flawed approach and provides no assurance for residences and businesses that rely on groundwater wells in the region.*** *"*[6]

Even the hydrologist who prepared the hydrology computer model for the current Draft EIR, told the NID board of directors.

> ***"With fractured rock there will always be uncertainty and during my career there won't be any 100% confidence in predictions."***[7]

It is because of these uncertainties that we are appealing to you to require protection for all wells with a domestic well monitoring plan before the Draft EIR is finalized and prior to any dewatering of the mine.

Thank You,

Gary Pierazzi
The Wells Coalition
wells@cea-nc.org

Additional expert opinion quotes regarding uncertainties in groundwater modeling and fractured rock.

"The EMKO Report describes a three-step procedure used to assess potential drawdown effects in perimeter areas. A major assumption underlying the procedure is that flow contributions from the workings are distributed uniformly across the mining areas after correcting for depth. ***However, the subsurface distribution and orientation of bedrock fractures is not uniform and is subject to***

uncertainty. Discussion of this uncertainty and the overall uncertainty of the analytical and numerical model predictions with respect to groundwater level impacts on individual wells should be provided. expanded to include an assessment of the uncertainty in the conclusions developed by Todd Engineers."*[8]*

"Although the analysis is considered conservative in methodology, ***several complexities in the groundwater system could potentially result in a larger or smaller radius of influence. Although larger impacts seem unlikely, it is difficult to prove that aberrations in the system do not exist."*** *[9]*

"Uncertainties in the analysis indicate that monitoring should occur over a slightly larger area than where impacts are predicted. In addition, the monitoring program should consider adjustments specifically for geologic faulting." *[9]*

"Monitoring locations should also include areas outside of the predicted impact zone to account for uncertainties in the analysis," *[9]*

"The fracture systems existing in buried bedrock beneath Grass Valley are not mappable within the resolution needed to predict specific dewatering effects. Technology and state-of-the-art hydrogeology have not developed to a level that fracture mapping is possible. Due to this limitation, hydrogeologic modeling is attempted by making an assumption on fracture connectivity." *[10]*

"The groundwater in this particular area is contained in and flows through fractures in near surface bedrock and because of this fracture flow regime, the groundwater flow in quantity varies considerably with location and ***cannot be predicted with certainty. Furthermore, complete hydraulic separation between the deeper groundwater within the underground mine workings and the shallow groundwater within fractures and supplying the domestic wells cannot be assumed."*** *[11]*

"Based upon the significance criteria established on page 4.3-4, ***the risk to all wells within the study area, regardless of risk category, represent a potentially significant impact."*** *[12]*

"The study area has not been monitored by an approved groundwater monitoring system designed to observe the dynamics associated with subsurface hydrology. Therefore, ***many of the initial unknown hydrogeologic and geologic parameters located within the earth between well and mine elevations still exist."***

Subject: Well Monitoring - Protection for homeowners from proposed IMM Mine

As a well owner in district 1, I need to make sure you all know how serious our concerns are regarding the IMM mine.

It is imperative that we have a process in place to gather baseline data for our wells before there is any further movement on this proposal. We could, literally, be facing life altering consequences and complete financial ruin without it.

For miles in every direction from the IMM site, we have densely populated land, and hundreds of homes with domestic wells that produce our only source of clean water. In the event of a well gone dry during dewatering, we would be thrown into chaos trying to save our families from severe undue hardship.

Imagine this real possibility in your own home; You wake up and discover all the pressure is gone from your faucets. The toilet flushed, but it's not refilling. Your spouse, and maybe kids, are asking, what's wrong with the water? Your face goes pale. A million thoughts race through your mind. Oh my god! Without water, my property is worthless. How could this have happened? Where is the protection from my county, whom I pay to do so?

It's catastrophic, and you have no recourse to blame the obvious cause, let alone, options for a solution, since no plans were in place to secure your rights and prevent the demise of your well.

This is by no means, overstating the danger. There are facts by historical example all over the gold mining west. There are facts by expert hydro professionals, and, then there's the grand daddy of all facts: "Gravity"! Nothing can stop it from drawing down water to the lowest point. Undeniably, it is impossible to know where the water highways are below us.

It is simply not acceptable to overlook the necessary protections, or downplay the high risk consequences of mining operations in populated areas with hundreds of primary water source wells. There should be no expense spared by the proposing mine company and governing county, to ensure every well owner will be 100% protected from loss,damage and contamination. This begins with a comprehensive well monitoring program before any other due process continues. This should have been in place long ago.

Ultimately, the future must include infrastructure, for immediate transfer to an equal alternative water source, at zero cost to all residents, forever. No one would want anything less for their family and life investment in their home.

I don't believe anyone here today would accept even the tiniest risk that they could lose their water in exchange for gold in the pockets of strangers. We implore the board to mandate this well monitoring starting point for our protection, immediately.

Thank You for addressing this matter with action.

Groundwater Baseline Requirements and the Idaho-Maryland Mine EIR

Presented as Public Comment to the Board of Supervisors, Dec 13, 2022.

The California Environmental Quality Act (CEQA) does not allow the deferral of important studies necessary to characterize a project's impacts.

According to CEQA Guidelines § 15125(a), an Environmental Impact Report (EIR) must include an accurate description of a project's environmental setting, which provides "the baseline physical conditions by which a lead agency determines whether an impact is significant."[1] It goes on to state: this baseline "should describe **physical environmental conditions as they exist at the time the notice of preparation is published**."[2] (i.e. before the Draft EIR is prepared.) The purpose of this requirement is, per CEQA Guidelines, "to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts."[3] And the court case of *Save Our Peninsula Com. v. Monterey County Bd. of Supervisors (2001)* affirmed that point: "Without a determination and description of the existing physical conditions on the property at the start of the environmental review process, the EIR cannot provide a meaningful assessment of the environmental impacts of the proposed project."[4]

Note that the Rise Gold project Draft EIR clearly acknowledges that this baseline is needed. It states that for each domestic well, a projected and seasonally averaged water level shall be estimated **"...which will serve as a baseline groundwater level."**[5] But **this incorrectly defers** the collection of the needed additional groundwater data to after the EIR process is over.

Let's look at it using common sense. Unless the EIR identifies current well levels and related data, it cannot establish performance criteria and evaluate how dewatering may impact wells, and it's not possible to define appropriate mitigations. For example, Rise Gold's hydrology model estimates that water levels will drop between 1-10 feet for over 150 wells. But there is no current data that could tell what the impact would be to well owners. A two foot drop could be critical. How would that be determined? Are some wells near failure? We don't know.

CEQA law, County precedents, and common sense all say the same thing: Collection of data must not be deferred until some future date, as proposed in the current Draft EIR. Current domestic well monitoring data needs to be included in a revised Draft EIR to establish a baseline so that it can be reviewed and then used in the decision making process.

The Wells Coalition members are alarmed that the County seems to be skipping this important step.

Thank you.

Ralph Silberstein, President
CEA Foundation

John Vaughan
Dist 3

Board of Supervisors, 12/13/2022, Wells Coalition Public Comment

My name is John Vaughan. I am a 55 year resident of Nevada County. My wife Gail and I are District 3 voters. Our well is approximately 100 yards from the southwest corner of the Rise mineral rights.

I am going to read a few quotes from Dr. David Chambers in his response to the Rise Gold Draft EIR. Dr. Chambers has an Engineering degree in physics from the Colorado School of Mines, a PhD in geophysics from UC Berkeley and is a registered geophysicist in California.

In part, Dr. Chamber's comments speak to the necessity for well monitoring and the risk of catastrophic events.

Dr. Chambers comments, re: water quality:

> "There is no discussion, or disclosure, of the operational water quality treatment needs or processes…This completely circumvents any discussion or analysis of what the contaminants might be, what contaminants would be monitored…and where monitoring would take place...The Monitoring Plan should incorporate all elements of monitoring, including surface water and groundwater…"

From page 9: a quote from the Rise Gold Draft EIR:

> "The Union Hill Mine workings are within 95-180 feet of the Idaho-Maryland Mine at three to four different levels. Following WWII, the Idaho-Maryland Mine was dewatered. In 1956, the water level at the Union Hill Mine was within 20 feet of the top of the shaft, suggesting that the dewatering of the adjacent mine resulted in no more than 10-20 feet of water level decline..."

Dr. Chambers comments re, dewatering:

> "There are two points to note…(1) the Union Hill Mine is very close to the Idaho-Maryland at several levels; and, (2) there has been a possible weak hydraulic connection between the two mines…"
>
> "The EIR suggests there is no significant hydraulic connection between the mines, but the discussion from the EIR suggests there could be some connection, and what is not known is whether this hydraulic connectivity could increase in the future."
>
> "If a conduit between these two mines were to open, for instance due to the widening of a fracture related to blasting vibrations or a seismic event, the flood of water into the Idaho-Maryland mine could be rapid and catastrophic…This issue must be thoroughly addressed before anyone is permitted to enter the dewatered mine."

In my opinion, at a minimum, if this project is approved, well monitoring as described in the EMGold proposal should be required.

Thank you for your time.

First of all you're link -Nevada county 3195 doesn't get me to a comment page. Very frustrating. Second why would we even consider a gold mining project right next to houses when we're still cleaning up gold hazardous waste from the 1800's. Where's our brains . Why ruin our historic town?? I'm a fifth generation Northern California resident and I'm appalled at the fact that you would even consider this boondoggle of a project. They lie and deceive according to their last project in Canada. I will personally see that all supervisors and council members that ok this project be voted out immediately. Please save our town for my grandchildren. Sue Santanna Chicago Park

EACH SUPERVISOR RECD
RECEIVED
NOV 30 2022
NEVADA COUNTY
BOARD OF SUPERVISORS

Nov 27, 2022

10858 Bartlett Drive

Grass Valley, CA 95945

530-913-1338

Dear Nevada County Supervisor: Heidi Hall,

I am a homeowner on Bartlett Drive which is very close to the Idaho Maryland mine site that is under consideration of being reopened. I have lived in Nevada County since the fall of 1980. I am active in the community and have been a practicing nurse since 1995 and am currently a Hospice nurse. My friends are here and I have been a volunteer for many different nonprofits over the years.

I am very concerned about the noise, environmental and health impacts that opening the mine would cause for the people of this county. My neighborhood will be directly impacted by noise, increased traffic and a significant decline in air quality. I hope you all have read the negative impact reports by the Unitarian Universalist Community, Martin Webb, Draft Environmental Impact Report, Nevada County document website, Air Concerns vs Cancer Risks and many articles published in The Union newspaper.

I heard from 2 realtors who have had offers taken back by just the threat of opening the mine. My property is close enough where I am sure my property value will decline.

As far as I am concerned the amount of toxic waste left from the mines in the area is not to be tolerated in the future. I do not know how much the owners of the mines knew of the destruction they were causing but this is a different time and we are very much aware of the environmental impacts of mining and there is no excuse to start that up again.

I already have health issues related to our poor air quality and if it deteriorates as predicted I may be forced to move. I don't want to move. This is a special community. My community, my friends, church, local businesses which I support, my work are all here. I have spent more than half my life living here and hope to die here. I raised my children here and if the mine opening passes I am sorry to say I would not like my children raised here. That is sad.

I do not know anyone who is in favor of opening the mine. Just look as you drive around at how many signs you see in opposition. I have only seen 1 sign in favor. Rise Gold is so much litigation in Canada from their previous practices in earlier projects I cannot believe you would even consider doing business with them Would you hire a contractor to work on your house who is in that much litigation? I wouldn't.

Last but not least, if this mine opens, I will not vote for any current Supervisor in upcoming elections unless we know exactly who voted for or against. If we are not informed I will assume you all voted yes and it my opinion that anyone in favor should be voted out of office. I will encourage my friends to do the same. Thank you for your consideration.

Siincerely,

Patricia Phillips

NEVADA COUNTY
BOARD OF SUPERVISORS

Nevada County Board of Supervisors
950 Maidu Avenue, Suite 200
Nevada City, CA, 95959

Date: 11/22/22

Dear Supervisors Heidi Hall, Ed Scofield, Dan Miller, Susan Hoek, and Hardy Bullock,

I, the undersigned, am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I understand that you will be reviewing the Environmental Impact Report and subsequently voting to approve or not approve the project. I have listened to both sides of the argument and find Rise Gold Mine to be inconsistent, misleading and manipulative. They fail to adequately mitigate many significant negative impacts of this large industrial project on my family, friends, neighbors, and businesses.

There are many reasons this mine should NOT be reopened. My personal reasons are:

I am resident of Nevada County and observe that Rise Gold Corporation lacks respect for the impact of their mine project on the environment and the people of Grass Valley. I hope you will be among those who will be known to have opposed the well-funded deception Rise Gold Mine has developed.

Sincerely,

Name: Erin Thornton

NEVADA COUNTY
BOARD OF SUPERVISORS

Nevada County Board of Supervisors
950 Maidu Avenue, Suite 200
Nevada City, CA, 95959

Date: 11/22

Dear Supervisors Heidi Hall, Ed Scofield, Dan Miller, Susan Hoek, and Hardy Bullock,

I, the undersigned, am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I understand that you will be reviewing the Environmental Impact Report and subsequently voting to approve or not approve the project. I have listened to both sides of the argument and find Rise Gold Mine to be inconsistent, misleading and manipulative. They fail to adequately mitigate many significant negative impacts of this large industrial project on my family, friends, neighbors, and businesses.

There are many reasons this mine should NOT be reopened. My personal reasons are:

I am resident of Nevada County and observe that Rise Gold Corporation lacks respect for the impact of their mine project on the environment and the people of Grass Valley. I hope you will be among those who will be known to have opposed the well-funded deception Rise Gold Mine has developed.

Sincerely,

Hi Georgette,

Thanks for your diligent work managing the preparation of the county's independent economic impact report for the Idaho-Maryland Mine Project.

We believe a supplemental memo should be attached to the report to further detail the county's property tax distribution to various taxing entities.

Our questions/comments on the report are as follows.

1) The Total Tax Revenue (estimated to range from $1,405,000 to $6,418,000 per year) is discussed in Section 5 and in the summary of the report, but not in the executive summary of the report. Only the benefit to the county general fund (14% of tax revenue) is discussed in the executive summary.
2) Would the project's annual property tax revenue (estimated to range from $1,405,000 to $6,418,000 per year) be distributed to various agencies at the current AB8 distribution percentages? https://www.nevadacountyca.gov/ArchiveCenter/ViewFile/Item/1314 . Some simple graphics would be useful to understand the proportional revenue that will be provided to various districts, as shown in the example below and spreadsheet attached.
3) A large portion of the property taxes from the project would go toward local school districts. Would the school districts be allowed to keep these surplus funds to enhance services or limit the would-be adverse fiscal impacts during economic downturns? Some supplementary information on the project's impact to school district finances would provide useful context, given schools are the largest recipient of property taxes from the project.

Thank you for the consideration of our questions/comments and we appreciate the county's effort in preparing this independent report for the Idaho Maryland Mine Project.

Sincerely,

Ben Mossman

Dear Supervisor Hoek,

I hope you are doing well.

Now that the public comment period on the Draft EIR has closed, Rise tabulated and mapped those who provided comments on the DEIR for the Idaho-Maryland Mine Project.

Here is a breakdown of those who submitted comments:

- Approximately 1,180 Nevada County residents sent letters of support for the project during the comment period.
- Approximately **1,340 Nevada County residents sent letters of support** for the project including ~160 support letters received after the close of the comment period.
- Approximately **940 Nevada county residents sent comments in opposition** to the project during the comment period.
- There were an additional 74 persons in opposition who didn't provide an address and could not be matched to the voter or property files.

*Those who commented but live outside Nevada County were not included in our count.

A summary table is provided below with a breakdown by district.

	1 - Hall	2 - Scofield	3 - Miller	4 - Hoek	5 - Bullock	Total
Support	294	331	342	325	51	1343

Oppose	405	78	325	118	11	937

A map with the locations of commentators is available at the link below:
https://www.google.com/maps/d/edit?mid=14UvuUUjNE8e6VY0c-TiZJCUBTtec9Drl&usp=sharing

I previously provided you with the first batch of support cards. The second batch and support cards received post comment period can be downloaded from the below link. I attached a few of the support letters as well.
https://riseg.sharefile.com/d-sed22aae489bd48bbb33601e8ea0cdaec

On behalf of Rise, I look forward to the county preparing the final EIR for the project.

Sincerely,
Ben Mossman

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sarah Boan. I live at 13905 Clover Leaf Ct, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,
I live in the Peardale neighborhood right down the street from where this proposed mine is to be located. I love my neighborhood and have never felt more “at home” anywhere else on the planet. This mine would destroy the utopia that is our neighborhood. The risk it runs to our fire safety via water, our only escape route, and to the peace and quiet surround us is beyond reprehensible. Please do not allow the beauty to be wiped out for corporate greed. There are so many other ways to create jobs rather than destroy our precious oasis.

Sincerely,

Sarah Boan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Alexis Alrich. I live at 13628 Raccoon Mountain Rd, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live off of Greenhorn Road in Grass Valley and drive by the proposed mine site every day. I own two houses here and would be seriously impacted by lower real estate values if the mine is re-opened. I am grateful for the clean air, quiet, tree views, and light traffic in Grass Valley. These are the reasons I moved here in 2017 and these blessings are so vulnerable to damage or loss. I live on Lost Lake which was created to hold mine tailings historically. After a flood in 1989 the old wooden dam failed and toxic mine tailings including mercury and arsenic were spread over the lake and the creeks feeding it. It is now an EPA superfund site. Apparently the harmful chemicals are stable at the bottom of the lake, but this makes me aware of

how destructive mining can be. Even in the best case, in the unlikely event of no human error or natural disaster, the damage to our local water, roads, landfill and air quality is awful to contemplate.

Sincerely,

Alexis Alrich

My name is Kathy Doty. I live at 14279 ryan's ranch road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a resident of Grass Valley for over 43 years, and am horrified to think that our beautiful town could be at risk for an 80 year lease by an irresponsible company who is already being held accountable in British Columbia for destroying a beautiful place due to unsafe and reprehensible action!!! Aside from the damage to water ways, I am VERY concerned about the toxic levels of chemicals that would be released through this process!
We gain Nothing !!!! Only 80 years of damage due to this company Rise Gold who seeks only their greed and destruction to our peaceful way of life here in these beautiful foothills!!! I beg of you ALL!!!! not to bring this destruction upon our peacefully community!!!

Sincerely,

Kathy Doty

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, I live on Green Horn road. I was born and raised in Grass Valley. After seeing a good portion of the country its obvious that Grass Valley is simply one of the best places to live, period. Allowing these miners with a criminal past to mine in our community is unimaginable. The quality of life here would decrease substantially. I don't see permitting rise to operate here as a logical or beneficial move for our community. It just seems so obvious to just say no!

Sincerely,

Ryan Duarte

My name is Linda Gemignani. I live at 12145 Pasquale Road, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a home owner in Nevada City for the last 16 years I have heard tales of the previous local mines. drained wells, contaminated waters, sick people, negatively impacted environment (flora, fauna, fowl).

After the recent flooding I honestly can’t even believe that this mine is still being discussed. It should be discarded!

Sincerely,

Linda Gemignani

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Erin McMichael at erin.mcmichael@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Erin McMichael. I live at 13905 Clover Leaf Court, B, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

My name is Erin and I’ve lived in Grass Valley for almost five years now. I live in Peardale, right off 174, and my life would be significantly altered if this disastrous mine were to be built. Not only would traffic increase in a huge way on an already busy road next to my house, but the idea that there will be massive trucks holding up traffic all the way up and down that long, one way stretch of road, with no way to pass, and increasing the potential for accidents, boggles my mind.

Additionally, and most importantly, the environmental impacts will diminish all quality of life, especially those who live around the mine, or near its thorough-ways. Dumping waste into local sites? That is irresponsible and mindless. Rise has absolutely NO business being here except to ruin the lives of current residents, and contaminate our beautiful land.

Why do we live in beautiful places such as Grass Valley? Why do you live here? The likely answer is to escape from the rest of the people of the world who only aim to process every possible resource we have until we have nothing available; To enjoy the splendors of what nature offers us without hesitation - a gift that is worth tending; To work hard to not turn our beautiful town into every other place on the map because we couldn't keep our greedy little hands to ourselves. We don't have to be like them. We can be different. We HAVE been different, and now we want to turn our town into some crap-shoot podunk destination where eventually people will leave and never come back. You will start to attract people you never wanted living here in the first place, people who don't care about this place the way we do, people that will only be staying a few shorts months anyway, leaving behind a trail of dust and damage.

I moved here to live in peace, and this disrupts my peace in a way that will eventually push me out. I'll find another town that cares more about its current residents than a few quick bucks. That would prove disappointing that the leaders of my town couldn't take a stand for me.

Providing a few short-term contracting jobs, with huge and dangerous long-term costs, is not the direction to go. Your residents are more valuable than anything else. Listen to us. We are the gold.

Please reconsider your decision to move forward with the mine. Every Grass Valley resident will thank you.

In community,

Erin McMichael

Sincerely,

Erin McMichael

Dear Nevada County Supervisors and Planning Commissioners,

My name is Tom Martella. I live at 16225 Orchard Springs Road, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Your decision must take into consideration how the community would pay for future environmental damage/ financial loss/ lawsuits should this project fail.
You should not rely on warranties, insurance, guarantees, or assurances, but rather past performances!

Sincerely,

Tom Martella

Dear Nevada County Supervisors and Planning Commissioners,

My name is Gary Aufdenspring. I live at P O Box 240, Rough and Ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi,
I live out on Bitney, been here since 1986. I'm not close to Idaho Maryland, but that doesn't matter. My wife and I were residents of Tuolumne County when the Jamestown Mine was reopened
What a mess. What broken promises, particularly those promises relating to jobs and economic benefit to Tuolumne County. The mine owners made out like bandits (which they were), Tuolumne County and it's residents made out like the victims of bandits.
Please don't open the Idaho Maryland Mine. My wife is deceased now, but I know she didn't want it opened and I don't either. I don't want to suffer this reopening of

old mines twice.
Gary Aufdenspring

Sincerely,

Gary Aufdenspring

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Norma Solarz. I live at 800 Freeman Lane, Apt 301, Grass Valley, CA 95949-7742.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 3 and enjoy the benefits of a clean and peaceful life in Grass Valley. We try to do as much of our shopping locally and support community events. Despite the propaganda from the mine proponents, the lion's share of profits from re-opening the mine will go to shareholders of the mine and to the Canadian mine owners. There will not be substantial enough profit for a positive impact for our local community to balance against the overall negative impacts of re-opening an unnecessary gold mine in the midst of our community.

The FEIR lists several significant and unavoidable environmental impacts that

endanger this community's health and quality of life. These include aesthetics, traffic, and noise; there are serious deficiencies in the FEIR that put the County and its citizens at even greater risk.

The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan’s goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. Still multiple conflicts exist with goals not only for land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns.

As tax-paying residents of Nevada County we demand that you "SAY NO" to re-opening the Idaho-Maryland Mine

Sincerely,

Norma Solarz

Dear Nevada County Supervisors and Planning Commissioners,

My name is Bonnie McKeegan. I live at 17076 Jody Ct, Grass Valley, CALIFORNIA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Me and my family live in Alta Sierra. We first came here in 1981 when I entered my junior year at NUHS. We were charmed by the trees, rivers, forests, state parks, and history, particularly the mining history.

I left as a teenager but returned as an adult with kids, so they could enjoy the same environment I fell in love with at 15 years old. They are 18 now and if they leave to pursue their educational goals, I want them to yearn to come back. If there is a nasty ole, loud, polluting mine that changes the culture of our community and environment, they will look elsewhere to live. Then, my husband and I would look elsewhere to live

as well. Leaving my family's 42-year home would be sad but we do not want to spend our fast approaching retirement and last years in a place that values corporate greed and destruction of our unique assets.

Commercial mining is history that no longer has a place in our community.

Please preserve the beauty, attractiveness for tourism, and serenity that we have.

NO mine!

Sincerely,

Bonnie McKeegan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Dunstan. I live at 19595 Bow Valley Road, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Chicago Park and the thought of having to deal with the trucks coming out of the mine site and the traffic related to continued road maintenance is frightening. It will make our home much less appealing to a new buyer. The noise will have a significant impact on the quiet of the foothills that we moved here to enjoy.

Making a decision to do business with a lying fraudulent company is unconscionable.

On top of climate change, our friend's and neighbor's wells will be severely impacted

by the de-watering.
Please DO NOT approve this, for the sake of our little piece of heaven on earth.

Sincerely,

Janet Dunstan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Christy McCracken. I live at 13313 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Greenhorn Road, just about 1/2 of a mile from the proposed mine. My parents moved here in 1970 and have continuously lived on these 5 acres for over 50 years. My siblings now own the adjacent two properties. We all rely on wells for water. I remember when there was a mill on the Brunswick site- I remember the large trucks, constant noise and smell. It wasn’t pleasant. What I don’t understand is how you are simultaneously considering this environmental disaster and spending money and time with your “Recreation and Resilience Master Plan.” According to your website you will “prioritize solutions that promote community health and safety,

economic development, creative placemaking, landscape restoration, environmental sustainability, climate change adaptation, and resilience." If that is true- I would hope then that the mine would not even come close to being approved. It doesn't match your master plan. Please do the right thing for the whole
county- not just the part closest to Truckee.

Sincerely,

Christy McCracken

Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Clayton Olson. I live at PO Box 3565, Grass Valley, CA 95945-3565.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The uncertainty of what will happen to peoples' wells and the historical lack of full responsibility by so many mining operations -- inadequate bonds, inadequate monies to cover mistakes or misdeeds of a mining company, toxic legacies -- is the primary reason I want the Rise-Gold Mine proposal to be rejected. My second reason is my wondering what it's like to have explosives go off underground in relation to the sound effects and seimic activity?

Sincerely,

Clayton Olson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Hubert Burk. I live at 13793 Raccoon Mtn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Nevada County Supervisors and Planning Commissioners.

My name is Hubert Burk. I live at 13793 Raccoon Mtn Rd , Grass Valley, 95945 , CALIFORNIA 95945 .

As a citizen of Nevada County, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi, I live off Greenhorn Rd. off Brunswick Road in Grass Valley. I have been living here since 35 years and have enjoyed the nature and rural living since then. I own several properties in Grass Valley. I also have been a business owner since then!!! here in GV. The business has been located on Whispering pine adjacent to the mine property. I am totally opposed to the re-opening of the mine!!! I resent the fact, that the county supervisors, that have been elected by the people, seem to want to favor CORPORATE interests and profits above the quality of life of the residents here!! I and many of my friends and acquaintances would never vote for a supervisor again, who votes for the mine re-opening!! Please reject the mine re-opening, as it is unconscionable, wrong and only profit oriented and will destroy the air, and the noise level and traffic will be bad. It is not worth that!! to us the residents!!
Sincerely,
Hubert Burk

Sincerely,

Wilma Terrill

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Edward Szymanski at Edwardz46@sbcglobal.net

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Edward Szymanski. I live at 112 S. School St., #3, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Supervisor Swarthout:

I have lived in Nevada County for 18 1/2 years. 18 years living in Nevada City and residing currently in the equally charming town of Grass Valley. I still remember when another out of state/out of country entity named Emgold tried to reopen the Idaho-Maryland Mine to the chagrin of many concerned citizens. That concern for a better quality of life here in Western Nevada County has not dissipated. Unproven, rosy promises were made by David Watkinson when Emgold came to town and now we have the RiseGold president, Benjamin Mossman, he of some ill repute due to

the Yellow Giant Mine fiasco in British Columbia, making promises that will not come to fruition due to the inherent risk and toxic environmental degradation and the diminishment of quality of life that invariably occurs with any type of mining.

I am sure that you by now are familiar with all the negative aspects of this proposed project. They far outweigh the positive. Let's remember gold mining as a part our history and not forget that it is history now. Gold mining has no place here anymore. Tourism forms a large part of our economy and it is built on our recreational opportunities and the charm of Nevada City and Grass Valley. It will suffer once it becomes known that the area is now host to industrial grade mining.

As a constituent who voted for you, I beseech you to oppose the reopening of the mine and do your absolute best to dissuade any supervisor who is in favor of this meretricious endeavor. Thank you for your attention to this critical matter.

Sincerely,

Edward Szymanski

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barbara and Bill Larsen. I live at 502 Redbud Way, Nevada City, United States, California 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Honorable Supervisors and Planning Commissioners,
We have lived in Nevada County for 45 years and what to state, again, NO to reopening the Idaho Maryland Mine.
Please review all the important and vital research that has been done and how this will effect the beauty and environment of our precious county. It has been revealed that many of the proponents of this endeavor are just fabrication of what will not be manifested.
Thanks you,
Barbara and Bill Larsen

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of John Vaughan at jvaughan1946@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Vaughan. I live at 11793 Lower Colfax Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The normal process for opening a mine includes (at least) the following steps: Feasibility Study, Exploration (which requires an EIR and permitting) and Production (which requires an EIR and permitting).

One of the many DEIR commenters notes the following: “The mining project as proposed in this [Draft]EIR has a fundamental lack of information on the economic viability of the mine, and potential environmental impacts related to geochemistry and water quality. The data submitted in support of this [Draft]EIR is only sufficient to support an application for dewatering the mine, and for underground exploration

drilling. ... The [Draft]EIR should analyze an Alternative that provides for dewatering and underground exploration. That is the only Alternative that the information provided in this [Draft]EIR will support."

The FEIR response: "This proposed alternative (exploration only) is not economically feasible because there is significant cost with dewatering the mine, including construction of a water treatment plant, installation of a potable water pipeline to provide water to affected well owners, and underground access and safety improvements necessary to complete the suggested exploration phase. The proposed alternative would be economically infeasible because all the above costs would be incurred without the ability to produce any valuable minerals to offset that cost."

The author of the DEIR comment notes: "If you follow this simplistic logic, mining companies would never ask for an exploration permit, they would just ask for a permit to mine, and then go start drilling to see if anything is really there. This approach, which is what is being proposed by the Idaho-Maryland proposal, gives the mining company an enormous amount of flexibility, with minimum regulatory oversight. Mining companies complain a lot about regulatory oversight, as well as having to communicate with the public. However, those regulatory requirements are there for a reason – mistakes have been made by mining companies that have led to financial and environmental losses to individuals and public agencies. It is highly likely that the public officials, county employees, and even the people proposing this mine will not be there when problems arise. But the landowners around the mine, and the public agencies that have assumed responsibility for the mine, will still be there, and they are the ones that will need to deal with the problems."

Frankly, I am stunned by the FEIR response, which basically says "we can't afford to follow the normal steps so just give us a permit to open the mine...for 80 years". The fact that Rise Gold can't afford to follow normal procedures is not the County's problem.

Just say NO to the Final EIR and just say NO to this project.

Thank you,
John Vaughan, District 3

Sincerely,

John Vaughan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rebecca Brewer. I live at 14891 Banner Lava Cap Rs, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

After years of nomadicism, Nevada City is the only place on earth that I have wished to permanently call my home.

Now living atop Banner Mountain for two years, I can honestly say without doubt that this community is amongst the brightest on earth.

The Idaho Maryland mine project is a short sighted artifact of an old world laced with blindness around the impact of extraction on our local communities and our biosphere as a whole.

Short term thinking that would poison our local ecosystem is so last era. Our town, our county, and the human race is more evolved than this.

There are so many other ways to create jobs that do not rely on destroying the earth upon which our thriving rests.

I urge you to make the decision that will positively impact this place seven generations into the future.

I believe if you look deep down, you will know that reopening this mine is not that decision.

To my trust that you will do what's best for us, our children, our children's children, and all the children to come.

-Becca

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Theresa Crowell at crowellresa@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Theresa Crowell. I live at 11536 Lower Circle Drive, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I currently live in Alta, Sierra, which may not be severely impacted, but my whole life has been impacted by the legacy of mining here in Nevada county. It is with that that I am reaching out to you today. When I first learned about the mine reopening I wrote a letter, and submitted it to the union newspaper in the opinion section. You can Google that letter under the name, Theresa Huck. Strangely enough, I received a call from a gentleman at the San Francisco EPA office, asking me if Nevada county ever physically knocked on my door and notified me that I was living on a superfund site. Several days later, I received a call from the head of environmental health, here in Nevada county. She called and asked me if anyone from the San

Francisco EPA office had ever knocked on my door and notified me that I was living on a superfund site. Confused by the finger-pointing, I contacted an attorney. This attorney told me that it was in fact Nevada County's job to notify anyone living on a superfund site. I lived on that site, the year that it was filed as a superfund site, and I lived there two years longer without any knowledge of the circumstances surrounding the domicile I was renting. I also found out from that attorney, that I have a hell of a lawsuit that I can file against the county for not notifying me. My well water was contaminated with mercury and arsenic. When environmental health called me, she asked me if I was going to sue, and I told her at that point that if this mine re-opened, that is exactly what I would do. I'm already ill, and what has happened has happened, but to allow another mine to reopen when we can't even handle the legacy already left behind, that is unacceptable. I am writing this letter to let you know, but if you vote to allow this mine to reopen the first thing I will begin to do is to seek in attorney, Nevada county failed, and will continue to fail, and I can't allow this to continue to go on.

Sincerely,

Theresa Crowell

Dear Supervisors Dan Miller, Ed Scofield, Susan Hoek, Hard Bullock and Heidi Hall,

We are residents of Nevada County and our home, located in The Cedars, is less than a half mile from the Brunswick site where ore will be brought up to the surface, crushed and loaded for transport. Despite Rise Mining claims that they can mitigate community impacts, community members who live nearby the site are extremely concerned of the associated risks of increased noise, dust, traffic, water quality and vibration in exchange for very little to no benefit for the community at large. Rise Mining has indicated that they intend to operate the mine 24/7 with truck traffic throughout most of the day and this is certain to impact our quiet serenity that we currently enjoy in our neighborhood. No matter the mitigation steps Rise Mining claims they will take to reduce the impacts, we choose not to accept that risk, nor the risks associated with any unforeseen hazards that may occur during operation of the fully opened mine. It would be unfair to burden neighborhoods within a stones throw of the mine sites with the disruptions that are certain to occur. We did not choose to live near an operating mine when we purchased our home. Please side with your current constituents, not outsiders who care only for profit, and vote no to re-opening the mine.

Sincerely,
Scott and Rema Brown

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Aimee Had. I live at 10293 Harmony Ridge Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in Nevada City, CA 95959. I greatly oppose the re-opening of the Idaho-Maryland Mine. This mine will grossly destruct the quality of life here in Nevada County. I have studied this project from all angles, and plead with the Nevada County Supervisors and Planning Commissioners to say NO to this project.
The elaborate list of negative future impacts are clear:
Water & private wells toxicity, air quality decay, NOISE pollution, lung disease, PROPERTY VALUE decline, power-grid-consumption, and so much more, are all at enormous risk.
Please vote NO, and do NOT allow this project to proceed.
The many environmental impacts associated with this project, as well as the inconsistency with both Grass Valley’s and the county’s land use plans, provide ample justification for saying NO to this project.

Thank you so much for all you do, and for caring greatly about our community. This is such an important moment in time, we must cherish the splendor of our treasured home.
Thank you, Aimee Had

Sincerely,

Aimee Had

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Mines are part of our history, but have no place in our future. We should be spending our time, efforts, resources, and energy developing an infrastructure to attract tech and manufacturing companies to take up root here. Not invite a foreign company to extract resources, leave a hole and pollution behind, and import personnel for the high paying jobs, then leave when they've had their fill. Just say NO!

Sincerely,

Alex Palm

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Alexis McSweeney. I live at 11572 W Brookview Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in Cedar Ridge. My children go to school locally and my family owns several businesses in town. We are extremely opposed to the reopened of the mine due to the negative environmental, ecological, and safety impacts it WILL impose on our community.
Just say NO. There are other avenues to bring in revenue to our community. Daily we have new businesses opening and planning for growth. Do not bite the hand that feeds you. Collectively we are trying to build this community's wealth and growth - you are not alone in this.

Sincerely,

Alexis McSweeney

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Anastacia Knight. I live at 520 Richardson Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a resident of downtown Grass Valley and have learned bed in this home since 1996. I am strongly opposed to the mine due to the environmental impact, noise, and integrity/trustworthiness of the company who has proposed this venture. I am concerned about water use and pollution of water. The traffic impacts on our roads are another concern. I do not believe this issues have been mitigated in this process and there are too many unknowns to trust a company with a poor track history. Once damage is done it can’t be undone. Please vote no I n the mine.

Sincerely,

Anastacia Knight

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Andrew Birkhoff. I live at 14811 Winding Creek Court, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My wife and I have only lived in Grass Valley for seven years but we have embraced the community and have become quite active.
We have a nice home on three acres. We are on well-water and are aware of the groundwater threat. My wife lived in an active mining community and we are very aware of the noise, increased truck traffic and of course environmental impacts.
We both strongly oppose the reopening of mining operations here in Grass Valley and Nevada County.
Andrew Birkhoff

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ann Barbour at awcb@me.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ann Barbour. I live at 16006 Airiport Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live on Airport Road in Nevada City. We strongly urge you to say NO to the re-opening of the Idaho-Maryland Mine for a whole host of reasons: environmental; economic; life quality in Grass Valley/Nevada City and its surrounding communities. The environmental report is flawed. The estimates of economic benefit to the community are grossly overstated. The existing infrastructure does not support a project of this magnitude. The individual(s) behind the Rise Mine project have had abysmal track records in previous mine openings. Quality of life in our communities would be severely impacted by both acknowledged and unforeseen factors - well water, traffic, pollution, and water discharge among others.

Please seriously consider the reasons so many voters are against this project. Once

a project like this is approved, the damage cannot be reversed. Voters will remember how each of you vote.

Sincerely,

Ann Barbour

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Anna Welle. I live at 17002 Piper Lane, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived in Penn Valley (district 4) for 6 years and I love this entire county. I am looking to purchase a new home closer to Grass Valley and an active mine would deter me from wanting to live anywhere close to it. There will be excessive noise from both the operation and the increased traffic. (Especially from the trucks). The water quality will be at risk. And water availability for nearby homeowners is not adequately addressed. Which is a massive risk.

I beg you, please do not allow this mining operation to open. It is not worth it!

Sincerely,

Anna Welle

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Anya Stanger. I live at 11153 Cement Hill Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I was born and raised in Nevada County, and-- like so many of my childhood friends-- I've returned to raise my own family. What brought me back was the incredible life that we get to live here: the spectacular beauty, the access to the outdoors, the kind people, the arts and culture, the amazing schools, and the ability to be a professional in a small but bustling town. Our mining history has shaped this place, but it has left a bitter and long-lasting legacy. In a town full of resourceful people, we should know better than to pursue temporary profits at high costs: we have more creativity, smarts, and abilities than this! What brings people here-- keeps people here, and brings us back-- has the potentially to be permanently damaged by re-opening this mine. (Clean water, anyone??) Please realize just how important this issue is to so many of us-- we value our environment and quality of life above all else, and we don't have the luxury to believe that we can act without thinking of the

long-term impacts of our choices. Choose to be on the right side of history: side with the environment, with the people, and not with extractive and damaging mining companies. Just say no!

Sincerely,

Anya Stanger

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ari Shirvanioun. I live at 114 E Main St, Apt E, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been fortunate enough to live in Nevada County since I was a small child. I have lived most of my life in Lake Wildwood, but currently reside in lovely District 3. My entire life the county has changed around me, and I fear the negative change reopening the Idaho Maryland Mine would bring would make it difficult, or impossible, for many Nevada County residents to continue to live their lives here. Many of the beautiful and unique things in the county, including but absolutely not limited to, the history of mining in the area, are what make this place home. If reopened, the Idaho Maryland Mine would make much of the county uninhabitable, because of the nonstop air, noise and environmental pollution. The few, menial jobs it would bring to the county are not necessary, and would hardly be enough of a reason to reopen the Mine. Mining is Nevada County's history, not our future. Do not reopen the Idaho Maryland Mine. I am already being priced out of my home, please

do not make it any more difficult to continue to reside and raise a family here.

Sincerely,

Ari Shirvanioun

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Arielle Lowe. I live at 424 Zion St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I was born & raised in Nevada City & have been an active member of the community for my entire life. Nevada County has already dealt with significant struggles in the past several years due to economic changes, property damage due to severe drought followed by snow storms & fires, as well as the health struggles of Covid-19 & the poor air quality.
The last thing we need is further threat to our environment & community health. This should not even be a discussion.
Make the right decision tomorrow & stop this from taking place.
Thank you.

Sincerely,

Arielle Lowe

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is asha whipple. I live at 12778 lost lake rd, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

40 years after I was born in its living room, I inherited my family home on Lost lake rd.
It’s was great road to grow up on, full of families who wanted a more remote, outdoorsy lifestyle nestled in the woods. With wells and septic tanks, poor TV antennae and annual power outages in the winter storms; We were proud of the little extra fortitude it took live a bit more off the grid. Times have changed a bit… the road is paved, the internet is possible, it feels a bit less remote and rugged, but the real change is greater threats loom. We’ve had to hearty ourselves more against wildfire and right now we have to protect our water and quality of life.
There are hundreds of homes surrounding the proposed mines. Homes on clean healthy wells. Homes that would run the high risk of contamination if mining operations began nearby. There are homes and communities in peaceful woods that

all be disrupted with mining operations and heavy traffic.
We are not a mining town. We are a tourist town with a mining HISTORY.
Simply put I do not trust this mining company to care or protect our quality of life. Their goal is profit not community. It breaks my heart that even 1 citizen of this community would consider allowing this company to ruin so many neighborhoods and homes. All in the name of greed and promise profiteering off our natural resources at any price to the community. You wouldn't want to live next to this mine yourself so help your neighbor avoid the same fate.

Thanks
Your neighbor on Lost Lake Rd

Sincerely,

asha whipple

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ashli Franck. I live at 13312 N Bloomfield Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in this lovely community for nearly a decade. What drew me to this area is the abundant beauty of the natural world and peaceful way of life. Prioritizing the protection of our natural resources and way of life over corporate profit and tax revenue is the decision of integrity. The natural world does not exist explicitly for our consumption. Please make a stand on the right side of history. There are many ways to make money in the world yet there are only limited natural resources. Thank you for your service.

Sincerely,

Ashli Franck

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ashton Simpson. I live at 364 Sutton Way Apt 6, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am writing to express my deep concern and opposition to the proposed reopening of the Idaho Maryland mine by the company Rise. It has come to my attention that Rise has a history of ruining communities where they have operated up and has declared bankruptcy multiple times. These are serious concerns that must be taken into consideration When deciding whether or not to trust these people.

The consequences of the reopening of this mine would be disastrous for our community. The negative impact on our air, water, and land would be severe, and the health and wellbeing of our community would be put at risk. Furthermore, our already congested public infrastructure would be further strained, causing more chaos and disruptions in our daily lives. This is not worth creating a few jobs, most

of which will be taken by non locals and the baseless promises of millions in tax revenue which are not guaranteed(especially given their history of bankruptcy)

I implore you to take action and prevent the reopening of the Idaho Maryland mine by Rise. The welfare of our community must be given top priority, and we cannot allow our town to be ruined by a company with such a questionable history. It is our responsibility to protect our environment and the health of our citizens.

I call upon you to work with other community leaders and local authorities to prevent the proposed reopening of the mine. We must make our voices heard and stand up against this potential threat to our community. I am confident that we can work together to avoid putting our community at risk.

Thank you for your attention to this important matter.

Sincerely,
Ashton Simpson

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barbara Carole O'Gara. I live at 10489 Robin Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

My name is Barbara O'Gara and I have lived here for 12 years. My husband Steven A Smith has lived here for over 40 years. He and I bought property on Robin Ave off of Squirrel Creek west of the City of Grass Valley.
We value the effort to keep Nevada County free of businesses that will pollute and misuse the already scarce WATER we drink and use to cook with, and introduce harmful chemical into the precious AIR we breathe and the EARTH we walk on.
DO NOT roll back time by allowing a business like His Gold come in to RUIN and Pollute these Natural Resources.
Additionally the cost for all of us is too big for this business to to go forward. There is no way that this boondoggle is a regrettable mistake made be possible by power

hungry folks with rich backers looking to exploit and then run away when there is nothing left but carnage to the natural environment that surrounds and to the people who are worse off after the exploitative company leaves or dies!.

Sincerely,

Barbara Carole O'Gara

Dear Nevada County Supervisors and Planning Commissioners,

My name is Beverly Martling. I live at 16726 Alexandra Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I have lived in Nevada County since 1977. I currently live in Alta Sierra. I am totally opposed to reopening the Idaho Maryland Mine. It will destroy the reason so many people live or visit here.
Please say no to this mine. Its owner left an environmental mess in Canada. They have lied about the supposed benefits to this county. I cannot believe this is even a serious consideration for the Board of Supervisors.
I would have to vote against my supervisor, Ed Scofield at the next election, if he votes for this disastrous mine.

Sincerely,

Beverly Martling

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Blake Larsen at blakelarsen101@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Blake Larsen. I live at 10293 Harmony Ridge Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in District 1 Nevada City, CA 95959. I am a 20+ year resident and own a Residential General Contracting business. I am not opposed to development. However, I greatly oppose the re-opening of the Idaho-Maryland Mine. Nevada County has a history of heavy industrial development and therefore the consideration of a new mine is understandable. Legacy development plans, codes and laws are still in place that should be seriously reconsidered. The direction of development in this community has evolved to a point where heavy industry will be in direct conflict with the current rural residential development direction.

I have studied this project from all angles, and plead with the Nevada County Supervisors and Planning Commissioners to say NO to this project.

The elaborate list of negative future impacts are clear:
Water & private wells toxicity, air quality decay, NOISE pollution, lung disease, PROPERTY VALUE decline, power-grid-consumption, and so much more, are all at enormous risk.
Please vote NO, and do NOT allow this project to proceed.
The many environmental impacts associated with this project, as well as the inconsistency with both Grass Valley's and the county's land use plans, provide ample justification for saying NO to this project.
Thank you so much for all you do, and for caring greatly about our community.
This is such an important moment in time, we must cherish the splendor of our treasured home.
Thank you, Aimee Had

Sincerely,

Blake Larsen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Catalina Davis. I live at Po Box 582, Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived here in Cedar Ridge at 11010 Brunswick Dr., for over 25 years. I personally cannot see one good reason to re-open that mine. We are a small community that loves welcoming new people into the area. The Opening of the mine would cause nothing but destruction, bad air, and more noise just to say a tiny bit about why I object to it.
Please please please listen to your community and do not even think about the possibility of reopening this horrible mine.
Please don’t sell out for money. We love the area the way it is.

I am very concerned and just want you to know my thoughts.

Sincerely,

Catalina Davis

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Catherine Harris. I live at 11632 Deer Creek lane, Never City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada City for 23 years. My husband has owned a business here for the past 35 years. Please NO mine!!

Sincerely,

Catherine Harris

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Cheryl Zook. I live at 15543 Indian Springs Road, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in District 4 and I am vehemently against the reopening of the Idaho Maryland Mine. How this is even a consideration when the Empire Mine is still a contaminated environmental site more than 50 years after closing is incomprehensible.

Mining is in our past. Our future is in environmentally safe businesses, like our thriving tourism and organic agriculture industries. We owe it to our children and all future generations to support and protect our land, water and wildlife for the benefit of all.

Sincerely,

Cheryl Zook

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Chris Pappas. I live at 14232 Anchor Lane, Grass Valley, CA 94945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a small business owner, who lives in district 3 and our house is located approximately 1/2 mile from the site of the proposed mine. My family and I have lived in Grass Valley for over a year now, and we have always enjoyed the peace, quiet, rural feeling that the county offers. I am deeply saddened, and concerned that a company with somewhat of a questionable history may be allowed to re-open mine in the heart of our county. The reopening of this mine raises, serious concerns regarding the negative impacts to water quality, air quality, traffic, road conditions, wildlife in the area, and the quality of life for the citizens, who live here. As a concerned citizen I am begging the County Supervisors and Planning Department to say no to any further plans for re-opening this mine in Nevada county. The risk to the county, environment, and people, is simply not worth it.

Thank you for your time and consideration to my concerns.

Best regards, Chris

Sincerely,

Chris Pappas

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Chris Steffani at sywbip@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Chris Steffani. I live at 13110 Brunswick rd, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We own a four acre parcel on Brunswick at Hwy 174. We live there and operate an animal rescue operating there for the last eight years. The proposed Idaho-Maryland Mine mine will affect our operation for all the wrong reasons. It has already impacted property values in this area by up to 20%. This decrease will not only hurt owners, but also tax revenue, once all the affected homes file for reduced property value. Reasons: traffic, noise, air quality, well issues, hazardous and municipal waste. With the basin already filling in with homes, small businesses, restaurants, hotels, how will this affect the people living and doing business. Mining in the area left many years ago. Then people came settled and made Nevada County their home. After the destruction caused by the first mining operations, I have the highest hopes that your decision will be based on people not on profit.
Repectfully,

Chris Steffani, Resident on top of the mine.
Retired hazardous waste characterization analyst, Environmental Protection Division, Lawrence Livermore National Lab

Dear Nevada County Supervisors and Planning Commissioners,

My name is Clinton Shifflett. I live at 12999 Wood Rose Way, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I recently moved to Grass Valley from out of state because I love the area and have always felt like home here when I visited. When I had the opportunity to live here I was excited to take it. I live across the street from the Idaho Maryland Mine location. The old mine goes under my house. I fear, that if the mine is reopened, my family and I will have to leave the area due to safety and health concerns with the mine being directly under and across from our house. Vote no on the mine. It is not worth the potential environmental and economic impacts it may have on families and the community.

Sincerely,

Clinton Shifflett

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Courtney Reiswig. I live at 108 Park St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Grass Valley, but grew up in Penn Valley. My husband also grew up here and together we own a local Fitness Facility - Limitless Fitness. All of our members love this community and hope to see it continue to flourish. Supporting this community we come from is our purpose.

As a native of Nevada County, I have watched it grow and am a proponent of responsible progress. With that being said, the risks that are associated with this NON LOCAL enterprise are unacceptable. Even if this enterprise proposing to reopen the Idaho Maryland mine were local, it still would not be worth the risk.

The impacts from reopening the Idaho Maryland Mine would create a ripple effect of lasting proportions. The effects of pollution and water redistribution are not worth the

risk. The tax paying citizens who LOVE this community do not deserve to be put in jeopardy.

We borrow this land from our children. It is our duty to steward and honor it above all else, regardless of political, or economic affiliation.

This mine will cause damage that cannot be undone. Money can never replenish lost resources that we are all so fortunate to have, here. Please honor the lives of those whom this Mine will bring harm - those who've elected you and whom you represent. Vote NO MINE, for us and our home.

Sincerely,

Courtney Reiswig

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Cynthia Borkenhagen at caborkenhagen@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Cynthia Borkenhagen. I live at 411 Kate Hayes St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a retiree who relocated from the Bay Area two years ago. I have a lovely home near downtown Grass Valley. I moved here not just to be closer to family, but to enjoy this charming town with its slower pace of life and beautiful surroundings. Rise Gold is a proven plunderer of the environment. Why would we trust them to "reform" themselves in Grass Valley? For a few jobs and a paltry financial return? NO! Our water, our air, the noise and the pollution...our health is at stake. There is only one answer to "Rise Gold?" It is NOT HERE! NOT ANYWHERE!! Thank you for your kind consideration. Grass Valley is counting on you.

Sincerely,

Cynthia Borkenhagen

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Cynthia Kapin. I live at 12255 Hoppy Hollow Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Cynthia Kapin. My husband and I live at 12255 Hoppy Hollow Road, Grass Valley.

As concerned residents, we are asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. All the residents in Nevada County have the rights to say NO to anything that would threat our health and lives and have the rights to be free of that fear and threat!

We believe there are many HEALTHY ways to bring more jobs, revenues and income to this area. Mining would definitely NOT be one of them!!

Sincerely,

Cynthia Kapin

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dan Gregor. I live at 520 Richardson st, Grass Valley, Ca 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have been here for about 20 years and I don’t want to see this vacation paradise environment destroyed by careless industrial mining by an outside company with little to no interest in the environment of our community. Just NO! We don’t want to see this waste of our hard work to make this a peasant and safe place for our family and community. Please don’t let this happen. Industrial mining has a horrible record of destroying the local environment and just paying damages when without cleaning up the damage. We vote no.

Sincerely,

Dan Gregor

Dear Nevada County Supervisors and Planning Commissioners,

My name is Daniel Worden. I live at 16630 BASS LN, NEVADA CITY, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada City since 1975. I live in the Lake Vera Neighborhood and am a practicing
Marriage Family Therapist in the community. I have witnessed many trends of development during my time here.
Mining was an historical endeavor that had devastating consequences on the landscape and indigenouss cultures.
I don't want another mining endeavor that will negatively impact the culture we have created in the near half century of my residing here. Let's use our imaginations to develop alternative eoonomic opportunity.

Sincerely,

Daniel Worden

Dear Nevada County Supervisors and Planning Commissioners,

My name is Darryl Snow. I live at 14278 La Noria Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We moved from Sonoma County to District 3 seven years ago with hopes to retire here and enjoy all that the area has to offer, and then this mine issue came up. As an environmental geologist, I cannot understand why this should even be considered while knowing the history of mining impacts here and elsewhere. Since we can't even vote on this potential environmental disaster, I hope you understand that you have a huge responsibility to do the right thing for us and the future of the area. Please just say no.

Sincerely,

Darryl Snow

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Kimmel. I live at 18163 Lake Forest Dr, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

How valuable is our land and community? I say too valuable to trust the Rise Mine run by someone who has a track record of leaving an environmental mess behind. Why would you take that risk? I used to be in business. You didn't hire someone who was a convicted embezzler to run your books. They might have reformed but your business was too valuable to take that risk. Why would you Supervisors take this risk with our community?

Don't take the risk? Why do you have to? Please say no to this mine. If you want more jobs, work on recruiting a clean business. Don't sell us out.

Sincerely,

David Kimmel

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Kyle. I live at 10643 Whispering Oaks Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, Our names are David and Patt Kyle. We live in District 1 and have lived in Nevada/Grass Valley area for 25 years. We've had independent businesses as consultants - Lind & Kyle Consultants. We were here when the other two mine fiascos happened. It is difficult to believe that the County would permit another mine to happen
here, particularly so close to our towns. This area over the 25 years we've been here has become retirement, recreation and tourism. Everything I have read from the reports and the position of Rise Mine and its owner is that what they claim to do is not realistic, beneficial, economical, and environmental sound for the county. We have read the reports and the open comments and the work of mine watch. Beyond the significant environmental impacts there is little evidence that jobs and tax

revenue will compensate for what we would face here from the mine.

Our big concern is the 80 year permit and the possibility of some other mine operator comes in if Rise sells the mine and we have no control over the new owners. It is so clear this mine does not serve the community or the county. We please ask you to vote no not to permit to open the Idaho-Maryland Mine.

Sincerely,

David Kyle

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of David Myers at davidtroym@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Myers. I live at 14915 Quail Pointe Lane, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I am a resident of District 1; my family moved to the area 4 years ago.

I am deeply concerned by the prospect of the Idaho-Maryland mine reopening. The risk to the local economy and residents' quality of life is not worth the very uncertain (and inflated estimates of) county revenue.

The estimates of new revenue to the county are uncertain at best. Any county revenues that do materialize will be more than offset by lost revenue from the tourism industry, declining property values, and the very likely need for the county to pay for environmental mitigation measures in the future. Meanwhile, our local housing crisis will be exacerbated by transient mining workers who will contribute very little to sales tax revenues.

My family moved here because of the incredible quality of life, particularly the natural beauty. That beauty is about to be destroyed by large-scale mining operation. Everyone should expect noise and pollution to increase dramatically from the mine. Rise Gold has a well-documented history of leaving pollution and broken promises in the wake of its operations.

Do not enrich a foreign company at the expense of your constituents. I urge you to vote “No” on the mine reopening. And to be frank, I (and many others) will make it a mission to have any supervisor who votes “yes” lose their position in upcoming elections.

Sincerely,

David Myers

My name is Debra Dworaczyk. I live at 18630 Oak Tree Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Debra Dworaczyk

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Dee Anne Dinelli at deeannedinelli@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Anne Dinelli. I live at 13050 Little Deer Creek Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for 43 years, raised my family here, and been employed by Grass Valley School District for twenty years of my career, as a special education speech therapist. Since retiring, I have owned a small commercial portrait photography business, Shadow Dance Photography. My supervisor district was changed from District 3 to District 4 recently, and I am urging my supervisor, Ms. Hoeck to vote NO on re-opening the mine. I am aware and concerned about the danger this mine would pose on air and water and soil conditions, especially for those most vulnerable, our children. Thank you.

Sincerely,

Dee Anne Dinelli

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Smith. I live at 582 Morgan Ranch Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have beed fortunate to call Nevada County my home since 1971. I left Los Angeles with bad air, water and over development, to live in this beautiful, clean area to live and raise a family. I watched LA destroy a once beautiful area for the sake of benefiting someone's pocket and without regard to the consequences of irrvirsably ruining the air, drinking water and land.
I beg you, please do not allow the mine to be reopened and actively operated in out town just for the sake of supposed temporary income at the cost of permanent damage to our beautiful town. Poor air quality, water loss for the wells in the area with a drought no less, increased heavy traffic in our already congested areas. Once the damage is done, it cannot be undone.
Again, please deny the opening of the mine for the sake of temporary income. Think of the well-being of the residents and quility of life we have. The people who voted

you to protect us.

Sincerely,

Dee Smith

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Dee Webster at dee@message4u.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Webster. I live at 12856 Burma Oaks Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 3, just past the Burma Road crest, which as the crow flies, is only a tiny distance from the proposed mine site. My parents purchased this property and began to build my childhood home here in 1952, when I was only five years old. I graduated from 8th grade at Union Hill School and from Nevada Union High in 1965. I am 75 years old.

There are dozens and dozens of reasons that I vehemently oppose the reopening of the mine! It would take me more than all day to write a letter that would encompass all of those objections, which you have heard a gazillion times already. So I will focus here on the most immediate localized and personal objection that I have.

I ABSOLUTELY CANNOT ABIDE THE HUGE POTENTIAL THAT ALL OF US IN THIS AREA WOULD VERY LIKELY LOSE OUR WELLS! And then what? The only "life-support system" I have is my home here. How would I be able to live here without water? And no one would consider buying my home and property if I were being forced to leave.

In other words, you have the power to destroy my life! As a very low income senior citizen, with no family, it appears to me that I am at your mercy on this point, an idea that runs against everything I believe in and every fiber of my being!!!!!

I have no family (other than my 97-year-old mother, incapacitated for the past 5+ years at Spring Hill Manor), meaning no husband, living siblings or children.

I have never considered myself to be the helpless type, but my home is essential to my well-being, especially so with it's location here because I am quite electrosensitive and would become quite unwell very rapidly in an apartment or other urban area of heavy electrosmog of wi-fi zones everywhere, cell phones everywhere, cell towers, etc., etc. Even more so with the expansion of 5G!

And yet it appears that your decision could deprive me of the only safe zone, my home here, where I am connected to my satellite internet service via my hardwired ethernet cable, (i.e. no wireless here) and where I run my laptop on its battery. DC does not make me ill. Just strong AC EMFs and radio frequencies. I live in a portion of the house that is as far distant as possible from the AC power main and from the power lines at the edge of the property.

I can't help but wonder how many other neighbors and nearby residents there are, each with their own individual stories and needs, whose lives you will also be putting in jeopardy if you approve the reopening of the mine!

What comes first in your own lives? Caring and compassion, kindness and supportiveness? Where do YOU stand within the truths and values of your own personal, inner selves as they relate to the wider community that you are supposed to be representing?

Sincerely,

Dee Webster

Dear Nevada County Supervisors and Planning Commissioners,

My name is Deni Silberstein. I live at 10505 Bragg Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

To the Nevada County Board of Supervisors and their representatives on the Planning Commission:

As an adult, I have resided, worked, volunteered and recreated in Nevada County for 24 years, living in District 3. As a child, my parents frequently brought us to Nevada County on fishing, camping and hiking trips. I have a deep love and familiarity with this county.That it has a history of mining is interesting, but that - rather sordid - history is far outweighed by the natural history and stunning beauty of this Sierra gem of a county (not to mention the reality of mining's habitat destruction and Nisenan obliteration). Nevada County should not allow the greed-based lure of gold to again leave its habitat destroying, community marring trademark on our contemporary soil. Unlike our mis-guided forefathers, you now have the opportunity

to JUST SAY NO! to the reopening of the Idaho-Maryland Mine! Please, vote from your heart, not from the pressure of other peoples' desire for GOLD!

Sincerely,

Deni Silberstein

Dear Nevada County Supervisors and Planning Commissioners,

My name is Devin Mecham. I live at 11249 Squirrel Creek Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The advertisements about the “silent majority” of our community being pro-mine are insulting to the people of Nevada County and Grass Valley. I worked for two years in a small general store on oak and squirrel creek where I established deep connections with the people of grass valley. Whenever we’d discuss the mine, political opinions to a side seat to the natural beauty of our town and our duty to defend it from financial interest. These unspoiled hills are the constant between all walks of life up here and the commercialization of the natural resources of our district could only be ushered by the silent majority remaining silent.

Sincerely,

Devin Mecham

Dear Nevada County Supervisors and Planning Commissioners,

My name is Diana Runnels. I live at 13797 Sontag Hill Road, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in District 1 and have been concerned about the obvious factors that the various studies have listed, not necessarily adequately addressed. I have yet to feel confident or swayed from my initial concerns. The unknown impacts to wells, to property values, noise factors, traffic issues, etc. can not be addressed fully based on studies from other areas. No one can gauge any of these factors to the degree that makes the Grass Valley community comfortable with opening the mine. Please don't allow the downfall of our community to come about based on the greed of a company with a questionable operating record, in fact with outstanding legal issues. Please do not allow this mining operation. Please "just say no". Thank you.

Sincerely,

Diana Runnels

Dear Nevada County Supervisors and Planning Commissioners,

My name is Diedra Spohler. I live at 18163 Lake Forest Drive, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in District 4 for 24 years and in District 3 for 5 years before that. I love this community and plan to stay till my dying days. A mine in our area, however, would change that. My life partner and I are chemically sensitive and would not stay here if the mine were to go through, polluting our air, water and soil. I enjoy the relative quiet here and the low amount of traffic though that is changing. Having the mine here would accelerate that even more so to an intolerable amount.

I say an adamant NO! to the mine.

Thank you.

Sincerely,

Diedra Spohler

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dom Lindars. I live at 16979 Rabb Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Nobody wants this mine.

Their CEO committed crimes at his Canadian mine; do we really expect anything less if he was allowed to start one up here? The FEIR is not a complete picture of what we can expect. Well owners will certainly suffer. And using an old toxic mine dump as the site for a new toxic dump site is a really bad idea. The mine won't create local jobs, unless we think that hiring mine experts and skilled labor from out of state counts. We don't want our roads filled with dusty, noisy trucks or our creeks filled with toxin-filled water.

And as a gentle reminder, as the NUJHSD election recently showed, if you vote to allow this mine to go forward, you will be voted out of office.

Please, listen to the people of the county and Just Say "No."

Sincerely,

Dom Lindars

Dear Nevada County Supervisors and Planning Commissioners,

My name is Don Davis. I live at PO Box 1083, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, my name is Don Davis. I first moved to Nevada County in 1988. I own my second home since coming to the area. I love this place and, after spending time elsewhere, I always return. It has changed over the years and that's not a bad thing. The proposed change, the Idaho-Maryland mine, is not a good change. I've read all the "stuff" and been to the meetings. I don't know why it's still being considered. I see no real benefit to the community. Perhaps some individuals will benefit but - overwhelmingly - this is a bad idea for Nevada County. Please use your vote to rid us of the unneeded, unwanted encroachment by denying this horrible opportunity. Thank you, Don Davis

Sincerely,

Don Davis

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Don Wiljamaa. I live at 13951 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

District 3 Greenhorn Rd area
In addition to the paragraph above, I wanted to state I have lived on Greenhorn for 16 years. I submitted opposition letters to the last company that tried to get the mine in operation. In either case, the issue of homeowners wells in a larger area around the mine has never been adequately addressed. It seems the issue of ground water is somewhat ambiguous, but I am majorly concerned our well has a very good chance of being negatively impacted. We moved to this area for the ambiance of a rural small town. I was a real estate broker in Oregon for many years, and I am also quite concerned that the mine reopening will affect property values significantly. This is an area that attracts people who have a choice where they live, not just a relocation based on a local job. The affect of a major industry (mine) reopening 70ish years after closing, with homes having been built right around it, is almost

incomprehensible to me. It's clear to me, the history of mines, even though the common PR strategy is to say technology has improved significantly, and there will be minor impacts to environment. History has been that it has been so easy for corporate entities to split off, the part of the company left responsible goes bankrupt, leaving the county/city/state having to deal with the mess.
I have not seen where it is stipulated that whoever does the mining (if it were to open) to have to place a realistically large amount of money, to cover long range problems that could happen as a result of the mining operation, in some kind of account, that is just for that purpose.
Please reject the Mine
Thank you

Sincerely,

Don Wiljamaa

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donald Gagliasso. I live at 14035 Diamond ct, Grass Valley, California 94545.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am against the mine. I want to keep our well. I do not believe the mine will pay for all the damage, that occurs, when they bring water up to my house. Being in construction for 55 year I am well aware of all the problems that occur after being promise they would not happen, (truck traffic, hours of work, noise, dust, dirt on streets, number of trucks used, staying on approved truck route, speeding vehicles) to name a few. Since I am across the street from the mine, I know my property will devalue. Our neighbor has not been able to sell their property saying the few onlookers did not bid because of the mine. I am against 24/7 working hours because there is no need if they are only taking 1500 yard a day. This can easily be done in a 10-hour workday or less.

Sincerely,

Donald Gagliasso

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Donald Wilkinson at drosswilk@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donald Wilkinson. I live at 11167 Daniels Dr, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

All mines require environmental clean-up and it is rare that companies can be held accountable. This company is designed to dissolve before any post profit clean up could be initiated, voluntarily or involuntarily.

Sincerely,

Donald Wilkinson

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donn Carlson. I live at 10805 GOLD HILL DR, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

How will Rise Gold ensure clean up of the mining sites. We would need a bond of at least hundreds of millions of dollars, if not hundreds of billions. Where can they obtain such a bond?

Sincerely,

Donn Carlson

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Doris Bowen at dorisbow7@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Doris Bowen. I live at 11010 Brunswick Drive, Cedar Ridge, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived for 15 years on property that is next to the proposed mine. After 73 years, I finally found the home that is perfect for me: Cedar Ridge. I love the nearby trails, the abundant wildlife, particularly the raptors, owls and other beautiful and varied birds. I love the SERENITY of this area!

My neighborhood will be forever changed for the worse if this mine is approved. No only will the wild habitat be disrupted, but the lovely Cedar Ridge area will no longer be a desirable place to live. Life for me and my neighbors will never be the same. I am too old to think about having to move out of the area.

I have read some of the environmental reports, and frankly, they scare the hell out of me.

The person who wants to reopen the mine has a terrible environmental record and has refused to pay the fines he's been levied. This is someone we DO NOT want doing any business in our community, let alone opening a mine.

Please VOTE NO on reopening the Idaho-Maryland Mine. Thank you.

Sincerely,

Doris Bowen

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is E S Eberts. I live at 12969 SOMERSET DR, GRASS VALLEY, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We are deeply concerned about the impact to the community we know and love- environmental, quality of life, real estate prices, noise and pollution, impact on tourism. Not to mention the concern about the solvency and credibility of Rise Gold. They make lots of promises but can't back it up with bonds. It's plain to see if you look at their past record!
Please DO NOT LET THE MINE REOPEN.

Sincerely,

E S Eberts

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elissa Crevoiserat. I live at 13243 Loma Rica Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley my entire life. It has only been recently that living here has become more stress inducing with the risk of forrest fires and drought. That’s why the thought of lowering the water table and shipping our water out of the area for the sake of profit is absolutely shocking to me. I cannot believe the idea is even being considered. The risks are obvious. The number community members that will be affected is obvious. Just say no to the Idaho-Maryland Mine.

Sincerely,

Elissa Crevoiserat

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elizabeth Fjeldheim. I live at 16905 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

Why are the Nevada County Supervisors and Planning Commissioners risking the Nevada County quality of life and putting our air quality, underground water sources, watershed quality, and the over environmental health of Nevada County at risk? Let alone all that is at stake for the sake of a Canadian company with a very soiled past?

There is no obligation to approve the mine, or any other local mine. The environmental impacts are unavoidable, and truly unforeseeable. The mine project is inconsistent with Nevada County's General Plan, which is one of the reasons many of us choose to make Nevada County our home.

Sincerely,

Elizabeth Fjeldheim

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen Clephane. I live at 13951 Greenhorn Rd, Grass Valley, CA 94945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live a little over 1 mile up Greenhorn road from Brunswick ~ very close to the mine. We have been here 16 years and love the quiet rural nature of this area. I am horrified at the thought of a huge industrial complex, with daily parade of trucks, the noise and air pollution, the high chance of our well going dry or greatly diminished, and the destruction of the lovely quality of life in our community. No need to spell out all the other environmental impacts that have been clearly stated by others.

PLEASE, PLEASE, PLEASE vote with your heart, your conscience, your caring, your desire to truly represent wishes of the people you are here to serve. Please do NOT destroy the beauty of this land and the well-being of all who live here. The potential loss on so many levels is not worth bowing to the interests of money.

Thank you so much for hearing this plea and saying NO to the mine.
Ellen Clephane

Sincerely,

Ellen Clephane

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellie Anderson. I live at 13072 Morro Drive, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

Like most of Nevada County, my water comes from a well. It is my only source of water for inside and outside. I'm fortunate because it is not filtered and tastes good. My well is low producing but with conservation, especially outside, it has provided for me for 23 years.
What am I to do if the dewatering process causes my well to go dry? What am I to do if contaminates spread to my well? I CANNOT LIVE WITHOUT WATER!

Sincerely,

Ellie Anderson

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Eva Saelens. I live at 13145 Wild Life Lane, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

My husband grew up in Weimar and we owned land in Dutch Flat for some years, but never developed it. We decided to move to Nevada County because we didn't feel confident that Placer county was truly dedicated to the preservation of ecosystems, a major priority for our family. We bought a house in the You Bet area in 2020. Part of our relationship to our surroundings is to be educated and dedicated to the care and preservation of these beautiful, wild lands. We would be absolutely heartbroken to see the county allow this mine to go forward. It is an action that is precisely the opposite of what our family desires and I believe what the majority of this community desire. People stay here and are coming here because of the Gorgeousness and purity of these lands. There is already so much trauma here from the extractive settler brutality that brought white people to this land. The way I see it, we must live our lives as an apology to these traumatized lands, and to live in a spirit

of apology to those indigenous peoples who were murdered and banished from their ancestral homeland. This mission can't happen alongside this gold mine and its sketchy management. Please come to your senses and reject this proposal.

Sincerely,

Eva Saelens

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I grew up in cedar ridge and this place was actually close to my backyard.
I've looked up details about the owner who want to open up this mine again. He has previous gone bankrupt from another mining project he had in BC where they are still trying to clean up the land from all the toxic waste. He promised to follow guidelines there and it didn't happen. Why would he keep it safe here? This is all for profit to make him rich. I'm sure you have heard all of this thousands of times now. Please keep the people of grass valley safe. Make them feel heard

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Francisco Rojas. I live at 13318 Snow Mountain Camp Rdn, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

Sincerely,

Francisco Rojas

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Frank & Jill Ernandes at Frank.Ernandes@Att.Net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Frank & Jill Ernandes. I live at 11547 Brunswick Pines Rd., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My wife and I recently purchased a home not far from the proposed Idaho-Maryland Mine Project Site. We decided to relocate to Grass Valley because of it's beauty, history, community, quality of life, natural resources, clean air and water, as well as the peace and quiet this particular area offers. We gave serious consideration to this issue prior to purchasing our "Dream Home and Property", and can't imagine how our Nevada County Supervisors and Planning Commission could ever approve such a potentially devastating, disastrous project. Clearly, re-opening the Idaho-Maryland Mine would adversely impact those of us who live here, as well as the environment, including our air, water and quality of life, notwithstanding the impact it'll most certainly have on fish and animals that live and thrive in this area. It has the potential to be one of the worst environmental disasters of our time, if approved. Please

consider these facts very seriously when casting your vote, as it'll impact us all. Although we're relatively new residents in Grass Valley, who plan of spending the next 30 years, or so (God willing), enjoying our new community, we'd likely be forced to sell and leave the area if this disastrous project is approved. Please count my wife and I as (2) "NO" votes on the Idaho-Maryland Mine Re-Opening Project. Regards, Frank & Jill Ernandes

Sincerely,

Frank & Jill Ernandes

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Frederick Bianchi. I live at 12 Mill St., Rockland, ME 4841.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

While the adverse effects of reopening the mine have surely been well-articulated by others with expertise in the environmental impacts, I will not repeat that detail here. My more immediate concern regards my plan to retire next year and relocate to Grass Valley. The beauty of this area and the environmental resources of Nevada County would provide me the opportunity to continue my post-academic writing and research activities. However, if the mine reopening proposal is passed, I would certainly reconsider my intent to relocate to the area.

In closing, I have read the literature regarding the proposal and have studied both sides of the argument. My hope is that you will act in the best interest of the environment and for the people living in the area.

Sincerely,
Dr. Frederick Bianchi

Dear Nevada County Supervisors and Planning Commissioners,

My name is George Olive. I live at 15356 Banner Lava Cap Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

While my family lives on Banner Mtn and knows a re-opened IM Mine will cause year-round, 24 hour/day negative impacts to the currently peaceful surroundings and ecology we enjoy, what I'm really thinking about are the ugly realities that caught the even more peaceful San Juan Ridge neighborhoods so by surprise as the Siskon Gold Mine - another Canadian boondoggle - cranked up its water pumping and exploration. Nevada County's Planning Commission and BOS in the mid-90's just did not imagine and completely misjudged the breadth of damage a re-opened mine could cause to wells, local creeks, air quality and noise pollution. Consider the unpredictabilities ignored when Siskon's proposal was approved. Just SAY NO to this next invasion by a Canadian company which has no real future investment in our community's quality of life.

Sincerely,

George Olive

Dear Nevada County Supervisors and Planning Commissioners,

My name is Geri Stout. I live at 101 Bawden Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in District three and have since 1987 although I have been a resident of Nevada County since 1976. I have an MS in Renewable Resources and many years of teaching experience concerning environmental issues. The Idaho Maryland Mine must not be reopened under any conditions. This land and water has been damaged enough! We must protect all our natural resources including our air quality, water, the list goes on and on! Our children and grandchildren deserve a clean and healthy environment.

The impact report has so many flaws and omissions that it must not be accepted! The many letters opposing the mine that have been submitted directly to you and the articles and letters that have been printed in our local paper stress so many reasons why you must not endorse the mine. Please use your good judgement not to

endorse the mine and also its impact report!

Sincerely,

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Gina Groom at gina.m.groom@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Gina Groom. I live at 12436 Beaver Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am writing to express my strong opposition to the proposed reopening of the Idaho-Maryland mine. As a concerned citizen and member of the community, I believe that this decision would have a detrimental impact on our environment and the health of our residents.

First and foremost, the reopening of this mine would result in a significant increase in air and water pollution, causing harm to both people and wildlife. The extraction process releases toxic chemicals and heavy metals into the air and groundwater, which can lead to respiratory problems, birth defects, and other health issues. The mining waste can also contaminate nearby rivers and lakes, negatively affecting aquatic ecosystems and the species that rely on them.

Furthermore, the increased traffic and noise associated with the mining operation would have a negative impact on the quality of life for residents in the surrounding area. This can lead to decreased property values, higher levels of stress, and a decrease in overall well-being.

In addition, the reopening of the mine would also have significant consequences for the local economy. Despite the potential for short-term job creation, the long-term effects of mining on the environment can harm tourism, agriculture, and other industries that are crucial to the region's economy.

In conclusion, I urge you to consider the potential harm and "vote no" for the reopening of the Idaho-Maryland mine. Instead, I encourage you to explore alternative economic development strategies that prioritize sustainability and the well-being of residents.

Sincerely,

Gina Groom

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Hannah Lipski at hannah.lipski@live.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Hannah Lipski. I live at 547 W Broad St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a resident of Nevada City, district 1. I have been living here for over five years. I have a deep love for this place, and it feels like home.

However, I have noticed that since I have moved here, I now have chronic congestion. Since the air quality is already so poor in our area, it concerns me to have a significant mining operation taking place. Nevada county residents are two times more likely to get lung disease compared to other counties in our state. Further, it was given an F by the 2020 state of the air report from the American Lung Association in particulate pollution levels and ozone levels. What we really need is to be actively working to remedy our community's air quality issue. Reopening the mine would send the message that the health of our community is not of your concern, because the operation of the mine would contribute to the pollution of our air from

significant sources of dust and fumes.

This personally impacts me and others in the present. However, potentially a more chilling consequence is the long term effects of the production of toxic waste. Toxic waste impacts can stick around for generations, long after my lifetime.

I am also seriously concerned about water. Climate change is not going to go away. California's drought is not going to let up anytime soon. We need to be conservative about our water. Rise Gold's plan of 3.6 million gallons per day is unsustainable. Further, the damage of creeks, habitat and risk of wells is concerning. The number one issue related to animal and plant endangerment is habitat loss.

Rise Gold is not to be trusted. The answer is simple. No mine!

Let's instead protect our people and land and clean up what is already contaminated and persisting as a problem, ie. low air quality.

Thank you!

Sincerely,

Hannah Lipski

Dear Nevada County Supervisors and Planning Commissioners,

My name is Heather Hunt. I live at 15079 Lewis Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I was raised in Nevada County and am now raising my children here. It is really important to me that we not repeat the ecological mistakes that were made here in the past. We are a beacon of progressive community. Please oppose this mine.

Sincerely,

Heather Hunt

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Heidi Belforte Breuer. I live at 18354 Raccoon Trail, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am appalled by even considering allowing this mine in Grass Valley. I hope my values align with yours. I would never trust someone who is under federal investigation in another country for polluting to come to my hometown and open any kind of business.

Thank you very much.

Sincerely,

Heidi Belforte Breuer

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Helen Martini. I live at 11613 Lower Pine Hill Drive Extension, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in District 1 and have lived my whole life in the Grass Valley area as did my mother and grandparents. If it were not for mining I would not be here but times have changed. I want this land to be beautiful for my children and grandchildren and this mine is not the way to do that. Yes, Nevada County needs many more good jobs, jobs that will support a family. We don't need more pollution, noise, and poorly paid jobs. Please vote no on the mine. There are other ways to create jobs that will promote a good living here in Nevada County. Again, please vote no on the mine.

Thank you,
Helen Martini

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Goodban. I live at 38 Candy Ln, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

There needs to be more thorough studies completed on the surrounding well sites before a decision is made. Why would you decide on something that will affect our community so hugely with only a small part of information? The majority of the community is adamantly against this, especially with a foreign company with a bad track record of ruining other communities like ours, leading it. This is all fueled by greed. There is absolutely no benefit to us if this goes through, it will only be detrimental in so many ways. I'm astounded it's even gotten this far. Thank you in advance for doing the right thing and voting against it.

Sincerely,

Janet Goodban

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Janet Weaver at jm.mp31@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Weaver. I live at 10818 Gunsmoke Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have several concerns regarding the Rise Gold Mine.
1. Well Water: Although we are 3.5 miles down Greenhorn, we may also be impacted by the voluminous amount of (possible contaminated) water that will be extracted from the mine. We are still in a drought and the snow disaster we had in December, reflects that. Trees had shallow roots because of the lack of water The enormous amount of water that will be then sent down the South Folk Wolf Creek, perhaps overflowing its banks.
2. Traffic: As I leave my home to make my right onto Brunswick from Greenhorn I generally see many cars that lined up at the flashing red light to enter the city or freeway. Sometimes they are as far back as the exit from the mine on Brunswick. To add 100 trucks coming up from Bennett will probably put this line as far back as the

“Y”. Many people from outside of GV area, are probably unaware of the extra time it will take them each day to get either into our city or out of it.
3. Toxicity: Hard rock mining is extremely toxic. Our property was deemed an EPA Superfund in 1998 because of the tailing overflow from the 1997 storms. Because the County could not afford the clean-up, the federal agency stepped in and spent thousands of dollars to correct the toxic waste flowing down the Little Clipper Creek. Taxpayers from all over the country fund EPA. EPA continues to monitor this site and I understand it will always be deemed a Superfund site.
4. School Buses: Our children will be riding on school buses that pass the mine almost daily. They will be exposed to longer delays at the Brunswick and Bennett intersection, plus possibly breath in toxic dust coming off the trucks.

There are so many other reasons NOT to have this mine. Perhaps consider having it a permanent green waste space and build a cogeneration (cogen) plant, creating our own clean energy.
We are no longer a Mining Town and anything built in that area should reflect 2022 ideas and not 1849 ideas.

Sincerely,

Janet Weaver

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janice Meyer. I live at 14423 Saddleback Pines Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I have resided in District One since 2001. It is more than essential that our government officials LISTEN to theiir constituents. It is obvious, as this project moves forward to be more than sensitive to those affected but advocates for their wishes.
IF the company behind the mine had a stellar history, there might be legs to stand on going forward. One only needs to review past operations to know we do NOT want this for our community.
Thank you for your consideration.

Sincerely,

Janice Meyer

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jeffrey Hunt at huntapplevalley@aol.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jeffrey Hunt. I live at 15494 Clover Valley Road, GRASS VALLEY, CA 95949.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

My wife Darlene and I live in the unincorporated section Alta Sierra, District 2. My spouse and my two little dogs moved to Alta Sierra in June of 2021. She a retired Nurse, and I a retired 25 year builder and 18 year Special Education Elementary Teacher.
40 years ago we were visiting relatives in Grass Valley and we both thought it would be wonderful to live in this part of California. Well, we are here now for good. This geographical area is truly, "wonderful!" The wildlife, landscapes, trees, waters, air, extremely low manufacturing green- house emissions, the peace and quiet, the people, schools, 1st responders , business owners, and the History are very special. No amount of profit can justify potentially destroying this magnificent region of California by re-opening the Idaho-Maryland Mine. Even the highest estimates of

profits from the proposed re-opening of the mine pales in comparison to the future profits of the long-term continuation of the way of life and business that now exsist, and is to come if we simply vote NO! to this mine re-opening proposal.
Please let History show that we as citizens made the correct and healthy choice and said, YES!! to keeping our prosperous and beautiful way of life here in Nevada County.
Respectfully,
Jeff and Darlene Hunt-

Sincerely,

Jeffrey Hunt

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jennifer Crebbin. I live at 21708 Dog Bar Road, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

We live in a historial mining community and we are still suffering the environmental impacts. No more mines!

Sincerely,

Jennifer Crebbin

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jennifer Long. I live at 16665 Eden Ranch Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My letters sent at the beginning of this proposed business venture - state all of my concerns:

Starting on August 10, 2020 I sent newspaper links to Matt Kelley about the mining operation Mr. Mossman had at the Yellow Giant Gold Mine and other boondoggles.

I expressed my concern that Nevada County taxpayers would be left holding the bag if the owners are irresponsible, or leave a toxic mess.

This project would undo the building up of our local tourist economy.

I believe the financial risks are very high to our communities, and outweigh any employment opportunities.

No to this project!

Thank you for your consideration,

Jenny Long
resident since 1971
retired Nevada County Library employee

Sincerely,

Jennifer Long

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jess RIEGEL. I live at 10911 WOLF RD, GRASS VALLEY, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Greetings! My name is Jess Riegel and I have been renting a studio in South County for 6.5 years. This property,
off Wolf Rd., is directly on Wolf Creek, and I have a very close relationship with this creek. I jump in about every day of the year, doing cold plunges in the water even during the winter. I love doing this, and cherish the water! Its one of the main reasons I oppose the new Idaho-Maryland mine, I'm very concerned about the environmental impact to this creek. No new mine, please! Thank you for representing us!

Sincerely,

Jess RIEGEL

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jim Pappas. I live at 15700 Turquoise Place, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live about 5 miles from the proposed mine site and, in addition to all of the reasons commonly referred to by opposers off the mine, let me add the problem in increased traffic. This due to not only the vehicles associated with the mine but all of the cars associated with mine employees. The relatively relaxed traffic patterns of Grass Valley would become like those of Auburn and Saint Helena, - semi rush hour traffic all day long. Not to mention the increased pressures upon schools, hospitals and housing. caused by the increased population.

In addition to money, and power, quality of life needs to be considered in all decisions that affect the life of thousands. What a painful thing it would be to have left the many disadvantages of the city only to have our board of supervisors recreate them here is peaceful Grass Valley.

Please, vote your conscience and truly represent your constituency as you have pledged to do.

Thank you,

Jim Pappas

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Clappier. I live at 15987 John Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I do volunteer work at the North Star House. I have done a lot of reading and learning about the history, processes, and negatives of gold mining.

Problems:
- Rise Gold's bad record of not living up to promises
- The noise, road damage, traffic issues and general disturbance of constant trucks hauling taiings
- Water pollution, ground pollution, noise pollution
- Threat to well water and very likely devaluation of nearby homes
- and the list goes on

The damage that they will do to our wonderful community far outweighs any benefits the people who actually live here will realize.

Mining is a toxic, noisy activity that is part of our PAST but would be destructive to our current and future environment and quality of life in Grass Valley.

Why has this not been put to a vote of the citizens instead of being decided by the council ... who don't seem to be taking the objections seriously or they would have told Rise Gold to "go away" by now!

Sincerely,

Joan Clappier

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Staffen. I live at 516 Temby Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am horrified that anyone on the Planning Commission or Board of Supervisors would support opening a toxic mining business in the heart of Nevada County without regard to our air, water, land and people., as if any amount of money could be worth the well being and lives of the people of Nevada County. The mining project is counter to the will of the people. One only need to look to the Ben Mossman's past history who are in the midst of a Canadian court cases for violating environmental laws on native peoples lands to know that Rise Gold is a sham of a company. Vote No against the Mine and Yes for the people of Nevada County.

Sincerely,

Joan Staffen

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,
We are a family living close to the Railroad Museum off Gold Flat, near downtown Nevada City. (district 1)

We, and our neighbors, are all STRONGLY against the opening of the mine. Although I was raised in Canada, and usually try to support Canadian companies, this company has no business opening a mine ANYWHERE, and certainly not here in Nevada City, for so many reasons.

No No NO!!

Thanks for listening,
John and Osher Alevizakis and Family

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Egan. I live at 16343 Rattlesnake Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley for 28 years and am very concerned about the mine reopening. Rise Gold's CEO Mossman already has a bad track record of maintaining its required responsibilities... "Mossman's prior company polluted tribal waters, went bankrupt, and left Canadians with a bill to pay."..

Couple that with the heavy traffic, potential groundwater pollution, and noise, and it is clear that we do not need this type of problem in what is now a bedroom and retirement community.

Do not allow this potential disaster to affect our neighborhood simply so a few out-of-towners can pocket profits.

Sincerely,

John Egan

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Kelly. I live at 10688 James Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Nevada City near Banner Lava Cap, and we will undoubtedly leave the area if the mine is approved. We have never seen such an erroneous EIR report supposedly by an unbiased organization. The mine will be a disaster for the whole of the western end of Nevada County.

However the plain truth is fundamental. Rise Gold has basically zero credibility as a good operating company. Rise Gold has left a trail of unfinished disasters and is trying to the same within this great county. Rise Gold's history and track record is appalling and it should not be permitted to operate in Nevada County.

Say NO to re-opening the mine.

Sincerely,

John Kelly

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John palmer. I live at 624 Nivens Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in this area for sixteen years. I now live downtown Nevada City, in District One. My wife and I are retired and love the quiet life here.

One hundred and seventy years ago this area went through the Gold Rush. The land was washed away, the rivers polluted, the forests cut down. We like to look back at it as a magical time. It wasn’t. It was an ugly time. A time of greed and selfishness and cruelty. Fortunately, that time has passed. This area has moved on. It’s now a tourists destination, a quiet place to retire, a great place to work remotely. Reopening the Idaho-Maryland Mine no longer fits this area. We don’t want to go back to noise, pollution, congestion and greed. Vote NO on reopening the mine! Thank you in advance for being an advocate for our area.

Sincerely,

John palmer

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Purchase. I live at 10412 Mercury Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the grandview terrace neighborhood which is bounded by hwy 174 & bennet road. Our neighborhood looks down on the centennial property. The amount of toxic dust and equipment noise produced by the effort to reshape the centennial site will make my delightful neighborhood unliveable. Please vote no on the mine.

Sincerely,

John Purchase

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jonathan Gordon. I live at 13967 Glenn Pines Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 approximately a half-mile from the proposed reopening of the Brunswick Site. I purchased my home in August of 2022 so I am a new resident to Grass Valley. Among many of the appealing qualities of Grass Valley are the beautiful environment with fresh water and air, and the peace and quiet. I have been following the process of the potential mine reopening since first beginning my due diligence during escrow of my home. I believe the proposed mine reopening would be extremely detrimental to the quality of life that is currently so appealing about Grass Valley. Pollution, traffic, noise would all come into play if the mine were to reopen and I have little faith in a company such as Rise with such a disastrous track record. Additionally as a property owner with my own well, I am deeply concerned about the impact from the mine on my water supply. Currently when water in

California has become a more precious commodity than gold, it's ridiculous to entertain the idea of the mine reopening and potentially impacting the water supply. I strongly oppose the reopening of the Idaho-Maryland Mine and hope the board of supervisors will listen to the overwhelming voices of the citizens of Grass Valley who oppose the reopening and vote no.

Sincerely,

Jonathan Gordon

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joshua Latimer. I live at 14412 Rattlesnake Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Rattlesnake in District 1; moved here two years ago from Truckee in District 5, where i lived 24 years. I run my own IT support business. I'm baffled why the county would be considering allowing this project to a company with such a checkered history as Rise Gold to begin with; but beyond that, it seems that the project offers quite a few certain negative impacts (noise, pollution, road traffic) and uncertain but likely impacts (negative property value impact, possible well water impact, unwanted and suspect discharge into Wolf Creek). Most rational people recognize that the specific skills that will be required by the mine will be imported from outside the county, so "jobs" isn't a compelling argument. Plus it is pretty clear that FEIR couldn't find a similar mining community to compare things to, because nobody in their right mind would want an active mine in the center of their community!

Sincerely,

Joshua Latimer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jude Daley. I live at 1737 Deerhaven Lane, Colfax, CA 95713.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

Heidi Hall was our district supervisor until we moved to Placer county partially due to the real possibility of a gold mine in our town. My position remains the same. Changing zoning to allow the reopening of the Idaho Maryland Mine to a foreign entity already in litigation for creating and abandoning a toxic mess in their own homeland would be a HUGE MISTAKE TO OUR COMMUNITIES! This is just one fatal aspect of the board approving a conditional use permit and allowing a plethora of negative consequences to spill into our backyards, literally. Re establishing as a gold producing entity was never part of the General Plan. There are no real benefits, only hardships to the people who will live the nightmare day after day, while a foreign country gains wealth from our own stupidity. Here are just a few

drawbacks…

Dewatering into the wolf creek, where portions have protected wetland areas and sensitive animal habitats not to mention possible flooding as we have seen in these last series of storms.

Noise, pollution and energy consumption from large diesel generation.

Roadway traffic from large trucks and machinery throughout the day into the night.

Underground blasting, and residential disturbance on multiple levels.

Water well desecration.

Etc., Etc., Etc.,

For only 70 or so underground, dark, dirty jobs while all the higher paying senior jobs are already spoken for? How are we so easily blinded by this crumb of an offering while our land is raped, again? Feels like there might be something else being offered that the general public is not aware of. If so, we have the right to know what this is.

We can do better than this for our Communities! Do the right thing and say NO TO THE RISE GOLD MINE!

OUR HEALTH BEFORE THIER WEALTH!
WE ARE MORE VALUABLE THAN GOLD!

Jude Daley

Sincerely,

Jude Daley

Dear Nevada County Supervisors and Planning Commissioners,

My name is JUDY DUDNEY. I live at 20055 ECHO BLUE DRIVE, PENN VALLEY, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

In 2011 I moved from Tuolumne County after 27 years.Both Counties are in the 'Gold Country' I live in Lake Wildwood ...which is district 4. I have been down this road before when a Mine was proposed in a more rural part of Tuolumne County..however many folks could see the detriment to the landscapes as well as the congestion it would cause to a pristine part of the County...as well as being counter productive in many aspects. Thankfully it was turned down...This area would be a horrifying encounter..1 Step Forward..2 Steps Back.. in the long run with many regrets. Don't swallow a Camel and strain a Knat.. So I agree to the statement and I am asking you to "Just Say No" to reopening the Mine..

Sincerely,

JUDY DUDNEY

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Judy Serb. I live at 15569 Allison Ranch Rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello I’m a resident of District 2. Judy Serb at 15569 Allison Ranch Road. Grass Valley California
I’m very concerned about the reopening of the mine. We moved here in May of 2017. We chose Grass Valley for the quiet and caring community that it is. We moved here from the Bay Area. We moved from the noise, traffic and refineries. If we think that constant digging, trucks constantly on the roadways and the promise of new jobs is going to benefit the city then some of us have our heads buried in the sand. Please don’t be swayed by false promises.

I’m concerned
About air quality
Being on well water and I’m very concerned about the quality of water and the

sustainability of our water supply.
About the congested roadways
About the death of our downtown.

I would not put Grass Valley on the top 10 list of places to visit amidst the destruction of our roadways, air quality, water supply and overall congestion. Our overall health and quality of life has no price

I hope the board of supervisors will do the right thing and ‘just say no ‘

Thank you
Judy Serb

Sincerely,

Judy Serb

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Julia Carroll. I live at 11069 Cedar Ridge Drive, Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I have owned property (and paid taxes) in Nevada County since 2000 and have lived in District 3 since 2006. We love our home in Cedar Ridge and hope to stay here until they cart us off to the rest home. (We're both in our 70s.) But our life here will be ruined if the mine is approved. Our home's sellability and value will be greatly reduced (regardless of what the faulty economic report says), so we either will be stuck in a place we no longer enjoy or lose much of the money (our equity) we might have used to see us through our old age. And that's just about us.

The entire community for many miles around the mine sites will be spoiled by the pollution, noise, traffic, etc., regardless of what the faulty EIR says.

Please please please say NO!

Sincerely,

Julia Carroll

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Julie Carville. I live at 14582 Alderwood Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I'm a long time home owner in district 1 in Nevada County, for more than 30 years. We have had historial damage from mining here starting with the gold rush. The murdering and starvation of Indians and the stealing of their land, and also huge destruction to the environment caused by mining should be enough for us to have stopped mining forever, even though the conditions are different now.

Yet we still consider mining requests, with their welknown damaging results, including what happened to wells up on the North San Juan Ridge even with the promise that their mine would be safe and safely monitered.

After all this why do we glorify mining, as if were good for the community?? Is wealth for the few and a few jobs worth it for the more likely damage it will cause over a

horrifying 80 years. That alone should make you say NO. Mning didn't build our community, people did, and we should be ashamed at how we continue to glorify it.

Please create a zonning law or whatever will stop any more mines forever, so we don't we don't waste time and money and unpset the community, as is happening now, over this new mine. Create a law now that stops all mining in the future. Right now you have enough threatening information (even just the 80 yrs request!!!) now to say no to the Idaho-Maryland Mine. Just say NO now. Represent our community, stop the mine.

Sincerely,

Julie Carville

Dear Nevada County Supervisors and Planning Commissioners,

My name is Julie Childs. I live at Po Box 527, North San Juan, CA 95960.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live within 2 miles of the Siskin mine and experienced the disaster when they hit the underground river. I lost my well. They left us up here denuded of all the trees on their property and a scotch broom and manzanita landscape. No mining company cares about the community. No local jobs were ever offered. Our govt let us down by allowing that project. Please don’t let us down again. Do Not Allow this new fiasco to happen. The damage is irreversible! I work at Grizzly Hill School, where there is no water fountains for the kids because our water has to be super filtrated. Never again be so duped!

Sincerely,

Julie Childs

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kalena Avila. I live at 12223 Rough And Ready Hwy, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

Sincerely,

Kalena Avila

Dear Nevada County Supervisors and Planning Commissioners,

My name is Karla Bravo. I live at 14891 Banner Lava Cap Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The charm, artistic and conscious population in Nevada City/County are what make this community such a magical place. It is what has drawn people like myself out of the Bay Area- AWAY from greed, traffic, pollution, and machine-like power centers. Please reflect on this and the future of our beautiful county. We have moved away from the times of the Gold Rush and the energies that that brought into our area. Our community is thriving because we are drawn to the purity of the land and our connection to it. It would heartbreaking and soul-crushing to dishonor these lands for profit and greed. I trust the right decision will be made with the heart.

Sincerely,

Karla Bravo

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Katherine Schugren Meyer. I live at 508 Brighton St., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My family has lived in Nevada County for 60 years. I live near Minnie Park on Brighton with my husband and two small children. Our son attends Kinderland Preschool in Cedar Ridge and we are concerned about its proximity to the proposed mine. Nevada County is still recovering from the negative environmental impacts of its mining history. We do not believe that any type of mining, no matter how "clean" or "green" the technology claims to be, is safe for our community. And the proposed economic benefits would not offset the potential for air, water, and noise pollution. We want to preserve our area for future generations. Please do not approve this proposal!

Sincerely,

Katherine Schugren Meyer

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Kathleen Madeira at tlmadeira1@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kathleen Madeira. I live at 149 Park Ave., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived at my current address for 29 years, in Grass Valley for 30. I'm close to Empire Street, close to the Empire Mine.
I was here when Canadian company, EmGold purchased the mine and tried to reopen it. They sold their holdings to RiseGold, another Canadian company. I see no positive outcomes for our county to allow this mine to reopen. The state stepped in to try to clean up the mess from Empire Mine, including constructing the ponds to try to clean up the polluted water. With California in a perpetual drought, there is no reason to allow a company to hold ownership for 80 years, flushing over 3 million gallons of tainted water a day, into a creek and through many rivers eventually spilling into San Francisco Bay and into the ocean. Another troubling thought, is that the representative of RiseGold is in litigation for polluting different mine properties in Canada and other countries. What happens if there is a problem here? He can easily

just leave Nevada County and the state to try to clean up the mess. I see no benefits of allowing this to go forward. There is also the problem with air pollution and noise from trucks driving on our small roads, carrying rock that is laden with asbestos and dumping it, who knows where, 24 hours/7 days a week. This area is residential, not industrial and the jobs that he's talking about are smoke and mirrors. The dewatering of people's wells, the noise and air pollution and the water pollution are enough to make me shake my head and wonder what is going through your minds? It's too bad that something couldn't be done on this property that would benefit the natural beauty of our area and maybe attract more tourism, rather than destroying it. Please vote no on allowing this to go forward. Thank you for your time.

Sincerely,

Kathleen Madeira

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kathy Foley. I live at 12372 Beaver Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3. I lived in Los Angeles for 50 + years moving to Grass Valley 2.5 years ago about when the re-opening the Idaho-Maryland became an issue for the community. At first I didn't know what this was all about, whether it was good or bad for our new community and I was open minded about the pros and cons.
I started pursuing information from both sides to make my own decision and without a doubt I confidently decided NO NO NO to reopening the Idaho-Maryland Mine, or any other mine ever.

This is 2023 not 1863 our planet is fragile and vulnerable, let alone our community of Nevada County where water is gold, fire has devastated some and we do not want to open our selves up to who knows what so another big company with an already suspicious history can come in to cause more harm to our water, our wells, our

roads and our air, our peace of mind.

Let's work on attracting other quality people and companies that appreciate and understand why we live here and want to contribute consciously to provide better jobs and tax revenue without the RISK.

Sincerely,

Kathy Foley

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kathy Jablonski. I live at 123 Boulder St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The cost/benefit analysis on the mine seems quite factually clear that the costs of longstanding health risks, longterm toxic pollution to natural and inhabited areas, noise and trucking impacts, quality of life impacts far outweigh proposed and unguaranteed benefits. In any circumstance where mines are reopened in Nevada County, it not a sound decision to hire a corporation with such an unsuccessful track record, where the community pays the price for decades. Nevada County is Better than giving property over to such an operation. I urge you to represent your constituency and decide based on the clear facts

Sincerely,

Kathy Jablonski

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Keith Porter. I live at 12968 Burma Rd., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live just a mile from the site, and can recall as a child when the New Brunswick site was still operating. We often heard and felt explosions from underground blasting, and worried how that might impact the flow of our water supply, a spring. I'd like very much to not again have that concern in my later years.

On a less personal level, the proposed movement of mine tailings from the site to the Centennial site on Brunswick and Whispering Pines is my largest concern. The Centennial site is likely already toxic, and the truck traffic will be a major source of pollution and noise and a danger to travel in the area.

Our community has grown away from our mining and timber roots, and there is no reasonable way to return to activity on this proposed scale. The impact on our

community, the environment and global climate change is untenable. The gold must stay in the ground.

Sincerely,

Keith Porter

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ken Bradford at kenbradfordphd@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Bradford. I live at 17601 Shoshoni Trail Ct, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 1, Nevada City, having resided in Nevada City for 4 years. As a retired couple intent on luring our children and grandchildren to the area, the local high quality of life is of paramount importance. Given the potentially slight benefits and enormous detriments of reopening the mine, it is clearly in our estimation a huge net negative. For all the reasons the various forms of thorough research have already clarified and the outstanding hazardous impacts that appear to be more likely than not, we urge the supervisors to strongly reject this misguided proposal that will, literally, take the riches of Nevada County while likely leaving the county irreparably damaged. Like so many other communities close to mining operations. Its just not worth it!!

Sincerely,

Ken Bradford

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ken Bradford at kenbradfordphd@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Bradford. I live at 17601 Shoshoni Trail Ct, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 1, Nevada City, having resided in Nevada City for 4 years. As a retired couple intent on luring our children and grandchildren to the area, the local high quality of life is of paramount importance. Given the potentially slight benefits and enormous detriments of reopening the mine, it is clearly in our estimation a huge net negative. For all the reasons the various forms of thorough research have already clarified and the outstanding hazardous impacts that appear to be more likely than not, we urge the supervisors to strongly reject this misguided proposal that will, literally, take the riches of Nevada County while likely leaving the county irreparably damaged. Like so many other communities close to mining operations. Its just not worth it!!

Sincerely,

Ken Bradford

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Stupi. I live at 13068 Madrona Leaf Court, Grass VAlley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in the Wawona Mardona Neighborhood in Grass Valley. Our home is located on the northern and eastern edge of the mineral rights. We are very concerned about the effect the mine will have on our well. In addition, the mine operator has a history of unscrupulous business atvities. From a a more global standpoint, what if soemthing goes wrong or when it is time to clean up the mess in 50 years? There will not be any money set aside, nor will the mine company have any assets left to clean up their mess.

Please vote no on the mine.

Sincerely,

Ken Stupi

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is kendall Annie. I live at 14676 Peaceful Meadow Ln, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve been a resident of Nevada County for 13 years now. I’ve come to love our quaint towns and the caring spirited people who live in it. I chose to build my business, Cosmic Shark Clothing, in Grass Valley CA 6 years ago because I felt this could be the place I settle down in. I felt a sense of community and that we cared about the preservation of the land we live on. I want a clean and safe environment for me, my family, friends and community. Allowing the mine to operate in our town would be a another tragic step to the declining health of our planet and community. Please don’t allow this to happen.

Sincerely Annie Kendall

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kimberly Carlsen. I live at 328 2nd Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I am also a top-producing Realtor in the area, and I have significant fears about how the potential of the mine would detrimentally affect home prices in our area. I worry that the entire Greenhorn/Idaho-Maryland/Cedar Ridge/Brunswick and surrounding areas will see home prices take a dramatic dive, and families will lose their homes in short sales due to the value being depleted based on the proximity of the mine. As a general rule, I strongly believe that home prices will be affected to some degree throughout the entire Nevada County and that our area which once was seen as so desirable, will weaken in the eyes of anybody considering relocating up here. All of the local homeowners who already have invested in what was to be their forever home will be faced with a major depletion of their investments. With our entire community being affected, I imagine both historic downtowns to lose revenue, and many places to go out of business. I believe if the mine is approved, we will see a

tremendous downturn in our economic health and well-being throughout Nevada County. This concerns me very much. Thank you so much for your time.

Sincerely,

Kimberly Carlsen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lana Fredrickson. I live at 16908 Banner Quaker Hill Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Cascade Shores, Nevada City, and have lived in Nevada City a total of 38 years. I have raised children here and recently retired from a lifelong career as a social worker. I live here because I value the natural environment and the aspirations and ideals of the area’s community citizens generally also do. We don’t need or want the mine, or any mine, re-opened to wreck havoc on our soil, air and water quality. NO NO a million zillion times NO! We deserve better. Our land deserves better. We know better than we did in the past how harmful the effects of mining are. Our job is to preserve and protect this home and place of sustenance for us and for future generations. Sustainability and viability are the real winners for us all, not a chase for short-term dollars which eventuates in long-term loss. NO!

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lance Goddard. I live at 14165 Talking Pines Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have owned property here since 1992 and have never been so concerned about the possible implications of a development here as I am with the proposal to reopen the Idaho-Maryland mine. You are aware, as am I, of the negative implications of such development. I don't wish to list the negative effects of the project as I am sure that you are aware of all of them. My purpose in writing is to state once and for all that this project just cannot be allowed to continue. Please don't allow the powerful economic interests to override the sensible and well documented interests of the huge majority of the citizens of Nevada County.

Sincerely,

Sincerely,

Lance Goddard

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Larry Engel. I live at 12116 Horseshoe Lane, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Forest Knowles area of Banner Mountain, one property above the Wolf Creek. I have resided and voted here since I retired in 2015. I have filed two lengthy objections to the disputed DEIR, and I am filing an even longer objection to the final EIR, all of which draw upon my half century of experience as a bankruptcy lawyer often dealing with failing mines and their insurance companies. Contrary to the disputed EIR/DEIR claim of compliance with CEQA, they fail to satisfy the court decision requirements for a “good faith reasoned analysis,” as my objections demonstrate in exposing serious errors, omissions, and worse.

Sincerely,

Larry Engel

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Larry Hoffman at hofbat@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Larry Hoffman. I live at 266 N Auburn St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Having worked at Hewlett-Packard for over 20 years as an IT Manager, I am acutely aware of assessing risks and developing disaster recovery plans. The process also involves doing robust scenario planning. These are all areas of deficiencies in the final EIR, as well as in the mindset of the Rise Grass Valley company.

For example, consider how many assisted living facilities are within the proximity of the potential mining site. These would all be at risk should an unforeseen chemical or environmental accident occur due to mining activities. As we observed during recent fire events, there is no coordinated plan to evacuate people at these facilities as well as the many people who live in the area who are unable to leave on their own. At the very least this and other scenarios should have been evaluated for the potential risks, and associated plans should have been developed before any such

industrial endeavor is approved.

For this an many other reasons already illustrating the negative impacts of reopening the mine, you must not approve this proposal. Furthermore, I would suggest that the city and county buy back the property, thus eliminating the possibility of future efforts to reopen the mine.

Sincerely,

Larry Hoffman

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Brownell. I live at 10415 Jasper Agate Ct, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in district one for nearly a decade, and own a small business in town. Reopening this mine is moving our community in the opposite direction we need to be headed. We should be considering how to move forward in a way that respects our beautiful natural community rather than towards the past, which caused enough environmental damage.

Sincerely,

Laura Brownell

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Gagliasso. I live at 14035 Diamond Ct., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been at this address 14035 Diamond Ct, Grass Valley, District 3, for 10 years with 65 years of prior association with the area. My property's water is supplied by a well. It is one of the wells that will be impacted by this project. I recently paid, in last 6 months, to have the well water tested and it is of excellent quality all around...tested for minerals and toxic elements. I expect it to stay that way. There is no reason to think otherwise.

It is My well-My water.
I did NOT ask for this! It is akin to having an uninvited person come into my home and help themselves to My furniture..."because they can". I say NO.

I count! I matter! I will fight anyone who tries to take my well, and say NO to the

mine.

There are other more appropriate uses for this land that need to be explored. Uses that will support
tourism, and more jobs than the few this project will provide. Uses that will support the community...the whole community not one salesman from Canada.

Just Say NO!
Laura Gagliasso

Sincerely,

Laura Gagliasso

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Gerhart. I live at 11010 Brunswick Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am writing to you from Cedar Ridge. I am a 30 year resident of Nevada County, 25 of which I have owned a home. For 30 years I've paid my taxes, raised children supported local business and recreated in our beautiful community.

My property is on the edge of the proposed Idaho Maryland mine. The area is home to bears, deer, all the little creatures of the forest and maybe even big cats. Developing the Idaho Maryland, mine property and pumping all that water through Wolf Creek will definitely negatively impact their habitat. And there's less and less habitat left for them these days.

The impact on the forest creatures is in addition to the faulty and overstated economic claims, environmental claims and community support claims that those

proposing Idaho Maryland mine have made all along. I'll leave that argument for those more skilled and articulate in addressing those facts, but I absolutely do not believe the mine has our best interests at heart. They are outsiders with a very poor track record.

I urge you to pass on the mine proposal with a no vote when the time comes.

Sincerely,

Laura Gerhart

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lauren Lauria. I live at 13784 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

It is common sense, and stated by hydrology experts that there Are real dangers to all wells within the mineral rights boundaries. The FEIR is severely flawed in this respect! If a significant failure were to occur in any of our wells, it would initiate a landslide of hardship and major loss of property value. It is completely false to state "...no significant impacts to domestic water wells are predicted". YES, they are! Many of these water wells are now part of the FEIR's plan to implement monitoring. This fact alone shows us all that there IS a significant chance we will suffer gravely from a failure. It is a complete failure to Not have the necessary infrastructure in place when that happens. The professionals of NID have concluded it is a major concern and a multimillion dollar bond should be made mandatory. This needs to be taken a step further and require the infrastructure to be built. None of us can live one day without our clean water source, let alone years to wait for infrastructure to be

built. If this is not done, it is a sentence of a catastrophic event that will turn this county upside down and ruin our lives, financially and emotionally. A mass exodus Will happen, and the county's tax revenue will suffer the consequences.

This by the way, is only the tip of the massive iceberg. We cannot live here with the toxic air, noise, vibrations, traffic, and wildfire dangers exacerbated by thousands of gallons of diesel and explosives on site. Our health and well being Will be impacted! Any vote to approve the FEIR and further the progress of this terrible plan is a complete failure of our governing body to protect and serve the citizens. Do the right thing. Reject this entire project, starting with the FEIR!

Sincerely,

Lauren Lauria

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lenda Woodard. I live at 11321 Beauview Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live about a block away from Idaho Maryland Mine. We only have well water that will be drained, due to draining the mine full of water into Deer Cheek. Which will not only flood the creek, it will be full of chemicals, i.e. arsenic, dumped into the mine when they closed it. My sister knew the guy that dumped it. Trucks going in and out 24/7. What happens when we have a evacuation? Not to mention the exhaust fumes not just from the trucks, but they will also be exhausting the fumes out of the mine. What about the noise 27/7? You got to be kidding about the jobs provided. Pretty sure they will be bringing the miners down from Canada, and the $$ will be send back up to Canada. There are people up on the Ridge that are sick from drinking well their well water. Not to long ago, parts of Brunswick Road collapsed due to the mine. I understand the man who is buying it, is being held up in Canada for not

cleaning up the mess he left behind when he closed another mine. He just took the $$ and ran. Please think about all the people this will effect. We have enough traffic here already. Thank you for listening..

Sincerely,

Lenda Woodard

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have lived in the Lake of the Pines Ranchos for over 20 years. Our home remains on well water at our property and we are very concerned about water quality and other environmental issues in our area. We moved to Nevada County from the Bay Area because we desired a peaceful, rural community and see the reopening of the mine as a threat to our neighborhood, even though our property is not located adjacent to the mine.

Sincerely,

Linda Adam

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Linda Boswell at colebos@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Boswell. I live at 14023 glenn pines rd., grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live out Greenhorn Rd. on Glenn Pines Rd., very near the mine. I have lived here about 18 years.

If the mine re-opens, I would be directly impacted by the noise pollution 24/7, air pollution and possibly smell pollution 24/7, possibly could not open windows in my home, well water drying up, unrelenting traffic 24/7, torn up streets from big trucks, AND my property value declining.
Not to mention what the site would look like after all the trees are removed and all the buildings are built.

And for what?
The negatives far outweigh the positives.

Who benefits?

Who would want to live here with all these problems?

Put yourself in our shoes.
Do any of you (supervisors) live in the directly impacted area?
If you did/do, would you vote for the mine?

It's not just those of us who live nearby, but the others in the county, as well as visitors we depend on to visit Grass Valley and Nevada City, who would now avoid the area and perhaps choose other places to vacation.

I ask you to think long and hard about this issue that will change the face of our area for 80years or more.

Just Say No!
Thank you for your time,
Linda Boswell

Sincerely,

Linda Boswell

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Elston. I live at 12406 Gayle Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I am a resident in District 1 on lower Banner Mountain in Nevada City. My house has a view of some of the Brunswick Road traffic, plus we can see the intersection light at Idaho Maryland Road and portions the Brunswick Basin. I have lived in Nevada County for almost 25 years and run my own business as a commercial MAI appraiser from my home. I am extremely concerned about the re-opening of the Idaho-Maryland Mine for many reasons. I can see and hear the traffic slightly along Brunswick Road below my house now. I am very concerned the noise will be much worse from the mine due to additional trucks and increased traffic needed to haul away the materials and waste, perhaps 24/7. With global warming getting worse each year and with prolong droughts and more wild fires, I don't think our community can affordable to give away any additional water that is needed to run this mine. We will most likely be challenged enough just to keep up with our basic water demands

in these times of global warming and the uncertain weather changes. Everyone in California knows that water is becoming more “scarce”. We cannot afford to think differently by allowing a mining company within our community to risk our future. As an appraiser and economist, I don’t believe for a minute that this new mine will produce any substantial and sustainable jobs for our community, and probably outsiders that will get the higher paying positions. We need to think of attracting greener and other cleaner industries into our community that reflect our values and that are more sustainable vs. a risky/dirty mine. Also as an appraiser, I am well aware of the risks this new mine could have on our property values from the additional noise in the outlining neighborhoods, additional pollution, additional hazardous risk to our environment and this community, the additional risk for water production/reductions to our well/properties, and all the other potential negative effects this mine will have on our community, our homes and our health. I moved to Nevada City and the Sierra Foothills because of the beauty and higher consciousness of this community. The re-opening of the Idaho-Maryland Mine is just about the worst thing our community could do. It is actually backwards thinking in terms of caring and stewarding our foothills and the protecting our precious resources, especially as the future gets even more challenging. So I am a strong “NO” on reopening this mine. I hope we can all come together and put our land, our water, our air, our community and it’s people, and all the good things we already have here now as our first priority before any corporate greed and outside Canadian miners who can destroy all that has been precious to those who live here now. So please, please just say and vote “NO” to re-opening the mine as the representatives of our community. Please protect and reflect the bigger picture for the good of our entire community, the well-being our health, and long-term care of our citizens and our property/land here. Thank you for your service.

Sincerely,

Linda Elston

Reply-To: gehlenlinda@gmail.com

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Linda Gehlen at gehlenlinda@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Gehlen. I live at 11199 Manhattan Mine Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Linda Gehlen

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Munoz. I live at 19131 jones ridge road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We own property near the
Beginning of greenhorn road
And know property owners in these areas and their water will
Be severely impacted by the opening of the Mine on Brunswick Road!

Water quality, disturbance constantly by large trucks running many hours, and the huge matter of the effect of dumping mine waste soil have not been addressed fully.

Certainly property values on greenhorn and Brunswick and on our community will be adversely affected!
Please vote NO on any further
Costly studies and NO on this

Mine!

Thank you
Larry and Linda munoz
Living off Greenhorn many years!!

The promoter of this Mine
Is still in legal problems in Canada
And will not be able to really bring in more jobs!

Sincerely,

Linda Munoz

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lindsey Nick. I live at 17777 Caruso court, Grass valley, California 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a lifetime resident of Grass Valley I am certain that the negative affects on my friends and community members of reopening the mine far outweigh the benefits. I will not stand to see our land, water and air polluted for the sake of generating profits for a company that has already shown to be irresponsible and untrustworthy. The fact that their operation will contaminate surrounding wells and immediately lower the quality of life for anyone living nearby should already be enough to keep them from moving forward. I believe in our town to say no and do what's best for the people who live here and our beautiful lands.

Sincerely,

Lindsey Nick

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is lisa bjorn. I live at 14995 Clear Creek Pl., grass valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived here for 30 years now.I live in district 4.I realize the mine is on the other side of town from me but, I shop locally ,support many local stores ,and use many of the local streets.
I am very concerned with many aspects of this mine coming into our area. I have seen this county change and grow into a diverse community with a lot to offer. We are spending a lot of money changing downtown Grass Valley and I don’t believe the mine will help those changes. This is not a gold mining area any longer. Going backwards dose not feel like the appropriate growth we are all interested in.
Please take care of our beautiful,special towns and don’t vote for this mine.

Sincerely,

lisa bjorn

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lisa Nowlain. I live at 12645 Valley View Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Banner above the Brunswick Basin. I have 2 small children. I have often thought about moving away from Nevada County, but keep making the decision to stay. The environmental beauty, the quiet, and the community's commitment to each others safety and health is why. The mine would destroy all that. I have my Masters in Library and Information Science, and have read the reports. It would be unconscionable to build that mine here. Please reject the mine.

Sincerely,

Lisa Nowlain

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lisa Schliff. I live at 19002 Dog Bar Road, Grass Valley, CA, USA, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Please vote against the mine! I live in South County, District 2, on Dog Bar Road and have been in Nevada County for seven years. The mine will impact our area for the worse, not the better. Please vote no! Even though I live far from where the mine is planned, I drive into town frequently and will be impacted by the increased traffic, high-level noise, and environmental degradation. Please don't allow the CEO to lure you into added revenue for the County and more local employment. The worsened quality of life will be too high a price to pay. I and my family members are counting on you to reject the mine proposal. Thank you.

Sincerely,

Lisa Schliff

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Lynette Cepeda at cepedaelec@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lynette Cepeda. I live at 13663 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My Husband and I live on Greenhorn Rd exactly one mile from the proposed mine site. My family moved to Grass Valley in1960. I was raised here, went all through school and was fortunate enough to have a career in this community. Although mining and logging was a huge part of the income for this area, times have changed. We know now how devastating mining can be to an area.
The area that Rise Gold wants to
Reopen will be threat to the environment. Dewatering the tunnels will definitely affect our wells and the amount of water they want to release into the creek on a daily basis will be overwhelming to the watershed.
There are so many reasons not to reopen the mine. The noise, traffic, exhaust, vibration, toxic waste, the unsightly tailings, the list goes on.
Another huge concern for us is the fact Rise Gold does not have a good reputation.

This should make the powers that be wake up.
We are a big destination for tourists. What a lovely area we live in and we work hard to keep it that way. Will people want to come here when they see and hear all of the pollution? When there are 70 to 80 trucks coming and going and creating a traffic nightmare. We don't think so.
Please listen to all the professionals who have done in-depth research on this proposal. The supposed benefits are totally outweighed by the damage that would be done by reopening the mine.
Please fight to keep Grass Valley the beautiful peaceful area we all love and cherish.
Thank you,
Lynette and Ed Cepeda

Sincerely,

Lynette Cepeda

Dear Nevada County Supervisors and Planning Commissioners,

My name is Margaret Crane. I live at 15318 indian springs Rd, penn valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Margaret Crane

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is MARGARET CULL. I live at 238 American Hill Rd, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1. I have owned my home for almost 35 years and have lived here in my home for 19 years. My concern is the amount of water the mining requires. Climate change has reduced the amount of rain and snow that we receive in a given year. We are still in a drought. Just one winter of good rainfall and snow does NOT end the drought. In addition to that, the amount of people required to work in the mine will impact our streets, water usage, sewage needs, schools, etc. Our two cities of Grass Valley and Nevada City do not have adequate streets and resources to handle the impact of so many new residents that the Mine will require.

Sincerely,

MARGARET CULL

Dear Nevada County Supervisors and Planning Commissioners,

My name is Margaret Florence. I live at 15470 Mt Olive Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in District 1 in Chicago Park for 36 years. I need to drive past this "Mine site" to come into my business community. The destruction of our environment and ability to commute into our own town will be extremely impacted by this Mine proposition of Rise Gold. Beyond my personal discomfort and that of my fellow neighbors and citizens of this town, I cannot fathom how you would ever consider doing ANY business with a man who is on trial for outright negligence of similar endeavors in other states.

Please do not allow this Mine proposition to happen. Please.

Sincerely,

Margaret Florence

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Marika McGraw. I live at 14414 Tim burr lane, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve recently purchased a home in Grass Valley. Unbeknownst to us the house is adjacent to the proposed mine and to the creek that would affected by waste from the mine. We are not intended to live there if the project moves forward. We would have to sell the property for the fraction of the price we purchased it for. We are not willing to endanger our health and serenity for corporate greed that not only ruins our daily life and health but also the desirability of the beautiful city of Grass Valley. This house was supposed to be for our retirement and that’s clearly would defy all requirements. We are also business owners and we were planning to continue our business in Grass Valley, but that’s clearly would not be on the table anymore.

Sincerely,

Marika McGraw

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Mark Hotsenpiller. I live at 17274 Oscar Drive, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have resided in Alta Sierra for three years, moving here from SF. We are very concerned about the mine opening up and causing serious traffic with hundreds of trucks hauling waste on our roads. There is an unaddressed concern about neighbors' water wells drying up or being contaminated. One thing that is rarely addressed is the business practices of Ben Mossman and his company. As you know, they have been sued in Canada for leaving toxic waste and not fulfilling their obligations to the province and country. Unless we can be assured that cannot happen here, you must not approve the mine here. The last thing we need will be a defunct, dirty mine 18 months after it is opened, as in Canada. Residents will leave in droves, and our beautiful foothill location will be spoiled for a long time. All one needs to do is look at the signs around Grass Valley and Nevada City. The vast majority of them say "No on the mine". Please do the will of the people and do not

approve the mine.
Thank you very much.

Sincerely,

Mark Hotsenpiller

Dear Nevada County Supervisors and Planning Commissioners,

My name is Mark Novak. I live at 14827Meadow Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello my name is Mark Novak and I live off Highway 174 in Grass Valley. It is a quiet peaceful community out here and I drive by the proposed mine site every day on my way to work, while heading to town, and taking my kids to school and other events. The mine will cause much unwelcomed traffic, add pollution to the whole Ecosystem between greenhorn and Grass Valley. Drain the wells of local homeowners and turn a beautiful quiet country road and do a destructive industrial district. This community has suffered enough from gold mining over the years and I adamantly stand against this mine coming to our community. Seeing how the company proposing this Toxic endeavor is not local or even American for that matter. I think our community should strongly stand against this project. Also with the new housing development down off of Idaho Maryland it seems like a horrible amount of congestion to be constantly sending trucks full of gravel directly by this new community in Grass Valley.

Sincerely,

Mark Novak

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Echo Ridge estates area. When carefully considered, the mine will bring only very small ECONOMIC benefits to our community compared to the huge environmental risks. Plus, Ben Mossman has a clear track record of illegal behavior on his prior projects. This adds up to a vote of NO. Thank you for considering my comments.

Sincerely,

Mark Triolo

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Maureen Graber. I live at 14585 Oak Ridge Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a resident of Banner Mountain, I utilize Brunswick and Idaho-Maryland Roads for ingress and egress to my home. My concerns are fourfold:
1) The mine will significantly increase the number of large trucks using these roads, 24/7, to access the mine
site. The road is too narrow, and with insufficient traffic controls, to support these semi-tractor trailers.
Even if these concerns were addressed, the addition of this amount of new cyclical traffic increases the risk
of accidents and injury to residents who use these road to access their homes.
2) The increased heavy use of large tractor-trailers in our community will negatively impact our air quality at a

time when California government is setting severe restrictions on emissions for its citizenry.
3) Residents utilize these roads as our primary evacuation route during wildfire season. Adding congestion
to these roadways risk the lives of those who call Nevada City our home.
4) The proposed waste of our precious water resources to flush mining operations it completely "tone deaf"
to global warming issues.

Sincerely,

Maureen Graber

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Melanie Dixon at melddixon@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Melanie Dixon. I live at 610 Brighton Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Thank you for choosing to work as a Nevada County Supervisor and Planning Commissioner. It takes a lot of grit to meet the changing needs and challenges of our community. Thank you for devoting your energy and your wisdom to this task.

I am a homeowner here in District 3. My husband and I own and operate a land maintenance and brush clearing business in Grass Valley. I have a child at Yuba River Charter School, and one who is a graduate of Ghidotti High School. I volunteer time and money to raise awareness of the local Nisenan Tribe, protect the Yuba River watershed and make our community a safer environment for LGBTQIA+ community members. I have lived here 10 years, and value it every day.

The mining history in Grass Valley is one of the most sordid aspects of our past. As

you may or may not know, there were 7-9,000 Nisenan people living in the Grass Valley/Nevada City area in 1849, before the gold rush. 18 years later, in 1867, there were 500 Nisenan people remaining (History of Us, Richard Johnson, p. 6). That's a minimum of 6500 people murdered in 18 years, and a whole culture destroyed, so that gold could be mined out of this ground. There are now about 150 living members of the Nisenan tribe, who are working to re-establish their identity, their land rights and their internal well being after such a massacre. That state sanctioned massacre was encouraged so that gold could be mined.

Now, there is a launch again to dig into the ground, to get this gold, and to do it whatever the cost. I'm not interested in supporting this kind of thinking. You've attended meetings with RISE representatives. You've read the unsubstantiated EIR reports, claiming minimal environmental impact. It doesn't take deep assessment to see that the results from this company's previous mining extractions resulted in massive environmental devastation, followed by a declaration of bankruptcy and a failure to clean up the land. Mining of this nature requires explosives, loud and toxic ore processing, heavy, loud trucks on our roads, toxic particulates in our air and sadness in our hearts at having lost sight of how to be real stewards of this community and this land. It is our job as mindful recipients of information to research the claims of "non-harm" to the environment from such a company as RISE and to see that the results in their track record indicate that our environment and quality of life would be devastatingly negatively impacted.

Have you ever lived in an active mining town? I have. In Utah. It's smelly, sad, unkind and not proud of itself. It's difficult to encourage generous behavior between people in a community where the economy is based on getting something from the earth that benefits the people but in turn, hurts the health of the land. It creates unkind people.

We live in what was previously a mining town. I tell you, I wouldn't have wanted to be here when extracting gold was the economic base. Everything I've read says it was a dangerous, unkind experience that destroyed old growth forests, the indigenous people, the face of the river and the downstream farmland. Those aren't the legacies I'm committed to creating.

This mine would do different harmful things than hydraulic mining of the past. The results though, in the end, would be harmful.

There's not a lack of jobs in our community. There's plenty of work here for skilled labor, retail, tech and services. Let's keep creating work and community projects that have us feel proud to be citizens of Grass Valley, the way we steward our groundwater, river, clean air, calm environment, and our just and kind treatment of each other and our land.

Thank you for considering the voices of your constituents.
All blessings to your work and your role as our representative.

Melanie Dixon

Sincerely,

Melanie Dixon

Dear Nevada County Supervisors and Planning Commissioners,

My name is Melissa Guzman. I live at 2036 Nevada City Hwy 509, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Melissa Guzman

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Alta Sierra and will likely not be directly affected the Idaho-Maryland mine. However, out of consideration for hundreds of our fellow Nevada County residents, I strongly oppose this project. The company (Rise Gold whatever) is a front for an alleged crook, one Benjamin Mossman. He is currently awaiting re-trial on numerous counts from his previous project in British Columbia. I can't imagine a worse candidate for the proposed mine.

Sincerely,

Michael Dockery

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Gilbert. I live at 14499 Lower Colfax Rd., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Lower Colfax Rd and within District 1. We have owned the property and have lived at this address since 1998, and love our land and neighborhood. I am very opposed to the proposed re-opening of the Idaho-Maryland Mine by Rise Gold, who, BTW, has a horrid track record in responsible mining in British Columbia, Canada. The DEIR and EIR are both deficient in many aspects and the economic review/analysis was shallow and skewed, managing to avoid covering the real costs this project will impose on our community, the county and the state, in particular external costs for improved transportation, increased traffic of heavily laden trucks, negative impacts on real estate in our area, and negative environmental impacts on groundwater, local wells, flows and water quality into Wolf Creek and into the Bear River, biodiversity and habitats, etc. This industrial scale project is totally

inappropriate being so near to existing residential, commercial, and medical facilities, and to the city limits of Grass Valley. If it is approved, it will undoubtedly end up in litigation due all its environmental, legal and social negative impacts and shortcomings!

Sincerely,

Nancy Gilbert

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Moore. I live at 10120 Alta Vista drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Alta Vista area of Grass Valley and have lived here since 2006. Part of what drew me here was the small town atmosphere and the beautiful surroundings along with the arts culture.
Of course the area has grown a lot since 2006. Along with this have come many increasing problems.
Certainly one way to stop growth here would be to put in the mine. ... Other than people related to the mine I can't imagine who would want to move here.
Please don't ruin our way of life. Don't ruin the health of all those poor people that live within hearing shot of the mine and all it's activities. Well this may not be considered, people will no doubt avoid that area due to the traffic insanity. (Count me in on this one, I'll go shopping elsewhere,) With the increased traffic and huge trucks rumbling through every couple of minutes no doubt there will also be more

accidents. And then it will be oh darn we're going to have widen the roads with more Lanes.
Many people have also worked very hard to own their own homes and it seems unconscionable to trash their real estate values. The whole idea of the mine seems unconscionable.
Please don't approve this.
Thank you

Sincerely,

Nancy Moore

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Rojo. I live at 17150 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I have lived for 19 years in District 1, at 17150 Greenhorn Road. We have retired and intend to live our remaining days in the beauty of our 30 acre property. When the reopening of the Idaho-Maryland Mine raised it's ugly head, we knew our health, both physical and mental, was being threatened by disruption and pollution caused by this project. The risks far outweigh the benefits of this high risk venture. The final report blew off the effect of diminished property value to ourselves, and the other 2000 residents living in mine's sphere of influence.

No on the mine!

Sincerely,

Nancy Rojo

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Nathan Wolfson at wolfson.nathan@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nathan Wolfson. I live at 15175 ranchwood Ct, nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Lake Vera Pardon area adjacent to downtown Nevada City, so I personally won't be immediately / directly impact by the mine at my home. But it will be a disaster that all of us share over time.

The County should deny the Idaho-Maryland Mine and should not certify the Final EIR.

The County has no obligation to approve the Mine.

The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley’s and the County’s land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious

deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be “significant” and does not comply with CEQA (California Environmental Quality Act).

● Environmental impacts unavoidable - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also serious deficiencies in the FEIR that put the County and its citizens at even greater risk. Key deficiencies are shown in sections 2-6 of this document.

● Inconsistent with General Plan - The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan’s goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. And yet, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns. A specific list of conflicts can be found here.

● Legal considerations - The County can confidently proceed with denial knowing the decision does not qualify as “taking”, which is a legal term that describes a project rejection that denies an owner their right to develop a property. Both the Brunswick and Centennial properties are currently zoned “Light Industrial”, which provide a reasonable use of the properties. The applicant would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

There is ample case law to uphold the rejection of FEIR certification if a project is denied. If the current FEIR were to be certified, then the project later denied, it will be a flawed EIR in County records that could be used in future applications. Read more legal considerations here.

● Inadequate economic justification - The Economic Impact Report on the Mine showed a huge range of possible revenue outcomes from very low to very high, making actual revenue potential uncertain. Only the lower estimates were backed by proven gold reserves. Expert community reviewers found that even low-end figures were overly optimistic with a heavy reliance on information provided by the applicant. The assertion that property values wouldn’t decline was a big miss. It failed to recognize local realtor expertise or use acceptable home appraisal methods. Additional downside risk was not evaluated. Learn more about the

community review here.

● Just say no! - Continuing with the EIR and project consideration will just cost the County in loss of time and energy as well as that of staff and the community. This community is overwhelmingly opposed to the Mine project, as evidenced by the over 5,500 petition signatures submitted to the County last summer and the fact that 95% of the opinion pieces published in The Union about the mine are against it.

Well Owners Shafted in the Final EIR

The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed, resulting in a final report that does not comply with CEQA and fails to identify the potential impacts.

● CEQA requires a current baseline to assess potential impacts and determine mitigations. The computer model used for the analysis did not use current monitoring data from any of the over 300 domestic wells in the mineral rights area. It relied only on sparse patches of data from over 15 years ago. The Final EIR acknowledges that data is needed, but the approach calls for drilling 15 new monitoring wells as a basis for verifying the computer model after the EIR is certified! The questionable computer model estimates well water drops at 1 to 10 feet for 152 wells, then avoids declaring the impact as "significant" by creating an arbitrary threshold of significance at 10%.

● The final EIR also adds a completely inadequate supplemental domestic monitoring plan for 378 newly-identified properties. Among the many deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

Mine Waste Management Inadequacies Risk Water Quality

The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported. The Water Board made it clear in Draft EIR comments that more rock testing is needed to assess the likely concentration levels of hazardous elements in the rock to be mined. The FEIR's plan for storing and

disposing of mine waste has extensive gaps, creating a risk for long-term mine water pollution similar to what this community has seen in the past.

● Rise Gold's project plans to deposit 1000 tons of tailings and waste rock per day on the Centennial and Brunswick sites for the first 11 years. After that, the plan is to dispose of it via off-site sales. However, only waste classified as Group C can be used for engineered fill deposits or off-site sales. The more hazardous Groups A and B require special handling. The FEIR asserts that "mine materials will likely be classified as Group C", but its conclusions rely on just 11 feet of drill core samples.

● The FEIR does not provide adequate provisions for the storage of Group A or Group B mine waste, which will be required by the Water Board. Since any waste that is not Group C cannot be used for engineered fill or off-site sales, viable alternative strategies must be defined. The FEIR introduced a new suggestion that if not Group C "...the waste rock would be placed underground", but CEQA requires storage of Group A or B mine waste underground to be reviewed in a Draft EIR.

● This extensive set of gaps in mine waste management also introduces uncertainties about Rise Gold's ability to operate by disposing of mine waste from off-site sales.

Mine Waste Management Inadequacies Put Air Quality at Risk

The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. Asbestos is found in all rock types in the Idaho-Maryland Mine in varying concentrations. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

● Management of asbestos emissions is a complicated task. If the rolling average over a 3-month period of asbestos concentration in mine waste exceeds 0.01% by weight, it cannot be shipped out of the mine facility. Rise Gold's primary approach – as described in the Asbestos, Serpentinite, and Ultramafic Rock (ASUR) management plan – simply proposes that cores would be sampled before excavation and that if asbestos levels are too high, the rock won't be mined. There is not enough evidence, however, to establish that they can feasibly stay below the limits using this plan.

● The test data in the FEIR for determining the potential impacts from Asbestos is inadequate for CEQA compliance. Of the testing that was provided, which came from just 3 drill cores, 40% of the samples exceeded the 0.01% threshold. Thus, for assessing the impacts of asbestos air pollution, spot sampling has been done on less than 1/1000th of the mine rock that will be excavated over the 80 year life of the Use Permit.

FEIR Fails to Assess Impacts of Centennial Site

The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

● The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The California Department of Toxic Substances Control (DTSC) is managing the cleanup, but their Remedial Action Plan (RAP) is only in draft form. It is unclear when the plan will be finalized or when DTSC might approve the clean up.

● Per CEQA, the EIR must provide an environmental assessment of the current conditions of a project site to establish a baseline in order to determine impacts.This was not done. The FEIR assumes the site will be cleaned up before it gets used to deposit new mine waste. The plan calls for placing 1.6 million tons of mine waste (assuming it qualifies as Group C) over the course of 5 years, covering about 44 acres to a height of up to 55 feet. And yet, the significant work needed to accomplish this clean-up is not disclosed or evaluated in the FEIR. Numerous aspects of this RAP draft have been questioned in public comments and the final project details are unknown.

Greenhouse Gas Emission Impacts dismissed in FEIR.

The FEIR concludes that the mine's greenhouse gas (GHG) emission impacts will be "less than significant", but it uses an unsupportable, obsolete threshold measure to justify its position. The only correct threshold – given current climate studies, CA SB-32, and today's state goals – is net zero. The County has not formally adopted its own threshold of significance, but it has set ambitious goals to reduce GHG through

energy reduction in its Energy Action Plan. The Mine's sizable energy footprint would be a serious setback.

● The FEIR sets the significance impact threshold of 10,000 Metric Tons (MT) of GHG emissions per year. Mine operations are projected to produce approximately 9,000 MT per year, which is just under the set limit. This does not, however, include the over 4000 MT of additional emissions that will be generated by cement manufacturers to provide the massive amount of cement that will be used to produce cemented paste backfill for 500 tons/day of mine tailings.

● The outdated 10,000 MT/year threshold is one that was used by other air districts such as the
Bay Area in the past. More recent projects, however, such as the Sargent Ranch Quarry project managed by the Bay Area Air Quality Management District in 2022, use net zero for the significance threshold.

● The mine's electricity usage is approximately equivalent to the annual use of 5000 homes. The Mine's energy use would be so sizable that it would completely offset the amount of residential reductions the County wants to achieve each year in its Energy Action Plan.

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nathaniel Crevoiserat. I live at 13243 Loma Rica Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live just down the street from the proposed mine with a well supplying my water. Not only will I have to redrill my well if the mine pumps outs its water, lowering the water table, but I will also witness the pollution of this beautiful Tahoe forest we have. The chemicals used in mining are lethal, and the company set to operate the mine has a record of bankrupting themselves and leaving the community to deal with the hazardous cleanup.

Sincerely,

Nathaniel Crevoiserat

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Patricia Cunningham. I live at 11057 Woodwardia Pl, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My family lives on Banner Mtn. We moved to Nevada City 4.5 years ago for beauty and tranquil environment escaping the pollution of the Bay Area. I know most people move here for those reason. Trading in the outside world for paradise. If you vote to open this mine, you will be ruining what everyone loves about this community. That should not even be allowed, but here we are. We didn’t vote for you to do this and it does not constitute the desires of the people you represent.

I don’t want to watch a 60 Minutes segment years from now that features Grass Valley and Nevada City destroyed because of misguided Supervisors that allowed an incompetent mine owner to pollute the towns and sicken its people from cancers

related to mine pollutants. Seriously, listen to the people of Grass Valley and Nevada City - do not allow the destruction of our hometown. Like many of us who can afford to leave, we will. What sort of economic impact will that leave the towns with?

Sincerely,

Patricia Cunningham

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Patricia Levitan. I live at 14544 Orzalli Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Patricia Levitan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Patti Williams. I live at 13044 somerset Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in The Cedars off of Highway 174, located in Grass Valley. I am worried about the environmental impacts and constant noise the mine would create within our community. I love living in Grass Valley and Nevada County; However, if the mine in approved I would leave the area as soon as possible. I’ve also talked to several neighbors who have also said that they would move out of the area. Please, please, please vote no!!!

Sincerely,

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Peter Willcox at willcoxps@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Peter Willcox. I live at 13031 Cedar Crest Ln, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 and have for 16 years. I drive by the mine site nearly every day. I am retired and love the area for its natural setting, many opportunities for retired folks, and country life. I have a well but am just outside the Well Monitoring Program.

Please consider the following;

1. Rise mine has no credibility, and even if it did, a large performance bond must be part of the arrangement.
2. All that truck traffic? Really? What of traffic control? A new signal on Brunswick? I can’t wait.
3. When they fill up their existing sites with waste rock, then what? They will have to haul all their waste rock to a processing site to turn it into sized rock, gravel, and

sand. So called “engineered fill” is neither a product nor viable. Where will the rock be processed? And what of the environmental concerns of that processing? And truck traffic to get it there?
4. You can’t move rock quietly. What of noise from bulldozers, large trucks, equipment?
5. Traffic again, the Loma Rico Ranch project will add 235 homes, many of which will be using Brunswick Road. It’s less than a mile to the mine, also on Brunswick! Not to mention the desirability of having a housing development next to an industrial operation.
6. The folks that may lose their well will suffer economically, considering that NID water is much more expensive than well water. It’s unlikely that will change. Shouldn’t the mine be responsible? For the entire 80 years?

Sincerely,

Peter Willcox

Dear Nevada County Supervisors and Planning Commissioners,

My name is Phyllis Gale Arnold. I live at 10555 Walker Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Live in District 3 with daughter and kindergarten aged grandson who attends Bell Hill Elementary School. As a retired school teacher I care deeply about our children. Have grave concerns regarding the environmental legacy we are leaving future generations. There are and have been negative consequences (ie. pollutions) on our air, water, and land and it's time we stop all actions with negative impact and find positive solutions. Reopening a mine in this way is not positive.

Sincerely,

Phyllis Gale Arnold

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Phyllis Hegeman. I live at 12600 Bolinas Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Good day! I live off Idaho Maryland Rd. I am a concerned citizen asking you to just say no to re--opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger our community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk. But what is of utmost concern is there is so much cancer and illness in Nevada County that has been traced to toxins from mining. I have a friend who started getting seizures at age 72. She just had in depth tests and several toxins known to be identified directly from mining, Some concerns include noise pollution, air pollution, lots of truck traffic, wells going dry, property values dropping, an industrial complex destroying the beauty of nature and the peaceful environment of our community, etc.
Thank you for hearing and taking deeply the incredible detrimental effects opening the mine will have and deeply considering and feeling whether or not you want to be

responsible for a decision that will physically, mentally, and spiritually harm your fellow human beings.
Phyllis Hegeman

Sincerely,

Phyllis Hegeman

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

We have two young children and we just moved very close to the Idaho- Maryland Mine. Re opening the mine would DRASTICALLY impact both my family and children's health. We would have to move! Moreover, we would not be able to afford at this time to move or anytime in the next number of years! This is a danger to not only the environment but the basic health of the community! PEASE, PLEASE DO NOT REOPEN THE MINE!

Sincerely,

Rachael Castle

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rachel Berry. I live at 11164 Newtown Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I moved to Nevada County in 2009 with my family so we could be part of a community that values the beautiful environment that surrounds us and the importance of ecological health. I live in District 1, and have worked for nearly 10 years to support a more reslient food and farm economy through Sierra Harvest. I am very concerned about the negative impacts mines have had on crucial water supplies, farms, and community health at large. Some potential short term gains in revenue are not worth long-term impact on the natural resources we rely on to thrive. Please don't make a short-sighted decision at the risk of jeopardizing our future.

Rachel Berry

Sincerely,

Rachel Berry

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Radha Devi. I live at 12751 Morro Dr., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in this beautiful, peaceful area on Banner Mountain for 25 years. I feel an intimate connection with the land. I feel when I ask the land deeply if this would assist in the healing of Mother Earth right now I get a loud clear NO. It would hurt her and all of the animal and plant queendoms of the area as well as humans. We as a culture are not in need of more gold for survival. It is not a need for humans at this time.

Moving forward it is time we realized how interconnected we all are and to come back to a healthy balance of Stewardship for our community. It begins in our own backyards and then ripples out to the world.

I stand for Mother Earth and Her Beauty. I do not want to be digging into Her for

gold. Period.

Thank you for really contemplating my letter and deeply feeling in your heart to do the right thing.
No Mining.

With Mature mutual respect for all beings, I sincerely write this letter,
Radha Devi

My name is Randy Oliver. I live at 14744 Meadow Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived in Nevada County for forty years. I kept an open mind as to reopening the mine, so long as they had a plan that respected the environment and the community. But after investigating the company involved, as well as the actual proposed plan, I now feel that they are not the right company to do so, and that the plan will be detrimental to our community. I am not against mining per se, but against this proposed plan.

Sincerely,

Randy Oliver

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ray Baldock. I live at 12975 Somerset Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Our town has transitioned successfully away from mining and has a vibrant high tech and light manufacturing industry anywhere close to residential/urban areas. Risk to water, increased traffic and road wear on narrow roads and the very long, multi-generational impact of the decision are clearly not in the best interests of the community. Should the consequences of the mine have any adverse impact, .we risk the attractiveness of our historic towns for tourism, an industry that is sustaining many businesses in the area and one that provides safe, clean tax revenues. Potentially the areas will be less desirable and a safe green haven in the foorhills leading to further decline,

The Updated EIR is unconvincing and again misses key points and use of several updated, scientifically based impact estimates.

I implore the board to REJECT Rise Gold's application, and any other mining operations, anywhere near our historic towns,

Sincerely,

Ray Baldock

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ray Bryars at raybryars@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ray Bryars. I live at 11574 Northview Drive, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi. My name is Ray Bryars and I have lived on Banner Mountain in District 1 since 1984, when I moved to the area to work for Grass Valley Group. Although I retired in the early 2000s, my wife and I love the area and have made this our forever home. I volunteer with Bear Yuba Land Trust, Habitat for Humanity and the Senior Firewood Program. I feel that all these organizations make a positive contribution to our community.

Below is an Opinion Piece that I recently submitted to The Union. It covers numerous concerns regarding the Economic Impact Report:

Experts review the Economic Impact Report for the proposed Idaho Maryland Mine. The report was prepared by Robert D Niehaus (RDN).

I attended the excellent Webinar discussing the recently released Economic Impact Report for the Idaho Maryland Mine that Community Environmental Advocates Foundation (CEAF) organized on December 20th. A group of very knowledgable presenters conducted detailed analysis in a number of areas. The amount of information was overwhelming, so this is an attempt to list some, of their concerns - There are many more.

• Well monitoring to provide a baseline for the DEIR was a requirement when the most recent San Juan Ridge MIne, also known as the Siskon Mine was approved. A similar requirement must be placed on Rise Gold to ensure that over 300 wells are monitored for at least 3 years.

• CEAF is concerned that there are many unanswered questions in the Environmental Impact Report (EIR). Therefore it cannot be considered “Final”.

• Dr David Chambers noted that a Technical Report NI 43-101 has not been completed for 5 years. So this is all we have to go on. It showed that there is not enough information to specify any mineral resources and mineral reserves. It is highly unusual to ask for a production permit without these being defined. Dr Chambers claims that he has never seen such a lack of information.

• Economic impact of Waste disposal. This is a problem because selling mine waste is difficult due to liability risks. Testing is required, but the current samples are not adequate. Most buyers will be reluctant to buy since there are many lower risk alternatives.

• Characterization of mine waste is suspect since It was not tested properly. Distilled water was used instead of the typically used, weak acid solution.

• Since there has not been proper testing of mine waste rock. If it could not be sold, where would the 2 million tons in 11 years of mining go?

• Financial assurance must be a requirement. It is common that mines have catastrophic events that end up being a burden on the community. We need to be assured that if there is a catastrophic event or the mine closes, it is done properly so there is not an impact to the community. The caveat is that historically, financial assurance, never covers catastrophic events. However there should be enough money put aside to compensate the community in case a catastrophe occurs and the the mine goes bankrupt.

• Does anyone seriously believe that there can ever be justification to permit a mine operation for 80 years? There is nothing that would justify this.

• Rise claims that it will be 3 years to get to full production. This is contrary to the reality that typically the industry takes 6 - 7 years after the permits are obtained. This will have a huge financial impact and should be seriously considered. Note that the time to get permits was not considered.

• The CEAF experts feel that spending patterns of construction and mine workers is overblown. Construction workers will likely be from outside the county, will probably share accommodation and spend much less than expected in the community. Their estimate is that spending would be 1/4 of that claimed.
• The cost to mine that Rise Gold is using is 1/2 of the industry average. This is way too optimistic and should have been seriously questioned in the Economic Impact Report.
• James Steinmann's conclusion on the Economic Impact Report: "The input data is questionable, the benefits are substantially overstated, the costs of operation are understated and the risks are ignored".
• Charlie Brock a local Real Estate expert strongly contests the conclusion that there will be no effect on real estate values. The consensus of surveyed agents was that there will be long term detrimental effects.
• Another expert estimated that even a small (5-10%) negative impact on tourism plus the impact on property values would be far greater than any positive financial impact that the mine claims.
• The comparisons with other mines that was used for looking at the impacts on property values was seriously misleading. There were none that had the same housing density, so close to the mine. We have approximately 2000 homes within 1/2 mile from the mine.
• Not discussed, but important, is that Economic Impact Reports for other mine operations, commonly include a comparison of the economic impact of alternative uses for the property. This may be an intentional omission since there are likely many other uses for the site that could provide greater benefits, with very much less risk and environmental impact.
• What is the estimated cost for installing the infrastructure, construction of buildings, purchase and installation of equipment and excavation down to a point where gold can be extracted? A detailed economic report should include a timeline of expenditures and income to show the breakeven point.
• The cost to first cleanup the Centennial Site was not included, but it should be completed to show the true economic picture. The mine intends to dump mine waste rock on this site.
The Remedial Action Plan for the Centennial Site will not be complete until sometime in 2023. Since the use of this site is a major part of the project plan, it seems wrong to move forward until this is finalized.

rebekahvoorhees@icloud.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rebekah Nelson-Voorhees. I live at 513 Whiting Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a 30 year resident of Nevada County living below the Empire Mine, still dealing with toxins leaching into our neighborhood. Note the properties on South Auburn Street and Whiting Street that are in able to be sold due to arsenic , mercury, cyanide , lead to name a few. If it was safe to walk in the mine , there would not be giant fenced in areas that we can’t go in with notices stating they’re toxic.
I also previously wrote to you supervisors to ask you all to go to Jamestown California, and look at the aftermath of what a Canadian mining company did there when gold prices were high they came in and raped the land, and as soon as the gold prices dropped, They vanished and left everything a mess. Never to follow through with their promises.

Our county is prime location for recreation and hospitality. Let’s create a place people want to come ride their horses, ride their bikes , visit the river, take hikes. Let’s make trails.More hotels wouldn’t be the worst thing, compared to anther gold mine. We can create far more jobs attracting families and people who want to enjoy the beauty without damaging the environment.
No one needs a gold mine!!!!!!!

Sincerely,

Rebekah Nelson-Voorhees

Dear Nevada County Supervisors and Planning Commissioners,

My name is Renee Renoir. I live at 12386 Robinson Road Apt B, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve lived in either Nevada or Yuba county since 1988 both my children are born in a home in Nevada City. Gold mining has had irreversible effects on our local ecology and there is no conceivable incentive to resurrect the practice. There are other possibilities for jobs and commerce that are safe and responsible within our community.

Sincerely,

Renee Renoir

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Renee Wade. I live at 26532 Wampum Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

While I currently live on the San Juan Ridge, I have been a resident of Nevada County for 25 years and have lived in the Chicago Park area as well. Driving by the Idaho-Maryland mine on my way into work for my first 4 years in the county makes me very aware of how impactful the reopening of this mine would be.

My biggest concern, that I believe was not adequately addressed in the Environmental Impact Report, regards the impacts of this mine on water. The amount of water required to operate this mine will inevitably impact wells throughout the local area. The toxicity of the water leaving the mine will be harmful throughout the ecosystem. Mining is a toxic endeavor and with mining companies throughout the world well-versed in the protocols for leaving local communities holding the bag for clean-up, I don't see any long-term benefit for Nevada County and

its residents in allowing this mine.

Added to this are my concerns about air quality - I work outdoors throughout the Grass Valley and Nevada City areas and will be directly affected by any pollutants added to our already often poor air quality - as well as concerns about traffic and noise pollution.

This mine is not going to be a benefit to our community, instead it will be a drain. Keep mining in our past and as low-tech recreation at the river.

Say No to the reopening of the Idaho-Maryland mine!

Sincerely,

Renee Wade

coreyswartsel@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Reverend A. Corey Swartsel. I live at 10084 S Ponderosa Way, Rough and Ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

To whomever reads this letter, please consider this our families impassioned plea that you do not allow the proposed Rise Gold mining project for the Idaho Maryland to go forward. After 10 years of gathering resources our family relocated to the Grass Valley area in 2020. This move was carefully considered and involved planning and sacrifice that we very much feel was worth the quality of life provide all of our family by setting down roots here. Besides the many cultural draws some of the specific reasons we chose to relocate here include the access to nature and the historical charm not tarnished by excessive sprawl and industrialization. In contrast with similar areas in the state we were and are impressed by the relatively stable economy for the size of the population. No matter how it is spun it is clear that the

negatives that WILL come with the proposed mining project will be primarily shouldered by the local populace while the few positives will primarily benefit the projects corporate cheerleaders. Endless heavy equipment traffic, damaged roadways, diesel pollution, noise pollution, light pollution, contaminated water, toxic dust, toxic runoff, loss of property values, destroyed wells, an overtaxed water supply, these issues will impact all of us and almost certainly will have a negative impact on the tourism that supports many of the small locally owned businesses that depend on the charm of our area as a draw for such tourism.
When these issues are weighed against the few hundred jobs Rise claims will be filled by locals vs the amount of extracted wealth that will not be returned to the local economy and the fact that the backers of this project have previously proven themselves to be criminally negligent there is no argument that justifies voting in favor of this project. Note that as a faith leader with much experience in social activism I do see myself supporting a vehement opposition campaign against any local officials who indicate a strong disregard for the well being of my community by supporting this project going forward.
Sincerely, Rev. A. Corey Swartsel

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rich Laws. I live at 21025 running horse road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am saddened this is even under consideration. This should be a hard no. As a Nevada City resident, I am proud of our shared appreciation and respect for the environment that we live in. Nevada City, Nevada County for that matter, is a special place. The environmental impact and damage that will follow this mine reopening is absolutely unacceptable and not with any “jobs created” as a result.

Why is anyone willing to sacrifice the health of the environment for revenue and jobs? There are better ways to bring revenue and jobs to Nevada County that won’t damage the environment not only for us but for our children and their children.

I beg you to think more about the planet and future generations. If you allow this mine to reopen you will have to live with that decision and knowing you are causing

irreparable harm to this beautiful area.

Sincerely,

Rich Laws

My name is Richard Katz. I live at 13094 Daisy Blue Mine Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The people promoting this mine have a sordid history in Canada. We shouldn't mortgage our future for these charlatans. Look at their track record, not their promises. The world is full of people promising big returns and minimizing risk. Haven't we learned by now not to be so gullible? And here the risk is not only financial, but the community and environment that we love so much, and which is a heritage we want to pass on to future generations.

Sincerely,

Richard Katz

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Samantha Bass at samantha.j.bass@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Samantha Bass. I live at 15806 Thiel Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I was born at Sierra Nevada Memorial Hospital in 1988, and raised in Grass Valley. I went to college at 18 and returned to Grass Valley at 28. I work remotely and plan to purchase a property in Nevada County in the next few years. If the mine reopens, I will move out of the county, as I know the environmental degradation that will ensue. We need to be rebuilding the ecology that was here prior to mining, not go back in time. Do not allow the mine to reopen; instead, let's continue restore ecosystems to help bring prosperity to NC.

Sincerely,

Samantha Bass

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Sandra Bruce at sandrabruce@pacbell.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sandra Bruce. I live at 13997 Emerald Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in District 3 and have lived here in this house for 32 years. I fear for the possibility of losing our water. This is the 3rd time we have had to deal with the possibility of a mine opening up near us. I love our home and living here. We raised our family in this house. I am also a business owner and my business is in downtown Grass Valley. For 32 years we have enjoyed water from our well, the peace and quiet this area has given us, and the increasing value of our home.

With the water issues we have here in our area, and all over the state how can it be that someone would be allowed to draw over a million gallons of water day out of the ground for 80 years? How could the FEIR, never mind the DEIR pass muster when it is incomplete and full of inaccuracies ?

There are so many other ways that Grass Valley can grow without putting such a dangerous and potentially disastrous mine into reality. If there are problems (which are sure to be) will Moseman be accountable for reducing any impacts to "less than significant"?

Every time I mention this issue to anyone I always hear the same thing...."how can such a terrible idea be allowed"? So, I ask you, how can you allow this to happen? Please say NO. Put yourself in my shoes: would you accept an industrial mine operation to run 24/7 for 80 years in your neighborhood?

Sincerely,

Sandra Bruce

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sandra Carrion. I live at 2 Dever Lane, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a concerned senior citizen living at Sierra Pines Mobile Home Park I retired here for a better quality of life. I am incredulous that this preposterous plan has gotten so far... the cons far outweigh the pros (which are overstated anyway). Makes me wonder about the old saying... "follow the money". Vote NO!!!

Sincerely,

Sandra Carrion

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sanford Anderson. I live at 17738 Minnow Way, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Articles in The Union by thoughtful people who have analyzed the various environmental and other analyses make it clear that the uncertainties in both the risks and the rewards make the risk/reward ratio look unacceptable for this project. Let's look forward and create a better future rather than trying to recreate a mining past that will no longer serve us and could likely harm us. Please don't approve the mine.
Sincerely,
Sanford Anderson

Sincerely,

Sanford Anderson

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sara Bottrell. I live at 11551 side hill circle, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I do NOT want this mine. Is the county going to pay for installation of NID to all houses in a 3 miles radius? Before our wells run dry? Will the county back our decreased property values? Please consider all the citizens who have been paying their property tax bills to the county for years. Not these deceptive mine owners. They purchased the land for 2M. Let’s buy it back at create a nature preserve. This is bad for Nevada County!

Sincerely,

Sara Bottrell

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Sarah Hutchins at sarah.giometti@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sarah Hutchins. I live at 10799 Henson Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a fairly new resident to Nevada County, and am a homeowner in Alta Sierra. My husband's family has lived here since the 1970s, and he spent his childhood in Nevada County. His family connection, along with the stunning beauty of the area, is the reason we decided to relocate here and buy a home. I was horrified to learn you are actually entertaining the idea of reopening the mine, especially by a company who is under investigation for innumerable environmental violations already. Do you honestly think they won't cause the same or worse harm here? The drastic harm the mine will cause to the environment and all of us who live here is not worth the uncertain (and unlikely) benefits. Please, please, please say no. If the county needs more money, we can find better ways to bring it in to the county that doesn't cause harm to the environment and the health and well-being of the residents.

Sincerely,

Sarah Hutchins

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sasha Soukup. I live at 13125 BURMA RD, GRASS VALLEY, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live about three miles from the proposed mine site, on bucolic Burma Road. If this mine is constructed, it will create a noisy traffic corridor that I have to drive through to get to any destination in town. I have lived here for 18 years, and while I accept the increase in traffic and congestion that comes with building new dwelling units in the area, I cannot accept the noise and pollution in the name of an operation that could impact water quality, air quality, and real estate values for decades to come. I am a small business owner that has always paid all of my local and state taxes to the max, as well as being a lynch pin in our thriving local arts and music scene. I have many friends who have been renting in town for years, and who are now hitting savings goals for home down payments. They are currently considering making Nevada County their permanent home, but having a mine here would change

everything for them. Are these the folks we want to drive away from our wonderful community?!? Thanks for your time. -Sasha

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sequoiah Briseno. I live at 12090 Paddock Lane, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley for 2 years and was shocked to find out that the town was considering re-opening the mine. Even though my property is far away, I feel horribly for the residents in close proximity to the mine who must be terrified of environmental impacts. Re-opening the mines would negatively impact ground water and community health. It has very few benefits for the community and MANY unknowns and risks. I strongly oppose the re-opening of the mine.

Sincerely,

Sequoiah Briseno

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sharon Cummings. I live at 17600 Shoshoni Trail, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The year is 2023.
Environmental disaster and catastrophe is widespread around the globe.
We are currently living in an 11th hour planetary emergency.
Are you kidding me with this shit?
Humankind has done enough plundering and mining of "valuable" resources.

The gold rush and subsequent incessant prioritization of capitalist profit over human life and sacred land cursed beautiful, bountiful California with a reproachable Native American genocide for which there has STILL been no acknowledgement or reparations. The only acceptable answer is to give the land back.

I have lived and owned a business in this community for over 10 years.
Every single person I know locally is against this mine. There are zero short or longterm benefits.
Stop the nonsense debate. Immediately. Full stop.
NO MINE.
NO.

A YES vote to re-open this mine directly translates to a big, fat, deplorable NO to ANY respect to the human and animal lives who live here, or to our precious planet which is deeply in need of regeneration.

Additionally, please note, anyone voting "YES" to this mine will not get richer, but will absolutely be revealed as morally bankrupt.

Sincerely,

Sharon Cummings

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shawn Orgel-Olson. I live at 214 Lloyd Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I own a house in downtown Grass Valley where my parents live. I am deeply concerned about this proposed mine, the horrible environmental impact it will have, and the harm it will cause to tourism (reducing interesting/marring the area) and real estate.

A NO vote on the mine is what your constituents want and is the right thing to do morally, economically and environmentally. Don't believe the false projections and lies from Rise Gold - their track record is deplorable and would be no different in our area.

We don't want a mine, we want a healthy community and thriving economy based on eco-tourism, local craftmanship, and rising talent.

Sincerely,

Shawn Orgel-Olson

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shelby Phillips. I live at 161 race st, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live close to town here in grass valley, very close to proposed mine. My partner and I purchased our house here a couple years ago. We love Our town and our natural resources. We are very against this proposed mine and the effects it would have in our community. Please keep Nevada county beautiful, green and sustainable.

Sincerely,

Shelby Phillips

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shiree Swenson. I live at 12351 Hillcrest Drive, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a 4th generation Nevada City family we have seen this town go through a lot of changes. This change is one that could ruin many of the aspects of what is good about this town. It will ruin our environment, add sound pollution, and do little for the good of this town and more for the greed of the company running it. Please do not allow this to ruin the beautiful town we have fought to protect.

Sincerely,

Shiree Swenson

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shirley Porter. I live at 12968 Burma Rd., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

MY name is Shirley Porter. My family has lived here since 1950 and we appreciate the quiet sense of our Burma Road home. The impact of the Mine would be great on our neighborhood, including endless trucks driving by, noise, concern about the loss of water in our well, and the overall negative impact on the Grass Valley area. If you are thinking the main reason to invite them into our area is the revenues that will come, then I ask you to rethink. Money isn't everything. The well being of the neighborhoods and the people in the area is the most important issue. And as I drive around, I see a lot of NO MINE signs so that almost everyone here does not want the mine to begin to operate again. Please just say NO to the re-opening of the mine. Thank you for your thoughtful consideration of this very important issue.

Sincerely,

Shirley Porter

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Stephanie Steyer at sjsteyer@mac.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Stephanie Steyer. I live at 13672 Quail Alley, Rough and Ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a home owner in District 4. My address is 13672 Quail Alley, Rough and Ready. I've lived in Nevada County for 23 years. I love how quaint and quiet this community is most of the time.

There are many reasons to SAY NO to the reopening of the Idaho Maryland Mine. The primary one in my opinion is the environmental impact. How can it not impact this community to have huge trucks driving on our roadways 24/7? The reopening of the mine will seriously impact the aesthetics, the noise and traffic in our community. Then there is the impact to local home owners who risk losing their well water and the quality of their peaceful way of life with this attempted reopening.

Then there is the fact that the CEO of Rise Gold left behind an incredible mess on his last "adventure" into mining in Canada. That has to be considered in this decision. How can he be trusted?

There are many other reasons to SAY NO to the reopening of the Idaho Maryland Mine, and I believe one of the most important points is that this is no longer 1849. We don't have to tolerate mining practices in our communities. We have an incredibly beautiful place here in Western Nevada County. We have unique things to offer tourist and visitors from all over the state and the country.

Please. For our community, for our health and for our children, just SAY NO to the Idaho Maryland Mine!

Thank you,

Sincerely,

Stephanie Steyer

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Steve Danner at danner.steve@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Steve Danner. I live at 10517 Indian Trail, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

There are many reasons why the mine should not reopen here are a few:

Environmental Concerns: Reopening the mine would have significant environmental impacts on the surrounding area. Mining operations can cause significant damage to ecosystems, including the destruction of wildlife habitats, the contamination of water sources, and the release of toxic chemicals into the air.

Community Opposition: the surrounding community is opposed to the mine reopening, citing concerns about the environmental impact, noise pollution, increased traffic, and decreased property values. In addition, the local tourism industry, which relies on the natural beauty of the area, could be negatively affected by mining operations.

Economic Viability: Despite claims by mining companies that reopening the mine could bring jobs and economic growth to the area, there are serious doubts about the long-term economic viability of the mine.

For these reasons, many environmentalists, community members, and safety advocates are opposed to the reopening of the Idaho-Maryland Mine. Instead, efforts should be focused on developing sustainable and environmentally friendly industries in the area that can provide long-term economic benefits without putting people and the environment at risk.

Regenerate response

Sincerely,

Steve Danner

Dear Nevada County Supervisors and Planning Commissioners,

My name is Steve Herrlinger. I live at 12345 Pioneer rd, Rough and ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My wife and I have lived in Rough and Ready since 2001. We moved here because of the quality of life and history and we don't want it spoiled by resurrecting something from the past. Going after gold is fine but not at the cost to the present population. We don't want a lot of big trucks on the freeway and in Grass Valley we don't want the impact to the water table and all the other environmental problems associated with what's proposed. I am strongly against reopening the gold mines

Sincerely,

Steve Herrlinger

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Summer Scanlan at summersong@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Summer Scanlan. I live at 379 Clark Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I grew up in Nevada County and currently live in downtown Grass Valley. While I understand that our county needs more jobs, we do not need the Mine!!! It will wreck our lovely community. Please vote NO. I don't see any reason you can reopen the mine in good conscience.

Sincerely,

Summer Scanlan

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Susan Iversen. I live at 219 Horizon Circle, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I have lived and worked in Nevada County for 20 years now, and currently own a home in the Morgan Ranch area of Grass Valley. I love this county and want to see what's best for its residents, resources, and future.

I'm extremely concerned about the possibility of the proposed Rise Gold mining project being approved and the significant negative impacts it will no doubt have on our community.

The completed impact report relies far too heavily on claims provided by Rise Gold, whose principles have a history of taking advantage of other communities and abandoning those communities to clean up the ongoing resulting mess. Much information provided by Rise Gold has already been found to be inaccurate, and

exaggerated claims can't be relied on. The consultants's conclusions of the impact report leaves many questions insufficiently answered, and far too much risk for our towns.

The environmental impacts alone are enough to deter such a project. These obvious concerns were not addressed fully in the impact report. Unavoidable impact on local wells, risk of water quality in affected waterways, and other waste management issues from proposed mining activities will create issues that will dramatically affect our area. Traffic, noise and air quality impacts will put our community and residents at further risk and also damage our reputation as a much-loved tourist destination.

As a homeowner, I'm also in no doubt that unavoidable issues due to mining will negatively impact the value of our local real estate. The real estate analysis failed to implement acceptable home appraisal methodologies, and so creates much room for concern. It is also common sense that a mining project with much potential for damage would seriously affect home and business values in an area that hasn't had that focus for well over half a century. Such a project is not conducive of our stated goals as a community.

I can see why claims that Rise Gold promises to help the community would be alluring. But they are only claims and nothing is holding them to these promises. The job potential keeps lessening, and low end potential revenue numbers were overly optimistic. Any positive affect claimed by Rise Gold is far, far outweighed by huge problems that communities, including our own, have have had to live with and try to untangle in similar previous projects. Surely the clear risks involved with this project shout NOT be dependent on hoping the damage won't be significant.

I'm urging you to stick with the focuses we've pledged to follow for our local communities, and to safeguard the future of Grass Valley and Nevada City and our residents. Please turn down Rise Gold's mining proposal and its associated threats.

We have the capability to continue improving our community without having to put our resources, our residents and our future at risk with the threats this dubious project will bring.

Sincerely,

Susan Iversen

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Susan Lane. I live at 19158 Tiger Lily Lane, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived in Nevada County for 39 years. I love this community. That being said, I believe it is impossible to truly know how draining the mine would affect the local ground water. Most of the tunnels under in the area are interconnected.

This mine feels like a repeat of stopping the mine off Idaho Maryland Rd. I was for the mine in the beginning. Most of the projects was to be completed underground, but they estimated there would be 1 semi truck leaving every hour 24 hrs. a day. At that time I was living at Rookwood Condos and you could hear everything that went on in that valley. The building of Mouls Paint and Glass, Sierra Nevada Memorial Hospital building 4, and Wheelers dealership. Cal Trans was also rerouting semis off I 80 at night due to construction. It was a lot of traffic. That's when I decided that mine was not a good idea.

I have well water where I live now. I'm concerned about what dewatering the mine would do to the groundwater. Many wells have been drilled post the closing of Empire Mine. There is also the impact on infrastructure, mainly the roads. There are many new houses developments that will use Idaho Maryland, Dorsey, and Brunswick Rd. to access the freeway, but there have been no improvements to handle the added stress on those resources and a bunch of semis will make it even worse.

Please say no to this proposal.
Susan Lane

Sincerely,

Susan Lane

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Susan McKinney. I live at 815 Zion St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for 40 years and have a vested interest in the health of our ecosystem.
I currently live in the business district of Nevada City, but have resided on Banner Mountain for several years, as well as Greenhorn Road.
Both of my former neighborhoods are home to friends and neighbors who will be directly impacted by the truck traffic, water pollution, and noise pollution the proposed mine will impose.
To ruin the quality of life people have worked all their lives to enjoy, as well as cause their property values to plummet in order to reap tax money from an ill-placed mine, would be a tragic mistake on the part of Nevada County Supervisors and Planning Commisioners.
It will also create an immense amount of conflict within our county, including protests

and demonstrations.
Please seriously consider the risks versus the tax benefits as though you live nextdoor to the proposed mine.
That is the only way you will do the people of Nevada County justice.

Sincerely,

Susan McKinney

Dear Nevada County Supervisors and Planning Commissioners,

My name is Suzanne Calkins. I live at 243 Nile St., Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in District 1 and have called Nevada County my home for over 8 years. Having been closely involved with SYRCL, the San Juan Ridge Taxpayers Association and other local environmental groups, I am very familiar with this area's relationship to mining and its horrific lasting impact it continues to have on the water we rely on, the land around us, and our bodies. This mine is not the answer for a healthy, vibrant future of Nevada County. Let's not repeat history and make remediating the existing damage even harder. I am strongly against the mine.

Sincerely,

Suzanne Calkins

My name is Terra Velentin. I live at 11564 Marjon Drive, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Nevada County Supervisors and Planing Commission,
I have resided in district 1 for over 27 years and love Nevada County. I am writing with concern about the potential reopening of the Idaho Maryland Mine. The environmental impact would be horrific! If you have ever spent time around large scale mining you would know how devastating it is. Because of the geology of the area and the local of the mine being in a residential area, the negative impacts would put peoples health at risk, as well as the environment so many of the locals enjoy.
A few of my concern:
- asbestos emissions
- groundwater impact
- traffic

- noise
I encourage you to say NO to reopening the Idaho Maryland Mine.

Sincerely,
Terra Valentin

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Thomas Dolan. I live at Mill Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley from the Bay Area. I have many friends who have also recently moved here, bringing money to the area and reinvigorating the housing market. Most Bay Area companies allow their employees to work remotely, but we still need to stay within a few hours of San Francisco to travel in for the occasional meeting. Grass Valley is a wonderful choice for people like us that want to live in a beautiful, serene town but who still need access to the Bay Area every quarter or so.

I have several friends that have visited us in Grass Valley, fell in love with it, and are currently interested in relocating here because of its pristine natural beauty. I assure you that they will not move here if the mine is opened. Any potential risk to the environment or to their health will cause them to move to different towns within a few hours of the Bay Area. In fact, if the mine is opened, we would consider

relocating to Placerville or Amador County, as we would not want to raise our child near any potential issues. If the mine is opened, remote workers (like my friends and me -- who are bringing money and new life to the area) would be discouraged from chosing Grass Valley when deciding where to move or where to get a second home. Those of us that have already come here may reconsider.

Sincerely,

Thomas Dolan

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Tom Lawicki at woodtml@aol.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Tom Lawicki. I live at 10872 Ridge Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 1. I have lived in the district for 21.5 years and work at Beale AFB.

As heard on national news, my concern and understanding is that the company developing the mine may be a subsidiary of a Chinese owned company or investor and subordinate to the commands and wishes of the CCP. If this is true, it would mean an adversarial government would be profiting off our natural resources and in close proximity (approximately 25 miles down highway 20) to one of our countries most sensitive military facilities with potential to collect information.

I do not have the resources to research this but your committee is obligated to do its due diligence and to research, notify, and assure the community this is NOT the case.

Grand Forks ND and Del Río TX found out too late to take action before the Chinese acquired over 100,000 acres of US land and the natural resources under it.

Please don't be lured into a false sense of security until the facts are known.

Sincerely,
Tom Lawicki

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Nevada County Supervisors,
Please say no to the Idaho-Maryland mine! My grandparents live within 5 miles of the mine so it would largely impact their property. For me, being able to go to my grandparent's house and play in the stream, build forts and dams, climb trees, and garden is really special to me and I am worried that the environmental impact of the mine will destroy that. I want to be able to keep having fun there. Please consider your decision and don't say yes to the mine.

Thank you,
Torin Johnson, Age 10

My name is Trinie Dalton. I live at 235 Harper St., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I moved from the Bay Area to support a county that champions environmental recovery, NOT pollution. The revised EIR is totally false and doesn't pull comps from realistic sources to show impacts. I will definitely relocate, along with most of my friends, if the mines open. We will not participate in a civic community that invites pollution and toxicity into an area people have been working for decades to recover. A mining town is not what we signed on for when we moved her to raise our children in the midst of climate change. We want a town on the forefronts of supporting Earth's health and healing. NO NO NO on this mine. Terrible mistake to even consider it.

Sincerely,

Trinie Dalton

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Una Kobrin. I live at 12920 Slate Creek Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Una Kobrin

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ursula Young. I live at 20818 red dog rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in You Bet, and have been living and raising a family here for 14 years. Opening the mine is a disastrous short-sighted plan which benefits the few while hurting the many. Our fragile ecosystem should be protected by those of us who call this our home and those who have the power to make major decisions about it. We have an opportunity to learn from past mistakes and we can see first-hand the destruction that gold mining has already caused to our area and its deep roots of trauma and scars on our landscape. Our children’s future and health depends on not allowing big corporate greed like this to destroy the environment & our already depleted water sources. Let’s consider our kids when making these decisions. Will they have clean air and water when they are our age? My family firmly opposes the mine

Sincerely,

Ursula Young

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Valerie Kack. I live at 10350 Smith rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I am writing to oppose the reopening of the mine. I have lived in this community for 40 years through all kinds of disasters due to snow, wind, rain and flooding. I live next to a feeder creek that runs From the main area into Wolf Creek. About once a month somebodies take it upon themselves to dump oil or gas into Ellen's creek next (10 feet) to my house. It's a horrible smell when I walk outside. I have not been able to identify the source and I have had authorities out to check it out to no avail. I am convinced regardless of what holding ponds the mine is designing, the mine runoff is going to seep into the ground and eventually run by my house. I oppose this horrible suggestion especially from a company from Canada who has no relationship to this community nor does this company care about our fragile environment. If this goes through I can promise you I am leaving the county. I've had a business here for 40 years as well so you will be losing my property tax, what I

spend in town for groceries, gas, and services that I use. Re-opening the mine Tells me this county will no longer have the beauty and appeal That draws new homeowners and tourists. It will be a waste land, our creeks will be seeping arsenic and other awful chemicals into our pristine waterways. Please let us use our collective voices to oppose this potential disaster.

Sincerely,

Valerie Kack

Dear Nevada County Supervisors and Planning Commissioners,

My name is Veronica Monet. I live at 204 West Main Street, Suite 122, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for a dozen years. My office is located in downtown Grass Valley in the historic Alpha Building. I love our friendly, small community. Being a transplant from the Bay Area, I know how special our mountains and the Yuba are. I know that while the rest of California is struggling to get here on the weekends, we are lucky enough to already be here! And why is the rest of our great State of California "escaping" to our community? Because we are blessed with beautiful forests and pristine rivers. We are blessed with a variety of flora and fauna including bears, cougars, bobcats, fox and so many beautiful birds. In short, it is our natural environment that is most valuable to us and to our visitors. Please protect our land, our water, our wildlife and our way of life. Say NO to the Idaho-Maryland

Mine. Thank you. Veronica Monet, resident and small business owner.

Sincerely,

Veronica Monet

Dear Nevada County Supervisors and Planning Commissioners,

My name is Wayne Jarosh. I live at 11588 Ridge Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

My family has lived here since 1977. My wife and I are retired government employees. We are opposed to opening the proposed mine. There are no advantages to having this kind of industry in our town. We need to continue attracting environmentally attractive businesses to our area. There is no such thing as a mine that doesn't cause permanent damage to the surrounding area. There never has been and there never will be. This is a very desirable place to live. Let's keep it that way.

Sincerely,

Wayne Jarosh

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Wendy Thompson. I live at 267 Bourbon Hill Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, I truly value the peaceful, scenic, communicative and cultural feelings shared in our community, I live in District 1, within walking distance of Nevada City and have happily lived in Nevada County since 1988.
I have a hard time imagining why we are even considering re-opening a mine here in our area, especially near residential areas! Rise Gold’s CEO has a horrible track record in following through with his promises, and I understand he is embroiled in legal battles for previous gross errors in cleaning up mine waste and not completing promised mitigations. Why would we consider doing business with this dishonest man? And why would we do business with a company outside of the United States where Canada benefits and we do not!
I am concerned for the homes that might lose their wells, I am concerned for the de

watering of our creeks, for the superflows that would flood Wolf Creek, and I am concerned for the lack of cleanup for the huge amount of debris left behind by the empty promises of Rise Gold. The Final EIR does not at all adequately address these potential issues.
I am also very concerned for the level of noise which the work would bring to our area, trucks driving back and forth 24/7 and for 80 years?? Really?? Why would we want that in our beautiful scenic, pristine area??? Tourism brings visitors to our diverse and wonderful businesses, bringing economic growth to our area, do you think tourism would continue with such unhealthy noise and ugly debris floating down and clogging our presently pristine streams?? I volunteer now with Wolf Creek Community Alliance as a creek monitor and have also volunteered for the Yuba. I am quite aware of the present state of our watersheds. I would hate to see the unhealthy results of reopening the mine on our watersheds and roads. Let Tourism grow and flourish here as a very profitable economic force.

I ask you to please JUST SAY NO!! to this inappropriate proposal that would only harm our community. The hazards far outweigh any benefits! PLEASE!!

Thank you for reading my letter.

Sincerely,

Wendy Thompson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Wendy van den Helder. I live at 22702 Lencrest Lane, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The reason I moved here 3 years ago was because of the quiet, rural community. Adding a busy, active mine not only will affect the quality of air and water, but will add traffic and noise. Everything that attracts tourists will be jeopardized. The residents will suffer. The long term effects of the mine aren't worth it.

Sincerely,

Wendy van den Helder

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

Hi, I live off Greenhorn Rd. off Brunswick Road in Grass Valley. I have been living here since 35 years and have enjoyed the nature and rural living since then. I also have been a business owner since then!!!I here in GV. The business has been located on Whispering pine adjacent to the mine property. I am totally opposed to the re-opening of the mine!!! I resent the fact that the county supervisors, that have been elected by the people, seem to want to favor CORPORATE interests and profits obove the quality of life of the residents here!! I and many of my friends and acquainances would never vote for a supervisor again, who votes for the mine re-opening!! Please reject the mine re-opening as it is unconscionable wrong and only profit oriented and will destroy the air, and the noise level and traffic will be bad. It is not worth that!! To us the residents!! Sincerely, Wilma Terrill

- Supervisorial District III: Terence McAteer
- Supervisorial District IV: Mike Mastrodonato
- Supervisorial District V: William Greeno

Thank you for taking the time to read my letter in its entirety and for your leadership on this complex matter of analyzing the Final Environmental Impact Report (FEIR) for the Idaho-Maryland Mine (IMM) project. I hope my letter will shed light on FEIR's Chapter 4.13 – **Wildfire**.

For clarity I have divided this letter into three parts:

1. A bit of information of who I am and the history of my concerns over the reopening of the Idaho-Maryland Mine by Rise Gold Grass Valley.

2. My reflections on the FEIR's response to my comments submitted on the Draft Environmental Impact Report (DEIR).
3. My closing comments

Part 1.

Over the past two years I've written numerous letters to members of the Nevada County Board of Supervisors (BOS), the Planning Commissioners, the Planning Department, Ben Mossman, (President of Rise Gold Grass Valley), each of the five members of Rise Gold's Board of Directors in Vancouver British Columbia, letters to the Editor of The Union paper, and an opinion piece with Yuba Net.

I spoke at the Special Meeting before the Planning Commission on March 24th, 2022 and again to the Planning Commission on November 10th, 2022.

With my deep concerns about what the reopening of the Idaho-Maryland Mine would do to the quality of life for our community, I committed to study the DEIR when it came out last year. Because of my experience as a firefight as a young adult and having lost everything to a wildfire in 2015, I decided to focus my effort on Chapter 4.13 regarding Wildfire. I was NOT reassured. I wrote 10 pages of comments, voicing my concerns about what the DEIR said about Wildfire should the Idaho-Maryland Mine be in operation.

When the FEIR was published in December 2022, I was hopeful I would find that my concerns and questions would be recognized as valid. In fact, each concern I raised was referenced to other sections of the DEIR and many specific issues were not addressed. I am not alone in this caviler treatment of my comments. In talking with others, many other authors of submitted comments were often treated in a similar manner.

I find there is a lot of conflicting information in the FEIR regarding Wildfire and other matters as well. I hope that this letter, along with many other letters, written by intelligent and knowledgeable people in our community, will help the readers, each of Nevada County BOS and each member of the Planning Commission, recognize that there are serious flaws in the 8661 pages of the FEIR. I want to support the individuals who must sort this matter out and make the decision that impacts all citizens in our county.

I ask that the readers be decerning about the inadequacies of the FEIR. I submit this letter to each of the members of the Planning Commission, the BOS, and the Planning Department to provide an alternative perspective on what the FEIR says on Wildfire.

I had hoped Raney Planning and Management Inc. (Raney) the environmental consultant who wrote the DEIR and the FEIR, would have taken the vast amount of input from the community and found their report to be inadequate instead of defending it. Now I must hope that the Planning Commission and the Board of Supervisors will have the clarity of mind needed to see the far-reaching detrimental impacts this mine

will have on the health and vitality of our community and the environment where we live. My intention is to support you all in this important decision making. So I write yet another letter expressing my concerns, now about the FEIR and shining the light on the inadequacies.

Part 2. The FEIR (Raney's) response to my comments on the DEIR

The FEIR is laid out in Chapters. Chapter 2 contains the Individual comment letters written by 845 members of our community and Raney's responses. My letter is #548 of the 845 individual letters submitted. Raney responded to each paragraph I wrote on Chapter 4.13 Wildfire comments assessing the DEIR. I share my perspective with the readers, my assessment of Raney's responses in the FEIR, why I disagree with their responses, and where Raney did not actually answer my questions.

INDIVIDUAL LETTER #548: MARTHA TURNER (found in the FEIR Pages 6698-7007)

FEIR Chapter 2 – Responses to Comments (found in the FEIR Pages 7008-7012)

- The major red flag in my reading the DEIR, which was NOT addressed in the FEIR in response to my comments, is the matter of <u>what would be required of the mine in the event of a wildfire in the vicinity and an evacuation is ordered for the citizens</u> (see Response to Comment Ind 548-8).

  The wording of the document (4.13.4 IMPACTS AND MITIGATION MEASURES) states that the mine would be contacted and "**asked** to temporarily shut down the mine and cease all truck hauling operations". Then states this "…would ensure that the Project would not have the potential to physically interfere with an emergency evacuation plan".

  My concern is that there is no authority in the word **"asked".** Evacuations for the public are **orders** and are enforceable. We are not <u>asked</u> to evacuate and we are not allowed to return until the order is lifted. What will happen if the mine operators were to decline? What if they were to respond with "NO, we will not shut down our mine. It would cost us too much in production"? Many large companies are more than willing to pay any fines for infractions as part of the cost of doing business but **at what cost to our community**? This would, in fact, impair the emergency response plan and become SIGNIFICANT if they were to not shut down the mine, keep their workers on site working, and continue to have their trucks hauling 112 loads/day of mine waste.

  Consider this second scenario: A wildfire has started near the Y at Brunswick Road and Hwy. 174 and is headed up Brunswick toward Bennett Street and

Greenhorn Road. Perhaps it is the time of day when the school buses are taking kids to or from school. Perhaps it is when there are 300 workers (according to Rise Golds numbers) on site at the mine. If the mine operator were asked to shut down and did so, consider the addition of 300 workers also evacuating along with residents of the area. The vehicles would be funneled into the Glenbrook Basin via Brunswick Road at the Hwy 49/20 junction. Again, how could this not have a significant impact?

The response by Raney to my concerns about the impact of the project on evacuation of the populace was dismissed. I was to referred to the Master Response 5 – Evacuation Zones. I was told "Project traffic would not substantially interfere with an evacuation plan", that "the Significance Threshold (Threshold WT-1)" was not met, and therefore NO mitigation is required. There are detailed evacuation maps in Master Response 5 but remember the evacuation mayhem of the Bennett Fire last year? My question regarding enforceable authority to shut down the mine was ignored.

I read that according to Raney, CEQA does not require analysis of speculative impacts. Perhaps my concerns are speculative. Yet it is also speculative to assume Rise Gold will follow the unenforceable request that they stop operations if asked. This is especially dubious when considering the history of Rise Gold. The unethical and illegal practices of the company at the last mine opened in BC are well documented.

The report states the "impacts will be less than significant" even though elsewhere in the FEIR it says the traffic impacts in the basin are unmitigable even when there is not a wildfire happening. These are contradictory statements and both cannot accurate.

- Another matter I addressed was that the property of both the Brunswick site and the Centennial site are classified by CAL Fire as Very High Fire Hazard Severity Zones. Rise Gold's mitigation for fuel management on the sites is to clear cut 18.5 acres of the 58 acres of forested land on the Brunswick site and clear cut 6.5 acres of the 10 forested acres on the Centennial site. The environmental impact of clearcutting is destruction of ecosystems, natural habitats, soil erosion, diminished carbon sequestration contributing to climate change, and more. Yet this is the mitigation proposed. If there is no forest to burn because they have been cut down, the fire risk is certainly reduced. But the use of clear cutting as mitigation for fuel management will have serious impacts on other aspects of the environment that will NOT be mitigated.

- I considered the risk of the mining operations actually being the cause of a wildfire in our community. How can the presence of an operating mine, with the

onsite above-ground fuel tanks totaling 24,000 gallons of diesel on the Brunswick site, plus another 1200 gallons at the Centennial site, the transport of the diesel to the site to fill these tanks, transporting explosives to the site, the moving of explosives around the site before being stored underground and the many hydrocarbon fueled vehicles and machinery, not be a recognized fire hazard? My concern was not addressed and I was referred (Response to Comment Ind 548-12) to look at landscaping in Figure 4.13-3.

- I found the DEIR's use of a questionably functioning "fire flow system" from when the site was a functioning lumber mill as support of there being a "less than significant" impact (page 4.13-20) dubious. The report also states it is NOT known if the old system meets California Fire Code (CFC) requirements. The response to my concerns was to state it would be built "to meet CFC requirements". The inclusion of a questionably functioning "fire flow system" to support the conclusion that it will make the project have NO significant impact certainly sounds more than speculative. It sounds misleading.

- There is much discussion in the DEIR on topography and prevailing winds and wildfire. While fire sciences continue to improve in their efforts anticipating how a fire is likely to behave in theoretical conditions, we also know that wildfires are erratic, unpredictable and will create their own weather and wind, which can NOT be mitigated just by saying "there is no significant impact".

  Because the Project sites do not have steep walled canyons, it is concluded that there will be no significant impact on wildfire risk. Yet there are "on-site slopes over 30%" but not enough to "influence on-site fire behavior" (Response to Comment 548-10). Sounds like more speculation to me.

- In response to my questioning the statement in the report that says "relatively few larger wildfires have occurred withing the region over the past three years", Raney said this was the statement was "according to CAL FIRE". While our fires were not the conflagrations on the scale of the Caldor fire or the Mendocino Complex, there have been 16 wildfires in Nevada County since 2015 with three in the last two years. The River Fire and the Jones Fire were devastating for many in our community. The Bennett Fire burned a portion of the Centennial site just last summer and could easily have burned down our entire town like the Paradise fire did on December 17, 2021.

  CAL FIRE has primary responsibility for a fire at the mine properties. Yet, in recent years we have seen how overwhelmed our fire agencies, local, state and federal, have been with the ever-increasing numbers of wildfires. Why would our community want to add to the risk?

- I questioned the inclusion of the Nevada County Emergency Operations Plan (EOP) which includes a “Mass Evacuation Annex (Annex B)” which has not even been approved and adopted by Nevada County. Annex B addresses disasters or incidents occurring outside of Nevada County though may result in a mass vehicular evacuation through our county”. There is no mention of the mine impact to the EOP’s plan because the “EOP does not address specific projects”. Why then include such information on something that does not exist, does not address the mine and yet is used to support the assertation that “Project traffic would not substantially interfere with an evacuation plan”. While the EOP is crucial, the FEIR does not address my question on how is this information is relevant to their claims.

- Several sections of Chapter 4.13 addresses fuel treatment projects. Most of these projects are in locations quite far from the mine site. If the reader were to look at the map (Figure 4.13-2 of the DEIR) you will see that it was poorly reproduced. It is difficult to see exactly what streets closer to the mine site have the “completed” fuel treatment projects and which are “planned”. Yet my pointing out the fact that very little fuel treatment has occurred proximate to the project site was dismissed. I was told “…the DEIR is to describe existing wildfire setting in the project region”. How are fuel reduction projects far from the mine relevant to the environmental impact of the mine?

- I questioned item 4.13-4 regarding the potential for flooding and landslides after a wildfire on the mine property. There was a detailed post-fire debris-flow hazard assessment of the 2017 McCourtney Fire and the analysis was applied to the project properties. Their conclusion was the risk of flooding and landslides would be, again, “less than significant”. They acknowledge the McCourtney Fire did not include the consideration of mine tailing and the presence of North Fork Wolf Creek. Mine tailing will NOT allow rains to soak into the ground and the runoff from potentially hazardous waste rock will drain into the creek.

  I also pointed out the homes located along Wolf Creek which have always been prone to flooding. We can watch the water rise from Mill Street and from the freeway during big rains and worry for those homes. How will the runoff, in addition to the initial 3.6 million gallons a day for six months, followed by 1.2 million gallons a day for 80 years, NOT have an impact on those properties? We are fortunate to have had hydrologists address the other serious concerns of the discharge of these huge volumes of water in other comment letters which I hope you all will have also had the opportunity to read.

  Raney’s response is to tell me there will be “drainage facilities to capture runoff and slow down post-fire runoff”, and that “these proposed detention basins would

hold back peak flows". How can these detention basins hold back runoff, heavy rain fall AND the millions of gallons that will be pumped from the mine shafts every day? Raney did NOT address my questions in the FEIR.

There are more questions in my original comment letter in the DEIR that were not satisfactorily addressed including matters as follows:

- How can putting in a potable water line for residents on East Bennett Street be included in the claim of fuel reduction to reduce wildfire risk?

- How will a "comprehensive vegetation management plan required by the County Fire Marshall's Office" be adhered to in "perpetuity" if the company goes bankrupt or is closed down for environmental infractions as the company did in British Columbia?

- The DEIR makes extrapolations regarding dewatering of the mine and state the discharge into South Fork Wolf Creek will prevent the lowering of ground water levels along the creek. Then it says "only a small fraction of the groundwater that was removed from the subsurface would come from that area". In effect it is saying it will not and it will impact the groundwater. I asked for clarification and was only referred to Master Response 33 – Groundwater Dependent Vegetation. The information is contradictory and no clarification was offered.

- The DEIR asserts the PGE lines installed to the project would contribute no risk to wildfire. I questioned this in light of so many wildfires resulting from trees falling on PGE line and was told CEQA does not require the analysis of speculations. It seems to me that any impacts for any proposed project are always "in the future" and therefore planning efforts are always "speculative". The FEIR can be speculative yet the public's questions can be discarded if deemed speculative? This is NOT right.

Part 3. Closing comments

I am thoroughly disheartened to read the second sentence in the Master Response 6 – Wildfire Impacts which states: "However, as thoroughly analyzed in Chapter 4.13 of the DEIR, all potential wildfire impacts as a result of the Project, would be mitigated to less than significant". It is clear that the concerns I raised about this project made no difference to Raney, the authors of the FEIR. It is my conclusion that the FEIR fails to see the big picture for the impact of the project on the Wildfire in our community. When I look at the big picture, I find the pieces do not add up and the presence of this mine will

have serious and significant impacts on wildfire near our community. “Less than Significant” impacts does NOT mean no impact at all. The impacts include:

1. The county will have no authority to shut down the mine in the event of a wildfire
2. Clear cutting the forest on the mine property will not eliminate fire dangers
3. 3600 gallons of diesel fuel and transport of explosives will increase danger
4. The function of the “fire flow system” is only theoretical and inadequate
5. Fires can burn the mine site properties regardless of the topography
6. Our community’s risk of burning down is increased
7. Fuel treatment plans in the region are not adequate to reduce fire at the mine site
8. The scouring of the Little Wolf Creek creek-bed will be detrimental to that ecosystem
9. Peoples’ homes will be impacted by flooding
10. The groundwater will be impacted by pumping out the mine shafts
11. PGE will have more power lines to keep clear of trees and branches

I am a discerning person with an abundance of common sense. I am not a scientist by profession but do have a strong background in health care and value the concepts of integrity and transparency. As I read this final massive document, knowing how many people, people with scientific knowledge and professional credentials, submitted comments on the DEIR, I was deeply disturbed that Raney changed so little and continues to state that, with only four “notable exceptions”, all concerns will be mitigatable and this heavy industrial complex called the Idaho-Maryland Mine will have “No Significant Impact” on our community. Our community disagrees with this conclusion!

Those “notable exceptions”, which are minimized in the FEIR include:

1. substantially degrade the existing visual character or quality of the site and its surroundings (Impact 4.1-2);
2. long-term changes in visual character (Impact 4.1-4);
3. generation of a substantial temporary increase in ambient noise levels in the project vicinity (Impact 4.10-1);
4. and conflicts with a program, plan, ordinance, or policy addressing study intersections (Impacts 4.12-1, 4.12-8, and 4.12-10).

The visual character will be change for all time. The “temporary” increase of noise would be for 80 years! The mine traffic will be more than an annoyance at intersections. The evacuation of the populace in the event of a wildfire will be a nightmare for many. One of the mandates of the Public Resource Code (21000-21001) that the FEIR quotes is to: “**Create and maintain conditions under which man and nature can exist in productive harmony to fulfill the social and economic requirements of present and future generations”**. The intent of the Public Resource Code is to protect the quality of our environment. This project will degrade the quality of life for the people of Nevada County and the environment.

The EIR process undertaken by the Rise Gold appears to have been accomplished in a manner consistent with the CEQA statute and guidelines. Raney quotes the following: CEQA is not a tool to forestall any and all changes to the environment, but rather to establish thresholds and manage such changes accordingly, while meeting the economic requirements and needs of the community… "NEEDS OF THE COMMUNITY" …NOT the needs of an industrial mining corporation!

It is my hope that each individual involved in the decision making process for whether or not to accept this FEIR will be wise and decerning. There will be a legacy to live with. Will the individuals working for Nevada County's Planning Commission and the five members of Nevada County's Board of Supervisors be known for standing up for the citizens of our community and rejecting the application of Rise Gold to reopen the Idaho-Maryland Mine. I hope so and wish you all wisdom and clear sight.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Daniel Worden. I live at 16630 BASS LN, NEVADA CITY, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada City since 1975. I live in the Lake Vera Neighborhood and am a practicing
Marriage Family Therapist in the community. I have witnessed many trends of development during my time here.
Mining was an historical endeavor that had devastating consequences on the landscape and indigenouss cultures.
I don't want another mining endeavor that will negatively impact the culture we have created in the near half century of my residing here. Let's use our imaginations to develop alternative eoonomic opportunity.

Sincerely,

Daniel Worden

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jacqueline Britton. I live at 11040 Brunswick Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live right next to where this mine would be placed. There are beautiful trails and wild life on our area that would be devastated by this project. We know that our soil is still recovering from mining from hundreds of years ago, why would we want to expose our land to further damage?

Sincerely,

Jacqueline Britton

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Diedra Spohler. I live at 18163 Lake Forest Drive, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in District 4 for 24 years and in District 3 for 5 years before that. I love this community and plan to stay till my dying days. A mine in our area, however, would change that. My life partner and I are chemically sensitive and would not stay here if the mine were to go through, polluting our air, water and soil. I enjoy the relative quiet here and the low amount of traffic though that is changing. Having the mine here would accelerate that even more so to an intolerable amount.

I say an adamant NO! to the mine.

Thank you.

Sincerely,

Diedra Spohler

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Kyle. I live at 10643 Whispering Oaks Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, Our names are David and Patt Kyle. We live in District 1 and have lived in Nevada/Grass Valley area for 25 years. We've had independent businesses as consultants - Lind & Kyle Consultants. We were here when the other two mine fiascos happened. It is difficult to believe that the County would permit another mine to happen
here, particularly so close to our towns. This area over the 25 years we've been here has become retirement, recreation and tourism. Everything I have read from the reports and the position of Rise Mine and its owner is that what they claim to do is not realistic, beneficial, economical, and environmental sound for the county. We have read the reports and the open comments and the work of mine watch. Beyond the significant environmental impacts there is little evidence that jobs and tax

revenue will compensate for what we would face here from the mine.

Our big concern is the 80 year permit and the possibility of some other mine operator comes in if Rise sells the mine and we have no control over the new owners. It is so clear this mine does not serve the community or the county. We please ask you to vote no not to permit to open the Idaho-Maryland Mine.

Sincerely,

David Kyle

My name is Glen Garrod. I live at PO BOX 356, 17750 Rock Creek Rd, NEVADA CITY, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

From my lens, there is a plethora of researched and well thought out reasons to deny Rise Gold Corporation a permit to proceed with their project that will negatively effect Nevada County and her residents. You, as county supervisors will have heard them multiple times. What you most likely have not heard is a significant number of Rise supporters offer valid researched and well thought out reasons that Rise's mine will actually benefit our county. Your constituents are counting on you to do the right thing by and for all our citizens. Stop the madness that is the Rise Gold Mine.

Sincerely,

Glen Garrod

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ari Shirvanioun. I live at 114 E Main St, Apt E, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been fortunate enough to live in Nevada County since I was a small child. I have lived most of my life in Lake Wildwood, but currently reside in lovely District 3. My entire life the county has changed around me, and I fear the negative change reopening the Idaho Maryland Mine would bring would make it difficult, or impossible, for many Nevada County residents to continue to live their lives here. Many of the beautiful and unique things in the county, including but absolutely not limited to, the history of mining in the area, are what make this place home. If reopened, the Idaho Maryland Mine would make much of the county uninhabitable, because of the nonstop air, noise and environmental pollution. The few, menial jobs it would bring to the county are not necessary, and would hardly be enough of a reason to reopen the Mine. Mining is Nevada County's history, not our future. Do not reopen the Idaho Maryland Mine. I am already being priced out of my home, please

do not make it any more difficult to continue to reside and raise a family here.

Sincerely,

Ari Shirvanioun

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Don Wiljamaa at donjma4@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Don Wiljamaa. I live at 13951 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

District 3 Greenhorn Rd area
In addition to the paragraph above, I wanted to state I have lived on Greenhorn for 16 years. I submitted opposition letters to the last company that tried to get the mine in operation. In either case, the issue of homeowners wells in a larger area around the mine has never been adequately addressed. It seems the issue of ground water is somewhat ambiguous, but I am majorly concerned our well has a very good chance of being negatively impacted. We moved to this area for the ambiance of a rural small town. I was a real estate broker in Oregon for many years, and I am also quite concerned that the mine reopening will affect property values significantly. This is an area that attracts people who have a choice where they live, not just a relocation based on a local job. The affect of a major industry (mine) reopening 70ish years after closing, with homes having been built right around it, is almost

incomprehensible to me. It's clear to me, the history of mines, even though the common PR strategy is to say technology has improved significantly, and there will be minor impacts to environment. History has been that it has been so easy for corporate entities to split off, the part of the company left responsible goes bankrupt, leaving the county/city/state having to deal with the mess.
I have not seen where it is stipulated that whoever does the mining (if it were to open) to have to place a realistically large amount of money, to cover long range problems that could happen as a result of the mining operation, in some kind of account, that is just for that purpose.
Please reject the Mine
Thank you

Sincerely,

Don Wiljamaa

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Samantha Bass. I live at 15806 Thiel Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I was born at Sierra Nevada Memorial Hospital in 1988, and raised in Grass Valley. I went to college at 18 and returned to Grass Valley at 28. I work remotely and plan to purchase a property in Nevada County in the next few years. If the mine reopens, I will move out of the county, as I know the environmental degradation that will ensue. We need to be rebuilding the ecology that was here prior to mining, not go back in time. Do not allow the mine to reopen; instead, let's continue restore ecosystems to help bring prosperity to NC.

Sincerely,

Samantha Bass

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sanford Anderson. I live at 17738 Minnow Way, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Articles in The Union by thoughtful people who have analyzed the various environmental and other analyses make it clear that the uncertainties in both the risks and the rewards make the risk/reward ratio look unacceptable for this project. Let's look forward and create a better future rather than trying to recreate a mining past that will no longer serve us and could likely harm us. Please don't approve the mine.
Sincerely,
Sanford Anderson

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Danielle Boucher. I live at 206 Providence Mine Road, Suite 115, Nevada City, California 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I'm a resident of Nevada City (Cement Hill neighborhood) and a small business owner in the 7 Hills District of Nevada City. The environmental effects of the mine could greatly impact both my home and business. As an acupuncturist, I worry about the health of myself and my patients if the mine were to reopen. Due to previous mining in this area, water and other natural resources are already compromised.

Sincerely,

Danielle Boucher

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, I am a resident and business owner in Nevada City for the last 22 years. I am a physician in health and natural healing. Nevada City has become a Mecca for health and wellness. The focus of balanced supportive and community living.

Please do not sell out the full life wealth of our town and our country for a few bags of gold. The value of the unique life giving area of the world has a living value beyond measure. The pollution, the noise, and the big truck traffic will destroy our community.

Be wise!

Sincerely,

Daniel Allen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janice Meyer. I live at 14423 Saddleback Pines Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have resided in District One since 2001. It is more than essential that our government officials LISTEN to theiir constituents. It is obvious, as this project moves forward to be more than sensitive to those affected but advocates for their wishes.
IF the company behind the mine had a stellar history, there might be legs to stand on going forward. One only needs to review past operations to know we do NOT want this for our community.
Thank you for your consideration.

Sincerely,

Janice Meyer

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Wendy Thompson. I live at 267 Bourbon Hill Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, I truly value the peaceful, scenic, communicative and cultural feelings shared in our community, I live in District 1, within walking distance of Nevada City and have happily lived in Nevada County since 1988.
I have a hard time imagining why we are even considering re-opening a mine here in our area, especially near residential areas! Rise Gold’s CEO has a horrible track record in following through with his promises, and I understand he is embroiled in legal battles for previous gross errors in cleaning up mine waste and not completing promised mitigations. Why would we consider doing business with this dishonest man? And why would we do business with a company outside of the United States where Canada benefits and we do not!
I am concerned for the homes that might lose their wells, I am concerned for the de

watering of our creeks, for the superflows that would flood Wolf Creek, and I am concerned for the lack of cleanup for the huge amount of debris left behind by the empty promises of Rise Gold. The Final EIR does not at all adequately address these potential issues.
I am also very concerned for the level of noise which the work would bring to our area, trucks driving back and forth 24/7 and for 80 years?? Really?? Why would we want that in our beautiful scenic, pristine area??? Tourism brings visitors to our diverse and wonderful businesses, bringing economic growth to our area, do you think tourism would continue with such unhealthy noise and ugly debris floating down and clogging our presently pristine streams?? I volunteer now with Wolf Creek Community Alliance as a creek monitor and have also volunteered for the Yuba. I am quite aware of the present state of our watersheds. I would hate to see the unhealthy results of reopening the mine on our watersheds and roads. Let Tourism grow and flourish here as a very profitable economic force.

I ask you to please JUST SAY NO!! to this inappropriate proposal that would only harm our community. The hazards far outweigh any benefits! PLEASE!!

Thank you for reading my letter.

Sincerely,

Wendy Thompson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Phyllis Gale Arnold. I live at 10555 Walker Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Live in District 3 with daughter and kindergarten aged grandson who attends Bell Hill Elementary School. As a retired school teacher I care deeply about our children. Have grave concerns regarding the environmental legacy we are leaving future generations. There are and have been negative consequences (ie. pollutions) on our air, water, and land and it's time we stop all actions with negative impact and find positive solutions. Reopening a mine in this way is not positive.

Sincerely,

Phyllis Gale Arnold

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Carla Woodside. I live at 11151 Cedar Ridge Dr., Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Carla Woodside

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Anne Dinelli. I live at 13050 Little Deer Creek Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for 43 years, raised my family here, and been employed by Grass Valley School District for twenty years of my career, as a special education speech therapist. Since retiring, I have owned a small commercial portrait photography business, Shadow Dance Photography. My supervisor district was changed from District 3 to District 4 recently, and I am urging my supervisor, Ms. Hoeck to vote NO on re-opening the mine. I am aware and concerned about the danger this mine would pose on air and water and soil conditions, especially for those most vulnerable, our children. Thank you.

Sincerely,

Dee Anne Dinelli

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen Hall. I live at 404 Redbud Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've enjoyed living in Nevada County for 20+ years and appreciate the value placed on the natural environment and vibrant community life. Of course we value thriving businesses too, but after reading the information available about the proposed mine operation, I do not want it to happen. The cost benefit ratio ain't worth it.

Thank you for erring on the side of caution with this decision.

Sincerely,

Ellen Hall

Dear Nevada County Supervisors and Planning Commissioners,

My name is Arielle Lowe. I live at 424 Zion St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I was born & raised in Nevada City & have been an active member of the community for my entire life. Nevada County has already dealt with significant struggles in the past several years due to economic changes, property damage due to severe drought followed by snow storms & fires, as well as the health struggles of Covid-19 & the poor air quality.
The last thing we need is further threat to our environment & community health. This should not even be a discussion.
Make the right decision tomorrow & stop this from taking place.
Thank you.

Sincerely,

Arielle Lowe

My name is Anastacia Knight. I live at 520 Richardson Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a resident of downtown Grass Valley and have learned bed in this home since 1996. I am strongly opposed to the mine due to the environmental impact, noise, and integrity/trustworthiness of the company who has proposed this venture. I am concerned about water use and pollution of water. The traffic impacts on our roads are another concern. I do not believe this issues have been mitigated in this process and there are too many unknowns to trust a company with a poor track history. Once damage is done it can’t be undone. Please vote no I n the mine.

Sincerely,

Anastacia Knight

Dear Nevada County Supervisors and Planning Commissioners,

My name is lisa bjorn. I live at 14995 Clear Creek Pl., grass valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived here for 30 years now.I live in district 4.I realize the mine is on the other side of town from me but, I shop locally ,support many local stores ,and use many of the local streets.
I am very concerned with many aspects of this mine coming into our area. I have seen this county change and grow into a diverse community with a lot to offer. We are spending a lot of money changing downtown Grass Valley and I don’t believe the mine will help those changes. This is not a gold mining area any longer. Going backwards dose not feel like the appropriate growth we are all interested in.
Please take care of our beautiful,special towns and don’t vote for this mine.

Sincerely,

lisa bjorn

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joshua Latimer. I live at 14412 Rattlesnake Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Rattlesnake in District 1; moved here two years ago from Truckee in District 5, where i lived 24 years. I run my own IT support business. I'm baffled why the county would be considering allowing this project to a company with such a checkered history as Rise Gold to begin with; but beyond that, it seems that the project offers quite a few certain negative impacts (noise, pollution, road traffic) and uncertain but likely impacts (negative property value impact, possible well water impact, unwanted and suspect discharge into Wolf Creek). Most rational people recognize that the specific skills that will be required by the mine will be imported from outside the county, so "jobs" isn't a compelling argument. Plus it is pretty clear that FEIR couldn't find a similar mining community to compare things to, because nobody in their right mind would want an active mine in the center of their

community!

Sincerely,

Joshua Latimer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Randy Oliver. I live at 14744 Meadow Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived in Nevada County for forty years. I kept an open mind as to reopening the mine, so long as they had a plan that respected the environment and the community. But after investigating the company involved, as well as the actual proposed plan, I now feel that they are not the right company to do so, and that the plan will be detrimental to our community. I am not against mining per se, but against this proposed plan.

Sincerely,

Randy Oliver

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lindsey Nick. I live at 17777 Caruso court, Grass valley, California 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a lifetime resident of Grass Valley I am certain that the negative affects on my friends and community members of reopening the mine far outweigh the benefits. I will not stand to see our land, water and air polluted for the sake of generating profits for a company that has already shown to be irresponsible and untrustworthy. The fact that their operation will contaminate surrounding wells and immediately lower the quality of life for anyone living nearby should already be enough to keep them from moving forward. I believe in our town to say no and do what's best for the people who live here and our beautiful lands.

Sincerely,

Lindsey Nick

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dawn Krusi. I live at 12586 Summit Ridge Dr, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Cascade Shores and I have lived in Nevada County over thirty years. I am a home owner and a business owner. I can’t understand how this mine is even being considered as it is an awful idea. We have a beautiful community and the quality of our lives will be greatly diminished by this mine. Please say no as no amount of money is worth the pollution, traffic and wasting of precious water we will be subjected to. And for an owner who is Canadian who will take the profits back to Canada? No! Let’s not ruin our community.

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Blake Larsen. I live at 10293 Harmony Ridge Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in District 1 Nevada City, CA 95959. I am a 20+ year resident and own a Residential General Contracting business. I am not opposed to development. However, I greatly oppose the re-opening of the Idaho-Maryland Mine. Nevada County has a history of heavy industrial development and therefore the consideration of a new mine is understandable. Legacy development plans, codes and laws are still in place that should be seriously reconsidered. The direction of development in this community has evolved to a point where heavy industry will be in direct conflict with the current rural residential development direction.

I have studied this project from all angles, and plead with the Nevada County Supervisors and Planning Commissioners to say NO to this project.

The elaborate list of negative future impacts are clear:
Water & private wells toxicity, air quality decay, NOISE pollution, lung disease, PROPERTY VALUE decline, power-grid-consumption, and so much more, are all at enormous risk.
Please vote NO, and do NOT allow this project to proceed.
The many environmental impacts associated with this project, as well as the inconsistency with both Grass Valley's and the county's land use plans, provide ample justification for saying NO to this project.
Thank you so much for all you do, and for caring greatly about our community.
This is such an important moment in time, we must cherish the splendor of our treasured home.
Thank you, Aimee Had

Sincerely,

Blake Larsen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Katz. I live at 13094 Daisy Blue Mine Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The people promoting this mine have a sordid history in Canada. We shouldn't mortgage our future for these charlatans. Look at their track record, not their promises. The world is full of people promising big returns and minimizing risk. Haven't we learned by now not to be so gullible? And here the risk is not only financial, but the community and environment that we love so much, and which is a heritage we want to pass on to future generations.

Sincerely,

Richard Katz

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kathy Foley. I live at 12372 Beaver Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3. I lived in Los Angeles for 50 + years moving to Grass Valley 2.5 years ago about when the re-opening the Idaho-Maryland became an issue for the community. At first I didn't know what this was all about, whether it was good or bad for our new community and I was open minded about the pros and cons.
I started pursuing information from both sides to make my own decision and without a doubt I confidently decided NO NO NO to reopening the Idaho-Maryland Mine, or any other mine ever.

This is 2023 not 1863 our planet is fragile and vulnerable, let alone our community of Nevada County where water is gold, fire has devastated some and we do not want to open our selves up to who knows what so another big company with an already suspicious history can come in to cause more harm to our water, our wells, our

roads and our air, our peace of mind.

Let's work on attracting other quality people and companies that appreciate and understand why we live here and want to contribute consciously to provide better jobs and tax revenue without the RISK.

Sincerely,

Kathy Foley

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kathleen Madeira. I live at 149 Park Ave., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived at my current address for 29 years, in Grass Valley for 30. I'm close to Empire Street, close to the Empire Mine.
I was here when Canadian company, EmGold purchased the mine and tried to reopen it. They sold their holdings to RiseGold, another Canadian company. I see no positive outcomes for our county to allow this mine to reopen. The state stepped in to try to clean up the mess from Empire Mine, including constructing the ponds to try to clean up the polluted water. With California in a perpetual drought, there is no reason to allow a company to hold ownership for 80 years, flushing over 3 million gallons of tainted water a day, into a creek and through many rivers eventually spilling into San Francisco Bay and into the ocean. Another troubling thought, is that the representative of RiseGold is in litigation for polluting different mine properties in Canada and other countries. What happens if there is a problem here? He can

easily just leave Nevada County and the state to try to clean up the mess. I see no benefits of allowing this to go forward. There is also the problem with air pollution and noise from trucks driving on our small roads, carrying rock that is laden with asbestos and dumping it, who knows where, 24 hours/7 days a week. This area is residential, not industrial and the jobs that he's talking about are smoke and mirrors. The dewatering of people's wells, the noise and air pollution and the water pollution are enough to make me shake my head and wonder what is going through your minds? It's too bad that something couldn't be done on this property that would benefit the natural beauty of our area and maybe attract more tourism, rather than destroying it. Please vote no on allowing this to go forward. Thank you for your time.

Sincerely,

Kathleen Madeira

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Griffin. I live at 14201 Idaho Maryland Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Idaho Maryland Road in Nevada City, CA. For many years I was a botanical consultant in California, Nevada, Arizona and other parts of the western United States. I performed many botanical surveys for the mining industry over the years. Throughout my experiences in both pre and post mining consulting, I have not seen the environment or the landscape improve as a result of the mining activities. In fact quite the contrary despite whatever efforts and monies were made to reclaim, restore or rehabilitate the landscape. The nature of mining destroys habitats for plants, wildlife, insects, and people. The long term effects and impacts to the water and the ecosystems will prevail. There is no choice but to reject this proposal and to protect the integrity of the environment in our beautiful Nevada County for many years to come.

Sincerely,

Joan Griffin

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is StaceyI Redman. I live at 11226 Northview Drive, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live on Banner Mt. We have owned a home in Nevada City for 12 yrs and love the community.
We moved from a crowded fast paced community to this lovely spot.
Please protect us from this Canadian company that is trying to change our lovely natural resources. Our wildlife is under enough stress as it is without adding more trucks, noise and toxins into THEIR environment.
I see help wanted signs all over Nevada City and Grass Valley so I don't see how adding more jobs that will not be filled is in anyway advantageous.
Water is a precious resource and this mine will impact that, drive home values down and take away from the tourist trade I am sure.
Do the right thing and protect us!

Sincerely,

Staceyl Redman

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elizabeth Lipski. I live at 14531 Echo Ridge Dr, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

To Whom It May Concern,

I have lived in Nevada City for the past 9 years. I own my home here and am also a small business owner. I am an LMFT and have my private practice in downtown Nevada City. My 11 year old son goes to seven hills school.

I do not support the mine. The mine will negatively affect the lives of our community. It is an outrage that we are having to fight to keep our community safe from this destructive mining company. The solution seems obvious to me… NO MINE!!

Best,
Elizabeth Lipski

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jeff Litton at jlit@mac.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jeff Litton. I live at 200 Litton Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

A good leader is defined by their ability to learn from past mistakes.

The county learned a hard lesson when they let a company reopen the San Juan Ridge mine, and it was an environmental disaster, and our citizens are still suffering today.

The EIR is too vague on their waste water treatment, and millions of gallons of poisonous water will be dumped into our watershed.

This will endanger us, the people downstream, and the animals who rely on that water.

Please read my DEIR comment letter for more info on this, or ask me if you haven't seen it yet.

Our rivers are still polluted from our past mining heritage. We are too smart to go back, and trust a company with a terrible track record.

Sincerely,

Jeff Litton

Dear Nevada County Supervisors and Planning Commissioners,

My name is Brion Dunbar. I live at 177 Bourbon Hill Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1, have lived here since 1989. I have studied the history of Rise Gold and Ben Mossman. They have proved that they are not responsible in their previous endeavors, being sued for leaving their prior mine in a mess for the Canadians to clean up. We can not afford that here. If hundreds of surrounding properties find their wells de-watered, or contaminated, do you honestly think Rise Gold will stick around and have the resources to make those people whole again?

Please do the right thing, rather than kow-towing to a foreign corporation.

Sincerely,

Brion Dunbar

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Susan Kane. I live at 16660 Fairless Lane, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in district 4 and have been a resident of Nevada County since 1987. Western Nevada County does not need an opportunistic company of questionable integrity coming in and stripping resources at the expense of our neighborhoods, the air we breathe, the rivers and streams; the landscapes and the wildlife we coexist with.

It is unfathomable that anyone who has read the reams of information that have been made available, can arrive at the conclusion that this is a sound idea.

Climate change is real. As are the many risks and uncertainties pertaining to this proposal.

There are other, more beneficial ways to generate tax dollars.

Sincerely,

Susan Kane

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Courtney Reiswig. I live at 108 Park St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Grass Valley, but grew up in Penn Valley. My husband also grew up here and together we own a local Fitness Facility - Limitless Fitness. All of our members love this community and hope to see it continue to flourish. Supporting this community we come from is our purpose.

As a native of Nevada County, I have watched it grow and am a proponent of responsible progress. With that being said, the risks that are associated with this NON LOCAL enterprise are unacceptable. Even if this enterprise proposing to reopen the Idaho Maryland mine were local, it still would not be worth the risk.

The impacts from reopening the Idaho Maryland Mine would create a ripple effect of lasting proportions. The effects of pollution and water redistribution are not worth the

risk. The tax paying citizens who LOVE this community do not deserve to be put in jeopardy.

We borrow this land from our children. It is our duty to steward and honor it above all else, regardless of political, or economic affiliation.

This mine will cause damage that cannot be undone. Money can never replenish lost resources that we are all so fortunate to have, here. Please honor the lives of those whom this Mine will bring harm - those who've elected you and whom you represent. Vote NO MINE, for us and our home.

Sincerely,

Courtney Reiswig

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Rachel Berry at rachel@sierrabotanica.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rachel Berry. I live at 11164 Newtown Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I moved to Nevada County in 2009 with my family so we could be part of a community that values the beautiful environment that surrounds us and the importance of ecological health. I live in District 1, and have worked for nearly 10 years to support a more reslient food and farm economy through Sierra Harvest. I am very concerned about the negative impacts mines have had on crucial water supplies, farms, and community health at large. Some potential short term gains in revenue are not worth long-term impact on the natural resources we rely on to thrive. Please don't make a short-sighted decision at the risk of jeopardizing our future.

Rachel Berry

Sincerely,

Rachel Berry

Dear Nevada County Supervisors and Planning Commissioners,

My name is Cynthia Borkenhagen. I live at 411 Kate Hayes St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a retiree who relocated from the Bay Area two years ago. I have a lovely home near downtown Grass Valley. I moved here not just to be closer to family, but to enjoy this charming town with its slower pace of life and beautiful surroundings. Rise Gold is a proven plunderer of the environment. Why would we trust them to "reform" themselves in Grass Valley? For a few jobs and a paltry financial return? NO! Our water, our air, the noise and the pollution...our health is at stake. There is only one answer to "Rise Gold?" It is NOT HERE! NOT ANYWHERE!! Thank you for your kind consideration. Grass Valley is counting on you.

Sincerely,

RECEIVED

FEB 21 2023

NEVADA COUNTY
BOARD OF SUPERVISORS

RE: Idaho-Maryland Gold Mine

Dear Supervisor Board Members,

I moved to Nevada County in 1970 to raise a family, practice architecture and be a community volunteer. I authored the Nevada County 2020 Facilities Master Plan that led to the correctional facility and library projects, and have designed buildings for Nevada City, Grass Valley, local School Districts as well as The Foundry and KVMR. I love our community and its environs.

We are at a watershed moment – facing whether or not a gold mine will operate for 80 years underneath Grass Valley. The risks are enormous, and the impacts would irrevocably change our community's identity and quality of life. **This is the most pivotal decision our local representatives will make in my life time**.

It takes strength to say 'NO' to a company that offers jobs and revenue. But, the returns pale compared to spoiling the air and water on which we depend. The constancy of mine trucks and explosives day and night is no small matter. **Our community would be derailed from being an environmentally-conscious place. Our grandchildren would not understand how we let such a project to occur.**

Our community has a storied relationship with gold-mining. We see it in the artifacts around town, the land features and State Parks. Part of the gold mining story is this: In the 1980's San Juan Gold Company obtained a permit for an open-pit mine on 2,000 acres of hydraulic tailings near North Columbia. Due to persistent watch-dogging by a citizen group (which I headed), the permit

included tight mitigation and monitoring measures. In the end, San Juan Gold "walked away" due, in part, to the permit measures.

Then, San Juan Gold sold the property to Siskon Mining Company. Ten years later, Siskon applied for a new permit, with underground shafts, similar to what Rise Gold has proposed. Despite opposition from the community, the County issued a permit.

Less than a year into the project, Siskon Mine was shut down by a catastrophic collapse. Siskon's explosives hit a fracture line; the groundwater basin pushed into the mine's cavities causing flooding, erupted to the surface, overflowed containment basins, scoured Spring Creek, and fowled the South Yuba River with a daily flow of 5 million gallons of metals-laden water. The flow went on 24/7 for months until Siskon could cap the shaft. Meanwhile, dozens of wells went dry, including the one supporting Grizzly Hill school, and water quality was contaminated by the release of heavy minerals. To this day, taxpayers continue to pay the cost for an expensive water filtration system at Grizzly Hill School. Siskon is well gone.

Many in our community including County officials remember the Siskon Mine disaster. It is cautionary, because Rise Gold's re-opening of Idaho-Maryland Mine poses similar risks, but on a larger scale. The Siskon site was remotely located. In this case, Idaho-Maryland Mine is a maze of tunnels underneath Grass Valley, with Wolf Creek and Bear River being the recipient of dewatering. There are complex fault and facture lines through the bedrock, not fully mapped. **The risks are incalculable – to permit a company to set off explosives and dewater tunnels for 80 years underneath our community**.

Thank you for your public service, and your consideration for this watershed decision.

Respectfully,

Jeff Gold

February 15, 2023

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

I write to express my opposition to the proposed Idaho-Maryland mine project.

Undoubtedly, you are all thoroughly familiar all the potential issues with the project (health risks, increased pollution, climate damage, etc.) The issue that most alarms me personally, however, is the risk to the community's groundwater posed by dewatering of the mine.

We recently moved to Nevada City. While shopping for our home we repeatedly ran into properties which the drought had left with severely under-producing wells (less than 1 gallon/min.). It is stunning to me that you would consider any plan for any purpose that would almost certainly further devastate the groundwater situation in a community that is larger and has many more opportunities for economic growth than when the mine was last operated.

It is inconceivable to me that the thin, potential benefits to this project (which, as far as I can tell, include only the possible enrichment of a few Canadians, if they can figure out how to run a business) would outweigh the tremendous risks to our community. As such, I strongly oppose moving forward with the Idaho-Maryland mine project.

Regards,

Douglas Hodder

RE: Businesses OPPOSE Rise Gold's proposal to re-open the Idaho-Maryland Mine

Dear Supervisors:

The undersigned businesses respectfully request that you oppose Rise Gold's proposal to re-open the Idaho-Maryland Mine.

Mining is our past, not our future. During the past 50 years, Nevada County has worked diligently to attract people and investments that contribute to and renew its economic vitality through promising and sustainable enterprises which align with the aspirations of its residents. That is what continues to make this County an attractive place to live, to make a living, and to start new business ventures.

Reopening the mine risks a transformation from a community that is a scenic and cultural destination to an industrial town that tolerates excess noise, dust, and truck traffic. It would entail supporting a business that puts precious water resources at risk, generates significant greenhouse gases, and consumes so much energy that it would completely erase the county's plan to reduce the effects of climate change. The mine could become a deterrent for many seeking to build new business opportunities in Western Nevada County, resulting in reduced community investment and property values. We welcome the County's call for an independent economic study of the impacts of the proposed mine and expect that it will include a non-mine alternative.

Rise Gold's promises to inject money into the local economy may sound attractive, but Nevada County can do better by continuing to invest in existing industries as well as new enterprises that address current priorities in the Sierra like watershed and forest management. The Economic Policy Institute Brief cited by Rise Gold actually shows that other industries can produce far better job numbers than mining, including eight industries Nevada County already has today. An economic study commissioned by the City of Grass Valley during Emgold's attempt to reopen the Idaho-Maryland Mine in 2008 concluded that Nevada County would be better off economically if it pursued other opportunities than mining.

An industrial gold mine would not be a constructive addition to our community. The social and economic benefits are far from clear. The environmental impacts are sobering.

We urge you to protect our health, economy, and quality of life. Please deny Rise Gold's application to reopen the Idaho-Maryland Mine.

Thank you for your time and consideration.

Sincerely,

Jon Moser

(DO NOT) I support re-opening the Idaho-Maryland Mine

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and environmentally sensitive mine that respects neighbors and our natural environment while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

NO MINE = RISE GRASS VALLEY IS A COMPANY OF LIARS + FAILURES

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual earnings of more than $122,000 including benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

Opportunities like this come along rarely. Rise Grass Valley has a responsible, innovative project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by strongly supporting the re-opening of the Idaho-Maryland Mine.

Dear Supervisors Heidi Hall, Ed Scofield, Dan Miller, Susan Hoek, and Hardy Bullock,

I, the undersigned, am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I understand that you will be reviewing the Environmental Impact Report and subsequently voting to approve or not approve the project. I have listened to both sides of the argument and find Rise Gold Mine to be inconsistent, misleading and manipulative. They fail to adequately mitigate many significant negative impacts of this large industrial project on my family, friends, neighbors, and businesses.

There are many reasons this mine should NOT be reopened. My personal reasons are:

I have lived in Nevada County for over 20 years. Our local ecology is our most valuable resource, and we have done enough damage already.
The fact that this is even being considered seems insane to me.
Do not allow this to happen.

I am resident of Nevada County and observe that Rise Gold Corporation lacks respect for the impact of their mine project on the environment and the people of Grass Valley. I hope you will be among those who will be known to have opposed the well-funded deception Rise Gold Mine has developed.

Sincerely,

Name: James P. Bond

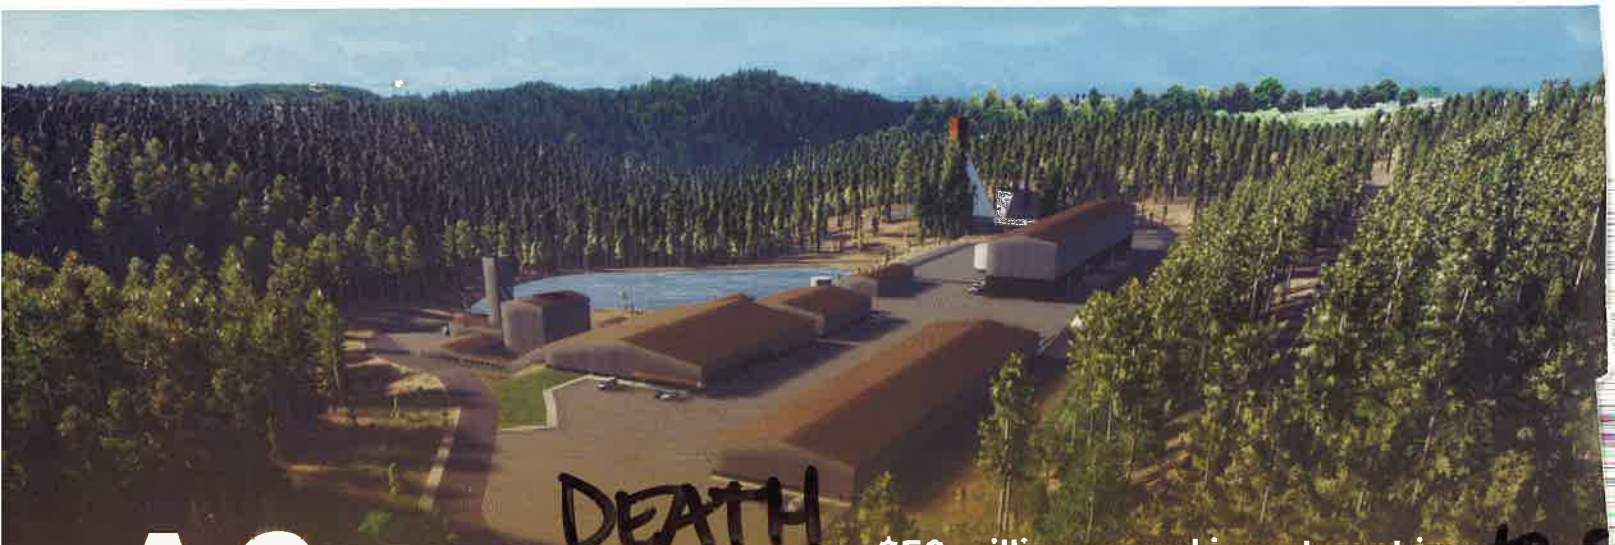
DON'T WANT YOU
THE SIERRA NEVADA
The Idaho-Maryland Mine:
An ANTIQUATED modern, safe, DANGEROUS economic PITFALL engine for Nevada County
Rise Grass Valley's plan to reopen the Idaho-Maryland Mine near Grass Valley will add $50 million annually to the local economy while protecting our natural environment.
result in failure that our community will have to clean up.
RISEGRASSVALLEY.COM
RISE GRASS VALLEY
THE LIARS TRYING TO SCAM OUR FAMILIES!



A ~~Game-~~ DEATH SENTENCE ~~Changer~~ for Our Local Economy

- $50 million annual investment in ~~the local economy and workforce.~~
- State-of-the-art modern mine and processing facility designed to ~~protect the environment and neighbors.~~ endanger our water sources natural environment
- A modern industrial workplace that puts ~~worker safety first.~~ profit over community

Environmentally Responsible Gold

LIES

When complete, the project will employ designs to **minimize emissions, reduce greenhouse gases and protect air quality.** The mine will minimize aesthetics, dust, noise, vibrations and traffic impacts. It will also **revitalize existing land and create new industrial zoned land that supports economic opportunity and create hundreds of good-paying local jobs.**

The trucking traffic alone will cause MASSIVE Problems. It will cost our community while Rise Gold pockets any profits (if it does fail again) lining our pockets

~~Workplace Safety~~ is Our Top Priority

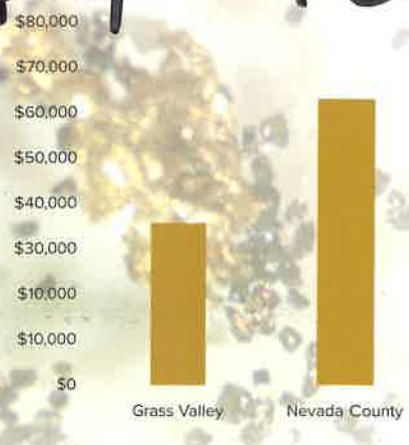
BLAH BLAH BLAH we hired a marketing firm to do a biased Poll ca

Best practices, mechanization and state-of-the-art technology will create a safe workplace environment. **Today's underground mining is as safe today as residential construction and 80% improvement over conditions 30 years ago.**

Good-Paying Family-Supporting Jobs

The re-opening of the Idaho-Maryland Mine will be an economic game-changer for Nevada County, creating 312 new jobs and the potential for another 300 jobs locally in related businesses. Mining operations will pump over $50 million in annual payroll into the local economy by creating jobs that **pay more than double** the average Nevada County annual wage. The Idaho-Maryland Mine is Nevada County's chance to secure a strong, vibrant economic future.

Median Household Income



Annual Wage Comparison

YOU CAN HELP TAKE ACTION!

The time is now to keep the mine – but we need your help!

We need your support and strong voice to tell the County Board of Supervisors that the mine is critical to Nevada County's future.

Please do one of the following today!

1 **Detach the support card on the right and fill out the reverse side.**

We'll use these cards later to show the Board of Supervisors that there is strong support throughout the community for re-opening the Idaho-Maryland Mine.

2 Visit RiseGrassValley.Com for complete project details. Use our **"Take Action"** tool to send a message directly to the County Board of Supervisors through our website.

THE IDAHO-MARYLAND MINE: A PROUD HISTORY, A BRIGHTER FUTURE

The Idaho-Maryland Mine was once one of America's greatest gold mines, helping to grow Nevada County and protect the local economy during even the toughest days of the Great Depression. Between 1866 and 1955 the mine produced roughly 2.4 million ounces, but was forced to close down due to federal gold price fixing.

IF THE MINE STAYS CLOSED

Today, Nevada County is struggling to build a stronger economy, and Rise Grass Valley's plan for the Idaho-Maryland Mine offers a bright future to families who want to deepen their roots in Nevada County.

AND NOW THE WORLD HAS MOVED ON & WE DON'T WANT A MINE.

Please fill out and send back to us your support for the Idaho-Maryland Mine

I support ~~re-opening~~ the Idaho-Maryland Mine staying closed.

Nevada County is in tremendous need of new, well-paying jobs that can help provide a strong economic future for today and for decades to come. Rise Grass Valley's plan to build a modern and ~~environmentally sensitive~~ mine that respects neighbors and our ~~natural environment~~ while creating over 600 new local jobs is a once-in-a-generation opportunity to revitalize our local economy.

No such thing.

Re-opening the mine means over 300 new employees in safe and satisfying careers with an average expected annual salary of more than $90,000 plus benefits. The mine will also spur an additional 300 jobs through related new business in the area. This project will enhance the pride and confidence of Nevada County workers and their families and help build stable and prosperous lives.

no one wants this

LIES! WHICH IS IT?

Opportunities like this come along rarely. Rise Grass Valley has a ~~responsible~~, ~~innovative~~ project for Nevada County. I urge the Board of Supervisors and other county officials to jump start our local economy by ~~strongly supporting~~ the re-opening of the Idaho-Maryland Mine.

OPPOSING!

Thank God.

Nevada City, CA, 95959

Date: 04/28/2022

Dear Supervisors Sue Hoek, Heidi Hall, Ed Scofield, Dan Miller, and Hardy Bullock:

I care deeply for Nevada County and I am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corp. I have found that costs way exceed any benefits.

I have listened to both sides of the argument and find the Rise Gold Corp. (RYES) reports and advertising to be inaccurate. They fail to adequately mitigate most significant negative impacts of this large industrial project on my community and business. As a citizen, I request that you recognize the will of the people and represent us by voting to stop the Idaho-Maryland Mine reopening project.

My opposition to this project is based on RYES plans, reports and the DEIR (Draft Environmental Impact Report). Experts have reported to me that there will be significant increases in air pollution, traffic in key areas, noise from both above and below ground explosions, wildfire evacuation blockages, reduction of our community's water resources, etc. They also report that any economic gains do not justify the costs to the County. Adding 312 jobs to the County workforce of approximately 50,000 persons **adds less than 1% to the County**. Experts predict that no matter what the wages, most jobs will not go to County residents.

I want a quality living experience for residents and visitors alike. I am especially concerned about tourism, likely the largest single public industry in the County. Increased traffic with huge diesel trucks and machines using primary access roads to Grass Valley are not going to improve our reputation as a tourist destination.

Please do not permit the County's attractive environment to be damaged by toxic air and noise pollution, large factories, and industrial traffic from the Mine.

Sincerely,

Dear Supervisors Sue Hoek, Heidi Hall, Ed Scofield, Dan Miller, and Hardy Bullock:

I care deeply for Nevada County and I am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corp. I have found that costs way exceed any benefits.

I have listened to both sides of the argument and find the Rise Gold Corp. (RYES) reports and advertising to be inaccurate. They fail to adequately mitigate most significant negative impacts of this large industrial project on my community and business. As a citizen, I request that you recognize the will of the people and represent us by voting to stop the Idaho-Maryland Mine reopening project.

My opposition to this project is based on RYES plans, reports and the DEIR (Draft Environmental Impact Report). Experts have reported to me that there will be significant increases in air pollution, traffic in key areas, noise from both above and below ground explosions, wildfire evacuation blockages, reduction of our community's water resources, etc. They also report that any economic gains do not justify the costs to the County. Adding 312 jobs to the County workforce of approximately 50,000 persons **adds less than 1% to the County**. Experts predict that no matter what the wages, most jobs will not go to County residents.

I want a quality living experience for residents and visitors alike. I am especially concerned about tourism, likely the largest single public industry in the County. Increased traffic with huge diesel trucks and machines using primary access roads to Grass Valley are not going to improve our reputation as a tourist destination.

Please do not permit the County's attractive environment to be damaged by toxic air and noise pollution, large factories, and industrial traffic from the Mine.

Sincerely,

Signature: _____

Dear Supervisors Heidi Hall, Ed Scofield, Dan Miller, Susan Hoek, and Hardy Bullock,

I, the undersigned, am opposed to the reopening of the Idaho-Maryland Mine by Rise Gold Corporation. I understand that you will be reviewing the Environmental Impact Report and subsequently voting to approve or not approve the project. I have listened to both sides of the argument and find Rise Gold Mine to be inconsistent, misleading and manipulative. They fail to adequately mitigate many significant negative impacts of this large industrial project on my family, friends, neighbors, and businesses.

There are many reasons this mine should NOT be reopened. My personal reasons are:

-119 acres on Brunwick rd, in the middle of hundreds of homes (a residential zone) - NO
- Hauling truck traffic - NO
- Harm to Our Home town, & Local people & environment!
- Harmfull mining dust, ground Water, mineral earth content
- Waste Mine Water - NO

thank you, Get Out of Our Town

I am resident of Nevada County and observe that Rise Gold Corporation lacks respect for the impact of their mine project on the environment and the people of Grass Valley. I hope you will be among those who will be known to have opposed the well-funded deception Rise Gold Mine has developed.

Sincerely,

I would like to know how you plans to dispose of the literal tons of waste gold mining produces, along with - keeping the water and soil clean from the cyanide and other harmful chemicals that are used in gold mining. Along with how you plan to keep people wells full of water considering NID isn't accessible to a lot of the areas around the mine.

If I lose water, have my water polluted, or notice any pollution not being dealt with we are prepared (the towns folk) to get citizen suits and we are prepared to sue for our health and safety.

We do not approve of your greed over our health and well being. This is our town we should be able to choose and we chose we did NOT want the mine. The pamphlets were full of lies and we are outraged by your greed.

Dear Supervisor Hoek,

I hope you are doing well.

Now that the public comment period on the Draft EIR has closed, Rise tabulated and mapped those who provided comments on the DEIR for the Idaho-Maryland Mine Project.

Here is a breakdown of those who submitted comments:

- Approximately 1,180 Nevada County residents sent letters of support for the project during the comment period.
- Approximately **1,340 Nevada County residents sent letters of support** for the project including ~160 support letters received after the close of the comment period.
- Approximately **940 Nevada county residents sent comments in opposition** to the project during the comment period.
- There were an additional 74 persons in opposition who didn't provide an address and could not be matched to the voter or property files.

*Those who commented but live outside Nevada County were not included in our count.

A summary table is provided below with a breakdown by district.

	1 - Hall	2 - Scofield	3 - Miller	4 - Hoek	5 - Bullock	Total
Support	294	331	342	325	51	1343

Oppose	405	78	325	118	11	937

A map with the locations of commentators is available at the link below:
https://www.google.com/maps/d/edit?mid=14UvuUUjNE8e6VY0c-TiZJCUBTtec9Drl&usp=sharing

I previously provided you with the first batch of support cards. The second batch and support cards received post comment period can be downloaded from the below link. I attached a few of the support letters as well.
https://riseg.sharefile.com/d-sed22aae489bd48bbb33601e8ea0cdaec

On behalf of Rise, I look forward to the county preparing the final EIR for the project.

I've become aware of the similarity of the current Cherokee County, NC Crypto Mining case.

I recently wrote an opinion letter to The Union (which has not been printed yet), asking the question, do we really need the income from a gold mine to support growth in the county? In fact, since I've worked in the high tech industry since my arrival in '69, I have seen literally hundreds of businesses move to or take root in our county, generating hundreds of jobs and revenues for the county. Can Rise Gold equal that financial benefit? My opinion, no.

There is more to this story beyond the reports to the county supervisors, the EIR, the Economic Impact Report and other comments from the public.

1. Do the Supervisors recognize the good financial health of the county, with our profitable high tech businesses, and attractive tourism destination? Why on earth would they entertain the thought of pushing the county and the inhabitants back 100 years into a gold mining past?
2. Could there possibly be a driving force pushing the need for the Supervisors toward accepting the Rise Gold proposal? Why isn't the decision a simple slam dunk answer, "No, we don't want the Gold Mine".
3. One needs to look deeper, follow the money, to answer that. The speculation on my part comes from articles over the past year that suggest that strong money interests in the success of Rise Gold are intertwined with legal interests that suggest that the small County of Nevada can be toppled into the hands of Rise Gold by legal manuevering to find the County as a whole must accept the Rise Gold offer. This constitutes a forceful takeover of the county. I'm sure our Supervisors have been advised by legal counsel of that risk.

Thus, this is not a simple fight of people with signs on street corners trying to educate the public or through articles in our newspaper. It is a political battle that must be won with a concerted legal front.

Is there precedence for what could happen here? Yes. Search what is happening with crypto mining cherokee county, North Carolina.

1. Question: Do any of the Supervisors know what crypto mining, or cryptocurrency mining is? What are they mining? Is it gold, minerals? No, it's a new way to create money! Sound impossible? It is the newest high tech approach to create a business by "mining" bitcoin for a profit.

The problem is that it is not a "clean" business at all, it tears apart the community, creates noise, ruins people's lives and there is no zoning to prevent the destruction.

What is my source? Other than Google and a good story in the Jan-Feb '23 issue of Popular Mechanics, you won't need more to make the connection to see how big business can destroy life in a quiet community, much like Nevada County. Read the article. Do some research. This is high tech run amuck. Going up against the likes of Rise Gold will pit Nevada County's independence against the legal forces of big business.

Bottom line, the "Mine" you are considering is a legal battle. Do we have the zoning to lock them out? Does that zoning protect or prevent excess noise, trucks, underground blasting, damage to wildlife, medial damage to residents? No, you can't mitigate against this stuff, you can only prevent it before it happens.

The Supervisors need to look deeper to the legality of injuries that will be caused to our people, animals and community. I found it interesting that the concept of Crypto Mining in Cherokee County, NC has such an obvious parallel to what we are looking at in Nevada County.

Information from: The Union July 20, 2022

"The CEO of Rise Gold Corp is currently on trial in a Canadian court on accusations of discharging waste, effluent and other substances into the environment.

CEO Ben Mossman and Dirk Meckert face 16 offenses under the British Columbia Environmental Management Act, nine under the Fisheries Act of Canada and four under the British Columbia Water Act....

... The (Canadian) mine closed in 2015 after Environment and Climate Change Canada said waste from the mine was found in nearby woods and wetlands, CBC has reported"

The failure to satisfy the above environmental requirements negates anything stated in the EIR, and this failure leaves Rise Gold a Non-Starter in their quest to reopen the Idaho Maryland Mine. Until the above court issues are totally satisfied the Rise Gold efforts cannot be considered in any way. Should any Elected Official support reopening the Mine prior to this, efforts to remove them from Office shall be a primary concern.

Incompatible Use

The economist representing RDN and the Niehaus Economic Impact Report on the proposal to reopen the defunct Idaho Maryland Mine at the 12/15/22 webinar spoke to their research into comparable projects and the impact of introducing industrial mining on real estate values. RDN stated that there were no comparable studies or approvals of mining enterprises as close to residential neighborhoods as the defunct Idaho Maryland Mine is to the 90 homes with in .5 miles of the proposed industrial site. They also stated they could find no comparable industrial mining enterprises approved or operating 24 hour a day, 7 days a week located as close as .5 miles to residential development. Therefore, they could only speculate on the impact to real estate values. The obvious question is how many proposed industrial mining projects were rejected by governing municipalities because of the adjacency to residential development?

Excerpts From Exhibit A, Draft Statement of Reasons to Permit Development in a Mineral Resource Zone, City of Auburn

Our neighboring city of Auburn approved the Baltimore Ravine Specific Plan that proposed a multi-use residential and commercial development in a Mineral Resource Zone. Within this zone, "the State Geologist has concluded that significant inferred gold resources are believed to exist", however, in spite of potential gold mining tax revenues and jobs, Exhibit A represented that "Mining is Incompatible with adjacent Land Uses". The areas around the Mineral Resource Zone have been developed with low-density residential uses. "Because mining activities would already be incompatible with these developed areas due to noise, dust, traffic and other nuisances, the project site should be developed for non-mining uses." Exhibit A goes on to say that even though mining has been a large part of the past in the area, "mining no linger makes up a substantial portion of industrial activity in the County". Similar to Nevada County, mining in Placer County represents less than .1% of the economy.

Nevada County would be wise to formally acknowledge that industrial gold mining is part of our past and not part of our future. The current and future economy will be built on a diverse mix of clean manufacturing, construction, wholesale & retail trade, healthcare, education, arts and entertainment, recreation & tourism, non-profits, government and government services. Success will draw on the willingness of County, City, non-profits, State and National Forest, utilities, and private sector leadership to collaborate and partner in solutions that lead us to a sustainable and balanced

I am a lawyer, local real estate broker, and reside in Nevada City, CA

The "Independent" economic report on this project brings out a few points that should be considered when deciding whether or not to issue a permit for this Applicant.

1. The fact that there is no other mine in this State and apparently in the Country which permits the mining of gold at 500 feet and below immediately beneath developed neighborhoods, commercial properties, airports and medical facilities.
2. The fact that the report does not complete an analysis of real estate revenue loss that it assumes will exist within 1-5 miles of the mine site.
3. The fact that the report relies solely on the facts as presented by the Applicant. See for your reference and 'please watch a panel of local expert citizens who volunteered in their review of this report at: https://youtu.be/dloojmt4M_).

The application must be reviewed under the existing general plan for the County as well as State policy and regulations. The County plan includes "limited exploration" on "compatible" land. in fact, the County encourages mining in compatible areas before encroachment of conflicting uses. (Chapter 17 of the County General Plan). In addition, as the Board is aware, the State authors general guidelines for plans which includes State policy.

I submit to you, that to authorize a permit to dig for gold that encompasses the development of underground mineral rights for 80 years is not a limited exploration in a compatible area. The conflicts of uses are entrenched in densely populated areas of homes, businesses, and commercial enterprises that is the result of 70 years of planning under the County's general plan. Further, the application is a bid to take over the Brunswick basin for the the sole purpose of gold mining the Motherlode which is not the lands highest and best uses in light of these areas.

The revenue that can be generated from this Plan if successful is already being generated in real estate revenue. Revenue which is certain and one can count on and is growing. This is unlike the revenue asserted by the Applicant to be generated which is uncertain and dependent on variables that may not even take place. It is also wrong to assume that mining

will be uninterrupted. Based on this County's past experiences with gold mining something always goes wrong or mining is interrupted even if just for the exchange of ownership interests. The uncertainty in such a plan is underscored by the fact that mining of the Motherlode has not been done at this mine since the mid 50's. No one knows, despite assertions of mitigation, what will happen. There is a lot to cover that must go right for the Applicant's Plans for revenues to even happen; and it is a certainty that the real estate revenues will fall.

Already, the local real estate market has been impacted by the mere fact of the mine possibly going in. Potential buyers have walked away from an area where heavy industrial underground mining imposes risks to water, air, and land and the quiet enjoyment of their potential property. Once the area becomes known for gold mining, more potential buyers will walk away. That is because marketability is based on risk not as defined under an EIR. Its the risk to the quality of life and health and safety of buyers in buying property that is the question in their minds. Some risk might be acceptable but not from a mine that operates 24/7 hours per week; puts tons of pollution into the air; dewaters toxic water; causes homeowners' water wells to be replaced with piped in water; uses up multiple gallons of water from the public per day; assaults the area with noise and traffic that cannot be mitigated; can tear up the land up to 500 ft beneath a residence or business; and holds out jobs for its youth that only bring minimum wages and which non-transferable skills.

Its the risk of being perceived as a community of gold mining values that take precedence over the lives of those who live here and work here. As one potential buyer said to me, " What kind of community would entertain such a development?"; and,as one investor said to Mr. Mossman who was on U-tube promoting the mine, "What are you going to do with all of the houses?".

In sum, the interests of a well-developed community of neighborhoods, businesses, and commercial enterprises that beckons ecotourism cannot be reconciled by underground mining that permanently affects property interests for 80 years. It will permanently throw away, even if it is as successful as a mine the Applicant wrongfully claims, all the progress made from revenue generated by real estate interests because it will redefine the area as a gold mining community. For most who live here, it will irreparably damage the trust in Nevada County government.
Thank you.

Attention Board of Supervisors,

Reopening the Idaho-Maryland Mine would be hugely detrimental to our community. The air we breathe, the ground water we drink and grow food with, increased traffic congestion, earth reverberating noise. All of which impact our physical health, mental health, economic health and small town cultural health.

In all due respect, pay attention to the outcry of community objection to permitting Rise Gold (a poor business risk) to re-open the Idaho-Maryland Mine. You are being presented with factual evidence showing serious unmitigable issues by credible science experts, business professionals, medical doctors as well as local common sense tax paying citizens.

At the very least, watch the report by Mine Watch/Community Environmental Advocates (CEA) for solid information.

https://www.minewatchnc.org/post/minewatch-december-2022-meeting-economic-report-review

Please deliberate with your head and heart, each of you.
Thank you,
Kathy Ogburn

Dear Nevada County Supervisors,

Are you all aware of the public outcry and opposition to the Rise Gold Grass Valley request for a permit to open the Idaho-Maryland mine? I hope so.
We've read the environmental and economic impact reports submitted on their behalf. They are inadequate and raise concern because they contain many omissions, flaws and assumptions that demand re-examination and rebuttal before even considering their request. Let's discuss it.
Please put this item on your agenda for your next meeting so that you can stop spending our money on this destructive, wasteful and unscrupulous project.

Dear Mr. Kelley,

This letter is a follow-up letter on the FEIR for the re-opening of the Idaho-Maryland Mine. In the attached letter, I address the FEIR responses to my letter on asbestos and other pollutants in the DEIR (Individual Letter #510 on March 31, 2022).

I am disappointed that the FEIR responses were cursory and inadequate. My requests to conduct more rigorous sampling for an updated DEIR were ignored.

As a result, I remain very concerned that re-opening of the mine will create serious pollution risks for humans and wildlife.

Sincerely,

Louise Jackson

Re: Final Environmental Impact Report (DEIR) on the Idaho-Maryland Mine Project

Dear Mr. Kelley,

Like many local residents, I am very worried about the risks associated with opening the Idaho-Maryland mine. The recent economic report is flawed due to lack of provision for: healthcare costs that will result from pollutants, loss of income from deterioration of the tourist industry, fair assessment of the drop in property value, and the clean-up costs for the Centennial site. The economic report does not address the lack of credibility of Rise Grass Valley, nor the repercussions for possible financial failure of the mining operations.

Furthermore, many of the FEIR's responses to the public's letters critiquing the Draft Environmental Impact Report (DEIR) are cursory and lack substance. Here I will specifically address the responses to my letter on asbestos and other pollutants in the DEIR. My letter (Individual Letter #510) explained why the data collection and sampling regime for evaluating the occurrence of asbestos was inadequate, creating a risk for human and wildlife health.

I am a Professor Emerita and Specialist in Cooperative Extension at the University of California Davis, in the College of Agriculture and Environmental Sciences. Much of my research focus is on sampling soils across landscapes, aimed at obtaining an accurate assessment of the distribution of soil chemical constituents in relation to soil types, topography, waterways, and vegetation. A link to my CV is here https://ucanr.edu/sites/Jackson_Lab/ . My experience is relevant to challenging the sampling regime at the mine site.

Comments 510-1, 510-2, 510-3, 510-4, 510-5, 510-7: My letter on the DEIR carefully explained why the sampling strategy for asbestos did not follow a scientifically valid design, and that very few samples were taken for analysis. The fact that asbestos was present in more than one-third of the cores and in all the rock types, in varying concentrations, indicates that thorough sampling is needed. This is important from the point of view of human and wildlife health, since it means that precautions for exposure must be taken very seriously, both in underground mining and in the rock for engineered fill. We need to know the 'hotpots' of greatest concern.

The responses in the FEIR do not directly address the points in my letter. They refer to Master Response 23, which is a generic statement on why sampling was limited to certain rock types encountered in gold mining operations. The response does not differentiate between gold-

bearing rocks and other rock types that are disturbed and removed in the excavation process. It does not acknowledge my request for a more comprehensive sampling regime overall.

Comments 510-6: My letter on the DEIR described the lack of detail for scientifically rigorous approaches for the asbestos dust mitigation plan. The response simply stated that the future plan would be in compliance with required regulations.

Comments 510-8, 510-9: My letter on the DEIR explained that very little data was used in the DEIR's section on asbestos exposure impacts. The FEIR response simply states that the DEIR is conservative and thorough, without any explanation or rationale. This is not a satisfactory response because it gives no plan or justification.

Comments 510-10, 510-11, 510-12: A second aspect of my letter was the inadequacy of the DEIR's analysis of the movement of existing arsenic in soils in the Wolf Creek Basin, and thus on the potential exposure for people and wildlife in the area. Water from the mine is likely to sometimes inundate stream corridors, and the scouring of creek banks will move sediment downstream toward Grass Valley. My letter included the full report of a 2009 study of soil samples by Wolf Creek Community Alliance. It shows high concentrations of arsenic in some places right along Wolf Creek. The DEIR did not address the impact of its dewatering on exposure to arsenic from movement of sediment off-site. My letter explained that a robust hydrologic study is needed in an updated version of the DEIR to understand how dewatering the mine may increase the risk of exposure to arsenic and other toxic minerals such as chromium and lead that are in existing sediments.

The FEIR response completely disregards the 2009 study of Wolf Creek, stating that samples were not taken in the bed or bank of the stream. This demonstrates a lack of understanding of hydrology and sediment movement, since runoff can easily carry sediment several feet into a stream. No mention is made of my request for a robust hydrologic study in an updated version of the DEIR, further showing little comprehension of potential hydrologic effects on pollutant movement, and exposure of people and wildlife in the Grass Valley area to toxic pollutants.

Comment 510-13: This comment relates to my inclusion of the 2009 study of soil samples by Wolf Creek Community Alliance in my letter on the DEIR. The FEIR response is that the study 'does not address the adequacy of the DEIR'. By refusing to consider this study as relevant to the DEIR, the ability to evaluate pollution risks in the DEIR is compromised.

Sincerely,

Louise Jackson

I sent this to the Board of Supervisors last week!

Re. Rise Grass Valley

Supervisor,

I realize that I live in a small bedroom community. Shopping local, in the past, was great and very seldom was it necessary to shop out of this area. What I do see now is that Grass Valley and Nevada City areas are becoming a very large bedroom communities, with virtually no retail shopping, very little medium to high paying jobs, very little manufacturing, and very little local shopping other than groceries. Small retail shops are available but most don't last long and the atmosphere is constantly changing, with available retail rental spaces everywhere.

I'm not sure when it all started. I think the first things I saw leave Grass Valley and Nevada City area, were the disappearance of the three car dealerships. It seemed like no big deal but now we had to drive 25, 45, or 60 miles or greater to buy a car and the same to maintain the warranty and service the vehicle. Shopping now is that same 25,45,

and 60 miles. Many people are beginning to shop on Amazon and other internet stores, because they don't wish to drive(gas being so high). Now KMart closed and this really affected a large number of people because there was no place locally that took its place.

Oh yes, finding specialized doctors. None to be had, so it's on to Auburn or Sac, several times a year. There were, it seems, just not enough doctors to cover all the senior individuals living here. Most doctors don't want to live here because of the high cost of homes and the high cost of living. Some of the our specialized doctors, moved to other areas that were cheaper and were probably paid more money.

One other problem is not only commuting or shopping in other areas but driving the hazardous and unsafe Highway 49. Somedays it's just one long line of cars from Grass Valley to Auburn.

I have also heard of various people in our two cities having meetings on how to promote or create more tourism and local shopping, maybe by celebrating something and/or commemorating someone, all to bring more people and monies into the area. Everyone is hoping Target will get here soon to help with local spending and increase our tax base. I myself think it will be more than a year before Target evens thinks of making another store just 20 miles from the one in Auburn.

Now this gets us to why I'm writing this letter. Copious low-cost housing is being built to house mostly lower income wage earners similar to fast food, restaurant employees and retired people. Several medium to large single family housing tracts are also being built. All this spells just more bedroom community individuals who will take their monies out of the county to spend elsewhere.

I believe that opening the Rise Grass Valley Mine will add more high paying jobs to this area, create a larger tax base and with more money to spend here, it will bring more retail to this area. Yes, we must promote more larger retail stores, more manufacturing and more

electronics to our great area. Okay, the mine may produce some Greenhouse Gas Emissions or affect the air quality, but just think of the probable expansion of our bedroom communities, which will be driving to Auburn, Roseville or Sac. every day, for doctors, work, or shopping. What does that do for air quality?

Granted, opening the Rise Grass Valley Mine may impact some residents near the mine. I believe the mine will do everything in its power to respect these homeowners and try to do as little as possible to upset their lives. I also believe that this mine will be the most highly monitored mine in California and will be chastised and fined for any minor infraction. If the mine is not doing as it has advertised, then yes, fine them and make them make changes. I would bet the mine would rather make money than have various penalties and charges levied against them.

In closing, please let the Rise Grass Valley Mine open and bring to this area jobs, high paying jobs, and demands for more retail, more restaurants, and more local spending. I just don't want to see Grass Valley and Nevada City becoming **Ghost Towns.**

Sincerely,

Gerald J. Gierszewski

Dear Board of Supervisors,

I urge you not to allow Rise Gold to reopen the Idaho Maryland Mine.

Surely, by now, you've read about the untrustworthiness of Rise Gold & its CEO.

If not, take a look at Shouldn't Trust Rise Gold | MineWatchNC.org

Beyond this particular company & its CEO, there are so many unpleasant consequences to our community from the mine reopening -- increased traffic, various kinds of pollution, etc.

Please don't vote to reopen the mine.

Thank you!

Best wishes,

1/16/23

Nevada County Board of Supervisors
Nevada City CA 95959

Board Members,

Thanks for your leadership in the communities of Nevada County. The members of these towns and cities put their trust in you to make wise decisions based on the character and values of the community. We live in an area with beautiful natural resources and recreation that draws visitors from throughout the state and around the world. That, coupled with the history of the Gold Rush and the charm of our small towns, is becoming harder to find anywhere in California.

The idea of allowing an extractive industry to move into the heart of our County and create an industrial complex that brings increased industrial traffic, pollution and threatens the water supply for many, seems to be a bad idea at best, and a disaster for the County at large. The fact that Rise Gold has a dubious track record as a corporation and is facing litigation in Canada, seems to suggest that Rise can't deliver on the promises they've made. They have already made an effort to mislead the community with their survey regarding the mine. I had the survey methodology reviewed by professional academics who agreed that it was flawed and that the findings would not be a valid representation of community opinion.

The community has elected you to act in their best interests. They want visionary leadership that can see through the false claims of extractive industries who want to set up shop in the heart of our community. Please vote **no** on the reopening of the Idaho/Maryland Mine.

Sincerely,
Dan & Dee Desmond

RECEIVED

JAN 26 2023

NEVADA COUNTY
BOARD OF SUPERVISORS

EACH SUPERVISOR RECD

1-23-2023

Dear Supervisor Ed Scofield,

Dist 1

It is out of concern regarding the potential re-opening of the Idaho-Maryland Mine by Rise Gold, that I write this letter. My husband and I live within the one mile sphere of impact/influence from the mine. There is no guarantee that our well will not be effected by the de-watering, drilling, or blasting by Rise Gold. Further impacts that can/will occur are noise and air pollution, and potential contamination from products used by the mining company. We will be directly impacted by the increased traffic on Brunswick Road, our main route to town. These concerns, coupled with the problematic EIR commissioned report by Nevada County make this project one that should NEVER come to fruition.

The report by Robert Niehaus focused on the economic effects of the mine versus any/all the other issues that can and will arise should the mine re-open. Furthermore, it has been reported that nothing in the EIR is typical for a mining entity. Is this because of Nevada County's short sidedness when making the request for the EIR thus restricting the study's scope? Even the comparables used by Mr. Niehaus were inadequate in terms of size and location when trying to draw a comparison to the proposed mine in Nevada County. The EIR has been characterized as incomplete and completely vacant of crucial information. The lack of crucial information should leave everyone scratching their head in dismay.

The opposition to the mine is not self-serving, it is, in fact, self-preservation. Nevada County should have its citizens at the forefront of their thinking. Our property values will diminish, our air quality will diminish, and our wells may diminish. The Concerned Citizens Roundtable group that presented on December 20th on the Mine Watch webinar are respected members of our community who have donated countless hours of their time to study the facts and to present the facts in a concise manner. Please, listen to them, to your constituents, and concerned citizens.

We are adamantly opposed to the re-opening of the Idaho-Maryland Mine. Please follow the science not the money!

Thank you,

Mary Lee

Dear Nevada County Supervisors and Planning Commissioners,

My name is *Marilyn Nyborg, 14480 Craig Lane, Grass Valley, CA 95945*

I have been writing to you all year it seems, with no reply. Others have been far more articulate quoting real facts and asking important questions. I can't believe we are still doing this.

What comes to mind, if the proposed Idaho-Maryland Mine Goes through:

You are NOT listening to the communities concerns. **Once again its profit over people.**
The traffic and noise issue is pretty obviously a problem.
The use of our limited supply of water!
The promises of the owner are unbelievable.
Additional unhealthy pollution.
THE character of the owner and promotor is highly suspect. Having left legal and environmental issues he violated in Canada, not telling the truth about HIS record.
Another country claiming our earthly treasures.
jobs.is a joke, he will have to recruit elsewhere for miners and adding to the housing loan, medical load and schools that will be needed.
The recent survey did not ask probing questions, likely designed by the investors.
IF it is another Flop, he leaves with investors money in HIS pocket and we get the cost of clean up and toxicity.

I'm done. Pease reread the letters you have been getting, Doctors and scientists who have stated their expertise. AND LISTEN please.

Sincerely, Marilyn Nyborg

Dear Nevada County Supervisors and Planning Commissioners

My name is Sharon Lipski. I own a home in Nevada CIty-547 W. Broad Street having moved here 4 years ago. My reason for moving here was to embrace the small town atmosphere abundant with nature and quiet. It saddens my heart that the proposal of reopening the Idaho-Maryland Mine has even made it to the voting table. There are so many reasons as to why this would be a devastating decision if it was to move forward. When reading the local paper "The Union" for every article there is about the mine there are also clear articles about California being in a drought-areas of our state already rationing our precious resource of water because there is a lack of. Why in the world would we allow a mine to open that would use up incomprehensible amounts of water to allow a company to look for gold. Why would we allow this company to drain our power grid when we already have power outages! There was a recent article questioning if California will be able to power all these electric cars that are being mandated with the questionable ability of our power grid to compensate this. Do we really want our power grid to be compromised by opening the mine when we need power for so many other endeavors.More importantly we are in a state of climate crisis. We need to move forward with ideas to heal the earth. Not cause devastation with toxic chemicals and drilling to pollute the soil and the land for generations to come. Why create an enviroment where the land is destroyed in hopes it will be cleaned up in the future. Right now at this very moment we should be putting our energies into finding ways to preserve our land in ways that it will be healthy and sustainable. Openng the mine is a decision nobody in these communities want. You represent the people please I am asking you to listen to the people. The noise from the trucks and the drilling on site-the air pollution it will cause-the wells that ill run dry-the people who have lived in houses right by this site who will have to deal with all of this. Do you have compassion for their concerns and quality of life that opening this mind will subject them to. But it goes further than the surrounding neighborhood. It is both communities that will suffer if this mine opens. We have vibrant towns that rely on tourism to come and support the local shops and restaurants. We offer a place for people to come with the feel of small town, nature, bringing them away from the noise, pollution, people, traffic, A reprieve from the chaotic big city every day life they lead. I run an Air B and B and all of my guests have told me they come here for these reasons. They love to get away to Nevada City! So not only do the residents who live here value this type of life but also the tourists who come. There is no assurance that opening this mine is going to monetarily help our communities. The

cost of the clean up as this company packs up and leaves us with the toxic aftermath will be a monetary drain on our community. But more importantly a devastating enviromental mess that will continue on for years to come. Truly you can't believe that finding some gems of gold is

worth the destruction the mining will cause to the land. Let's value what is right-to be stewards of the land. To be grateful for the gift and do everything in our power to live in harmony and work towards preserving and healing instead of destroying.
Thank You for listening to my concerns. Please give thought to all the reasons your community is opposed to this. If you move forward with this you can't turn back when the reality of all the extreme negative consequences start to play out. Again there will be no turning back so please make the right decision for all of us. Sincerely Sharon Lipski

Re: Inadequate Assessment of Toxic Pollutants for the Idaho-Maryland Mine Project

Like many residents, I am deeply concerned about the risks associated with opening the Idaho-Maryland mine. These include the loss of quality of life, property value, and local economic viability, but I will focus on the lack of rigorous evaluation of toxic pollutants in the Draft Environmental Impact Report (DEIR), specifically asbestos and arsenic. In the Final Environmental Impact Report (FEIR), the responses to letters of concern on this topic tend to be cursory and insubstantial, without specific plans for how assessment of these toxic compounds will improve information that would benefit human and wildlife health.

I am a retired Professor and Specialist in Cooperative Extension at the University of California Davis, in the College of Agriculture and Environmental Sciences. My research and experience are relevant to challenging the sampling and assessment regime for soil and water constituents, and the potential for mobilization of compounds into waterways. A link to my CV is https://ucanr.edu/sites/Jackson_Lab/.

My letter on the DEIR (Individual Letter #510) explained why the sampling strategy for asbestos did not follow a scientifically valid design, and how very few samples were taken for analysis. Since asbestos was present in many of the cores and in all the rock types, in varying concentrations, there is a need for thorough sampling. The responses in the FEIR did not directly address the points in my letter. They referred to Master Response 23, a generic statement on why sampling was limited to certain rock types encountered in gold mining operations. An improved sampling regime for better understanding of asbestos risks was not proposed.

Another aspect of my letter was the movement of existing soil arsenic in the Wolf Creek Basin. Water from the mine may sometimes inundate stream corridors and could move sediment downstream toward Grass Valley, exposing people and wildlife. The FEIR response disregarded a local study on soil arsenic and other toxics. No mention was made of my request for a robust hydrologic study on how dewatering the mine may increase the risk of exposure to arsenic and other toxic minerals such as chromium and lead that are in existing sediments.

Unfortunately, the FEIR responses suggest an unwillingness to provide a rigorous assessment of toxics, leaving us without adequate information about the risks of opening the mine.

Dear Supervisors,

Please consider embedding the very worthwhile quality of compassion into all Code Compliance enforcement. Especially when the result of enforcement will be very detrimental to vulnerable people or needlessly punish a landowner due to a vengeful complaint.
It seems it would be a simple thing to consider the result of enforcement and what harmful results would arise. The cannabis farmers were given two years to come into compliance. It seems zoning violations that would result in unhousing vulnerable citizens could also be afforded more leniency.

Thank you for your consideration.

To: Nevada County Supervisors and Planning Department

Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

January 30, 2023

Dear Nevada County Supervisors and Planning Department:

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of Wolf Creek, which have been protected by the State Park. It could damage the whole watershed, including the Bear River and points downstream from there and exacerbate climate change… wrong direction!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance since 2004 and know well how Wolf Creek lives in our community, how important it is, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive creek

invertebrates (bugs to most of us), which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.

- I'm worried about the effects on the Meadow along Bennett Street.
- I believe there is insufficient mitigations for endangered species and species of special concern, like Monarch Butterflies, Yellow Warblers (a favorite of my husband) and the Yellow-legged Frog
- Increased traffic, noise and air pollutants, impacting wildlife and people
- Increased energy use, SO MUCH (I had a long career as an energy engineer and greenhouse gas analyst and this is NOT the direction we want our community to take toward climate change!)

I do not believe the FEIR addressed these impacts properly or thoroughly.

PLEASE, Commissioners, do NOT approve the FEIR and do NOT recommend the project.

If this project is recommended, please Supervisors, to NOT approve this dreadful project.

Sincerely,
BJ Schmitt

Nevada County BOS and Planning Commissioners,

I am Tony Lauria. My wife Lauren and I live at 13784 Greenhorn Rd GV

Please take a short few minutes from your busy day to fully read our important message.

I "beg" you to say NO to the certification of the FEIR and NO to the project. No Build - No Project!

I could easily write an essay on how utterly wrong this mining proposal is for the thousands of people who live here in Nevada County. Over the past couple years, I've actually compiled most of that writing already, which is a testament to the impact not discussed; how severely stressful life has become dealing with the potential consequences of not being able to stop this life threatening proposal. As I mention below, the words, *risk* and *potential*, are not accurate at all. There are impacts that *cannot* be mitigated to less than significant. There is no possible outcome other than the demise of our community, with an active mine permitted to reopen.

I was told by one of your commissioners that this is a democratic process, and I "do not have to beg" for justice in this matter. While I genuinely appreciate his sincerity, the sentiment seems to be out of sync with the impact reports published by county staff. As I witness the disregard to blaring deficiencies in the DEIR, resulting in an FEIR candidate, I am left astonished and abandoned by my county officials, in the fight for justice to save our residency from the horror of a devastating mine, 1 mile away. Were this a democratic process, a public referendum would be the deciding factor. And that factor would see this

proposal rejected by an overwhelming decision. I'm sure you have seen the No Mine signs on, virtually, every road in GV and NC.

The fact that our home is listed as one included in a well monitoring program, indicates there *is* a risk to our well being damaged, contaminated or drained. Just as any of you would not allow a theft of your property, we will not allow anyone to risk our health and well being by stealing our water and quality of life. Any action to place our well at risk is illegal. I do Not give permission to risk our only clean water source to any company or individual. I did Not ask for this mine to be reopened. I would have absolutely No benefit. The reopened reality would be a severe contrast to any benefit. My family and home would be subject to significant devaluation, financial hardship and a litany of health issues caused by mining operations. We would be forced to vacate our wonderful home of 32 years. There is no possible way we could survive within proximity of such a contaminated environment of air and noise pollution, not to mention the loss of our water.

Again, as I see it, this is an illegal act against my family's private possessions; Our only source of water, in a well that we paid for, and our home/property, that has a stated current value. Any action that threatens to damage either, is unacceptable and must not be allowed to proceed.

My comments and questions on the DEIR were not answered or addressed to my satisfaction. Here are the reasons:

1. There *will* be impacts. Contrary to what the gold mining company has stated in their press releases, it is fact, based on evidence from all the previous mining done in this county, that there *will* be environmental compromises. Virtually every former mine site is still contaminated. Ironically, the IMM and Centennial site are currently on that list. Experts have documented their opinions that support the likelihood of impending disasters. A brief search on the web shows the prevalence of gold mining gone wrong, all over the western US and Canada. There's no speculation in this regard, and no exception for the IMM.

2. There *will* be significant impacts to domestic wells. The extent of how many will be drained, damaged or contaminated cannot be known due to the complex hydrogeology within the entire mineral rights boundaries, and beyond. Dewatering, at the projected rate of millions of gallons per day, *will* cause

impacts to our precious resource. The FEIR even acknowledges that. Water is far more important to the well being of the community that gold in the pockets of foreigners.

3. There *will* be significant impacts to air quality. It is impossible to fully contain the silica and asbestos dust that will be discharged during the mining process. This entire area is known for it's serpentine rock, which contains this asbestos. When ground up and hauled out of the earth, it *will* disperse into the atmosphere. The particles of asbestos and silica dust can travel for miles in the wind and the FEIR's plan for managing the mine waste relies on such a grossly simplified method of monitoring asbestos levels, that we'd be fools to believe that process would be accurate.

3b. The thousands of tons of exhaust by machinery and one hundred plus truck loads per day, *will* result in a significant health hazard for breathing, as well as contribute enormously to the global problem of excess carbon in the atmosphere, which is causing our climate change.

4. High explosive blasting *will* be a significant impact to all the residents within the mineral rights area of the mine. It is impossible to contain the vibration and noise of an active process of blasting thru solid bedrock below residential areas. Fact; during the short exploratory drilling off Bennett St, the residents were subject to deafening noise and home shaking vibration for days.

5. Home & Property values *will* be significantly reduced. That loss could be 100% if the only source of water for the home is a well, and it is drained from the mining operations. All local Realtors agree that the loss in home values will be significant. No direct comparison to this area was found in the economic report. In this respect, the economic report was inaccurate and useless. Even the former president of the realtors board has taken a public position of denouncing the reports unsubstantiated claims of no loss to property values.

6. The risk factors far outweigh any potential monetary gains for the county. One disaster, such as the Siskon Mine, or Banks Island spills, would place a serious burden on the county to fund clean up and claims for ill health caused by the mine. This county rightfully prides itself on good budget management. However, a single catastrophic even could put a massive burden on those figures. There is no worthwhile economic reason to accept that risk when balanced against the real potential for extreme hardship imposed on the

community.

6b. Did Mossman's previous company go bankrupt? Yes! Who would be responsible for damages and clean up if Rise Gold goes bankrupt? Nevada County, and the residents therein.

7. The credibility of the CEO of this mine company is significantly flawed. He is currently in litigation for 29 charges of environmental failures in Canada. This CEO cannot be trusted. He has released many published statements that are not true, such as, "there will be no impacts" and "the community overwhelmingly supports the mine". The opposite is the actual truth. Is this a company you would want to open a business in your town? It is more than obvious they are interested in a profit, which does not include the well being of the community.

7b. In what FEIR world of adequate protection and fairness to the community is it acceptable to design an emergency replacement water program dependent on a negotiation with the Mining company? I should Not be required to compromise or negotiate with Rise Gold to get my water connected to NID. Would this make any of you feel protected, being forced to deal with a very unconscientious company and CEO?

8. Did the EIR provide for NID hookups to all the unserved neighborhoods where wells could be drained, as recommended by NID? No!

9. Many **wildlife species** have been captured on video in the mine site area. What will happen to these animals when the noise of operations begins? They **will vanish.**

10. Even if an adequate 3 plus year well monitoring program was put in place, it does not mitigate the stress and burden of a potential loss of one's well. It *would* be a constant concern and worry as to whether any given day is *the* day your pristine well becomes contaminated or drained. What if it's contamination from stirred heavy metals and toxins caused by drilling, dewatering or blasting? How long before you were to become aware of the problem? Did you or your family ingest any of this contaminated water before you found out? What a nightmare. In no way is there a possible mitigation for well problems. On this basis alone, there should be No permit issued. The law states, if an impact cannot be mitigated to less than significant, the operation

should not be permitted. No project! No build! I'd say the constant anxiety and worry that, at any moment, you may lose your well, and/or have your health seriously endangered, is Not mitigable. Property value loss is not able to be mitigated either. Who do you know that would buy a home with the warning, at any time in the next 80 years, it could lose it's only water source?

12. We, the community of thousands who now live in this area, **do Not approve of any rezoning to heavy industrial mineral extraction!** We did not purchase our property with a written statement that the IMM could be rezoned in the future, from light industrial, to this full blown heavy industry. This is absolutely wrong and unacceptable.

13. This entire proposal was built on either no data, or insufficient data. It has obviously been crafted to omit many aspects of real data, so it has a better chance for success. This is not the manner in which a conscientious company would do business, with a priority on the citizens well being. Furthermore, the economic report was dismantled by experts and deemed flawed in virtually every aspect of its findings. The DEIR was the beginning of documents submitted with deficiencies, and flawed, or no, data. Numerous expert comments were submitted to expose this fact.

14. There is a high probability that the IMM will be abandoned from, either the lack of funding to produce a result, higher mining costs, or an environmental disaster, such has happened before in countless mines. In any case, the burden of clean up will be on the county and it's residents. This will be in the tens of millions. Is the county prepared for this likely outcome?

15. This project *will* create a nightmare for wildfire evacuations. With the estimated 600 employees, and the thousands of residents down Greenhorn and other surrounding roads, there *will* be a complete inability for traffic to clear from the area. Furthermore, thousands of gallons of onsite diesel and tons of high explosives, *will* be a significant hinderance to containing wildfires, and prevention of such fires.

Is any of this an alarmist attitude and over reaction? Absolutely not! What is being touted as a money maker for the county is really a swindle for the thousands of residents that will be seriously affected by this mine.

Please say NO to this project and put a stop to this threat to our health, safety and well being. Any other decision is, *literally*, a sentence to force us into the extreme hardship of moving out of our home, at a great emotional and financial loss.

Please be part of the evolution to change the injustice of money and power being the deciding factor. Choose the priority of well being for citizens and the planet, over promises of profit.

Thank You

Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Planners and Leaders,
As a long time resident and concerned citizen I am requesting that you vote against the proposed re-opening of Idaho-Maryland Mine by RISE Mining Corp. The proposed operations have significant and unacceptable impacts that endanger our community's health and well-being. There would appear to be significant impacts to the ground water table, the soil stability, the atmosphere, and the noise levels and health of residents and visitors in the Brunswick basin and surrounding neighborhoods. In fact, the detrimental effects may deter visitors and future home buyers from coming into the area and leave the county with long-term consequences that are complex and costly to deal with.. appropo...remember the piles of tailings and red dirt from the Empire Mine? https://www.waterboards.ca.gov/centralvalley/water_issues/mining/region5_success_stories/empire_mine_state_park/index.html
The handful of proposed local-hired jobs and the uncertain, if not over-estimated, tax revenue aren't worth the overall risks. Please, for the sake of preserving our beautiful landscape and a healthy, unpolluted community have no part in sanctioning the RISE mining operations in our county. Thank you for your considerations.

Yours for a truly heathy tomorrow,
Denise Buglino
Nevada City resident

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of John Vaughan at jvaughan1946@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Vaughan. I live at 11793 Lower Colfax Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The normal process for opening a mine includes (at least) the following steps: Feasibility Study, Exploration (which requires an EIR and permitting) and Production (which requires an EIR and permitting).

One of the many DEIR commenters notes the following: “The mining project as proposed in this [Draft]EIR has a fundamental lack of information on the economic viability of the mine, and potential environmental impacts related to geochemistry and water quality. The data submitted in support of this [Draft]EIR is only sufficient to support an application for dewatering the mine, and for underground exploration

drilling. ... The [Draft]EIR should analyze an Alternative that provides for dewatering and underground exploration. That is the only Alternative that the information provided in this [Draft]EIR will support."

The FEIR response: "This proposed alternative (exploration only) is not economically feasible because there is significant cost with dewatering the mine, including construction of a water treatment plant, installation of a potable water pipeline to provide water to affected well owners, and underground access and safety improvements necessary to complete the suggested exploration phase. The proposed alternative would be economically infeasible because all the above costs would be incurred without the ability to produce any valuable minerals to offset that cost."

The author of the DEIR comment notes: "If you follow this simplistic logic, mining companies would never ask for an exploration permit, they would just ask for a permit to mine, and then go start drilling to see if anything is really there. This approach, which is what is being proposed by the Idaho-Maryland proposal, gives the mining company an enormous amount of flexibility, with minimum regulatory oversight. Mining companies complain a lot about regulatory oversight, as well as having to communicate with the public. However, those regulatory requirements are there for a reason – mistakes have been made by mining companies that have led to financial and environmental losses to individuals and public agencies. It is highly likely that the public officials, county employees, and even the people proposing this mine will not be there when problems arise. But the landowners around the mine, and the public agencies that have assumed responsibility for the mine, will still be there, and they are the ones that will need to deal with the problems."

Frankly, I am stunned by the FEIR response, which basically says "we can't afford to follow the normal steps so just give us a permit to open the mine...for 80 years". The fact that Rise Gold can't afford to follow normal procedures is not the County's problem.

Just say NO to the Final EIR and just say NO to this project.

Thank you,
John Vaughan, District 3

Sincerely,

John Vaughan

Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Edward Szymanski. I live at 112 S. School St., #3, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Supervisor Swarthout:

I have lived in Nevada County for 18 1/2 years. 18 years living in Nevada City and residing currently in the equally charming town of Grass Valley. I still remember when another out of state/out of country entity named Emgold tried to reopen the Idaho-Maryland Mine to the chagrin of many concerned citizens. That concern for a better quality of life here in Western Nevada County has not dissipated. Unproven, rosy promises were made by David Watkinson when Emgold came to town and now we have the RiseGold president, Benjamin Mossman, he of some ill repute due to

the Yellow Giant Mine fiasco in British Columbia, making promises that will not come to fruition due to the inherent risk and toxic environmental degradation and the diminishment of quality of life that invariably occurs with any type of mining.

I am sure that you by now are familiar with all the negative aspects of this proposed project. They far outweigh the positive. Let's remember gold mining as a part our history and not forget that it is history now. Gold mining has no place here anymore. Tourism forms a large part of our economy and it is built on our recreational opportunities and the charm of Nevada City and Grass Valley. It will suffer once it becomes known that the area is now host to industrial grade mining.

As a constituent who voted for you, I beseech you to oppose the reopening of the mine and do your absolute best to dissuade any supervisor who is in favor of this meretricious endeavor. Thank you for your attention to this critical matter.

Sincerely,

Edward Szymanski

Dear Nevada County Supervisors and Planning Commissioners,

My name is Clayton Olson. I live at PO Box 3565, Grass Valley, CA 95945-3565.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The uncertainty of what will happen to peoples' wells and the historical lack of full responsibility by so many mining operations -- inadequate bonds, inadequate monies to cover mistakes or misdeeds of a mining company, toxic legacies -- is the primary reason I want the Rise-Gold Mine proposal to be rejected. My second reason is my wondering what it's like to have explosives go off underground in relation to the sound effects and seimic activity?

Sincerely,

Clayton Olson

Dear Board of Supervisors:

My husband and I, among many others, live off of Colfax Highway #174. The residents in my neighborhood all depend on wells for water, for drinking and its many other purposes. We want assurance that our wells will remain clean and healthy. If the mine contaminates them, then it is too late to save the water we depend on. Water is more precious than gold, for it is necessary for life.

Another reason we do not want the mine would be the increase of truck traffic on our two-lane, double yellow-lined highway. It is our only way to Grass Valley and/or to the rest of California. We drive it almost every day. There is a song entitled "Wicked Twisted Road." Although I don't think it was written about Hwy 174, this curvy route has numerous crosses and memorials to indicate it already has safety issues. In many places, the road has no shoulders. There are already many tandem trucks hauling river rocks from Greenhorn Creek, a mining process itself that also contributes to the silting in of Rollins Reservoir and reduces its shoreline. We don't want more traffic.

I do not know of any young people aspiring to work in an underground mine. A high proportion of Nevada County residents are senior citizens, who also have no inclination to be employed by the mine. I think the claim that the mine would bring jobs for our residents is over-projected.

Another reason to say No to the mine is because Rise Gold is not a U.S. company. Why do we want a foreign company to be taking American gold? I think Canada is a good neighbor, but I 've also read columns in the Union Newspaper that were critical of this company and its management. Please do not be deceived.

Please be aware of the opinions of the Highway 174 Corridor who live near the mine site and oppose reopening the mine. A lot can go wrong. Reopening the mine could bring more harm than good.

Sincerely,

Donna A. Meares

My name is Janet Dunstan. I live at 19595 Bow Valley Road, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Chicago Park and the thought of having to deal with the trucks coming out of the mine site and the traffic related to continued road maintenance is frightening. It will make our home much less appealing to a new buyer. The noise will have a significant impact on the quiet of the foothills that we moved here to enjoy.

Making a decision to do business with a lying fraudulent company is unconscionable.

On top of climate change, our friend's and neighbor's wells will be severely impacted

Dear Nevada County Supervisors and Planning Commissioners,

My name is Bonnie McKeegan. I live at 17076 Jody Ct, Grass Valley, CALIFORNIA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Me and my family live in Alta Sierra. We first came here in 1981 when I entered my junior year at NUHS. We were charmed by the trees, rivers, forests, state parks, and history, particularly the mining history.

I left as a teenager but returned as an adult with kids, so they could enjoy the same environment I fell in love with at 15 years old. They are 18 now and if they leave to pursue their educational goals, I want them to yearn to come back. If there is a nasty ole, loud, polluting mine that changes the culture of our community and environment, they will look elsewhere to live. Then, my husband and I would look elsewhere to live

as well. Leaving my family's 42-year home would be sad but we do not want to spend our fast approaching retirement and last years in a place that values corporate greed and destruction of our unique assets.

Commercial mining is history that no longer has a place in our community.

Please preserve the beauty, attractiveness for tourism, and serenity that we have.

NO mine!

Sincerely,

Bonnie McKeegan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Craig Rohrsen. I live at 10615 Lone Lobo Tr., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have made Nevada County my home for 42 years. As a videographer I have produced videos for the 16to1 and the Boston mine mercury remediation project. We will be managing the environmental impacts for generations. We should not even consider a project of this magnitude! Remember the San Juan mine? Nevada County is thriving. Please say NO to this and any future mining.

Sincerely,

Craig Rohrsen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Erin McMichael. I live at 13905 Clover Leaf Court, B, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

My name is Erin and I’ve lived in Grass Valley for almost five years now. I live in Peardale, right off 174, and my life would be significantly altered if this disastrous mine were to be built. Not only would traffic increase in a huge way on an already busy road next to my house, but the idea that there will be massive trucks holding up traffic all the way up and down that long, one way stretch of road, with no way to pass, and increasing the potential for accidents, boggles my mind.

Additionally, and most importantly, the environmental impacts will diminish all quality of life, especially those who live around the mine, or near its thorough-ways. Dumping waste into local sites? That is irresponsible and mindless. Rise has absolutely NO business being here except to ruin the lives of current residents, and contaminate our beautiful land.

Why do we live in beautiful places such as Grass Valley? Why do you live here? The likely answer is to escape from the rest of the people of the world who only aim to process every possible resource we have until we have nothing available; To enjoy the splendors of what nature offers us without hesitation - a gift that is worth tending; To work hard to not turn our beautiful town into every other place on the map because we couldn't keep our greedy little hands to ourselves. We don't have to be like them. We can be different. We HAVE been different, and now we want to turn our town into some crap-shoot podunk destination where eventually people will leave and never come back. You will start to attract people you never wanted living here in the first place, people who don't care about this place the way we do, people that will only be staying a few shorts months anyway, leaving behind a trail of dust and damage.

I moved here to live in peace, and this disrupts my peace in a way that will eventually push me out. I'll find another town that cares more about its current residents than a few quick bucks. That would prove disappointing that the leaders of my town couldn't take a stand for me.

Providing a few short-term contracting jobs, with huge and dangerous long-term costs, is not the direction to go. Your residents are more valuable than anything else. Listen to us. We are the gold.

Please reconsider your decision to move forward with the mine. Every Grass Valley resident will thank you.

In community,

Erin McMichael

Sincerely,

Erin McMichael

My name is Kathy Doty. I live at 14279 ryan's ranch road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a resident of Grass Valley for over 43 years, and am horrified to think that our beautiful town could be at risk for an 80 year lease by an irresponsible company who is already being held accountable in British Columbia for destroying a beautiful place due to unsafe and reprehensible action!!! Aside from the damage to water ways, I am VERY concerned about the toxic levels of chemicals that would be released through this process!
We gain Nothing !!!! Only 80 years of damage due to this company Rise Gold who seeks only their greed and destruction to our peaceful way of life here in these beautiful foothills!!! I beg of you ALL!!!! not to bring this destruction upon our peacefully community!!!

Sincerely,

Kathy Doty

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,
I live in the Peardale neighborhood right down the street from where this proposed mine is to be located. I love my neighborhood and have never felt more “at home” anywhere else on the planet. This mine would destroy the utopia that is our neighborhood. The risk it runs to our fire safety via water, our only escape route, and to the peace and quiet surround us is beyond reprehensible. Please do not allow the beauty to be wiped out for corporate greed. There are so many other ways to create jobs rather than destroy our precious oasis.

Sincerely,

Sarah Boan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rebecca Brewer. I live at 14891 Banner Lava Cap Rs, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

After years of nomadicism, Nevada City is the only place on earth that I have wished to permanently call my home.

Now living atop Banner Mountain for two years, I can honestly say without doubt that this community is amongst the brightest on earth.

The Idaho Maryland mine project is a short sighted artifact of an old world laced with blindness around the impact of extraction on our local communities and our biosphere as a whole.

Short term thinking that would poison our local ecosystem is so last era. Our town, our county, and the human race is more evolved than this.

There are so many other ways to create jobs that do not rely on destroying the earth upon which our thriving rests.

I urge you to make the decision that will positively impact this place seven generations into the future.

I believe if you look deep down, you will know that reopening this mine is not that decision.

To my trust that you will do what's best for us, our children, our children's children, and all the children to come.

-Becca

Dear Nevada County Supervisors and Planning Commissioners.

My name is Hubert Burk. I live at 13793 Raccoon Mtn Rd , Grass Valley, 95945 , CALIFORNIA 95945 .

As a citizen of Nevada County, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi, I live off Greenhorn Rd. off Brunswick Road in Grass Valley. I have been living here since 35 years and have enjoyed the nature and rural living since then. I own several properties in Grass Valley. I also have been a business owner since then!!! here in GV. The business has been located on Whispering pine adjacent to the mine property. I am totally opposed to the re-opening of the mine!!! I resent the fact, that the county supervisors, that have been elected by the people, seem to want to favor CORPORATE interests and profits above the quality of life of the residents here!! I and many of my friends and acquaintances would never vote for a supervisor again, who votes for the mine re-opening!! Please reject the mine re-opening, as it is unconscionable, wrong and only profit oriented and will destroy the air, and the noise level and traffic will be bad. It is not worth that!! to us the residents!!
Sincerely,
Hubert Burk

Dear Nevada County Supervisors and Planning Commissioners,

My name is Christy McCracken. I live at 13313 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Greenhorn Road, just about 1/2 of a mile from the proposed mine. My parents moved here in 1970 and have continuously lived on these 5 acres for over 50 years. My siblings now own the adjacent two properties. We all rely on wells for water. I remember when there was a mill on the Brunswick site- I remember the large trucks, constant noise and smell. It wasn’t pleasant. What I don’t understand is how you are simultaneously considering this environmental disaster and spending money and time with your “Recreation and Resilience Master Plan.” According to your website you will “prioritize solutions that promote community health and safety,

economic development, creative placemaking, landscape restoration, environmental sustainability, climate change adaptation, and resilience." If that is true- I would hope then that the mine would not even come close to being approved. It doesn't match your master plan. Please do the right thing for the whole
county- not just the part closest to Truckee.

Sincerely,

Christy McCracken

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lynn Forbes. I live at 12288 Thoroughbred Loop, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have lived in Grass Valley for four years. The reason we moved here was the beauty and safety of this area. We have a beautiful property with a clean well, healthy trees and critters and happy humans. I can't imagine trading this for anything that may jeopardize our quality of life. Just say no!

Sincerely,

Lynn Forbes

Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Norma Solarz. I live at 800 Freeman Lane, Apt 301, Grass Valley, CA 95949-7742.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 3 and enjoy the benefits of a clean and peaceful life in Grass Valley. We try to do as much of our shopping locally and support community events. Despite the propaganda from the mine proponents, the lion's share of profits from re-opening the mine will go to shareholders of the mine and to the Canadian mine owners. There will not be substantial enough profit for a positive impact for our local community to balance against the overall negative impacts of re-opening an unnecessary gold mine in the midst of our community.

The FEIR lists several significant and unavoidable environmental impacts that

endanger this community's health and quality of life. These include aesthetics, traffic, and noise; there are serious deficiencies in the FEIR that put the County and its citizens at even greater risk.

The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan’s goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. Still multiple conflicts exist with goals not only for land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns.

As tax-paying residents of Nevada County we demand that you "SAY NO" to re-opening the Idaho-Maryland Mine

Sincerely,

Norma Solarz

Hi,
I live out on Bitney, been here since 1986. I'm not close to Idaho Maryland, but that doesn't matter. My wife and I were residents of Tuolumne County when the Jamestown Mine was reopened
What a mess. What broken promises, particularly those promises relating to jobs and economic benefit to Tuolumne County. The mine owners made out like bandits (which they were), Tuolumne County and it's residents made out like the victims of bandits.
Please don't open the Idaho Maryland Mine. My wife is deceased now, but I know she didn't want it opened and I don't either. I don't want to suffer this reopening of

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a home owner in Nevada City for the last 16 years I have heard tales of the previous local mines. drained wells, contaminated waters, sick people, negatively impacted environment (flora, fauna, fowl).

After the recent flooding I honestly can’t even believe that this mine is still being discussed. It should be discarded!

Hello, I live on Green Horn road. I was born and raised in Grass Valley. After seeing a good portion of the country its obvious that Grass Valley is simply one of the best places to live, period. Allowing these miners with a criminal past to mine in our community is unimaginable. The quality of life here would decrease substantially. I don't see permitting rise to operate here as a logical or beneficial move for our community. It just seems so obvious to just say no!

Sincerely,

Ryan Duarte

Dear Nevada County Supervisors and Planning Commissioners,

My name is Alexis Alrich. I live at 13628 Raccoon Mountain Rd, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live off of Greenhorn Road in Grass Valley and drive by the proposed mine site every day. I own two houses here and would be seriously impacted by lower real estate values if the mine is re-opened. I am grateful for the clean air, quiet, tree views, and light traffic in Grass Valley. These are the reasons I moved here in 2017 and these blessings are so vulnerable to damage or loss. I live on Lost Lake which was created to hold mine tailings historically. After a flood in 1989 the old wooden dam failed and toxic mine tailings including mercury and arsenic were spread over the lake and the creeks feeding it. It is now an EPA superfund site. Apparently the harmful chemicals are stable at the bottom of the lake, but this makes me aware of

how destructive mining can be. Even in the best case, in the unlikely event of no human error or natural disaster, the damage to our local water, roads, landfill and air quality is awful to contemplate.

Sincerely,

Alexis Alrich

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Theresa Crowell at crowellresa@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Theresa Crowell. I live at 11536 Lower Circle Drive, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I currently live in Alta, Sierra, which may not be severely impacted, but my whole life has been impacted by the legacy of mining here in Nevada county. It is with that that I am reaching out to you today. When I first learned about the mine reopening I wrote a letter, and submitted it to the union newspaper in the opinion section. You can Google that letter under the name, Theresa Huck. Strangely enough, I received a call from a gentleman at the San Francisco EPA office, asking me if Nevada county ever physically knocked on my door and notified me that I was living on a superfund site. Several days later, I received a call from the head of environmental health, here in Nevada county. She called and asked me if anyone from the San

Francisco EPA office had ever knocked on my door and notified me that I was living on a superfund site. Confused by the finger-pointing, I contacted an attorney. This attorney told me that it was in fact Nevada County's job to notify anyone living on a superfund site. I lived on that site, the year that it was filed as a superfund site, and I lived there two years longer without any knowledge of the circumstances surrounding the domicile I was renting. I also found out from that attorney, that I have a hell of a lawsuit that I can file against the county for not notifying me. My well water was contaminated with mercury and arsenic. When environmental health called me, she asked me if I was going to sue, and I told her at that point that if this mine re-opened, that is exactly what I would do. I'm already ill, and what has happened has happened, but to allow another mine to reopen when we can't even handle the legacy already left behind, that is unacceptable. I am writing this letter to let you know, but if you vote to allow this mine to reopen the first thing I will begin to do is to seek in attorney, Nevada county failed, and will continue to fail, and I can't allow this to continue to go on.

Sincerely,

Theresa Crowell

Dear Nevada County Supervisors and Planning Commissioners,

My name is Peter Arpin and I live at 15352 Stonehill Dr. Nevada City 95959.

As a very concerned citizen, I am asking you to "**just say no**" to re-opening the Idaho-Maryland Mine. It will have significant and unavoidable environmental impacts that will endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk!

Just look at what the mining industry has done in Appalachia and Montana for a glimpse of our future. We don't even need to look that far to see the effects of this industry that remain after over 100 years. By their very nature, they are boom then bust once all the want has been taken.

PLEASE don't let the promises of short-term tax revenue blind us to the ongoing and future costs of reopening the mine. There is no place for a heavy industry like this in our community.

Sincerely, Peter Arpin

Dear Nevada County Supervisors and Planning Department,

Please stop the mine! The environmental risks and past damages are obvious, regardless how much money backers to paint their misleading information and is connected to their financial gain.

Global warming and climate change are some of the results of financial interests harming people and our environment. Covid is another example of our lack of attention to animals, water, air, etc.

I live in Nevada City near Pioneer Park and moved from Los Angeles to Marin County and now to Nevada City because financial gains have ruined those communities. Nevada City has been working hard to improve the damages from past mining practices that have deeply harmed the soil, water and all life that had sustained this land before the gold rush marred this area.

Please STOP the Mining efforts in Nevada County!

Barbara Moore
Resident of Nevada City, CA 95959

January 30, 2023

Dear Nevada County Supervisors and Planning Department:

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of both Wolf Creek and the South Fork of Wolf Creek, which is at least partially protected by Empire Mine State Park. This project will damage the entire watershed, including the Bear River and points downstream from there and significantly contribute to global climate change. This is NOT acceptable!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance and know well how important Wolf Creek is in our community, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive aquatic invertebrates, which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.

- I'm worried about the effects on the Meadow along Bennett Street. This meadow is the last remnant of the "grass valleys" that gave this community its name.

- I believe there are insufficient mitigations for endangered species and species of special concern, such as the Pine Hill Flannelbush, Yellow Warblers and other bird species that utilize riparian corridors, and the Yellow-legged Frog

- I'm concerned about increased traffic, noise and air pollutants, impacting wildlife and people

- I'm also greatly concerned about increased energy use and the massive greenhouse gas emissions this project would produce

I do not believe the FEIR addressed these impacts properly or thoroughly.

This project will be an unmitigated disaster for our community! Do not approve the FEIR, or this project!

Sincerely,
Charles Brownstein
357 ½ Alta St
Grass Valley, CA 95945

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of Wolf Creek, which have been protected by the State Park. It could damage the whole watershed, including the Bear River and points downstream from there and exacerbate climate change… wrong direction!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance since 2004 and know well how Wolf Creek lives in our community, how important it is, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive creek invertebrates (bugs to most of us), which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.
- I'm worried about the effects on the Meadow along Bennett Street.
- I believe there is insufficient mitigations for endangered species and species of special concern, like Monarch Butterflies, Yellow Warblers (a favorite of my husband) and the Yellow-legged Frog
- Increased traffic, noise and air pollutants, impacting wildlife and people
- Increased energy use, SO MUCH (I had a long career as an energy engineer and greenhouse gas analyst and this is NOT the direction we want our community to take toward climate change!)

I do not believe the FEIR addressed these impacts properly or thoroughly.

PLEASE, Commissioners, do NOT approve the FEIR and do NOT recommend the project.

If this project is recommended, please Supervisors, to NOT approve this dreadful project.

Sincerely,
BJ Schmitt

Dear Board of Supervisors,

I urge you not to allow Rise Gold to reopen the Idaho Maryland Mine.

Surely, by now, you've read about the untrustworthiness of Rise Gold & its CEO.

If not, take a look at Shouldn't Trust Rise Gold | MineWatchNC.org

Beyond this particular company & its CEO, there are so many unpleasant consequences to our community from the mine reopening -- increased traffic, various kinds of pollution, etc.

Please don't vote to reopen the mine.

Thank you!

Best wishes,

Judith Cooper, homeowner

1/16/23

Nevada County Board of Supervisors
Nevada City CA 95959

Board Members,

Thanks for your leadership in the communities of Nevada County. The members of these towns and cities put their trust in you to make wise decisions based on the character and values of the community. We live in an area with beautiful natural resources and recreation that draws visitors from throughout the state and around the world. That, coupled with the history of the Gold Rush and the charm of our small towns, is becoming harder to find anywhere in California.

The idea of allowing an extractive industry to move into the heart of our County and create an industrial complex that brings increased industrial traffic, pollution and threatens the water supply for many, seems to be a bad idea at best, and a disaster for the County at large. The fact that Rise Gold has a dubious track record as a corporation and is facing litigation in Canada, seems to suggest that Rise can't deliver on the promises they've made. They have already made an effort to mislead the community with their survey regarding the mine. I had the survey methodology reviewed by professional academics who agreed that it was flawed and that the findings would not be a valid representation of community opinion.

The community has elected you to act in their best interests. They want visionary leadership that can see through the false claims of extractive industries who want to set up shop in the heart of our community. Please vote **no** on the reopening of the Idaho/Maryland Mine.

Sincerely,
Dan & Dee Desmond

RECEIVED

JAN 26 2023

NEVADA COUNTY
BOARD OF SUPERVISORS

EACH SUPERVISOR RECD

1-23-2023

Dear Supervisor Ed Scofield,

Dist 1

It is out of concern regarding the potential re-opening of the Idaho-Maryland Mine by Rise Gold, that I write this letter. My husband and I live within the one mile sphere of impact/influence from the mine. There is no guarantee that our well will not be effected by the de-watering, drilling, or blasting by Rise Gold. Further impacts that can/will occur are noise and air pollution, and potential contamination from products used by the mining company. We will be directly impacted by the increased traffic on Brunswick Road, our main route to town. These concerns, coupled with the problematic EIR commissioned report by Nevada County make this project one that should NEVER come to fruition.

The report by Robert Niehaus focused on the economic effects of the mine versus any/all the other issues that can and will arise should the mine re-open. Furthermore, it has been reported that nothing in the EIR is typical for a mining entity. Is this because of Nevada County's short sidedness when making the request for the EIR thus restricting the study's scope? Even the comparables used by Mr. Niehaus were inadequate in terms of size and location when trying to draw a comparison to the proposed mine in Nevada County. The EIR has been characterized as incomplete and completely vacant of crucial information. The lack of crucial information should leave everyone scratching their head in dismay.

The opposition to the mine is not self-serving, it is, in fact, self-preservation. Nevada County should have its citizens at the forefront of their thinking. Our property values will diminish, our air quality will diminish, and our wells may diminish. The Concerned Citizens Roundtable group that presented on December 20th on the Mine Watch webinar are respected members of our community who have donated countless hours of their time to study the facts and to present the facts in a concise manner. Please, listen to them, to your constituents, and concerned citizens.

We are adamantly opposed to the re-opening of the Idaho-Maryland Mine. Please follow the science not the money!

Thank you,

Mary Lee

Dear Nevada County Supervisors and Planning Commissioners,

My name is *Marilyn Nyborg, 14480 Craig Lane, Grass Valley, CA 95945*

I have been writing to you all year it seems, with no reply. Others have been far more articulate quoting real facts and asking important questions. I can't believe we are still doing this.

What comes to mind, if the proposed Idaho-Maryland Mine Goes through:

You are NOT listening to the communities concerns. **Once again its profit over people.**
The traffic and noise issue is pretty obviously a problem.
The use of our limited supply of water!
The promises of the owner are unbelievable.
Additional unhealthy pollution.
THE character of the owner and promotor is highly suspect. Having left legal and environmental issues he violated in Canada, not telling the truth about HIS record.
Another country claiming our earthly treasures.
jobs.is a joke, he will have to recruit elsewhere for miners and adding to the housing loan, medical load and schools that will be needed.
The recent survey did not ask probing questions, likely designed by the investors.
IF it is another Flop, he leaves with investors money in HIS pocket and we get the cost of clean up and toxicity.

I'm done. Pease reread the letters you have been getting, Doctors and scientists who have stated their expertise. AND LISTEN please.

Sincerely, Marilyn Nyborg

Dear Nevada County Supervisors and Planning Commissioners

My name is Sharon Lipski. I own a home in Nevada CIty-547 W. Broad Street having moved here 4 years ago. My reason for moving here was to embrace the small town atmosphere abundant with nature and quiet. It saddens my heart that the proposal of reopening the Idaho-Maryland Mine has even made it to the voting table. There are so many reasons as to why this would be a devastating decision if it was to move forward. When reading the local paper "The Union" for every article there is about the mine there are also clear articles about California being in a drought-areas of our state already rationing our precious resource of water because there is a lack of. Why in the world would we allow a mine to open that would use up incomprehensible amounts of water to allow a company to look for gold. Why would we allow this company to drain our power grid when we already have power outages! There was a recent article questioning if California will be able to power all these electric cars that are being mandated with the questionable ability of our power grid to compensate this. Do we really want our power grid to be compromised by opening the mine when we need power for so many other endeavors.More importantly we are in a state of climate crisis. We need to move forward with ideas to heal the earth. Not cause devastation with toxic chemicals and drilling to pollute the soil and the land for generations to come. Why create an enviroment where the land is destroyed in hopes it will be cleaned up in the future. Right now at this very moment we should be putting our energies into finding ways to preserve our land in ways that it will be healthy and sustainable. Openng the mine is a decision nobody in these communities want. You represent the people please I am asking you to listen to the people. The noise from the trucks and the drilling on site-the air pollution it will cause-the wells that ill run dry-the people who have lived in houses right by this site who will have to deal with all of this. Do you have compassion for their concerns and quality of life that opening this mind will subject them to. But it goes further than the surrounding neighborhood. It is both communities that will suffer if this mine opens. We have vibrant towns that rely on tourism to come and support the local shops and restaurants. We offer a place for people to come with the feel of small town, nature, bringing them away from the noise, pollution, people, traffic, A reprieve from the chaotic big city every day life they lead. I run an Air B and B and all of my guests have told me they come here for these reasons. They love to get away to Nevada City! So not only do the residents who live here value this type of life but also the tourists who come. There is no assurance that opening this mine is going to monetarily help our communities. The

cost of the clean up as this company packs up and leaves us with the toxic aftermath will be a monetary drain on our community. But more importantly a devastating enviromental mess that will continue on for years to come. Truly you can't believe that finding some gems of gold is

worth the destruction the mining will cause to the land. Let's value what is right-to be stewards of the land. To be grateful for the gift and do everything in our power to live in harmony and work towards preserving and healing instead of destroying.
Thank You for listening to my concerns. Please give thought to all the reasons your community is opposed to this. If you move forward with this you can't turn back when the reality of all the extreme negative consequences start to play out. Again there will be no turning back so please make the right decision for all of us. Sincerely Sharon Lipski

I worked with Newmont Mining for several years. They are a first class company.
They gave up on mining in Nevada County, and sold their rights to Rise cheap.
Now Rise is putting a second class effort into mining here on the cheap.
All the evidence says Rise is a bad operator.
The supervisors should vote NO on the Mine.

Dear Supervisors Hall, Scofield, Swarthout, Hoek, and Bullock,

Please find attached a letter of concern about the inadequate assessment of toxic pollutants for the Idaho-Maryland Mine project.

I am a local resident and a retired professor in environmental sciences from University of California Davis.

I hope that you will carefully consider that long-term risks could result from asbestos and arsenic toxicity for humans and wildlife.

Sincerely,

Louise Jackson, PhD

Re: Inadequate Assessment of Toxic Pollutants for the Idaho-Maryland Mine Project

Like many residents, I am deeply concerned about the risks associated with opening the Idaho-Maryland mine. These include the loss of quality of life, property value, and local economic viability, but I will focus on the lack of rigorous evaluation of toxic pollutants in the Draft Environmental Impact Report (DEIR), specifically asbestos and arsenic. In the Final Environmental Impact Report (FEIR), the responses to letters of concern on this topic tend to be cursory and insubstantial, without specific plans for how assessment of these toxic compounds will improve information that would benefit human and wildlife health.

I am a retired Professor and Specialist in Cooperative Extension at the University of California Davis, in the College of Agriculture and Environmental Sciences. My research and experience are relevant to challenging the sampling and assessment regime for soil and water constituents, and the potential for mobilization of compounds into waterways. A link to my CV is https://ucanr.edu/sites/Jackson_Lab/.

My letter on the DEIR (Individual Letter #510) explained why the sampling strategy for asbestos did not follow a scientifically valid design, and how very few samples were taken for analysis. Since asbestos was present in many of the cores and in all the rock types, in varying concentrations, there is a need for thorough sampling. The responses in the FEIR did not directly address the points in my letter. They referred to Master Response 23, a generic statement on why sampling was limited to certain rock types encountered in gold mining operations. An improved sampling regime for better understanding of asbestos risks was not proposed.

Another aspect of my letter was the movement of existing soil arsenic in the Wolf Creek Basin. Water from the mine may sometimes inundate stream corridors and could move sediment downstream toward Grass Valley, exposing people and wildlife. The FEIR response disregarded a local study on soil arsenic and other toxics. No mention was made of my request for a robust hydrologic study on how dewatering the mine may increase the risk of exposure to arsenic and other toxic minerals such as chromium and lead that are in existing sediments.

Unfortunately, the FEIR responses suggest an unwillingness to provide a rigorous assessment of toxics, leaving us without adequate information about the risks of opening the mine.

Sincerely,

Louise E Jackson

Dear Supervisors,

Please consider embedding the very worthwhile quality of compassion into all Code Compliance enforcement. Especially when the result of enforcement will be very detrimental to vulnerable people or needlessly punish a landowner due to a vengeful complaint.
It seems it would be a simple thing to consider the result of enforcement and what harmful results would arise. The cannabis farmers were given two years to come into compliance. It seems zoning violations that would result in unhousing vulnerable citizens could also be afforded more leniency.

Thank you for your consideration.

To: Nevada County Supervisors and Planning Department

Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

January 30, 2023

Dear Nevada County Supervisors and Planning Department:

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of Wolf Creek, which have been protected by the State Park. It could damage the whole watershed, including the Bear River and points downstream from there and exacerbate climate change… wrong direction!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance since 2004 and know well how Wolf Creek lives in our community, how important it is, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive creek

invertebrates (bugs to most of us), which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.

- I'm worried about the effects on the Meadow along Bennett Street.

- I believe there is insufficient mitigations for endangered species and species of special concern, like Monarch Butterflies, Yellow Warblers (a favorite of my husband) and the Yellow-legged Frog

- Increased traffic, noise and air pollutants, impacting wildlife and people

- Increased energy use, SO MUCH (I had a long career as an energy engineer and greenhouse gas analyst and this is NOT the direction we want our community to take toward climate change!)

I do not believe the FEIR addressed these impacts properly or thoroughly.

PLEASE, Commissioners, do NOT approve the FEIR and do NOT recommend the project.

If this project is recommended, please Supervisors, to NOT approve this dreadful project.

Sincerely,
BJ Schmitt

Nevada County BOS and Planning Commissioners,

I am Tony Lauria. My wife Lauren and I live at 13784 Greenhorn Rd GV

Please take a short few minutes from your busy day to fully read our important message.

I "beg" you to say NO to the certification of the FEIR and NO to the project. No Build - No Project!

I could easily write an essay on how utterly wrong this mining proposal is for the thousands of people who live here in Nevada County. Over the past couple years, I've actually compiled most of that writing already, which is a testament to the impact not discussed; how severely stressful life has become dealing with the potential consequences of not being able to stop this life threatening proposal. As I mention below, the words, *risk* and *potential*, are not accurate at all. There are impacts that *cannot* be mitigated to less than significant. There is no possible outcome other than the demise of our community, with an active mine permitted to reopen.

I was told by one of your commissioners that this is a democratic process, and I "do not have to beg" for justice in this matter. While I genuinely appreciate his sincerity, the sentiment seems to be out of sync with the impact reports published by county staff. As I witness the disregard to blaring deficiencies in the DEIR, resulting in an FEIR candidate, I am left astonished and abandoned by my county officials, in the fight for justice to save our residency from the horror of a devastating mine, 1 mile away. Were this a democratic process, a public referendum would be the deciding factor. And that factor would see this

proposal rejected by an overwhelming decision. I'm sure you have seen the No Mine signs on, virtually, every road in GV and NC.

The fact that our home is listed as one included in a well monitoring program, indicates there *is* a risk to our well being damaged, contaminated or drained. Just as any of you would not allow a theft of your property, we will not allow anyone to risk our health and well being by stealing our water and quality of life. Any action to place our well at risk is illegal. I do Not give permission to risk our only clean water source to any company or individual. I did Not ask for this mine to be reopened. I would have absolutely No benefit. The reopened reality would be a severe contrast to any benefit. My family and home would be subject to significant devaluation, financial hardship and a litany of health issues caused by mining operations. We would be forced to vacate our wonderful home of 32 years. There is no possible way we could survive within proximity of such a contaminated environment of air and noise pollution, not to mention the loss of our water.

Again, as I see it, this is an illegal act against my family's private possessions; Our only source of water, in a well that we paid for, and our home/property, that has a stated current value. Any action that threatens to damage either, is unacceptable and must not be allowed to proceed.

My comments and questions on the DEIR were not answered or addressed to my satisfaction. Here are the reasons:

1. There *will* be impacts. Contrary to what the gold mining company has stated in their press releases, it is fact, based on evidence from all the previous mining done in this county, that there *will* be environmental compromises. Virtually every former mine site is still contaminated. Ironically, the IMM and Centennial site are currently on that list. Experts have documented their opinions that support the likelihood of impending disasters. A brief search on the web shows the prevalence of gold mining gone wrong, all over the western US and Canada. There's no speculation in this regard, and no exception for the IMM.

2. There *will* be significant impacts to domestic wells. The extent of how many will be drained, damaged or contaminated cannot be known due to the complex hydrogeology within the entire mineral rights boundaries, and beyond. Dewatering, at the projected rate of millions of gallons per day, *will* cause

impacts to our precious resource. The FEIR even acknowledges that. Water is far more important to the well being of the community that gold in the pockets of foreigners.

3. There *will* be significant impacts to air quality. It is impossible to fully contain the silica and asbestos dust that will be discharged during the mining process. This entire area is known for it's serpentine rock, which contains this asbestos. When ground up and hauled out of the earth, it *will* disperse into the atmosphere. The particles of asbestos and silica dust can travel for miles in the wind and the FEIR's plan for managing the mine waste relies on such a grossly simplified method of monitoring asbestos levels, that we'd be fools to believe that process would be accurate.

3b. The thousands of tons of exhaust by machinery and one hundred plus truck loads per day, *will* result in a significant health hazard for breathing, as well as contribute enormously to the global problem of excess carbon in the atmosphere, which is causing our climate change.

4. High explosive blasting *will* be a significant impact to all the residents within the mineral rights area of the mine. It is impossible to contain the vibration and noise of an active process of blasting thru solid bedrock below residential areas. Fact; during the short exploratory drilling off Bennett St, the residents were subject to deafening noise and home shaking vibration for days.

5. Home & Property values *will* be significantly reduced. That loss could be 100% if the only source of water for the home is a well, and it is drained from the mining operations. All local Realtors agree that the loss in home values will be significant. No direct comparison to this area was found in the economic report. In this respect, the economic report was inaccurate and useless. Even the former president of the realtors board has taken a public position of denouncing the reports unsubstantiated claims of no loss to property values.

6. The risk factors far outweigh any potential monetary gains for the county. One disaster, such as the Siskon Mine, or Banks Island spills, would place a serious burden on the county to fund clean up and claims for ill health caused by the mine. This county rightfully prides itself on good budget management. However, a single catastrophic even could put a massive burden on those figures. There is no worthwhile economic reason to accept that risk when balanced against the real potential for extreme hardship imposed on the

community.

6b. Did Mossman's previous company go bankrupt? Yes! Who would be responsible for damages and clean up if Rise Gold goes bankrupt? Nevada County, and the residents therein.

7. The credibility of the CEO of this mine company is significantly flawed. He is currently in litigation for 29 charges of environmental failures in Canada. This CEO cannot be trusted. He has released many published statements that are not true, such as, "there will be no impacts" and "the community overwhelmingly supports the mine". The opposite is the actual truth. Is this a company you would want to open a business in your town? It is more than obvious they are interested in a profit, which does not include the well being of the community.

7b. In what FEIR world of adequate protection and fairness to the community is it acceptable to design an emergency replacement water program dependent on a negotiation with the Mining company? I should Not be required to compromise or negotiate with Rise Gold to get my water connected to NID. Would this make any of you feel protected, being forced to deal with a very unconscientious company and CEO?

8. Did the EIR provide for NID hookups to all the unserved neighborhoods where wells could be drained, as recommended by NID? No!

9. Many **wildlife species** have been captured on video in the mine site area. What will happen to these animals when the noise of operations begins? They **will vanish.**

10. Even if an adequate 3 plus year well monitoring program was put in place, it does not mitigate the stress and burden of a potential loss of one's well. It *would* be a constant concern and worry as to whether any given day is *the* day your pristine well becomes contaminated or drained. What if it's contamination from stirred heavy metals and toxins caused by drilling, dewatering or blasting? How long before you were to become aware of the problem? Did you or your family ingest any of this contaminated water before you found out? What a nightmare. In no way is there a possible mitigation for well problems. On this basis alone, there should be No permit issued. The law states, if an impact cannot be mitigated to less than significant, the operation

should not be permitted. No project! No build! I'd say the constant anxiety and worry that, at any moment, you may lose your well, and/or have your health seriously endangered, is Not mitigable. Property value loss is not able to be mitigated either. Who do you know that would buy a home with the warning, at any time in the next 80 years, it could lose it's only water source?

12. We, the community of thousands who now live in this area, **do Not approve of any rezoning to heavy industrial mineral extraction!** We did not purchase our property with a written statement that the IMM could be rezoned in the future, from light industrial, to this full blown heavy industry. This is absolutely wrong and unacceptable.

13. This entire proposal was built on either no data, or insufficient data. It has obviously been crafted to omit many aspects of real data, so it has a better chance for success. This is not the manner in which a conscientious company would do business, with a priority on the citizens well being. Furthermore, the economic report was dismantled by experts and deemed flawed in virtually every aspect of its findings. The DEIR was the beginning of documents submitted with deficiencies, and flawed, or no, data. Numerous expert comments were submitted to expose this fact.

14. There is a high probability that the IMM will be abandoned from, either the lack of funding to produce a result, higher mining costs, or an environmental disaster, such has happened before in countless mines. In any case, the burden of clean up will be on the county and it's residents. This will be in the tens of millions. Is the county prepared for this likely outcome?

15. This project *will* create a nightmare for wildfire evacuations. With the estimated 600 employees, and the thousands of residents down Greenhorn and other surrounding roads, there *will* be a complete inability for traffic to clear from the area. Furthermore, thousands of gallons of onsite diesel and tons of high explosives, *will* be a significant hinderance to containing wildfires, and prevention of such fires.

Is any of this an alarmist attitude and over reaction? Absolutely not! What is being touted as a money maker for the county is really a swindle for the thousands of residents that will be seriously affected by this mine.

Please say NO to this project and put a stop to this threat to our health, safety and well being. Any other decision is, *literally*, a sentence to force us into the extreme hardship of moving out of our home, at a great emotional and financial loss.

Please be part of the evolution to change the injustice of money and power being the deciding factor. Choose the priority of well being for citizens and the planet, over promises of profit.

Thank You
Tony & Lauren Lauria

Idaho.MMEIR@co.nevada.ca.us

Dear Planners and Leaders,
As a long time resident and concerned citizen I am requesting that you vote against the proposed re-opening of Idaho-Maryland Mine by RISE Mining Corp. The proposed operations have significant and unacceptable impacts that endanger our community's health and well-being. There would appear to be significant impacts to the ground water table, the soil stability, the atmosphere, and the noise levels and health of residents and visitors in the Brunswick basin and surrounding neighborhoods. In fact, the detrimental effects may deter visitors and future home buyers from coming into the area and leave the county with long-term consequences that are complex and costly to deal with.. appropo...remember the piles of tailings and red dirt from the Empire Mine? https://www.waterboards.ca.gov/centralvalley/water_issues/mining/region5_success_stories/empire_mine_state_park/index.html
The handful of proposed local-hired jobs and the uncertain, if not over-estimated, tax revenue aren't worth the overall risks. Please, for the sake of preserving our beautiful landscape and a healthy, unpolluted community have no part in sanctioning the RISE mining operations in our county. Thank you for your considerations.

Yours for a truly heathy tomorrow,
Denise Buglino
Nevada City resident

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of John Vaughan at jvaughan1946@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Vaughan. I live at 11793 Lower Colfax Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The normal process for opening a mine includes (at least) the following steps: Feasibility Study, Exploration (which requires an EIR and permitting) and Production (which requires an EIR and permitting).

One of the many DEIR commenters notes the following: “The mining project as proposed in this [Draft]EIR has a fundamental lack of information on the economic viability of the mine, and potential environmental impacts related to geochemistry and water quality. The data submitted in support of this [Draft]EIR is only sufficient to support an application for dewatering the mine, and for underground exploration

drilling. ... The [Draft]EIR should analyze an Alternative that provides for dewatering and underground exploration. That is the only Alternative that the information provided in this [Draft]EIR will support."

The FEIR response: "This proposed alternative (exploration only) is not economically feasible because there is significant cost with dewatering the mine, including construction of a water treatment plant, installation of a potable water pipeline to provide water to affected well owners, and underground access and safety improvements necessary to complete the suggested exploration phase. The proposed alternative would be economically infeasible because all the above costs would be incurred without the ability to produce any valuable minerals to offset that cost."

The author of the DEIR comment notes: "If you follow this simplistic logic, mining companies would never ask for an exploration permit, they would just ask for a permit to mine, and then go start drilling to see if anything is really there. This approach, which is what is being proposed by the Idaho-Maryland proposal, gives the mining company an enormous amount of flexibility, with minimum regulatory oversight. Mining companies complain a lot about regulatory oversight, as well as having to communicate with the public. However, those regulatory requirements are there for a reason – mistakes have been made by mining companies that have led to financial and environmental losses to individuals and public agencies. It is highly likely that the public officials, county employees, and even the people proposing this mine will not be there when problems arise. But the landowners around the mine, and the public agencies that have assumed responsibility for the mine, will still be there, and they are the ones that will need to deal with the problems."

Frankly, I am stunned by the FEIR response, which basically says "we can't afford to follow the normal steps so just give us a permit to open the mine...for 80 years". The fact that Rise Gold can't afford to follow normal procedures is not the County's problem.

Just say NO to the Final EIR and just say NO to this project.

Thank you,
John Vaughan, District 3

Sincerely,

John Vaughan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Edward Szymanski. I live at 112 S. School St., #3, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Supervisor Swarthout:

I have lived in Nevada County for 18 1/2 years. 18 years living in Nevada City and residing currently in the equally charming town of Grass Valley. I still remember when another out of state/out of country entity named Emgold tried to reopen the Idaho-Maryland Mine to the chagrin of many concerned citizens. That concern for a better quality of life here in Western Nevada County has not dissipated. Unproven, rosy promises were made by David Watkinson when Emgold came to town and now we have the RiseGold president, Benjamin Mossman, he of some ill repute due to

the Yellow Giant Mine fiasco in British Columbia, making promises that will not come to fruition due to the inherent risk and toxic environmental degradation and the diminishment of quality of life that invariably occurs with any type of mining.

I am sure that you by now are familiar with all the negative aspects of this proposed project. They far outweigh the positive. Let's remember gold mining as a part our history and not forget that it is history now. Gold mining has no place here anymore. Tourism forms a large part of our economy and it is built on our recreational opportunities and the charm of Nevada City and Grass Valley. It will suffer once it becomes known that the area is now host to industrial grade mining.

As a constituent who voted for you, I beseech you to oppose the reopening of the mine and do your absolute best to dissuade any supervisor who is in favor of this meretricious endeavor. Thank you for your attention to this critical matter.

Sincerely,

Edward Szymanski

Dear Nevada County Supervisors and Planning Commissioners,

My name is Clayton Olson. I live at PO Box 3565, Grass Valley, CA 95945-3565.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The uncertainty of what will happen to peoples' wells and the historical lack of full responsibility by so many mining operations -- inadequate bonds, inadequate monies to cover mistakes or misdeeds of a mining company, toxic legacies -- is the primary reason I want the Rise-Gold Mine proposal to be rejected. My second reason is my wondering what it's like to have explosives go off underground in relation to the sound effects and seimic activity?

Sincerely,

Clayton Olson

Dear Board of Supervisors:

My husband and I, among many others, live off of Colfax Highway #174. The residents in my neighborhood all depend on wells for water, for drinking and its many other purposes. We want assurance that our wells will remain clean and healthy. If the mine contaminates them, then it is too late to save the water we depend on. Water is more precious than gold, for it is necessary for life.

Another reason we do not want the mine would be the increase of truck traffic on our two-lane, double yellow-lined highway. It is our only way to Grass Valley and/or to the rest of California. We drive it almost every day. There is a song entitled "Wicked Twisted Road." Although I don't think it was written about Hwy 174, this curvy route has numerous crosses and memorials to indicate it already has safety issues. In many places, the road has no shoulders. There are already many tandem trucks hauling river rocks from Greenhorn Creek, a mining process itself that also contributes to the silting in of Rollins Reservoir and reduces its shoreline. We don't want more traffic.

I do not know of any young people aspiring to work in an underground mine. A high proportion of Nevada County residents are senior citizens, who also have no inclination to be employed by the mine. I think the claim that the mine would bring jobs for our residents is over-projected.

Another reason to say No to the mine is because Rise Gold is not a U.S. company. Why do we want a foreign company to be taking American gold? I think Canada is a good neighbor, but I 've also read columns in the Union Newspaper that were critical of this company and its management. Please do not be deceived.

Please be aware of the opinions of the Highway 174 Corridor who live near the mine site and oppose reopening the mine. A lot can go wrong. Reopening the mine could bring more harm than good.

Sincerely,

Donna A. Meares

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Dunstan. I live at 19595 Bow Valley Road, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Chicago Park and the thought of having to deal with the trucks coming out of the mine site and the traffic related to continued road maintenance is frightening. It will make our home much less appealing to a new buyer. The noise will have a significant impact on the quiet of the foothills that we moved here to enjoy.

Making a decision to do business with a lying fraudulent company is unconscionable.

On top of climate change, our friend's and neighbor's wells will be severely impacted

Dear Nevada County Supervisors and Planning Commissioners,

My name is Bonnie McKeegan. I live at 17076 Jody Ct, Grass Valley, CALIFORNIA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Me and my family live in Alta Sierra. We first came here in 1981 when I entered my junior year at NUHS. We were charmed by the trees, rivers, forests, state parks, and history, particularly the mining history.

I left as a teenager but returned as an adult with kids, so they could enjoy the same environment I fell in love with at 15 years old. They are 18 now and if they leave to pursue their educational goals, I want them to yearn to come back. If there is a nasty ole, loud, polluting mine that changes the culture of our community and environment, they will look elsewhere to live. Then, my husband and I would look elsewhere to live

as well. Leaving my family's 42-year home would be sad but we do not want to spend our fast approaching retirement and last years in a place that values corporate greed and destruction of our unique assets.

Commercial mining is history that no longer has a place in our community.

Please preserve the beauty, attractiveness for tourism, and serenity that we have.

NO mine!

Sincerely,

Bonnie McKeegan

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Erin McMichael at erin.mcmichael@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Erin McMichael. I live at 13905 Clover Leaf Court, B, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

My name is Erin and I’ve lived in Grass Valley for almost five years now. I live in Peardale, right off 174, and my life would be significantly altered if this disastrous mine were to be built. Not only would traffic increase in a huge way on an already busy road next to my house, but the idea that there will be massive trucks holding up traffic all the way up and down that long, one way stretch of road, with no way to pass, and increasing the potential for accidents, boggles my mind.

Additionally, and most importantly, the environmental impacts will diminish all quality of life, especially those who live around the mine, or near its thorough-ways. Dumping waste into local sites? That is irresponsible and mindless. Rise has absolutely NO business being here except to ruin the lives of current residents, and contaminate our beautiful land.

Why do we live in beautiful places such as Grass Valley? Why do you live here? The likely answer is to escape from the rest of the people of the world who only aim to process every possible resource we have until we have nothing available; To enjoy the splendors of what nature offers us without hesitation - a gift that is worth tending; To work hard to not turn our beautiful town into every other place on the map because we couldn't keep our greedy little hands to ourselves. We don't have to be like them. We can be different. We HAVE been different, and now we want to turn our town into some crap-shoot podunk destination where eventually people will leave and never come back. You will start to attract people you never wanted living here in the first place, people who don't care about this place the way we do, people that will only be staying a few shorts months anyway, leaving behind a trail of dust and damage.

I moved here to live in peace, and this disrupts my peace in a way that will eventually push me out. I'll find another town that cares more about its current residents than a few quick bucks. That would prove disappointing that the leaders of my town couldn't take a stand for me.

Providing a few short-term contracting jobs, with huge and dangerous long-term costs, is not the direction to go. Your residents are more valuable than anything else. Listen to us. We are the gold.

Please reconsider your decision to move forward with the mine. Every Grass Valley resident will thank you.

In community,

Erin McMichael

Sincerely,

Erin McMichael

My name is Kathy Doty. I live at 14279 ryan's ranch road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a resident of Grass Valley for over 43 years, and am horrified to think that our beautiful town could be at risk for an 80 year lease by an irresponsible company who is already being held accountable in British Columbia for destroying a beautiful place due to unsafe and reprehensible action!!! Aside from the damage to water ways, I am VERY concerned about the toxic levels of chemicals that would be released through this process!
We gain Nothing !!!! Only 80 years of damage due to this company Rise Gold who seeks only their greed and destruction to our peaceful way of life here in these beautiful foothills!!! I beg of you ALL!!!! not to bring this destruction upon our peacefully community!!!

Sincerely,

Kathy Doty

Hello,
I live in the Peardale neighborhood right down the street from where this proposed mine is to be located. I love my neighborhood and have never felt more “at home” anywhere else on the planet. This mine would destroy the utopia that is our neighborhood. The risk it runs to our fire safety via water, our only escape route, and to the peace and quiet surround us is beyond reprehensible. Please do not allow the beauty to be wiped out for corporate greed. There are so many other ways to create jobs rather than destroy our precious oasis.

Sincerely,

Sarah Boan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rebecca Brewer. I live at 14891 Banner Lava Cap Rs, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

After years of nomadicism, Nevada City is the only place on earth that I have wished to permanently call my home.

Now living atop Banner Mountain for two years, I can honestly say without doubt that this community is amongst the brightest on earth.

The Idaho Maryland mine project is a short sighted artifact of an old world laced with blindness around the impact of extraction on our local communities and our biosphere as a whole.

Short term thinking that would poison our local ecosystem is so last era. Our town, our county, and the human race is more evolved than this.

There are so many other ways to create jobs that do not rely on destroying the earth upon which our thriving rests.

I urge you to make the decision that will positively impact this place seven generations into the future.

I believe if you look deep down, you will know that reopening this mine is not that decision.

To my trust that you will do what's best for us, our children, our children's children, and all the children to come.

-Becca

Sincerely,

Rebecca Brewer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barbara and Bill Larsen. I live at 502 Redbud Way, Nevada City, United States, California 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Honorable Supervisors and Planning Commissioners,
We have lived in Nevada County for 45 years and what to state, again, NO to reopening the Idaho Maryland Mine.
Please review all the important and vital research that has been done and how this will effect the beauty and environment of our precious county. It has been revealed that many of the proponents of this endeavor are just fabrication of what will not be manifested.
Thanks you,
Barbara and Bill Larsen

Sincerely,

Barbara and Bill Larsen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Hubert Burk. I live at 13793 Raccoon Mtn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Nevada County Supervisors and Planning Commissioners.

My name is Hubert Burk. I live at 13793 Raccoon Mtn Rd , Grass Valley, 95945 , CALIFORNIA 95945 .

As a citizen of Nevada County, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi, I live off Greenhorn Rd. off Brunswick Road in Grass Valley. I have been living here since 35 years and have enjoyed the nature and rural living since then. I own several properties in Grass Valley. I also have been a business owner since then!!! here in GV. The business has been located on Whispering pine adjacent to the mine property. I am totally opposed to the re-opening of the mine!!! I resent the fact, that the county supervisors, that have been elected by the people, seem to want to favor CORPORATE interests and profits above the quality of life of the residents here!! I and many of my friends and acquaintances would never vote for a supervisor again, who votes for the mine re-opening!! Please reject the mine re-opening, as it is unconscionable, wrong and only profit oriented and will destroy the air, and the noise level and traffic will be bad. It is not worth that!! to us the residents!!
Sincerely,
Hubert Burk

Sincerely,

Wilma Terrill

Dear Nevada County Supervisors and Planning Commissioners,

My name is Christy McCracken. I live at 13313 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Greenhorn Road, just about 1/2 of a mile from the proposed mine. My parents moved here in 1970 and have continuously lived on these 5 acres for over 50 years. My siblings now own the adjacent two properties. We all rely on wells for water. I remember when there was a mill on the Brunswick site- I remember the large trucks, constant noise and smell. It wasn’t pleasant. What I don’t understand is how you are simultaneously considering this environmental disaster and spending money and time with your “Recreation and Resilience Master Plan.” According to your website you will “prioritize solutions that promote community health and safety,

economic development, creative placemaking, landscape restoration, environmental sustainability, climate change adaptation, and resilience." If that is true- I would hope then that the mine would not even come close to being approved. It doesn't match your master plan. Please do the right thing for the whole
county- not just the part closest to Truckee.

Sincerely,

Christy McCracken

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Norma Solarz at nsolarz@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Norma Solarz. I live at 800 Freeman Lane, Apt 301, Grass Valley, CA 95949-7742.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 3 and enjoy the benefits of a clean and peaceful life in Grass Valley. We try to do as much of our shopping locally and support community events. Despite the propaganda from the mine proponents, the lion's share of profits from re-opening the mine will go to shareholders of the mine and to the Canadian mine owners. There will not be substantial enough profit for a positive impact for our local community to balance against the overall negative impacts of re-opening an unnecessary gold mine in the midst of our community.

The FEIR lists several significant and unavoidable environmental impacts that

endanger this community's health and quality of life. These include aesthetics, traffic, and noise; there are serious deficiencies in the FEIR that put the County and its citizens at even greater risk.

The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan’s goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. Still multiple conflicts exist with goals not only for land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns.

As tax-paying residents of Nevada County we demand that you "SAY NO" to re-opening the Idaho-Maryland Mine

Sincerely,

Norma Solarz

Hi,
I live out on Bitney, been here since 1986. I'm not close to Idaho Maryland, but that doesn't matter. My wife and I were residents of Tuolumne County when the Jamestown Mine was reopened
What a mess. What broken promises, particularly those promises relating to jobs and economic benefit to Tuolumne County. The mine owners made out like bandits (which they were), Tuolumne County and it's residents made out like the victims of bandits.
Please don't open the Idaho Maryland Mine. My wife is deceased now, but I know she didn't want it opened and I don't either. I don't want to suffer this reopening of

Dear Nevada County Supervisors and Planning Commissioners,

My name is Alexis Alrich. I live at 13628 Raccoon Mountain Rd, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live off of Greenhorn Road in Grass Valley and drive by the proposed mine site every day. I own two houses here and would be seriously impacted by lower real estate values if the mine is re-opened. I am grateful for the clean air, quiet, tree views, and light traffic in Grass Valley. These are the reasons I moved here in 2017 and these blessings are so vulnerable to damage or loss. I live on Lost Lake which was created to hold mine tailings historically. After a flood in 1989 the old wooden dam failed and toxic mine tailings including mercury and arsenic were spread over the lake and the creeks feeding it. It is now an EPA superfund site. Apparently the harmful chemicals are stable at the bottom of the lake, but this makes me aware of

how destructive mining can be. Even in the best case, in the unlikely event of no human error or natural disaster, the damage to our local water, roads, landfill and air quality is awful to contemplate.

Sincerely,

Alexis Alrich

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Theresa Crowell at crowellresa@gmail.com

Nevada County Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959
bdofsupervisors@co.nevada.ca.us
Idaho.MMEIR@co.nevada.ca.us

Dear Nevada County Supervisors and Planning Commissioners,

My name is Theresa Crowell. I live at 11536 Lower Circle Drive, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I currently live in Alta, Sierra, which may not be severely impacted, but my whole life has been impacted by the legacy of mining here in Nevada county. It is with that that I am reaching out to you today. When I first learned about the mine reopening I wrote a letter, and submitted it to the union newspaper in the opinion section. You can Google that letter under the name, Theresa Huck. Strangely enough, I received a call from a gentleman at the San Francisco EPA office, asking me if Nevada county ever physically knocked on my door and notified me that I was living on a superfund site. Several days later, I received a call from the head of environmental health, here in Nevada county. She called and asked me if anyone from the San

Francisco EPA office had ever knocked on my door and notified me that I was living on a superfund site. Confused by the finger-pointing, I contacted an attorney. This attorney told me that it was in fact Nevada County's job to notify anyone living on a superfund site. I lived on that site, the year that it was filed as a superfund site, and I lived there two years longer without any knowledge of the circumstances surrounding the domicile I was renting. I also found out from that attorney, that I have a hell of a lawsuit that I can file against the county for not notifying me. My well water was contaminated with mercury and arsenic. When environmental health called me, she asked me if I was going to sue, and I told her at that point that if this mine re-opened, that is exactly what I would do. I'm already ill, and what has happened has happened, but to allow another mine to reopen when we can't even handle the legacy already left behind, that is unacceptable. I am writing this letter to let you know, but if you vote to allow this mine to reopen the first thing I will begin to do is to seek in attorney, Nevada county failed, and will continue to fail, and I can't allow this to continue to go on.

Sincerely,

Theresa Crowell

Dear Nevada County Supervisors and Planning Commissioners,

My name is Peter Arpin and I live at 15352 Stonehill Dr. Nevada City 95959.

As a very concerned citizen, I am asking you to "**just say no**" to re-opening the Idaho-Maryland Mine. It will have significant and unavoidable environmental impacts that will endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk!

Just look at what the mining industry has done in Appalachia and Montana for a glimpse of our future. We don't even need to look that far to see the effects of this industry that remain after over 100 years. By their very nature, they are boom then bust once all the want has been taken.

PLEASE don't let the promises of short-term tax revenue blind us to the ongoing and future costs of reopening the mine. There is no place for a heavy industry like this in our community.

Sincerely, Peter Arpin

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Department,

Please stop the mine! The environmental risks and past damages are obvious, regardless how much money backers to paint their misleading information and is connected to their financial gain.

Global warming and climate change are some of the results of financial interests harming people and our environment. Covid is another example of our lack of attention to animals, water, air, etc.

I live in Nevada City near Pioneer Park and moved from Los Angeles to Marin County and now to Nevada City because financial gains have ruined those communities. Nevada City has been working hard to improve the damages from past mining practices that have deeply harmed the soil, water and all life that had sustained this land before the gold rush marred this area.

Please STOP the Mining efforts in Nevada County!

Barbara Moore
Resident of Nevada City, CA 95959

January 30, 2023

Dear Nevada County Supervisors and Planning Department:

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of both Wolf Creek and the South Fork of Wolf Creek, which is at least partially protected by Empire Mine State Park. This project will damage the entire watershed, including the Bear River and points downstream from there and significantly contribute to global climate change. This is NOT acceptable!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance and know well how important Wolf Creek is in our community, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive aquatic invertebrates, which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.

- I'm worried about the effects on the Meadow along Bennett Street. This meadow is the last remnant of the "grass valleys" that gave this community its name.

- I believe there are insufficient mitigations for endangered species and species of special concern, such as the Pine Hill Flannelbush, Yellow Warblers and other bird species that utilize riparian corridors, and the Yellow-legged Frog

- I'm concerned about increased traffic, noise and air pollutants, impacting wildlife and people

- I'm also greatly concerned about increased energy use and the massive greenhouse gas emissions this project would produce

I do not believe the FEIR addressed these impacts properly or thoroughly.

This project will be an unmitigated disaster for our community! Do not approve the FEIR, or this project!

Sincerely,
Charles Brownstein
357 ½ Alta St
Grass Valley, CA 95945

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of Wolf Creek, which have been protected by the State Park. It could damage the whole watershed, including the Bear River and points downstream from there and exacerbate climate change… wrong direction!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance since 2004 and know well how Wolf Creek lives in our community, how important it is, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive creek invertebrates (bugs to most of us), which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.
- I'm worried about the effects on the Meadow along Bennett Street.
- I believe there is insufficient mitigations for endangered species and species of special concern, like Monarch Butterflies, Yellow Warblers (a favorite of my husband) and the Yellow-legged Frog
- Increased traffic, noise and air pollutants, impacting wildlife and people
- Increased energy use, SO MUCH (I had a long career as an energy engineer and greenhouse gas analyst and this is NOT the direction we want our community to take toward climate change!)

I do not believe the FEIR addressed these impacts properly or thoroughly.

PLEASE, Commissioners, do NOT approve the FEIR and do NOT recommend the project.

If this project is recommended, please Supervisors, to NOT approve this dreadful project.

Sincerely,
BJ Schmitt

Dist 1

January 30, 2023

Dear Nevada County Supervisors and Planning Commissioners,

I ask you to please say NO to re-opening the Idaho-Maryland Mine.

I am a resident of District 1, Nevada County. I have resided within Nevada County for 23 years.

The negative, unavoidable impacts this mine will deliver far, far outweigh any possible positive outcomes.

I have examined and studied this project from all angles. Water and private wells are at great risk to toxicity. The water/hydro geology report is too vague to pretend all water will remain safe and clean.

Noise pollution, power grid consumption, animal habitat, and PROPERTY VALUES are all in absolute jeopardy if this mine were to occur.

I strongly oppose this mine.

This is such an important moment in time; we must cherish the splendor of our treasured home. Thank you for caring! Best, Aimee Had

Mines are part of our history, but have no place in our future. We should be spending our time, efforts, resources, and energy developing an infrastructure to attract tech and manufacturing companies to take up root here. Not invite a foreign company to extract resources, leave a hole and pollution behind, and import personnel for the high paying jobs, then leave when they've had their fill. Just say NO!

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Nathan Wolfson at wolfson.nathan@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nathan Wolfson. I live at 15175 ranchwood Ct, nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Lake Vera Pardon area adjacent to downtown Nevada City, so I personally won't be immediately / directly impact by the mine at my home. But it will be a disaster that all of us share over time.

The County should deny the Idaho-Maryland Mine and should not certify the Final EIR.

The County has no obligation to approve the Mine.

The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley’s and the County’s land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious

deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be “significant” and does not comply with CEQA (California Environmental Quality Act).

● Environmental impacts unavoidable - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also serious deficiencies in the FEIR that put the County and its citizens at even greater risk. Key deficiencies are shown in sections 2-6 of this document.

● Inconsistent with General Plan - The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan’s goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. And yet, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns. A specific list of conflicts can be found here.

● Legal considerations - The County can confidently proceed with denial knowing the decision does not qualify as “taking”, which is a legal term that describes a project rejection that denies an owner their right to develop a property. Both the Brunswick and Centennial properties are currently zoned “Light Industrial”, which provide a reasonable use of the properties. The applicant would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

There is ample case law to uphold the rejection of FEIR certification if a project is denied. If the current FEIR were to be certified, then the project later denied, it will be a flawed EIR in County records that could be used in future applications. Read more legal considerations here.

● Inadequate economic justification - The Economic Impact Report on the Mine showed a huge range of possible revenue outcomes from very low to very high, making actual revenue potential uncertain. Only the lower estimates were backed by proven gold reserves. Expert community reviewers found that even low-end figures were overly optimistic with a heavy reliance on information provided by the applicant. The assertion that property values wouldn’t decline was a big miss. It failed to recognize local realtor expertise or use acceptable home appraisal methods. Additional downside risk was not evaluated. Learn more about the community review

here.

● Just say no! - Continuing with the EIR and project consideration will just cost the County in loss of time and energy as well as that of staff and the community. This community is overwhelmingly opposed to the Mine project, as evidenced by the over 5,500 petition signatures submitted to the County last summer and the fact that 95% of the opinion pieces published in The Union about the mine are against it.

Well Owners Shafted in the Final EIR

The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed, resulting in a final report that does not comply with CEQA and fails to identify the potential impacts.

● CEQA requires a current baseline to assess potential impacts and determine mitigations. The computer model used for the analysis did not use current monitoring data from any of the over 300 domestic wells in the mineral rights area. It relied only on sparse patches of data from over 15 years ago. The Final EIR acknowledges that data is needed, but the approach calls for drilling 15 new monitoring wells as a basis for verifying the computer model after the EIR is certified! The questionable computer model estimates well water drops at 1 to 10 feet for 152 wells, then avoids declaring the impact as "significant" by creating an arbitrary threshold of significance at 10%.

● The final EIR also adds a completely inadequate supplemental domestic monitoring plan for 378 newly-identified properties. Among the many deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

Mine Waste Management Inadequacies Risk Water Quality

The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported. The Water Board made it clear in Draft EIR comments that more rock testing is needed to assess the likely concentration levels of hazardous elements in the rock to be mined. The FEIR's plan for storing and

disposing of mine waste has extensive gaps, creating a risk for long-term mine water pollution similar to what this community has seen in the past.

● Rise Gold's project plans to deposit 1000 tons of tailings and waste rock per day on the Centennial and Brunswick sites for the first 11 years. After that, the plan is to dispose of it via off-site sales. However, only waste classified as Group C can be used for engineered fill deposits or off-site sales. The more hazardous Groups A and B require special handling. The FEIR asserts that "mine materials will likely be classified as Group C", but its conclusions rely on just 11 feet of drill core samples.

● The FEIR does not provide adequate provisions for the storage of Group A or Group B mine waste, which will be required by the Water Board. Since any waste that is not Group C cannot be used for engineered fill or off-site sales, viable alternative strategies must be defined. The FEIR introduced a new suggestion that if not Group C "...the waste rock would be placed underground", but CEQA requires storage of Group A or B mine waste underground to be reviewed in a Draft EIR.

● This extensive set of gaps in mine waste management also introduces uncertainties about Rise Gold's ability to operate by disposing of mine waste from off-site sales.

Mine Waste Management Inadequacies Put Air Quality at Risk

The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. Asbestos is found in all rock types in the Idaho-Maryland Mine in varying concentrations. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

● Management of asbestos emissions is a complicated task. If the rolling average over a 3-month period of asbestos concentration in mine waste exceeds 0.01% by weight, it cannot be shipped out of the mine facility. Rise Gold's primary approach – as described in the Asbestos, Serpentinite, and Ultramafic Rock (ASUR) management plan – simply proposes that cores would be sampled before excavation and that if asbestos levels are too high, the rock won't be mined. There is not enough evidence, however, to establish that they can feasibly stay below the limits using this plan.

● The test data in the FEIR for determining the potential impacts from Asbestos is inadequate for CEQA compliance. Of the testing that was provided, which came from just 3 drill cores, 40% of the samples exceeded the 0.01% threshold. Thus, for assessing the impacts of asbestos air pollution, spot sampling has been done on less than 1/1000th of the mine rock that will be excavated over the 80 year life of the Use Permit.

FEIR Fails to Assess Impacts of Centennial Site

The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

● The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The California Department of Toxic Substances Control (DTSC) is managing the cleanup, but their Remedial Action Plan (RAP) is only in draft form. It is unclear when the plan will be finalized or when DTSC might approve the clean up.

● Per CEQA, the EIR must provide an environmental assessment of the current conditions of a project site to establish a baseline in order to determine impacts.This was not done. The FEIR assumes the site will be cleaned up before it gets used to deposit new mine waste. The plan calls for placing 1.6 million tons of mine waste (assuming it qualifies as Group C) over the course of 5 years, covering about 44 acres to a height of up to 55 feet. And yet, the significant work needed to accomplish this clean-up is not disclosed or evaluated in the FEIR. Numerous aspects of this RAP draft have been questioned in public comments and the final project details are unknown.

Greenhouse Gas Emission Impacts dismissed in FEIR.

The FEIR concludes that the mine's greenhouse gas (GHG) emission impacts will be "less than significant", but it uses an unsupportable, obsolete threshold measure to justify its position. The only correct threshold – given current climate studies, CA SB-32, and today's state goals – is net zero. The County has not formally adopted its own threshold of significance, but it has set ambitious goals to reduce GHG

through energy reduction in its Energy Action Plan. The Mine's sizable energy footprint would be a serious setback.

● The FEIR sets the significance impact threshold of 10,000 Metric Tons (MT) of GHG emissions per year. Mine operations are projected to produce approximately 9,000 MT per year, which is just under the set limit. This does not, however, include the over 4000 MT of additional emissions that will be generated by cement manufacturers to provide the massive amount of cement that will be used to produce cemented paste backfill for 500 tons/day of mine tailings.

● The outdated 10,000 MT/year threshold is one that was used by other air districts such as the
Bay Area in the past. More recent projects, however, such as the Sargent Ranch Quarry project managed by the Bay Area Air Quality Management District in 2022, use net zero for the significance threshold.

● The mine's electricity usage is approximately equivalent to the annual use of 5000 homes. The Mine's energy use would be so sizable that it would completely offset the amount of residential reductions the County wants to achieve each year in its Energy Action Plan.

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elissa Crevoiserat. I live at 13243 Loma Rica Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley my entire life. It has only been recently that living here has become more stress inducing with the risk of forrest fires and drought. That’s why the thought of lowering the water table and shipping our water out of the area for the sake of profit is absolutely shocking to me. I cannot believe the idea is even being considered. The risks are obvious. The number community members that will be affected is obvious. Just say no to the Idaho-Maryland Mine.

Sincerely,

Elissa Crevoiserat

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lenda Woodard. I live at 11321 Beauview Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live about a block away from Idaho Maryland Mine. We only have well water that will be drained, due to draining the mine full of water into Deer Cheek. Which will not only flood the creek, it will be full of chemicals, i.e. arsenic, dumped into the mine when they closed it. My sister knew the guy that dumped it. Trucks going in and out 24/7. What happens when we have a evacuation? Not to mention the exhaust fumes not just from the trucks, but they will also be exhausting the fumes out of the mine. What about the noise 27/7? You got to be kidding about the jobs provided. Pretty sure they will be bringing the miners down from Canada, and the $$ will be send back up to Canada. There are people up on the Ridge that are sick from drinking well their well water. Not to long ago, parts of Brunswick Road collapsed due to the mine. I understand the man who is buying it, is being held up in Canada for not

cleaning up the mess he left behind when he closed another mine. He just took the $$ and ran. Please think about all the people this will effect. We have enough traffic here already. Thank you for listening..

Sincerely,

Lenda Woodard

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen Clephane. I live at 13951 Greenhorn Rd, Grass Valley, CA 94945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live a little over 1 mile up Greenhorn road from Brunswick ~ very close to the mine. We have been here 16 years and love the quiet rural nature of this area. I am horrified at the thought of a huge industrial complex, with daily parade of trucks, the noise and air pollution, the high chance of our well going dry or greatly diminished, and the destruction of the lovely quality of life in our community. No need to spell out all the other environmental impacts that have been clearly stated by others.

PLEASE, PLEASE, PLEASE vote with your heart, your conscience, your caring, your desire to truly represent wishes of the people you are here to serve. Please do NOT destroy the beauty of this land and the well-being of all who live here. The potential loss on so many levels is not worth bowing to the interests of money.

Thank you so much for hearing this plea and saying NO to the mine.
Ellen Clephane

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Linda Boswell at colebos@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Boswell. I live at 14023 glenn pines rd., grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live out Greenhorn Rd. on Glenn Pines Rd., very near the mine. I have lived here about 18 years.

If the mine re-opens, I would be directly impacted by the noise pollution 24/7, air pollution and possibly smell pollution 24/7, possibly could not open windows in my home, well water drying up, unrelenting traffic 24/7, torn up streets from big trucks, AND my property value declining.
Not to mention what the site would look like after all the trees are removed and all the buildings are built.

And for what?
The negatives far outweigh the positives.

Who benefits?

Who would want to live here with all these problems?

Put yourself in our shoes.
Do any of you (supervisors) live in the directly impacted area?
If you did/do, would you vote for the mine?

It's not just those of us who live nearby, but the others in the county, as well as visitors we depend on to visit Grass Valley and Nevada City, who would now avoid the area and perhaps choose other places to vacation.

I ask you to think long and hard about this issue that will change the face of our area for 80years or more.

Just Say No!
Thank you for your time,
Linda Boswell

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Larry Hoffman. I live at 266 N Auburn St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Having worked at Hewlett-Packard for over 20 years as an IT Manager, I am acutely aware of assessing risks and developing disaster recovery plans. The process also involves doing robust scenario planning. These are all areas of deficiencies in the final EIR, as well as in the mindset of the Rise Grass Valley company.

For example, consider how many assisted living facilities are within the proximity of the potential mining site. These would all be at risk should an unforeseen chemical or environmental accident occur due to mining activities. As we observed during recent fire events, there is no coordinated plan to evacuate people at these facilities as well as the many people who live in the area who are unable to leave on their own. At the very least this and other scenarios should have been evaluated for the potential risks, and associated plans should have been developed before any such

industrial endeavor is approved.

For this an many other reasons already illustrating the negative impacts of reopening the mine, you must not approve this proposal. Furthermore, I would suggest that the city and county buy back the property, thus eliminating the possibility of future efforts to reopen the mine.

Sincerely,

Larry Hoffman

FEB 03 2023

NEVADA COUNTY
BOARD OF SUPERVISORS

January 28,2023

Regarding Idaho-Maryland Mine Reopening

Dear Nevada County Supervisors and Planning Commissioners,

I strongly oppose the re-opening of the mine. I have lived in Nevada County for over 40 years and served my entire medical career here, but if the mine project moves forward, I plan to leave Nevada County immediately and permanently.

The potential for severe negative impacts on environmental quality including water resources, noise, air quality, and traffic are impossible to ignore.

The potential advantages are meager.

The sentiment of the community is clearly against the project.

A vote to advance the project would be disastrous and entirely unjustified.

Sincerely,

John W. Reeder MD
12677 Jack Pine Rd.

NEVADA COUNTY
BOARD OF SUPERVISORS

Dist 1

January 29, 2023

Nevada County Supervisors and Planning Department

Eric Rood Administrative Center

950 Maidu Avenue

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

I am a 30-year resident of Nevada County and Banner Mountain in particular. I am writing to ask that you do not approve re-opening the Idaho-Maryland Mine.

When we relocated to Nevada City 30 years ago the mines had been closed for 36 years. Nevada County in 1992 had already made significant progress in rebuilding a new future without the mines. We purchased a home, sent our son to school, started a business, and supported the local economy. For 19 of the 30 years, I was employed as a Clinical Laboratory Scientist at a Nevada County Hospital. If the mine had been operational or if we believed that re-opening the mine was being seriously considered we would not have relocated to this area.

I have reviewed the draft documents that are available on-line. I have also reviewed the arguments for and against re-opening the mine. I am opposed to re-opening the mine for the following reasons:

1. Home values – Re-opening the mine will have a substantially negative impact on my home value and those in the general area.
2. Well issues - This is a huge issue which is likely to impact many more wells than indicated. I am concerned that my well could be impacted. Without clean water our homes are worthless.
3. Other environmental issues - Traffic, noise, and air pollution will make this community undesirable. People will not want to live here, vacation here, or conduct other business activities here.

I urge you to say no to re-opening the Idaho-Maryland mine.

Sincerely,

Barbara Edwards

Hello my name is Kimberly Cappa, I live in District 3 (about 2 miles as a crow flies) from proposed reopening of the mine.

I am against re-opening the mine.....please VOTE NO
there are way too many negatives with this project than there are positives. I totally love this community, but I feel that this growth is NOT THE RIGHT ONE.

I will give just one example in this email. I used to work for an oil company in the bay area for 23 years. I saw too much human error and also mechanical failure. I DO BELIEVE that this will have the same outcome, and for this PLEASE VOTE NO

Thank you,
Kim Cappa

January 30, 2023

Dear Nevada County Supervisors and Planning Commissioners,

I ask you to please say NO to re-opening the Idaho-Maryland Mine.

I am a resident of District 1, Nevada County. I have resided within Nevada County for 23 years.

The negative, unavoidable impacts this mine will deliver far, far outweigh any possible positive outcomes.

I have examined and studied this project from all angles. Water and private wells are at great risk to toxicity. The water/hydro geology report is too vague to pretend all water will remain safe and clean.

Noise pollution, power grid consumption, animal habitat, and PROPERTY VALUES are all in absolute jeopardy if this mine were to occur.

I strongly oppose this mine.

This is such an important moment in time; we must cherish the splendor of our treasured home. Thank you for caring! Best, Aimee Had

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jason McLean. I live at 10740 Cub Court, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We should not be endangering our citizens health and well-being for monetary gain. It’s ridiculous that we’re even considering this.

Sincerely,

Jason McLean

Dear Nevada County Supervisors and Planning Commissioners,

My name is Mindy Oberne. I live at 13169 Twin Star Lane, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve lived in the Hidden Valley area of grass Valley for 40 years now. I love this community and have given to it by volunteering with the Meals On Wheels program for over 10 years, and bringing three free healthcare clinics to our community. As much as I love it here, if this mine goes through, I will consider leaving the area because I believe it will do irreparable damage. Please do not let this go through.

Sincerely,

Mindy Oberne

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Mines are part of our history, but have no place in our future. We should be spending our time, efforts, resources, and energy developing an infrastructure to attract tech and manufacturing companies to take up root here. Not invite a foreign company to extract resources, leave a hole and pollution behind, and import personnel for the high paying jobs, then leave when they've had their fill. Just say NO!

Sincerely,

Alex Palm

I live just down the street from the proposed mine with a well supplying my water. Not only will I have to redrill my well if the mine pumps outs its water, lowering the water table, but I will also witness the pollution of this beautiful Tahoe forest we have. The chemicals used in mining are lethal, and the company set to operate the mine has a record of bankrupting themselves and leaving the community to deal with the hazardous cleanup.

Sincerely,

Nathaniel Crevoiserat

My name is Sara Bottrell. I live at 11551 side hill circle, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I do NOT want this mine. Is the county going to pay for installation of NID to all houses in a 3 miles radius? Before our wells run dry? Will the county back our decreased property values? Please consider all the citizens who have been paying their property tax bills to the county for years. Not these deceptive mine owners. They purchased the land for 2M. Let’s buy it back at create a nature preserve. This is bad for Nevada County!

Sincerely,

Sara Bottrell

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Nathan Wolfson at wolfson.nathan@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nathan Wolfson. I live at 15175 ranchwood Ct, nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Lake Vera Pardon area adjacent to downtown Nevada City, so I personally won't be immediately / directly impact by the mine at my home. But it will be a disaster that all of us share over time.

The County should deny the Idaho-Maryland Mine and should not certify the Final EIR.

The County has no obligation to approve the Mine.

The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley’s and the County’s land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious

deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be “significant” and does not comply with CEQA (California Environmental Quality Act).

● Environmental impacts unavoidable - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also serious deficiencies in the FEIR that put the County and its citizens at even greater risk. Key deficiencies are shown in sections 2-6 of this document.

● Inconsistent with General Plan - The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan’s goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. And yet, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns. A specific list of conflicts can be found here.

● Legal considerations - The County can confidently proceed with denial knowing the decision does not qualify as “taking”, which is a legal term that describes a project rejection that denies an owner their right to develop a property. Both the Brunswick and Centennial properties are currently zoned “Light Industrial”, which provide a reasonable use of the properties. The applicant would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

There is ample case law to uphold the rejection of FEIR certification if a project is denied. If the current FEIR were to be certified, then the project later denied, it will be a flawed EIR in County records that could be used in future applications. Read more legal considerations here.

● Inadequate economic justification - The Economic Impact Report on the Mine showed a huge range of possible revenue outcomes from very low to very high, making actual revenue potential uncertain. Only the lower estimates were backed by proven gold reserves. Expert community reviewers found that even low-end figures were overly optimistic with a heavy reliance on information provided by the applicant. The assertion that property values wouldn’t decline was a big miss. It failed to recognize local realtor expertise or use acceptable home appraisal methods. Additional downside risk was not evaluated. Learn more about the community review

here.

● Just say no! - Continuing with the EIR and project consideration will just cost the County in loss of time and energy as well as that of staff and the community. This community is overwhelmingly opposed to the Mine project, as evidenced by the over 5,500 petition signatures submitted to the County last summer and the fact that 95% of the opinion pieces published in The Union about the mine are against it.

Well Owners Shafted in the Final EIR

The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed, resulting in a final report that does not comply with CEQA and fails to identify the potential impacts.

● CEQA requires a current baseline to assess potential impacts and determine mitigations. The computer model used for the analysis did not use current monitoring data from any of the over 300 domestic wells in the mineral rights area. It relied only on sparse patches of data from over 15 years ago. The Final EIR acknowledges that data is needed, but the approach calls for drilling 15 new monitoring wells as a basis for verifying the computer model after the EIR is certified! The questionable computer model estimates well water drops at 1 to 10 feet for 152 wells, then avoids declaring the impact as "significant" by creating an arbitrary threshold of significance at 10%.

● The final EIR also adds a completely inadequate supplemental domestic monitoring plan for 378 newly-identified properties. Among the many deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

Mine Waste Management Inadequacies Risk Water Quality

The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported. The Water Board made it clear in Draft EIR comments that more rock testing is needed to assess the likely concentration levels of hazardous elements in the rock to be mined. The FEIR's plan for storing and

disposing of mine waste has extensive gaps, creating a risk for long-term mine water pollution similar to what this community has seen in the past.

● Rise Gold's project plans to deposit 1000 tons of tailings and waste rock per day on the Centennial and Brunswick sites for the first 11 years. After that, the plan is to dispose of it via off-site sales. However, only waste classified as Group C can be used for engineered fill deposits or off-site sales. The more hazardous Groups A and B require special handling. The FEIR asserts that "mine materials will likely be classified as Group C", but its conclusions rely on just 11 feet of drill core samples.

● The FEIR does not provide adequate provisions for the storage of Group A or Group B mine waste, which will be required by the Water Board. Since any waste that is not Group C cannot be used for engineered fill or off-site sales, viable alternative strategies must be defined. The FEIR introduced a new suggestion that if not Group C "...the waste rock would be placed underground", but CEQA requires storage of Group A or B mine waste underground to be reviewed in a Draft EIR.

● This extensive set of gaps in mine waste management also introduces uncertainties about Rise Gold's ability to operate by disposing of mine waste from off-site sales.

Mine Waste Management Inadequacies Put Air Quality at Risk

The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. Asbestos is found in all rock types in the Idaho-Maryland Mine in varying concentrations. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

● Management of asbestos emissions is a complicated task. If the rolling average over a 3-month period of asbestos concentration in mine waste exceeds 0.01% by weight, it cannot be shipped out of the mine facility. Rise Gold's primary approach – as described in the Asbestos, Serpentinite, and Ultramafic Rock (ASUR) management plan – simply proposes that cores would be sampled before excavation and that if asbestos levels are too high, the rock won't be mined. There is not enough evidence, however, to establish that they can feasibly stay below the limits using this plan.

● The test data in the FEIR for determining the potential impacts from Asbestos is inadequate for CEQA compliance. Of the testing that was provided, which came from just 3 drill cores, 40% of the samples exceeded the 0.01% threshold. Thus, for assessing the impacts of asbestos air pollution, spot sampling has been done on less than 1/1000th of the mine rock that will be excavated over the 80 year life of the Use Permit.

FEIR Fails to Assess Impacts of Centennial Site

The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

● The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The California Department of Toxic Substances Control (DTSC) is managing the cleanup, but their Remedial Action Plan (RAP) is only in draft form. It is unclear when the plan will be finalized or when DTSC might approve the clean up.

● Per CEQA, the EIR must provide an environmental assessment of the current conditions of a project site to establish a baseline in order to determine impacts.This was not done. The FEIR assumes the site will be cleaned up before it gets used to deposit new mine waste. The plan calls for placing 1.6 million tons of mine waste (assuming it qualifies as Group C) over the course of 5 years, covering about 44 acres to a height of up to 55 feet. And yet, the significant work needed to accomplish this clean-up is not disclosed or evaluated in the FEIR. Numerous aspects of this RAP draft have been questioned in public comments and the final project details are unknown.

Greenhouse Gas Emission Impacts dismissed in FEIR.

The FEIR concludes that the mine's greenhouse gas (GHG) emission impacts will be "less than significant", but it uses an unsupportable, obsolete threshold measure to justify its position. The only correct threshold – given current climate studies, CA SB-32, and today's state goals – is net zero. The County has not formally adopted its own threshold of significance, but it has set ambitious goals to reduce GHG

through energy reduction in its Energy Action Plan. The Mine's sizable energy footprint would be a serious setback.

● The FEIR sets the significance impact threshold of 10,000 Metric Tons (MT) of GHG emissions per year. Mine operations are projected to produce approximately 9,000 MT per year, which is just under the set limit. This does not, however, include the over 4000 MT of additional emissions that will be generated by cement manufacturers to provide the massive amount of cement that will be used to produce cemented paste backfill for 500 tons/day of mine tailings.

● The outdated 10,000 MT/year threshold is one that was used by other air districts such as the
Bay Area in the past. More recent projects, however, such as the Sargent Ranch Quarry project managed by the Bay Area Air Quality Management District in 2022, use net zero for the significance threshold.

● The mine's electricity usage is approximately equivalent to the annual use of 5000 homes. The Mine's energy use would be so sizable that it would completely offset the amount of residential reductions the County wants to achieve each year in its Energy Action Plan.

Sincerely,

Nathan Wolfson

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elissa Crevoiserat. I live at 13243 Loma Rica Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley my entire life. It has only been recently that living here has become more stress inducing with the risk of forrest fires and drought. That’s why the thought of lowering the water table and shipping our water out of the area for the sake of profit is absolutely shocking to me. I cannot believe the idea is even being considered. The risks are obvious. The number community members that will be affected is obvious. Just say no to the Idaho-Maryland Mine.

Sincerely,

Elissa Crevoiserat

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lenda Woodard. I live at 11321 Beauview Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live about a block away from Idaho Maryland Mine. We only have well water that will be drained, due to draining the mine full of water into Deer Cheek. Which will not only flood the creek, it will be full of chemicals, i.e. arsenic, dumped into the mine when they closed it. My sister knew the guy that dumped it. Trucks going in and out 24/7. What happens when we have a evacuation? Not to mention the exhaust fumes not just from the trucks, but they will also be exhausting the fumes out of the mine. What about the noise 27/7? You got to be kidding about the jobs provided. Pretty sure they will be bringing the miners down from Canada, and the $$ will be send back up to Canada. There are people up on the Ridge that are sick from drinking well their well water. Not to long ago, parts of Brunswick Road collapsed due to the mine. I understand the man who is buying it, is being held up in Canada for not

cleaning up the mess he left behind when he closed another mine. He just took the $$ and ran. Please think about all the people this will effect. We have enough traffic here already. Thank you for listening..

Sincerely,

Lenda Woodard

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shiree Swenson. I live at 12351 Hillcrest Drive, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a 4th generation Nevada City family we have seen this town go through a lot of changes. This change is one that could ruin many of the aspects of what is good about this town. It will ruin our environment, add sound pollution, and do little for the good of this town and more for the greed of the company running it. Please do not allow this to ruin the beautiful town we have fought to protect.

Sincerely,

Shiree Swenson

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen Clephane. I live at 13951 Greenhorn Rd, Grass Valley, CA 94945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live a little over 1 mile up Greenhorn road from Brunswick ~ very close to the mine. We have been here 16 years and love the quiet rural nature of this area. I am horrified at the thought of a huge industrial complex, with daily parade of trucks, the noise and air pollution, the high chance of our well going dry or greatly diminished, and the destruction of the lovely quality of life in our community. No need to spell out all the other environmental impacts that have been clearly stated by others.

PLEASE, PLEASE, PLEASE vote with your heart, your conscience, your caring, your desire to truly represent wishes of the people you are here to serve. Please do NOT destroy the beauty of this land and the well-being of all who live here. The potential loss on so many levels is not worth bowing to the interests of money.

Thank you so much for hearing this plea and saying NO to the mine.
Ellen Clephane

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Boswell. I live at 14023 glenn pines rd., grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live out Greenhorn Rd. on Glenn Pines Rd., very near the mine. I have lived here about 18 years.

If the mine re-opens, I would be directly impacted by the noise pollution 24/7, air pollution and possibly smell pollution 24/7, possibly could not open windows in my home, well water drying up, unrelenting traffic 24/7, torn up streets from big trucks, AND my property value declining.
Not to mention what the site would look like after all the trees are removed and all the buildings are built.

And for what?
The negatives far outweigh the positives.

Who benefits?

Who would want to live here with all these problems?

Put yourself in our shoes.
Do any of you (supervisors) live in the directly impacted area?
If you did/do, would you vote for the mine?

It's not just those of us who live nearby, but the others in the county, as well as visitors we depend on to visit Grass Valley and Nevada City, who would now avoid the area and perhaps choose other places to vacation.

I ask you to think long and hard about this issue that will change the face of our area for 80years or more.

Just Say No!
Thank you for your time,
Linda Boswell

Sincerely,

Linda Boswell

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Larry Hoffman. I live at 266 N Auburn St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Having worked at Hewlett-Packard for over 20 years as an IT Manager, I am acutely aware of assessing risks and developing disaster recovery plans. The process also involves doing robust scenario planning. These are all areas of deficiencies in the final EIR, as well as in the mindset of the Rise Grass Valley company.

For example, consider how many assisted living facilities are within the proximity of the potential mining site. These would all be at risk should an unforeseen chemical or environmental accident occur due to mining activities. As we observed during recent fire events, there is no coordinated plan to evacuate people at these facilities as well as the many people who live in the area who are unable to leave on their own. At the very least this and other scenarios should have been evaluated for the potential risks, and associated plans should have been developed before any such

industrial endeavor is approved.

For this an many other reasons already illustrating the negative impacts of reopening the mine, you must not approve this proposal. Furthermore, I would suggest that the city and county buy back the property, thus eliminating the possibility of future efforts to reopen the mine.

Sincerely,

Larry Hoffman

BOARD OF SUPERVISORS

January 28,2023

Regarding Idaho-Maryland Mine Reopening

Dear Nevada County Supervisors and Planning Commissioners,

I strongly oppose the re-opening of the mine. I have lived in Nevada County for over 40 years and served my entire medical career here, but if the mine project moves forward, I plan to leave Nevada County immediately and permanently.

The potential for severe negative impacts on environmental quality including water resources, noise, air quality, and traffic are impossible to ignore.

The potential advantages are meager.

The sentiment of the community is clearly against the project.

A vote to advance the project would be disastrous and entirely unjustified.

Sincerely,

John W. Reeder MD

Dist 1

January 29, 2023

Nevada County Supervisors and Planning Department

Eric Rood Administrative Center

950 Maidu Avenue

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

I am a 30-year resident of Nevada County and Banner Mountain in particular. I am writing to ask that you do not approve re-opening the Idaho-Maryland Mine.

When we relocated to Nevada City 30 years ago the mines had been closed for 36 years. Nevada County in 1992 had already made significant progress in rebuilding a new future without the mines. We purchased a home, sent our son to school, started a business, and supported the local economy. For 19 of the 30 years, I was employed as a Clinical Laboratory Scientist at a Nevada County Hospital. If the mine had been operational or if we believed that re-opening the mine was being seriously considered we would not have relocated to this area.

I have reviewed the draft documents that are available on-line. I have also reviewed the arguments for and against re-opening the mine. I am opposed to re-opening the mine for the following reasons:

1. Home values – Re-opening the mine will have a substantially negative impact on my home value and those in the general area.
2. Well issues - This is a huge issue which is likely to impact many more wells than indicated. I am concerned that my well could be impacted. Without clean water our homes are worthless.
3. Other environmental issues - Traffic, noise, and air pollution will make this community undesirable. People will not want to live here, vacation here, or conduct other business activities here.

I urge you to say no to re-opening the Idaho-Maryland mine.

Sincerely,

Barbara Edwards

Hello my name is Kimberly Cappa, I live in District 3 (about 2 miles as a crow flies) from proposed reopening of the mine.

I am against re-opening the mine.....please VOTE NO
there are way too many negatives with this project than there are positives. I totally love this community, but I feel that this growth is NOT THE RIGHT ONE.

I will give just one example in this email. I used to work for an oil company in the bay area for 23 years. I saw too much human error and also mechanical failure. I DO BELIEVE that this will have the same outcome, and for this PLEASE VOTE NO

Thank you,

Hello Supervisors,

Please read the attached letter about some of my reasons for opposing the reopening of the Idaho-Maryland Mine.

Respectfully,

Rev. Sharon Delgado
http://sharondelgado.org

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sharon Delgado and I live outside Nevada City. I am a retired United Methodist pastor and a founding board member of Earth Justice Ministries, based in Nevada City.

I strongly urge planning commissioners and supervisors to reject the proposal to reopen the Idaho-Maryland Mine. My concerns are based on personal experience, but also on potential harm to our community. I entreat you to reject the FEIR, which was badly flawed. I believe our community will suffer harm over many years if this project goes through. Here's why.

On Mothers' Day in 2006, after my husband Guari and I had moved back to Nevada County, our grown kids and grandkids gathered at Memorial Park for a picnic. I had requested it since I had happy memories of being there at the park when we raised our children. I imagined that our grandchildren would also enjoy playing at the playground and splashing in the creek.

I was shocked to see that metal fencing blocked the so-called creek. Signs warned people to stay out because it contained hazardous chemicals. What a nightmare. As it turned out, it was not a creek at all, but the Magenta Drain, which handles discharge from the Empire Mine. Some weeks afterward, I saw people in Hazmat suits working to strengthen the fence. Chilling.

I thought back, remembering the kids playing in the creek and wondering what they had been exposed to and how it might have impacted their health. I still wonder what ailments might be traced back to those exposures. I know now that toxic waste at the mine included mercury, arsenic, cadmium, lead, and other pollutants, and that it flowed into Wolf Creek and other area streams, where people fish and swim.

In 2014, a grand jury report found that local residents' health, welfare, and water quality may be compromised by toxic pollution caused by the Empire Mine, Lava Cap Mine, and North Star Mine, and that for over 30 years governmental agencies failed to coordinate or properly enforce cleanup required by legal settlements and abatement orders.

Mine runoff from the Empire Mine is now being treated by a wastewater treatment system built by Empire Mine State Park and mine owner Newmont Mining. In other words, it was paid for with both public and private funds. This commonly takes place with mining corporations around the world. In fact, there is often no accountability for mining corporations that pollute. Cleanup from mining operations (if it happens) is often paid for by the state. It's called corporate welfare—private gain for corporate "persons" at the expense of flesh and blood human beings, communities, and ecosystems.

For example, Rise Gold's CEO Ben Mossman is currently on trial in Canada. He faces nine federal and twenty provincial charges related to toxic spills by his previous mining company, which polluted tribal waters, went bankrupt, and left Canadians with the costs.

Naturally, we oppose the reopening of the Idaho-Maryland Mine. The Environmental Impact Report is deficient in so many ways. Members of our community have spent countless hours

analyzing it and uncovering its flaws. And we have prior commitments as a community that we the people have worked hard to implement. Why would any member of the Planning Commission or the Board of Supervisors vote to approve this project, which would override and negate the stated goals of the Nevada County Energy Action Plan?

I entreat each member of the Planning Commission and Board of Supervisors to oppose it. The promises of a re-opened gold mine ring hollow considering the potential health risks, disruption of community values and commitments, damage to local ecosystems, threats of further toxicity to our children and future generations, and so much more. Our beloved Nevada County has been damaged by the toxic legacy of the Gold Rush, but there is still so much beauty and life here, so much to be saved and protected. We may think that we sit on top of the natural world and try to control it, that is not true, and the natural world is not expendible for human gain. We are part of the interconnected and interdependent community of life, and as Indigenous people have always known, what we do to the community of life, we do to ourselves.

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

I am Lorraine Reich a local attorney on Colfax Avenue in Grass Valley, and a 30+ year resident of Nevada County. I am strongly opposed to the re-opening of the Idaho-Maryland mine for many environmental reasons, including further pollution of our ground waters, the usage of precious ground waters for their mining operation, inevitable air pollution, and sound "pollution."

Further, I am opposed on the basis of increased industrial traffic on the city streets of Grass Valley, particularly Colfax Avenue which is where my business and rental properties are located.

Please do what you have been elected to do: represent the people's interests of Nevada County. The people clearly do not want to have the Idaho Maryland Mine re-opened.

LORRAINE REICH

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Cynthia Kapin at cynthia_tai@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Cynthia Kapin. I live at 12255 Hoppy Hollow Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Cynthia Kapin. My husband and I live at 12255 Hoppy Hollow Road, Grass Valley.

As concerned residents, we are asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. All the residents in Nevada County have the rights to say NO to anything that would threat our health and lives and have the rights to be free of that fear and threat!

We believe there are many HEALTHY ways to bring more jobs, revenues and income to this area. Mining would definitely NOT be one of them!!

Sincerely,

Cynthia Kapin

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jonathan Gordon at jsethgordon@comcast.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jonathan Gordon. I live at 13967 Glenn Pines Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 approximately a half-mile from the proposed reopening of the Brunswick Site. I purchased my home in August of 2022 so I am a new resident to Grass Valley. Among many of the appealing qualities of Grass Valley are the beautiful environment with fresh water and air, and the peace and quiet. I have been following the process of the potential mine reopening since first beginning my due diligence during escrow of my home. I believe the proposed mine reopening would be extremely detrimental to the quality of life that is currently so appealing about Grass Valley. Pollution, traffic, noise would all come into play if the mine were to reopen and I have little faith in a company such as Rise with such a disastrous track record. Additionally as a property owner with my own well, I am deeply concerned about the impact from the mine on my water supply. Currently when water in

California has become a more precious commodity than gold, it's ridiculous to entertain the idea of the mine reopening and potentially impacting the water supply. I strongly oppose the reopening of the Idaho-Maryland Mine and hope the board of supervisors will listen to the overwhelming voices of the citizens of Grass Valley who oppose the reopening and vote no.

Sincerely,

Jonathan Gordon

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ray Baldock at baldockr@comcast.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ray Baldock. I live at 12975 Somerset Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Our town has transitioned successfully away from mining and has a vibrant high tech and light manufacturing industry anywhere close to residential/urban areas. Risk to water, increased traffic and road wear on narrow roads and the very long, multi-generational impact of the decision are clearly not in the best interests of the community. Should the consequences of the mine have any adverse impact, .we risk the attractiveness of our historic towns for tourism, an industry that is sustaining many businesses in the area and one that provides safe, clean tax revenues. Potentially the areas will be less desirable and a safe green haven in the foorhills leading to further decline,

The Updated EIR is unconvincing and again misses key points and use of several updated, scientifically based impact estimates.

I implore the board to REJECT Rise Gold's application, and any other mining operations, anywhere near our historic towns,

Sincerely,

Ray Baldock

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Bradford. I live at 17601 Shoshoni Trail Ct, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 1, Nevada City, having resided in Nevada City for 4 years. As a retired couple intent on luring our children and grandchildren to the area, the local high quality of life is of paramount importance. Given the potentially slight benefits and enormous detriments of reopening the mine, it is clearly in our estimation a huge net negative. For all the reasons the various forms of thorough research have already clarified and the outstanding hazardous impacts that appear to be more likely than not, we urge the supervisors to strongly reject this misguided proposal that will, literally, take the riches of Nevada County while likely leaving the county irreparably damaged. Like so many other communities close to mining operations. Its just not worth it!!

Sincerely,

Ken Bradford

My name is Sheerlie Ryngler. I live at 14343 Moon Shadow Dr, Nevada city, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a resident of this county for 7 years and have recently planted deep roots by becoming a homeowner here. I have also run my small food businesses here, including a brick & mortar, for almost 5 years. I can’t believe we are still entertaining this option, considering the widespread community opposition, the track record of this criminal business entity called Rise Gold, and the horrible implications for environmental destruction and water loss in an already extremely vulnerable area! We need to be all hands on deck in terms of enhancing our environmental resiliency and preserving our precious resources. We say NO!

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Julia Carroll. I live at 11069 Cedar Ridge Drive, Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I have owned property (and paid taxes) in Nevada County since 2000 and have lived in District 3 since 2006. We love our home in Cedar Ridge and hope to stay here until they cart us off to the rest home. (We're both in our 70s.) But our life here will be ruined if the mine is approved. Our home's sellability and value will be greatly reduced (regardless of what the faulty economic report says), so we either will be stuck in a place we no longer enjoy or lose much of the money (our equity) we might have used to see us through our old age. And that's just about us.

The entire community for many miles around the mine sites will be spoiled by the pollution, noise, traffic, etc., regardless of what the faulty EIR says.

Please please please say NO!

Sincerely,

Julia Carroll

Re: Rise Gold mining permit.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Walt Froloff. I live in Grass Valley, CA 95945.

Just a friendly reminder of how the IMM gold mine re-opening would affect the county and the Nevada County Supervisor 2023 Objectives (see https://www.nevadacountyca.gov/731/Board-of-Supervisors). The NC BoS objectives include eight community priorities.

1. Fiscal stability:

As shown in the NC Econ study and EIR the risk and liability to the county will increase due to accidents, traffic, insurance, monitoring, compliance measures, fire department and police department services.

2. Emergency preparedness:

Will require a larger budget to prepare for mine catastrophic fires sweeping through the IMM launching poison/toxic fumes from stored processing cyanide/mercury, toxic dust from mine tailing, property stored dynamite/explosives, debilitating smoke from wind-suspended particulate, accidents, and toxic waste spillages from trucks carrying toxic dust mine tailings and insurance costs for new emergency community liability.

3. Economic development:

The county econ study only starts with a profitable mine operation. There is not any evidence that the mine will be profitable. On the contrary, mines were closed because they could not be profitable even when environmental or community costs were not considered. It's not rocket science to show that the likely outcomes from mine operations will bring a depressed economy, driven by lower tourism due to toxic environmental factors, traffic, and slow-moving truck-dominated highways and streets. Depressed real-estate property prices lowered property assessment funds, and locals escaping noise, traffic, and pollution for dining else ware. The largest economic sink will be from an unprofitable gold mine operation taxing county services and eventually leaving a toxic mess to be cleaned up by the county and state and an economic dumpster for the county.

4. Broadband:

A useless investment in a technology that will bring no new workers or clients due to low-wage mine workers sucking up any available housing and county resources and creating a low-income impoverished community and cheap labor force for a mining industry seeking unskilled pickaxe welding laborers.

5. Climate resilience:

Climate resilience would have projects where ground/well water/air or natural resources are being replenished or restored. A mine operation absorbs any and all available ground/well water and discards wastewater into a surface creek that will be flooded uniformly from mine dewatering. Toxic waste dust and tailings finding their way into the air will need to be contained. Mining destroys the fragility of nature's balance and is the antithesis of climate resilience.

6. Housing:

Any IMM employment will bring in a tighter housing market based on projected workers arriving and this without any benefit to the community unless the IMM is very profitable, which is most certainly NOT going to happen for an abundance of reasons.

7. Homelessness:

An increase in homelessness can be expected as the IMM will be hiring people that are desperate. Desperate for unskilled labor opportunities, those who aspire to weld a pickaxe a mile underground because mining is their only career choice available.

8. Recreation:

With a mining industry we will experience a decrease in recreation in the county due to toxicity in the mountain streams keeping tourists out of the water, dead or inedible fish keeping fishermen out of the water, and traffic keeping everybody else recreating at home or at destinations out of the county. This brings us back full circle to the founding of Nevada City, built by miners engaged in "drinking, violence, and whoring" to pass any time outside the mines — recreating.

Conclusion - These are your board's objectives for the county in 2023 as they will trend **if** a gold mining operation is permitted, an operation for an industry that ceased being profitable even without regulations 70 years ago and will not now be so. Instead it will be an albatross

around the neck of the county. The BoS has one decision, whether or not to sink Nevada County for the next 100 years. Our Nevada County is still reeling with the gold mine's environmental damage from a hundred years ago — by founders with good intentions, but without understanding. You now have an understanding. Vote no on the permit. Please stop the insanity now.

Sincerely,

Walt Froloff

RE: Rise Gold proposal to re-open the Idaho-Maryland Mine

Dear Ed Scofield,

Attached are 3 one-page summaries of information I hope you will find useful in your analysis of the Robert D. Neihaus Economic Report and the Final EIR re: the Rise Gold proposal to re-open the Idaho-Maryland Mine.

The attachments are:

1) Economics 101 and the RDN Rise Gold Economic Report
2) The FEIR and Economic Viability for "only a few decades"
3) The FEIR and the "normal" Mine approval process

Although the County's Economic Impact Report and the Final EIR (FEIR) and are two completely separate analyses, both make a number of economic assumptions that deserve your close attention. The examples in these documents demonstrate inflated economics based on data provided by Rise Gold and a bias towards the applicant found throughout the FEIR responses, not just in the FEIR commentary re: economics.

The FEIR is inadequate and should be rejected.

I would be happy to meet in person to review the contents if needed.

I respectfully request you **JUST SAY NO** to the Final EIR and the Rise Gold Proposal.

Thank you for your consideration.

Sincerely,

John Vaughan
District 3
55 year Nevada County resident

Economics 101 and the RDN Rise Gold Economic Report

Commentary below is a high-level summary of the key issues with RDN's recently published "ECONOMIC IMPACT OF THE PROPOSED IDAHO-MARYLAND MINE". Table 5-4 is from page 52 of the report.

Table 5-4. Base Year Mineral Property Value Assessment – High-end Scenario (in millions of 2022 dollars)

Year[1]	Yearly Production	Revenue	Expenses[2]	Net Income	Present Value[3]
4	108,400	D $179.8	E $68.3	$111.5	A $111.5
5	108,400	$179.8	$68.3	$111.5	$94.5
6	108,400	$179.8	$68.3	$111.5	$80.1
7	108,400	$179.8	$68.3	$111.5	$67.9
8	108,400	$179.8	$68.3	$111.5	$57.5
9	108,400	$179.8	$68.3	$111.5	$48.8
10	108,400	$179.8	$68.3	$111.5	$41.3
11	108,400	$179.8	$68.3	$111.5	$35.0
Total[4]	867,200	$1,438.4	$546.1	G $892.3	B_1 $536.7

[1] Analysis uses Year 4 of the proposed project (i.e., first year of full production) as the base year
[2] Annual expenses during full operation were provided by RGV
[3] Applies a discount rate of 17% to account for the high risk associated with the mining industry
[4] Numbers may not sum due to rounding

B_2

A	Table 5-4 shows the "Present Value" of the "Mineral Property" (also known as Mineral Reserves) over 8 years.
B_1	The total "Mineral Property Value Assessment" is stated as $536.7M in the "Present Value" column, which is used as the basis for calculations related to County Property Tax and General Fund revenue.
C	The Mineral Reserve calculation begins with the assumption that "Yearly Production" will produce 108,400 oz of gold every year based on the mine's history from the 1940's and 1950's. **It is not based on any current exploration data.**
D	"Revenue" is then calculated from 108,400 oz/year times $1,659 (which is the 2022 three-year average price of gold), resulting in total Annual Revenue of $179.8M.
E	"Expenses" of $68.3M (provided by Rise-see footnote 2) includes only Rise Payroll of $38.1M/yr (see RDN Report Table 3-1) and Supplier Expenses of ~$30M/yr (see Figure 4, of March 2021 Rise Economic Plan) and do not include depreciation of startup/shutdown costs, purchased equipment, mitigation costs, leases, or any other items normally found in an Income Statement. Page 51 of the Economic Report references the "CA Assessors Handbook Section 560" and notes "...the County uses an income approach to assess mineral property values." [emphasis added] The "income approach" as described in Section 560 requires all expenses, not just Payroll and Supplier costs. Therefore, the $68.3M Expenses provided by Rise are too low.
	"Net Income" of $111.5M/year is the result of Revenue at $179.8M minus Expenses at $68.3M. Net Income is the basis for Mineral Reserve calculations. As noted, with Expenses too low, projected Net Income is high, leading to inflated County Property Tax and General Fund projections.
G	"Net Income" over 8 years is stated as $892.3M, just under $1 BILLION. Note: Based on Rise projected Net Income of $111.5M/year, Return on Investment = 63% which is unrealistic at best.
B_2	Annual Expenses of $68.3M divided by 108,400oz/yr = $630/oz to produce gold. As noted above, expenses are low based on the CA Assessors Handbook. They are also low compared to industry averages. The Industry Average to produce an ounce of gold is about $1,200/oz. **Using the Industry Average of $1,200/oz for Expenses reduces the Mineral Reserves to $297M, which then also reduces County Tax Revenue by 45%.**

In summary, the numbers provided by Rise are inflated at best and irresponsible at worst.

The FEIR and Economic Viability for "only a few decades"

The FEIR responses repeatedly say some form of: "The economic viability of the mine is outside the scope of CEQA" yet the FEIR responses routinely then attempt to provide an economic justification for the project based on speculation and without any data to support their conclusions. The FEIR authors should not attempt to provide editorial comments on a topic outside the scope of their expertise.

For example, the FEIR "Response to Agcy 8-42", which is from the City of Grass Valley, states in part "Long permit terms are commonly requested for large mining operations because they are capital intensive, and it is not economically feasible to invest tens or even hundreds of millions of dollars on a project, when the number of years in which to obtain return on that investment are limited to only a few decades."

First, where is the definition of "large mining operations"? What data is provided to support the FEIR speculation that the Rise "inferred resource"[1] of 108,400 oz/year is large relative to other mining operations? For example, look at Nevada Gold Mines, a merger of Barrick and Newmont which includes 6 mines in the State of Nevada creating "the world's single-largest gold producer", producing ~3.3million oz/year. The smallest of the 6 is Long Canyon with annual production at ~136,000 oz/year is being considered for sale as it is too small. The remaining 5 sites each average over 6 times the production of Rise's "inferred resource". In addition, the smallest of the top 10 gold producing companies world-wide also produces over 6 times the production of Rise's "inferred resource". Defining Rise as a "large mining operation" is speculation at best and pure guesswork at worst.

Second, "not economically feasible" is more speculation not supported by any research or facts. The data *provided by Rise Gold* in support of the recently published "ECONOMIC IMPACT OF THE PROPOSED IDAHO-MARYLAND MINE", prepared by Robert D. Niehaus (RDN) in Table 5-4 is summarized on the right:

Annual Revenue (based on 108,400 oz/year at $1,659/oz)	$179,800,000
Annual Expenses	$68,300,000
Net Income	**$111,500,000**

Now let's look at Net Income when, as noted above, the FEIR speculates "...it is not economically feasible to invest tens or even hundreds of millions of dollars on a project, when the number of years in which to obtain return on that investment are limited to only a few decades."

In fact, according to Rise's own data, they will have $1.15 BILLION in profit every decade for 80 years.

BILLIONS of Net Income	
10 years	$ 1,115,000,000
20 years	$ 2,230,000,000
30 years	$ 3,345,000,000
80 years	$ 8,920,000,000

Finally, the Startup & Construction costs of **$36.1M**, again using data provided by Rise, could easily be **paid off from Net Income of $111.5M in the first year of operation, not decades** as speculated by the FEIR.

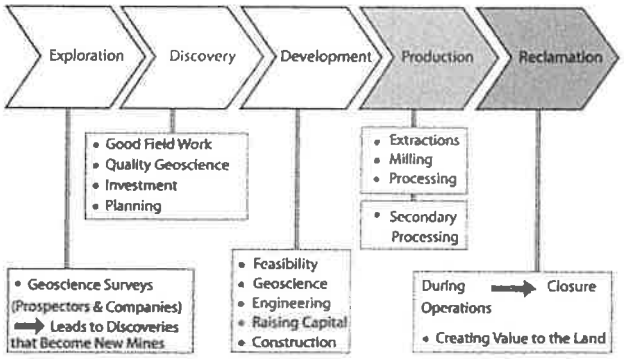
Rise Gold Startup & Construction (see RDN Report: Pg 51 commentary, Table 3-3 and Webinar Q&A #3)			
Assessed Value of Site Improvements	Pg 51		$12,500,000
Construction Direct Costs (Labor/Subcontractor)	Table 3-3, QA#3	Year 1	$10,100,000
		Year 2	$13,500,000
Total Assessed Value of Site Improvements + Construction Direct Costs			**$36,100,000**

Unless the FEIR is speculating it will cost BILLIONS to start up the project, which is inconsistent with the data provided by Rise for the RDN report, **the FEIR response does not match the facts** and makes no sense.

[1] See SEC Industry Guide 7 and https://www.crirsco.com/docs/rendu_paper_darwin2006.pdf Reporting Mineral Resources and Mineral Reserves in the United States of America

The FEIR and the "normal" Mine approval process

As shown in the picture (one of many available on the internet, re: the steps required to open a hard rock mine), the normal process for opening a mine includes (at least) the following steps: Feasibility Study, Exploration (which requires an EIR and permitting) and Production (which requires an EIR and permitting). Also see the Nevada County "USE PERMIT PACKET EXPLORATION / MINING / RECLAMATION AND ENVIRONMENTAL ASSESSMENT" form which clearly includes the option to request an exploration permit.



David Chambers, Ph.D., P. Geop., #GP972 (a recognized expert in the mineral exploration industry), one of the many DEIR commenters notes the following: "The mining project as proposed in this [Draft]EIR has a **fundamental lack of information** on the economic viability of the mine, and potential environmental impacts related to geochemistry and water quality. **The data submitted in support of this [Draft]EIR is only sufficient to support an application for dewatering the mine, and for underground exploration drilling.** This would provide not only the information that will be required to perform a preliminary economic analysis of the orebody, but also supply the samples needed for geotechnical and geochemical testing, and for water quality modeling. The [Draft]EIR should analyze an **Alternative that provides for dewatering and underground exploration. That is the only Alternative that the information provided in this [Draft]EIR will support.**" [emphasis added]

In this example, the FEIR does not bother with "...economic viability of the mine is outside the scope of CEQA" but jumps straight to (again) speculating "...not economically feasible..." followed by an attempt to defend the applicant by noting a list of "significant cost[s]" without any actual data to support their conclusions.

The FEIR response states: "This proposed alternative (exploration only) is not economically feasible because there is significant cost with dewatering the mine, including construction of a water treatment plant, installation of a potable water pipeline [for] affected well owners...underground access and safety improvements...to complete the...exploration phase. The proposed alternative would be economically infeasible because all the above costs would be incurred without the ability to produce any valuable minerals to offset that cost."

Dr. Chambers response (via email) to this FEIR comment: "**If you follow this simplistic logic**, mining companies would never ask for an exploration permit, they would just ask for a permit to mine, and then go start drilling to see if anything is really there. **This approach**, which is what is being proposed by the Idaho-Maryland proposal, **gives the mining company an enormous amount of flexibility, with minimum regulatory oversight**. Mining companies complain a lot about regulatory oversight, as well as having to communicate with the public. However, those regulatory requirements are there for a reason – mistakes have been made by mining companies that have led to financial and environmental losses to individuals and public agencies..." [emphasis added]

Independent of the fact that Rise is not following normal approval processes, the FEIR response is stunning, basically saying "we can't afford to follow the normal steps so give us a permit to open the mine...for 80 years".

As noted on page 3 of this packet (The FEIR and Economic Viability for "only a few decades") based on data provided by Rise Gold, the **startup costs of $36.1M can be offset over 3 times in the first year of operation.** In addition, the same Rise data forecasts a **$1.15 BILLION profit every 10 years.** With profits as high as claimed by Rise, attracting investors to cover startup costs would be easy. **If you believe the Rise data, *which is suspect at best*, claims of economic infeasibility do not stand up.**

Community Environmental Advocates FOUNDATION

Dear Nevada County Supervisors and Planning Commissioners,

As a citizen of Nevada County, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

Dear County Supervisors,

I live in the Ridge Road area of Nevada City. I work in education and youth suicide prevention. I am a resident of Nevada County for 19 years.

One of the contributing factors to youth suicide risks is a sense of impending environmental collapse and the fact that older generations prioritize short term profit over planetary health for our childrens and grandchildren's future. I would like our local youth to see this board of supervisors make decisions that give them hope, rather than despair.

I have seen the ways that drought has impacted our forest health and fire risk. Any proposal to use millions of gallons of water per day for any operation not needed for survival should be vetoed. Wasting and relocating our water for corporate profit is deplorable. I'm embarrassed that our county is even considering this plan, and any non-resident I share this with is shocked it is even a discussion to consider this amount of water use. Recent rainstorms were a gift we cannot afford to squander. Displacement of water down to Smartsville after treatment does not help reduce the strain upstream. You can't drink gold.

High metals in the water from mining contamination have impacted cancer rates. I've lost too many local women to cancers, and too many have had to fight breast cancer - we have very high rates of cancer in this county due to impacts of mining. I do not want more contamination

in our ground and water, and reading these statements I do not feel reassured about the risk, as I do not trust this company's cleanup methods. I am scared about the high metals in my own body, and I am tired of losing friends.

I'm also concerned about the impacts on strained local housing. I admin a county housing group and the numbers of seekers vastly outweighs the offers, for years. I know elders and families who are couch surfing or living in vehicles. According to reports, the jobs created would only go to a small portion of locals, and we do not have homes available for the influx of specialists. Displacing locals for Rise Gold's employees would be shortsighted, as this company will move along after they have extracted our resources.

While people love to glorify the Gold Rush that brought settlers to this area, the truth is that history has not been so glorious. Mining decimated the landscape, wasted and contaminated water, and waged genocide on the displaced Nisenan Tribe. Let us not repeat the mistakes of the past.

Respect Nisenan Tribal guidance, heed warnings from environmentalists about water and fire and contamination risks, and protect housing for local families.

Thank you for rejecting this proposal once and for all.

Sincerely,
"Xylem" Larla Dey Maloney, M. Ed.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Katherine Korsak I live at 11721 Inverness Way, Auburn, CA 95602 (Lake of the Pines).

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

We are very worried that the air pollution, ground water pollution, potential permanent decrease in property values, increase in noise, increase in traffic, increase in crime all will have seriously negative impact on the quality of life across Nevada County.

Largest question to all of you – how do you plan to allocate support for the proper water needs of this mine? Mine's take an extraordinary amount of water to run. Many resident's well's at their properties ran dry during this last drought. How will Nevada County provide the water for this mine and at what expense will this be to residents?

Please stop this mine. It will have deleterious long-lasting impacts that be irreversible.

Thank you for your time and for serving our community.

Best,

Katherine Korsak

Dear Nevada County Supervisors and Planning Commissioners,

Our names are Margaret and Graeme Little.
We live in district one at 13343 Red Dog Road, Nevada City 95959.

As concerned citizens, we are asking you to "just say no" to re-opening the Idaho-Maryland Mine. Re-opening the mine will create significant and unavoidable environmental impacts that endanger our community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risks.

We have been residents of Nevada County since 1986 and property owners since 1987. We value the the natural beauty of our area.
We are seeing too many instances where that beauty is being compromised.

We realize that as our elected officials you have numerous extremely important decisions to consider. Please do what you can to keep this project from going through.

Respectfully submitted,

Margaret and Graeme Little

CLS LABS

SAMPLE RECEIVING EXCEPTION REPORTS

CLS Labs Job # 1901152

Problem discovered by: Grace **Date:** 9/18/19

Nature of problem

Sulfite **Chlorine, Total** **Chlorine, Residual** **Ph** **Dissolved O2**

(Circle analysis above) Received out of HOLD time.

Client contacted? Yes ____ **No** ____ **Spoke With:** ____

By whom: ____ **Date:** __/__/__ **Time:** ____ **HRS**

Client instructions:

Resolution of problem:

Logged in regardless and will be ran for analysis requested.

Inorganic Reference

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit unless omitted or equal to the PQL (see comment #5). Allows for instrument and annual fluctuations
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit. Synonymous with the EPA term "minimum level".
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*POV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure
Control Samples	Verifies the accuracy of the method, including the prep procedure
Duplicates	Verifies the precision of the instrument and/or method
Spikes/Fortified Matrix	Determines sample matrix interferences, if any
Standard	Verifies the validity of the calibration.

QC Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time
L	Target analyte response was below the laboratory defined negative threshold
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.
(4)	An asterisk in the "XQ" column indicates there is an extended qualifier and/or validation qualifier associated with the result.

Hi Cynthia

You are correct, I saw the discrepancy yesterday during our review, however, we failed to send the revised COC - please see attached. Should you have any questions, please do not hesitate to give us a call. Take care and enjoy your day.

Subject: Re: 1880794

Thank You Mark.

I Also did not receive a sample container for Lab ID: 1880794-09.

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Sample Receipt

Rise Grass Valley Inc.

ACZ Project ID: L55806
Date Received: 11/11/2019 14:20
Received By: mjj
Date Printed: 11/12/2019

Receipt Verification

	YES	NO	NA
1) Is a foreign soil permit included for applicable samples?			X
2) Is the Chain of Custody form or other directive shipping papers present?	X		
3) Does this project require special handling procedures such as CLP protocol?		X	
4) Are any samples NRC licensable material?			X
5) If samples are received past hold time, proceed with requested short hold time analyses?	X		
6) Is the Chain of Custody form complete and accurate?	X		
7) Were any changes made to the Chain of Custody form prior to ACZ receiving the samples?		X	

Samples/Containers

	YES	NO	NA
8) Are all containers intact and with no leaks?	X		
9) Are all labels on containers and are they intact and legible?	X		
10) Do the sample labels and Chain of Custody form match for Sample ID, Date, and Time?	X		
11) For preserved bottle types, was the pH checked and within limits? [1]			X
12) Is there sufficient sample volume to perform all requested work?	X		
13) Is the custody seal intact on all containers?			X
14) Are samples that require zero headspace acceptable?			X
15) Are all sample containers appropriate for analytical requirements?		X	

L55806-02 : Sample container was broken, was placed in ziplock bag.

16) Is there an Hg-1631 trip blank present?			X
17) Is there a VOA trip blank present?			X
18) Were all samples received within hold time?		X	

Some parameters were received past hold time.

NA indicates Not Applicable

Chain of Custody Related Remarks

Shipping Containers

Cooler Id	Temp(°C)	Temp Criteria(°C)	Rad(µR/Hr)	Custody Seal Intact?
NA31789	1.2	6.0	15	N/A

Was ice present in the shipment container(s)?

No - Wet or gel ice was not present in the shipment container(s).

Client must contact an ACZ Project Manager if analysis should not proceed for samples received outside of their thermal preservation acceptance criteria.

Rise Grass Valley Inc. ACZ Project ID: *L55806*

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
					sample is too low for accurate evaluation (< 10x MDL).
	WG487169	Manganese, total (3050)	M6010D ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG486752	Mercury (WET DI)	M7470 CVAA	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG486482	Mercury by Direct Combustion AA	M7473 CVAAS	Q5	Sample was received above recommended temperature.
			M7473 CVAAS	QR	Sample matrix is solid rock and a homogenous sample aliquot could not be created for Hg analysis prior to preparation and air drying. Hg analysis was performed on crushed, homogenized, and air dried (40C) sub sample. Some loss of Hg may have occurred. Residual moisture on the prepped sample fraction was used for data correction.
			M7473 CVAAS	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG486611	Molybdenum (WET DI)	6010D ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG487169	Molybdenum, total (3050)	M6010D ICP	ZG	The ICP or ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG486611	Nickel (WET DI)	6010D ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG487169	Nickel, total (3050)	M6010D ICP	ZG	The ICP or ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG486756	Nitrate/Nitrite as N (WET DI)	M353.2 - Automated Cadmium Reduction	H3	Sample was received and analyzed past holding time.
			M353.2 - Automated Cadmium Reduction	HD	Analysis is outside the intended scope of the method, which does not provide hold time information for soil extracts. No hold time is observed for collection to extraction. The referenced method hold time is observed for extraction-to-analysis.
			M353.2 - Automated Cadmium Reduction	Q5	Sample was received above recommended temperature.
			M353.2 - Automated Cadmium Reduction	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
		Nitrite as N (WET DI)	M353.2 - Automated Cadmium Reduction	H3	Sample was received and analyzed past holding time.
			M353.2 - Automated Cadmium Reduction	HD	Analysis is outside the intended scope of the method, which does not provide hold time information for soil extracts. No hold time is observed for collection to extraction. The referenced method hold time is observed for extraction-to-analysis.
			M353.2 - Automated Cadmium Reduction	Q5	Sample was received above recommended temperature.
			M353.2 - Automated Cadmium Reduction	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG486534	Residue, Filterable (TDS) @180C (WET DI)	SM2540C	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG487030	Selenium (WET DI)	6020B ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
		Silver (WET DI)	6020B ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG488017	Sulfate (WET DI)	D516-07 Turbidimetric	HD	Analysis is outside the intended scope of the method, which does not provide hold time information for soil extracts. No hold time is observed for collection to extraction. The referenced method hold time is observed for extraction-to-analysis.

		Silver (WET DI)	6020B ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the concentration of the duplicated sample is too low for accurate evaluation (< 10x MDL).
	WG488017	Sulfate (WET DI)	D516-07 - Turbidimetric	HD	Analysis is outside the intended scope of the method, which does not provide hold time information for soil extracts. No hold time is observed for collection to extraction. The referenced method hold time is observed for extraction-to-analysis.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit unless omitted or equal to the PQL (see comment #5) Allows for instrument and annual fluctuations
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit. Synonymous with the EPA term "minimum level".
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Recovered amount of the true value or spike added, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of Interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure
Control Samples	Verifies the accuracy of the method, including the prep procedure
Duplicates	Verifies the precision of the instrument and/or method
Spikes/Fortified Matrix	Determines sample matrix interferences, if any
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time
L	Target analyte response was below the laboratory defined negative threshold
U	The material was analyzed for, but was not detected above the level of the associated value The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations
(2)	Soil, Sludge, and Solid matrices for Inorganic analyses are reported on a dry weight basis
(3)	Animal matrices for Chemical analyses are reported on an "as received" basis.
(4)	An asterisk in the "QC" column indicates there is an exception qualifier and/or certification qualifier associated with the result.
(5)	If the MDL equals the PQL or the MDL column is omitted, the PQL is the reporting limit.

Dear Commissioner Milman,

As you know, the Community Environmental Advocates Foundation-Minewatch campaign will be coming before you in the next few months to ask you to just say no to the Idaho Maryland Mine FEIR and no to the project.

We will continue to be giving brief presentations from time to time before then on key issues. We promise to keep them short!

Attached is a copy of the background information that explains why it makes sense and why it is legal to not recommend certification of the Final EIR and to recommend denial the mine to the Board of Supervisors. We presented some of this information at a recent Commission meeting. This provides some additional background.

We have also attached a summary of our top 6 key concerns on the Final EIR.

We will follow up with summary packets on other critical mine issues that we hope will be helpful.

Thank you for your time and consideration.

Sincerely,
The CEA Foundation Board

Community Environmental Advocates FOUNDATION

The County should deny the Idaho Maryland Mine and should not certify the EIR.

- **The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the mine project.**

- **Denying the mine project does not deprive the applicant of use of the land under its current zoning. It is not a taking.**
  The entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

- **If it denies the Project, the County is under no obligation to certify the EIR.** (Las Lomas Land Co., LLC v. City of Los Angeles (2009)). In this case, the court upheld a decision to stop preparation of an EIR and specific plan where the city determined the project was not consistent with its land use policies.

  There is no reason to continue with the EIR. We believe that continuing the EIR will just cost the County in loss of time and energy as well as that of staff and the community. We can better spend this time on critical issues like wildfire safety and climate change.

  If the EIR is certified as it stands now, even if the project is denied, it will be a flawed EIR in county records that can be used under future applications.

- **The bottom line is that the community overwhelmingly does not want the Idaho Maryland Mine to reopen.**
  The mine will be counter to the adopted General Plan land use policies and vision which the community supports. The County should deny the Idaho Maryland Mine Final EIR and not certify the EIR.

Nevada County General Plan Goals and Policies
Justify Denial of the Idaho Maryland Mine

The Idaho Maryland Mine project is inconsistent with numerous Nevada County General Plan goals and policies which provide justification to deny the project independent of the environmental analysis:

Land Use Element

GOAL 1.5 Within Community Regions, ensure that development reflects our small-town character, the characteristics of the land and the natural environment.

GOAL 1.6 Allow for growth while protecting, maintaining and enhancing communities and neighborhoods.

Policy 1.8.3 Within the City/Town spheres of influence, the Nevada County General Plan Land Use Maps will generally reflect the City's/Town's General Plan land use mapping. In some instances, the County may provide for a less intensive land use due to infrastructure capability, environmental constraints or effect on land use and development patterns outside the city's sphere. However, the County's Plan will not preclude implementation of the City's/Town's Plan by providing for a significantly more intensive land use than the City's/Town's Plan.

GOAL 1.8 Coordinate with the cities/town in land use planning and development within their spheres of influence.

Policy 1.7.10 The County shall provide for facilities for the management of hazardous waste produced on-site in the Commercial, Business Park, Industrial, and Public land use designations, and shall provide for facilities for the management of hazardous waste produced on or off-site in the Industrial and Public land use designations. All facilities shall be located in a manner consistent with criteria established in the State-approved Nevada County Hazardous Waste Management Plan approved by the County.

Economic Element

Goal 2.1 Provide for a strong economic base while protecting and maintaining communities and neighborhoods.

Objective 2.4 Encourage economic development which favors a high economic multiplier effect.

Policy 2.9 In support of the County Economic Policy, develop and implement an ongoing, aggressive business recruitment and marketing program featuring the County's strengths in areas such as education and quality of life. Target the program to prospective types of business (particularly those that are entrepreneur-oriented) that are best suited to provide significant long-term job opportunities in industries such as biotechnology, electronics and communications, and energy-related products.

Objective 2.14 Encourage protection and enhancement of the natural scenic beauty of this County in support of the tourist trade.

Safety Element

GOAL CC-10.13 Build Climate-Resilient Communities and Protect Neighborhoods, Public Infrastructure and Natural Resources Through Mitigating Climate Change.

Policy CC-10.13.4 Require new discretionary development to include an analysis of potential affects to climate change impacts and water resources in the project review process. Projects shall reduce or limit impacts as feasible.

GOAL HM-10.5 Protect public health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.

Policy HM-10.5.5 The County will actively promote prompt clean-up or remediation of properties contaminated by mine waste or other hazardous materials and shall not grant any discretionary or ministerial land use approvals to develop or change boundaries or reconfigure parcels believed to be contaminated, unless and until the nature, extent, type and location of the contamination is determined and satisfactory arrangements are made for clean-up or remediation, in accordance with Nevada County standards or State regulations.

Noise Element

GOAL 9.1 Provide for the health, safety, and welfare of the people of Nevada County through a set of policies designed to encourage an environment free of unnecessary and annoying noise.

Policy 9.1.10 Strongly discourage those General Plan amendments and zone changes that would likely create land use conflicts relative to noise.

Aesthetics Element

Goal 18.1 Promote and provide for aesthetic design in new development which reflects existing character.

Water Element

Goal 11.1 Identify, protect and manage for sustainable water resources and riparian habitats.

Policy 11.2 Encourage the protection of resources which produce water for domestic and agricultural consumption.

Objective 11.2 Preserve surface and sub-surface water quality and, where feasible, improve such quality.

Policy 11.4 Cooperate with State and local agencies in efforts to identify and reduce to acceptable levels all sources of existing and potential point- and non-point-source pollution to ground and surface waters, including leaking fuel tanks, discharges from storm drains, Chapter 11: Water Element Volume I - Page 11-4 Nevada County General Plan auto dismantling and dump sites, sanitary waste systems, parking lots, roadways, logging and mining operations.

Objective 11.3 Preserve and, where economically feasible, restore the density and diversity of water dependent species and continuous riparian habitats based on sound ecological principles.

Mineral Management Element

Goal 17.1 Recognize and protect valuable mineral resources for current and future generations in a manner that does not create land use conflicts.

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.11 Recognize the importance of water conservation and quality for the present and future needs of the County by: 1. Requiring the conservation of on-site water during mining operations. 2. Requiring that off-site water discharge complies with State water quality standards. 3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

Policy 17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Legal Background Supporting Denial of Idaho Maryland Mine FEIR Certification and Project

The following background was prepared by attorneys Shute, Mihaly, and Weinberger who represent CEA Foundation on our mine project responses:

The County should deny the Project and should not certify the EIR. The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If it denies the Project, the County is under no obligation to certify the EIR. Las Lomas Land Co., LLC v. City of Los Angeles (2009) 177 Cal.App.4th 83 (upholding decision to stop preparation of an EIR and specific plan where city determined the project was not consistent with its land use policies); Pub. Res. Code § 21080 (a) (CEQA applies only to projects that public agencies carry out or approve.)

Denial of the Project would also consistent with a long line of case law recognizing that public agencies may limit the use of land to protect public values without resulting in a taking of property. Penn Cent. Transp. Co. v. City of New York (1978) 438 U.S. 104, 129 (1978) ("[T]his Court has recognized, in a number of settings, that States and cities may enact land-use restrictions or controls to enhance the quality of life by preserving the character and desirable aesthetic features of a city.") (citations omitted); id. ("[I]n instances in which a state tribunal reasonably concluded that 'the health, safety, morals or general welfare" would be promoted by prohibiting particular contemplated uses of land, this Court has upheld land-use regulations that destroyed or adversely affected recognized property interests."); Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency (2002) 535 U.S. 302, 324 ("Land-use regulations are ubiquitous and most of them impact property values in some tangential way— often in completely unanticipated ways. Treating them all as per se takings would transform government regulation into a luxury few governments could afford.")

The Supreme Court has identified two primary tests to determine whether regulation causes a taking of property. First, a taking may occur if the regulation eliminates all use or value of the property. See Lucas v. S.C. Coastal Council (1992) 505 U.S. 1003. Under that test, there must be no value whatsoever remaining in the property; even a diminution of value of 95% is insufficient. See Tahoe-Sierra, 535 U.S. at 330 (citing Lucas, 505 U.S. at 1019 n.8). The second test involves evaluation of multiple factors, including the severity of the impact of the regulation on the value of the property, the extent of its interference with reasonable investment-backed expectations of use of the property, and the character of the governmental action. See Lingle v. Chevron (2005) 544 U.S. 528, 538-39 (citing Penn Central, 438 U.S. at 124.) Courts have consistently held that Penn Central test requires elimination of nearly all value in the property. The Ninth Circuit has recently recognized that even "diminution in property value because of governmental regulation ranging from 75% to 92.5% does not constitute a taking." Colony Cove Props. LLC v. City of Carson (9th Cir. 2018) 888 F.3d 445, 451; see also Hadacheck v. Sebastian (1915) 239 U.S. 394, 405 (no taking despite diminution in value from $800,000 to a maximum of $60,000, and property could not be used for any purpose permitted under city's ordinance).

In fact, as long as permissible uses exist, a denial would not deprive the applicant of economically viable use of its property. (Shea Homes Limited Partnership v. County of Alameda (2003) 110 Cal.App.4th 1246, 1267 [finding no regulatory taking because agricultural designation allowed single family use if certain County standards were met].) Here, the entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All of these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

Community Environmental Advocates FOUNDATION
PO Box 972, Cedar Ridge, CA 95924-0972
www.cea-nc.org / email: info@cea-nc.org

The County should deny the Idaho-Maryland Mine and should not certify the Final EIR.

1 The County has no obligation to approve the Mine.

The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be "significant" and does not comply with CEQA (California Environmental Quality Act).

- **Environmental impacts unavoidable** - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also *serious deficiencies in the FEIR* that put the County and its citizens at even greater risk. Key deficiencies are shown in sections 2-6 of this document.

- **Inconsistent with General Plan** - The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan's goal 17.1 calls for recognizing and protecting mineral resources in a manner that *does not create land use conflicts*. And yet, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns. A specific list of conflicts can be found here.

- **Legal considerations** - The County can confidently proceed with denial knowing the decision *does not qualify as "taking"*, which is a legal term that describes a project rejection that denies an owner their right to develop a property. Both the Brunswick and Centennial properties are currently zoned "Light Industrial", which provide a reasonable use of the properties. The applicant would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

  There is ample case law to uphold the rejection of FEIR certification if a project is denied. If the current FEIR were to be certified, then the project later denied, it will be a flawed EIR in County records that could be used in future applications. Read more legal considerations here.

- **Inadequate economic justification** - The Economic Impact Report on the Mine showed a huge range of possible revenue outcomes from very low to very high, *making actual revenue potential uncertain*. Only the lower estimates were backed by proven gold reserves.

  Expert community reviewers found that even low-end figures were overly optimistic with a heavy reliance on information provided by the applicant. The assertion that property values wouldn't decline was a big miss. It failed to recognize local realtor expertise or use acceptable home appraisal methods. Additional downside risk was not evaluated. Learn more about the community review here.

- **Just say no! -** Continuing with the EIR and project consideration will just cost the County in loss of time and energy as well as that of staff and the community. *This community is overwhelmingly opposed to the Mine project*, as evidenced by the over 5,500 petition signatures submitted to the County last summer and the fact that 95% of the opinion pieces published in The Union about the mine are against it. More information about opposition can be found here.

Following are five key deficiencies of the FEIR.

2 Well Owners Shafted in the Final EIR

The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed, resulting in a final report that does not comply with CEQA and fails to identify the potential impacts.

- CEQA requires a *current* baseline to assess potential impacts and determine mitigations. The computer model used for the analysis did not use current monitoring data from any of the over 300 domestic wells in the mineral rights area. It relied only on sparse patches of data from over 15 years ago. The Final EIR acknowledges that data is needed, but the approach calls for drilling 15 new monitoring wells as a basis for verifying the computer model *after* the EIR is certified! The questionable computer model estimates well water drops at 1 to 10 feet for 152 wells, then avoids declaring the impact as "significant" by creating an arbitrary threshold of significance at 10%.
- The final EIR also adds a *completely inadequate supplemental domestic monitoring plan* for 378 newly-identified properties. Among the many deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

  Read public comments from the Wells Coalition, CEA Foundation, and San Juan Ridge Taxpayers Association here.

3 Mine Waste Management Inadequacies Risk Water Quality

The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported. The Water Board made it clear in Draft EIR comments that more rock testing is needed to assess the likely concentration levels of hazardous elements in the rock to be mined. The FEIR's plan for storing and disposing of mine waste has extensive gaps, creating a risk for long-term mine water pollution similar to what this community has seen in the past.

- Rise Gold's project plans to deposit 1000 tons of tailings and waste rock per day on the Centennial and Brunswick sites for the first 11 years. After that, the plan is to dispose of it via off-site sales. However, only waste classified as *Group C* can be used for engineered fill deposits or off-site sales. The more hazardous Groups A and B require special handling. The FEIR asserts that "mine materials will *likely* be classified as Group C", but its conclusions rely on just 11 feet of drill core samples.
- The FEIR does not provide adequate provisions for the storage of Group A or Group B mine waste, which will be required by the Water Board. Since any waste that is not Group C cannot be used for engineered fill or off-site sales, viable alternative strategies must be defined. The FEIR introduced a new suggestion that if not Group C "...the waste rock would be placed underground", but CEQA requires storage of Group A or B mine waste underground to be reviewed in a Draft EIR.
- This extensive set of gaps in mine waste management also introduces uncertainties about Rise Gold's ability to operate by disposing of mine waste from off-site sales.

  Read public comments from CEA Foundation here.

4 Mine Waste Management Inadequacies Put Air Quality at Risk

The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. Asbestos is found in all rock types in the Idaho-Maryland Mine in varying concentrations. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

- Management of asbestos emissions is a complicated task. If the rolling average over a 3-month period of asbestos concentration *in mine waste exceeds 0.01% by weight, it cannot be shipped out of the mine facility.* Rise Gold's primary approach – as described in the Asbestos, Serpentinite, and Ultramafic Rock (ASUR) management plan – simply proposes that cores would be sampled before excavation and that if asbestos levels are too high, the rock won't be mined. *There is not enough evidence*, however, to establish that they can feasibly stay below the limits using this plan.

- The test data in the FEIR for determining the potential impacts from Asbestos is inadequate for CEQA compliance. Of the testing that was provided, which came from just 3 drill cores, 40% of the samples exceeded the 0.01% threshold. Thus, for assessing the impacts of asbestos air pollution, spot sampling has been done on less than 1/1000th of the mine rock that will be excavated over the 80 year life of the Use Permit.

5 FEIR Fails to Assess Impacts of Centennial Site

The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

- The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The California Department of Toxic Substances Control (DTSC) is managing the cleanup, but their Remedial Action Plan (RAP) is only in draft form. It is unclear when the plan will be finalized or when DTSC might approve the clean up.
- Per CEQA, *the EIR must provide an environmental assessment of the current conditions of a project site to establish a baseline in order to determine impacts.*This was not done. The FEIR assumes the site will be cleaned up before it gets used to deposit new mine waste. The plan calls for placing 1.6 million tons of mine waste (assuming it qualifies as Group C) over the course of 5 years, covering about 44 acres to a height of up to 55 feet. And yet, the significant work needed to accomplish this clean-up is not disclosed or evaluated in the FEIR. Numerous aspects of this RAP draft have been questioned in public comments and the final project details are unknown.

  Read public comments from CEA Foundation here.

6 Greenhouse Gas Emission Impacts dismissed in FEIR.

The FEIR concludes that the mine's greenhouse gas (GHG) emission impacts will be "less than significant", but it uses an unsupportable, obsolete threshold measure to justify its position. The only correct threshold – given current climate studies, CA SB-32, and today's state goals – is *net zero*. The County has not formally adopted its own threshold of significance, but it has set ambitious goals to reduce GHG through energy reduction in its Energy Action Plan. The Mine's sizable energy footprint would be a serious setback.

- The FEIR sets the significance impact threshold of 10,000 Metric Tons (MT) of GHG emissions per year. Mine operations are projected to produce approximately 9,000 MT per year, which is just under the set limit. This does not, however, include the over 4000 MT of additional emissions that will be generated by cement manufacturers to provide the massive amount of cement that will be used to produce cemented paste backfill for 500 tons/day of mine tailings.
- *The outdated 10,000 MT/year threshold* is one that was used by other air districts such as the Bay Area in the past. More recent projects, however, such as the Sargent Ranch Quarry project managed by the Bay Area Air Quality Management District in 2022, *use net zero for the significance threshold.*
- The mine's electricity usage is approximately equivalent to the annual use of 5000 homes. The Mine's energy use would be so sizable that it would completely offset the amount of residential reductions the County wants to achieve each year in its Energy Action Plan.

Dear Commissioner Duncan,

s you know, the Community Environmental Advocates Foundation-Minewatch campaign will be coming before you in the next few months to ask you to just say no to the Idaho Maryland Mine FEIR and no to the project.

We will continue to be giving brief presentations from time to time before then on key issues. We promise to keep them short!

Attached is a copy of the background information that explains why it makes sense and why it is legal to not recommend certification of the Final EIR and to recommend denial the mine to the Board of Supervisors. We presented some of this information at a recent Commission meeting. This provides some additional background.

We have also attached a summary of our top 6 key concerns on the Final EIR.

We will follow up with summary packets on other critical mine issues that we hope will be helpful.

Thank you for your time and consideration.

Sincerely,
The CEA Foundation Board

Community Environmental Advocates
FOUNDATION
PO Box 972, Cedar Ridge, CA 95924-0972
www.cea-nc.org / email: info@cea-nc.org

The County should deny the Idaho Maryland Mine and should not certify the EIR.

- **The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the mine project.**

- **Denying the mine project does not deprive the applicant of use of the land under its current zoning. It is not a taking.**
  The entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

- **If it denies the Project, the County is under no obligation to certify the EIR.** (Las Lomas Land Co., LLC v. City of Los Angeles (2009)). In this case, the court upheld a decision to stop preparation of an EIR and specific plan where the city determined the project was not consistent with its land use policies.

  There is no reason to continue with the EIR. We believe that continuing the EIR will just cost the County in loss of time and energy as well as that of staff and the community. We can better spend this time on critical issues like wildfire safety and climate change.

  If the EIR is certified as it stands now, even if the project is denied, it will be a flawed EIR in county records that can be used under future applications.

- **The bottom line is that the community overwhelmingly does not want the Idaho Maryland Mine to reopen.**
  The mine will be counter to the adopted General Plan land use policies and vision which the community supports. The County should deny the Idaho Maryland Mine Final EIR and not certify the EIR.

Nevada County General Plan Goals and Policies
Justify Denial of the Idaho Maryland Mine

The Idaho Maryland Mine project is inconsistent with numerous Nevada County General Plan goals and policies which provide justification to deny the project independent of the environmental analysis:

Land Use Element

GOAL 1.5 Within Community Regions, ensure that development reflects our small-town character, the characteristics of the land and the natural environment.

GOAL 1.6 Allow for growth while protecting, maintaining and enhancing communities and neighborhoods.

Policy 1.8.3 Within the City/Town spheres of influence, the Nevada County General Plan Land Use Maps will generally reflect the City's/Town's General Plan land use mapping. In some instances, the County may provide for a less intensive land use due to infrastructure capability, environmental constraints or effect on land use and development patterns outside the city's sphere. However, the County's Plan will not preclude implementation of the City's/Town's Plan by providing for a significantly more intensive land use than the City's/Town's Plan.

GOAL 1.8 Coordinate with the cities/town in land use planning and development within their spheres of influence.

Policy 1.7.10 The County shall provide for facilities for the management of hazardous waste produced on-site in the Commercial, Business Park, Industrial, and Public land use designations, and shall provide for facilities for the management of hazardous waste produced on or off-site in the Industrial and Public land use designations. All facilities shall be located in a manner consistent with criteria established in the State-approved Nevada County Hazardous Waste Management Plan approved by the County.

Economic Element

Goal 2.1 Provide for a strong economic base while protecting and maintaining communities and neighborhoods.

Objective 2.4 Encourage economic development which favors a high economic multiplier effect.

Policy 2.9 In support of the County Economic Policy, develop and implement an ongoing, aggressive business recruitment and marketing program featuring the County's strengths in areas such as education and quality of life. Target the program to prospective types of business (particularly those that are entrepreneur-oriented) that are best suited to provide significant long-term job opportunities in industries such as biotechnology, electronics and communications, and energy-related products.

Objective 2.14 Encourage protection and enhancement of the natural scenic beauty of this County in support of the tourist trade.

Safety Element

GOAL CC-10.13 Build Climate-Resilient Communities and Protect Neighborhoods, Public Infrastructure and Natural Resources Through Mitigating Climate Change.

Policy CC-10.13.4 Require new discretionary development to include an analysis of potential affects to climate change impacts and water resources in the project review process. Projects shall reduce or limit impacts as feasible.

GOAL HM-10.5 Protect public health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.

Policy HM-10.5.5 The County will actively promote prompt clean-up or remediation of properties contaminated by mine waste or other hazardous materials and shall not grant any discretionary or ministerial land use approvals to develop or change boundaries or reconfigure parcels believed to be contaminated, unless and until the nature, extent, type and location of the contamination is determined and satisfactory arrangements are made for clean-up or remediation, in accordance with Nevada County standards or State regulations.

Noise Element

GOAL 9.1 Provide for the health, safety, and welfare of the people of Nevada County through a set of policies designed to encourage an environment free of unnecessary and annoying noise.

Policy 9.1.10 Strongly discourage those General Plan amendments and zone changes that would likely create land use conflicts relative to noise.

Aesthetics Element

Goal 18.1 Promote and provide for aesthetic design in new development which reflects existing character.

Water Element

Goal 11.1 Identify, protect and manage for sustainable water resources and riparian habitats.

Policy 11.2 Encourage the protection of resources which produce water for domestic and agricultural consumption.

Objective 11.2 Preserve surface and sub-surface water quality and, where feasible, improve such quality.

Policy 11.4 Cooperate with State and local agencies in efforts to identify and reduce to acceptable levels all sources of existing and potential point- and non-point-source pollution to ground and surface waters, including leaking fuel tanks, discharges from storm drains, Chapter 11: Water Element Volume I - Page 11-4 Nevada County General Plan auto dismantling and dump sites, sanitary waste systems, parking lots, roadways, logging and mining operations.

Objective 11.3 Preserve and, where economically feasible, restore the density and diversity of water dependent species and continuous riparian habitats based on sound ecological principles.

Mineral Management Element

Goal 17.1 Recognize and protect valuable mineral resources for current and future generations in a manner that does not create land use conflicts.

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.11 Recognize the importance of water conservation and quality for the present and future needs of the County by: 1. Requiring the conservation of on-site water during mining operations. 2. Requiring that off-site water discharge complies with State water quality standards. 3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

Policy 17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Legal Background Supporting Denial of Idaho Maryland Mine FEIR Certification and Project

The following background was prepared by attorneys Shute, Mihaly, and Weinberger who represent CEA Foundation on our mine project responses:

The County should deny the Project and should not certify the EIR. The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If it denies the Project, the County is under no obligation to certify the EIR. Las Lomas Land Co., LLC v. City of Los Angeles (2009) 177 Cal.App.4th 83 (upholding decision to stop preparation of an EIR and specific plan where city determined the project was not consistent with its land use policies); Pub. Res. Code § 21080 (a) (CEQA applies only to projects that public agencies carry out or approve.)

Denial of the Project would also consistent with a long line of case law recognizing that public agencies may limit the use of land to protect public values without resulting in a taking of property. Penn Cent. Transp. Co. v. City of New York (1978) 438 U.S. 104, 129 (1978) ("[T]his Court has recognized, in a number of settings, that States and cities may enact land-use restrictions or controls to enhance the quality of life by preserving the character and desirable aesthetic features of a city.") (citations omitted); id. ("[I]n instances in which a state tribunal reasonably concluded that 'the health, safety, morals or general welfare" would be promoted by prohibiting particular contemplated uses of land, this Court has upheld land-use regulations that destroyed or adversely affected recognized property interests."); Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency (2002) 535 U.S. 302, 324 ("Land-use regulations are ubiquitous and most of them impact property values in some tangential way— often in completely unanticipated ways. Treating them all as per se takings would transform government regulation into a luxury few governments could afford.")

The Supreme Court has identified two primary tests to determine whether regulation causes a taking of property. First, a taking may occur if the regulation eliminates all use or value of the property. See Lucas v. S.C. Coastal Council (1992) 505 U.S. 1003. Under that test, there must be no value whatsoever remaining in the property; even a diminution of value of 95% is insufficient. See Tahoe-Sierra, 535 U.S. at 330 (citing Lucas, 505 U.S. at 1019 n.8). The second test involves evaluation of multiple factors, including the severity of the impact of the regulation on the value of the property, the extent of its interference with reasonable investment-backed expectations of use of the property, and the character of the governmental action. See Lingle v. Chevron (2005) 544 U.S. 528, 538-39 (citing Penn Central, 438 U.S. at 124.) Courts have consistently held that Penn Central test requires elimination of nearly all value in the property. The Ninth Circuit has recently recognized that even "diminution in property value because of governmental regulation ranging from 75% to 92.5% does not constitute a taking." Colony Cove Props. LLC v. City of Carson (9th Cir. 2018) 888 F.3d 445, 451; see also Hadacheck v. Sebastian (1915) 239 U.S. 394, 405 (no taking despite diminution in value from $800,000 to a maximum of $60,000, and property could not be used for any purpose permitted under city's ordinance).

In fact, as long as permissible uses exist, a denial would not deprive the applicant of economically viable use of its property. (Shea Homes Limited Partnership v. County of Alameda (2003) 110 Cal.App.4th 1246, 1267 [finding no regulatory taking because agricultural designation allowed single family use if certain County standards were met].) Here, the entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All of these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

The County should deny the Idaho-Maryland Mine and should not certify the Final EIR.

1 The County has no obligation to approve the Mine.

The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be "significant" and does not comply with CEQA (California Environmental Quality Act).

- **Environmental impacts unavoidable** - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also *serious deficiencies in the FEIR* that put the County and its citizens at even greater risk. Key deficiencies are shown in sections 2-6 of this document.

- **Inconsistent with General Plan** - The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan's goal 17.1 calls for recognizing and protecting mineral resources in a manner that *does not create land use conflicts*. And yet, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns. A specific list of conflicts can be found here.

- **Legal considerations** - The County can confidently proceed with denial knowing the decision *does not qualify as "taking"*, which is a legal term that describes a project rejection that denies an owner their right to develop a property. Both the Brunswick and Centennial properties are currently zoned "Light Industrial", which provide a reasonable use of the properties. The applicant would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

  There is ample case law to uphold the rejection of FEIR certification if a project is denied. If the current FEIR were to be certified, then the project later denied, it will be a flawed EIR in County records that could be used in future applications. Read more legal considerations here.

- **Inadequate economic justification** - The Economic Impact Report on the Mine showed a huge range of possible revenue outcomes from very low to very high, *making actual revenue potential uncertain*. Only the lower estimates were backed by proven gold reserves.

  Expert community reviewers found that even low-end figures were overly optimistic with a heavy reliance on information provided by the applicant. The assertion that property values wouldn't decline was a big miss. It failed to recognize local realtor expertise or use acceptable home appraisal methods. Additional downside risk was not evaluated. Learn more about the community review here.

- **Just say no! -** Continuing with the EIR and project consideration will just cost the County in loss of time and energy as well as that of staff and the community. *This community is overwhelmingly opposed to the Mine project*, as evidenced by the over 5,500 petition signatures submitted to the County last summer and the fact that 95% of the opinion pieces published in The Union about the mine are against it. More information about opposition can be found here.

Following are five key deficiencies of the FEIR.

2 Well Owners Shafted in the Final EIR

The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed, resulting in a final report that does not comply with CEQA and fails to identify the potential impacts.

- CEQA requires a *current* baseline to assess potential impacts and determine mitigations. The computer model used for the analysis did not use current monitoring data from any of the over 300 domestic wells in the mineral rights area. It relied only on sparse patches of data from over 15 years ago. The Final EIR acknowledges that data is needed, but the approach calls for drilling 15 new monitoring wells as a basis for verifying the computer model *after* the EIR is certified! The questionable computer model estimates well water drops at 1 to 10 feet for 152 wells, then avoids declaring the impact as "significant" by creating an arbitrary threshold of significance at 10%.
- The final EIR also adds a *completely inadequate supplemental domestic monitoring plan* for 378 newly-identified properties. Among the many deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

  Read public comments from the Wells Coalition, CEA Foundation, and San Juan Ridge Taxpayers Association here.

3 Mine Waste Management Inadequacies Risk Water Quality

The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported. The Water Board made it clear in Draft EIR comments that more rock testing is needed to assess the likely concentration levels of hazardous elements in the rock to be mined. The FEIR's plan for storing and disposing of mine waste has extensive gaps, creating a risk for long-term mine water pollution similar to what this community has seen in the past.

- Rise Gold's project plans to deposit 1000 tons of tailings and waste rock per day on the Centennial and Brunswick sites for the first 11 years. After that, the plan is to dispose of it via off-site sales. However, only waste classified as *Group C* can be used for engineered fill deposits or off-site sales. The more hazardous Groups A and B require special handling. The FEIR asserts that "mine materials will *likely* be classified as Group C", but its conclusions rely on just 11 feet of drill core samples.
- The FEIR does not provide adequate provisions for the storage of Group A or Group B mine waste, which will be required by the Water Board. Since any waste that is not Group C cannot be used for engineered fill or off-site sales, viable alternative strategies must be defined. The FEIR introduced a new suggestion that if not Group C "...the waste rock would be placed underground", but CEQA requires storage of Group A or B mine waste underground to be reviewed in a Draft EIR.
- This extensive set of gaps in mine waste management also introduces uncertainties about Rise Gold's ability to operate by disposing of mine waste from off-site sales.

  Read public comments from CEA Foundation here.

4 Mine Waste Management Inadequacies Put Air Quality at Risk

The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. Asbestos is found in all rock types in the Idaho-Maryland Mine in varying concentrations. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

- Management of asbestos emissions is a complicated task. If the rolling average over a 3-month period of asbestos concentration *in mine waste exceeds 0.01% by weight, it cannot be shipped out of the mine facility.* Rise Gold's primary approach – as described in the Asbestos, Serpentinite, and Ultramafic Rock (ASUR) management plan – simply proposes that cores would be sampled before excavation and that if asbestos levels are too high, the rock won't be mined. *There is not enough evidence*, however, to establish that they can feasibly stay below the limits using this plan.

- The test data in the FEIR for determining the potential impacts from Asbestos is inadequate for CEQA compliance. Of the testing that was provided, which came from just 3 drill cores, 40% of the samples exceeded the 0.01% threshold. Thus, for assessing the impacts of asbestos air pollution, spot sampling has been done on less than 1/1000th of the mine rock that will be excavated over the 80 year life of the Use Permit.

5 FEIR Fails to Assess Impacts of Centennial Site

The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

- The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The California Department of Toxic Substances Control (DTSC) is managing the cleanup, but their Remedial Action Plan (RAP) is only in draft form. It is unclear when the plan will be finalized or when DTSC might approve the clean up.
- Per CEQA, *the EIR must provide an environmental assessment of the current conditions of a project site to establish a baseline in order to determine impacts.*This was not done. The FEIR assumes the site will be cleaned up before it gets used to deposit new mine waste. The plan calls for placing 1.6 million tons of mine waste (assuming it qualifies as Group C) over the course of 5 years, covering about 44 acres to a height of up to 55 feet. And yet, the significant work needed to accomplish this clean-up is not disclosed or evaluated in the FEIR. Numerous aspects of this RAP draft have been questioned in public comments and the final project details are unknown.

  Read public comments from CEA Foundation here.

6 Greenhouse Gas Emission Impacts dismissed in FEIR.

The FEIR concludes that the mine's greenhouse gas (GHG) emission impacts will be "less than significant", but it uses an unsupportable, obsolete threshold measure to justify its position. The only correct threshold – given current climate studies, CA SB-32, and today's state goals – is *net zero*. The County has not formally adopted its own threshold of significance, but it has set ambitious goals to reduce GHG through energy reduction in its Energy Action Plan. The Mine's sizable energy footprint would be a serious setback.

- The FEIR sets the significance impact threshold of 10,000 Metric Tons (MT) of GHG emissions per year. Mine operations are projected to produce approximately 9,000 MT per year, which is just under the set limit. This does not, however, include the over 4000 MT of additional emissions that will be generated by cement manufacturers to provide the massive amount of cement that will be used to produce cemented paste backfill for 500 tons/day of mine tailings.
- *The outdated 10,000 MT/year threshold* is one that was used by other air districts such as the Bay Area in the past. More recent projects, however, such as the Sargent Ranch Quarry project managed by the Bay Area Air Quality Management District in 2022, *use net zero for the significance threshold.*
- The mine's electricity usage is approximately equivalent to the annual use of 5000 homes. The Mine's energy use would be so sizable that it would completely offset the amount of residential reductions the County wants to achieve each year in its Energy Action Plan.

In this case, the court upheld a decision to stop preparation of an EIR and specific plan where the city determined the project was not consistent with its land use policies.

  There is no reason to continue with the EIR. We believe that continuing the EIR will just cost the County in loss of time and energy as well as that of staff and the community. We can better spend this time on critical issues like wildfire safety and climate change.

  If the EIR is certified as it stands now, even if the project is denied, it will be a flawed EIR in county records that can be used under future applications.

- **The bottom line is that the community overwhelmingly does not want the Idaho Maryland Mine to reopen.**
  The mine will be counter to the adopted General Plan land use policies and vision which the community supports. The County should deny the Idaho Maryland Mine Final EIR and not certify the EIR.

Nevada County General Plan Goals and Policies
Justify Denial of the Idaho Maryland Mine

The Idaho Maryland Mine project is inconsistent with numerous Nevada County General Plan goals and policies which provide justification to deny the project independent of the environmental analysis:

Land Use Element

GOAL 1.5 Within Community Regions, ensure that development reflects our small-town character, the characteristics of the land and the natural environment.

GOAL 1.6 Allow for growth while protecting, maintaining and enhancing communities and neighborhoods.

Policy 1.8.3 Within the City/Town spheres of influence, the Nevada County General Plan Land Use Maps will generally reflect the City's/Town's General Plan land use mapping. In some instances, the County may provide for a less intensive land use due to infrastructure capability, environmental constraints or effect on land use and development patterns outside the city's sphere. However, the County's Plan will not preclude implementation of the City's/Town's Plan by providing for a significantly more intensive land use than the City's/Town's Plan.

GOAL 1.8 Coordinate with the cities/town in land use planning and development within their spheres of influence.

Policy 1.7.10 The County shall provide for facilities for the management of hazardous waste produced on-site in the Commercial, Business Park, Industrial, and Public land use designations, and shall provide for facilities for the management of hazardous waste produced on or off-site in the Industrial and Public land use designations. All facilities shall be located in a manner consistent with criteria established in the State-approved Nevada County Hazardous Waste Management Plan approved by the County.

Economic Element

Goal 2.1 Provide for a strong economic base while protecting and maintaining communities and neighborhoods.

Objective 2.4 Encourage economic development which favors a high economic multiplier effect.

Policy 2.9 In support of the County Economic Policy, develop and implement an ongoing, aggressive business recruitment and marketing program featuring the County's strengths in areas such as education and quality of life. Target the program to prospective types of business (particularly those that are entrepreneur-oriented) that are best suited to provide significant long-term job opportunities in industries such as biotechnology, electronics and communications, and energy-related products.

Objective 2.14 Encourage protection and enhancement of the natural scenic beauty of this County in support of the tourist trade.

Safety Element

GOAL CC-10.13 Build Climate-Resilient Communities and Protect Neighborhoods, Public Infrastructure and Natural Resources Through Mitigating Climate Change.

Policy CC-10.13.4 Require new discretionary development to include an analysis of potential affects to climate change impacts and water resources in the project review process. Projects shall reduce or limit impacts as feasible.

GOAL HM-10.5 Protect public health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.

Policy HM-10.5.5 The County will actively promote prompt clean-up or remediation of properties contaminated by mine waste or other hazardous materials and shall not grant any discretionary or ministerial land use approvals to develop or change boundaries or reconfigure parcels believed to be contaminated, unless and until the nature, extent, type and location of the contamination is determined and satisfactory arrangements are made for clean-up or remediation, in accordance with Nevada County standards or State regulations.

Noise Element

GOAL 9.1 Provide for the health, safety, and welfare of the people of Nevada County through a set of policies designed to encourage an environment free of unnecessary and annoying noise.

Policy 9.1.10 Strongly discourage those General Plan amendments and zone changes that would likely create land use conflicts relative to noise.

Aesthetics Element

Goal 18.1 Promote and provide for aesthetic design in new development which reflects existing character.

Water Element

Goal 11.1 Identify, protect and manage for sustainable water resources and riparian habitats.

Policy 11.2 Encourage the protection of resources which produce water for domestic and agricultural consumption.

Objective 11.2 Preserve surface and sub-surface water quality and, where feasible, improve such quality.

Policy 11.4 Cooperate with State and local agencies in efforts to identify and reduce to acceptable levels all sources of existing and potential point- and non-point-source pollution to ground and surface waters, including leaking fuel tanks, discharges from storm drains, Chapter 11: Water Element Volume I - Page 11-4 Nevada County General Plan auto dismantling and dump sites, sanitary waste systems, parking lots, roadways, logging and mining operations.

Objective 11.3 Preserve and, where economically feasible, restore the density and diversity of water dependent species and continuous riparian habitats based on sound ecological principles.

Mineral Management Element

Goal 17.1 Recognize and protect valuable mineral resources for current and future generations in a manner that does not create land use conflicts.

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.11 Recognize the importance of water conservation and quality for the present and future needs of the County by: 1. Requiring the conservation of on-site water during mining operations. 2. Requiring that off-site water discharge complies with State water quality standards. 3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

Policy 17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Legal Background Supporting Denial of Idaho Maryland Mine FEIR Certification and Project

The following background was prepared by attorneys Shute, Mihaly, and Weinberger who represent CEA Foundation on our mine project responses:

The County should deny the Project and should not certify the EIR. The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If it denies the Project, the County is under no obligation to certify the EIR. Las Lomas Land Co., LLC v. City of Los Angeles (2009) 177 Cal.App.4th 83 (upholding decision to stop preparation of an EIR and specific plan where city determined the project was not consistent with its land use policies); Pub. Res. Code § 21080 (a) (CEQA applies only to projects that public agencies carry out or approve.)

Denial of the Project would also consistent with a long line of case law recognizing that public agencies may limit the use of land to protect public values without resulting in a taking of property. Penn Cent. Transp. Co. v. City of New York (1978) 438 U.S. 104, 129 (1978) ("[T]his Court has recognized, in a number of settings, that States and cities may enact land-use restrictions or controls to enhance the quality of life by preserving the character and desirable aesthetic features of a city.") (citations omitted); id. ("[I]n instances in which a state tribunal reasonably concluded that 'the health, safety, morals or general welfare" would be promoted by prohibiting particular contemplated uses of land, this Court has upheld land-use regulations that destroyed or adversely affected recognized property interests."); Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency (2002) 535 U.S. 302, 324 ("Land-use regulations are ubiquitous and most of them impact property values in some tangential way— often in completely unanticipated ways. Treating them all as per se takings would transform government regulation into a luxury few governments could afford.")

The Supreme Court has identified two primary tests to determine whether regulation causes a taking of property. First, a taking may occur if the regulation eliminates all use or value of the property. See Lucas v. S.C. Coastal Council (1992) 505 U.S. 1003. Under that test, there must be no value whatsoever remaining in the property; even a diminution of value of 95% is insufficient. See Tahoe-Sierra, 535 U.S. at 330 (citing Lucas, 505 U.S. at 1019 n.8). The second test involves evaluation of multiple factors, including the severity of the impact of the regulation on the value of the property, the extent of its interference with reasonable investment-backed expectations of use of the property, and the character of the governmental action. See Lingle v. Chevron (2005) 544 U.S. 528, 538-39 (citing Penn Central, 438 U.S. at 124.) Courts have consistently held that Penn Central test requires elimination of nearly all value in the property. The Ninth Circuit has recently recognized that even "diminution in property value because of governmental regulation ranging from 75% to 92.5% does not constitute a taking." Colony Cove Props. LLC v. City of Carson (9th Cir. 2018) 888 F.3d 445, 451; see also Hadacheck v. Sebastian (1915) 239 U.S. 394, 405 (no taking despite diminution in value from $800,000 to a maximum of $60,000, and property could not be used for any purpose permitted under city's ordinance).

In fact, as long as permissible uses exist, a denial would not deprive the applicant of economically viable use of its property. (Shea Homes Limited Partnership v. County of Alameda (2003) 110 Cal.App.4th 1246, 1267 [finding no regulatory taking because agricultural designation allowed single family use if certain County standards were met].) Here, the entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All of these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

Community Environmental Advocates FOUNDATION
PO Box 972, Cedar Ridge, CA 95924-0972
www.cea-nc.org / email: info@cea-nc.org

The County should deny the Idaho-Maryland Mine and should not certify the Final EIR.

1 The County has no obligation to approve the Mine.

The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be "significant" and does not comply with CEQA (California Environmental Quality Act).

- **Environmental impacts unavoidable** - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also *serious deficiencies in the FEIR* that put the County and its citizens at even greater risk. Key deficiencies are shown in sections 2-6 of this document.

- **Inconsistent with General Plan** - The Mine project is inconsistent with numerous Nevada County General Plan goals and policies. The Plan's goal 17.1 calls for recognizing and protecting mineral resources in a manner that *does not create land use conflicts*. And yet, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns. A specific list of conflicts can be found here.

- **Legal considerations** - The County can confidently proceed with denial knowing the decision *does not qualify as "taking"*, which is a legal term that describes a project rejection that denies an owner their right to develop a property. Both the Brunswick and Centennial properties are currently zoned "Light Industrial", which provide a reasonable use of the properties. The applicant would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

  There is ample case law to uphold the rejection of FEIR certification if a project is denied. If the current FEIR were to be certified, then the project later denied, it will be a flawed EIR in County records that could be used in future applications. Read more legal considerations here.

- **Inadequate economic justification** - The Economic Impact Report on the Mine showed a huge range of possible revenue outcomes from very low to very high, *making actual revenue potential uncertain*. Only the lower estimates were backed by proven gold reserves.

  Expert community reviewers found that even low-end figures were overly optimistic with a heavy reliance on information provided by the applicant. The assertion that property values wouldn't decline was a big miss. It failed to recognize local realtor expertise or use acceptable home appraisal methods. Additional downside risk was not evaluated. Learn more about the community review here.

- **Just say no! -** Continuing with the EIR and project consideration will just cost the County in loss of time and energy as well as that of staff and the community. *This community is overwhelmingly opposed to the Mine project*, as evidenced by the over 5,500 petition signatures submitted to the County last summer and the fact that 95% of the opinion pieces published in The Union about the mine are against it. More information about opposition can be found here.

Following are five key deficiencies of the FEIR.

2 Well Owners Shafted in the Final EIR

The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed, resulting in a final report that does not comply with CEQA and fails to identify the potential impacts.

- CEQA requires a *current* baseline to assess potential impacts and determine mitigations. The computer model used for the analysis did not use current monitoring data from any of the over 300 domestic wells in the mineral rights area. It relied only on sparse patches of data from over 15 years ago. The Final EIR acknowledges that data is needed, but the approach calls for drilling 15 new monitoring wells as a basis for verifying the computer model *after* the EIR is certified! The questionable computer model estimates well water drops at 1 to 10 feet for 152 wells, then avoids declaring the impact as "significant" by creating an arbitrary threshold of significance at 10%.
- The final EIR also adds a *completely inadequate supplemental domestic monitoring plan* for 378 newly-identified properties. Among the many deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

  Read public comments from the Wells Coalition, CEA Foundation, and San Juan Ridge Taxpayers Association here.

3 Mine Waste Management Inadequacies Risk Water Quality

The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported. The Water Board made it clear in Draft EIR comments that more rock testing is needed to assess the likely concentration levels of hazardous elements in the rock to be mined. The FEIR's plan for storing and disposing of mine waste has extensive gaps, creating a risk for long-term mine water pollution similar to what this community has seen in the past.

- Rise Gold's project plans to deposit 1000 tons of tailings and waste rock per day on the Centennial and Brunswick sites for the first 11 years. After that, the plan is to dispose of it via off-site sales. However, only waste classified as *Group C* can be used for engineered fill deposits or off-site sales. The more hazardous Groups A and B require special handling. The FEIR asserts that "mine materials will *likely* be classified as Group C", but its conclusions rely on just 11 feet of drill core samples.
- The FEIR does not provide adequate provisions for the storage of Group A or Group B mine waste, which will be required by the Water Board. Since any waste that is not Group C cannot be used for engineered fill or off-site sales, viable alternative strategies must be defined. The FEIR introduced a new suggestion that if not Group C "...the waste rock would be placed underground", but CEQA requires storage of Group A or B mine waste underground to be reviewed in a Draft EIR.
- This extensive set of gaps in mine waste management also introduces uncertainties about Rise Gold's ability to operate by disposing of mine waste from off-site sales.

  Read public comments from CEA Foundation here.

4 Mine Waste Management Inadequacies Put Air Quality at Risk

The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. Asbestos is found in all rock types in the Idaho-Maryland Mine in varying concentrations. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

- Management of asbestos emissions is a complicated task. If the rolling average over a 3-month period of asbestos concentration *in mine waste exceeds 0.01% by weight, it cannot be shipped out of the mine facility.* Rise Gold's primary approach – as described in the Asbestos, Serpentinite, and Ultramafic Rock (ASUR) management plan – simply proposes that cores would be sampled before excavation and that if asbestos levels are too high, the rock won't be mined. *There is not enough evidence*, however, to establish that they can feasibly stay below the limits using this plan.

- The test data in the FEIR for determining the potential impacts from Asbestos is inadequate for CEQA compliance. Of the testing that was provided, which came from just 3 drill cores, 40% of the samples exceeded the 0.01% threshold. Thus, for assessing the impacts of asbestos air pollution, spot sampling has been done on less than 1/1000th of the mine rock that will be excavated over the 80 year life of the Use Permit.

5 FEIR Fails to Assess Impacts of Centennial Site

The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

- The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The California Department of Toxic Substances Control (DTSC) is managing the cleanup, but their Remedial Action Plan (RAP) is only in draft form. It is unclear when the plan will be finalized or when DTSC might approve the clean up.
- Per CEQA, *the EIR must provide an environmental assessment of the current conditions of a project site to establish a baseline in order to determine impacts.*This was not done. The FEIR assumes the site will be cleaned up before it gets used to deposit new mine waste. The plan calls for placing 1.6 million tons of mine waste (assuming it qualifies as Group C) over the course of 5 years, covering about 44 acres to a height of up to 55 feet. And yet, the significant work needed to accomplish this clean-up is not disclosed or evaluated in the FEIR. Numerous aspects of this RAP draft have been questioned in public comments and the final project details are unknown.

  Read public comments from CEA Foundation here.

6 Greenhouse Gas Emission Impacts dismissed in FEIR.

The FEIR concludes that the mine's greenhouse gas (GHG) emission impacts will be "less than significant", but it uses an unsupportable, obsolete threshold measure to justify its position. The only correct threshold – given current climate studies, CA SB-32, and today's state goals – is *net zero*. The County has not formally adopted its own threshold of significance, but it has set ambitious goals to reduce GHG through energy reduction in its Energy Action Plan. The Mine's sizable energy footprint would be a serious setback.

- The FEIR sets the significance impact threshold of 10,000 Metric Tons (MT) of GHG emissions per year. Mine operations are projected to produce approximately 9,000 MT per year, which is just under the set limit. This does not, however, include the over 4000 MT of additional emissions that will be generated by cement manufacturers to provide the massive amount of cement that will be used to produce cemented paste backfill for 500 tons/day of mine tailings.
- *The outdated 10,000 MT/year threshold* is one that was used by other air districts such as the Bay Area in the past. More recent projects, however, such as the Sargent Ranch Quarry project managed by the Bay Area Air Quality Management District in 2022, *use net zero for the significance threshold.*
- The mine's electricity usage is approximately equivalent to the annual use of 5000 homes. The Mine's energy use would be so sizable that it would completely offset the amount of residential reductions the County wants to achieve each year in its Energy Action Plan.

Hello my name is Kimberly Cappa, I live in District 3 (about 2 miles as a crow flies) from proposed reopening of the mine.

I am against re-opening the mine.....please VOTE NO
there are way too many negatives with this project than there are positives. I totally love this community, but I feel that this growth is NOT THE RIGHT ONE.

I will give just one example in this email. I used to work for an oil company in the bay area for 23 years. I saw too much human error and also mechanical failure. I DO BELIEVE that this will have the same outcome, and for this PLEASE VOTE NO

Thank you,
Kim Cappa

To: Nevada County Supervisors and Planning Department

Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

January 30, 2023

Dear Nevada County Supervisors and Planning Department:

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of Wolf Creek, which have been protected by the State Park. It could damage the whole watershed, including the Bear River and points downstream from there and exacerbate climate change… wrong direction!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance since 2004 and know well how Wolf Creek lives in our community, how important it is, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive creek

invertebrates (bugs to most of us), which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.

- I'm worried about the effects on the Meadow along Bennett Street.
- I believe there is insufficient mitigations for endangered species and species of special concern, like Monarch Butterflies, Yellow Warblers (a favorite of my husband) and the Yellow-legged Frog
- Increased traffic, noise and air pollutants, impacting wildlife and people
- Increased energy use, SO MUCH (I had a long career as an energy engineer and greenhouse gas analyst and this is NOT the direction we want our community to take toward climate change!)

I do not believe the FEIR addressed these impacts properly or thoroughly.

PLEASE, Commissioners, do NOT approve the FEIR and do NOT recommend the project.

If this project is recommended, please Supervisors, to NOT approve this dreadful project.

Sincerely,
BJ Schmitt

Dear Board of Supervisors-

Please lead us in the direction of being very careful who & what we allow to mine our area. This group does not have the credentials to do this project with our future healthy land in mind.

I would urge you to do research on their past experiences. There's no evidence that they have left any place better than when they went to it.

Thank you, Freda Scott

To all the Supervisors:

I vigorously OPPOSE the approval of the Rise Gold Mine in our county.
The negative impact of this extractive industry in the immediate vicinity of populated areas would be immediate and long term. This includes noise, air, and water impacts that will profoundly affect our health and the well being and sustainability of our environment that we all depend on for life and sustenance.

This is the 21st century and we absolutely do NOT need a destructive industry here again in order to survive economically: the first environmental protection laws were enacted right here in this county because of this industry. It is madness try to revive this; the consequences of this industry remain today after over a century and a half to be remedied and healed.

I live here in Nevada County for its natural beauty and the creative and rich culture here. Our mining history can't be changed but we are called on to learn from it and evolve as a community and as citizens on this planet.

There is no way that I could trust a company with no record of success in gold mining but instead a horrendous track record of bankruptcies, lawsuits, and pollution left to be cleaned up by others.

It is an outrageous proposition to consider allowing this in our county.

NO MINE

Greetings - My name is Martha Burdick-Mohr and I have resided in District 3 for over 30 years. I am writing to express my opposition to the proposed reopening of the Idaho-Maryland Mine by Rise Grass Valley.

Aside from the many environmental considerations my biggest concern is Benjamin Mossman's previous failure with the Banks Island Gold site in British Columbia and the ongoing legal situation. How his company, Rise Grass Valley can even be considered to do business in this community is alarming to me. Business ethics and reputation cannot be overlooked for any reason, especially with a business that has so much potential for environmental damage.

I would like to know if this statement in a recent press release by Benjamin Mossman is accurate:

" The County received approximately 2,850 comment letters during the comment period of which the majority (~1,600 comment letters) expressed support for the Project. In addition, the Company received over 200 additional support letters after the close of the comment period, which will not be included in the Final EIR ".

Thank you for your consideration of my opposition to this project.

Dear Nevada County Board of Supervisors,

I believe the reasons for *not* supporting the Rise Gold Mine proposal *far* outweigh the benefits of pursuing the venture. Bright minds and experienced professionals have made a powerful case that the *combination* of risks to neighborhoods, pollution of our already compromised air and water, particularly in drought conditions, potential mine waste, the risk to property values, and the toxic results of hardrock mining sets up probable disastrous, long-term negative consequences for our community. I'm clearly not one of those professionals, but I respect their hands-on, expert experience and educated calculations, unlike any information I've seen that is pro-Mine.

The dismal record of Rise Gold's brief and highly unsuccessful, damaging history is *appalling*, and it concerns me that *any* member of the County Board of Supervisors would entrust Rise Gold with the future of our historic and charming community.

Please do not allow this to go forward! Our community deserves better! Thank you for listening.

Hi folks

My name is Seth Dolinsky.
I live at 10392 Willow Valley Road in Nevada City.

I am writing in opposition to the Rise gold mine proposal for Grass Valley.
We need to build the infrastructure for a better future here in Nevada County, and that means the necessities food shelter energy water healthcare fire safety.
Gold is not a necessity and good jobs can be created in other ways that are not environmentally devastating.

Please look toward the future and not the past for ways to prosper in our beautiful county.

Dear Supervisors and Planner Matt Kelley,

Recent discussions with a friend, who is working with PG&E to contend payout claims for fires started by failed lines, left me compelled to make sure you are considering the legal implications for Nevada County if the Idaho Maryland Mine Reopens and causes damage to the Grass Valley Airport, a statewide Emergency Command Center.

Cal Fire marshall Scott Eckman explained that California is set up on a statewide grid making all areas of the state within 20 minutes of resources for aerial fire suppression. As I'm sure you're aware, the 20 minute avionic range in any direction is quite high and protects not only numerous municipalities within Nevada County but also several adjacent counties. In the unfortunate situation that the Mine were to be approved and dewatering caused the collapse of one of the tunnels running under the grass valley airport, the decision of the Board could effectively disable the states strategically organized fire fighting capabilities for a multitude of communities. Unfortunately we've all seen over recent years, that fire loss often leads to litigation. People are forced to look for a responsible party to sue after a fire takes everything they own out of the necessity to survive. I am not legal counsel and am not educated in such matters, however while we are asking the Rise Gold company to provide us with a more sufficient EIR, should we not use that same time to do some due diligence about the possible long term legal implications of reopening the mine and how they may adversely affect all your tax paying constituents?

I also imagine this concern carries over to any well depletions as NID made a recorded statement at a public hearing that they don't feel they have the capacity to replenish the homes projected to be affected.

Furthermore, for those who still believe the mine is attractive as it can provide jobs, please refer those job seeking parties you have in mind to Waste Management, the hiring offices of Nevada County or the Nevada/California border inspection agency, all of whom are short staffed, respectable, well paying and already existing local jobs.

Below is a link to an LA Times article, with state wide distribution and recognition, about the reopening of the Idaho Maryland Mine proposed by Rise Gold. You may find it informative as to the charges previously brought against Benjamin Mossman in Canada, his company's blatant disrespect for local regulation, policy and environment as well as the financial burden the community had to endure to clean up his mess.

September 30, 2022

Supervisor Heidi Hall, District 1
950 Maidu Avenue, Suite 200
Nevada City, CA 95959

Dear Supervisor Hall,

I attended the anti-mine forum at the Unitarian church last Tuesday, and became even more alarmed at the destruction and pollutants that would affect our community. Destruction is probably a more accurate word to use.

The opening of the mine would mean a drop in our already compromised air quality, traffic congestion, over use of water which is already drought depleted, noise pollution, financial loss and the affect on the mental health of those of us deluged by these adverse conditions.

This proposed mine would be in effect for 80 years and would greatly lessen the health and quality of life of our children and grandchildren.

There is much at stake in the safety and health of our community. Please oppose the mine.

Thank you,
Ronnie Paul

Dear Nevada County Supervisors and Planning Commissioners,

My name is Peter Arpin and I live at 15352 Stonehill Dr. Nevada City 95959.

As a very concerned citizen, I am asking you to "**just say no**" to re-opening the Idaho-Maryland Mine. It will have significant and unavoidable environmental impacts that will endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk!

Just look at what the mining industry has done in Appalachia and Montana for a glimpse of our future. We don't even need to look that far to see the effects of this industry that remain after over 100 years. By their very nature, they are boom then bust once all the want has been taken.

PLEASE don't let the promises of short-term tax revenue blind us to the ongoing and future costs of reopening the mine. There is no place for a heavy industry like this in our community.

Sincerely, Peter Arpin

Mine Waste and the Water Pollution Problem
Jan 10, 2023

The Final EIR for Rise Gold's Idaho-Maryland Mine is inadequate because it fails to address the potentially significant impact of mine waste disposal.

The Mine project plans to export 1000 tons of tailings and waste rock per day. This mine waste will be dumped into 2 Engineered fill piles over the course of the first 11 years. After that, the mine waste will be disposed of through off-site sales.

There are significant issues with the disposal of mine waste due to the potential to pollute ground water and surface waters by leaching hazardous chemicals. This falls under the jurisdiction of the Regional Water Quality Control Board.

The Water Board classifies mine waste by Groups A, B, and C. Only Group C, which has relatively low levels of contaminants, is clean enough to be used for off-site sales. Groups A and B require more stringent controls. The Water board requires mine waste testing to determine classification. In response to the Draft EIR, the Water Board stated: "The applicant shall not sell or utilize waste rock and tailings from the Project for construction aggregate or fill purposes offsite unless such material has been tested and confirmed to qualify as Group C mining waste..." [1]

In the EIR, the Water Board and numerous other parties identified that there was insufficient testing to determine whether the mine waste would be Group C, suitable for off-site sales.
Per the Water Board comments:
"*...the alternative scenario that the mining waste is not suitable for off-site use should be examined.*"
The Water Board goes on to state that Rise should assess any constraints or challenges associated with waste disposal in case they can't do off-site sales for construction aggregate. They conclude with:
"The Draft EIR should be revised to address this comment."[3]

Rise Gold acquired a collection of drill cores and samples from Emgold Mining when they purchased the mine. In addition, they did over 67,500 linear feet of exploratory drilling. . Yet, from all those samples, they chose to test only 11 feet to characterize what will be over 25 million tons of waste rock that will be produced over the life of the mine. [2]

Disposal of mine waste is a critical element of the project with the potential for causing significant long term impacts. Yet no further testing was produced for the Final EIR. This is inexplicable.

CEQA requires that the EIR "…give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts." [4]
This Final EIR fails to do that.

You are being asked to approve a project without knowing if any portion of the mine waste will qualify as Group C. Currently, there is no realistic plan for continued mine operations if you can't sell the mine waste.

The Final EIR response uses speculative, unproven assumptions stating that the mine rock "...would not be mined until mine waste characterization has been performed to ensure the rock will be suitable for off-site sale. Rock types that are not suitable for off-site sale would likely not be mined, and if mined, the waste rock would be placed underground" [5].

Mine waste classified as Group A and B requires specific management that must be determined by the Water Board, and cannot automatically be placed underground.

Backfilling with waste rock and tailings is the exact scenario which has led to polluted ground water discharges in so many mines in our area. This new element, the placement of Group A or B mine waste underground, was not included in the Draft EIR.

Even disposal of mine waste on the project sites for Engineered fill (Centennial for 5 years, Brunswick for 6 years) requires testing and will have to meet the Water Board's approval. Quoting the Final EIR:

"The barren rock and sand tailings would undergo testing as part of obtaining [Water Discharge Requirements] WDRs for use in the Engineered fill pads, and compliance with water quality objectives will need to be demonstrated to the [Water Board] prior to that placement ." [6]

The project description fails to provide an adequate means of interim storage for mine waste.

The viability of the entire project is dependent upon the safe disposal of mine waste under Group C. There were numerous core samples available that could have undergone static and long-term dynamic testing, yet, subsequent to the release of the Draft EIR, no additional testing was done.

Even if the mine waste is all Group C, it is hard to believe there will be no need to stockpile any of it for shipping off site. 1,000 tons/day will be coming out of the shaft. That's about 50 truck loads/day. Construction aggregate is seasonal. Most construction shuts down in the winter.

The Final EIR is inadequate because if fails to address the potentially significant impact of mine waste disposal. Again, critical testing after project approval does not provide an "…accurate and understandable picture…of the projects likely…impacts".

Thank you.

TO: idaho.MMEIR@co.nevada.ca.us, bdofsupervisors@co.nevada.ca.us

I want you to vote "No" to reopening the Idaho-Maryland Mine.

Before that, I want you to "update" all pre-vote reports, e.g., the EIR/MEIR, and any others I do not know about.

If you want to know why I oppose the mine, check out:

Dear Supervisors and Planner Matt Kelley,

Recent discussions with a friend, who is working with PG&E to contend payout claims for fires started by failed lines, left me compelled to make sure you are considering the legal implications for Nevada County if the Idaho Maryland Mine Reopens and causes damage to the Grass Valley Airport, a statewide Emergency Command Center.

Cal Fire marshall Scott Eckman explained that California is set up on a statewide grid making all areas of the state within 20 minutes of resources for aerial fire suppression. As I'm sure you're aware, the 20 minute avionic range in any direction is quite high and protects not only numerous municipalities within Nevada County but also several adjacent counties. In the unfortunate situation that the Mine were to be approved and dewatering caused the collapse of one of the tunnels running under the grass valley airport, the decision of the Board could effectively disable the states strategically organized fire fighting capabilities for a multitude of communities. Unfortunately we've all seen over recent years, that fire loss often leads to litigation. People are forced to look for a responsible party to sue after a fire takes everything they own out of the necessity to survive. I am not legal counsel and am not educated in such matters, however while we are asking the Rise Gold company to provide us with a more sufficient EIR, should we not use that same time to do some due diligence about the possible long term legal implications of reopening the mine and how they may adversely affect all your tax paying constituents?

I also imagine this concern carries over to any well depletions as NID made a recorded statement at a public hearing that they don't feel they have the capacity to replenish the homes projected to be affected.

Furthermore, for those who still believe the mine is attractive as it can provide jobs, please refer those job seeking parties you have in mind to Waste Management, the hiring offices of Nevada

County or the Nevada/California border inspection agency, all of whom are short staffed, respectable, well paying and already existing local jobs.

Below is a link to an LA Times article, with state wide distribution and recognition, about the reopening of the Idaho Maryland Mine proposed by Rise Gold. You may find it informative as to the charges previously brought against Benjamin Mossman in Canada, his company's blatant disrespect for local regulation, policy and environment as well as the financial burden the community had to endure to clean up his mess.

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Wilma Terrill. I live at 13793 Raccon Mtn Rd, Grass Valley, 95945, CALIFORNIA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi, I live off Greenhorn Rd. off Brunswick Road in Grass Valley. I have been living here since 35 years and have enjoyed the nature and rural living since then. I also have been a business owner since then!!!I here in GV. The business has been located on Whispering pine adjacent to the mine property. I am totally opposed to the re-opening of the mine!!! I resent the fact that the county supervisors, that have been elected by the people, seem to want to favor CORPORATE interests and profits obove the quality of life of the residents here!! I and many of my friends and acquainances would never vote for a supervisor again, who votes for the mine re-opening!! Please reject the mine re-opening as it is unconscionable wrong and only profit oriented and will destroy the air, and the noise level and traffic will be bad. It is not worth that!! To us the residents!! Sincerely, Wilma Terrill

Sincerely,

Wilma Terrill
