Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Valerie Kack. I live at 10350 Smith rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am writing to oppose the reopening of the mine. I have lived in this community for 40 years through all kinds of disasters due to snow, wind, rain and flooding. I live next to a feeder creek that runs From the main area into Wolf Creek. About once a month somebodies take it upon themselves to dump oil or gas into Ellen’s creek next (10 feet) to my house. It’s a horrible smell when I walk outside. I have not been able to identify the source and I have had authorities out to check it out to no avail. I am convinced regardless of what holding ponds the mine is designing, the mine runoff is going to seep into the ground and eventually run by my house. I oppose this horrible suggestion especially from a company from Canada who has no relationship to this community nor does this company care about our fragile environment. If this goes through I can promise you I am leaving the county. I’ve had a business here for 40 years as well so you will be losing my property tax, what I spend in town for

groceries, gas, and services that I use. Re-opening the mine Tells me this county will no longer have the beauty and appeal That draws new homeowners and tourists. It will be a waste land, our creeks will be seeping arsenic and other awful chemicals into our pristine waterways. Please let us use our collective voices to oppose this potential disaster.

Sincerely,

Valerie Kack

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Margaret Florence. I live at 15470 Mt Olive Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in District 1 in Chicago Park for 36 years. I need to drive past this "Mine site" to come into my business community. The destruction of our environment and ability to commute into our own town will be extremely impacted by this Mine proposition of Rise Gold. Beyond my personal discomfort and that of my fellow neighbors and citizens of this town, I cannot fathom how you would ever consider doing ANY business with a man who is on trial for outright negligence of similar endeavors in other states.

Please do not allow this Mine proposition to happen. Please.

Sincerely,

Margaret Florence

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sena Shellenberger. I live at 11267 Diamond back way, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I purchased my first home in January 2020.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk. I will strongly consider leaving the area if the mine goes through. This does not support our community and way of life.

Thank you for reading

Sena

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Katherine Schugren Meyer. I live at 508 Brighton St., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My family has lived in Nevada County for 60 years. I live near Minnie Park on Brighton with my husband and two small children. Our son attends Kinderland Preschool in Cedar Ridge and we are concerned about its proximity to the proposed mine. Nevada County is still recovering from the negative environmental impacts of its mining history. We do not believe that any type of mining, no matter how "clean" or "green" the technology claims to be, is safe for our community. And the proposed economic benefits would not offset the potential for air, water, and noise pollution. We want to preserve our area for future generations. Please do not approve this proposal!

Sincerely,

Katherine Schugren Meyer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shawn Orgel-Olson. I live at 214 Lloyd Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I own a house in downtown Grass Valley where my parents live. I am deeply concerned about this proposed mine, the horrible environmental impact it will have, and the harm it will cause to tourism (reducing interesting/marring the area) and real estate.

A NO vote on the mine is what your constituents want and is the right thing to do morally, economically and environmentally. Don't believe the false projections and lies from Rise Gold - their track record is deplorable and would be no different in our area.

We don't want a mine, we want a healthy community and thriving economy based on eco-tourism, local craftmanship, and rising talent.

Sincerely,

Shawn Orgel-Olson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barbara Carole O'Gara. I live at 10489 Robin Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Barbara O'Gara and I have lived here for 12 years. My husband Steven A Smith has lived here for over 40 years. He and I bought property on Robin Ave off of Squirrel Creek west of the City of Grass Valley.
We value the effort to keep Nevada County free of businesses that will pollute and misuse the already scarce WATER we drink and use to cook with, and introduce harmful chemical into the precious AIR we breathe and the EARTH we walk on.
DO NOT roll back time by allowing a business like His Gold come in to RUIN and Pollute these Natural Resources.
Additionally the cost for all of us is too big for this business to to go forward. There is no way that this boondoggle is a regrettable mistake made be possible by power

hungry folks with rich backers looking to exploit and then run away when there is nothing left but carnage to the natural environment that surrounds and to the people who are worse off after the exploitative company leaves or dies!.

Sincerely,

Barbara Carole O'Gara

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dom Lindars. I live at 16979 Rabb Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Nobody wants this mine.

Their CEO committed crimes at his Canadian mine; do we really expect anything less if he was allowed to start one up here? The FEIR is not a complete picture of what we can expect. Well owners will certainly suffer. And using an old toxic mine dump as the site for a new toxic dump site is a really bad idea. The mine won't create local jobs, unless we think that hiring mine experts and skilled labor from out of state counts. We don't want our roads filled with dusty, noisy trucks or our creeks filled with toxin-filled water.

And as a gentle reminder, as the NUJHSD election recently showed, if you vote to allow this mine to go forward, you will be voted out of office.

Please, listen to the people of the county and Just Say "No."

Sincerely,

Dom Lindars

Dear Nevada County Supervisors and Planning Commissioners,

My name is Thomas Dolan. I live at Mill Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley from the Bay Area. I have many friends who have also recently moved here, bringing money to the area and reinvigorating the housing market. Most Bay Area companies allow their employees to work remotely, but we still need to stay within a few hours of San Francisco to travel in for the occasional meeting. Grass Valley is a wonderful choice for people like us that want to live in a beautiful, serene town but who still need access to the Bay Area every quarter or so.

I have several friends that have visited us in Grass Valley, fell in love with it, and are currently interested in relocating here because of its pristine natural beauty. I assure you that they will not move here if the mine is opened. Any potential risk to the environment or to their health will cause them to move to different towns within a few hours of the Bay Area. In fact, if the mine is opened, we would consider relocating to

Placerville or Amador County, as we would not want to raise our child near any potential issues. If the mine is opened, remote workers (like my friends and me -- who are bringing money and new life to the area) would be discouraged from chosing Grass Valley when deciding where to move or where to get a second home. Those of us that have already come here may reconsider.

Sincerely,

Thomas Dolan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lisa Schliff. I live at 19002 Dog Bar Road, Grass Valley, CA, USA, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Please vote against the mine! I live in South County, District 2, on Dog Bar Road and have been in Nevada County for seven years. The mine will impact our area for the worse, not the better. Please vote no! Even though I live far from where the mine is planned, I drive into town frequently and will be impacted by the increased traffic, high-level noise, and environmental degradation. Please don't allow the CEO to lure you into added revenue for the County and more local employment. The worsened quality of life will be too high a price to pay. I and my family members are counting on you to reject the mine proposal. Thank you.

Sincerely,

Lisa Schliff

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Hochwald. I live at 15822 American Hill Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I strongly object to reopening the mine. It is a dangerous endeavor forwarded by a sketchy business with potentially disastrous outcomes. We must heed the warnings.

Sincerely,

Richard Hochwald

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Stupi. I live at 13068 Madrona Leaf Court, Grass VAlley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in the Wawona Mardona Neighborhood in Grass Valley. Our home is located on the northern and eastern edge of the mineral rights. We are very concerned about the effect the mine will have on our well. In addition, the mine operator has a history of unscrupulous business atvities. From a a more global standpoint, what if soemthing goes wrong or when it is time to clean up the mess in 50 years? There will not be any money set aside, nor will the mine company have any assets left to clean up their mess.

Please vote no on the mine.

Sincerely,

Ken Stupi

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,
We are a family living close to the Railroad Museum off Gold Flat, near downtown Nevada City. (district 1)

We, and our neighbors, are all STRONGLY against the opening of the mine. Although I was raised in Canada, and usually try to support Canadian companies, this company has no business opening a mine ANYWHERE, and certainly not here in Nevada City, for so many reasons.

No No NO!!

Thanks for listening,
John and Osher Alevizakis and Family

Sincerely,

John and Osher Alevizakis

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rich Laws. I live at 21025 running horse road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am saddened this is even under consideration. This should be a hard no. As a Nevada City resident, I am proud of our shared appreciation and respect for the environment that we live in. Nevada City, Nevada County for that matter, is a special place. The environmental impact and damage that will follow this mine reopening is absolutely unacceptable and not with any “jobs created” as a result.

Why is anyone willing to sacrifice the health of the environment for revenue and jobs? There are better ways to bring revenue and jobs to Nevada County that won’t damage the environment not only for us but for our children and their children.

I beg you to think more about the planet and future generations. If you allow this mine to reopen you will have to live with that decision and knowing you are causing

irreparable harm to this beautiful area.

Sincerely,

Rich Laws

Dear Nevada County Supervisors and Planning Commissioners,

My name is Carolyn Anderson. I live at 17738 Minnow Way, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The environmental impact of opening this mine is clearly negative. It will affect the quality of the air and the water of nearby wells. This project goes against the county land use, safety, and economic development goals.
It will have a negative impact on the aesthetics of this charming tourist destination.

In general, it is ill-conceived and unwanted.

Sincerely,

Carolyn Anderson

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Sandra Bruce at sandrabruce@pacbell.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sandra Bruce. I live at 13997 Emerald Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 and have lived here in this house for 32 years. I fear for the possibility of losing our water. This is the 3rd time we have had to deal with the possibility of a mine opening up near us. I love our home and living here. We raised our family in this house. I am also a business owner and my business is in downtown Grass Valley. For 32 years we have enjoyed water from our well, the peace and quiet this area has given us, and the increasing value of our home.

With the water issues we have here in our area, and all over the state how can it be that someone would be allowed to draw over a million gallons of water day out of the ground for 80 years? How could the FEIR, never mind the DEIR pass muster when it is incomplete and full of inaccuracies ?

There are so many other ways that Grass Valley can grow without putting such a dangerous and potentially disastrous mine into reality. If there are problems (which are sure to be) will Moseman be accountable for reducing any impacts to "less than significant"?

Every time I mention this issue to anyone I always hear the same thing...."how can such a terrible idea be allowed"? So, I ask you, how can you allow this to happen? Please say NO. Put yourself in my shoes: would you accept an industrial mine operation to run 24/7 for 80 years in your neighborhood?

Sincerely,

Sandra Bruce

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ann Barbour at awcb@me.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ann Barbour. I live at 16006 Airiport Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live on Airport Road in Nevada City. We strongly urge you to say NO to the re-opening of the Idaho-Maryland Mine for a whole host of reasons: environmental; economic; life quality in Grass Valley/Nevada City and its surrounding communities. The environmental report is flawed. The estimates of economic benefit to the community are grossly overstated. The existing infrastructure does not support a project of this magnitude. The individual(s) behind the Rise Mine project have had abysmal track records in previous mine openings. Quality of life in our communities would be severely impacted by both acknowledged and unforeseen factors - well water, traffic, pollution, and water discharge among others.

Please seriously consider the reasons so many voters are against this project. Once

a project like this is approved, the damage cannot be reversed. Voters will remember how each of you vote.

Sincerely,

Ann Barbour

Dear Nevada County Supervisors and Planning Commissioners,

My name is Catalina Davis. I live at Po Box 582, Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived here in Cedar Ridge at 11010 Brunswick Dr., for over 25 years. I personally cannot see one good reason to re-open that mine. We are a small community that loves welcoming new people into the area. The Opening of the mine would cause nothing but destruction, bad air, and more noise just to say a tiny bit about why I object to it.
Please please please listen to your community and do not even think about the possibility of reopening this horrible mine.
Please don’t sell out for money. We love the area the way it is.

I am very concerned and just want you to know my thoughts.

Sincerely,

Catalina Davis

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Timothy Snyder at 1tcsnyder@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Timothy Snyder. I live at 1364 Whispering Pines Ln., Suite 3, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Timothy Snyder

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Chris Steffani. I live at 13110 Brunswick rd, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We own a four acre parcel on Brunswick at Hwy 174. We live there and operate an animal rescue operating there for the last eight years. The proposed Idaho-Maryland Mine mine will affect our operation for all the wrong reasons. It has already impacted property values in this area by up to 20%. This decrease will not only hurt owners, but also tax revenue, once all the affected homes file for reduced property value. Reasons: traffic, noise, air quality, well issues, hazardous and municipal waste. With the basin already filling in with homes, small businesses, restaurants, hotels, how will this affect the people living and doing business. Mining in the area left many years ago. Then people came settled and made Nevada County their home. After the destruction caused by the first mining operations, I have the highest hopes that your decision will be based on people not on profit.
Repectfully,

Chris Steffani, Resident on top of the mine.
Retired hazardous waste characterization analyst, Environmental Protection Division, Lawrence Livermore National Lab

Sincerely,

Chris Steffani

Dear Nevada County Supervisors and Planning Commissioners,

My name is Andrew Birkhoff. I live at 14811 Winding Creek Court, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My wife and I have only lived in Grass Valley for seven years but we have embraced the community and have become quite active.
We have a nice home on three acres. We are on well-water and are aware of the groundwater threat. My wife lived in an active mining community and we are very aware of the noise, increased truck traffic and of course environmental impacts.
We both strongly oppose the reopening of mining operations here in Grass Valley and Nevada County.
Andrew Birkhoff

Dear Nevada County Supervisors and Planning Commissioners,

My name is Clinton Shifflett. I live at 12999 Wood Rose Way, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley from out of state because I love the area and have always felt like home here when I visited. When I had the opportunity to live here I was excited to take it. I live across the street from the Idaho Maryland Mine location. The old mine goes under my house. I fear, that if the mine is reopened, my family and I will have to leave the area due to safety and health concerns with the mine being directly under and across from our house. Vote no on the mine. It is not worth the potential environmental and economic impacts it may have on families and the community.

Sincerely,

Clinton Shifflett

Dear Nevada County Supervisors and Planning Commissioners,

My name is Michael Dockery. I live at 19132 Connie Dr., Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Alta Sierra and will likely not be directly affected the Idaho-Maryland mine. However, out of consideration for hundreds of our fellow Nevada County residents, I strongly oppose this project. The company (Rise Gold whatever) is a front for an alleged crook, one Benjamin Mossman. He is currently awaiting re-trial on numerous counts from his previous project in British Columbia. I can't imagine a worse candidate for the proposed mine.

Sincerely,

Michael Dockery

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Kelly. I live at 10688 James Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Nevada City near Banner Lava Cap, and we will undoubtedly leave the area if the mine is approved. We have never seen such an erroneous EIR report supposedly by an unbiased organization. The mine will be a disaster for the whole of the western end of Nevada County.

However the plain truth is fundamental. Rise Gold has basically zero credibility as a good operating company. Rise Gold has left a trail of unfinished disasters and is trying to the same within this great county. Rise Gold's history and track record is appalling and it should not be permitted to operate in Nevada County.

Say NO to re-opening the mine.

Sincerely,

John Kelly

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jude Daley. I live at 1737 Deerhaven Lane, Colfax, CA 95713.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

Heidi Hall was our district supervisor until we moved to Placer county partially due to the real possibility of a gold mine in our town. My position remains the same. Changing zoning to allow the reopening of the Idaho Maryland Mine to a foreign entity already in litigation for creating and abandoning a toxic mess in their own homeland would be a HUGE MISTAKE TO OUR COMMUNITIES! This is just one fatal aspect of the board approving a conditional use permit and allowing a plethora of negative consequences to spill into our backyards, literally. Re establishing as a gold producing entity was never part of the General Plan. There are no real benefits, only hardships to the people who will live the nightmare day after day, while a foreign country gains wealth from our own stupidity. Here are just a few

drawbacks…

Dewatering into the wolf creek, where portions have protected wetland areas and sensitive animal habitats not to mention possible flooding as we have seen in these last series of storms.

Noise, pollution and energy consumption from large diesel generation.

Roadway traffic from large trucks and machinery throughout the day into the night.

Underground blasting, and residential disturbance on multiple levels.

Water well desecration.

Etc., Etc., Etc.,

For only 70 or so underground, dark, dirty jobs while all the higher paying senior jobs are already spoken for? How are we so easily blinded by this crumb of an offering while our land is raped, again? Feels like there might be something else being offered that the general public is not aware of. If so, we have the right to know what this is.

We can do better than this for our Communities! Do the right thing and say NO TO THE RISE GOLD MINE!

OUR HEALTH BEFORE THIER WEALTH!
WE ARE MORE VALUABLE THAN GOLD!

Jude Daley

Sincerely,

Jude Daley

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Rojo. I live at 17150 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I have lived for 19 years in District 1, at 17150 Greenhorn Road. We have retired and intend to live our remaining days in the beauty of our 30 acre property. When the reopening of the Idaho-Maryland Mine raised it's ugly head, we knew our health, both physical and mental, was being threatened by disruption and pollution caused by this project. The risks far outweigh the benefits of this high risk venture. The final report blew off the effect of diminished property value to ourselves, and the other 2000 residents living in mine's sphere of influence.

No on the mine!

Sincerely,

Nancy Rojo

Dear Nevada County Supervisors and Planning Commissioners,

My name is kendall Annie. I live at 14676 Peaceful Meadow Ln, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve been a resident of Nevada County for 13 years now. I’ve come to love our quaint towns and the caring spirited people who live in it. I chose to build my business, Cosmic Shark Clothing, in Grass Valley CA 6 years ago because I felt this could be the place I settle down in. I felt a sense of community and that we cared about the preservation of the land we live on. I want a clean and safe environment for me, my family, friends and community. Allowing the mine to operate in our town would be a another tragic step to the declining health of our planet and community. Please don’t allow this to happen.

Sincerely Annie Kendall

Dear Nevada County Supervisors and Planning Commissioners,

My name is John palmer. I live at 624 Nivens Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in this area for sixteen years. I now live downtown Nevada City, in District One. My wife and I are retired and love the quiet life here.

One hundred and seventy years ago this area went through the Gold Rush. The land was washed away, the rivers polluted, the forests cut down. We like to look back at it as a magical time. It wasn’t. It was an ugly time. A time of greed and selfishness and cruelty. Fortunately, that time has passed. This area has moved on. It’s now a tourists destination, a quiet place to retire, a great place to work remotely. Reopening the Idaho-Maryland Mine no longer fits this area. We don’t want to go back to noise, pollution, congestion and greed. Vote NO on reopening the mine! Thank you in advance for being an advocate for our area.

Sincerely,

John palmer

My name is Carrie Hayward. I live at 16714 Scott Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I grew up in Grass Valley and then returned here after 20 years in LA specifically because I sought a better quality of life. The noise, traffic and pollution created by a reopened mine will significantly decrease quality of life for ALL residents—this is not what any of us signed up for when we chose to live here!

Sincerely,

Carrie Hayward

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Karla Bravo. I live at 14891 Banner Lava Cap Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The charm, artistic and conscious population in Nevada City/County are what make this community such a magical place. It is what has drawn people like myself out of the Bay Area- AWAY from greed, traffic, pollution, and machine-like power centers. Please reflect on this and the future of our beautiful county. We have moved away from the times of the Gold Rush and the energies that that brought into our area. Our community is thriving because we are drawn to the purity of the land and our connection to it. It would heartbreaking and soul-crushing to dishonor these lands for profit and greed. I trust the right decision will be made with the heart.

Sincerely,

Karla Bravo

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Moore. I live at 10120 Alta Vista drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Alta Vista area of Grass Valley and have lived here since 2006. Part of what drew me here was the small town atmosphere and the beautiful surroundings along with the arts culture.
Of course the area has grown a lot since 2006. Along with this have come many increasing problems.
Certainly one way to stop growth here would be to put in the mine. ... Other than people related to the mine I can't imagine who would want to move here.
Please don't ruin our way of life. Don't ruin the health of all those poor people that live within hearing shot of the mine and all it's activities. Well this may not be considered, people will no doubt avoid that area due to the traffic insanity. (Count me in on this one, I'll go shopping elsewhere,) With the increased traffic and huge trucks rumbling through every couple of minutes no doubt there will also be more

accidents. And then it will be oh darn we're going to have widen the roads with more Lanes.
Many people have also worked very hard to own their own homes and it seems unconscionable to trash their real estate values. The whole idea of the mine seems unconscionable.
Please don't approve this.
Thank you

Sincerely,

Nancy Moore

Dear Nevada County Supervisors and Planning Commissioners,

My name is Julie Childs. I live at Po Box 527, North San Juan, CA 95960.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live within 2 miles of the Siskin mine and experienced the disaster when they hit the underground river. I lost my well. They left us up here denuded of all the trees on their property and a scotch broom and manzanita landscape. No mining company cares about the community. No local jobs were ever offered. Our govt let us down by allowing that project. Please don’t let us down again. Do Not Allow this new fiasco to happen. The damage is irreversible! I work at Grizzly Hill School, where there is no water fountains for the kids because our water has to be super filtrated. Never again be so duped!

Sincerely,

Julie Childs

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Judy Serb. I live at 15569 Allison Ranch Rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello I’m a resident of District 2. Judy Serb at 15569 Allison Ranch Road. Grass Valley California
I’m very concerned about the reopening of the mine. We moved here in May of 2017. We chose Grass Valley for the quiet and caring community that it is. We moved here from the Bay Area. We moved from the noise, traffic and refineries. If we think that constant digging, trucks constantly on the roadways and the promise of new jobs is going to benefit the city then some of us have our heads buried in the sand. Please don’t be swayed by false promises.

I’m concerned
About air quality
Being on well water and I’m very concerned about the quality of water and the

sustainability of our water supply.
About the congested roadways
About the death of our downtown.

I would not put Grass Valley on the top 10 list of places to visit amidst the destruction of our roadways, air quality, water supply and overall congestion. Our overall health and quality of life has no price

I hope the board of supervisors will do the right thing and ‘just say no ‘

Thank you
Judy Serb

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Dee Webster at dee@message4u.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Webster. I live at 12856 Burma Oaks Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 3, just past the Burma Road crest, which as the crow flies, is only a tiny distance from the proposed mine site. My parents purchased this property and began to build my childhood home here in 1952, when I was only five years old. I graduated from 8th grade at Union Hill School and from Nevada Union High in 1965. I am 75 years old.

There are dozens and dozens of reasons that I vehemently oppose the reopening of the mine! It would take me more than all day to write a letter that would encompass all of those objections, which you have heard a gazillion times already. So I will focus here on the most immediate localized and personal objection that I have.

I ABSOLUTELY CANNOT ABIDE THE HUGE POTENTIAL THAT ALL OF US IN THIS AREA WOULD VERY LIKELY LOSE OUR WELLS! And then what? The only "life-support system" I have is my home here. How would I be able to live here without water? And no one would consider buying my home and property if I were being forced to leave.

In other words, you have the power to destroy my life! As a very low income senior citizen, with no family, it appears to me that I am at your mercy on this point, an idea that runs against everything I believe in and every fiber of my being!!!!!

I have no family (other than my 97-year-old mother, incapacitated for the past 5+ years at Spring Hill Manor), meaning no husband, living siblings or children.

I have never considered myself to be the helpless type, but my home is essential to my well-being, especially so with it's location here because I am quite electrosensitive and would become quite unwell very rapidly in an apartment or other urban area of heavy electrosmog of wi-fi zones everywhere, cell phones everywhere, cell towers, etc., etc. Even more so with the expansion of 5G!

And yet it appears that your decision could deprive me of the only safe zone, my home here, where I am connected to my satellite internet service via my hardwired ethernet cable, (i.e. no wireless here) and where I run my laptop on its battery. DC does not make me ill. Just strong AC EMFs and radio frequencies. I live in a portion of the house that is as far distant as possible from the AC power main and from the power lines at the edge of the property.

I can't help but wonder how many other neighbors and nearby residents there are, each with their own individual stories and needs, whose lives you will also be putting in jeopardy if you approve the reopening of the mine!

What comes first in your own lives? Caring and compassion, kindness and supportiveness? Where do YOU stand within the truths and values of your own personal, inner selves as they relate to the wider community that you are supposed to be representing?

Sincerely,

Dee Webster

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Gagliasso. I live at 14035 Diamond Ct., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been at this address 14035 Diamond Ct, Grass Valley, District 3, for 10 years with 65 years of prior association with the area. My property's water is supplied by a well. It is one of the wells that will be impacted by this project. I recently paid, in last 6 months, to have the well water tested and it is of excellent quality all around...tested for minerals and toxic elements. I expect it to stay that way. There is no reason to think otherwise.

It is My well-My water.
I did NOT ask for this! It is akin to having an uninvited person come into my home and help themselves to My furniture..."because they can". I say NO.

I count! I matter! I will fight anyone who tries to take my well, and say NO to the

mine.

There are other more appropriate uses for this land that need to be explored. Uses that will support
tourism, and more jobs than the few this project will provide. Uses that will support the community...the whole community not one salesman from Canada.

Just Say NO!
Laura Gagliasso

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shirley Porter. I live at 12968 Burma Rd., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

MY name is Shirley Porter. My family has lived here since 1950 and we appreciate the quiet sense of our Burma Road home. The impact of the Mine would be great on our neighborhood, including endless trucks driving by, noise, concern about the loss of water in our well, and the overall negative impact on the Grass Valley area. If you are thinking the main reason to invite them into our area is the revenues that will come, then I ask you to rethink. Money isn't everything. The well being of the neighborhoods and the people in the area is the most important issue. And as I drive around, I see a lot of NO MINE signs so that almost everyone here does not want the mine to begin to operate again. Please just say NO to the re-opening of the mine. Thank you for your thoughtful consideration of this very important issue.

Sincerely,

Shirley Porter

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donald Gagliasso. I live at 14035 Diamond ct, Grass Valley, California 94545.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am against the mine. I want to keep our well. I do not believe the mine will pay for all the damage, that occurs, when they bring water up to my house. Being in construction for 55 year I am well aware of all the problems that occur after being promise they would not happen, (truck traffic, hours of work, noise, dust, dirt on streets, number of trucks used, staying on approved truck route, speeding vehicles) to name a few. Since I am across the street from the mine, I know my property will devalue. Our neighbor has not been able to sell their property saying the few onlookers did not bid because of the mine. I am against 24/7 working hours because there is no need if they are only taking 1500 yard a day. This can easily be done in a 10-hour workday or less.

Sincerely,

Donald Gagliasso

Dear Nevada County Supervisors and Planning Commissioners,

My name is JUDY DUDNEY. I live at 20055 ECHO BLUE DRIVE, PENN VALLEY, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

In 2011 I moved from Tuolumne County after 27 years.Both Counties are in the 'Gold Country' I live in Lake Wildwood ...which is district 4. I have been down this road before when a Mine was proposed in a more rural part of Tuolumne County..however many folks could see the detriment to the landscapes as well as the congestion it would cause to a pristine part of the County...as well as being counter productive in many aspects. Thankfully it was turned down...This area would be a horrifying encounter..1 Step Forward..2 Steps Back.. in the long run with many regrets. Don't swallow a Camel and strain a Knat.. So I agree to the statement and I am asking you to "Just Say No" to reopening the Mine..

Sincerely,

JUDY DUDNEY

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Renee Wade. I live at 26532 Wampum Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

While I currently live on the San Juan Ridge, I have been a resident of Nevada County for 25 years and have lived in the Chicago Park area as well. Driving by the Idaho-Maryland mine on my way into work for my first 4 years in the county makes me very aware of how impactful the reopening of this mine would be.

My biggest concern, that I believe was not adequately addressed in the Environmental Impact Report, regards the impacts of this mine on water. The amount of water required to operate this mine will inevitably impact wells throughout the local area. The toxicity of the water leaving the mine will be harmful throughout the ecosystem. Mining is a toxic endeavor and with mining companies throughout the world well-versed in the protocols for leaving local communities holding the bag for clean-up, I don’t see any long-term benefit for Nevada County and its residents in

allowing this mine.

Added to this are my concerns about air quality - I work outdoors throughout the Grass Valley and Nevada City areas and will be directly affected by any pollutants added to our already often poor air quality - as well as concerns about traffic and noise pollution.

This mine is not going to be a benefit to our community, instead it will be a drain. Keep mining in our past and as low-tech recreation at the river.

Say No to the reopening of the Idaho-Maryland mine!

Sincerely,

Renee Wade

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sarah Hutchins. I live at 10799 Henson Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a fairly new resident to Nevada County, and am a homeowner in Alta Sierra. My husband's family has lived here since the 1970s, and he spent his childhood in Nevada County. His family connection, along with the stunning beauty of the area, is the reason we decided to relocate here and buy a home. I was horrified to learn you are actually entertaining the idea of reopening the mine, especially by a company who is under investigation for innumerable environmental violations already. Do you honestly think they won't cause the same or worse harm here? The drastic harm the mine will cause to the environment and all of us who live here is not worth the uncertain (and unlikely) benefits. Please, please, please say no. If the county needs more money, we can find better ways to bring it in to the county that doesn't cause harm to the environment and the health and well-being of the residents.

Sincerely,

Sarah Hutchins

Dear Nevada County Supervisors and Planning Commissioners,

My name is Diana Runnels. I live at 13797 Sontag Hill Road, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in District 1 and have been concerned about the obvious factors that the various studies have listed, not necessarily adequately addressed. I have yet to feel confident or swayed from my initial concerns. The unknown impacts to wells, to property values, noise factors, traffic issues, etc. can not be addressed fully based on studies from other areas. No one can gauge any of these factors to the degree that makes the Grass Valley community comfortable with opening the mine. Please don't allow the downfall of our community to come about based on the greed of a company with a questionable operating record, in fact with outstanding legal issues. Please do not allow this mining operation. Please "just say no". Thank you.

Sincerely,

Diana Runnels

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Egan. I live at 16343 Rattlesnake Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley for 28 years and am very concerned about the mine reopening. Rise Gold's CEO Mossman already has a bad track record of maintaining its required responsibilities... "Mossman's prior company polluted tribal waters, went bankrupt, and left Canadians with a bill to pay."..

Couple that with the heavy traffic, potential groundwater pollution, and noise, and it is clear that we do not need this type of problem in what is now a bedroom and retirement community.

Do not allow this potential disaster to affect our neighborhood simply so a few out-of-towners can pocket profits.

Sincerely,

John Egan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Clappier. I live at 15987 John Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I do volunteer work at the North Star House. I have done a lot of reading and learning about the history, processes, and negatives of gold mining.

Problems:
- Rise Gold's bad record of not living up to promises
- The noise, road damage, traffic issues and general disturbance of constant trucks hauling taiings
- Water pollution, ground pollution, noise pollution
- Threat to well water and very likely devaluation of nearby homes
- and the list goes on

The damage that they will do to our wonderful community far outweighs any benefits the people who actually live here will realize.

Mining is a toxic, noisy activity that is part of our PAST but would be destructive to our current and future environment and quality of life in Grass Valley.

Why has this not been put to a vote of the citizens instead of being decided by the council ... who don't seem to be taking the objections seriously or they would have told Rise Gold to "go away" by now!

Sincerely,

Joan Clappier

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Lynette Cepeda at cepedaelec@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lynette Cepeda. I live at 13663 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My Husband and I live on Greenhorn Rd exactly one mile from the proposed mine site. My family moved to Grass Valley in1960. I was raised here, went all through school and was fortunate enough to have a career in this community. Although mining and logging was a huge part of the income for this area, times have changed. We know now how devastating mining can be to an area.
The area that Rise Gold wants to
Reopen will be threat to the environment. Dewatering the tunnels will definitely affect our wells and the amount of water they want to release into the creek on a daily basis will be overwhelming to the watershed.
There are so many reasons not to reopen the mine. The noise, traffic, exhaust, vibration, toxic waste, the unsightly tailings, the list goes on.
Another huge concern for us is the fact Rise Gold does not have a good reputation.

This should make the powers that be wake up.
We are a big destination for tourists. What a lovely area we live in and we work hard to keep it that way. Will people want to come here when they see and hear all of the pollution? When there are 70 to 80 trucks coming and going and creating a traffic nightmare. We don't think so.
Please listen to all the professionals who have done in-depth research on this proposal. The supposed benefits are totally outweighed by the damage that would be done by reopening the mine.
Please fight to keep Grass Valley the beautiful peaceful area we all love and cherish.
Thank you,
Lynette and Ed Cepeda

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Janet Weaver at jm.mp31@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Weaver. I live at 10818 Gunsmoke Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have several concerns regarding the Rise Gold Mine.
1. Well Water: Although we are 3.5 miles down Greenhorn, we may also be impacted by the voluminous amount of (possible contaminated) water that will be extracted from the mine. We are still in a drought and the snow disaster we had in December, reflects that. Trees had shallow roots because of the lack of water The enormous amount of water that will be then sent down the South Folk Wolf Creek, perhaps overflowing its banks.
2. Traffic: As I leave my home to make my right onto Brunswick from Greenhorn I generally see many cars that lined up at the flashing red light to enter the city or freeway. Sometimes they are as far back as the exit from the mine on Brunswick. To add 100 trucks coming up from Bennett will probably put this line as far back as the

“Y”. Many people from outside of GV area, are probably unaware of the extra time it will take them each day to get either into our city or out of it.
3. Toxicity: Hard rock mining is extremely toxic. Our property was deemed an EPA Superfund in 1998 because of the tailing overflow from the 1997 storms. Because the County could not afford the clean-up, the federal agency stepped in and spent thousands of dollars to correct the toxic waste flowing down the Little Clipper Creek. Taxpayers from all over the country fund EPA. EPA continues to monitor this site and I understand it will always be deemed a Superfund site.
4. School Buses: Our children will be riding on school buses that pass the mine almost daily. They will be exposed to longer delays at the Brunswick and Bennett intersection, plus possibly breath in toxic dust coming off the trucks.

There are so many other reasons NOT to have this mine. Perhaps consider having it a permanent green waste space and build a cogeneration (cogen) plant, creating our own clean energy.
We are no longer a Mining Town and anything built in that area should reflect 2022 ideas and not 1849 ideas.

Sincerely,

Janet Weaver

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jennifer Long. I live at 16665 Eden Ranch Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My letters sent at the beginning of this proposed business venture - state all of my concerns:

Starting on August 10, 2020 I sent newspaper links to Matt Kelley about the mining operation Mr. Mossman had at the Yellow Giant Gold Mine and other boondoggles.

I expressed my concern that Nevada County taxpayers would be left holding the bag if the owners are irresponsible, or leave a toxic mess.

This project would undo the building up of our local tourist economy.

I believe the financial risks are very high to our communities, and outweigh any employment opportunities.

No to this project!

Thank you for your consideration,

Jenny Long
resident since 1971
retired Nevada County Library employee

Sincerely,

Jennifer Long

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Melanie Dixon at melddixon@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Melanie Dixon. I live at 610 Brighton Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Thank you for choosing to work as a Nevada County Supervisor and Planning Commissioner. It takes a lot of grit to meet the changing needs and challenges of our community. Thank you for devoting your energy and your wisdom to this task.

I am a homeowner here in District 3. My husband and I own and operate a land maintenance and brush clearing business in Grass Valley. I have a child at Yuba River Charter School, and one who is a graduate of Ghidotti High School. I volunteer time and money to raise awareness of the local Nisenan Tribe, protect the Yuba River watershed and make our community a safer environment for LGBTQIA+ community members. I have lived here 10 years, and value it every day.

The mining history in Grass Valley is one of the most sordid aspects of our past. As

you may or may not know, there were 7-9,000 Nisenan people living in the Grass Valley/Nevada City area in 1849, before the gold rush. 18 years later, in 1867, there were 500 Nisenan people remaining (History of Us, Richard Johnson, p. 6). That's a minimum of 6500 people murdered in 18 years, and a whole culture destroyed, so that gold could be mined out of this ground. There are now about 150 living members of the Nisenan tribe, who are working to re-establish their identity, their land rights and their internal well being after such a massacre. That state sanctioned massacre was encouraged so that gold could be mined.

Now, there is a launch again to dig into the ground, to get this gold, and to do it whatever the cost. I'm not interested in supporting this kind of thinking. You've attended meetings with RISE representatives. You've read the unsubstantiated EIR reports, claiming minimal environmental impact. It doesn't take deep assessment to see that the results from this company's previous mining extractions resulted in massive environmental devastation, followed by a declaration of bankruptcy and a failure to clean up the land. Mining of this nature requires explosives, loud and toxic ore processing, heavy, loud trucks on our roads, toxic particulates in our air and sadness in our hearts at having lost sight of how to be real stewards of this community and this land. It is our job as mindful recipients of information to research the claims of "non-harm" to the environment from such a company as RISE and to see that the results in their track record indicate that our environment and quality of life would be devastatingly negatively impacted.

Have you ever lived in an active mining town? I have. In Utah. It's smelly, sad, unkind and not proud of itself. It's difficult to encourage generous behavior between people in a community where the economy is based on getting something from the earth that benefits the people but in turn, hurts the health of the land. It creates unkind people.

We live in what was previously a mining town. I tell you, I wouldn't have wanted to be here when extracting gold was the economic base. Everything I've read says it was a dangerous, unkind experience that destroyed old growth forests, the indigenous people, the face of the river and the downstream farmland. Those aren't the legacies I'm committed to creating.

This mine would do different harmful things than hydraulic mining of the past. The results though, in the end, would be harmful.

There's not a lack of jobs in our community. There's plenty of work here for skilled labor, retail, tech and services. Let's keep creating work and community projects that have us feel proud to be citizens of Grass Valley, the way we steward our groundwater, river, clean air, calm environment, and our just and kind treatment of each other and our land.

Thank you for considering the voices of your constituents.
All blessings to your work and your role as our representative.

Melanie Dixon

Sincerely,

Melanie Dixon

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Staffen. I live at 516 Temby Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am horrified that anyone on the Planning Commission or Board of Supervisors would support opening a toxic mining business in the heart of Nevada County without regard to our air, water, land and people., as if any amount of money could be worth the well being and lives of the people of Nevada County. The mining project is counter to the will of the people. One only need to look to the Ben Mossman's past history who are in the midst of a Canadian court cases for violating environmental laws on native peoples lands to know that Rise Gold is a sham of a company. Vote No against the Mine and Yes for the people of Nevada County.

Sincerely,

Joan Staffen

My name is Wilma Terrill. I live at 13793 Raccon Mtn Rd, Grass Valley, 95945, CALIFORNIA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi, I live off Greenhorn Rd. off Brunswick Road in Grass Valley. I have been living here since 35 years and have enjoyed the nature and rural living since then. I also have been a business owner since then!!!I here in GV. The business has been located on Whispering pine adjacent to the mine property. I am totally opposed to the re-opening of the mine!!! I resent the fact that the county supervisors, that have been elected by the people, seem to want to favor CORPORATE interests and profits obove the quality of life of the residents here!! I and many of my friends and acquainances would never vote for a supervisor again, who votes for the mine re-opening!! Please reject the mine re-opening as it is unconscionable wrong and only profit oriented and will destroy the air, and the noise level and traffic will be bad. It is not worth that!! To us the residents!! Sincerely, Wilma Terrill

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Valerie Kack. I live at 10350 Smith rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am writing to oppose the reopening of the mine. I have lived in this community for 40 years through all kinds of disasters due to snow, wind, rain and flooding. I live next to a feeder creek that runs From the main area into Wolf Creek. About once a month somebodies take it upon themselves to dump oil or gas into Ellen’s creek next (10 feet) to my house. It’s a horrible smell when I walk outside. I have not been able to identify the source and I have had authorities out to check it out to no avail. I am convinced regardless of what holding ponds the mine is designing, the mine runoff is going to seep into the ground and eventually run by my house. I oppose this horrible suggestion especially from a company from Canada who has no relationship to this community nor does this company care about our fragile environment. If this goes through I can promise you I am leaving the county. I’ve had a business here for 40 years as well so you will be losing my property tax, what I spend in town for

groceries, gas, and services that I use. Re-opening the mine Tells me this county will no longer have the beauty and appeal That draws new homeowners and tourists. It will be a waste land, our creeks will be seeping arsenic and other awful chemicals into our pristine waterways. Please let us use our collective voices to oppose this potential disaster.

Sincerely,

Valerie Kack

My name is Margaret Florence. I live at 15470 Mt Olive Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in District 1 in Chicago Park for 36 years. I need to drive past this "Mine site" to come into my business community. The destruction of our environment and ability to commute into our own town will be extremely impacted by this Mine proposition of Rise Gold. Beyond my personal discomfort and that of my fellow neighbors and citizens of this town, I cannot fathom how you would ever consider doing ANY business with a man who is on trial for outright negligence of similar endeavors in other states.

Please do not allow this Mine proposition to happen. Please.

Sincerely,

Margaret Florence

Dear Nevada County Supervisors and Planning Commissioners,

My name is Katherine Schugren Meyer. I live at 508 Brighton St., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My family has lived in Nevada County for 60 years. I live near Minnie Park on Brighton with my husband and two small children. Our son attends Kinderland Preschool in Cedar Ridge and we are concerned about its proximity to the proposed mine. Nevada County is still recovering from the negative environmental impacts of its mining history. We do not believe that any type of mining, no matter how "clean" or "green" the technology claims to be, is safe for our community. And the proposed economic benefits would not offset the potential for air, water, and noise pollution. We want to preserve our area for future generations. Please do not approve this proposal!

Sincerely,

Katherine Schugren Meyer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shawn Orgel-Olson. I live at 214 Lloyd Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I own a house in downtown Grass Valley where my parents live. I am deeply concerned about this proposed mine, the horrible environmental impact it will have, and the harm it will cause to tourism (reducing interesting/marring the area) and real estate.

A NO vote on the mine is what your constituents want and is the right thing to do morally, economically and environmentally. Don't believe the false projections and lies from Rise Gold - their track record is deplorable and would be no different in our area.

We don't want a mine, we want a healthy community and thriving economy based on eco-tourism, local craftmanship, and rising talent.

Sincerely,

Shawn Orgel-Olson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barbara Carole O'Gara. I live at 10489 Robin Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Barbara O'Gara and I have lived here for 12 years. My husband Steven A Smith has lived here for over 40 years. He and I bought property on Robin Ave off of Squirrel Creek west of the City of Grass Valley.
We value the effort to keep Nevada County free of businesses that will pollute and misuse the already scarce WATER we drink and use to cook with, and introduce harmful chemical into the precious AIR we breathe and the EARTH we walk on.
DO NOT roll back time by allowing a business like His Gold come in to RUIN and Pollute these Natural Resources.
Additionally the cost for all of us is too big for this business to to go forward. There is no way that this boondoggle is a regrettable mistake made be possible by power

hungry folks with rich backers looking to exploit and then run away when there is nothing left but carnage to the natural environment that surrounds and to the people who are worse off after the exploitative company leaves or dies!.

Sincerely,

Barbara Carole O'Gara

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dom Lindars. I live at 16979 Rabb Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Nobody wants this mine.

Their CEO committed crimes at his Canadian mine; do we really expect anything less if he was allowed to start one up here? The FEIR is not a complete picture of what we can expect. Well owners will certainly suffer. And using an old toxic mine dump as the site for a new toxic dump site is a really bad idea. The mine won't create local jobs, unless we think that hiring mine experts and skilled labor from out of state counts. We don't want our roads filled with dusty, noisy trucks or our creeks filled with toxin-filled water.

And as a gentle reminder, as the NUJHSD election recently showed, if you vote to allow this mine to go forward, you will be voted out of office.

Please, listen to the people of the county and Just Say "No."

Sincerely,

Dom Lindars

Dear Nevada County Supervisors and Planning Commissioners,

My name is Wayne Jarosh. I live at 11588 Ridge Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My family has lived here since 1977. My wife and I are retired government employees. We are opposed to opening the proposed mine. There are no advantages to having this kind of industry in our town. We need to continue attracting environmentally attractive businesses to our area. There is no such thing as a mine that doesn’t cause permanent damage to the surrounding area. There never has been and there never will be. This is a very desirable place to live. Let’s keep it that way.

Sincerely,

Wayne Jarosh

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Thomas Dolan. I live at Mill Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley from the Bay Area. I have many friends who have also recently moved here, bringing money to the area and reinvigorating the housing market. Most Bay Area companies allow their employees to work remotely, but we still need to stay within a few hours of San Francisco to travel in for the occasional meeting. Grass Valley is a wonderful choice for people like us that want to live in a beautiful, serene town but who still need access to the Bay Area every quarter or so.

I have several friends that have visited us in Grass Valley, fell in love with it, and are currently interested in relocating here because of its pristine natural beauty. I assure you that they will not move here if the mine is opened. Any potential risk to the environment or to their health will cause them to move to different towns within a few hours of the Bay Area. In fact, if the mine is opened, we would consider relocating to

Placerville or Amador County, as we would not want to raise our child near any potential issues. If the mine is opened, remote workers (like my friends and me -- who are bringing money and new life to the area) would be discouraged from chosing Grass Valley when deciding where to move or where to get a second home. Those of us that have already come here may reconsider.

Sincerely,

Thomas Dolan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lisa Schliff. I live at 19002 Dog Bar Road, Grass Valley, CA, USA, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Please vote against the mine! I live in South County, District 2, on Dog Bar Road and have been in Nevada County for seven years. The mine will impact our area for the worse, not the better. Please vote no! Even though I live far from where the mine is planned, I drive into town frequently and will be impacted by the increased traffic, high-level noise, and environmental degradation. Please don't allow the CEO to lure you into added revenue for the County and more local employment. The worsened quality of life will be too high a price to pay. I and my family members are counting on you to reject the mine proposal. Thank you.

Sincerely,

Lisa Schliff

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Stupi. I live at 13068 Madrona Leaf Court, Grass VAlley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in the Wawona Mardona Neighborhood in Grass Valley. Our home is located on the northern and eastern edge of the mineral rights. We are very concerned about the effect the mine will have on our well. In addition, the mine operator has a history of unscrupulous business atvities. From a a more global standpoint, what if soemthing goes wrong or when it is time to clean up the mess in 50 years? There will not be any money set aside, nor will the mine company have any assets left to clean up their mess.

Please vote no on the mine.

Sincerely,

Ken Stupi

Hello,
We are a family living close to the Railroad Museum off Gold Flat, near downtown Nevada City. (district 1)

We, and our neighbors, are all STRONGLY against the opening of the mine. Although I was raised in Canada, and usually try to support Canadian companies, this company has no business opening a mine ANYWHERE, and certainly not here in Nevada City, for so many reasons.

No No NO!!

Thanks for listening,
John and Osher Alevizakis and Family

Sincerely,

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rich Laws. I live at 21025 running horse road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am saddened this is even under consideration. This should be a hard no. As a Nevada City resident, I am proud of our shared appreciation and respect for the environment that we live in. Nevada City, Nevada County for that matter, is a special place. The environmental impact and damage that will follow this mine reopening is absolutely unacceptable and not with any “jobs created” as a result.

Why is anyone willing to sacrifice the health of the environment for revenue and jobs? There are better ways to bring revenue and jobs to Nevada County that won’t damage the environment not only for us but for our children and their children.

I beg you to think more about the planet and future generations. If you allow this mine to reopen you will have to live with that decision and knowing you are causing

irreparable harm to this beautiful area.

Sincerely,

Rich Laws

Dear Nevada County Supervisors and Planning Commissioners,

My name is Carolyn Anderson. I live at 17738 Minnow Way, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The environmental impact of opening this mine is clearly negative. It will affect the quality of the air and the water of nearby wells. This project goes against the county land use, safety, and economic development goals.
It will have a negative impact on the aesthetics of this charming tourist destination.

In general, it is ill-conceived and unwanted.

Sincerely,

Carolyn Anderson

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Sandra Bruce at sandrabruce@pacbell.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sandra Bruce. I live at 13997 Emerald Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 and have lived here in this house for 32 years. I fear for the possibility of losing our water. This is the 3rd time we have had to deal with the possibility of a mine opening up near us. I love our home and living here. We raised our family in this house. I am also a business owner and my business is in downtown Grass Valley. For 32 years we have enjoyed water from our well, the peace and quiet this area has given us, and the increasing value of our home.

With the water issues we have here in our area, and all over the state how can it be that someone would be allowed to draw over a million gallons of water day out of the ground for 80 years? How could the FEIR, never mind the DEIR pass muster when it is incomplete and full of inaccuracies ?

There are so many other ways that Grass Valley can grow without putting such a dangerous and potentially disastrous mine into reality. If there are problems (which are sure to be) will Moseman be accountable for reducing any impacts to "less than significant"?

Every time I mention this issue to anyone I always hear the same thing...."how can such a terrible idea be allowed"? So, I ask you, how can you allow this to happen? Please say NO. Put yourself in my shoes: would you accept an industrial mine operation to run 24/7 for 80 years in your neighborhood?

Sincerely,

Sandra Bruce

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ann Barbour. I live at 16006 Airiport Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live on Airport Road in Nevada City. We strongly urge you to say NO to the re-opening of the Idaho-Maryland Mine for a whole host of reasons: environmental; economic; life quality in Grass Valley/Nevada City and its surrounding communities. The environmental report is flawed. The estimates of economic benefit to the community are grossly overstated. The existing infrastructure does not support a project of this magnitude. The individual(s) behind the Rise Mine project have had abysmal track records in previous mine openings. Quality of life in our communities would be severely impacted by both acknowledged and unforeseen factors - well water, traffic, pollution, and water discharge among others.

Please seriously consider the reasons so many voters are against this project. Once

a project like this is approved, the damage cannot be reversed. Voters will remember how each of you vote.

Sincerely,

Ann Barbour

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Catalina Davis. I live at Po Box 582, Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived here in Cedar Ridge at 11010 Brunswick Dr., for over 25 years. I personally cannot see one good reason to re-open that mine. We are a small community that loves welcoming new people into the area. The Opening of the mine would cause nothing but destruction, bad air, and more noise just to say a tiny bit about why I object to it.
Please please please listen to your community and do not even think about the possibility of reopening this horrible mine.
Please don’t sell out for money. We love the area the way it is.

I am very concerned and just want you to know my thoughts.

Sincerely,

Catalina Davis

My name is Oscar Barba. I live at 17790 Jones Ridge Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

There is no need to be redundant and list at length the factual reasons for denying the certification of the FEIR form they have clearly stated in documents and public comments presented by the community organizations and individuals that advocate against approval of the mining project. As our elected representatives you have an obligation to make decisions based on our best interests and what we voice.

Sincerely,

Oscar Barba

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lance Goddard. I live at 14165 Talking Pines Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have owned property here since 1992 and have never been so concerned about the possible implications of a development here as I am with the proposal to reopen the Idaho-Maryland mine. You are aware, as am I, of the negative implications of such development. I don't wish to list the negative effects of the project as I am sure that you are aware of all of them. My purpose in writing is to state once and for all that this project just cannot be allowed to continue. Please don't allow the powerful economic interests to override the sensible and well documented interests of the huge majority of the citizens of Nevada County.

Sincerely,

Sincerely,

Lance Goddard

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Chris Steffani. I live at 13110 Brunswick rd, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We own a four acre parcel on Brunswick at Hwy 174. We live there and operate an animal rescue operating there for the last eight years. The proposed Idaho-Maryland Mine mine will affect our operation for all the wrong reasons. It has already impacted property values in this area by up to 20%. This decrease will not only hurt owners, but also tax revenue, once all the affected homes file for reduced property value. Reasons: traffic, noise, air quality, well issues, hazardous and municipal waste. With the basin already filling in with homes, small businesses, restaurants, hotels, how will this affect the people living and doing business. Mining in the area left many years ago. Then people came settled and made Nevada County their home. After the destruction caused by the first mining operations, I have the highest hopes that your decision will be based on people not on profit.
Repectfully,

Chris Steffani, Resident on top of the mine.
Retired hazardous waste characterization analyst, Environmental Protection Division, Lawrence Livermore National Lab

Dear Nevada County Supervisors and Planning Commissioners,

My name is Andrew Birkhoff. I live at 14811 Winding Creek Court, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My wife and I have only lived in Grass Valley for seven years but we have embraced the community and have become quite active.
We have a nice home on three acres. We are on well-water and are aware of the groundwater threat. My wife lived in an active mining community and we are very aware of the noise, increased truck traffic and of course environmental impacts.
We both strongly oppose the reopening of mining operations here in Grass Valley and Nevada County.
Andrew Birkhoff

My name is Clinton Shifflett. I live at 12999 Wood Rose Way, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley from out of state because I love the area and have always felt like home here when I visited. When I had the opportunity to live here I was excited to take it. I live across the street from the Idaho Maryland Mine location. The old mine goes under my house. I fear, that if the mine is reopened, my family and I will have to leave the area due to safety and health concerns with the mine being directly under and across from our house. Vote no on the mine. It is not worth the potential environmental and economic impacts it may have on families and the community.

Sincerely,

Clinton Shifflett

My name is Michael Dockery. I live at 19132 Connie Dr., Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Alta Sierra and will likely not be directly affected the Idaho-Maryland mine. However, out of consideration for hundreds of our fellow Nevada County residents, I strongly oppose this project. The company (Rise Gold whatever) is a front for an alleged crook, one Benjamin Mossman. He is currently awaiting re-trial on numerous counts from his previous project in British Columbia. I can't imagine a worse candidate for the proposed mine.

Sincerely,

Michael Dockery

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Nevada City near Banner Lava Cap, and we will undoubtedly leave the area if the mine is approved. We have never seen such an erroneous EIR report supposedly by an unbiased organization. The mine will be a disaster for the whole of the western end of Nevada County.

However the plain truth is fundamental. Rise Gold has basically zero credibility as a good operating company. Rise Gold has left a trail of unfinished disasters and is trying to the same within this great county. Rise Gold's history and track record is appalling and it should not be permitted to operate in Nevada County.

Say NO to re-opening the mine.

Sincerely,

John Kelly

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jude Daley. I live at 1737 Deerhaven Lane, Colfax, CA 95713.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,

Heidi Hall was our district supervisor until we moved to Placer county partially due to the real possibility of a gold mine in our town. My position remains the same. Changing zoning to allow the reopening of the Idaho Maryland Mine to a foreign entity already in litigation for creating and abandoning a toxic mess in their own homeland would be a HUGE MISTAKE TO OUR COMMUNITIES! This is just one fatal aspect of the board approving a conditional use permit and allowing a plethora of negative consequences to spill into our backyards, literally. Re establishing as a gold producing entity was never part of the General Plan. There are no real benefits, only hardships to the people who will live the nightmare day after day, while a foreign country gains wealth from our own stupidity. Here are just a few

drawbacks…

Dewatering into the wolf creek, where portions have protected wetland areas and sensitive animal habitats not to mention possible flooding as we have seen in these last series of storms.

Noise, pollution and energy consumption from large diesel generation.

Roadway traffic from large trucks and machinery throughout the day into the night.

Underground blasting, and residential disturbance on multiple levels.

Water well desecration.

Etc., Etc., Etc.,

For only 70 or so underground, dark, dirty jobs while all the higher paying senior jobs are already spoken for? How are we so easily blinded by this crumb of an offering while our land is raped, again? Feels like there might be something else being offered that the general public is not aware of. If so, we have the right to know what this is.

We can do better than this for our Communities! Do the right thing and say NO TO THE RISE GOLD MINE!

OUR HEALTH BEFORE THIER WEALTH!
WE ARE MORE VALUABLE THAN GOLD!

Jude Daley

Sincerely,

Jude Daley

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Tina DeLisle-McCoy. I live at 11037 Ball Road, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Tina DeLisle-McCoy

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Rojo. I live at 17150 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I have lived for 19 years in District 1, at 17150 Greenhorn Road. We have retired and intend to live our remaining days in the beauty of our 30 acre property. When the reopening of the Idaho-Maryland Mine raised it's ugly head, we knew our health, both physical and mental, was being threatened by disruption and pollution caused by this project. The risks far outweigh the benefits of this high risk venture. The final report blew off the effect of diminished property value to ourselves, and the other 2000 residents living in mine's sphere of influence.

No on the mine!

Sincerely,

Nancy Rojo

Dear Nevada County Supervisors and Planning Commissioners,

My name is kendall Annie. I live at 14676 Peaceful Meadow Ln, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve been a resident of Nevada County for 13 years now. I’ve come to love our quaint towns and the caring spirited people who live in it. I chose to build my business, Cosmic Shark Clothing, in Grass Valley CA 6 years ago because I felt this could be the place I settle down in. I felt a sense of community and that we cared about the preservation of the land we live on. I want a clean and safe environment for me, my family, friends and community. Allowing the mine to operate in our town would be a another tragic step to the declining health of our planet and community. Please don’t allow this to happen.

Sincerely Annie Kendall

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lisa Nowlain. I live at 12645 Valley View Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Banner above the Brunswick Basin. I have 2 small children. I have often thought about moving away from Nevada County, but keep making the decision to stay. The environmental beauty, the quiet, and the community's commitment to each others safety and health is why. The mine would destroy all that. I have my Masters in Library and Information Science, and have read the reports. It would be unconscionable to build that mine here. Please reject the mine.

Sincerely,

Lisa Nowlain

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John palmer. I live at 624 Nivens Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in this area for sixteen years. I now live downtown Nevada City, in District One. My wife and I are retired and love the quiet life here.

One hundred and seventy years ago this area went through the Gold Rush. The land was washed away, the rivers polluted, the forests cut down. We like to look back at it as a magical time. It wasn’t. It was an ugly time. A time of greed and selfishness and cruelty. Fortunately, that time has passed. This area has moved on. It’s now a tourists destination, a quiet place to retire, a great place to work remotely. Reopening the Idaho-Maryland Mine no longer fits this area. We don’t want to go back to noise, pollution, congestion and greed. Vote NO on reopening the mine! Thank you in advance for being an advocate for our area.

Sincerely,

John palmer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Karla Bravo. I live at 14891 Banner Lava Cap Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The charm, artistic and conscious population in Nevada City/County are what make this community such a magical place. It is what has drawn people like myself out of the Bay Area- AWAY from greed, traffic, pollution, and machine-like power centers. Please reflect on this and the future of our beautiful county. We have moved away from the times of the Gold Rush and the energies that that brought into our area. Our community is thriving because we are drawn to the purity of the land and our connection to it. It would heartbreaking and soul-crushing to dishonor these lands for profit and greed. I trust the right decision will be made with the heart.

Sincerely,

Karla Bravo

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Moore. I live at 10120 Alta Vista drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Alta Vista area of Grass Valley and have lived here since 2006. Part of what drew me here was the small town atmosphere and the beautiful surroundings along with the arts culture.
Of course the area has grown a lot since 2006. Along with this have come many increasing problems.
Certainly one way to stop growth here would be to put in the mine. ... Other than people related to the mine I can't imagine who would want to move here.
Please don't ruin our way of life. Don't ruin the health of all those poor people that live within hearing shot of the mine and all it's activities. Well this may not be considered, people will no doubt avoid that area due to the traffic insanity. (Count me in on this one, I'll go shopping elsewhere,) With the increased traffic and huge trucks rumbling through every couple of minutes no doubt there will also be more

accidents. And then it will be oh darn we're going to have widen the roads with more Lanes.
Many people have also worked very hard to own their own homes and it seems unconscionable to trash their real estate values. The whole idea of the mine seems unconscionable.
Please don't approve this.
Thank you

Sincerely,

Nancy Moore

Dear Nevada County Supervisors and Planning Commissioners,

My name is Julie Childs. I live at Po Box 527, North San Juan, CA 95960.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live within 2 miles of the Siskin mine and experienced the disaster when they hit the underground river. I lost my well. They left us up here denuded of all the trees on their property and a scotch broom and manzanita landscape. No mining company cares about the community. No local jobs were ever offered. Our govt let us down by allowing that project. Please don’t let us down again. Do Not Allow this new fiasco to happen. The damage is irreversible! I work at Grizzly Hill School, where there is no water fountains for the kids because our water has to be super filtrated. Never again be so duped!

Dear Nevada County Supervisors and Planning Commissioners,

My name is Judy Serb. I live at 15569 Allison Ranch Rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello I’m a resident of District 2. Judy Serb at 15569 Allison Ranch Road. Grass Valley California
I’m very concerned about the reopening of the mine. We moved here in May of 2017. We chose Grass Valley for the quiet and caring community that it is. We moved here from the Bay Area. We moved from the noise, traffic and refineries. If we think that constant digging, trucks constantly on the roadways and the promise of new jobs is going to benefit the city then some of us have our heads buried in the sand. Please don’t be swayed by false promises.

I’m concerned
About air quality
Being on well water and I’m very concerned about the quality of water and the

sustainability of our water supply.
About the congested roadways
About the death of our downtown.

I would not put Grass Valley on the top 10 list of places to visit amidst the destruction of our roadways, air quality, water supply and overall congestion. Our overall health and quality of life has no price

I hope the board of supervisors will do the right thing and ‘just say no ‘

Thank you
Judy Serb

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Dee Webster at dee@message4u.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Webster. I live at 12856 Burma Oaks Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 3, just past the Burma Road crest, which as the crow flies, is only a tiny distance from the proposed mine site. My parents purchased this property and began to build my childhood home here in 1952, when I was only five years old. I graduated from 8th grade at Union Hill School and from Nevada Union High in 1965. I am 75 years old.

There are dozens and dozens of reasons that I vehemently oppose the reopening of the mine! It would take me more than all day to write a letter that would encompass all of those objections, which you have heard a gazillion times already. So I will focus here on the most immediate localized and personal objection that I have.

I ABSOLUTELY CANNOT ABIDE THE HUGE POTENTIAL THAT ALL OF US IN THIS AREA WOULD VERY LIKELY LOSE OUR WELLS! And then what? The only "life-support system" I have is my home here. How would I be able to live here without water? And no one would consider buying my home and property if I were being forced to leave.

In other words, you have the power to destroy my life! As a very low income senior citizen, with no family, it appears to me that I am at your mercy on this point, an idea that runs against everything I believe in and every fiber of my being!!!!!

I have no family (other than my 97-year-old mother, incapacitated for the past 5+ years at Spring Hill Manor), meaning no husband, living siblings or children.

I have never considered myself to be the helpless type, but my home is essential to my well-being, especially so with it's location here because I am quite electrosensitive and would become quite unwell very rapidly in an apartment or other urban area of heavy electrosmog of wi-fi zones everywhere, cell phones everywhere, cell towers, etc., etc. Even more so with the expansion of 5G!

And yet it appears that your decision could deprive me of the only safe zone, my home here, where I am connected to my satellite internet service via my hardwired ethernet cable, (i.e. no wireless here) and where I run my laptop on its battery. DC does not make me ill. Just strong AC EMFs and radio frequencies. I live in a portion of the house that is as far distant as possible from the AC power main and from the power lines at the edge of the property.

I can't help but wonder how many other neighbors and nearby residents there are, each with their own individual stories and needs, whose lives you will also be putting in jeopardy if you approve the reopening of the mine!

What comes first in your own lives? Caring and compassion, kindness and supportiveness? Where do YOU stand within the truths and values of your own personal, inner selves as they relate to the wider community that you are supposed to be representing?

Sincerely,

Dee Webster

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Gagliasso. I live at 14035 Diamond Ct., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been at this address 14035 Diamond Ct, Grass Valley, District 3, for 10 years with 65 years of prior association with the area. My property's water is supplied by a well. It is one of the wells that will be impacted by this project. I recently paid, in last 6 months, to have the well water tested and it is of excellent quality all around...tested for minerals and toxic elements. I expect it to stay that way. There is no reason to think otherwise.

It is My well-My water.
I did NOT ask for this! It is akin to having an uninvited person come into my home and help themselves to My furniture..."because they can". I say NO.

I count! I matter! I will fight anyone who tries to take my well, and say NO to the

mine.

There are other more appropriate uses for this land that need to be explored. Uses that will support
tourism, and more jobs than the few this project will provide. Uses that will support the community...the whole community not one salesman from Canada.

Just Say NO!
Laura Gagliasso

My name is Shirley Porter. I live at 12968 Burma Rd., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

MY name is Shirley Porter. My family has lived here since 1950 and we appreciate the quiet sense of our Burma Road home. The impact of the Mine would be great on our neighborhood, including endless trucks driving by, noise, concern about the loss of water in our well, and the overall negative impact on the Grass Valley area. If you are thinking the main reason to invite them into our area is the revenues that will come, then I ask you to rethink. Money isn't everything. The well being of the neighborhoods and the people in the area is the most important issue. And as I drive around, I see a lot of NO MINE signs so that almost everyone here does not want the mine to begin to operate again. Please just say NO to the re-opening of the mine. Thank you for your thoughtful consideration of this very important issue.

Sincerely,

Shirley Porter

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donald Gagliasso. I live at 14035 Diamond ct, Grass Valley, California 94545.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am against the mine. I want to keep our well. I do not believe the mine will pay for all the damage, that occurs, when they bring water up to my house. Being in construction for 55 year I am well aware of all the problems that occur after being promise they would not happen, (truck traffic, hours of work, noise, dust, dirt on streets, number of trucks used, staying on approved truck route, speeding vehicles) to name a few. Since I am across the street from the mine, I know my property will devalue. Our neighbor has not been able to sell their property saying the few onlookers did not bid because of the mine. I am against 24/7 working hours because there is no need if they are only taking 1500 yard a day. This can easily be done in a 10-hour workday or less.

Sincerely,

Donald Gagliasso

Dear Nevada County Supervisors and Planning Commissioners,

My name is Beverly Martling. I live at 16726 Alexandra Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County since 1977. I currently live in Alta Sierra. I am totally opposed to reopening the Idaho Maryland Mine. It will destroy the reason so many people live or visit here.
Please say no to this mine. Its owner left an environmental mess in Canada. They have lied about the supposed benefits to this county. I cannot believe this is even a serious consideration for the Board of Supervisors.
I would have to vote against my supervisor, Ed Scofield at the next election, if he votes for this disastrous mine.

Sincerely,

Beverly Martling

Dear Nevada County Supervisors and Planning Commissioners,

My name is JUDY DUDNEY. I live at 20055 ECHO BLUE DRIVE, PENN VALLEY, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

In 2011 I moved from Tuolumne County after 27 years.Both Counties are in the 'Gold Country' I live in Lake Wildwood ...which is district 4. I have been down this road before when a Mine was proposed in a more rural part of Tuolumne County..however many folks could see the detriment to the landscapes as well as the congestion it would cause to a pristine part of the County...as well as being counter productive in many aspects. Thankfully it was turned down...This area would be a horrifying encounter..1 Step Forward..2 Steps Back.. in the long run with many regrets. Don't swallow a Camel and strain a Knat.. So I agree to the statement and I am asking you to "Just Say No" to reopening the Mine..

Sincerely,

JUDY DUDNEY

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Renee Wade at renee.wildrose@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Renee Wade. I live at 26532 Wampum Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

While I currently live on the San Juan Ridge, I have been a resident of Nevada County for 25 years and have lived in the Chicago Park area as well. Driving by the Idaho-Maryland mine on my way into work for my first 4 years in the county makes me very aware of how impactful the reopening of this mine would be.

My biggest concern, that I believe was not adequately addressed in the Environmental Impact Report, regards the impacts of this mine on water. The amount of water required to operate this mine will inevitably impact wells throughout the local area. The toxicity of the water leaving the mine will be harmful throughout the ecosystem. Mining is a toxic endeavor and with mining companies throughout the world well-versed in the protocols for leaving local communities holding the bag for clean-up, I don’t see any long-term benefit for Nevada County and its residents in

allowing this mine.

Added to this are my concerns about air quality - I work outdoors throughout the Grass Valley and Nevada City areas and will be directly affected by any pollutants added to our already often poor air quality - as well as concerns about traffic and noise pollution.

This mine is not going to be a benefit to our community, instead it will be a drain. Keep mining in our past and as low-tech recreation at the river.

Say No to the reopening of the Idaho-Maryland mine!

Sincerely,

Renee Wade

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sarah Hutchins. I live at 10799 Henson Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a fairly new resident to Nevada County, and am a homeowner in Alta Sierra. My husband's family has lived here since the 1970s, and he spent his childhood in Nevada County. His family connection, along with the stunning beauty of the area, is the reason we decided to relocate here and buy a home. I was horrified to learn you are actually entertaining the idea of reopening the mine, especially by a company who is under investigation for innumerable environmental violations already. Do you honestly think they won't cause the same or worse harm here? The drastic harm the mine will cause to the environment and all of us who live here is not worth the uncertain (and unlikely) benefits. Please, please, please say no. If the county needs more money, we can find better ways to bring it in to the county that doesn't cause harm to the environment and the health and well-being of the residents.

Sincerely,

Sarah Hutchins

Dear Nevada County Supervisors and Planning Commissioners,

My name is Diana Runnels. I live at 13797 Sontag Hill Road, Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in District 1 and have been concerned about the obvious factors that the various studies have listed, not necessarily adequately addressed. I have yet to feel confident or swayed from my initial concerns. The unknown impacts to wells, to property values, noise factors, traffic issues, etc. can not be addressed fully based on studies from other areas. No one can gauge any of these factors to the degree that makes the Grass Valley community comfortable with opening the mine. Please don't allow the downfall of our community to come about based on the greed of a company with a questionable operating record, in fact with outstanding legal issues. Please do not allow this mining operation. Please "just say no". Thank you.

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Egan. I live at 16343 Rattlesnake Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Grass Valley for 28 years and am very concerned about the mine reopening. Rise Gold's CEO Mossman already has a bad track record of maintaining its required responsibilities... "Mossman's prior company polluted tribal waters, went bankrupt, and left Canadians with a bill to pay."..

Couple that with the heavy traffic, potential groundwater pollution, and noise, and it is clear that we do not need this type of problem in what is now a bedroom and retirement community.

Do not allow this potential disaster to affect our neighborhood simply so a few out-of-towners can pocket profits.

Sincerely,

John Egan

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ashli Franck. I live at 13312 N Bloomfield Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in this lovely community for nearly a decade. What drew me to this area is the abundant beauty of the natural world and peaceful way of life. Prioritizing the protection of our natural resources and way of life over corporate profit and tax revenue is the decision of integrity. The natural world does not exist explicitly for our consumption. Please make a stand on the right side of history. There are many ways to make money in the world yet there are only limited natural resources. Thank you for your service.

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Joan Clappier at joan1953@aol.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Clappier. I live at 15987 John Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I do volunteer work at the North Star House. I have done a lot of reading and learning about the history, processes, and negatives of gold mining.

Problems:
- Rise Gold's bad record of not living up to promises
- The noise, road damage, traffic issues and general disturbance of constant trucks hauling taiings
- Water pollution, ground pollution, noise pollution
- Threat to well water and very likely devaluation of nearby homes
- and the list goes on

The damage that they will do to our wonderful community far outweighs any benefits the people who actually live here will realize.

Mining is a toxic, noisy activity that is part of our PAST but would be destructive to our current and future environment and quality of life in Grass Valley.

Why has this not been put to a vote of the citizens instead of being decided by the council ... who don't seem to be taking the objections seriously or they would have told Rise Gold to "go away" by now!

Sincerely,

Joan Clappier

Dear Nevada County Supervisors and Planning Commissioners,

My name is Luc Olrich. I live at 11325 Alpine Ln, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a present resident of the Oaks district of Grass Valley, and a life-long resident of the area, I can say that history has demonstrated the detrimental impact of gold mining on this region. There is no reason, economic or otherwise, to permit another rape session of the land and people here. Please act justly, and avoid the temptation of greed...No mine

Sincerely,

Luc Olrich

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lynette Cepeda. I live at 13663 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My Husband and I live on Greenhorn Rd exactly one mile from the proposed mine site. My family moved to Grass Valley in1960. I was raised here, went all through school and was fortunate enough to have a career in this community. Although mining and logging was a huge part of the income for this area, times have changed. We know now how devastating mining can be to an area.
The area that Rise Gold wants to
Reopen will be threat to the environment. Dewatering the tunnels will definitely affect our wells and the amount of water they want to release into the creek on a daily basis will be overwhelming to the watershed.
There are so many reasons not to reopen the mine. The noise, traffic, exhaust, vibration, toxic waste, the unsightly tailings, the list goes on.
Another huge concern for us is the fact Rise Gold does not have a good reputation.

This should make the powers that be wake up.
We are a big destination for tourists. What a lovely area we live in and we work hard to keep it that way. Will people want to come here when they see and hear all of the pollution? When there are 70 to 80 trucks coming and going and creating a traffic nightmare. We don't think so.
Please listen to all the professionals who have done in-depth research on this proposal. The supposed benefits are totally outweighed by the damage that would be done by reopening the mine.
Please fight to keep Grass Valley the beautiful peaceful area we all love and cherish.
Thank you,
Lynette and Ed Cepeda

Sincerely,

Lynette Cepeda

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Janet Weaver at jm.mp31@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Weaver. I live at 10818 Gunsmoke Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have several concerns regarding the Rise Gold Mine.
1. Well Water: Although we are 3.5 miles down Greenhorn, we may also be impacted by the voluminous amount of (possible contaminated) water that will be extracted from the mine. We are still in a drought and the snow disaster we had in December, reflects that. Trees had shallow roots because of the lack of water The enormous amount of water that will be then sent down the South Folk Wolf Creek, perhaps overflowing its banks.
2. Traffic: As I leave my home to make my right onto Brunswick from Greenhorn I generally see many cars that lined up at the flashing red light to enter the city or freeway. Sometimes they are as far back as the exit from the mine on Brunswick. To add 100 trucks coming up from Bennett will probably put this line as far back as the

“Y”. Many people from outside of GV area, are probably unaware of the extra time it will take them each day to get either into our city or out of it.
3. Toxicity: Hard rock mining is extremely toxic. Our property was deemed an EPA Superfund in 1998 because of the tailing overflow from the 1997 storms. Because the County could not afford the clean-up, the federal agency stepped in and spent thousands of dollars to correct the toxic waste flowing down the Little Clipper Creek. Taxpayers from all over the country fund EPA. EPA continues to monitor this site and I understand it will always be deemed a Superfund site.
4. School Buses: Our children will be riding on school buses that pass the mine almost daily. They will be exposed to longer delays at the Brunswick and Bennett intersection, plus possibly breath in toxic dust coming off the trucks.

There are so many other reasons NOT to have this mine. Perhaps consider having it a permanent green waste space and build a cogeneration (cogen) plant, creating our own clean energy.
We are no longer a Mining Town and anything built in that area should reflect 2022 ideas and not 1849 ideas.

Sincerely,

Janet Weaver

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jennifer Long at jenlobell@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jennifer Long. I live at 16665 Eden Ranch Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My letters sent at the beginning of this proposed business venture - state all of my concerns:

Starting on August 10, 2020 I sent newspaper links to Matt Kelley about the mining operation Mr. Mossman had at the Yellow Giant Gold Mine and other boondoggles.

I expressed my concern that Nevada County taxpayers would be left holding the bag if the owners are irresponsible, or leave a toxic mess.

This project would undo the building up of our local tourist economy.

I believe the financial risks are very high to our communities, and outweigh any employment opportunities.

No to this project!

Thank you for your consideration,

Jenny Long
resident since 1971
retired Nevada County Library employee

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Melanie Dixon. I live at 610 Brighton Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Thank you for choosing to work as a Nevada County Supervisor and Planning Commissioner. It takes a lot of grit to meet the changing needs and challenges of our community. Thank you for devoting your energy and your wisdom to this task.

I am a homeowner here in District 3. My husband and I own and operate a land maintenance and brush clearing business in Grass Valley. I have a child at Yuba River Charter School, and one who is a graduate of Ghidotti High School. I volunteer time and money to raise awareness of the local Nisenan Tribe, protect the Yuba River watershed and make our community a safer environment for LGBTQIA+ community members. I have lived here 10 years, and value it every day.

The mining history in Grass Valley is one of the most sordid aspects of our past. As

you may or may not know, there were 7-9,000 Nisenan people living in the Grass Valley/Nevada City area in 1849, before the gold rush. 18 years later, in 1867, there were 500 Nisenan people remaining (History of Us, Richard Johnson, p. 6). That's a minimum of 6500 people murdered in 18 years, and a whole culture destroyed, so that gold could be mined out of this ground. There are now about 150 living members of the Nisenan tribe, who are working to re-establish their identity, their land rights and their internal well being after such a massacre. That state sanctioned massacre was encouraged so that gold could be mined.

Now, there is a launch again to dig into the ground, to get this gold, and to do it whatever the cost. I'm not interested in supporting this kind of thinking. You've attended meetings with RISE representatives. You've read the unsubstantiated EIR reports, claiming minimal environmental impact. It doesn't take deep assessment to see that the results from this company's previous mining extractions resulted in massive environmental devastation, followed by a declaration of bankruptcy and a failure to clean up the land. Mining of this nature requires explosives, loud and toxic ore processing, heavy, loud trucks on our roads, toxic particulates in our air and sadness in our hearts at having lost sight of how to be real stewards of this community and this land. It is our job as mindful recipients of information to research the claims of "non-harm" to the environment from such a company as RISE and to see that the results in their track record indicate that our environment and quality of life would be devastatingly negatively impacted.

Have you ever lived in an active mining town? I have. In Utah. It's smelly, sad, unkind and not proud of itself. It's difficult to encourage generous behavior between people in a community where the economy is based on getting something from the earth that benefits the people but in turn, hurts the health of the land. It creates unkind people.

We live in what was previously a mining town. I tell you, I wouldn't have wanted to be here when extracting gold was the economic base. Everything I've read says it was a dangerous, unkind experience that destroyed old growth forests, the indigenous people, the face of the river and the downstream farmland. Those aren't the legacies I'm committed to creating.

This mine would do different harmful things than hydraulic mining of the past. The results though, in the end, would be harmful.

There's not a lack of jobs in our community. There's plenty of work here for skilled labor, retail, tech and services. Let's keep creating work and community projects that have us feel proud to be citizens of Grass Valley, the way we steward our groundwater, river, clean air, calm environment, and our just and kind treatment of each other and our land.

Thank you for considering the voices of your constituents.
All blessings to your work and your role as our representative.

Melanie Dixon

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joan Staffen. I live at 516 Temby Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am horrified that anyone on the Planning Commission or Board of Supervisors would support opening a toxic mining business in the heart of Nevada County without regard to our air, water, land and people., as if any amount of money could be worth the well being and lives of the people of Nevada County. The mining project is counter to the will of the people. One only need to look to the Ben Mossman's past history who are in the midst of a Canadian court cases for violating environmental laws on native peoples lands to know that Rise Gold is a sham of a company. Vote No against the Mine and Yes for the people of Nevada County.

Sincerely,

Joan Staffen

To: Nevada County Supervisors and Planning Department

Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

January 30, 2023

Dear Nevada County Supervisors and Planning Department:

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of both Wolf Creek and the South Fork of Wolf Creek, which is at least partially protected by Empire Mine State Park. This project will damage the entire watershed, including the Bear River and points downstream from there and significantly contribute to global climate change. This is NOT acceptable!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance and know well how important Wolf Creek is in our community, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive aquatic invertebrates, which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.

- I'm worried about the effects on the Meadow along Bennett Street. This meadow is the last remnant of the "grass valleys" that gave this community its name.

- I believe there are insufficient mitigations for endangered species and species of special concern, such as the Pine Hill Flannelbush, Yellow Warblers and other bird species that utilize riparian corridors, and the Yellow-legged Frog

- I'm concerned about increased traffic, noise and air pollutants, impacting wildlife and people

- I'm also greatly concerned about increased energy use and the massive greenhouse gas emissions this project would produce

I do not believe the FEIR addressed these impacts properly or thoroughly.

This project will be an unmitigated disaster for our community! Do not approve the FEIR, or this project!

Sincerely,
Charles Brownstein
357 ½ Alta St
Grass Valley, CA 95945

The proposed Idaho-Maryland mine would allow an 80-year heavy-industrial operation right next to Grass Valley, near where we live, and right in the headwaters of Wolf Creek, which have been protected by the State Park. It could damage the whole watershed, including the Bear River and points downstream from there and exacerbate climate change… wrong direction!

I've been a lover of this home watershed of mine since we bought our first house here in 1997. I've worked with Wolf Creek Community Alliance since 2004 and know well how Wolf Creek lives in our community, how important it is, and how fragile the South Fork is. I have worked hard to protect this treasure, this jewel in our area, to make the community a better place for humans and the others that live here as well. Wolf Creek makes my life here rich.

I understand these particular concerns vis-à-vis our watershed:

- The South Fork has the most intact habitat, the most sensitive creek invertebrates (bugs to most of us), which rely on specific temperature and flow regimes, which will be grossly affected. Please don't allow the use of South Fork Wolf Creek as a mine sewer, increasing flow year round, destroying the seasonality of flow.
- I'm worried about the effects on the Meadow along Bennett Street.
- I believe there is insufficient mitigations for endangered species and species of special concern, like Monarch Butterflies, Yellow Warblers (a favorite of my husband) and the Yellow-legged Frog
- Increased traffic, noise and air pollutants, impacting wildlife and people
- Increased energy use, SO MUCH (I had a long career as an energy engineer and greenhouse gas analyst and this is NOT the direction we want our community to take toward climate change!)

I do not believe the FEIR addressed these impacts properly or thoroughly.

PLEASE, Commissioners, do NOT approve the FEIR and do NOT recommend the project.

If this project is recommended, please Supervisors, to NOT approve this dreadful project.

Sincerely,
BJ Schmitt

I can see no reason for an EIR; No reason for us to even consider mining for gold here; no financial need; certainly not an employment need; no need to alter Wolf Creek and its drainage; and no need to even think about any of it. The answer is no. We don't need to address any of it. Nor any of its after effects . Charles Schmidt. 274 7116

Can I submit a comment, as a community member, directly to you via this email address? Or is there a better address?

After looking over this report, I oppose the mine due to the significant potential environmental impacts that would occur because of the proposed mining operations. I am deeply concerned that mining operations would introduce pollution into our waterways, dewater groundwater, and dry up private wells that are already being adversely impacted by long periods of drought. Further, legacy mining impacts include serious health impacts for community members who may be exposed to heavy metals such as arsenic and mercury. I am also strongly concerned about power use and disruptions in community and culture. So I would urge that the mine not be permitted.

I have a question about responsibility. Rise Grass Valley is a subsidiary of the out of country parent company, Rise Gold. Will the City of Grass Valley be responsible for any environmental damage instead of parent company, Rise Gold?
This is something I found.

Is the parent company liable for its subsidiary?

As a general rule a parent company cannot be held liable for its subsidiary's debts. The only exception is when: The subsidiary is a joint stock company or a limited liability company.

Some holding companies will transfer out all excess cash each quarter from the subsidiary, while others may keep the cash within the operating business. In most cases, the parent company will take over the accounting, HR, and IT tasks and allow the subsidiary to focus on selling their product or service.

Do you have any information on the fact that Rise Gold made Rise Grass Valley a subsidiary?

I'm curious. I don't trust the owner. He has a terrible track record.

Thank you, Kathleen Madeira

1/16/23

Nevada County Board of Supervisors
Nevada City CA 95959

Board Members,

Thanks for your leadership in the communities of Nevada County. The members of these towns and cities put their trust in you to make wise decisions based on the character and values of the community. We live in an area with beautiful natural resources and recreation that draws visitors from throughout the state and around the world. That, coupled with the history of the Gold Rush and the charm of our small towns, is becoming harder to find anywhere in California.

The idea of allowing an extractive industry to move into the heart of our County and create an industrial complex that brings increased industrial traffic, pollution and threatens the water supply for many, seems to be a bad idea at best, and a disaster for the County at large. The fact that Rise Gold has a dubious track record as a corporation and is facing litigation in Canada, seems to suggest that Rise can't deliver on the promises they've made. They have already made an effort to mislead the community with their survey regarding the mine. I had the survey methodology reviewed by professional academics who agreed that it was flawed and that the findings would not be a valid representation of community opinion.

The community has elected you to act in their best interests. They want visionary leadership that can see through the false claims of extractive industries who want to set up shop in the heart of our community. Please vote **no** on the reopening of the Idaho/Maryland Mine.

Sincerely,
Dan & Dee Desmond

Hello Planning Commissioners,

Please read the attached letter about some of my reasons for opposing the reopening of the Idaho-Maryland Mine. Please do not recommend it.

Respectfully,

Rev. Sharon Delgado
http://sharondelgado.org

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sharon Delgado and I live outside Nevada City. I am a retired United Methodist pastor and a founding board member of Earth Justice Ministries, based in Nevada City.

I strongly urge planning commissioners and supervisors to reject the proposal to reopen the Idaho-Maryland Mine. My concerns are based on personal experience, but also on potential harm to our community. I entreat you to reject the FEIR, which was badly flawed. I believe our community will suffer harm over many years if this project goes through. Here's why.

On Mothers' Day in 2006, after my husband Guari and I had moved back to Nevada County, our grown kids and grandkids gathered at Memorial Park for a picnic. I had requested it since I had happy memories of being there at the park when we raised our children. I imagined that our grandchildren would also enjoy playing at the playground and splashing in the creek.

I was shocked to see that metal fencing blocked the so-called creek. Signs warned people to stay out because it contained hazardous chemicals. What a nightmare. As it turned out, it was not a creek at all, but the Magenta Drain, which handles discharge from the Empire Mine. Some weeks afterward, I saw people in Hazmat suits working to strengthen the fence. Chilling.

I thought back, remembering the kids playing in the creek and wondering what they had been exposed to and how it might have impacted their health. I still wonder what ailments might be traced back to those exposures. I know now that toxic waste at the mine included mercury, arsenic, cadmium, lead, and other pollutants, and that it flowed into Wolf Creek and other area streams, where people fish and swim.

In 2014, a grand jury report found that local residents' health, welfare, and water quality may be compromised by toxic pollution caused by the Empire Mine, Lava Cap Mine, and North Star Mine, and that for over 30 years governmental agencies failed to coordinate or properly enforce cleanup required by legal settlements and abatement orders.

Mine runoff from the Empire Mine is now being treated by a wastewater treatment system built by Empire Mine State Park and mine owner Newmont Mining. In other words, it was paid for with both public and private funds. This commonly takes place with mining corporations around the world. In fact, there is often no accountability for mining corporations that pollute. Cleanup from mining operations (if it happens) is often paid for by the state. It's called corporate welfare—private gain for corporate "persons" at the expense of flesh and blood human beings, communities, and ecosystems.

For example, Rise Gold's CEO Ben Mossman is currently on trial in Canada. He faces nine federal and twenty provincial charges related to toxic spills by his previous mining company, which polluted tribal waters, went bankrupt, and left Canadians with the costs.

Naturally, we oppose the reopening of the Idaho-Maryland Mine. The Environmental Impact Report is deficient in so many ways. Members of our community have spent countless hours

analyzing it and uncovering its flaws. And we have prior commitments as a community that we the people have worked hard to implement. Why would any member of the Planning Commission or the Board of Supervisors vote to approve this project, which would override and negate the stated goals of the Nevada County Energy Action Plan?

I entreat each member of the Planning Commission and Board of Supervisors to oppose it. The promises of a re-opened gold mine ring hollow considering the potential health risks, disruption of community values and commitments, damage to local ecosystems, threats of further toxicity to our children and future generations, and so much more. Our beloved Nevada County has been damaged by the toxic legacy of the Gold Rush, but there is still so much beauty and life here, so much to be saved and protected. We may think that we sit on top of the natural world and try to control it, that is not true, and the natural world is not expendible for human gain. We are part of the interconnected and interdependent community of life, and as Indigenous people have always known, what we do to the community of life, we do to ourselves.

Idaho.MMEIR@co.nevada.ca.us

Dear Planners and Leaders,
As a long time resident and concerned citizen I am requesting that you vote against the proposed re-opening of Idaho-Maryland Mine by RISE Mining Corp. The proposed operations have significant and unacceptable impacts that endanger our community's health and well-being. There would appear to be significant impacts to the ground water table, the soil stability, the atmosphere, and the noise levels and health of residents and visitors in the Brunswick basin and surrounding neighborhoods. In fact, the detrimental effects may deter visitors and future home buyers from coming into the area and leave the county with long-term consequences that are complex and costly to deal with.. appropo...remember the piles of tailings and red dirt from the Empire Mine? https://www.waterboards.ca.gov/centralvalley/water_issues/mining/region5_success_stories/empire_mine_state_park/index.html
The handful of proposed local-hired jobs and the uncertain, if not over-estimated, tax revenue aren't worth the overall risks. Please, for the sake of preserving our beautiful landscape and a healthy, unpolluted community have no part in sanctioning the RISE mining operations in our county. Thank you for your considerations.

Yours for a truly heathy tomorrow,
Denise Buglino
Nevada City resident

CAUTION: This email is from an external sender. If you are not expecting this email or don't recognize the sender, consider deleting.

Do not click links or open attachments unless you recognize the sender and know the content is safe. If you have more questions search for Cybersecurity Awareness on the County InfoNet.

Dear Matt Kelley,
Please find my attached letter addressing the responses to my initial comment letter in the IMM FEIS. It seems that the responder does not have access to the same information or depth of understanding regarding groundwater. Please make this part of the public record and available to both the Planning Commission and Board of Supervisors. Thanks very much, Dianna Suarez

The Suarez Family Cam, Dianna, Donavon, Jessie and Cruz "Walk tall as the trees, Live strong as the mountains, Be gentle as the spring winds, Keep the summer sun in your heart and the Great Spirit will always be with you."

Comments to the Idaho Maryland Mine FEIS for the

Responses to Individual 199, Me

Response to Comment Ind 199-1 The commenter provides an estimate of the value of water which will be discharged to South Fork Wolf Creek and asserts that the project will take this water away from the community.

1. However, the groundwater which would be pumped from the proposed underground mine and treated at the surface is not currently available for use by surface users, as it is far deeper than groundwater wells in the project area.

Comment: The respondent erroneously asserts that this particular groundwater is somehow not connected to the greater system and is isolated underground. This is a false assumption as water is all connected and what happens to our groundwater undeniably effects water supply. The water that is pumped out will be replaced by more groundwater thus draining the groundwater which is connected to the larger surface water supply.

2. As discussed on page 10 of Appendix N of the DEIR, the proposed project will have a surplus of water from the natural groundwater flow into the ground workings. Once the initial dewatering is completed, approximately 1,224,000 gallons per day are estimated to be pumped to the surface on an on-going basis to maintain the dewatered mine.

Comment: the respondent falsely claims that there will be surplus water created by moving water out of the ground and putting it on the surface and down Wolf Creek. This is ridiculous and demonstrates circular reasoning. The water is finite in a closed system and moving it around does not create surplus water.

3. The groundwater consumed during operations is estimated to be 84,000 gpd. Notably, the water that will be discharged into South Fork Wolf Creek is not lost and can be used by downstream water users, including Nevada Irrigation District.

Comment: There will be an onsite loss of 84,000 gpd and further loss of over 3 acre-feet per day. The respondent asserts that this water can easily be used by down stream users. That is another false assumption. Most of the NID district is higher in elevation and cannot use the water. There is only one diversion on Wolf Creek and the Tarr Ditch is of limited capacity. There is also a disconnect in timing of the water releases, as use is seasonal and not needed during winter months. There is no impoundment between this mine and Camp Far West reservoir. ***The water will be lost to the people of our community!***

4. Economic benefits or water prices are not required to be analyzed by CEQA in the DEIR. Please see Master Response 2- Social and Economic Impacts.

Comment: You can bet the deciding officials will be considering the social and economic impacts of this proposal.

Response to Comment Ind 199-2 Please see Response to Comment Ind 199-1. The water that will be discharged into South Fork Wolf Creek is not lost, as asserted by the commenter, and can be used by downstream water users, including Nevada Irrigation District. Please see Master Response 2- Social and Economic Impacts.

Comment: See comment #3 on response #1. The respondent uses false assumptions and circular reasoning.

Response to Comment Ind 199-3 Groundwater dependent vegetation will not be significantly impacted by the project and therefore no restoration is proposed. Please see Master Response 33 - Groundwater Dependent Vegetation.

Comment: See comment #1 on response #1. The respondent uses false assumptions and circular reasoning.

Response to Comment Ind 199-4 The commenter asks what the cumulative impacts to the Bear River Watershed would be of 49,000-acre -feet of groundwater deficits. The South Fork Wolf Creek is a tributary to Wolf Creek and Wolf Creek is a tributary to the Bear River. As discussed on pages 4-8-65 and 4-8-65 of the DEIR, mine dewatering is estimated to reduce baseflow in South Fork Wolf Creek by up to as 0.1 cfs and in Wolf Creek by up to 0.75 cfs. During maintenance dewatering, 1.9 cfs would be added to the baseflow of South Fork Wolf Creek. Therefore, the baseflow in Wolf Creek and the Bear River would increase by approximately 1 cfs and the project would not create an impact from groundwater deficits, cumulative or otherwise, to the Bear River watershed.

Comment: This 49,000 acre feet equals the capacity of Scotts Flat Reservoir. This loss is compared to losing an entire reservoir worth of water supply that is located in a position to be utilized by the local water district, unlike the mistaken assertion of availability by this respondent, who seems uninformed about the water distribution system. See Comment #3 to response #1. Further if NID loses a reservoir worth of water, they may be driven to create yet another reservoir to replace what is lost, again threatening Bear River.

Response to Comment Ind 199-5 The commenter asks for a risk assessment related to drier landscapes and increased wildfire from groundwater removal. As stated on page 4.13-21 of the DEIR, the dewatering of the mine would not affect the available moisture for vegetation in the project area because the existing depth to groundwater is already below the typical

rooting depths in higher topographic areas while adequate flows would occur in South Fork Wolf Creek and Wolf Creek to maintain groundwater levels in the lower topographic areas. The dewatering would not, therefore, increase fire risk due to reduced groundwater levels. Please also see Master Response 33 - Groundwater Dependent Vegetation.

See comment #1 on response #1. The respondent uses false assumptions and circular reasoning. This analysis ***splits*** *off the surface water from the greater groundwater system to avoid cumulative affects which is in violation of CEQA.*

Response to Comment Ind 199-6 ….The Basin Plan does not specifically identify beneficial uses for South Fork of Wolf Creek but does identify present and potential uses for the Bear River, to which the South Fork of Wolf Creek and Wolf Creek are tributary. As discussed on page 4.8- 31 of the EIR, the beneficial uses of Bear River and South Fork Wolf Creek are identical and therefore the potential downstream impacts to the Bear River are already analyzed in the DEIR.

Comment: Bear River and Wolf Creek are distinctly different in that Bear River has Greenhorn and Steephollow Creeks which contribute mercury and additional historic mining impacts as well as Wolf Creek. The false assumption that these two different streams are the same is a fatal flaw. Bear River water quality is analyzed in the Bear River Watershed Disturbance Inventory and Existing Conditions Assessment 2016 Sierra Streams Institute. Any increase in toxic mine wastewater coming into Bear River will further diminish water quality. Nevada County should be promoting restoration projects for water quality, not further legacy mine pollution.

Response to Comment Ind 199-10 Rise Gold owns subsurface mineral rights and has the right to dewater the underground works to access the valuable minerals subject to a permit from the County. Moreover, Rise Gold has appropriate water rights on its properties.

Response to Comment Ind 199-11 The public trust doctrine applies to navigable waters, but not to groundwater in subsurface mine works.

Comment: This situation is similar to large corporate agriculture in Southern California where families cannot sustain themselves with their wells because the big corporate straw is deeper in the ground. ***Where does Rise Gold's water rights end and the Public Trust water begin?*** *The citizens of our area and their water is being taken by another extractive industry under the guise of "beneficial use". This taking of our groundwater is not benefiting anyone but Rise Gold.*

Response to Comment Ind 199-12 As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water

available downstream if it desired to. The beneficial uses for water in South Fork Wolf Creek are provided on page 4.8-31 of the DEIR. Rise Gold owns subsurface mineral rights and has the right to dewater the underground works to access the valuable minerals subject to a permit from the County. Moreover, Rise Gold has appropriate water rights on its properties.

Response to Comment Ind 199-13 Rise Gold owns subsurface mineral rights and has the right to dewater the underground works to access the valuable minerals subject to a permit from the County. Moreover, Rise Gold has appropriate water rights on its properties. The public trust doctrine applies to navigable waters, but not to groundwater in subsurface mine works.

Comment: (See Response 1, Comment 1) the respondent falsely claims that there will be surplus water created by moving water out of the ground and putting it on the surface and down Wolf Creek. This is ridiculous and demonstrates circular reasoning. The water is finite in a closed system and moving it around does not create surplus water.

(See Response 1 comment #3), The respondent asserts that this water can easily be used by downstream users. That is another false assumption. Most of the NID district is higher in elevation and cannot use the water. There is only one diversion on Wolf Creek and the Tarr Ditch is of limited capacity. There is also a disconnect in timing of the water releases as use is seasonal and not needed during winter months. There is no impoundment between this mine and Camp Far West reservoir. ***The water will be lost to the people of our community!***

Further comment: The respondent states Rise Gold's rights "subject to a permit from the County", and that is where the Public Trust comes forward. You see, our water, according to the California Constitution, belongs to ***The People*** *who elect the County Representatives and who have the legislated authority to* ***not approve a permit*** *to dewater our groundwater for the exclusive benefit of Rise Gold corporation.*

Response to Comment Ind 199-14 The commentor suggests that fractured rock aquifers are not well understood. Please see Master Response 14 - Adequacy of Groundwater Model. The commenter also appears to allege that there is no mitigation provided with regard to groundwater depletion. However, the DEIR requires implementation of Mitigation Measures 4.8-2(a), 4.8-2(b) and 4.8-2(c) to mitigate water supply Final EIR Idaho-Maryland Mine Project December 2022 Chapter 2 – Responses to Comments Page 2-5690 impacts related to dewatering. Please also see Master Response 15 – Adequacy of Groundwater Monitoring Wells.

Comment: The respondent cites a groundwater model that measures groundwater by multiplying the volume of precipitation in inches by the acreage of the District. This is a gross volume that doesn't account for runoff, impermeable surfaces and various rates of saturation and permeability. Further, the respondent pretends that water below well depth does not constitute groundwater subject to consideration. These are assumptions that may compromise the validity of the model.

Offering NID treated water as a mitigation for well dewatering is not practical, preferred, or acceptable for many people. It is an act of covering up real, long-term threats and unacceptable outcomes with optimistic, rosy predictions; that there will be no delay, that people would rather have chlorinated water than well water; and that they want to pay for water that was once free. The truth is that this ***Significant Impact*** *cannot be mitigated!*

Nevada County BOS and Planning Commissioners,

I am Tony Lauria. My wife Lauren and I live at 13784 Greenhorn Rd GV

Please take a short few minutes from your busy day to fully read our important message.

I "beg" you to say NO to the certification of the FEIR and NO to the project. No Build - No Project!

I could easily write an essay on how utterly wrong this mining proposal is for the thousands of people who live here in Nevada County. Over the past couple years, I've actually compiled most of that writing already, which is a testament to the impact not discussed; how severely stressful life has become dealing with the potential consequences of not being able to stop this life threatening proposal. As I mention below, the words, *risk* and *potential*, are not accurate at all. There are impacts that *cannot* be mitigated to less than significant. There is no possible outcome other than the demise of our community, with an active mine permitted to reopen.

I was told by one of your commissioners that this is a democratic process, and I "do not have to beg" for justice in this matter. While I genuinely appreciate his sincerity, the sentiment seems to be out of sync with the impact reports published by county staff. As I witness the disregard to blaring deficiencies in the DEIR, resulting in an FEIR candidate, I am left astonished and abandoned by my county officials, in the fight for justice to save our residency from the horror of a devastating mine, 1 mile away. Were this a democratic process, a public referendum would be the deciding factor. And that factor would see this

proposal rejected by an overwhelming decision. I'm sure you have seen the No Mine signs on, virtually, every road in GV and NC.

The fact that our home is listed as one included in a well monitoring program, indicates there *is* a risk to our well being damaged, contaminated or drained. Just as any of you would not allow a theft of your property, we will not allow anyone to risk our health and well being by stealing our water and quality of life. Any action to place our well at risk is illegal. I do Not give permission to risk our only clean water source to any company or individual. I did Not ask for this mine to be reopened. I would have absolutely No benefit. The reopened reality would be a severe contrast to any benefit. My family and home would be subject to significant devaluation, financial hardship and a litany of health issues caused by mining operations. We would be forced to vacate our wonderful home of 32 years. There is no possible way we could survive within proximity of such a contaminated environment of air and noise pollution, not to mention the loss of our water.

Again, as I see it, this is an illegal act against my family's private possessions; Our only source of water, in a well that we paid for, and our home/property, that has a stated current value. Any action that threatens to damage either, is unacceptable and must not be allowed to proceed.

My comments and questions on the DEIR were not answered or addressed to my satisfaction. Here are the reasons:

1. There *will* be impacts. Contrary to what the gold mining company has stated in their press releases, it is fact, based on evidence from all the previous mining done in this county, that there *will* be environmental compromises. Virtually every former mine site is still contaminated. Ironically, the IMM and Centennial site are currently on that list. Experts have documented their opinions that support the likelihood of impending disasters. A brief search on the web shows the prevalence of gold mining gone wrong, all over the western US and Canada. There's no speculation in this regard, and no exception for the IMM.

2. There *will* be significant impacts to domestic wells. The extent of how many will be drained, damaged or contaminated cannot be known due to the complex hydrogeology within the entire mineral rights boundaries, and beyond. Dewatering, at the projected rate of millions of gallons per day, *will* cause

impacts to our precious resource. The FEIR even acknowledges that. Water is far more important to the well being of the community that gold in the pockets of foreigners.

3. There *will* be significant impacts to air quality. It is impossible to fully contain the silica and asbestos dust that will be discharged during the mining process. This entire area is known for it's serpentine rock, which contains this asbestos. When ground up and hauled out of the earth, it *will* disperse into the atmosphere. The particles of asbestos and silica dust can travel for miles in the wind and the FEIR's plan for managing the mine waste relies on such a grossly simplified method of monitoring asbestos levels, that we'd be fools to believe that process would be accurate.

3b. The thousands of tons of exhaust by machinery and one hundred plus truck loads per day, *will* result in a significant health hazard for breathing, as well as contribute enormously to the global problem of excess carbon in the atmosphere, which is causing our climate change.

4. High explosive blasting *will* be a significant impact to all the residents within the mineral rights area of the mine. It is impossible to contain the vibration and noise of an active process of blasting thru solid bedrock below residential areas. Fact; during the short exploratory drilling off Bennett St, the residents were subject to deafening noise and home shaking vibration for days.

5. Home & Property values *will* be significantly reduced. That loss could be 100% if the only source of water for the home is a well, and it is drained from the mining operations. All local Realtors agree that the loss in home values will be significant. No direct comparison to this area was found in the economic report. In this respect, the economic report was inaccurate and useless. Even the former president of the realtors board has taken a public position of denouncing the reports unsubstantiated claims of no loss to property values.

6. The risk factors far outweigh any potential monetary gains for the county. One disaster, such as the Siskon Mine, or Banks Island spills, would place a serious burden on the county to fund clean up and claims for ill health caused by the mine. This county rightfully prides itself on good budget management. However, a single catastrophic even could put a massive burden on those figures. There is no worthwhile economic reason to accept that risk when balanced against the real potential for extreme hardship imposed on the

community.

6b. Did Mossman's previous company go bankrupt? Yes! Who would be responsible for damages and clean up if Rise Gold goes bankrupt? Nevada County, and the residents therein.

7. The credibility of the CEO of this mine company is significantly flawed. He is currently in litigation for 29 charges of environmental failures in Canada. This CEO cannot be trusted. He has released many published statements that are not true, such as, "there will be no impacts" and "the community overwhelmingly supports the mine". The opposite is the actual truth. Is this a company you would want to open a business in your town? It is more than obvious they are interested in a profit, which does not include the well being of the community.

7b. In what FEIR world of adequate protection and fairness to the community is it acceptable to design an emergency replacement water program dependent on a negotiation with the Mining company? I should Not be required to compromise or negotiate with Rise Gold to get my water connected to NID. Would this make any of you feel protected, being forced to deal with a very unconscientious company and CEO?

8. Did the EIR provide for NID hookups to all the unserved neighborhoods where wells could be drained, as recommended by NID? No!

9. Many **wildlife species** have been captured on video in the mine site area. What will happen to these animals when the noise of operations begins? They **will vanish.**

10. Even if an adequate 3 plus year well monitoring program was put in place, it does not mitigate the stress and burden of a potential loss of one's well. It *would* be a constant concern and worry as to whether any given day is *the* day your pristine well becomes contaminated or drained. What if it's contamination from stirred heavy metals and toxins caused by drilling, dewatering or blasting? How long before you were to become aware of the problem? Did you or your family ingest any of this contaminated water before you found out? What a nightmare. In no way is there a possible mitigation for well problems. On this basis alone, there should be No permit issued. The law states, if an impact cannot be mitigated to less than significant, the operation

should not be permitted. No project! No build! I'd say the constant anxiety and worry that, at any moment, you may lose your well, and/or have your health seriously endangered, is Not mitigable. Property value loss is not able to be mitigated either. Who do you know that would buy a home with the warning, at any time in the next 80 years, it could lose it's only water source?

12. We, the community of thousands who now live in this area, **do Not approve of any rezoning to heavy industrial mineral extraction!** We did not purchase our property with a written statement that the IMM could be rezoned in the future, from light industrial, to this full blown heavy industry. This is absolutely wrong and unacceptable.

13. This entire proposal was built on either no data, or insufficient data. It has obviously been crafted to omit many aspects of real data, so it has a better chance for success. This is not the manner in which a conscientious company would do business, with a priority on the citizens well being. Furthermore, the economic report was dismantled by experts and deemed flawed in virtually every aspect of its findings. The DEIR was the beginning of documents submitted with deficiencies, and flawed, or no, data. Numerous expert comments were submitted to expose this fact.

14. There is a high probability that the IMM will be abandoned from, either the lack of funding to produce a result, higher mining costs, or an environmental disaster, such has happened before in countless mines. In any case, the burden of clean up will be on the county and it's residents. This will be in the tens of millions. Is the county prepared for this likely outcome?

15. This project *will* create a nightmare for wildfire evacuations. With the estimated 600 employees, and the thousands of residents down Greenhorn and other surrounding roads, there *will* be a complete inability for traffic to clear from the area. Furthermore, thousands of gallons of onsite diesel and tons of high explosives, *will* be a significant hinderance to containing wildfires, and prevention of such fires.

Is any of this an alarmist attitude and over reaction? Absolutely not! What is being touted as a money maker for the county is really a swindle for the thousands of residents that will be seriously affected by this mine.

Please say NO to this project and put a stop to this threat to our health, safety and well being. Any other decision is, *literally*, a sentence to force us into the extreme hardship of moving out of our home, at a great emotional and financial loss.

Please be part of the evolution to change the injustice of money and power being the deciding factor. Choose the priority of well being for citizens and the planet, over promises of profit.

Thank You

Re: Rise Gold mining permit.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Walt Froloff. I live in Grass Valley, CA 95945.

Just a friendly reminder of how the IMM gold mine re-opening would affect the county and the Nevada County Supervisor 2023 Objectives (see https://www.nevadacountyca.gov/731/Board-of-Supervisors). The NC BoS objectives include eight community priorities.

1. Fiscal stability:

As shown in the NC Econ study and EIR the risk and liability to the county will increase due to accidents, traffic, insurance, monitoring, compliance measures, fire department and police department services.

2. Emergency preparedness:

Will require a larger budget to prepare for mine catastrophic fires sweeping through the IMM launching poison/toxic fumes from stored processing cyanide/mercury, toxic dust from mine tailing, property stored dynamite/explosives, debilitating smoke from wind-suspended particulate, accidents, and toxic waste spillages from trucks carrying toxic dust mine tailings and insurance costs for new emergency community liability.

3. Economic development:

The county econ study only starts with a profitable mine operation. There is not any evidence that the mine will be profitable. On the contrary, mines were closed because they could not be profitable even when environmental or community costs were not considered. It's not rocket science to show that the likely outcomes from mine operations will bring a depressed economy, driven by lower tourism due to toxic environmental factors, traffic, and slow-moving truck-dominated highways and streets. Depressed real-estate property prices lowered property assessment funds, and locals escaping noise, traffic, and pollution for dining else ware. The largest economic sink will be from an unprofitable gold mine operation taxing county services and eventually leaving a toxic mess to be cleaned up by the county and state and an economic dumpster for the county.

4. Broadband:

A useless investment in a technology that will bring no new workers or clients due to low-wage mine workers sucking up any available housing and county resources and creating a low-income impoverished community and cheap labor force for a mining industry seeking unskilled pickaxe welding laborers.

5. Climate resilience:

Climate resilience would have projects where ground/well water/air or natural resources are being replenished or restored. A mine operation absorbs any and all available ground/well water and discards wastewater into a surface creek that will be flooded uniformly from mine dewatering. Toxic waste dust and tailings finding their way into the air will need to be contained. Mining destroys the fragility of nature's balance and is the antithesis of climate resilience.

6. Housing:

Any IMM employment will bring in a tighter housing market based on projected workers arriving and this without any benefit to the community unless the IMM is very profitable, which is most certainly NOT going to happen for an abundance of reasons.

7. Homelessness:

An increase in homelessness can be expected as the IMM will be hiring people that are desperate. Desperate for unskilled labor opportunities, those who aspire to weld a pickaxe a mile underground because mining is their only career choice available.

8. Recreation:

With a mining industry we will experience a decrease in recreation in the county due to toxicity in the mountain streams keeping tourists out of the water, dead or inedible fish keeping fishermen out of the water, and traffic keeping everybody else recreating at home or at destinations out of the county. This brings us back full circle to the founding of Nevada City, built by miners engaged in "drinking, violence, and whoring" to pass any time outside the mines — recreating.

Conclusion - These are your board's objectives for the county in 2023 as they will trend **if** a gold mining operation is permitted, an operation for an industry that ceased being profitable even without regulations 70 years ago and will not now be so. Instead it will be an albatross

around the neck of the county. The BoS has one decision, whether or not to sink Nevada County for the next 100 years. Our Nevada County is still reeling with the gold mine's environmental damage from a hundred years ago — by founders with good intentions, but without understanding. You now have an understanding. Vote no on the permit. Please stop the insanity now.

Sincerely,

Walt Froloff

Dear Planning Commissioners,

Thank you for affording that extra bit of time today to hear all the comments from The Wells Coalition, San Juan Ridge Taxpayers Association, and Community Environmental Advocates Foundation about the Final EIR for the proposed Idaho-Maryland Mine.

We provided printed copies of the first five comments during the meeting. For your records, I am also attaching digital copies of our comments.

This digital file includes a sixth comment that wasn't provided in print - the one made by Laurie Oberholtzer on behalf of CEA Foundation.

As always, we genuinely appreciate your time and attention.

Subject: Protection for Wells Near Idaho-Maryland Mine Still Not Adequate

The Wells Coalition is a group of well owners near the Idaho-Maryland Mine. Our purpose is to protect our only source of water, our wells.

We are astounded that a comprehensive domestic well monitoring program was not established *before* the Draft EIR was published last year. Such a program is a necessary step to establishing the baseline data required by CEQA. It's clear that this omission was recognized in the Final EIR, but the proposed solution is little more than a band-aid that doesn't actually address the serious, underlying problem.

Even though there are over 300 properties with wells within 1000 feet of the Mine's mineral rights area, neither the draft nor final EIRs provided current monitoring data from these domestic wells. They relied only on *sparse patches of data from over 15 years ago*. The quality of this input data is one of many concerns identified by numerous experts who contradicted the findings of the Draft EIR's groundwater study in their written comments.

The EIR's primary approach is to install fifteen non-domestic *monitoring wells over a limited area* to do the job of predicting impacts for all water supply wells. With our complex fractured bedrock spread over thousands of acres, this approach is inadequate. This is further complicated by the fact that the estimated area of potential impact is based on the findings of a questionable study. In addition, the 378 properties identified in the Final EIR's *supplemental domestic well monitoring program* only capture about 150 of the 300 plus wells in the mineral rights area.

Timing of baseline data collection, however, is really the central issue. CEQA requires that a baseline be established prior to the evaluation of potential impacts. This was not done. With mine dewatering, previous dry years, and drought still predicted for the future, it is imperative that we get this right. Adding a well monitoring program *after* the project is approved and just one year before the mine is dewatered - as the Final EIR proposes - is not only out of compliance with CEQA, but is also extremely shortsighted and risky. Multiple experts provided comments telling us that it takes a minimum of 3 years to establish a reliable baseline in order to account for year-over-year variations.

Also, under CEQA a mitigation measure must be achievable, enforceable, and must be capable of actually reducing the Project's impacts. The Final EIR's supplemental domestic well monitoring program is not even defined as a mitigation.

Not having a baseline established by a properly constructed *domestic* well monitoring program before publishing a Final EIR is unacceptable. Our wells are not currently being monitored. Since it will take several years for Rise Gold to establish a reliable baseline, we request the current EIR be rejected and that any future EIRs include at least 3 years of comprehensive well monitoring data.

Sincerely,

Christy Hubbard (District 3 resident)

Nevada County Planning Commissioners
950 Maidu Avenue
Nevada City, Ca. 95959

Dear Commissioners,

My name is Sol Henson, I grew up on the San Juan Ridge and hold a master's degree in hydrology. I am the president of the San Juan Ridge Taxpayers Association and speak for the Association today. I'm here to talk about the importance of baseline monitoring for wells to protect our community from industrial mining impacts.

In 1995 Siskon Gold operated a gold mine in the North Columbia Diggings on the San Juan Ridge. During mining operations, they breached a water bearing fault-line 300 feet underground. This breach led to the loss of nearly a dozen wells including the well for our middle school and the community Cultural Center. This was a disaster for those who lost their wells, but we still do not know the extent of well impacts. Some wells may have lost 50% or even 75% capacity but without baseline data, owners could not prove that the mine had impacted their wells.

This was a single catastrophic event. Wells are more commonly impacted by the extraordinary amount of water pumped out of mine tunnels just to maintain daily industrial mining operations. Over time, millions of gallons of water a day must be removed from the surrounding fractured bedrock aquifer. In such cases, well impacts can be slow to develop and can be hidden within seasonal cycles.

In 2012, the San Juan Ridge Mine Corporation submitted a new permit application to mine the North Columbia Diggings. Exhibiting due diligence, and with community input, the County helped to create a baseline monitoring program for domestic wells. This program established a baseline through monthly collection of water quantity and quality data. This information would have been invaluable for the environmental review process. Should the mine have been permitted, well owners would have had recourse to say with some confidence if their well had been impacted.

We firmly support the precedent of baseline monitoring for projects of such scale and impact as the Idaho Maryland Mine. Significant monitoring programs have been developed in the past for the IMM site, including for the 1996 permit to dewater the mine for exploration and the 2008 Emgold Mine environmental review process. It is unclear why the current Rise Gold effort to permit the IMM lacks a monitoring plan that would form a baseline for water quantity and quality of domestic wells in the surrounding area. We believe that the community is owed these safeguards and that CEQA requires it. Thank you very much.

Sincerely,

Sol Henson

planning@nevadacountyca.gov

Subject: the Idaho-Maryland Mine Final EIR groundwater hydrological model predictions and risk to domestic wells in the area of the Project.

The proposed well mitigations in the Final EIR for Rise Gold fail to acknowledge that there are significant risks posed to domestic wells in the surrounding area of the Idaho-Maryland Mine project, and it does not comply with CEQA.

The Final EIR for Rise Gold states:

" All potentially impacted wells are located in the E. Bennett Road area. Domestic water wells outside this area will not be impacted." [1]

But expert opinions contradict the certainty of these statements, citing repeatedly the uncertainties in hydrologic predictions and impacts to wells:

Emgold's 2008 DEIR for the Idaho-Maryland Mine states

"Due to the uncertainties regarding the complex geology and groundwater flow, dewatering ***impacts to domestic water supply wells cannot be accurately predicted."*** [2]

Also, Emgold's project description states

*"****The geologic formation in which the mine is located is fractured bedrock whose hydrogeology is difficult to predict.*** *Therefore, reliance on Domestic Well Level Monitoring Program data will be required to assess impacts and discern appropriate* ***mitigation measures for each domestic well*** *owner."* [3]

After reviewing the hydrology computer model from the EIR for Rise Gold an expert hydrogeologist in groundwater modeling stated

"Even a well calibrated model has a large uncertainty to it, in its predictions.

It turns out that this model is not well calibrated, so the uncertainties are almost certainly larger."[4]

The hydrology report for the Idaho-Maryland Mine's 2008 EIR affirms the uncertainty in predicting whether ground water from near surface well waters may drain down into the deeper mine workings.

"The groundwater in this particular area is contained in and flows through fractures in near surface bedrock and because of this fracture flow regime, the groundwater flow in quantity varies considerably with location and ***cannot be predicted with certainty. Furthermore, complete hydraulic separation between the deeper groundwater within the underground mine workings and the shallow groundwater within fractures and supplying the domestic wells cannot be assumed."***[9]

Even the hydrologist who prepared the hydrology computer model for the EIR, told the NID board of directors.

"***With fractured rock there will always be uncertainty and during my career there won't be any 100% confidence in predictions."***[5]

It is because of these uncertainties that we are appealing to you to require protection for all wells with a comprehensive well monitoring plan for at least 3 years to gather baseline data to be used in a revised EIR.

Thank You,

Gary Pierazzi
The Wells Coalition
wells@cea-nc.org

Additional expert opinion quotes regarding uncertainties in groundwater modeling and fractured rock.

"The EMKO Report describes a three-step procedure used to assess potential drawdown effects in perimeter areas. A major assumption underlying the procedure is that flow contributions from the workings are distributed uniformly across the mining areas after correcting for depth. ***However, the subsurface distribution and orientation of bedrock fractures is not uniform and is subject to uncertainty. Discussion of this uncertainty and the overall uncertainty of the analytical and numerical model predictions with respect to groundwater level impacts on individual wells should be provided. expanded to include an assessment of the uncertainty in the conclusions developed by Todd Engineers."****[6]*

"Although the analysis is considered conservative in methodology, ***several complexities in the groundwater system could potentially result in a larger or smaller radius of influence. Although larger impacts seem unlikely, it is difficult to prove that aberrations in the system do not exist."*** *[9]*

"Uncertainties in the analysis indicate that monitoring should occur over a slightly larger area than where impacts are predicted. In addition, the monitoring program should consider adjustments specifically for geologic faulting." *[7]*

"Monitoring locations should also include areas outside of the predicted impact zone to account for uncertainties in the analysis," *[7]*

"The fracture systems existing in buried bedrock beneath Grass Valley are not mappable within the resolution needed to predict specific dewatering effects. Technology and state-of-the-art hydrogeology have not developed to a level that fracture mapping is possible. Due to this limitation, hydrogeologic modeling is attempted by making an assumption on fracture connectivity." *[8]*

"Based upon the significance criteria established on page 4.3-4, ***the risk to all wells within the study area, regardless of risk category, represent a potentially significant impact."*** *[10]*

"The study area has not been monitored by an approved groundwater monitoring system designed to observe the dynamics associated with subsurface hydrology. Therefore, ***many of the initial unknown hydrogeologic and geologic parameters located within the earth between well and mine elevations still exist."***

planning@nevadacountyca.gov

I'm a resident & well owner in district 1.

I can appreciate the inclusion of a well monitoring program in the FEIR, but it falls significantly short of what we really need. I should not have to beg for protection from the county to keep our sacred resource safe. Our well is amazing! It provides safety from wildfires by allowing us to maintain green space. It keeps my family and pets healthy and happy. Just imagine what you would do if the water in your own home suddenly vanished. Your spouse and kids, asking what's wrong with the water? Oh my god! Without water my property is worthless! How could this have happened? Where is the protection from my county?

Experts have weighed in on the amount of monitoring time necessary to obtain a dependable baseline. In some cases, 3 years is not even enough. It's also a stretch to accept a program that is deficient in infrastructure to replace my water resource if it becomes damaged? As I read the details, I would be subject to some sort of nebulous negotiations with Rise Gold to get my water
connected to NID. Would this make you feel protected? To be forced to deal with a CEO that has demonstrated severe environmental failures in Canada, and spreads contrary information through press releases and interviews, stating, "there will be no impacts", or, "the community overwhelmingly supports the project"?

I should not be required to compromise or negotiate when it comes to an intruder causing harm to my family and home. None of the hundreds of well owners asked for this. None of us would be the recipient of any benefit whatsoever. We need complete protection from this potential catastrophe, with a comprehensive well monitoring program that is designed around the adequate years necessary to produce dependable data. This data should have been obtained before the DEIR, according to CEQA. This program must also lay out, in specific details, the transfer to an equal replacement water source, with all necessary infrastructure in place, and independent from Rise Gold for immediate implementation when a well fails.

Our stress levels are off the charts dealing with these potential consequences, including financial ruin and loss of our nest egg. The fact that I must beg for protection in 3 minutes here is just as stressful. No one here today would accept even the tiniest risk that they could lose their water in exchange for gold in the pockets of strangers. I implore the board reject this FEIR and take
everything back to the drawing board with our protection as top priority.

Groundwater Baseline Requirements and the Idaho-Maryland Mine EIR

Presented as Public Comment to the Planning Commission Jan 12, 2023

The California Environmental Quality Act (CEQA) does not allow the deferral of important studies necessary to characterize a project's impacts.

According to CEQA Guidelines § 15125(a), an Environmental Impact Report (EIR) must include an accurate description of a project's environmental setting, which provides "the baseline physical conditions by which a lead agency determines whether an impact is significant."[1] It goes on to state: this baseline "should describe **physical environmental conditions as they exist at the time the notice of preparation** is published."[2] (i.e. before the Draft EIR is prepared.) The purpose of this requirement is, per CEQA Guidelines, "to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts."[3] And the court case of *Save Our Peninsula Com. v. Monterey County Bd. of Supervisors (2001)* affirmed that point: "Without a determination and description of the existing physical conditions on the property at the **start** of the environmental review process, the EIR cannot provide a meaningful assessment of the environmental impacts of the proposed project."[4]

Note that the Rise Gold project Final EIR clearly acknowledges that this baseline is needed. It states that for each domestic well, a projected and seasonally averaged water level shall be estimated **"...which will serve as a baseline groundwater level.**"[5] But this **incorrectly defers** the collection of the needed additional groundwater data to after the EIR process is over.

Let's look at it using common sense. Unless the EIR identifies current well levels and related data, it cannot establish performance criteria and evaluate how dewatering may impact wells, and it's not possible to define appropriate mitigations. For example, Rise Gold's hydrology model estimates that water levels will drop between 1-10 feet for over 150 wells. But there is no current data that could tell what the impact would be to well owners. A two foot drop could be critical. How would that be determined? Are some wells near failure? We don't know.

CEQA law, County precedents, and common sense all say the same thing: Collection of the well data should have been included in the Draft EIR, not deferred until after the CEQA decision has been made.

Current domestic well monitoring data should have been collected and included in the EIR to establish a baseline so that it can be reviewed and then used in the decision making process. The County has ignored this critical step and released an inadequate Final EIR.

Thank you.

Just Say No to the Final EIR and the Idaho Maryland Mine

Presented to the Nevada County Planning Commission 1/12/23

The previous speakers made it very clear that the groundwater impacts of the proposed mine have not been adequately addressed in the Final EIR… and could be catastrophic. Rather, the Final EIR holds to their Draft EIR conclusion, with no additional analysis, that impacts will be less than significant.

This is a theme throughout the Final EIR responses. The consultants continually dismiss comments from our technical experts on numerous big-ticket impacts, against all common sense, and continue to conclude that impacts will be less than significant.

That is why when we come before you in the next few months, we will ask you to just say no. Please do not certify this flawed EIR. And do not approve the project. The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If you deny the Project, the County is under no legal obligation to certify the EIR. This has been well-litigated by other counties.

The bottom line is that the community overwhelmingly does not want the-Idaho Maryland Mine to reopen. We believe that the impacts will be severe, and it will permanently alter the community we have become since it was closed down almost 70 years ago.

There is no reason to continue with the EIR. We believe that continuing the EIR will just cost the County in loss of your time and energy as well as that of your staff and the community. We can better spend this time on critical issues like wildfire safety and climate change.

Yes, you can certify the EIR and deny the project just to get it out of the way. But do we want a flawed EIR in our records that can be used in the future by the next Canadian gold mining company?

We appreciate that staff and the decision makers have worked so well with the community.

Now we are asking you to please say no to the Final EIR and the mine.

Thank you for your time,

Laurie Oberholtzer

Re: Idaho-Maryland Mine Project Final Environmental Impact Report

Dear Mr. Kelley:

On behalf of Community Environmental Advocates Foundation (CEA Foundation), we respectfully submit these comments in connection with the Final Environmental Impact Report (FEIR) for the Idaho-Maryland Mine Project (Project). As demonstrated in our comments on the Draft Environmental Impact Report (DEIR), the DEIR failed to comply with the California Environmental Quality Act (CEQA), Public Resources Code section 21000 *et seq.* Numerous inadequacies in its scope, project description, and analysis and mitigation of environmental impacts precluded any meaningful review of the Project, and required that the DEIR be revised and recirculated. Our comments had also explained that it would be improper and infeasible to attempt to correct these deficiencies within an FEIR.

Unfortunately, the FEIR has not fixed the myriad issues in the DEIR. In particular, it continues to erroneously exclude the remediation of the Centennial Site from the Project description and environmental baseline. Its alternatives analysis also remains deficient. And it has not adequately addressed the numerous faults in the DEIR's analysis and mitigation of impacts related to waste rock and tailings, hydrology, water quality, air quality, greenhouse gas (GHG) emissions, or energy use. Because the EIR remains deeply flawed, CEA Foundation urges the County to deny the Project and not certify the EIR.

This letter, along with the February 2, 2023 report prepared by Baseline Environmental Consulting regarding air quality, GHG emissions, and energy use (attached as Exhibit A), constitute our comments on the FEIR. Please refer to that report for further detail and discussion of the FEIR's continued inadequacies.

I. The EIR still fails to describe the Project accurately or to use an accurate baseline by refusing to admit that the Centennial Site remediation is part of this Project.

We previously commented that the DEIR's project description is flawed because it improperly excludes the proposed remediation of the Centennial Industrial Site (the "Centennial cleanup") pursuant to a Voluntary Cleanup Agreement with the California Department of Toxic Substances Control ("DTSC"). The DEIR also lacks a legally adequate baseline because it assumes the Centennial cleanup will have been completed as the baseline to analyze certain impacts, while using existing conditions—*i.e.*, without the cleanup—on the site as the baseline to analyze other impacts. The FEIR failed to correct either of these problems.

A. The FEIR does not correct the improper project description, but instead continues to omit the Centennial cleanup.

The DEIR's project description is legally inadequate because it excludes the required cleanup of existing contamination on the Centennial Site, which is plainly part of the Project. FEIR p. 2-798, 2-803-05. CEQA defines a "project" broadly to include the "whole of an action" with the potential to result in a physical change in the environment, rather than "each separate governmental approval." CEQA Guidelines § 15378(a), (c); *Nelson v. County of Kern*, 190 Cal.App.4th 252, 271 (2010) (the term "project" is "broadly construed and applied in order to maximize protection of the environment.") Where two actions are integrally related or where one is conditioned on another, they must be considered together as one project; segmenting their analysis is a way to evade a complete impact analysis, and is therefore forbidden. *Nelson*, 190 Cal.App.4th at 271.

Courts have described several ways that actions can be related such that they are deemed a single project under CEQA. *See POET, LLC v. State Air Resources Bd.* (2017) 12 Cal.App.5th 52, 74 ("[T]here are different ways actions can be related."). For example, one action is considered part of the remainder of the project when that action is "among the 'various steps which taken together obtain an objective," or when it is "part of a coordinated endeavor." *Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonora* (2007) 155 Cal.App.4th 1214, 1226, 1228 (internal citation omitted).

Additionally, activities are related and constitute a single project when they are "related in 1) time, 2) physical location, and 3) the entity undertaking the action." *Id.* at 1227.

Based on these factors and considerations, the Centennial cleanup is plainly part of the IMM Project. First, it is an integral step to achieving the IMM Project's objectives. The DEIR lists as a project objective the aim to "[i]ncrease the usable land at the Centennial Industrial Site to allow its future use as industrial land." DEIR at 3-12. Accordingly, the applicant proposes to dump the approximately 500 tons of waste rock and tailings it will generate daily on the Centennial and Brunswick sites as "engineered fill." DEIR at 3-19; *id.* at 3-29; *see also* FEIR at 2-48 (defining "engineered fill" as "barren rock and sand tailings"). The engineered fill would be graded into pads intended to support future industrial development on both sites. DEIR at 3-29. However, the Centennial site cannot be used as a dumping ground for "engineered fill" from the IMM Project until it has been remediated pursuant to a DTSC-approved Remedial Action Plan (RAP). DEIR at 3-10. The RAP similarly reveals that the objective of the Centennial cleanup is to prepare the property for use to place "additional mine waste (mine rock and crushed sand tailings) resulting from future mining operations." *See* Exhibit C to Shute Mihaly & Weinberger March 30, 2022 Comments on DEIR (Draft Final RAP) at xv. Accordingly, the Centennial cleanup is one of the steps to obtaining this Project objective. *See Tuolumne County*, 155 Cal.App.4th at 1226.

Furthermore, the review process and proposed timeline for the Centennial cleanup are closely related in time to the review process and proposed start of the IMM Project. The applicant submitted the Centennial RAP January 25, 2021. *See* Exhibit C to Shute Mihaly & Weinberger March 30, 2022 Comments on DEIR (Draft Final RAP). Around that same time, the applicant was beginning the environmental review process for the IMM Project: the County issued the Notice of Preparation on July 17, 2020, and it issued the DEIR in December 2021. And, as evidenced by the fact that the DEIR assumes the Centennial cleanup will have already occurred, the applicant aims to complete the cleanup before the IMM Project commences. Accordingly, this factor shows that the Centennial cleanup is closely related to the IMM Project. *See Tuolumne County*, 155 Cal.App.4th at 1227.

The physical location of the Centennial cleanup is also closely related to the IMM Project: the Centennial site comprises the physical site of the IMM Project. DEIR at 3-1, 3-12. Finally, the same entity is undertaking both the Centennial cleanup and the IMM Project: Rise Grass Valley, the project applicant. *Compare* Exhibit F to Shute Mihaly & Weinberger March 30, 2022 Comments on DEIR (Department of Toxic Substances Control, Voluntary Cleanup Agreement) at 1 (naming Proponent as Rise Grass Valley,

Inc.) *with* DEIR at 1-1. Accordingly, under any test used to determine whether an action is part of a project for purposes of CEQA, the Centennial cleanup is plainly part of the IMM Project. *See Tuolumne County*, 155 Cal.App.4th at 1227.

Nevertheless, the FEIR merely restates the same faulty justifications from the DEIR for its decision to piecemeal the review of the Centennial cleanup from the IMM Project. FEIR at 2-7 to 2-10. These justifications remain unsatisfactory.

First, the FEIR contends that the IMM Project is "designed to proceed whether the DTSC clean-up project is completed or is not completed." FEIR at 2-8. Relatedly, the FEIR contends that the Centennial cleanup has independent utility, serves a different purpose, and can be implemented independently of the IMM Project. *Id.* at 2-9. These assertions ignore the fact that one of the IMM Project's objectives is to reclaim the Centennial Site for future industrial use. DEIR at 3-42, 3-46. The assertions are also belied by the fact that all of the alternatives considered in the DEIR assume the Centennial cleanup has occurred and the DEIR assumed the Centennial cleanup had occurred as the baseline to analyze several environmental impacts, as discussed further below.

Accordingly, the FEIR's citation of *Banning Ranch Conservancy v. City of Newport Beach* (2012) 211 Cal.App.4th 1209, 1223, only serves to reinforce that the Centennial cleanup is part of the IMM Project. *See* FEIR at 2-8. According to the FEIR, this case provides that one of the only circumstances in which two activities will be considered a single project under CEQA is when development of the project under review requires or presumes completion of another activity. *Id.* However, that is *exactly* the circumstance here: the DEIR presumes in much of its analysis that the Centennial cleanup will have occurred. *See* DEIR at 1-6 to 1-7; *id.* at 6-16 to 6-42.

Second, the fact that the EPA identified the Centennial site for possible remediation before the applicant owned the IMM Project site, and that discussions about the Centennial cleanup "began between the U.S. EPA, the DTSC and the site owner prior to any application for the IMM Project having been submitted" (FEIR at 2-8) is immaterial to whether the Centennial cleanup is part of the IMM Project. Whether there were amorphous "discussions" and "coordination" among the parties does not change the fundamental fact that the DEIR includes as a project objective the use of the Centennial site, and that it presumes the Centennial cleanup will have occurred and relies on that presumption in its impacts and alternatives analyses.

Third, the FEIR says, the Centennial cleanup is under DTSC's control, whereas the IMM Project is under the County's control. FEIR at 2-8. However, this fact is irrelevant for purposes of defining the "project." Indeed, the CEQA Guidelines expressly state that a project comprises the "activity which is being approved and which may be subject to several discretionary approvals by governmental agencies. The term 'project' does not mean each separate governmental approval." CEQA Guidelines § 15378(c). Courts have elaborated that this requirement is meant to prevent the exact circumstances present here: a project proponent filing "separate environmental reports for the same project to different agencies thereby preventing 'consideration of the cumulative impact on the environment...'" *Nelson*, 190 Cal.App.4th at 271 (internal citation omitted). Here, the applicant filed its EIR with the County for the IMM Project, and it entered into the Voluntary Agreement and submitted the Draft Final RAP to the DTSC for the Centennial cleanup. Doing so does not change the fact that these are part of the same project for CEQA purposes, and that they must be analyzed together.

The FEIR's reliance on *Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal.App.4th 1036, is unavailing. *See* FEIR 2-9. There, the Court of Appeal upheld an EIR for the City's proposed development project on Treasure Island that would occur after the Navy had cleaned up hazardous materials on the project site. 227 Cal.App.4th at 1056. The cleanup was "the sole responsibility of the Navy," and the EIR assumed that it would be completed before the property was conveyed to the City. *Id.* at 1056-57. However, the EIR also contemplated the possibility that the City might assume responsibility for remediating certain sites on the property. *Id.* at 1057. Accordingly, although the possibility of any cleanup effort by the City was "abstract and speculative," the EIR nevertheless included a contingent mitigation measure in case the City were to assume control of the cleanup. *Id.* at 1058. The court upheld the City's deferral of CEQA analysis for any such potential cleanup, noting that the City could not "possibly know whether it will be called upon to undertake a more active role" in the cleanup. *Id.* at 1058-59.

Treasure Island does not help the County, because that case did not address whether the Navy's cleanup should have been part of the project being analyzed in the EIR. Instead, the court was addressing the question whether the City had properly disclosed how it would manage and dispose of hazardous materials in the event it took responsibility for part of the cleanup. *Id.* at 1058-59.

Additionally, to the extent the court in *Treasure Island* sanctioned reviewing the cleanup separately from the later development project, the facts of that case are distinct. There, the Navy, rather than the project proponent, was responsible for cleaning up the

site. *Id.* at 1056-57. Here, the project applicant is responsible for both the Centennial cleanup and the IMM Project. Furthermore, the Navy cleanup was already under way in *Treasure Island*, and nearly half of the project site had been cleaned up or was uncontaminated. *Id.* at 1056. And, the cleanup activities would occur "with or without the Proposed Project." *Id.* Here, in contrast, it is unclear whether the Centennial cleanup will be approved let alone whether it will be completed during the lifetime of the IMM Project. Accordingly, while it might have been reasonable to assume the Navy cleanup would occur in *Treasure Island*, there is no similar reason to assume that the Centennial cleanup will occur, nor to rely on that assumption to analyze impacts or alternatives.

Finally, in the alternative, even if it were appropriate to sever the Centennial Cleanup from the IMM Project, the DEIR and FEIR would have erred by failing to analyze the cumulative impacts of these projects together. CEQA requires the "cumulative effects of two separate projects which are 'individually limited but cumulatively considerable' to be addressed in the EIR." *San Joaquin Raptor Rescue Center v. County of Merced* (2007) 149 Cal.App.4th 645, 733 (citing Pub. Resources Code § 21083(b)). Because the Centennial Cleanup was severed from the project description, and the combined effects of the Cleanup and the IMM Project were not considered in the DEIR or the FEIR, these documents provide an "inaccurate assessment" of the IMM Project's impacts. *See id.* at 733.

B. The FEIR does not correct the inaccurate and shifting baseline, which assumes for some impact analyses that the Centennial Cleanup is complete, and for others that it is not.

As we explained in our comments on the DEIR, CEQA requires that an EIR include an accurate description of a project's environmental setting, which provides "the baseline physical conditions by which a lead agency determines whether an impact is significant." CEQA Guidelines § 15125(a). This baseline "should describe physical environmental conditions *as they exist at the time the notice of preparation is published*." *Id.* (emphasis added)."Without a determination and description of the existing physical conditions on the property at the start of the environmental review process, the EIR cannot provide a meaningful assessment of the environmental impacts of the proposed project." *Save Our Peninsula Com. v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 119. CEQA also prohibits the use of "hypothetical conditions, such as those that might be allowed, but have never actually occurred, under existing permits or plans, as the baseline." CEQA Guidelines § 15125(a)(3).

Here, the DEIR pretended that the Centennial Site cleanup was already completed in its analysis of aesthetic impacts, agriculture and forestry resources, biological resources, hazards and hazardous materials, and wildfire risk. DEIR at 1-6 to 1-7. However, in the analysis of other impact areas and elsewhere, the DEIR and FEIR acknowledged that the Centennial Site cleanup might not be approved by DTSC. *See, e.g.*, DEIR at 1-3, 3-26; FEIR at 2-8 (acknowledging the cleanup might not be completed within the life of the IMM Project).

In our comments on the DEIR, we explained that it was improper to define existing conditions with reference to conditions "expected when the project becomes operational" because there is no guarantee that the Centennial site cleanup will have even begun—let alone been completed—before the Project begins operations. FEIR at 2-801. The DEIR *itself* acknowledges that the cleanup may not be approved by DTSC, and may never be completed. DEIR at 1-3, 3-26. Accordingly, the DEIR's use of a hypothetical baseline for various impact areas in which the Centennial cleanup has already occurred renders its analysis legally inadequate and unsupported by substantial evidence. FEIR at 2-801.

The FEIR contends that it was not using a future conditions baseline, but instead the "conditions expected when the project becomes operational." FEIR at 2-295. However, there is no evidence that that the Centennial cleanup will have occurred such that it can be "expected" by the time the Project is operational.

The FEIR does nothing to correct this fundamental deficiency in the Project's baseline. Instead, the FEIR doubles down on its use of an inconsistent baseline for the DEIR's impact analyses. According to the FEIR, "the baseline for the Centennial Site was adjusted because the proposed project could not possibly impact that site unless and until the DTSC cleanup project has already been completed." FEIR 2-924. Therefore, the FEIR says, "presenting the Project's impacts to the Centennial Site based on the pre-DTSC Project conditions would be misleading . . . and would not represent actual project impacts." *Id.*

To the contrary, it is the EIR's strategy of separating the Centennial cleanup from the IMM Project that it is misleading. The EIR truncates its environmental analysis and only considers a portion of the impacts attributed to the IMM Project, without considering the considerable impacts of the Centennial cleanup. By assuming the Centennial cleanup has already been completed for purposes of defining the baseline to analyze impacts—while at the same time claiming that it may never happen and is not part of the Project—the EIR ignores the impacts caused by the Centennial cleanup. *See*

Woodward Park Homeowners Assn., Inc. v. City of Fresno (2007) 150 Cal.App.4th 683, 707 ("If an EIR for a construction project on vacant land uses something other than vacant land as its baseline, the EIR will report only a portion of the impacts the project will have.").

Additionally, the EIR's inconsistent baseline precludes a consistent description of the IMM Project's impacts. CEQA allows the use of multiple baselines only if the EIR compares the project to *each* of the baselines. *See Woodward Park Homeowners Assn., Inc. v. City of Fresno* (2007) 150 Cal.App.4th 683, 707. For example, in *Woodward Park* the EIR acknowledged that the existing condition of the project site was a vacant lot, but then in many instances it compared the project's impacts to those of the maximum buildable development under zoning and plan designations. 150 Cal.App.4th at 707. Had the EIR actually evaluated the project's impacts "in relation to *both* a vacant lot *and* a large development permissible under existing zoning and plan designations," the court found that the treatment of the baseline would have been legally correct. *Id.* Instead, the EIR largely compared the proposed project to buildout possible under the zoning, "combined with a scattered, partial discussion of some of the project's impacts relative to vacant land." *Id.* at 707-08. Accordingly, the EIR did not present a "clear or consistent description" of the project's impacts compared with the effects of leaving the land in its existing state." *Id.* at 708.

The FEIR also contends it "explicitly addresses" the situation in which the cleanup might not occur by analyzing the impacts of placing engineered fill on the Brunswick Site but not the Centennial Site, and hauling the remaining fill to local and regional markets. FEIR at 2-925 (citing DEIR 1-3). In response to comments noting that the DEIR failed to analyze the impacts if the Centennial Site were not available to receive 1.6 million tons of mine waste, the FEIR merely added a condition of approval that would require the use of electric trucks to transport waste rock and engineered fill offsite before 2033. FEIR at 2-925-26. However, this condition assumes the use of electric vehicles is a panacea for all potential impacts caused by hauling this waste rock offsite. To the contrary, there may be impacts to water quality caused by the debris left by electric vehicles traveling greater distances to transport the waste rock; air quality impacts caused by dust and debris from the vehicles; GHG impacts associated with producing the electricity for the vehicles, and more. The County should revise the DEIR to analyze these potential impacts if the Centennial site is unavailable.

The FEIR asserts that our comment letter "mistakenly reference[d] CEQA Guidelines Section 15125(a)(2), for 'future conditions' baselines, but the DEIR relied on CEQA Guidelines Section 15125(a)(1), which allows use of a baseline consisting of

'conditions expected when the project becomes operational.'" FEIR at 2-925. According to the FEIR, the reliance on expected conditions was appropriate because "it is reasonably expected that the DTSC cleanup project will be complete with the project becomes operational." *Id.* This response is not only belied by the FEIR's acknowledgements elsewhere that the DTSC cleanup might not be completed at all within the 80-year term of the IMM Project, but it also misapprehends our comments on the DEIR.

As we explained, despite asserting that it was *not* using a future baseline, the DEIR in fact *does* use a future baseline when it assumes that the Centennial Site Cleanup has occurred. Comments at 7-8. As the CEQA Guidelines make clear, projected future conditions are simply "those beyond the date of project operations." Guidelines § 15125(a)(2). Because the FEIR and DEIR have acknowledged that the post-remediation baseline for the Centennial Site may not occur until after Project operations have begun, (DEIR at 1-3, 3-26), they are using a projected future conditions as its baseline.

Accordingly, the FEIR *must* satisfy the requirements for a future baseline, which include demonstrating "with substantial evidence that use of existing conditions would be either misleading or without informative value to decision-makers and the public." Guidelines § 15125(a)(2). The EIR may not avoid these requirements simply by asserting that it does not purport to use a future baseline. *See* DEIR at 1-4, FEIR at 2-925. Similarly, the FEIR may not avoid the requirements to justify its use of a future conditions baseline by contending that it expects the Cleanup project to be complete by the time the IMM project becomes operational, especially when it has also acknowledged the opposite is also possible. *See* FEIR at 2-925; *id.* at 2-10.

II. The FEIR does not correct the DEIR's deficient alternatives analysis.

CEQA requires that an EIR consider a "reasonable range" of alternatives "that will foster informed decision-making and public participation." CEQA Guidelines § 15126.6(a). These alternatives must "feasibly attain most of the basic objectives of the project" but "avoid or substantially lessen any of the significant effects of the project." *Id.* The DEIR's alternatives analysis was flawed both because it failed to find certain impacts significant, and therefore it did not study alternatives that would avoid those impacts, and also because it failed to study alternatives that would reduce any of the Project's significant impacts on aesthetics, noise, and transportation to less than significant levels. DEIR at 6-44; FEIR at 2-853 to 2-854.

The FEIR simply doubled down on the DEIR's alternatives analysis, reciting the number of alternatives it considered and rejected and those that it analyzed in detail. FEIR 2-924 (noting that the DEIR "considered nine different alternatives," five of which were rejected, and four of which were analyzed in detail). The County "believes" the DEIR's approach, and specifically the *number* of alternatives it considered, "provides a reasoned choice of alternatives for consideration by the public and decisionmakers." *Id.* However, the number of alternatives has no bearing on whether the EIR actually considered alternatives that could reduce the Project's significant impacts. As commenters pointed out, the DEIR's alternatives would not reduce *any* of the Project's significant impacts. FEIR at 2-853 to 2-854. For that reason, the EIR's analysis of alternatives did not permit a reasoned choice about the IMM Project.

In response to comments that the DEIR failed to find certain impacts significant, the FEIR contends these comments did not explain why the DEIR reached the wrong conclusion about these impacts. FEIR at 2-946. However, this response ignores the comments' copious discussion about the deficiency of these impact analyses. *See, e.g.*, FEIR at 2-809 to 2-817 (explaining the deficiency in the DEIR's analysis of hydrology and water quality impacts); FEIR at 2-825 to 2-837 (explaining the deficiency in the DEIR's analysis of hazards); FEIR at 2-827 to 2-833 (explaining the deficiency in the DEIR's analysis of air quality impacts); *see also* FEIR at 2-853 (explaining that the DEIR's incorrect significance conclusions tainted its alternatives analysis).

Additionally, all the alternatives, including the no-project alternative, assumed that remediation of the Centennial site would occur. DEIR at 6-16 to 6-42; FEIR at 2-855. The FEIR contended there was no reason its alternatives should *not* assume that the Centennial site is remediated. FEIR at 2-947 ("The commenter does not explain why the DEIR must assume the DTSC project is not completed for the purpose of analyzing alternatives to the project."). This assertion is belied by the FEIR *also* acknowledging the very real possibility that "Project activities would not be allowed on the Centennial Site" if the cleanup is not completed. FEIR at 2-10. As described above, the EIR also has strenuously denied that the IMM Project relies on the Centennial cleanup being completed. If that is the case, and given the potential that the cleanup may never be approved, let alone completed, the EIR should study alternatives that do not assume that the Centennial cleanup will be completed.

The DEIR also defined the Project so narrowly that very few alternatives could reasonably meet its objectives. FEIR at 2-854. "The purpose of an EIR is *not* to identify alleged alternatives that meet few if any of the project's objectives so that these alleged alternatives may be readily eliminated." *Watsonville Pilots Assn. v. City of Watsonville* (2010) 183 Cal.App.4th 1059, 1089. Attempting to defend the Project's narrowly-defined

objectives, the FEIR contended that setting a particular ore production level as an objective was necessary in order to feasibly finance and construct a mine "that will take in excess of 100 million dollars to construct." FEIR at 2-946. However, this circular logic simply assumes Project as described in the DEIR will be built and will cost 100 million dollars, thereby failing to consider alternatives that would be cheaper to construct and therefore could be feasible at lower production levels. Furthermore, this response ignores the CEQA Guidelines requirement to focus on alternatives that would avoid significant effects, even if those alternatives "would be more costly." Guidelines § 15126.6(b).

Additionally, in contending that it was necessary to achieve a certain ore production level, the FEIR ignored evidence showing that a mining project with lower production would still be economically viable. An independent economic analysis of the proposed Idaho-Maryland Mine conducted for the County showed that the project would be profitable even assuming very low reserves. *See* Exhibit B (RDN, Robert N. Niehaus, Inc., "Economic Impact of the Proposed Idaho-Maryland Mine Project," Nov. 15, 2022, at 52-53). This analysis assessed a "high-end scenario," based on assumed yearly production of 108,400 ounces of gold. *Id.* at 52. Under this scenario, the mine would earn $179.8 million annually, with $68.3 million in annual expenses, resulting in a net annual income of $111.5 million. However, even under the "low-end scenario," in which the mine would produce only 26,500 ounces of gold annually, and earning only $44 million annually and incurring annual expenses of $16.7 million, the mine would still be profitable, netting an annual $27.3 million. *Id.* at 53. Furthermore, even assuming production were cut in half from the low-end scenario to $22 million, and conservatively assuming expenses remained the same, at $16.7 million, the mine operations would *still* yield $5.3 million in net annual income, reflecting a roughly 25% profit. *See id.* Accordingly, the FEIR should have included a more flexible objective with respect to the project's output.

The FEIR also defended the objective to locate the project on property owned by the applicant with existing access to underground workings, because economical quantities of gold "exist in very limited locations." FEIR at 2-947. However, this response ignores the information in the DEIR itself that sets out numerous mineral resource zones containing in Western Nevada County alone. DEIR at 6-9 to 6-10. The response also fails to justify why the IMM Project must take place on property with existing access to underground workings—an objective that unnecessarily narrows the field of possible project sites.

The FEIR's attempt to justify only the Project's first two objectives also ignores the eight other project objectives that impermissibly narrow its scope and thus the range of potential alternatives. For example, the objective to "[u]tilize existing underground

access points" limits the project to properties with such infrastructure, while the objective to "[p]rovide property owners along East Bennett Road a reliable and clean potable water source" narrows the possible locations to one near this road. DEIR at 3-12.

The FEIR also contends that it has satisfied the Guidelines section 15126.6(b) requirement to focus on alternatives that would avoid or substantially lessen any significant effects "even if these alternatives would impede to some degree the attainment of the project objectives" because the DEIR "does include discussion of alternatives that do not satisfy all project objectives." FEIR at 2-946 to 2-947. However, this interpretation of the Guidelines ignores the *most salient* requirement of that Guideline: that the alternatives considered would avoid or substantially lessen significant effects. Guidelines § 15126.6(b). Here, the EIR examined alternatives that did not avoid or substantially lessen the Project's significant effects on aesthetics, noise, and transportation. Instead, the County should revise the DEIR to include an analysis of alternatives that would actually reduce these significant effects

The FEIR also attempted to refute commenters' argument that it should have selected Alternative 2 as the environmental superior argument. This Alternative would reduce the Project's significant impacts in nine of the ten categories found to be significant. DEIR at 6-42. However, according to the FEIR, while this Alternative would "lessen some traffic impacts," it would not "substantially lessen" environmental impacts, and therefore it does not preclude approval of the Project. FEIR at 2-948 to 2-949 (citing DEIR 6-21 to 6-29). This response, which focuses inexplicably on traffic impacts, ignores the fact that the Alternative would reduce nine out of ten significant impacts.

Further, the Guidelines do not define "substantial," nor do they require an alternative to reduce an impact from significant to less than significant in order to substantially lessen an impact. *See* CEQA Guidelines § 15021(a)(2). Here, the County's own description of Alternative 2 explains that it would have "fewer" impacts in nine of ten impact areas, without specifying the degree of these decreases, i.e., whether they would be "substantially less." *See* DEIR at 6-44. Accordingly, it is disingenuous to claim that these reductions are not "substantial" enough for CEQA's purposes. Finally, the County's interpretation ignores its fundamental duty under CEQA to "avoid or minimize environmental damage where feasible." CEQA Guidelines § 15021(a).

III. The FEIR continues to defer the testing required to ensure that waste rock and tailings will not result in harmful discharges, and it still does not have a plan for safely storing this fill material on site pending its sale and use offsite.

The DEIR includes a plan to utilize waste rock and mine tailings generated by the Project as "engineered fill" on the Centennial and Brunswick sites, and then, once these sites are at capacity, to sell these materials for use as construction aggregate in the region. FEIR 2-59, 2-826. This waste rock has the potential to be contaminated. As a result, whether these materials are used as engineered fill on the Centennial and Brunswick sites, are sold offsite, or are stockpiled onsite pending some further action, they risk discharging contaminants and causing water quality issues.

The DEIR found that the impact to water quality from mine waste was potentially significant, and that mitigation is required for this impact. FEIR at 2-45. Proposed mitigation includes submitting a Report of Waste Discharge to the Regional Water Quality Control Board, and obtaining approval of a Waste Discharge Requirements permit before placing mine waste as engineered fill. FEIR 2-60 to 61. According to the FEIR, significant testing will be required to obtain Waste Discharge Requirements permit from the Water Board. FEIR at 2-45. As part of this process, the Water Board will determine the appropriate mining waste classification for the proposed engineered fill. FEIR at 2-61. Mine waste is classified pursuant to regulations as either Group A, Group B, or Group C, based on an assessment of the risk of water quality degradation. 27 C.C.R. § 22480(b). According to the FEIR, testing done for the DEIR shows that the waste rock from the IMM Project will likely be considered Group C mining waste, FEIR at 2-47, which is waste from which any discharge would be in compliance with the applicable water quality control plan. 27 C.C.R. § 22480(b)(3).

However, commenters pointed out that the waste characterization conducted on the Project site—which relied on two samples, from a total of 11 feet of drill core, to characterize waste rock generated during the entire 80-year life of the project (FEIR 2-502)—was inadequate, and that further testing was required to ensure that the use of fill would not impact water quality. FEIR 2-433. The FEIR denies the need for additional testing, relying on the inadequate testing done to date to assert that "mine materials will *likely* be classified as Group C mine waste." FEIR 2-59 (emphasis added). This response ignores commenters' concerns that the testing done to date has been insufficient. The FEIR also deferred any further testing to the waste characterization process done as part of the process of submitting a Report of Waste Discharge to the Water Board. *Id.* at 2-47.

The FEIR also refused to plan for the potential scenario that the waste rock is not fit for sale and must instead be stored onsite. *See* FEIR at 2-507. The Central Valley

Regional Water Quality Control Board commented that it was "concerned with the general assumption" that "a significant volume of the mining waste produced during the life of the Project will be suitable for off-site sale and use . . . with limited regulatory restrictions (i.e., Group C mining waste)." FEIR at 2-233. As a result, the Water Board noted that the County "should examine[]" the "alternative scenario that the mining waste is not suitable for off-site use." *Id.* The FEIR brushed off this concern, asserting that its testing showed that this situation "is not reasonably expected to occur." FEIR at 2-238 to 239. Elsewhere, the FEIR affirmed that "[n]o stockpiles of fill material are proposed on-site," failing to explain its plan to store these materials pending sale or in the event they are not fit for sale. FEIR at 2-564.

The FEIR modified Mitigation Measure 4.8-1(e) to state that only mining products previously classified as Group C mining waste will be utilized for local and regional construction projects. FEIR 2-60. However, this modification to the Mitigation Measure does not assuage concerns that waste that does not qualify as Group C waste could nevertheless be stored onsite or used as "engineered fill" at the Brunswick and Centennial Sites. *See* FEIR 2-61 (the Mitigation Measure was modified to add the sentence, "The applicant shall not sell or utilize waste rock and tailings from the Project for construction aggregate or fill purposes *offsite* (*i.e., sites other than the applicant[']s Brunswick and Centennial sites*) unless such material has been tested and confirmed to qualify as Group C mining waste.") (emphasis added).

The Mitigation Measure should be modified to also prohibit the applicant from using waste rock and tailings for fill purposes *on the Brunswick and Centennial Sites* unless it is tested and confirmed to qualify as Group C waste. The Water Board's comments on the DEIR affirmed this point, noting that the waste rock "being proposed for engineered fill will need to be characterized as Group C mining waste . . . prior to its use as engineered fill." FEIR at 2-233. And yet, in response to the Water Board's comment, the FEIR merely deleted a statement that the "engineered fill would be considered a Group C mining waste," (FEIR at 2-237), and the FEIR's change to Mitigation Measure 4.8-1(e) gives no indication that it will require the waste rock used as fill on the Brunswick and Centennial sites to qualify as Group C waste.

The FEIR avoids a full evaluation of water quality impacts related to the use of waste rock and mine tailings as engineered fill by stating that the project proponent would be required to submit a Report of Waste Discharge (RoWD) and that Waste Discharge Requirements (WDR) before the mine waste is placed. FEIR 2-516. However, compliance with existing policies and regulations does not excuse the agency from describing project activities or from analyzing resulting impacts. *See Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal.App.4th 1099, 1108-09

(environmental effect may be significant despite compliance with such requirements). To simply assert that water quality standards will be met is not sufficient for the public or decisionmakers to assess either the adequacy of water treatment methods proposed or the adequacy of the standards proposed for the discharge permit.

Finally, to avoid mining waste rock that is contaminated, the FEIR also asserts that the applicant will collect samples before mining, and that "[r]ock types that are not suitable for offsite sale *would likely* not be mined, and if mined, the waste rock would be placed underground." FEIR 2-60 (emphasis added). This flimsy prediction of what *might* happen is no assurance that the Project will not result in contaminated waste rock with the potential to cause water quality issues as it sits onsite before being shipped offsite, or is used as fill on the Brunswick and Centennial sites. Furthermore, the EIR's statement that the applicant will simply place contaminated waste rock that is unsuitable for sale "underground" provides no binding guarantee about how this waste will be treated to ensure it does not result in water quality issues. The EIR must provide a clear plan for how it will safely store waste rock that does not qualify as Group C waste fit for sale that does not risk contaminating water onsite.

IV. The FEIR does not address the basic deficiencies in the DEIR's groundwater and water quality analyses.

The EIR's existing groundwater analysis remains deeply—and admittedly—flawed. The FEIR proposes to correct these errors by eventually doing the necessary analysis, but only after the project has been approved. This is inadequate. The EIR itself needed to have included a current and accurate environmental baseline. Without one, the EIR's impacts analysis and mitigation measures also are necessarily defective. Moreover, the FEIR has not adequately responded to concerns commenters raised with the soundness of its groundwater level modeling methodology.

A. The EIR's outdated groundwater baseline deprives its impacts and mitigation analyses of any value.

The most recent groundwater well level measurements in the EIR are from 2007. These data were collected by the Idaho-Maryland Mining Corporation (IMMC) from 79 private domestic wells during two monitoring periods, from 1995 through 2001 and again from 2003 through 2007. *See* DEIR 4.8-11; DEIR App. K.2 at 26–28. The DEIR relied upon these data to construct its groundwater level baseline and to calibrate its modeling of groundwater impacts. (*See* FEIR 2-74.) Several commenters contested this approach, explaining that fifteen-year-old data cannot possibly furnish an accurate environmental baseline. *See id.* at 2-73, 2-76.

The FEIR does not meaningfully refute these criticisms. In fact, it acknowledges that there are major gaps in the existing data. *See* FEIR 2-74 "[N]o groundwater level measurements have been completed since 2007, which creates some uncertainty to [*sic*] the predicted impact to percentage of water column in domestic well."). But it claims that all these deficiencies will be cured through the implementation of a groundwater monitoring plan—*after* the EIR has been certified and the Project approved. *See id.* Under this plan, "water-level monitoring data" will be "collected before commencement of dewatering," and any "[i]mpacts to domestic water wells will be measured against those current baseline measurements and not historic water levels." *Id.*; *see also id.* at 2-76 ("This water level monitoring [under the post-approval plan] will provide the baseline levels prior to dewatering. The collection of 12 months of baseline data allows for the seasonal change in water levels at each location to be captured.").

This is not so much an explanation as it is an admission that the EIR is legally deficient. The FEIR cannot postpone to some opaque post-CEQA process the articulation of the environmental baseline that should have been the foundation of the EIR's impacts analysis. *See County of Amador v. El Dorado Cnty. Water Agency* (1999) 76 Cal.App.4th 931, 952 ("Before the impacts of a project can be assessed and mitigation measures considered, an EIR must describe the existing environment. It is only against this baseline that any significant environmental effects can be determined."); CEQA Guidelines §§ 15125, 15126. This is not, as the FEIR presents it, simply a matter of deferred mitigation. *See* FEIR 2-931 through -932, 2-951 through -952. It is the deferral of the EIR's entire groundwater impacts analysis.

That postponement would be improper under any circumstances. *See Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 441 ("CEQA's informational purpose is not satisfied by simply stating information will be provided in the future." (citation and internal quotation marks omitted)). But it is especially unjustifiable here, given that the FEIR offers no reasons for why new well level data cannot be collected and analyzed until after the Project is approved. *See* FEIR 2-74, 2-76 (acknowledging comments that said new groundwater data needed to be incorporated within the EIR, but not explaining why this could not or need not be done).

Because the EIR lacked "an adequate baseline description" of existing groundwater levels, it was "impossible" for the EIR to have provided a reasoned "analysis of impacts, mitigation measures[, or] project alternatives." *County of Amador*, 76 Cal.App.4th at 953. For example, the EIR could not reasonably conclude that the Project's potentially significant impacts to domestic groundwater wells would be limited to the East Bennett area, when that impacts modeling was based on admittedly deficient inputs. *Contra* FEIR 2-79. Nor could it accurately predict the extent of the Project's one-

foot "drawdown isopeth," and thus the extent of the properties that should be eligible for the newly proposed Domestic Well Monitoring Program. *Contra* FEIR 2-79 through -80. As the FEIR itself correctly observes, "speculation" and "unsubstantiated opinion . . . does not constitute substantial evidence." (*Id.* (quoting CEQA Guidelines § 15384).); *see also Kings Cnty. Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 721–23 (mandating an EIR must consider environmental impacts over the entire area where one might reasonably expect them to occur). But "speculation" is all the EIR rests upon until there is an adequate inventory of existing environmental conditions.

Elsewhere, the FEIR also implies that the newly collected data will not reveal anything different, in any event, since the existing domestic well data do not display any "long-term increasing or decreasing trends." FEIR 2-74; *see also id.* at 2-93, 2-519, 2-952,[1] 2-5824. This secondary response is no more compelling. First, the FEIR's idle speculation about what current measurements might show is no reason to delay their collection. Second, datapoints collected sporadically over a twelve-year period ending over fifteen years ago is hardly a basis from which to gauge "long-term" trends. This is especially true when climatic conditions between 1995 and 2007 were significantly and consistently wetter than over the next fifteen years.[2] The region's mean annual precipitation from 1995 to 2007 was approximately 57.63 inches—over 8 inches more than the 49.33-inch annual average from 2008 through 2022.[3] And the 2008 through 2022 period saw *five* years that were drier (2008, 2013, 2015, 2020, 2022) than the driest single year between 1995 and 2007 (2007).[4] These included the driest single year on record (2013), and four of the five driest years for which near-complete data are available (2008,

[1] This passage, in particular, alleges that new data would not change the DEIR's groundwater impact analysis because that analysis "was based on a computer model of groundwater wells under existing (pre-dewatering) conditions." FEIR 2-952. This is incorrect. The existing model—as the FEIR and DEIR elsewhere admit—was calibrated using well level data that are at least fifteen years old. Without valid current data, it is entirely speculative to claim that "[a]dditional measurements would not substantially inform or change that [impacts] analysis." *Id.*

[2] All calculations here were derived from the same dataset that the DEIR used. *See* Western Regional Climate Center (WRCC), Grass Valley No. 2, CA – Total of Precipitation (Inches) (last updated Feb. 16, 2023), https://wrcc.dri.edu/cgi-bin/cliMAIN.pl?ca3573. A printout of this dataset is included as Exhibit C to this letter.

[3] This is also about 4.5 inches more than the 52.18-inch annual mean for the entire available reporting period (1966 through 2022). *See* Exhibit C (WRCC dataset).

[4] *See* Exhibit C (WRCC dataset).

2013, 2015, and 2020).[5] It strains credulity to assume that whatever "trends" in groundwater levels may or may not have emerged between 1995 and 2007 necessarily held up under these intervening circumstances.[6]

The FEIR also suggests that groundwater level data from individual "domestic wells" suffer from "uncertainties" that render the data unusable—or at least much less useful—for modeling purposes. FEIR 2-77, 2-953; *see also id.* at 2-955 through -956. This seems to be the basis for the FEIR's insistence that new groundwater monitoring wells must first be drilled before any accurate baseline information can be collected. *See id.* But this stance is in obvious tension with the fact that the DEIR's analysis *did* incorporate the existing domestic well level data from the 1995 through 2007 monitoring period. *See* FEIR 2-74, 2-76, 2-92 through -93; DEIR 4.8-11 through -12, 4.8-55 & n.34; DEIR App. K.2 at 26–28; DEIR App. K.3 at 7–8. If these datapoints from domestic wells are as nebulous as the FEIR claims, the DEIR and its appendices had no basis for relying upon them—even putting aside their outdatedness. But if domestic well level data *are* sufficiently reliable to serve as inputs, the EIR needed to have used measurements that are less than fifteen years old. The EIR's waffling about when and what domestic well data are useable suggests that its methodology was informed more by convenience than good science.

In sum, CEQA demands an accurate and up-to-date baseline from which to assess a project's impacts, alternatives, and mitigation measures. The EIR's groundwater level baseline does not fit that description. It admittedly uses no actual recent data from either domestic or monitoring wells. As a result, the EIR's entire groundwater supply analysis is unsupported. Promising to collect the baseline data later and to then re-run the analysis is not a "fix"; it is a concession that the EIR violates CEQA.

---

[5] *See id.*

[6] The FEIR acknowledges that there is, at minimum, a possibility that changes in climate and precipitation levels will impact groundwater recharge rates. *See* FEIR 2-93 through -94. But it dismisses any downward trend in recharge as "speculative" and unworthy of further analysis. *See* FEIR 2-94. The FEIR has it backwards. What is "speculative" is declining to collect new and readily available groundwater level data that could then be compared against the pre-drought 1995–2007 measurements, and instead insisting that any "trends" in the old dataset must have remained consistent over the past fifteen years.

B. The FEIR does not adequately respond to commenters' concerns regarding its faulty groundwater modeling.

Several commenters explained that the DEIR's groundwater analysis was flawed not only due to its bad inputs, but also because the modeling methodology itself was inappropriate and unjustified. *See, e.g.*, FEIR 2-812, 2-866, 2-5779 through 2-5782. Specifically, they emphasized that it was improper for the DEIR to have relied upon a flow model designed for porous media, at least without first conducting the extensive analysis necessary to determine if the fractured rock underlying the Project site actually displays those tendencies. *See id.* They noted that fractured rock aquifers can behave drastically differently than porous media aquifers, and thus the DEIR's models—and all of the impacts analyses and mitigation measures that relied upon them—could be entirely off base. *See id.*

The FEIR does not meaningfully respond to these criticisms. It simply reiterates that the DEIR was justified in assuming porous media conditions, and asserts that the new monitoring data to be collected post-Project approval will help to confirm whether these assumptions were correct. *See* FEIR 2-5783 through -5785; *id.* at 2-5785 ("A porous media representation is an appropriate way to model a fractured bedrock system at the scale of this project. However, the DEIR acknowledges that without the implementation of a groundwater monitoring program and well mitigation plan, the project could result in a significant impact to groundwater supplies.").

Once again, this response gets things completely backwards. The time to *confirm*—not to merely *assume*—what groundwater models would be appropriate for this Project site was during the DEIR preparation process. If a detailed geological evaluation had revealed that accurate modeling of the groundwater environment would instead require a more nuanced approach than the simplistic porous media model that the EIR currently uses, that is what CEQA demands.[7] Because the EIR instead relies on

[7] As multiple commenters pointed out, there are strong indications that the porous media model is inapt for the Project site. Among other evidence, existing well level data reflect a level of hydrologic discontinuity in the region that appears incompatible with a porous media environment. *See* FEIR 2-5780 through -5781. The FEIR's main response—apart from again asserting that post-approval data collection will help to fill in the analytical gaps—is that these discontinuities might not be quite as severe as commenters alleged. *See* FEIR 2-5784. But this does not address the broader questions of whether the aquifer is, in fact, a porous media environment or what Project-specific evidence the EIR drew upon in reaching that conclusion. Instead, the FEIR's responses suggest that it opted for the porous media model because the Project site's fractured rock environment appeared

uncorroborated assumptions and a smattering of outdated well level datapoints, *see* FEIR 2-5783, its groundwater modeling methodology is not supported by substantial evidence. As a result, each component of the EIR's groundwater analysis that relies upon that model—including its drawdown isopleth projections, the groundwater monitoring program, and the newly proposed domestic well monitoring plan—are themselves unsupported and inadequate. *See County of Amador*, 76 Cal.App.4th at 952; *Vineyard Area Citizens for Responsible Growth*, 40 Cal.4th at 441; CEQA Guidelines § 15384.

C. The EIR should have addressed how chemicals released from truck tires would impact water quality and aquatic species.

The Project would cause a substantial increase in truck traffic on regional roadways, including on roads that adjoin waterbodies like Wolf Creek and South Fork Wolf Creek. *See* DEIR 3-26 through 3-29, 3-30 (Fig. 3-13), 4.8-3 (Fig. 4.8-1). As they wear down, these trucks' tires inevitably would release the pollutant 6PPD-quinone (6PPD-q), a chemical that is ubiquitous in modern rubber tires.[8] There is a growing body of scientific literature demonstrating that 6PPD-q released from truck tires and leached into neighboring waterways is highly lethal to multiple species of fish and other aquatic organisms.[9] The EIR should have addressed the foreseeable impacts to water quality and biological resources that would result from increased 6PPD-q pollution associated with

---

roughly analogous, and implementing a more nuanced model would be too inconvenient. *See* FEIR 2-5783, 2-5785 (referencing three times the "large scale" of the Project when attempting to justify the use of the porous media model).

[8] *See* Erik Stokstad, *Common Tire Chemical Implicated in Mysterious Deaths of At-risk Salmon*, Science (Dec. 3, 2020), *available at* https://www.science.org/content/article/common-tire-chemical-implicated-mysterious-deaths-risk-salmon (attached as Exhibit D); Kate Raphael, *A Nasty Salmon-Killing Chemical Is in Bay Waterways. Can It Be Cleaned Up?*, Bay Nature (Mar. 2, 2023), *available at* https://baynature.org/2023/03/02/a-nasty-salmon-killing-tire-chemical-is-in-bay-waterways-can-it-be-cleaned-up/ (attached as Exhibit E).

Letters 733 (2022) (attached as Exhibit F); Zhenyu Tian et al., *6PPD-Quinone: Revised Toxicity Assessment and Quantification with a Commercial Standard*, 9 Envtl. Sci. & Tech. Letters 140 (2022) (attached as Exhibit G); Stokstad, *supra* note 8 (Exhibit D); Raphael, *supra* note 8 (Exhibit E).

Project vehicle trips. And, if necessary, the EIR should have incorporated feasible measures to mitigate these impacts.[10]

V. The FEIR's analysis and mitigation of impacts relating to air quality, GHG emissions, and energy use are flawed.

Commenters had pointed to several issues in the DEIR's evaluation of impacts and mitigation measures relating to air quality, GHG emissions, and energy use. The FEIR generally does not attempt to correct those errors, and instead offers up various rationales for sticking by the DEIR's analysis. For the reasons set forth below, each of the FEIR's responses is unavailing. The EIR remains deeply flawed, and in some areas the FEIR has made matters worse by offering up contradictory responses and unexplained proposals.

A. The FEIR provides only one justification for refusing to mitigate the Project's potentially significant operational air quality impacts, and that justification is wrong.

The DEIR recognized that the Project's operational impacts from ROG, NO_x, and PM_{10} emissions would be "potentially significant," based on the North Sierra Air Quality Management District's (NSAQMD) significance thresholds. But the DEIR also predicted that there would be no difference whatsoever between the project's "unmitigated" and "mitigated" operational emissions for these pollutants. *See* DEIR 4.3-67 through -70, 4.3-74 through -76. In other words, the DEIR identified a significant impact, and then did nothing to mitigate it. This violates CEQA's clear mandate that an EIR must either adopt all feasible mitigation measures to reduce impacts to less-than-significant levels, or it must explain why further mitigation is infeasible. *See King & Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 852; Cal. Pub. Res. Code § 21081(a); CEQA Guidelines § 15126.4(a).

Inexplicably, the FEIR and DEIR nonetheless assert that the Project's operational air quality impacts *have* been mitigated to less-than-significant levels. *See* FEIR 2-103; DEIR 4.3-73; DEIR App. E.1 at v, 51. The FEIR does not—and cannot—claim that the EIR's *construction*-related air quality mitigation measures will have any actual impact on the Projects *operational* air quality emissions; the DEIR itself shows that they will not.

---

[10] *See, e.g.*, J.K. McIntyre et al., *Soil Bioretention Protects Juvenile Salmon and Their Prey from the Toxic Impacts of Urban Stormwater Runoff*, 132 Chemosphere 213 (2015) (finding "relatively inexpensive" green stormwater infrastructure technologies can be "highly effective at reversing" severe adverse effects of contaminated runoff on fish and aquatic macroinvertebrate species) (attached as Exhibit H).

See DEIR 4.3-67 through -70, 4.3-74 through -76. Rather, the FEIR says only that as a legal matter, a project's potentially significant operational air quality impacts are automatically reduced to less-than-significant levels as long as the EIR adopts certain construction-phase measures listed in the NSAQMD's CEQA guidelines. *See* FEIR 2-104, 2-183; *see also* DEIR 4.3-67 n.38.

The FEIR is incorrect. Unsurprisingly, the NSAQMD guidelines do not say that a project can automatically reduce its potentially significant *operational* air quality impacts simply by incorporating pro forma *construction*-related mitigation measures. The guidelines instead provide a "suggested list" of mitigation measures that is explicitly "not all-inclusive." NSAQMD Guidelines 10. The only measures that the DEIR incorporated, and which the FEIR insists are sufficient to mitigate all of the Project's air quality impacts, are listed in the NSAQMD guidelines under the heading, "Mitigations for Use *During Design and Construction Phases*." *Id.* (emphasis added). The guidelines expressly contemplate that "additional, project-specific mitigation measures" may be necessary to "ensure that impacts are sufficiently mitigated." *Id.* In other words, the NSAQMD guidelines are not some rubber stamp that allows every project to mitigate all potentially significant impacts via construction-related measures.

This flexible, project-specific methodology is also exactly what CEQA requires. *See* Cal. Pub. Res. Code § 21081(a); CEQA Guidelines § 15370. That is because if mitigation measures are not "at least partially effective" in reducing an otherwise significant impact, they do not qualify as mitigation measures at all. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 523; *King & Gardiner Farms*, 45 Cal.App.5th at 865. The NSAQMD guidelines cannot absolve the EIR of its obligation to incorporate "effective" mitigation. Construction-phase measures that have literally zero impact on operational air quality emissions do not satisfy this requirement.

The FEIR points to CEQA materials from other past projects in the region that it claims have interpreted the NSAQMD guidelines in the same way. *See* FEIR 2-104 & n.14, 2-183 & n.13. This past practice cannot supplant the clear directives in the NSAQMD guidelines and in CEQA itself. But even if those previous studies were relevant, not a single one supports the FEIR's position. Three of the four projects had no estimated operational emissions at all. Thus, there was no need to even analyze operational air quality impacts, much less mitigate them.[11] And the one project that *did*

[11] *See Lake Wildwood Tennis Facility Lighting Expansion – Notice of Availability for Public Review and Notice of Intent to Adopt a Proposed Mitigated Negative Declaration and Excerpt of Initial Study* (July 2022) at 15 ("The proposed project would result in a temporary but incrementally small net increase in pollutants due to minor land

involve operational air quality emissions incorporated mitigation measures that substantially and quantifiably reduced those emissions[12]—exactly what the EIR needed to do here.

In short, the EIR relies on a single faulty legal justification to excuse itself from CEQA's basic mitigation requirements. The FEIR does *not* claim that it would be infeasible to adopt measures that would lessen the Project's operational air quality impacts.[13] It simply asserts that it did not need to consider such measures in the first place. That is wrong, and the EIR is legally deficient as a result.

---

disturbance and construction vehicle and equipment emissions related to the installation of the 24 light poles and trenching for underground electrical.") (attached as Exhibit I); *Auburn Ski Club Lighting Expansion – Notice of Availability for Public Review and Notice of Intent to Adopt a Proposed Mitigated Negative Declaration and Excerpt of Initial Study* (July 2022) at 16–17 ("The proposed project would result in a temporary but incrementally small net increase in pollutants due to minor land disturbance and construction vehicle and equipment emissions related to the installation of the 40 light poles and trenching for underground electrical.") (attached as Exhibit J); *Empire Mine State Historic Park Site Characterization and Remediation Draft Program Environmental Impact Report Section 4.2, Air Quality* (Aug. 2009) at 4.2-21 ("This air quality impact analysis does not evaluate the impacts following completion of the Project (such as exposure to visitors walking on trail systems), but the impacts as a result of the Project Actions that would occur during the Project implementation.") (attached as Exhibit K).

[12] *See Rincon del Rio Draft Environmental Impact Report Section 3.3, Air Quality* (Jan. 2012) at 3.3-21 through 3.3-22 (analyzing two mitigation measures that would result in a significant reduction in operational ROG, NO_x, and PM_{10} emissions relative to unmitigated levels) (attached as Exhibit L).

[13] Nor could it: One such measure—the use of electric trucks to haul mine waste off-site during the operational phases of the Project—is a potentially feasible method of reducing operational emissions. *See* FEIR 2-10. The fact that the FEIR botched its analysis of this new mitigation proposal, *see* Section V.D., *infra*, does not necessarily mean that it is infeasible. *But cf.* Section V.D., *infra*; Exhibit A (Baseline Report (Feb. 2023)) at 3 (questioning whether heavy-duty electric trucks will be available in sufficient numbers during the early years of Project operations).

B. The FEIR's discussion of the Project's applicant-proposed measures (APMs) for air quality is incoherent.

The DEIR identified several air quality APMs that would be implemented during the construction and/or operational phases of the Project, including (1) exhaust emission controls (APM-AQ-1), (2) fugitive dust control measures (APM-AQ-2), and (3) an asbestos minimization plan (APM-AQ-3). *See* DEIR 4.3-65. The DEIR was clear that it had factored the first two APMs in to its "unmitigated" emissions assessment. *See id.* at 4.3-73 ("The emission data presented in Table 4.3-17 (i.e., unmitigated emissions) reflect the reductions that would occur with implementation of APM-AQ-1 and APM-AQ-2. Table 4.3-19 shows the estimated maximum daily mitigated emissions associated with construction, operation, and reclamation of the project, accounting for additional emissions associated with Mitigation Measure 4.3-1(b) . . . ."). Commenters were equally clear that this approach was improper. They explained that the EIR needed to treat these APMs as the mitigation measures that they actually are, rather than as design features of the Project. That would require omitting them from the "unmitigated" emissions scenario and separately quantifying their impacts on Project emissions.

Rather than correcting these substantive issues in the DEIR, the FEIR offers up conflicting excuses. Its first and clearest response is that the DEIR merely had a typo—that the sentence on page 4.3-73 was meant to read, "[t]he emission data presented in Table 4.3-17 (i.e., unmitigated emissions) reflect the reductions that would occur without implementation of APM-AQ-1 and APM-AQ-2." FEIR 2-182; *see also id.* at 2-184. In other words, the APMs "were not actually included in the unmitigated emissions inventory." *Id.* at 2-182. With that "minor change . . . to clarify the DEIR text," the FEIR reassures us, "no change to the analysis in the DEIR" is necessary. *Id.*

Elsewhere, however, the FEIR says exactly the opposite—that the DEIR *did* include APM-AQ-1 and APM-AQ-2 within the "unmitigated" emissions scenario, and thus did not treat them as mitigation measures. *See* FEIR 2-104 ("These APMs, which go above and beyond the measures suggested in the NSAQMD [guidelines] . . . *were already incorporated into the assessment* and, therefore, do not result in additional reductions under the mitigated scenario, nonetheless the APMs do reduce emissions of criteria air pollutants compared to the Project if it did not incorporate these emission reduction features." (emphasis added)); *id.* at 2-940 ("As the applicant proposed these [APMs] as part of the project, prior to analysis of air quality impacts of the project, they are properly considered as part of the Project Description."); *id.* at 2-941 ("[T]he project's criteria air pollutant emissions incorporating the APMs as part of the proposed

project can be directly measured against numerical emissions thresholds established by [NSAQMD].").[14]

These two contradictory responses cannot both be true. The result—that it is impossible for the reviewing public to discern how or whether the EIR evaluated the air quality APMs—is a violation of CEQA in and of itself. *See Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 439 (holding "[f]actual inconsistencies and lack of clarity in the FEIR leave the reader—and the decision makers—without substantial evidence" to support the EIR's conclusions); *Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal.* (1988) 47 Cal.3d 376, 404 ("[T]here must be a disclosure of the analytic route the agency traveled from evidence to action." (cleaned up)).

But even if the EIR were clear that it considered the APMs *either* (1) as part of the "unmitigated" Project emissions baseline, *or* (2) as mitigation measures, the EIR's air quality discussion would still violate CEQA. If scenario (1) is true—and thus the "typo" excuse is wrong—the EIR is deficient for all the reasons already pointed out in the comments on the DEIR. Specifically, an EIR may not "compress[] the analysis of impacts and mitigation measures into a single issue" by folding mitigation into the project description; the EIR must first evaluate the Project's unmitigated impacts and then gauge the extent to which the mitigation measures lessen them. *Lotus v. Dep't of Transp.* (2014) 223 Cal.App.4th 645, 656, 658.

If scenario (2) is right, the EIR is flawed because it does not separately assess the impact of these measures or explain why a more detailed analysis is infeasible.[15] A one-sentence assertion that the APMs "do[] achieve a reduction in emissions as compared to the unmitigated emissions," FEIR 2-182, is not enough. *See King & Gardiner Farms*, 45

---

[14] This response seems to be the correct one. Notably, the DEIR's "unmitigated" emissions table also includes footnotes explaining how APM-AQ-1 and APM-AQ-2 were factored in to the "unmitigated" calculations. *See* DEIR 4.3-70. Additionally, the DEIR's separate air quality report includes the same sentence as on page 4.3-73 of the DEIR, *see* DEIR App. E.1 at 47–48, and its "unmitigated" emissions table includes the same footnotes regarding the APMs as the DEIR's table, *see id.* at 44. The FEIR does not purport to correct or explain any of these issues, each of which conflicts with the "typo" explanation. *See also* Exhibit A (Baseline Report (Feb. 2023)) at 3.

[15] And, in any event, the APMs would not be valid mitigation measures as to *operational* air quality impacts, since the Project's "unmitigated" and "mitigated" operational emissions are the same. *See* Section V.A., *supra*; *Sierra Club*, 6 Cal.5th at 523 (requiring that mitigation measures be "at least partially effective" in lessening impacts).

Cal.App.5th at 869 ("To fulfill the EIR's informational role, the discussion of the mitigation measures must contain facts and analysis, not bare conclusions and opinions."); *Sierra Club*, 6 Cal.5th at 522 (agreeing that the "use of the term 'substantial' to describe the impact the proposed mitigation measures would have on reducing the Project's significant health effects, without further explanation or factual support, amounted to a 'bare conclusion' that did not satisfy CEQA's disclosure requirements"). In either scenario, the basic problem is the same: The EIR provides virtually no explanation of the effect the APMs will have on Project emissions. *See also* Exhibit A (Baseline Report (Feb. 2023)) at 3–4 (describing in further detail the issues with the EIR's analysis of the impacts of the APMs).

These exact same issues recur in the EIR's discussion of GHG emissions. That is because the DEIR's GHG emissions analysis—apparently like its air quality analysis—incorporated the effects of APM-AQ-1 within its "unmitigated" operational emissions inventory. *See* DEIR 4.3-94 (explaining, in footnote "a" of Table 4.3-23, that the "unmitigated" emissions calculations "[a]ccount[] for APM-AQ-1 (Exhaust Emission Controls), including Tier 4 Final equipment"). Again, this was improper: The EIR first should have calculated the Project's GHG emissions without the APMs in place, and then separately quantified the APMs' effects on emissions. *See Lotus*, 223 Cal.App.4th at 656, 658. The error is all the more glaring in this GHG context, since the EIR found that the Project's "unmitigated" operational GHG emissions—even after improperly factoring in APM-AQ-1—were barely below the significance threshold. *See* DEIR 4.3-94. Consequently, had the EIR handled the APMs correctly, this impact might well have been "significant" without mitigation.

C. The EIR's plan to test for and manage the asbestos content of mined rock is internally inconsistent and likely to fail, and it improperly defers mitigation.

The applicant prepared an Asbestos, Serpentinite, and Ultramafic Rock Management Plan ("ASUR Plan") that purportedly incorporates measures to minimize asbestos in the engineered fill generated by the Project. DEIR at 3-20. According to the EIR, the ASUR Plan "requires testing of *all* mined materials" to "ensure that average mined material and engineered fill contains less than 0.01% asbestos by mass." DEIR at 4.3-61 (emphasis added); *id.* at 3-20. Thus, the EIR gives the impression that all rock generated by the Project will be tested, and that it will achieve an average level of less than 0.01% asbestos by mass. However, to the contrary, the EIR and ASUR Plan elsewhere obliquely reveal that very little of the mined rock will actually be tested, that it will be held to a much lower standard of 0.25% asbestos, and that there is no concrete plan for what to do if the engineered fill is found to be contaminated with asbestos.

Furthermore, the EIR improperly deferred mitigation measures to address the Project's asbestos risks.

1. The EIR improperly relies on the ASUR Plan's inadequate asbestos testing

The ASUR Plan contains measures related to the asbestos content of barren rock and sand tailings generated by the Project. DEIR Appendix E.2 (ASUR Management Plan) at 13 ("ASUR Plan"). The ASUR Plan asserts that it is designed so that "all aboveground materials are sampled and analyzed for asbestos before they are loaded for transportation and used as Engineered Fill." *Id.* (emphasis in original). However, the sampling plan for the barren rock and sand tailings fails to account for the sheer volume of these materials and does not allow enough time for accurate testing to determine their asbestos content.

Although the Project will result in 1,500 tons per day of mined material (*see* ASUR Plan at 5-6), the ASUR Plan describes an above-ground silo to store barren rock and sand tailings that can hold slightly less than a single day's production. *Id.* at 13 (silo has capacity of 1,400 tons). Before the material is transferred to the silo, the applicant will conduct three random grab samples from the barren rock or the mineralized material for every 1,000 tons of material. *Id.* To determine if the samples are "Asbestos Containing Material," which is any material with an asbestos content of 0.25% or greater, the samples will be analyzed using Polarized Light Microscopy (PLM), which has the ability to detect 0.25% asbestos. *Id.* at 2, 13. In addition, for purposes of maintaining an "Asbestos Inventory," which will measure the "rolling three-month weighted average" of the mined materials, the samples will also be tested using the Transmission Electron Microscope (TEM) method, which can detect 0.01% asbestos. *Id.* at 13-14; *id.* at 15. However, the more accurate TEM test requires two weeks for results. *See* FEIR at 2-542.

The ASUR Plan also contains several requirements for what must happen if the engineered fill contains asbestos. ASUR Plan at 16-17. If a sample shows that the material is Asbestos-Containing Material *and* the three-month rolling average asbestos content is at least 0.01%, then all barren rock "represented by the composite sample" will be disposed underground as cemented paste backfill rather than loaded onto trucks for use as Engineered Fill. *Id.* at 16. Similarly, all sand tailings derived from processing Asbestos-Containing Material will be used for underground cemented paste backfill and not for Engineered Fill. *Id.* at 16-17. Additionally, if the three-month rolling Asbestos Inventory exceeds 0.01% asbestos, then the "geology department will immediately . . . halt mining in the area of concern until a revised mine plan is prepared." *Id.* at 20.

However, these planned actions fail to account for the two weeks for a TEM test result to come back, during which time the barren rock and rock tailings will have moved far beyond the surface silo. Because the testing would occur before the materials are transferred to the silo, which only has the capacity to store materials produced from a single day, the mined materials would be moved on to the next phase of processing before the TEM test results are developed. *See* ASUR Plan at 14 (noting that rock is "stored in bins with capacity of ~1 day"). Given this limited storage, during the 2-week testing period, any material containing asbestos will likely have been transported offsite or used as engineered fill at the Brunswick or Centennial Sites, where it would pose a risk of airborne asbestos exposure. *See* DEIR at 2-546 (noting that the "project site is not designed to hold 3-months of mined material in inventory and will not do so"). The EIR also fails to explain how the geology department will determine the source of contaminated material, given the volume of material mined, the very small sample rate, and the lapse in time from the sample to the result.

The FEIR gives no assurances about this process, noting instead that "[m]ining will continue as normal during the two week turn-around time for TEM samples," and vaguely contending that the "asbestos content [of] mined material" will be "managed through the measures of the ASUR plan which included exploration sampling, mine planning, and testing of materials on surface to monitor and ensure the effectiveness of these measures." FEIR at 2-542. Again, this response fails to account for the fact that—given limited storage capacity—contaminated material may already be far from the project site by the time the problem comes to light. Conceding that the more accurate TEM testing will be largely ineffective, the FEIR asserts that the purpose of TEM testing "is not to control the fate of the rock and tailings after it reaches surface [sic]," because "that is the purpose of the PLM testing." FEIR at 2-514.

2. The EIR improperly defers development of asbestos mitigation measures

The EIR relies on the ASUR Plan as an "applicant proposed measure" (APM) for air quality impacts (DEIR 4.3-65) without clarifying that this Plan actually purports to mitigate potentially significant asbestos impacts. DEIR at 4.3-65. Comments on the DEIR explained that the APMs, including the ASUR Plan, were "in reality mitigation measures, which the DEIR improperly fails to recognize as such," despite being incorporated into the Project. FEIR at 2-830, 2-874-75. In response, the FEIR simply stated that these measures were part of the project, rather than mitigation measures. *Id.* at 2-922. However, simply calling a measure that is meant to mitigate impacts a part of the project

does not cure the fundamental defect in this approach: namely, that it obscures the true extent of the impacts. *Lotus*, 223 Cal.App.4th at 656 (EIR may not compress the analysis of impacts and mitigation measures by incorporating the mitigation measure into the project's features). Here, for example, the EIR fails to evaluate the Project's asbestos impacts resulting both from the mining process and from the storage and shipment of engineered material offsite, opting instead to hide behind the assertion that these impacts will be mitigated through the ASUR Plan and ill-defined plans therein. Instead, the EIR must classify the ASUR Plan as a mitigation measure and evaluate the significance of the Project's asbestos impacts with and without the Plan.

Furthermore, the ASUR Plan itself defers development of important mitigation measures, instead relying on ill-defined and unenforceable plans. *See* ASUR Plan at 8. In particular, the ASUR Plan and the EIR both contend that TEM testing will be used to determine the asbestos content "during the exploration and pre-mining phase before mining is commenced," (FEIR at 2-547), and this "was made an explicit requirement of the ASUR Plan." *Id.* at 2-514. To the contrary, the ASUR Plan lacks any concrete and measurable commitments to test for asbestos, and instead defers creating measures to detect and mitigate the presence of asbestos in mined material. In so doing, the EIR falls short of its primary purpose to "describe feasible measures which could minimize significant adverse impacts." CEQA Guidelines § 15126.4(a)(1).

For example, the ASUR Plan asserts that "[e]xploration core drilling and core logging shall be supervised by a California Licensed Geologist," and that "[l]ithological units and gold mineralization will be adequately sampled and tested for naturally occurring asbestos." ASUR Plan at 8. However, the ASUR Plan does not specify when core drilling and logging and the related sampling and testing will occur, including how frequently and how far in advance of mining operations. Similarly, the ASUR Plan does not specify what "adequate" sampling and testing entails, and what standards will be applied to the materials before determining whether or not to proceed with mining. These vague assertions do not constitute mitigation measures for the potentially serious asbestos contamination associated with the Project. *See* at *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 198 (vague or speculative mitigation measures do not comply with CEQA); *Lincoln Place Tenants Assn. v. City of Las Angeles* (2007) 155 Cal.App.4th 425, 445 (mitigation measures must be feasible and enforceable).

Similarly, after in situ testing, the ASUR Plan contends that "[a]n Engineered Fill Placement Plan will be maintained to ensure that adequate non-Asbestos Containing Material, as determined by PLM testing, is available for Surfacing applications." ASUR Plan at 8. This Engineered Fill Placement Plan will "be designed to ensure that Asbestos

Containing Material is not used for Surfacing," and will "designate areas which are suitable for the placement of Asbestos Containing Material." *Id.* at 17. However, the EIR fails to provide any details about what this plan will contain or require, or to include specific performance standards, including the criteria for an area to be "suitable" for the placement of Asbestos-Containing Material. In so doing, the ASUR Plan and the EIR have improperly deferred mitigation. *See Preserve Wild Santee v. City of Santee,* 210 Cal.App.4th 260, 281 (2012) (EIR improperly deferred formulation of mitigation measures in part because it did not state why specifying performance standards for habitat management was impractical or infeasible); *see also San Joaquin Raptor*, 149 Cal.App.4th at 670 (deferring the formulation of mitigation measures until after a project is approved "leave[s] the reader in the dark about what . . . management steps will be taken, or what specific criteria or performance standard will be met").

Relatedly, the ASUR Plan's plan to provide auxiliary ventilation and dust collection in the event that tunneling is projected to exceed a 3-month rolling average of 0.01% asbestos is similarly flawed due to the failure to provide any specific performance standards. *See* ASUR Plan at 10. Instead, it merely asserts that under such circumstances, "an experienced professional" would select "dust collection equipment . . . to suit the conditions and air flow." *Id.* Similarly, the "dust collection equipment will be designed to allow removal of collected dust and filter cartridges without exposing workers or releasing dust into the air." *Id.* As a result of these vague assertions, the EIR is only able to contemplate that the "workers *should* not be exposed to rock with unexpected high values of asbestos." FEIR at 2-514 (emphasis added). This vague assertion does not constitute the binding commitment to achieve a specific performance standard that is required, and the EIR did not attempt to justify its failure to specify the details. *See* CEQA Guidelines § 15126.4(a)(2) (an EIR may postpone development of the "specific details" of a mitigation measure only if it first demonstrates why "it is impractical or infeasible to include those details during the project's environmental review").

Finally, the EIR contains inconsistent conclusions regarding the risk associated with asbestos exposure. On the one hand, the EIR states that implementing the ASUR Plan "would ensure that underground mining activities and use of project-generated fill would not result in the emission of asbestos containing dust." DEIR at 4.3-82. However, the EIR also states that without implementing an Asbestos Dust Mitigation Plan (ADMP), "the project could result in a significant impact with respect to exposing receptors to substantial concentrations." *Id.*; *see also* DEIR at 6-32. If the Project will not result in the emissions of dust containing asbestos, why is an ADMP required to avoid significant impacts related to the exposure to *substantial concentrations of asbestos*? In reaching this conclusion, the EIR is tacitly conceding that the ASUR Plan alone is not

reasonably likely to reduce asbestos exposure to a less-than-significant level, contrary to the EIR's statements elsewhere that it would. Accordingly, the EIR must be revised to provide specific mitigation measures that include concrete and measurable performance standards to mitigate the risk of exposing mine workers and the public to asbestos.

D. The FEIR fails to support its use of an unjustifiably high threshold of significance for operational GHG emissions.

Several commenters explained at length that it was inappropriate for the DEIR to use a significance threshold of 10,000 metric tons of carbon dioxide equivalent (MT CO_2e) per year for operational GHG emissions. They pointed out that this ad hoc threshold is outdated, unsupported by Project-specific evidence, and unreasonably high. The FEIR once again ignores these concerns and doubles down on the single rationale provided in the DEIR: The threshold is acceptable because other agencies elsewhere in the State have used it before. *See* FEIR 2-115 through -116.

This response misses the mark for several reasons. First, the mere fact that other jurisdictions have adopted a certain significance threshold in the past is not adequate to justify its use for this particular Project. As various commenters noted, all of the thresholds that the DEIR references were developed before the enactment of S.B. 32 in 2016. That law set significantly more aggressive targets for reducing statewide GHG emissions compared to the earlier A.B. 32 regime. Thus, one cannot assume that what was a less-than-significant contribution to GHG emissions in 2015 remains so today. These thresholds were also all designed for "industrial" and/or "stationary source" projects. That makes for an awkward fit with this Project, where mobile sources are projected to be the second largest contributor to operational GHG emissions. *See* DEIR 4.3-93 through -94. In light of all these changes and nuance, "if it's good enough for them, it's good enough for us" is not substantial evidence. *See Golden Door Props., LLC v. County of San Diego* (2018) 27 Cal.App.5th 892, 904–05.

Second, the FEIR's rationale is wrong even on its own terms. Some of the very agencies whose lead the FEIR purports to be following have now abandoned the 10,000 MT CO_2e threshold. For example, the July 2022 Draft Environmental Impact Report prepared by the County of Santa Clara for the analogous Sargent Ranch Quarry project, which is located within the jurisdiction of the Bay Area Air Quality Management District (BAAQMD), uses a *net-zero* significance threshold for operational GHG emissions. *See* Sargent Ranch Quarry Draft Environmental Impact Report Section 3.8, Greenhouse Gas

Emissions at 3.8-10 (July 2022) (attached as Exhibit M).[16] The Sargent Ranch Quarry DEIR adopted this threshold after expressly—and correctly—recognizing that BAAQMD's old standards "were designed . . . to meet the AB 32 goal of reducing GHG emissions to 1990 levels by 2020," and thus were no longer "consistent with the more recently adopted SB 32 target of reducing statewide GHG emissions to 40 percent below 1990 levels by 2030." *See id.*[17] The FEIR does not acknowledge this shift. It instead incorrectly asserts that the 10,000 MT CO_2e "is [still] used by" BAAQMD "for industrial and/or stationary source emissions of GHGs." FEIR 2-116 (quoting DEIR 4.3-43).

Had the EIR conducted its own meaningful review of the current GHG landscape, the only reasonable conclusion it could have reached was that the same net-zero threshold is appropriate for this Project. And had the threshold been reduced by even a tiny fraction of that—to 9,000 MT CO_2e per year—the Project's operational emissions would have been significant and required mitigation. *See* DEIR 4.3-94 (estimating annual operational GHG emissions of 9,041.23 MT CO_2e in years 2033 to 2102). At minimum, the EIR needed to try to explain why it relies on outdated thresholds used in other jurisdictions—thresholds that purportedly deserve complete deference when set at 10,000 MT CO_2e, *see* FEIR 2-116—when those same jurisdictions now use thresholds that have been updated and lowered to reflect the serious threat of climate change. *See also* Exhibit A (Baseline Report (Feb. 2023)) at 7–8. Because the EIR did none of this, its significance threshold lacks substantial evidence and violates CEQA. *See Golden Door Props.*, 27 Cal.App.5th at 904–05.

E. The FEIR's new proposal to use electric trucks to haul mine waste off-site is unexplained and underdeveloped.

For the first time, the FEIR proposes a new condition of approval for the Project: "In the event that sand tailings or waste rock material is transported from the Brunswick Site prior to 2033 to locations other than the Centennial Site, all transport of such materials shall be accomplished using electric vehicles." FEIR 2-10. The FEIR includes no analysis of this new plan—just a few of cursory sentences implying that this condition

[16] Available at https://stgenpln.blob.core.windows.net/document/10747_Sargent_Ranch_Quarry_DEIR_July_2022.pdf.

[17] This transition away from a bright-line GHG significance threshold is also more consistent with the California Supreme Court's intervening decision in *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 220–23, which requires that a project's GHG emissions be evaluated in the context of the State's long-term climate goals.

would not result in "greater air quality and GHG emissions impacts or energy use impacts than analyzed under the DEIR." *See id.* at 2-926; *see also id.* at 2-10, 2-940.

Using electric trucks to haul mine waste off-site is a good idea, in theory. But there are major problems with the FEIR's proposal. First, as explained in the Baseline report, there are significant questions about whether this measure would even be feasible as presented in the FEIR, given that heavy-duty electric trucks are not expected to be widely commercially available during the early years of the Project's operations. *See* Baseline Letter (Feb. 2023) 3. The FEIR leaves these feasibility questions entirely unanswered, and instead seems to simply assume that this measure can be implemented. But CEQA demands more than unspoken assumptions; it requires *evidence* of feasibility. *See Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1119–20 (holding a "mitigation measure[is] inadequate under CEQA" where "there is not substantial evidence to conclude that this [mitigation] option is even feasible").

Second, the FEIR is void of analysis regarding the environmental impacts that may arise from this new plan. The DEIR had identified several environmental impacts that were on the cusp of significance. For example, the Project's operational GHG emissions were predicted to fall slightly below the EIR's (unjustifiably high) significance threshold. *See* DEIR 4.3-93. And the Project's electricity demand was projected to bring the circuit serving the Project site within just a couple of megawatts of its total capacity. *Id.* at 4.11-34 through -35. Would the increased GHG emissions[18] and electricity demand associated with using grid energy to charge the electric trucks cause these or any other significance thresholds to be surpassed? The FEIR is defective as an informational document because it does not even begin to acknowledge these foreseeable impacts, much less "contain analysis sufficient to allow informed decision making." *See Laurel Heights*, 47 Cal.3d at 403–05; *see also* Exhibit A (Baseline Report (Feb. 2023)) at 3.

Finally, even if the FEIR had correctly analyzed the feasibility and the environmental impacts of this new proposal, it would still be flawed because the measure does not go far enough. Specifically, there was no basis for limiting the proposal to off-site hauling that occurs "prior to 2033" and "to locations other than the Centennial Site." As discussed above, this Project will have potentially significant—and so far entirely unmitigated—operational air quality impacts. *See* Section V.A., *supra*. To address those impacts, the EIR should have included off-site electric truck use as an enforceable

[18] Notably, the use of grid-supplied electricity is projected to be *by far* the largest contributor to operational GHG emissions over the duration of the Project. *See* DEIR 4.3-92 through -94.

mitigation measure, without any of the current limitations.[19] *See King & Gardiner Farms*, 45 Cal.App.4th at 865 (emphasizing CEQA requires the adoption of "*all* feasible mitigation measures"). And the EIR should have explained the degree to which this measure would reduce the Project's operational air quality impacts. *See Sierra Club*, 6 Cal.5th at 522. Those steps would not have been sufficient to fix the many flaws in the EIR's air quality analysis. But they were necessary steps, and without them the EIR cannot be certified.

F. The FEIR fails to address several other concerns raised about the DEIR's handling of air quality, GHG emissions, and energy use.

Commenters expressed concerns that the DEIR's Project description stated that construction would last for 18 months, whereas the air quality analysis assumed a 12-month construction timeline and provided no explanation for this discrepancy. *See* FEIR 2-111. The FEIR's one response is effectively "no harm, no foul": Because a 12-month timeline would result in shorter but more intensive impacts, it purportedly represents a "worst-case" scenario. *Id.* at 2-112. But this is not responsive to the concerns actually raised by commenters, which focused on the DEIR's lack of analysis to support its assertion that a shorter timeline is, in fact, a "worst-case." For example, commenters flagged that a longer construction timeline could result in a more extensive exposure to critical air pollutants, and thus possibly more severe—or at least different—impacts. The FEIR fails to either account for these comments or furnish any evidence showing that the DEIR's approach really is more "conservative" than an 18-month construction timeline.

Commenters also explained at length the lack of evidence supporting the DEIR's Health Risk Assessment (HRA). *See, e.g.*, FEIR 2-179, 2-942. To its credit, the FEIR includes some new analysis in response to these concerns. *See* Exhibit A (Baseline Report (Feb. 2023)) at 4–5. Unfortunately, this new information does not support the DEIR's optimistic projections regarding the extent to which Mitigation Measure 4.3-1(b) will reduce the risks of cancer linked to Project emissions. In particular, and as discussed at greater length in the Baseline Environmental Consulting letter, the FEIR does not provide any explanation of how Measure 4.3-1(b)'s estimated 2% reduction in total diesel exhaust emissions could, standing alone, produce a 27% decrease in cancer risk. *See id.* at 4–6.

[19] Even if it turned out that it would be infeasible to use electric haul trucks during the early years of the Project's operations, the FEIR should have considered whether it would be feasible to begin implementing this measure in a later operational year, when heavy-duty electric trucks are projected to be more broadly available.

Finally, the FEIR makes several changes to Mitigation Measure 4.3-7(b) (GHG Offset Credits), apparently in recognition of the fact that the version of the measured proposed in the DEIR would be impermissible under *Golden Door Properties, LLC v. County of San Diego* (2020) 50 Cal.App.5th 467. What the FEIR does not explain, though, is why it is appropriate to use offset credits to accomplish 100% of the Project's GHG emissions reductions, instead of implementing feasible on-site measures. Commenters had pointed to several possible on-site measures, including the retention of additional on-site vegetation, the use of solar power during construction, and the use of electric construction equipment and haul trucks. The FEIR ignores each of these specific suggestions and points back to its pro forma response regarding GHG credits. *See* FEIR 2-945; *see also id.* at 2-753 (alleging "feasible construction GHG emissions mitigation is very limited," but not responding to the specific suggestions provided in comments). The notion that on-site GHG mitigation measures are currently infeasible also flatly conflicts with the FEIR's new proposal to use electric haul trucks. *See id.* at 2-10.

VI. The County should deny the Project and should not certify the EIR.

The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If it denies the Project, the County is under no obligation to certify the EIR. *Las Lomas Land Co., LLC v. City of Los Angeles* (2009) 177 Cal.App.4th 83 (upholding decision to stop preparation of an EIR and specific plan where city determined the project was not consistent with its land use policies); Pub. Res. Code § 21080(a) (CEQA applies only to projects that public agencies carry out or approve).

Denial of the Project would also consistent with a long line of case law recognizing that public agencies may limit the use of land to protect public values without resulting in a taking of property. *Penn Cent. Transp. Co. v. City of New York* (1978) 438 U.S. 104, 129 ("[T]his Court has recognized, in a number of settings, that States and cities may enact land-use restrictions or controls to enhance the quality of life by preserving the character and desirable aesthetic features of a city.") (citations omitted); *id*. ("[I]n instances in which a state tribunal reasonably concluded that 'the health, safety, morals or general welfare" would be promoted by prohibiting particular contemplated uses of land, this Court has upheld land-use regulations that destroyed or adversely affected recognized property interests."); *Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency* (2002) 535 U.S. 302, 324 ("Land-use regulations are ubiquitous and most of them impact property values in some tangential way—often in completely unanticipated ways. Treating them all as *per se* takings would transform government regulation into a luxury few governments could afford.").

The Supreme Court has identified two primary tests to determine whether regulation causes a taking of property. First, a taking may occur if the regulation eliminates *all* use or value of the property. *See Lucas v. S.C. Coastal Council* (1992) 505 U.S. 1003. Under that test, there must be no value whatsoever remaining in the property; even a diminution of value of 95% is insufficient. *See Tahoe-Sierra*, 535 U.S. at 330 (citing *Lucas*, 505 U.S. at 1019 n.8). The second test involves evaluation of multiple factors, including the severity of the impact of the regulation on the value of the property, the extent of its interference with reasonable investment-backed expectations of use of the property, and the character of the governmental action. *See Lingle v. Chevron* (2005) 544 U.S. 528, 538-39 (citing *Penn Central*, 438 U.S. at 124). Courts have consistently held that *Penn Central* test requires elimination of nearly all value in the property. The Ninth Circuit has recently recognized that even "diminution in property value because of governmental regulation ranging from 75% to 92.5% does not constitute a taking." *Colony Cove Props. LLC v. City of Carson* (9th Cir. 2018) 888 F.3d 445, 451; see also *Hadacheck v. Sebastian* (1915) 239 U.S. 394, 405 (no taking despite diminution in value from $800,000 to a maximum of $60,000, and property could not be used for any purpose permitted under city's ordinance).

In fact, as long as permissible uses exist, a denial would not deprive the applicant of economically viable use of its property. *Shea Homes Ltd. P'ship v. County of Alameda* (2003) 110 Cal.App.4th 1246, 1267 (finding no regulatory taking because agricultural designation allowed single family use if certain County standards were met).

Here, the entire Brunswick Industrial Site is currently zoned M1-SP (Light Industrial, Site Performance Combining District), per the County's Zoning Code. Its land use designation is IND (Industrial) under the County's General Plan. The applicant is proposing to re-zone it as M1-ME (Light Industrial with Mineral Extraction Combining District) as part of the project. The Centennial Industrial Site and potable water pipeline easement areas are both zoned as M1 (Light Industrial) and designated as IND. All of these land use designations provide a reasonable economic use of the property and, on their face, defeat any claim that the applicant is entitled to establish a gold mine at the site.

Conclusion

As set forth above, the FEIR failed to address or correct the many fundamental issues with the DEIR. As a result, the EIR violates CEQA and cannot be certified. The County should exercise its authority to deny the Project.

Very truly yours,

SHUTE, MIHALY & WEINBERGER LLP

Subject: **Review of Idaho-Maryland Mine Project, Final Environmental Impact Report, SCH# 2020070378**

Dear Ms. Folk:

In February 2022, Baseline Environmental Consulting (Baseline) peer reviewed the Draft Environmental Impact Report (DEIR) for the proposed Idaho-Maryland Mine Project (project) and prepared a comment letter that identified flaws in the analysis used to support the significance determinations for air quality and greenhouse gas (GHG) emissions (as well as other topics). Baseline has reviewed the Air Quality and GHG Emissions sections of the Final Environmental Impact Report (FEIR) for the proposed project. Based on our review of the revisions and responses to comments presented in the FEIR, we have identified flaws that remain in the overall CEQA analysis. The specific concerns identified in our review of the air quality and GHG sections of the FEIR are described in detail below.

Comment GRP 21-122: Underestimated Emissions from Off-Site Haul Truck Trips

Baseline previously prepared a comment for the DEIR (FEIR comment GRP 21-122) regarding the inadequate analysis of criteria air pollutant and GHG emissions from haul trucks transporting waste rock and mine tailings to various destinations over the lifetime of the project. The DEIR air quality analysis assumed that waste rock and mine tailings would be used as engineered fill at the following locations over time:

- Years 2022–2026: Fill placement at the Centennial Industrial Site;
- Years 2027–2032: Fill placement at the Brunswick Industrial Site; and
- Years 2033–2102: Fill placement at off-site locations.

The air quality and GHG analysis in the DEIR assumed that remediation of the Centennial Industrial Site would be completed and approved by the DTSC prior to the opening year. However, since remediation of the Centennial Industrial Site is not included as part of the CEQA analysis for the project, there is no assurance that remediation of the site will be completed prior to the opening year of the project or within the lifetime of the project. The DEIR acknowledged this on page 3-26, stating that "if the remediation of the Centennial Industrial

Site, currently under DTSC oversight, is not complete upon commencement of mining, in which case engineered fill would be placed at the Brunswick Industrial Site and/or transported off-site to be utilized in local and regional construction markets."

As Baseline previously commented (FEIR comment GRP-122), the DEIR should have analyzed the worst-case scenario for estimating emissions from haul trucks transporting engineered fill, which would be to assume trucks may need to haul the engineered fill to off-site locations about 60 miles away in the opening year (2022). Baseline prepared an updated analysis of the project's daily nitrogen oxide (NOx) emissions in the opening year related to haul trucks transporting engineered fill to the off-site locations instead of the Centennial Industrial Site. Based on the updated analysis, the project would generate about 193 pounds per day of NOx, which would exceed the Northern Sierra Air Quality Management District's (NSAQMD's) Level C threshold of significance of 136 pounds per day. This would result in a significant and unavoidable impact if emissions are not mitigated below the NSAQMD's Level C threshold.

In response to comment GRP 21-122, page 2-957 of the FEIR states that "if the Centennial site were not available, fill placement would take place initially at the Brunswick site rather than being hauled to local and regional construction projects." Based on this assumption, the FEIR states that emissions from haul trucks transporting engineered fill to the more distance off-site locations would not occur before 2027, after placement of engineered fill at the Brunswick site is completed. According to the FEIR response to comment, the project's total NOx emissions in 2027 would be about 125 pounds per day, which is below NSAQMD's Level C threshold of significance of 136 pounds per day (page 2-958 of FEIR).

However, the FEIR did not provide any revisions to the Project Description or other chapters of the DEIR explicitly stating that engineered fill will not be transported to off-site locations prior 2027. The current language in the Project Description clearly states that if the Centennial Industrial Site were not available, then "engineered fill would be placed at the Brunswick Industrial Site and/or transported off-site" (page 3-26 of DEIR). Because there is no explicit requirement preventing the project from transporting fill to off-site locations prior 2027, the FEIR has failed to analyze the worst-case scenario for the project's criteria air pollutant and GHG emissions.

Aside from failing to analyze the worst-case scenario, Baseline acknowledges that Master Response 4 of the FEIR attempts to address the air quality and GHG emission concerns associated with haul trucks traveling to off-site locations. As stated on page 2-10 of the FEIR, "the applicant has agreed to a condition of approval that would require the applicant to use electric trucks for any offsite sale or transport of waste rock or sand tailings from the Brunswick site (other than to the Centennial Site) if such transport occurs prior to 2033." The purpose of this condition of approval (referred to as "COA 4") is to ensure the project would not have greater air quality and GHG emissions impacts than analyzed under the DEIR if the Centennial

Site is not available for placement of engineered fill. Baseline appreciates that the applicant has adopted COA 4 with the intent to address the potentially significant air quality and GHG emissions impacts not properly analyzed in the DEIR. However, there is currently limited commercial availability for electric-powered haul trucks. According to the California Air Resources Board's Advanced Clean Trucks regulation, only about 5% of the heavy-duty trucks that will be manufactured in California in 2024 will be zero-emission vehicles (i.e., battery electric or hydrogen fuel cell electric). Also, the FEIR does not address the need to install charging infrastructure for heavy-duty trucks at the project site. While COA 4 was incorporated into the project with good intentions, the FEIR fails to evaluate the feasibility of implementing COA 4. Therefore, the assumption that 100 percent of the project's heavy-duty trucks used for transporting engineered fill to off-site locations prior to 2033 will be electric is unsubstantiated.

Comments GRP 21-123 and GRP 21-124: Incomplete Evaluation of Applicant Proposed Measures and Mitigation Measures

Baseline previously prepared a comment (FEIR comment GRP 21-123) about the need to incorporate the applicant proposed measures (APMs) related to air quality and GHG emissions into the project design to ensure they are implemented. In response to comment GRP 21-123 (and others), the FEIR revised the Project Description in the DEIR to include the following APMs:

- APM-AQ-1: Exhaust Emission Controls
- APM-AQ-2: Surface Fugitive Dust Controls

Baseline acknowledges and appreciates that the requested revisions were made to ensure the APMs are implemented. However, the FEIR also revised the following sentence in the Air Quality chapter of the DEIR (page 2-182 of FEIR): "The emission data presented in Table 4.3-17 (i.e., unmitigated emissions) reflect the reductions that would occur without implementation of APM-AQ-1 and APM-AQ-2." This statement is not true. According to page 50 of Appendix E.1 of the DEIR, the unmitigated criteria air pollutant emissions summarized in Table 4.3-17 includes implementation of APM-AQ-1 and APM-AQ-2. In other words, Table 4.3-17 of the DEIR summarizes the project's mitigated emissions with APM-AQ-1 and APM-AQ-2 instead of the unmitigated emissions.

As Baseline previously commented (GRP 21-123), the DEIR should have been revised to disclose the project's unmitigated emissions without implementation of the APMs and evaluate the effectiveness of the APMs to reduce the project's air quality impacts. Similarly, Baseline commented (GRP 21-124) that the DEIR analysis should have been updated to identify and evaluate feasible mitigation measures that would reduce the project's criteria air pollutant emissions during operation. In response, the FEIR incorporated APM-AQ-1 and APM-AQ-2 into the Project Description, which requires the use of Tier 4 final engines for all off-road equipment

and dust control measures during project operation. However, the FEIR did not evaluate the effectiveness of APM-AQ-1 and APM-AQ-2 to reduce the project's unmitigated emissions.

According to Table 4.3-17 of the DEIR, it appears that emissions of NOx from off-road equipment (about 6.7 pounds per day) after implementing APM-AQ-1 accounts for about 7% of the project's total NOx emissions (100.2 pounds per day) during operation in 2022. Because the unmitigated NOx emissions without APM-AQ-1 have not been disclosed, it's not clear what level of reduction in NOx emissions is achieved by implementing APM-AQ-1. According to Table 4.3-17 of the DEIR, operation of on-road vehicles and emergency generator testing would account for about 46% and 19% of the project's NOx emissions in 2022, but the FEIR does not evaluate potential mitigation measures such as increasing electric vehicle charging infrastructure or using battery-powered emergency generators to reduce NOx emissions from these sources. As a result, the FEIR failed to evaluate and disclose the effectiveness of implementing the APMs or other potential mitigation measures to reduce the project's air quality impacts during operation.

Comments GRP 21-125 and 21-126: Unsubstantiated Health Risk Assessment

Baseline previously prepared comments for the DEIR (FEIR comments GRP 21-125 and 21-126) about the inadequacy of the supporting documentation for the project's air quality health risk assessment (HRA). The DEIR did not include documentation of the individual health-risk contributions from up to 25 emission sources during each phase of project construction and operation. In addition, no graphics were provided to show the location of the modeled emission sources, sensitive receptors, and results of the air dispersion modeling. As a result, there was no reasonable method for the public or decision makers to review the validity of the HRA findings and evaluate the effectiveness of proposed Mitigation Measure 4.3-1(b).

According to the HRA, the estimated unmitigated cancer risk at the maximally exposed individual resident (MEIR) was reported to be 10.4 in a million, which is above the threshold of significance (10.0 in a million). With implementation of higher-tier engines during construction, as required by Mitigation Measure 4.3-1(b), the DEIR estimated that the project would result in an incremental cancer risk of 7.6 in one million. This 27% reduction in cancer risk is surprising, because Mitigation Measure 4.3-1(b) only reduces emissions during 1 year of construction and does not reduce any of the other emission sources over the 80 years of operation. However, there is no way to review the validity of the HRA results and effectiveness of Mitigation Measure 4.3-1(b) because the results of the HRA analysis are poorly documented and non-existent in some cases.

In partial response to comments GRP 21-122 and 21-123, a Health Risk Memorandum was attached to the Final EIR as Appendix K that included health risk isopleths and sensitive receptor locations, which helps to clarify some of missing HRA documentation in the DEIR. The

FEIR also provided a summary table of health risks in response to comments GRP 21-122 and 21-123 (see **Table 1** below). This information was not included in the Air Quality chapter or Appendix E.1 of the DEIR. Table 4.3-21 *Project-Related Health Risk Results* of the DEIR should have been revised to disclose this information to the public.

Table 1. Calculated Cancer Risks at the MEIR

Activity	Cancer Risk per million Mitigated	Unmitigated
Construction - Asbestos in Dust	3.7	3.7
Construction - Diesel Exhaust	1.2	4.1
Operations - Asbestos in Dust	1.8	1.8
Operations - Diesel Exhaust	0.6	0.6
Operations - Arsenic in Dust	0.3	0.3
Total	7.6	10.4

Note: MEIR = maximally exposed individual resident.
Source: Page 2-942 of FEIR

The HRA was based on a 30-year exposure scenario. As summarized in **Table 2** below, the project would generate about 8.60 tons of diesel exhaust on-site from offroad equipment and on-road vehicles over a 30-year period. Implementation of Mitigation Measure 4.3-1(b) during construction in 2021 would reduce the project's total diesel exhaust emissions over the 30-year period by about 2% to 8.41 tons. This is a relatively minor reduction in the project's total on-site diesel exhaust emissions. However, according to **Table 1**, implementation of Mitigation Measure 4.3-1(b) would reduce the project's overall cancer risk by about 27%, which does not seem to correlate with the project's 2% reduction in diesel exhaust over the 30-year period. It appears that the cancer risk associated with diesel exhaust during project operations from 2022 to 2050 has been substantially underestimated.

The FEIR fails to provide an explanation for how a 27% reduction in cancer risk can be achieved by implementing Mitigation Measure 4.3-1(b). To verify the results of the HRA, the public would need to know the emission rates used for each modeled source for each year of construction and operation from 2021 to 2050, as well as the location of each source. This level of information is not documented Appendix E.1 of the DEIR or Appendix K of the FEIR.

Table 2. Annual On-Site Diesel Exhaust Emissions

Year	Unmitigated Diesel Exhaust Emissions (tons)	Mitigated Diesel Exhaust Emissions (tons)	% Reduction
2021	0.32	0.13	59%
2022	0.36	0.36	0%
2023	0.36	0.36	0%
2024	0.36	0.36	0%
2025	0.36	0.36	0%
2026	0.36	0.36	0%
2027	0.42	0.42	0%
2028	0.42	0.42	0%
2029	0.42	0.42	0%
2030	0.42	0.42	0%
2031	0.42	0.42	0%
2032	0.42	0.42	0%
2033	0.22	0.22	0%
2034	0.22	0.22	0%
2035	0.22	0.22	0%
2036	0.22	0.22	0%
2037	0.22	0.22	0%
2038	0.22	0.22	0%
2039	0.22	0.22	0%
2040	0.22	0.22	0%
2041	0.22	0.22	0%
2042	0.22	0.22	0%
2043	0.22	0.22	0%
2044	0.22	0.22	0%
2045	0.22	0.22	0%
2046	0.22	0.22	0%
2047	0.22	0.22	0%
2048	0.22	0.22	0%
2049	0.22	0.22	0%
2050	0.22	0.22	0%
TOTAL	**8.60**	**8.41**	**2%**

Note: Based on PM10 emissions from offroad equipment and on-road vehicles reported in Appendix E.1 pages 114-119.

Comment GRP 21-127: Unsubstantiated GHG Threshold of Significance

Baseline previously prepared a comment (FEIR comment GRP 21-127) about the DEIR failing to provide justification for using an annual GHG threshold of significance of 10,000 metric tons of carbon dioxide equivalents (MTCO2e) to demonstrate how the project would achieve the statewide GHG reductions goals for 2030 and beyond over the proposed 80-year lifetime of the mining permit.

In response to the comment GRP 21-127 (and others), page 2-116 of the FEIR provides the following explanation:

> *As a basis for choosing 10,000 MT CO2e as the threshold of significance for operational GHG emissions, the DEIR provided the following reasoning: "For operations, because the project is an industrial project that includes stationary sources (i.e., diesel generators used for emergency power), the project's GHG emissions were compared to the 10,000 MT CO2e per year quantitative threshold, which, as described above, is used by SMAQMD, PCAPCD, BAAQMD, and SCAQMD for industrial and/or stationary source emissions of GHGs. The substantial evidence for this GHG emissions threshold is based on the expert opinion of various California air districts, which have applied the 10,000 MT CO2e per year threshold in numerous CEQA documents where those air districts are the lead agency." (DEIR, p. 4.3-43.)*

Based on the California Supreme Court findings for *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) (62 Cal.4th 204), a project's GHG emissions should be evaluated based on its effect on California's efforts to meet its long-term climate goals. As the Supreme Court held in that case, a project that would be consistent with meeting those goals can be found to have a less-than-significant impact on climate change under CEQA. If a project would contribute its "fair share" of what will be required to achieve those long-term climate goals, then a reviewing agency can find that the impact will not be significant because the project will help to solve the problem of global climate change (62 Cal.4th 220–223).

In accordance with Executive Order B-55-18, California is committed to achieving carbon neutrality by 2045. The 10,000 MTCO2e threshold used in the FEIR has no correlation to the State's carbon neutrality goal for 2045. As Baseline previously commented, the other air districts originally adopted the 10,000 MTCO2e threshold to achieve the 2020 statewide GHG goal under California Assembly Bill 32. The Bay Area Air Quality Management District (BAAQMD), which is referenced above, is in the process of considering an updated GHG threshold for industrial projects to address California's long-term GHG goals such as carbon neutrality by 2045.[1] In effect, the FEIR has blindly applied a GHG threshold of 10,000 MTCO2e

[1] Bay Area Air Quality Management District (BAAQMD), Air District Update to CEQA Thresholds of Significance for Greenhouse Gases; Public Workshop. December 9, 2021.

per year adopted by other air districts without understanding the justifications each air district had for originally adopting the threshold. The FEIR should be able to reference specific supporting documentation provided by these air districts to justify how the threshold would help the project achieve California's long-term GHG goals. As a result, the FEIR analysis of project impacts from GHG emissions remains inadequate.

Conclusions

Based on our review of the FEIR, many of the previous comments on the DEIR have not been resolved and the overall analysis related to air quality and GHG emissions is inadequate.

Sincerely,

Patrick Sutton,
Principal Environmental Engineer

Patrick Sutton, P.E.

Patrick Sutton is an environmental engineer who specializes in the assessment of hazardous materials released into the environment. Mr. Sutton prepares technical reports in support of environmental review, such as Phase I/II Environmental Site Investigations, Air Quality Reports, Greenhouse Gas (GHG) Reduction Plans, and Health Risk Assessments. He has prepared numerous CEQA/NEPA evaluations for air quality, GHGs, geology, hazardous materials, and water quality related to residential, commercial, and industrial projects, as well as large infrastructure developments. His proficiency in a wide range of modeling software (AERMOD, CalEEMod, RCEM, CT-EMFAC) as well as relational databases, GIS, and graphics design allows him to thoroughly and efficiently assess and mitigate environmental concerns.

For mixed-use development projects, Mr. Sutton has prepared health risk assessments for sensitive receptors exposed to toxic air contaminants based on air dispersion modeling. He has also prepared GHG Reduction Plans to demonstrate how projects can comply with State and/or local GHG reduction goals. For large highway infrastructure improvement projects, Mr. Sutton has prepared air quality and hazardous materials technical reports in accordance with Caltrans requirements. Air quality assessments include the evaluation of criteria air pollutants, mobile source air toxics, and GHG emissions to support environmental review of the project under CEQA/NEPA and to determine conformity with the State Implementation Plan. Hazardous materials investigations include sampling and statistically analysis of aerially-deposited lead adjacent to highway corridors.

Project Experience

Oakland Downtown Specific Plan EIR. Prepared a program- and project-level Air Quality and GHG Emissions analysis. Developed a mitigation measure with performance standards to ensure GHG emissions from future projects comply with the Citywide 2030 GHG reduction target.

I-680 Express Lanes from SR 84 to Alcosta Boulevard Project. Prepared Initial Site Assessment and Preliminary Site Investigation to evaluate contaminants of potential concern in soil and groundwater. Prepared Air Quality Report to determine the project's conformity to federal air quality regulations and to support environmental review of the project under CEQA and NEPA.

Altamont Corridor Expressway (ACE/Forward) Project EIR/EIS. Prepared a program- and project-level Hazardous Materials analysis for over 120 miles of railroad corridor from San Jose to Merced. Hazardous materials concerns, such as release sites, petroleum pipelines, agricultural pesticides, and nearby school sites were evaluated in GIS.

Stonegate Residential Subdivision EIR. Prepared a project-level Hydrology and Water Quality analysis for a residential development located within the 100-year floodplain. The proposed project included modifications to existing levees and flood channels.

BART Silicon Valley Extension Project. Prepared Initial Site Assessment and Hazardous Materials EIS/EIR section for extending 6 miles of proposed BART service through the Cities of San Jose and Santa Clara.

EXECUTIVE SUMMARY

This report, prepared for Nevada County by Robert D. Niehaus, Inc. (RDN), presents results of the economic and fiscal impact analysis of the proposed Idaho-Maryland Mine project (proposed project). The proposed project would reinitiate underground mining and gold mineralization processing in Nevada County, which would result in costs and benefits to the local community. This study evaluates potential costs and benefits of the proposed project in Nevada County. Potential costs include increased need for public services, while potential benefits include increased economic activity, employment, wages, and tax revenue. This study also assesses whether operation of the proposed project may indirectly impact local property values. Although this study assumes the project proponent, Rise Grass Valley (RGV), would construct and operate the proposed project, the impacts would remain the same if another operator were to purchase the mine because the new operator would be subject to the same constraints, conditions, and requirements.

The County is responsible for processing and reviewing RGV's application for consideration by decision-makers, including the Nevada County Planning Commission and Board of Supervisors. Understanding both costs and benefits of the proposed project and how they relate to one another is important for helping decision-makers, as well as the public and other stakeholders, better understand the economic implications of the proposed project for the local community. This study aims to provide a clearer picture of the proposed project's potential economic and fiscal effects to the local community, including anticipated costs and benefits of the proposed project in Nevada County. This study, in combination with the Draft Environmental Impact Report (EIR), provides valuable information about the potential impacts of the proposed project to help inform the decision-making process.

This study evaluates the anticipated economic and fiscal impacts of the proposed project to local businesses, residential property values, utility providers, public services, tax revenues, and the County General Fund. Given the uncertainty regarding the mine's production and resulting economic impact, these results require careful interpretation. Although this study includes information about the economic impacts of the proposed project during multiple phases—construction, ramp up, and ongoing operation—the most critical impacts are those related to ongoing operation. Therefore, this summary focuses on the impact of ongoing project operation to businesses, residents, utility providers, government agencies, and special districts in Nevada County.

The results of this economic and fiscal impact analysis are summarized below. This analysis assumes the proposed project would operate as proposed by the applicant and documented in the project description in the Draft EIR, and the applicant's projections for employment, payroll, and operational expenditures on goods and services provided for this study are accurate. This report presents all dollar figures in constant (inflation-adjusted) 2022 dollars.

Economic Impact from Proposed Project Spending

- RGV provided estimated annual payroll expenditures for the proposed project, which are expected to total $38.1 million for 312 jobs, including 213 local hires and 99 non-local hires, for an average $122,000 in total compensation (i.e., wages plus benefits) per job.

- RDN adjusted RGV's estimated local annual operational expenditures on goods and services based on known industry dynamics of local versus non-local spending. The revised annual operational expenditures total $5.0 million. This estimate is $7.5 million lower than RGV's

original estimate of $12.5 million.

- Full operation of the proposed project would result in yearly output of $202.8 million in Nevada County. The community impact, which considers the portion of output that would be generated by RGV spending and benefits the local community, would be $61.1 million.

- During full operation, the proposed project would directly employ 312 workers and the proposed project's operational expenditures on goods and services would support an additional 163 indirect and induced jobs at local businesses.

- Operation of the proposed project would result in yearly labor income of approximately $45.4 million: $38.1 million from jobs working directly for the mine (direct jobs), $2.2 million from jobs in supporting industries (indirect jobs), and $5.1 million from jobs in industries that serve residents (induced jobs).

Impact to Local Property Values

- RDN performed extensive research and analysis and found no conclusive evidence to assert that the proposed project would have a significant impact on local property values.

- An extensive literature review did not identify any studies that focused specifically on property value impacts of a modern, underground mineral mine.

- A rigorous analysis of three mines determined to be viable case study locations did not find a statistically significant impact on nearby residential property values.

- A survey of licensed real estate professionals in Nevada County indicates that most respondents believe that the proposed project would result in a large and permanent negative impact on local property values. This result is coupled with their opinion that the Draft EIR significantly understates the significance of the proposed project's environmental impacts.

Impacts to Utilities, Public Services, and the General Fund

- The County provides public services that would be affected by the proposed project and associated increase in population. Certain costs would be covered by mitigation through the project's conditions of approval. Costs to the County not covered by mitigation are primarily associated with law enforcement and emergency services, which expect increases in costs related to heightened traffic on local roads and associated vehicle accidents.

- RGV's mineral property tax accounts for a sizable portion of the impact to the County's tax revenue. Mineral property taxes would be based on the amount of gold reserves that are available and economically viable, which is currently unknown. Given this uncertainty, RDN estimates that the tax revenue on mineral properties going to the County General Fund would be between $141,000 and $742,000 in the first year of full production. This value would decrease over time if mineral properties were reduced during operation without the discovery of additional reserves.

- During full operation, the proposed project would result in approximately $881,000 in estimated annual tax revenue from property, sales, and other taxes due to indirect and induced effects from

RGV spending, with $147,000 of this revenue going to the Nevada County General Fund.

- This study estimates a range for the net fiscal impact of the proposed project to the Nevada County General Fund. The high-end estimate is $763,000 in the first year of full operation, declining gradually to somewhere between $760,000 and $741,000 per year for as long as the mine is fully operational and continues discovering new reserves at the projected rate of extraction. The low-end estimate is $163,000 in the first year of full operation before declining over an eight-year productive life of the mine to somewhere between $22,000 and $17,000 per year after exhausting mineral reserves.

1. INTRODUCTION

Rise Grass Valley (RGV), a private company, is applying to construct and operate the Idaho-Maryland Mine Project (proposed project), which would reinitiate underground mining and gold mineralization processing in Nevada County. The County is responsible for processing and reviewing the application for consideration by decision-makers, including the Nevada County Planning Commission and Board of Supervisors. In order to provide a clearer picture of the proposed project's potential effects to the local community, the County contracted with Robert D. Niehaus, Inc. (RDN) to perform this economic impact analysis. The study was performed concurrently with the environmental review process and, in combination with the Draft Environmental Impact Report (EIR), provides valuable information about the potential impacts of the proposed project to help inform the decision-making process.

This study evaluates the proposed project based on the assumption that it would operate as proposed by the applicant and documented in the project description in the Draft EIR. Any concerns about the potential for the proposed project to result in environmental impacts above or below those discussed in the Draft EIR should be addressed as part of the California Environmental Quality Act (CEQA) process. This study assumes RGV constructs and operates the proposed project. If another mine operator were to purchase the mine and assume responsibility for the project, they would be subject to the same constraints, conditions, and requirements. Therefore, the expected economic impact would remain the same.

Construction and operation of the proposed project would result in costs and benefits to the local community as a result of new mining activity. These activities would provide financial benefits to the community by increasing economic activity and supporting new jobs. However, they could also result in adverse environmental effects, such as increased traffic volumes, noise levels, and visual impacts, making the surrounding area a less desirable place to live or visit. In the event the proposed project resulted in substantial long-term adverse effects, these effects could translate to indirect financial costs in the form of reduced property values and County tax revenues.

Understanding both costs and benefits of the proposed project and how they relate to one another is important for helping decision-makers, as well as the public and other stakeholders, better understand the economic implications of the proposed project to the local community. This study provides quantitative analysis of the measurable economic impacts, including estimated impacts to output, local jobs, and property values, as well as qualitative analysis of other financial costs and benefits that cannot be precisely measured, such as potential impacts to existing local businesses that are not captured in the aggregated data. The conclusion of this study includes a summary of the costs relative to the benefits of the proposed project to help provide an understanding of the overall economic effects of the project.

The following sections of this report include:

- **Section 2: Proposed Project Summary** – This section provides an overview of the proposed project, including key project components that affect the economic and fiscal impact analysis.
- **Section 3: Economic Impact from Proposed Project Spending** – This section evaluates the estimated payroll and expenditures, and resulting output, employment, and labor income that construction and operation of the proposed project would generate in Nevada County.
- **Section 4: Impact to Local Property Values** – This section provides an analysis of how similar

projects have impacted property values and discusses the potential impact of the proposed project to property values in Nevada County; this section also includes the results of an opinion survey that asked local Realtors® to estimate the potential impacts.

- **Section 5: Impacts to Utilities, Public Services, and the General Fund** – This section summarizes anticipated fiscal impacts to utility providers, public services, tax revenues, and the County General Fund.

2. PROPOSED PROJECT SUMMARY

The proposed project would reinitiate underground mining and gold mineralization processing for the Idaho-Maryland Mine over an 80-year permit period, with proposed operation occurring 24 hours a day, 7 days a week during full operations. It includes underground mining within the 2,585 subsurface acres to which the applicant retains mineral rights and above-ground activities at two properties comprising approximately 175 acres in unincorporated western Nevada County: the Brunswick and Centennial industrial sites. The proposed project would construct and operate above-ground mineral processing and water treatment facilities at the Brunswick Industrial Site and place engineered fill at both industrial sites for the first five years of the project. Once these sites have reached their specified capacity for engineered fill, this material would be trucked out of the area for disposal elsewhere. For a detailed description of the proposed project, refer to *Section 3: Project Description* of the Draft EIR.

This section provides a summary of the primary project components that affect the economic impact analysis, including the proposed project's schedule, estimated level of gold production, and anticipated increase in vehicle and truck trips on local roadways, which would increase needs and associated costs for public law enforcement and emergency services. Another key component is the proposed project's local spending on project operation, including both payroll and expenditures on goods and services, which is discussed in *Section 3.1: Project Payroll and Expenditures*.

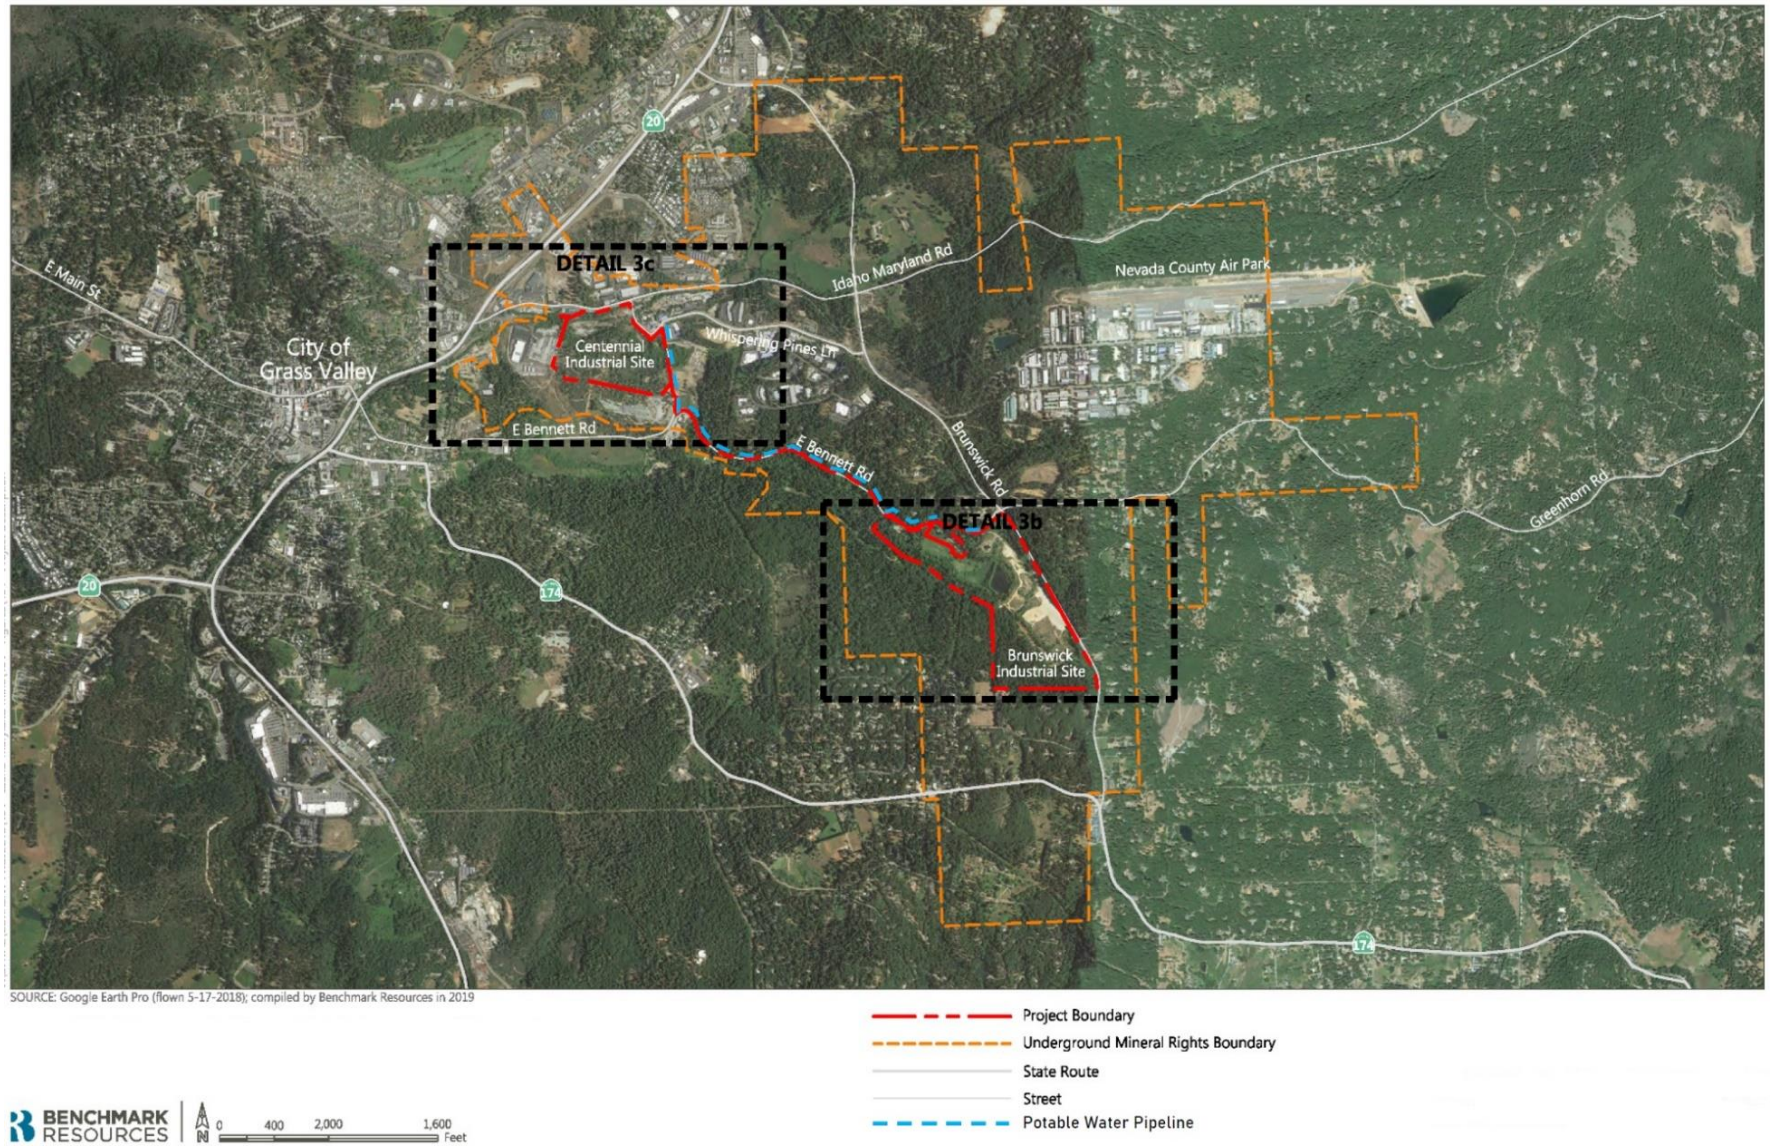
2.1 Project Location and Description

The proposed project's underground mining and above-ground mineral processing activities would occur on the Brunswick Industrial Site, which is located on approximately 119 acres immediately southwest of the East Bennett Road and Brunswick Road intersection. The site is currently located in unincorporated Nevada County, though the northern portion is also within the City of Grass Valley's long-term sphere of influence. This means the City could someday annex the northern portion of the site into their incorporated city boundary. The property is an industrial site with several historic mine shaft entrances, including the Brunswick and Union Hill shafts, which are currently covered. The property was more recently used for a sawmill that operated into the early 2000s. Surrounding properties include low-density residences to the north, west, south, and east, industrial uses to the north, open space to the west and south, and South Fork Wolf Creek to the west.

During the first five years of mining operation, the proposed project would place engineered fill at the Centennial Industrial Site, which is located on approximately 56 acres southwest of the Idaho Maryland Road and Centennial Drive intersection and is entirely within unincorporated Nevada County and the City of Grass Valley's long-term sphere of influence. The site is located immediately adjacent to the City of Grass Valley, with the western, northern, and part of the eastern property lines located along the city's boundary. The site is designated for light industrial uses and was previously used to deposit mine tailings. Development is not currently permitted on the majority of this site due to unstable soils and contamination, but RGV is performing voluntary cleanup of the site. Cleanup efforts are a separate project and are not part of the proposed project. Uses that surround the Centennial Industrial Site include commercial uses to the north, west, and east, and industrial uses to the north, south, and east.

Figure 2-1 provides an overview of the project area, depicting the location of the project sites and the underground mineral rights boundary. No underground mining activity would occur in the first 500 feet of the surface except at access points on the project site. Figure 2-2 maps the proposed haul routes for transporting material to and from the project sites.

Figure 2-1. Project Location



Source: Draft EIR

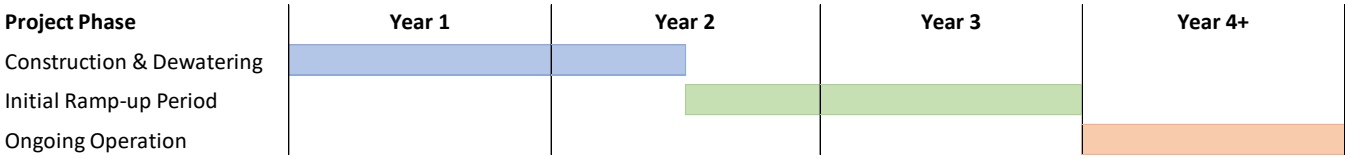
Figure 2-2. Proposed Haul Routes

Source: Draft EIR

2.2 Key Project Components

The anticipated schedule for the proposed project includes 18 months of above-ground construction and mine dewatering, 18 months of initial ramp up, and then full ongoing project operation. The construction phase includes the construction of above-ground facilities and the initial dewatering of mine shafts. The ramp-up phase includes underground construction, employee training, mill commissioning, initial mining, and ramp-up to full production and workforce. Once these phases are complete, the project would be in its full operation phase, which would continue for as long as the mine is active, up to the 80-year permit period. Figure 2-3 displays the projected schedule for the proposed project.

Figure 2-3 Proposed Project Schedule



This study uses estimates of the proposed project's mineral extraction schedule and annual mineral production, based on data provided by RGV. RGV provided information about underground gold mining operations with similar throughputs to the proposed project and similar reserve grades to historic production at the Idaho-Maryland Mine. These mines maintain approximately 5 to 11 years of mineral reserves with an average of 8 years, meaning that they extract their known reserves over an eight-year period as they continue to explore and discover additional reserves. The 2021 economic impact report commissioned by RGV projected annual mineral production of the Idaho-Maryland Mine would be 108,400 ounces of gold per year based on an estimated 365,000 tons of annual gold mineralization and the assumption that mineralization grades are at historic levels achieved before mine closure (Applied Economics LLC 2021). Based on this information, this study assumes the proposed project would maintain eight years of mineral reserves and produce 108,400 ounces of gold per year.

The proposed project would increase traffic in the area from workers commuting to their jobs and from new truck trips associated with project operation, which would impact long-term costs to law enforcement and emergency services. During full operation, the Brunswick Industrial Site would generate a maximum of 174 employee trips per day, while the Centennial Industrial Site would generate a maximum of 4 employee trips per day. In addition to employee traffic, the maximum number of two-way truck trips is 118 trucks completing 236 total daily trips, one inbound and one outbound. The proposed haul routes go from the Brunswick Industrial Site to the Centennial Industrial Site on Brunswick Road and Whispering Pines Lane or off-site locations on SR49, depending on the location used for engineered fill. The roadways most heavily impacted by the haul routes are Brunswick Road between E. Bennett Road and Project Driveway; Brunswick Road between E. Bennett Road and Whispering Pines Lane; Brunswick Road between SR 49 and Whispering Pines Lane; E. Bennett Road between Project Driveway and Brunswick Road; Whispering Pines Lane between Brunswick Road and Crown Point Circle; and Whispering Pines Lane between Crown Point Circle and the Centennial Industrial Site.

3. ECONOMIC IMPACT FROM PROPOSED PROJECT SPENDING

This section estimates the economic impacts in Nevada County from construction and operation of the proposed project if it were to operate at its anticipated capacity. The proposed project would increase economic activity and support new jobs due to local spending and employment associated with initial construction and ongoing mining activities. This new spending and employment would have spillover effects to local businesses and residents as RGV purchases goods and services from other businesses in the county, which in turn spend some portion of this money and potentially employ additional county residents. In addition to this activity, workers supported directly and indirectly by the proposed project would spend money at local businesses, such as shops and restaurants, resulting in additional economic activity and jobs.

RDN recognizes that aggregate economic effects do not fully account for impacts to existing individual businesses in the area because the proposed project would impact businesses differently. For example, a local truck repair shop may get additional business repairing trucks used by the mining operation, while a local restaurant with outdoor seating along the transportation corridor may suffer reduced patronage due to the degraded atmosphere from traffic and noise. This study considers these impacts by incorporating feedback obtained through stakeholder interviews to better understand potential project impacts that are not captured in the aggregated data.

This analysis evaluates the short-term and long-term impact of the proposed project. The construction and ramp-up phases of the proposed project would result in short-term economic impacts. The proposed project schedule includes 18 months of construction and 18 months of initial ramp up. Impacts from these phases would be short-term, as they are expected to last only for the duration of construction and ramp-up activity. Economic impacts from ongoing operation of the proposed project are expected to continue as long as the project operates at its anticipated capacity. These impacts are therefore considered long-term impacts that continue for the life of the project. This analysis evaluates the economic impacts in the following periods:

Year 1: Construction (above-ground)
Year 2: Construction (above ground), dewatering and initial ramp up
Year 3: Ramp up to full operation
Year 4+: Annual ongoing operation

This report adjusts all dollar figures for inflation in order to present them in today's dollars. Therefore, the proposed project's expenses, revenues, and economic impacts for each year are presented in constant 2022 dollars. In the case of ongoing annual expenses and revenues, the amounts of these cash flows appear unchanged over time because this study assumes these cash flows would escalate at the projected rate of inflation, and then deflates them by the same projected rate of inflation to bring them into today's dollars. For example, assume the proposed project purchases 100 hard hats each year. If the cost for 100 hard hats is $10,000 in 2022 and inflation is 3.0 percent, the cost would be $10,300 in 2023, $10,609 in 2024, etc. Once these costs are deflated to constant 2022 dollars using a rate of 3.0 percent, they would be $10,000 in 2022, 2023, 2024, and every future year of the project.

3.1 Project Payroll and Expenditures

This study uses anticipated employment and payroll expenditures based on data provided by RGV. The proposed project would employ 63 workers during the construction and dewatering phase, 121 workers

during the initial ramp-up period, and 312 workers during full ongoing operation. During the construction phase, 52 of the 63 workers would perform construction work related to the proposed project's above-ground infrastructure and mine dewatering. RDN estimates that the remaining 11 workers would perform construction work related to the potable water pipeline and other conveyance infrastructure needed to provide water from Nevada Irrigation District (NID) to up to 30 residential properties currently on wells along 1.25 miles of East Bennett Road. This estimate is based on average construction costs provided by NID.

Table 3-1 presents anticipated workforce, average annual compensation (i.e., wages plus benefits), and total payroll during full operations. The majority of construction workers would be contractors rather than direct employees of RGV. The 121 workers for the ramp-up period represents the average employment across the 18-month project phase, during which employment would consistently grow. During full operation, the proposed project would employ 312 full-time workers with a total annual payroll of $38.1 million. RGV projects they would hire 213 of these workers locally and recruit 99 workers from outside the county (RGV, 2021).

Table 3-1. Projected Workforce and Annual Average Compensation and Payroll by Category

Job Category	Total Jobs	*Local Hires*	*Non-Local Hires*	Average Compensation	Total Payroll[1]
Underground Mine	156	*98*	*58*	$123,000	$19,188,000
Mineral Processing	36	*36*	*0*	$108,000	$3,888,000
Trades	34	*26*	*8*	$126,000	$4,284,000
Labor – Underground	17	*17*	*0*	$89,000	$1,513,000
Geology, Engineering, and Environmental	28	*14*	*14*	$130,000	$3,640,000
Accountants, Administration, and Security	16	*16*	*0*	$110,000	$1,760,000
Surface equipment operators	6	*6*	*0*	$99,000	$594,000
Managers and Supervisors	19	*0*	*19*	$172,000	$3,268,000
Total or Weighted Average[2]	**312**	***213***	***99***	**$122,000**	**$38,135,000**

[1] Total payroll in millions

[2] Numbers may not sum due to rounding

RGV projects the average compensation including wages and benefits for their 312 employees would be $122,000 per year. This includes employees that are hired locally and from outside the area. Based on the average compensation by job category, the 213 employees hired locally would have an average compensation of $117,000 per year and the 99 employees hired from outside the County would have an average compensation of $134,000 per year. The difference in average compensation for local and non-local hires is primarily driven by the 19 non-local employees RGV expects to hire for manager and supervisor positions, which have a projected average compensation of $172,000 per year. The weighted average compensation for all employees excluding managers and supervisors would be $119,000 per year.

Table 3-2 presents anticipated annual local operational expenditures on goods and services, including RGV's initial estimates and RDN's adjustments.

Table 3-2. Annual Local Operational Expenditures on Goods and Services by Category

Expenditure Category	RGV Estimate	RDN Adjustment	Revised Estimate
Office, Administration, & Miscellaneous	$1,232,000	-	$1,232,000
Engineering, Environmental, and Professional Services	$360,000	-	$360,000
Facility and Road Operation and Maintenance[1]	$457,000	$24,000	$481,000
Electric Power and Fuel	$7,918,000	($7,442,000)	$476,000
Equipment Maintenance and Repair	$210,000	-	$210,000
Operating Supplies	$1,327,000	-	$1,327,000
Transportation and Deliveries	$368,000	-	$368,000
Lodging and Local Transportation	$639,000	($128,000)	$511,000
Total[2]	**$12,511,000**	**($7,546,000)**	**$4,965,000**

[1] RDN adjusted this category by deducting $12,000 for internet expenses and adding $36,000 for water expenditures
[2] Numbers may not sum due to rounding

The proposed project's anticipated local operational expenditures on goods and services (i.e., those that would occur within the county) are $5.0 million. RGV provided initial expenditures estimates and RDN adjusted them based on the dynamics of specific industries. RDN excluded expenditures to utility companies that are headquartered outside of the local area because these expenditures would not substantially affect local economic activity and employment. In the case of electrical expenditures to Pacific Gas and Electricity (PG&E), payments to their customer service office in Nevada City would be routed to PG&E's headquarters, and the amount of the payments routed through this office would not affect its operation in terms of costs or employment. Additionally, although much of the electricity used in the project area is generated locally and delivered by electrical infrastructure built and maintained by local workers, an increase in local demand would not necessarily increase the amount of electricity generated locally or the amount of ongoing infrastructure maintenance activity. The power grid is a dynamic system that is managed across the state, and new demand in one area may be served by any number of generation facilities throughout the state.

RDN also adjusted anticipated local expenditures for taxis, rental cars, and airport shuttles. The closest major airport is located outside of Nevada County, so some of these expenditures would likely occur outside the local area. Finally, RDN adjusted expenditure data to account for the cost of water RGV would purchase from NID to serve up to 30 residential properties currently on wells along East Bennett Road.

3.2 Input-Output Methodology and Inputs

This analysis evaluates the economic impact of the proposed project in Nevada County using IMPLAN, a widely recognized economic modeling software platform commonly used in the planning community. The key component of the IMPLAN platform is an input-output (I-O) model containing accounting tables that trace the linkages of interindustry purchases and sales in a specific region. The model uses these linkages to calculate the impacts per dollar of spending on jobs, income, and additional expenditures in one industry on the overall economy of the study region. For more information on the IMPLAN modeling process, visit IMPLAN.com.

This study presents the potential direct, indirect, induced, and total economic impacts of the proposed project in Nevada County in terms of output, employment, and labor income. These impacts include:

- **Direct Impacts**: The proposed project would draw dollars into the local area, some of which RGV would use to pay for supplies, services, and labor from local businesses. The direct impacts of the proposed project include the output of the mine, which is the market value of all goods and services produced by the mine, jobs working directly for the mine, and the labor income associated with those jobs. Construction activities would also draw dollars into the area, stimulating the local economy and producing output in the form of new buildings and infrastructure.

- **Indirect Impacts**: Indirect impacts include output, jobs, and labor income at businesses supported by (1) RGV's procurement spending, i.e., purchases of goods and services used in the course of business, and (2) local expenditures by supplying industries responding to demand from the sectors where these initial expenditures occur. An example of an indirect impact is increased employment and spending by a local firm providing services to RGV. For example, suppose RGV hires ABC Maintenance to repair some machinery. ABC Maintenance then purchases parts from a local wholesaler to perform the work. RGV's expenditures to ABC Maintenance, the jobs at ABC Maintenance supported by this spending, and the resulting increased sales of parts and associated employment are all indirect impacts of RGV's operational expenditures.

- **Induced Impacts**: Employees of RGV, as well as employees of businesses directly and indirectly impacted by RGV's expenditures, would spend a portion of their income in Nevada County. Local spending by these employees and the employment and labor income it supports are induced impacts. Examples of induced impacts include output, employment, and labor income at businesses such as retail stores, gas stations, banks, restaurants, and service companies that supply goods and services to workers and their families.

- **Total Impacts**: The total impacts are the sum of all direct, indirect, and induced impacts.

The proposed project's spending on construction and operation, including payroll and procurement of goods and services, would drive the economic impacts of the project. This analysis relies on employment, payroll, and local spending estimates based on data provided by RGV and reviewed and adjusted by RDN. Refer to *Section 3.1: Project Payroll and Expenditures* for details regarding these estimates. The proposed project's expenditures include:

1. **Construction Expenditures:** RGV would pay for construction of above-ground facilities, initial dewatering of the mine, and construction of underground water pipelines and associated infrastructure. Construction of the proposed project would occur over 18 months and require an estimated 52 workers for above-ground facilities and dewatering, and 11 workers for underground water pipelines. RGV was not able to provide estimated costs for construction of above-ground facilities and dewatering, so RDN used the IMPLAN model to translate the number of construction workers to the estimated costs associated with that level of employment. RDN obtained the estimated cost of construction for underground pipelines and associated infrastructure from NID.

2. **Payroll Expenditures:** RGV projects they would spend $38.1 million per year employing 312 workers at the mine during full operation. Refer to Table 3-1 in *Section 3.1: Project Payroll and Expenditures* for a breakdown of anticipated workforce, average annual compensation, and total payroll. During the 18-month ramp-up period, RGV projects they would employ an average of 121 workers. This analysis assumes the same average pay for these workers as for those that would be employed during full operations.

3. **Operational Expenditures on Goods and Services**: RGV would procure a portion of the goods and services necessary to support the proposed project's operation from businesses located in Nevada County. Annual expenditures during full operation of the proposed project would be approximately $5.0 million per year. Refer to Table 3-2 in *Section 3.1: Project Payroll and Expenditures* for a breakdown of anticipated local operational expenditures on goods and services, including RGV's initial estimates and RDN's adjustments. This analysis accounts for the industry-level effects of the proposed project's operational spending based on the major industry codes for these expenditures, as defined by the North American Industry Classification System (NAICS). For the ramp-up period, this analysis scales down anticipated operational expenditures proportionally to the anticipated level of employment during the ramp-up period relative to full operations.

3.3 Output, Jobs, and Labor Income

Total output represents the amount of money that would circulate in the economy as a result of the proposed project's activity and includes the multiplier effect that is generated by the portion of each dollar that gets re-spent locally. In this analysis, direct output represents the value of everything that would be produced by RGV, including the new facilities and infrastructure they would build during the construction phase, and the minerals they would mine, process, and sell to the market during the ramp-up and full operation phases. Indirect output includes RGV's initial spending on procurement of goods and services and the successive rounds of spending that would occur at businesses across multiple sectors. Induced output includes all of the spending by RGV employees and employees at businesses supported directly and indirectly by RGV spending. The total output is the sum of direct, indirect, and induced output. Indirect and induced impacts relative to the total impact represent the multiplier effect of RGV's direct output.

Because much of the total output would be related to RGV's profit, this analysis also estimates a "community impact." Impacts to the local community include the multiplier effect from RGV's output (i.e., the sum of indirect and induced output), the value of RGV's newly constructed facilities and infrastructure, and RGV's payroll spending to local residents.

Table 3-3 presents the proposed project's estimated direct, indirect, induced, and total impact in terms of output for each year of the construction and ramp-up period, and for ongoing operation. It also provides the economic multiplier, multiplier effect, and the community impact for each of these periods.

Table 3-3. Annual Output (in millions; 2022 dollars)

Type of Impact	Year 1	Year 2	Year 3	Year 4+
Direct	$10.1	$13.5	$69.7	$179.8
Indirect	$2.7	$2.6	$2.4	$6.1
Induced	$2.4	$4.5	$6.6	$16.9
Total[1]	**$15.2**	**$20.6**	**$78.6**	**$202.8**
Multiplier	*1.51*	*1.52*	*1.13*	*1.13*
Multiplier Effect	$5.1	$7.1	$8.9	$23.0
Community Impact[3]	**$15.2**	**$20.6**	**$23.7**	**$61.1**

[1] Number may not sum due to rounding

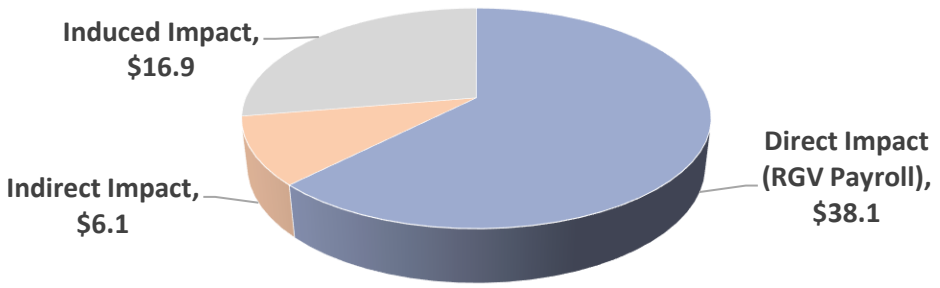
[2] The multiplier effect is equivalent to the sum of indirect and induced impacts

[3] The community impact represents indirect and induced effects, the value of constructed infrastructure, and RGV's payroll spending

The total economic impact of expenditures by the proposed project would increase each year during the construction and ramp-up period and reach approximately $202.8 million per year of output during full operation. The proposed project's direct impact is the annual output produced by mining activity, estimated at $179.8 million based on RGV's projected production of 108,400 ounces of gold per year and the current three-year average price of gold of $1,659 per ounce. Of these funds, RGV would spend approximately $5.0 million on procurement of local goods and services to support their operations, which would generate an indirect economic impact of $6.1 million. These impacts would accrue to businesses where RGV initially spends these funds as well as to those businesses' supply chains. In addition to direct and indirect impacts, the proposed project would generate an induced impact of $16.9 million due to household spending by RGV employees and employees of the businesses supported directly or indirectly by RGV's operational spending.

This analysis estimates that the portion of the total economic activity that would impact the local community during full project operation would be $61.1 million per year. The IMPLAN analysis generated an economic multiplier for the proposed project in Nevada County of 1.13, which indicates that each dollar worth of output generated by the proposed project would support an additional 13 cents of indirect and induced output, i.e., economic activity, in Nevada County due to local and successive rounds of spending. Therefore, the multiplier effect would result in $23.0 million of output. This, in combination with RGV's local payroll spending of $38.1 million, comprises the total community impact of $61.1 million per year. Figure 3-1 shows the community impact during full operation by impact type.

Figure 3-1. Annual Community Impact during Full Operation by Impact Type (in millions; 2022 dollars)



Output during the construction and ramp-up periods would be $15.2 million in Year 1, $20.6 million in Year 2, and $78.6 million in Year 3. The community impacts in Year 1 and Year 2 are equal to the total output because RGV's expenditures would go toward construction of local infrastructure, development of the mine, and mill commissioning, all of which produce value locally. This analysis assumes the mine would begin mining and processing minerals in Year 3 and would therefore start generating output in the form of RGV revenue in that year. The estimated community impact in Year 3 is $23.7 million in output.

Operation of the proposed project would generate local jobs and associated labor income, including direct jobs working for the mine, indirect jobs working for businesses supported by RGV's operational expenditures, and induced jobs working for businesses that supply goods and services to workers and their families. All direct jobs working for the mine would be full-time positions and each count as one job in the following analysis. However, this analysis estimates the employment impact in terms of the total number of jobs, per the IMPLAN methodology, rather than full-time equivalent jobs. This means that two part-time indirect or induced jobs would count as two jobs rather than one. Labor income includes the combined cost of total payroll paid to employees (e.g., wages and salaries, benefits, and payroll taxes) and payments received by self-employed individuals and unincorporated business owners.

Table 3-4 presents the proposed project's estimated direct, indirect, induced, and total impact in terms of jobs and labor income for each year of the construction and ramp-up period, and for ongoing operation.

Table 3-4. Annual Employment and Labor Income

Type of Impact	Year 1	Year 2	Year 3	Year 4+
Employment (in number of jobs)				
Direct	63.0	93.0	121.0	312.0
Indirect	17.6	19.2	20.4	52.6
Induced	15.8	29.6	42.8	110.4
Total[1]	**96.3**	**141.8**	**184.2**	**475.0**
Labor Income (in millions; 2022 dollars)				
Direct	$4.5	$9.7	$14.8	$38.1
Indirect	$0.7	$0.8	$0.8	$2.2
Induced	$0.7	$1.4	$2.0	$5.1
Total[1]	**$5.9**	**$11.9**	**$17.6**	**$45.4**

[1] Number may not sum due to rounding

Ongoing operation of the proposed project would support an estimated 475 jobs and $45.4 million in labor income in Nevada County annually. This includes 312 jobs working directly for RGV, all of which would be full-time positions. The remaining 163 jobs would be a mix of full-time and part-time jobs working for businesses supported directly and indirectly by RGV expenditures and associated household spending. Based on RGV's projected payroll spending of $38.1 million, average annual compensation for their workers would be $122,000. Estimated income for the indirect and induced jobs amounts to $7.3 million, which equates to average annual compensation of $44,000 for these jobs.

Many of the direct, indirect, and induced expenditures that would occur as a result of the proposed project would also generate local tax payments. RDN evaluated the total tax effects from project spending in Nevada County that would accrue to all taxing entities in the county, as well as the amount

of tax dollars that would accrue to the County's General Fund. Refer to *Section 5.3: Tax Revenue*, for the results of this tax analysis.

3.4 Impacts to Commercial Industries

Operation of the proposed project and associated indirect and induced spending would impact hundreds of industries in Nevada County.

Table 3-5 displays the top 12 industries that would be impacted by operation of the proposed project in terms of output, employment, and labor income.

Table 3-5. Industries with Largest Impact in terms of Output, Employment, and Labor Income

Industry	Direct	Indirect	Induced	Total[1]
Output				
Gold Ore Mining	$179,800,000	$1,000	$1,000	$179,802,000
Retail Sales	$0	$667,000	$1,880,000	$2,547,000
Wholesale Suppliers	$0	$1,373,000	$886,000	$2,259,000
Healthcare Services	$0	$0	$1,837,000	$1,837,000
Real Estate Services	$0	$243,000	$927,000	$1,171,000
Restaurants and Drinking Places	$0	$31,000	$1,048,000	$1,080,000
Financial Services	$0	$34,000	$813,000	$847,000
Local Government Enterprises	$0	$116,000	$623,000	$739,000
Services to Buildings and Landscaping	$0	$434,000	$136,000	$571,000
Insurance Providers and Related Activity	$0	$54,000	$511,000	$566,000
Truck Transportation	$0	$380,000	$38,000	$418,000
Hotels and Motels	$0	$411,000	$0	$412,000
Employment				
Gold Ore Mining	312.0	0.0	0.0	312.0
Retail Sales	0.0	6.7	16.7	23.4

Financial Services	$0	$9,000	$196,000	$205,000
Hotels and Motels	$0	$187,000	$0	$187,000
Wholesale Suppliers	$0	$98,000	$83,000	$180,000
Truck Transportation	$0	$157,000	$16,000	$173,000

[1] *Numbers may not sum due to rounding. Dollar figures presented in 2022 dollars and rounded to thousands.*

The total direct economic impact of proposed project operation would be the $179.8 million of output, 312 jobs, and $38.1 million of labor income produced by RGV in the Gold Ore Mining sector, while the indirect and induced impacts would be the resulting rounds of spending that occur at businesses across multiple sectors. The industry with the largest indirect and induced impacts in terms of output and employment would be Retail Sales. RGV and supporting industry expenditures as well as local household spending would drive these impacts. The industry with the largest indirect and induced impacts in terms of labor income would be Healthcare Services, with this impact entirely driven by household spending. The reason the 13 jobs in Healthcare Services would result in more labor income than the 23 jobs in Retail Sales is that jobs in this sector have higher average wages and weekly hours (Bureau of Labor Statistics, 2022).

RGV and supporting industry expenditures, i.e., those that contribute to indirect impacts, would have the largest impact in terms of output in the Wholesale Suppliers, Retail Sales, and Services to Buildings and Landscaping sectors. The impact of industry spending would outweigh that of household spending in the Wholesale Supplier sector (60.8 percent versus 39.2 percent), while the reverse is true in the Retail Sales sector (26.2 percent versus 73.8 percent). This finding is in line with general spending patterns of businesses and households, with both of these types of buyers making purchases from both types of sellers, with businesses generally purchasing supplies from wholesalers and households generally purchasing goods from retailers. The output impact to the Services to Buildings and Landscaping sector would be primarily driven by RGV and supporting industry expenditures, which would make up 76.0 percent of the total impact in this industry.

The economic impacts from RGV and supporting industry expenditures in terms of jobs and labor income are generally in line with those for output, with a couple of exceptions. Although industry rather than household spending supports the majority of output in the Wholesale Supplier sector, employment and labor income supported by each type of buyer is relatively equal. This finding implies that more staff is required relative to total sales volume at wholesale suppliers that serve households rather than businesses. Another exception is the Dry-Cleaning and Laundry Services sector, which would not be in the top 12 industries in terms of output but would grow by seven jobs and $264,000 in labor income. RGV projects they would have high costs for laundry services ($183,000 per year), which would be the primary driver of this impact.

The induced impacts of proposed project operation are greater than the indirect impacts, with $16.9 million versus $6.1 million in output (refer to Table 3-3 in *Section 3.3: Output, Jobs, and Labor Income*), as much of the household spending occurs locally. This spending impacts a wide variety of household-supporting industries, with the top industries in terms of output being Retail Sales, Healthcare Services, and Restaurants and Drinking Places. These three industries would also experience the highest indirect impacts in terms of employment and labor income.

3.5 Impacts to Existing Local Businesses

RDN understands that the proposed mining operations may impact individual local businesses in a variety of ways. While the IMPLAN analysis captures the aggregate anticipated economic impact, it does not capture the differences in how existing local businesses may be impacted. To better understand potential impacts to these businesses, RDN reached out to local business organizations and owners and other representatives at individual businesses to conduct brief interviews.

RDN and the County developed an initial list of local businesses to contact based on their proximity to the project site and transportation corridors, and then refined and expanded the list based on stakeholder input from MineWatch and local business organizations. RDN spoke to representatives at business organizations about the impacts they anticipate could occur as a result of the proposed project to local businesses, public services, and real estate. During these interviews, RDN also requested recommendations for specific local businesses or types of businesses that should be included in the stakeholder interviews. RDN then interviewed representatives at individual local businesses about their general operations and anticipated impacts to their business from the proposed project.

RDN spoke with representatives of MineWatch and four business organizations: Nevada City Chamber of Commerce, Greater Grass Valley Chamber of Commerce, Nevada County Economic Resource Council, and Sierra Business Council. Given the controversial nature of the proposed project, representatives from a couple of these organizations largely declined to comment because their organizations are not taking a position on the proposed project. Representatives from the remaining organizations had mixed responses.

Generally speaking, these organizations indicated that the new economic activity generated by the proposed project could support new businesses in the area, but potential environmental effects could adversely affect other local businesses. Even if the proposed project does not have substantial negative environmental impacts, the perception of such impacts may negatively affect the tourism industry, as people may choose not to visit the area if they believe it has been negatively impacted by mining activity. Another concern is the size of the local workforce. Local businesses are already competing for talent and labor; introducing additional high-paying jobs would likely make it harder for local businesses to meet their hiring needs.

After interviewing organizations, RDN reached out to representatives at 24 individual businesses in Nevada County, of which 8 agreed to an interview, 6 declined to participate, and 10 did not respond to our messages. Similar to our experience with business organizations, many of the business representatives who chose not to participate cited the contentious nature of the proposed project as their reason for declining. Even among the business representatives who responded to our questions, there was a general sense of hesitancy to participate in the interview and responses were often guarded.

Of those business owners and representatives that spoke with RDN about the proposed project, their anticipated impacts varied. Some business representatives anticipate little to no change in business revenue but expressed concern over how potential environmental impacts, namely water quality, might impact their business's operations. Others expect that the proposed mining operation would likely benefit their businesses. When asked about the effect of the proposed mine on the economy more generally (beyond their specific business), responses echoed those from the business organizations. Their responses varied, with some expecting that the mine would facilitate new economic activity in Nevada County and others articulating concerns about labor shortages. While the sample size and response rate limit the ability to quantify or draw broader conclusions, the variance in responses highlights the variety and complexity of potential impacts that the proposed mine may have on existing local businesses.

4. IMPACT TO LOCAL PROPERTY VALUES

RDN researched the potential impacts of re-opening the Idaho Maryland Mine on local residential property values. This research consisted of (1) a literature review, (2) a case study analysis, and (3) a survey of real estate professionals that work in western Nevada County. This section details our research methodologies and findings.

4.1 Literature Review Summary

Although there is an extensive body of literature about the potential spillover effects of adverse environmental impacts on home prices, there are relatively few rigorous, well-executed studies that focus specifically on mining and its impact on home prices, and these studies cover a range of mining operations and locations. As a result, our thorough review of the academic literature did not yield any significant research on the impact to home values of mines that closely resemble the proposed project. Most studies focus on more visibly impactful activities, such as open pit mining or other major industrial activities, rather than underground mineral mining. Please see *Section 7: References* for a complete list of papers RDN reviewed for this study and *Appendix A—Literature Review: Impacts of Mining and Industrial Activities on Home Values* for a summary of results for the studies RDN found most relevant to the proposed project.

Table 4-1 summarizes the findings of the key studies identified in RDN's literature review based on the type of site, study area, and direction and magnitude of the impact. The literature presents a wide range of impacts from mining and other industrial activities on property values, from a positive impact of 3.8 percent for home sales within two kilometers of industrial sites in the Netherlands to a negative impact of up to 17.2 percent on rental prices in Chilean cities where new mines opened. For the studies RDN reviewed, the distance of measurable impacts ranged from 0.3 miles away for general hazardous waste sites to 10 miles away for open pit rock mines.

Table 4-1: Summary of Key Study Findings

Author(s)	Site Type	Impact Area	Impact on Residential Property Values
Bakker (2021)	Industrial sites	2 kilometers (1.2 miles)	Premium of 4% for homes near an industrial site (i.e., homes cost more closer to the site)
Boxall, Chan, and McMillan (2005)	Natural gas facilities	4 kilometers (2.5 miles)	4% to 8% decline in value for homes near natural gas facilities
Brasington and Hite (2005)	General environmental hazards	Not applicable; study estimates a distance-to-hazard price elasticity	3% increase in home prices when distance from the nearest environmental hazard increases by 10%
Currie, et al. (2015)	Toxic plants	1 mile	11% decline in home prices within a half mile of a source of toxic air emissions; negative impact may remain even after closure of the source of pollution

Author(s)	Site Type	Impact Area	Impact on Residential Property Values
Davis (2011)	Power plants	2 miles	Reduction between 3% and 7% for homes near power plants
Fitzpatrick and Parmeter (2021)	Coal mining	2.3 kilometers (1.4 miles)	15.5% decline in value for homes near coal mining
Ford and Seals (2018)	Rock quarries	In some specifications they estimate elasticities, so they do not use a specific distance; in other specifications they use 2 miles	Finds no compelling statistical evidence that either the anticipation of, or the ongoing operation of, rock quarries negatively impact home prices
Kiel and McClain (1995)	Incinerator Plant	Not applicable; study estimates a distance-to-hazard price elasticity over a 28-square-mile area	Home prices increased by 1.7% per mile away from the plant during construction, 3.2% per mile during early operation, and 2.7% per mile after four years of continued activity
Malikov, Sun, and Hite (2017)	Rock mining	10 miles for near-zero effect (effects dissipate with distance)	2.3% to 5.1% reduction per mile closer to rock mining activity
Muehlenbachs, Spiller, and Timmins (2015)	Shale gas	1.5 kilometers (0.9 miles)	Reductions in value between 10% and 17% for homes near shale gas development
Neelawala, Wilson, and Athukorala (2012)	Mining of different resources	4 kilometers (2.5 miles)	6% to 7% increase in willingness to pay per kilometer of distance from mine/smelting operation
Rivera (2020)	Mining of different resources	Not applicable; study evaluates city-level data	10% to 17% reduction in rents in cities with new mine openings
Taylor, Phaneuf, and Liu (2016)	Contaminated and clean commercial/ industrial sites	Home impacted by a contaminated site if within 0.5 miles, and by a clean site if within 0.3 miles	Proximity to clean sites reduces neighboring home values by 2.5%; proximity to a contaminated site reduces values by about 8%; remediation of a contaminated site increases values by as much as 5%

4.2 Case Study Analysis

Given that existing academic research does not specifically address impacts to property values from underground gold mining activities and shows a range of impacts by the type of activity and size of impact area, RDN performed a case study analysis to estimate the impacts of similar mining operations on property values. The steps of this analysis include searching for existing mines that are reasonably comparable to the proposed project, acquiring real estate transaction data for continuous periods during which the comparable mines switched from a period of extended closure to full operation, selecting an appropriate methodology for evaluating impacts of these operations to property values, and performing the analysis.

Site Selection

To identify potential case study mines, RDN searched records from two public databases that catalog active and inactive or abandoned mines in the U.S.: the Mine Safety and Health Administration's (MSHA) Mine Data Retrieval System (MDRS) and the U.S. Geological Survey's (USGS) Mineral Resource Data System (MRDS). MSHA's MDRS online database contains information on over 31,500 mines, including location, type, mineral, operational status, operator, and quarterly employment data. While the MSHA data include information from 1983 to present, the bulk data files available for public download only go back to 2000. (Data for 1983 to 1999 is accessible through the web interface for individual mines.) USGS MRDS records go back much further and include historical information on the type of workings and mineral deposits for over 300,000 locations. Unfortunately, many of the USGS's database records are also incomplete and/or out of date. Where needed, RDN supplemented our research with internet searches for news articles, press releases, and financial documents on candidate mines' operational histories. Our screening criteria considered the following factors:

Mine Status –*When did the mine open and, if it has since closed, when did it close? If the mine was intermittently open, were there periods of inactivity during which the community believed the mine would close permanently?* Ideally, the mine will have opened in an area where mining has not previously occurred or where the existing mine has either been abandoned or inactive long enough that the community was uncertain whether the mine would re-open. Due to the lack of bulk data from MSHA MDRS before 2000, we restricted our search to mines that opened or re-opened in 2000 or later. Compared to the proposed project, we assume older mines are less likely to have used the same mining processes or be subject to the same environmental standards during their early operation. Similarly, real estate data providers are more likely to have parcel-level information available for recent periods versus older periods.

Mine Material – *What are the mine's primary products? Are the mine's extraction processes and environmental impacts similar to those of the proposed Idaho-Maryland Mine Project?* Ideally, the mine should use similar mining extraction processes as the proposed project and output similar waste products. Thus, the mined material should ideally be gold or other metal as opposed to coal or other non-metals.

Mine's Proximity to Residential Areas – *How many people live within one, five, and ten miles? Are there any other significant commercial or industrial activities nearby which could interfere with an analysis of the mine's impacts?* The mine must be close enough to a residential area that the mine could conceivably impact nearby property values. Areas with large populations close to the mine are preferable to areas with smaller populations. They will most likely contain more real estate transactions

for the period of interest and thus a larger dataset available for analysis. Our literature review included studies with an impact radius that ranged from 0.3 miles to 10 miles, with most using an impact radius of between 1 mile and 2.5 miles. It is also important that the area have a sizable population close to the mine but outside the impact radius to act as a control group.

Mine Type – *Is the mine (1) a surface or open-pit mine, (2) an underground mine, (3) a hybrid surface and underground mine, or (4) an in-situ mine?* Ideally, the mine should be an underground mine so as to match the proposed project. Research shows that the potentially adverse environmental spillover effects of underground mines are typically lower than those of similarly sized surface mines.

Using the search criteria above, RDN filtered the MSHA dataset down to about a dozen candidates, then determined the total population and housing units within one, five, and ten miles as of the 2000, 2010, and 2020 censuses. After a holistic review of each mine's characteristics, operational histories, and surrounding population, RDN chose three mines to use as case studies: the Haile Gold Mine in Lancaster County, SC; the Coy Mine in Jefferson County, TN; and the Lincoln Mine in Amador County, CA.

The final step in our preparation for the case study analysis was to acquire residential sales transactions and property characteristics for surrounding parcels. RDN investigated several potential sources for these data, including public data available from County Assessor's Offices and Zillow, and licensed data available from third-party sellers, including ATTOM Data Solutions, CoreLogic, and ParcelQuest. We ultimately purchased data from CoreLogic. In consideration of budget constraints, we limited the scope of our purchase to parcels partially or wholly located in ZIP codes within five miles of each case study mine. We also limited our purchase of sales transactions to 11-year periods during which the mines ramped up production after an extended closure. These periods were 2010-2020 for the Haile Gold Mine, 2004-2014 for the Coy Mine, and 2009-2019 for the Lincoln Mine. Of course, not all parcels in the study area necessarily sold during these periods. For parcels that only sold before or after the requested periods, the CoreLogic data still includes the most recent sales price. To validate and supplement the CoreLogic data, RDN manually collected historical sales prices from Zillow for a random sample of properties located at various distances from each mine. This supplementary data collection was particularly helpful for increasing our sample size of observations for the Haile Gold Mine.

Case Study Mines

Haile Gold Mine

The Haile Gold Mine is a surface gold mining operation located in Lancaster County, South Carolina. The closest town to the Haile Gold Mine is Kershaw, South Carolina, which is approximately four miles away. According to the decennial censuses, the population within 10 miles of the mine increased from 15,233 in 2000, to 16,564 in 2010, and 17,253 in 2020.

The mine is currently owned and operated by Haile Gold Mine, Inc., a subsidiary of OceanaGold, a global mining company. The mine initially opened in 1827 before closing in the early 1900s; it was then periodically mined for the rest of the century. More recently, MSHA records indicate the mine was inactive from December 2002 until November 2011, when the mine changed back to active status. However, the mine operator did not receive all the necessary permits to commence new construction and

operations until October 2014. The mine then ramped up employment and operations, pouring its first gold in January 2017.

Table 4-2 presents summary statistics for single-family homes sold within 10 miles of the mine, broken down into two periods: before and after the mine re-opened. For purposes of this study, we are using 2016Q3 as the opening period. As show in the table, the real average sales price and price per square foot (in constant 2022 dollars) grew after the mine re-opened. However, this does not mean there is a causal relationship between increases in sales prices and the mine opening, which could be attributed to confounding factors.

Table 4-2: Summary Statistics for Home Sales within 10 Miles of Haile Gold Mine, Before and After Opening (2016Q3)

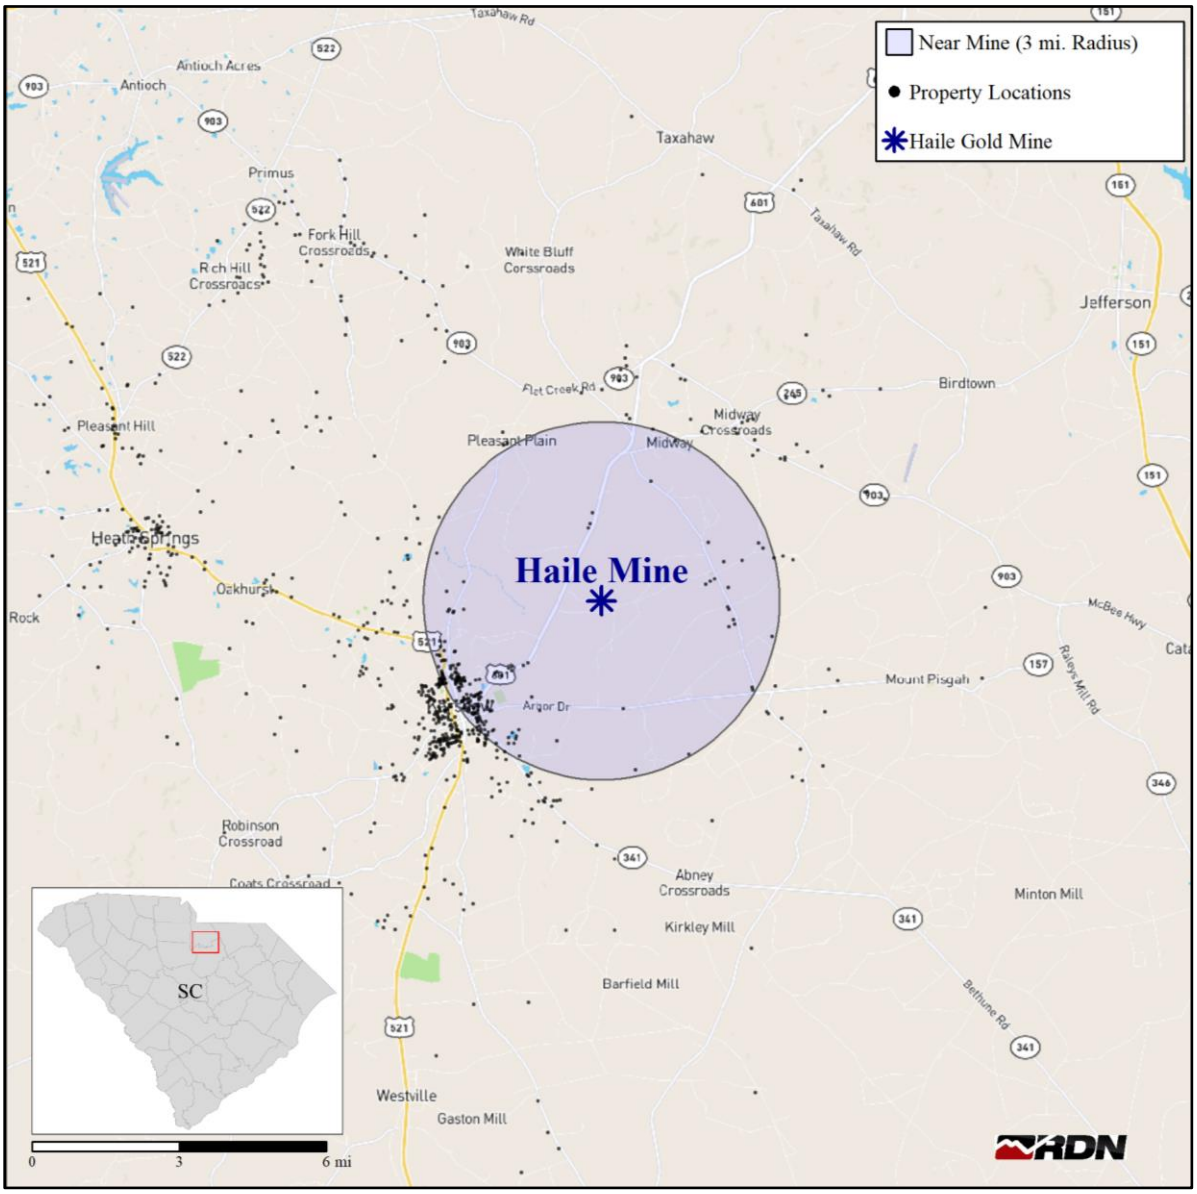
Variable	(n=622) Before Opening 2002Q1-2016Q2	(n=497) After Opening 2016Q3-2022Q1	Change
Sale Price (Adj.)	$96,032	$111,284	***$15,252
Price per Square Foot (Adj.)	$56.68	$68.98	***$11.15
Age (Sale Date – Year Built)	38	37	(1)
Square Footage (Home)	1,614	1,585	(29)
Square Footage (Land)	120,804	175,570	*54,766
Population Density (Pop./sq mi)	319	315	(4)
Distance to Nearest School (miles)	1.48	1.40	(0.08)

Notes: **** p < 0.001; ** p < 0.01; * p < 0.05. All values are average estimates for properties within 10 miles of the mine. The opening of the mine is defined as 2016Q3. All prices in constant 2022 dollars.*

Sources: CoreLogic, 2022; Zillow, 2022; ESRI, 2022; and RDN estimates prepared for this study.

For the purpose of our analysis, we consider properties within three miles of the Haile Gold Mine as "near" the mine and all other properties are "far" from the mine. We chose this radius for the impact area because it is within the range of distances used in the literature and results in a similar number of observations that are inside or outside the impact area in our hedonic regression analysis. All else equal, having similar sample sizes in each area (i.e., near and far from the mine) increases the statistical power of their comparison. This means we are more likely to detect the effect, if any, that the mine has had on nearby property values relative to a dataset with the same total sample size but with fewer observations in one area and more in the other. Figure 4-1 maps the Haile Gold Mine, the impact area, and the locations of property sales observed over the case study period.

Figure 4-1: Residential Property Sales Near and Far from Haile Gold Mine, Lancaster County, SC, 2002-2022



Coy Mine

The Coy Mine is an underground zinc mine located in Jefferson County, Tennessee; it is one of three East Tennessee Mines, the others being the Immel Mine and the Young Mine. The population within 10 miles of the Coy Mine was 52,190 in 2000, 59,356 in 2010, and 63,042 in 2020. Asarco purchased the site in the 1960s and operated the Coy Mine until 2001. Press releases indicate the mine closed at the tail end of 2001 following the U.S. recession and a steep fall in the price of zinc. The mine remained closed for several years before briefly re-opening in 2007 under new owner Glencore. The current owner, Nyrstar, completed its purchase of the mine in 2009 and resumed operations, reaching full capacity by 2010Q4.

Table 4-3 presents summary statistics for single-family homes sold within 10 miles of the Coy Mine, classified into two periods: before and after the mine re-opened. For purposes of this study, we set 2009Q3 as the period for mine re-opening. Though the mine was active from 2007 to 2008, it appears the current owner, Nystar, significantly ramped up production after they acquired the mine in 2009. As show in the table, the real average sales price and price per square foot (in constant 2022 dollars) fell after the mine re-opened. However, this does not mean there is a causal relationship between decreases in sales prices and the mine opening, which could be attributed to confounding factors. To establish a causal relationship, we must also analyze the marginal change in prices for impacted homes and non-impacted homes at different stages of the mine's operation.

Table 4-3: Summary Statistics for Home Sales within 10 Miles of Coy Mine, Before and After Opening (2009Q3)

Variable	(n=4,594) Before Opening 2002Q1-2009Q2	(n=3,683) After Opening 2009Q3-2022Q1	Change
Sale Price (Adj.)	$194,928	$170,966	***($23,962)
Price per Square Foot (Adj.)	$108.32	$94.12	***($14.20)

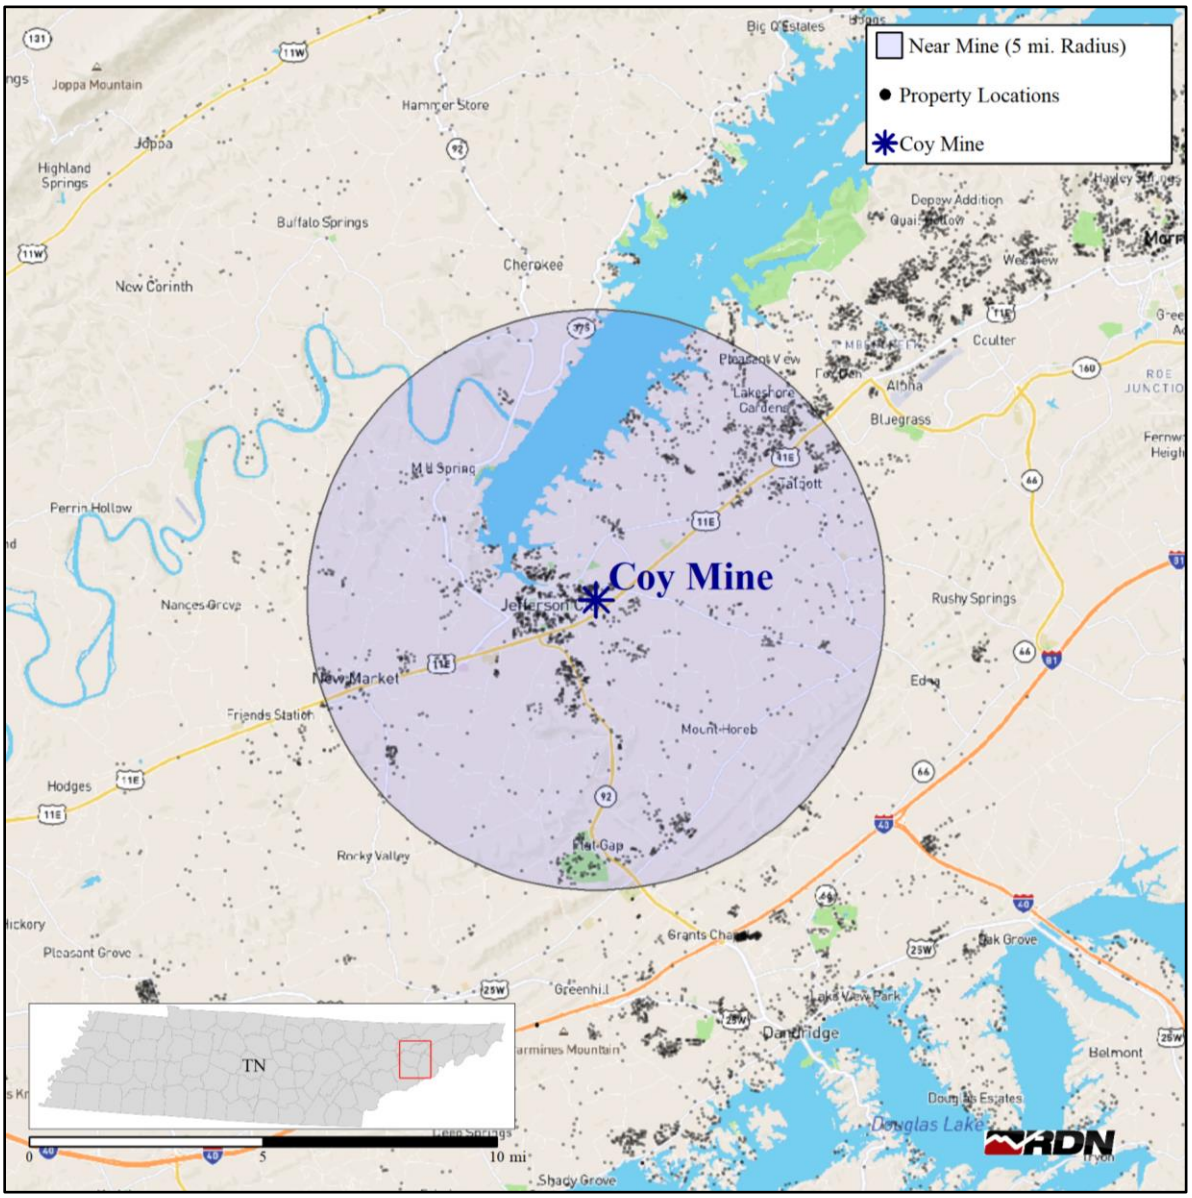
Notes: **** p < 0.001; ** p < 0.01; * p < 0.05. All values are average estimates for properties within 10 miles of the mine. The opening of the mine is defined as 2009Q3. All prices in constant 2022 dollars.*

Sources: *CoreLogic, 2022; Zillow, 2022; ESRI, 2022; and RDN estimates prepared for this study.*

For the purpose of our analysis, properties within five miles of the Coy Mine are "near" the mine and all other properties are "far" from the mine. We chose this radius for the impact area because it is within the range of distances used in the literature (albeit at the upper end) and results in a similar number of observations that are "near" and "far" from the mine in our hedonic regression analysis, which increases

the statistical power of their comparison. Figure 4-2 maps the Coy Mine, the impact area, and the locations of property sales observed between 2002 and 2022.

Figure 4-2: Coy Mine Impact Area and Residential Property Sales, Jefferson County, TN, 2002-2022



Lincoln Mine

The Lincoln Mine is an underground gold mine in Amador County, California that was first established in 1851. The closest town to the Lincoln Mine is Sutter Creek, California, which is approximately 1.4 miles away. The population within 10 miles of the mine, retrieved from decennial census data for 2000, 2010, and 2020, were 26,397, 28,964, and 30,536, respectively. According to MSHA data, the Lincoln Mine was abandoned from at least 1999 to July 2012, when "intermittent" operation began under then owner, Sutter Gold. A February 2013 news article from ABC7 describe the mine as "weeks away from starting full-scale mining," but the company ran into financial and equipment issues that delayed production. The mine was put on care and maintenance in 2014 until the current owner, Seduli Sutter Operations, purchased the mine in 2020 and resumed operations, pouring its first gold in 2022.

Table 4-4 presents summary statistics for single-family homes sold within 10 miles of the Lincoln mine from before the mine re-opened and after the mine re-opened. For purposes of this study, we define the "mine opening" period as 2016Q3. As shown in the table, the real average sales price and price per square foot (in constant 2022 dollars) grew after the mine re-opened. However, this does not by itself indicate any causal relationship between homes sales prices and the mine opening. To establish a causal relationship, we must also analyze the marginal change in prices for impacted homes and non-impacted homes at different stages of the mine's operation.

Table 4-4: Summary Statistics for Home Sales within 10 Miles of Lincoln Mine, Before and After Opening

Variable	(n=1,598) Before Opening 2001Q1-2013Q1	(n=2,609) After Opening 2013Q2-2022Q1	Change
Sale Price (Adj.)	$324,172	$383,363	***$59,190
Price per Square Foot (Adj.)	$182.82	$224.32	***$41.50
Age (Sale Date – Year Built)	28	34	***6
Square Footage (Home)	1,738	1,785	*47
Square Footage (Land)	59,025	72,948	**13,923
Population Density (Pop./sq mi)	683	679	(4)

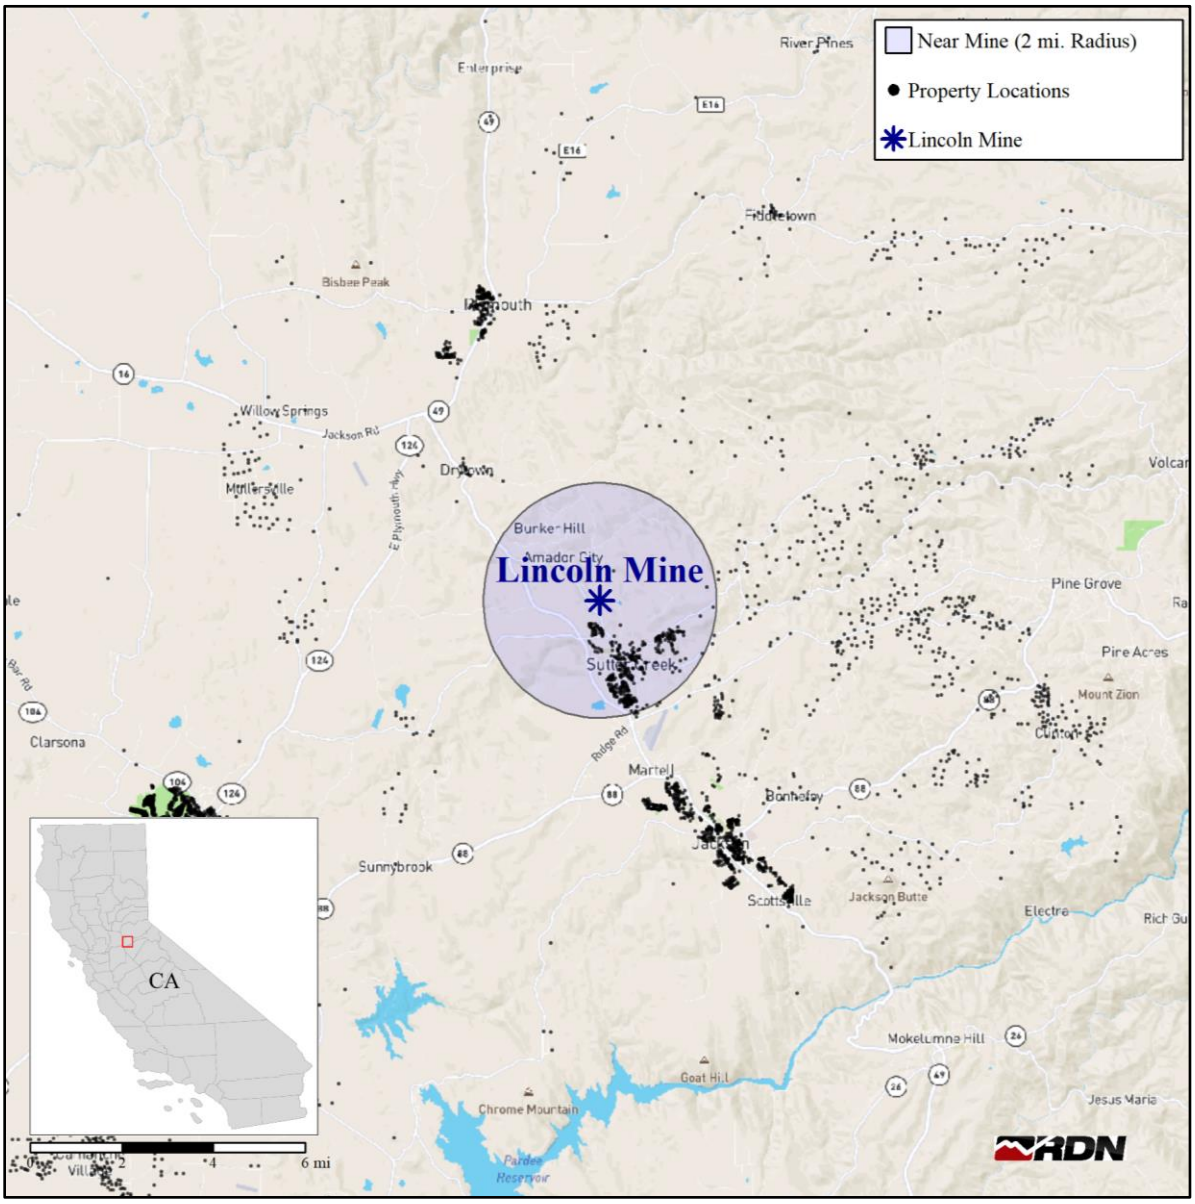
For the purpose of our analysis, properties within two miles of the Lincoln Mine are "near" the mine and all other properties are "far" from the mine. We chose this radius as the impact area because it is within the range of distances used in the literature and results in a similar number of observations that are inside or outside the impact area in our hedonic regression analysis, which increases the statistical power of our analysis. Figure 4-3 maps the Lincoln Mine, the impact area, and the locations of property sales observed between 2001 and 2022.

Figure 4-3: Lincoln Mine Impact Area and Residential Property Sales, Amador County, CA, 2001-2022



Case Study Methodologies

While the existing literature does not specifically address impacts to property values from underground mining, the same methodologies used to estimate the impacts of other activities on residential home prices are generally applicable. For a discussion of methodological approaches that may be used to estimate impacts of mining and other activities to property values, see *Appendix B—Literature Review: Methodologies for Estimating Impacts on Home Values*. The methodologies used for this case study analysis are summarized below.

Hedonic Pricing Multi-Event Analysis

Impacts on home values from an activity may vary based on the homes' distance from the activity and the stage of the activity. Using a hedonic pricing multi-event approach, RDN estimated whether, on average, the distance from a mine is associated with any premium or penalty on home values for the case-study locations. We do this at three different stages for each mine: pre-operation, ramp up, and an ongoing operation. Data used for the case study analysis includes property and location attributes. Table 4-5 includes a summary of the variables used for the analysis.

Table 4-5: Summary of Case Study Dataset Variables

Variable	Description
Mine Name	Designates if the property is near to the Haile Gold Mine, Coy Mine, or Lincoln Mine
Sale Amount	Transaction value of home (constant 2022Q1USD)
Sale Date	Date of transaction
Home Square Footage	Size of livable space in the home (square feet)
Age	Age of the home (years)
Population Density	Population density surrounding the home
Distance to Nearest School	Straight-line distance to the nearest school (miles)
Distance to Mine	Straight-line distance to the nearest mine (miles)

In order to define the development and operation stages for each of the three case study mines, RDN reviewed a combination of historical mine status and employment data from MSHA and, when available online, historical news articles about the development and operational status of the mines. This analysis considers mines to be inactive during periods the mine's status is recorded by MSHA as "abandoned" or "non-producing," or if the mine's status is "active" but the mine is not producing and does not show any significant employment. Non-producing mines are those where production has not yet begun or has ceased, but some minimal work occurs, such as safety inspections. Abandoned mines are those that are not only closed, but also no party is actively monitoring or maintaining the site. A mine can become active again when the existing or new operator decides to resume operations. This often requires a

transition period of construction, capital improvements, and hiring and training before the mine reaches full operational capacity.

RDN selected dates that best align with the following definitions of the various stages of development and operation:

- **Pre-operation Phase**: this is the period during which a prospective mine operator is working on obtaining project approval and necessary permits; during this period the general public learns about the upcoming project.
- **Ramp-up Phase**: this period includes construction activities, equipment procurement and upgrades, workforce training, and ramp up of mining activities to full operation; the mine begins operating (i.e., producing) part-way through this phase.
- **Ongoing Operation Phase**: this period includes ongoing full operation of the mine.

Table 4-6 summarizes the periods RDN selected for each mine's pre-operation, ramp-up, and ongoing operation phases.

Table 4-6: Quarterly Periods by Phase of Operation, Case Study Mines

Mine Name	Pre-operation	Ramp-up	Ongoing
Haile Gold Mine	2002Q1 - 2014Q3	2014Q4 - 2020Q3 (Mine open: 2016Q3)	2020Q4 – 2022Q2
Coy Mine	2002Q1 - 2006Q3	2006Q4 - 2013Q3 (Mine open: 2009Q3)	2013Q4 - 2022Q2
Lincoln Mine	2001Q1 - 2011Q3	2011Q4 - 2017Q2 (Mine open: 2013Q2)	2017Q3 - 2022Q2

Once all stages were defined for each mine, we pooled the data for each stage and performed statistical analyses to examine the relationship between a mine's location and phase of operation and the location and characteristics of homes sold in the surrounding area. Specifically, in each stage, we regressed the natural logarithm of the constant-dollar sale price on a variable measuring the straight-line distance to the mine in miles, our main variable of interest, and a set of additional covariates/control variables. Because we use the natural logarithm of the sale price, the coefficient on the distance-to-mine variable can be interpreted approximately as the percent change in the value of a home associated with an increase of one mile in the distance from the mine.

Fixed-Effects Difference-in-Differences Analysis

To further investigate whether the opening of the case study mines impacted home values in their respective areas, and whether any impact varied by proximity to the mines, we analyze whether, on average, home prices in the counties where the mines are located changed as a result of the mines opening and commencing normal operations. Further, we estimate whether homes considered to be near the mine experienced different impacts than other homes.

The fixed-effects difference-in-differences analysis uses two operational statuses: mine closed and mine open. This is different from the hedonic pricing multi-event analysis, which included three phases. For this binary indicator, RDN selected the quarter when the mine appears to have commenced or re-commenced production (i.e., mineral extraction), as opposed to exploratory drilling and mine construction leading up to operations. This date occurs part-way into the ramp-up phase, after construction and equipment procurement or upgrades. Based on available data, the dates at which the case study mines began operation were 2016Q3 for the Haile Gold Mine, 2009Q3 for the Coy Mine, and 2013Q2 for the Lincoln Mine (refer to Table 4-6).

For each mine location, RDN calculated an average quarterly price for homes classified as near or far from the mine using a large set of alternative distances as the cutoff point for being considered near the mine. These distances ranged from half a mile up to ten miles. For each mine, RDN then found which cutoff distance resulted in the largest number of same-quarter near-and-far averages. Under certain cutoff distances and periods, some counties only had home sales either near or far from the mine, but not both. In order to ensure the fixed effects regression has appropriate overlap of sales across groups (near and far) for each mine, we defined the cutoff as the distance that results in the largest number of same-quarter near-and-far averages. The resulting cutoff distances are three miles for the Haile Gold Mine, five miles for the Coy Mine, and two miles for the Lincoln Mine.

Once we determined the distances for each mine and created near/far indicators in each data set, we pooled the data for all three case study areas. We then regressed the natural logarithm of the constant-dollar sale price on key indicators: (1) *Mine Open*, for if the sale occurred while the mine was operating normally, and (2) an interaction term, *Mine Open*Near Mine*, for if the mine was operational during the sale and the property is close to the mine. Note that for any individual property its proximity to the mine does not vary over time (nor does its building area or land area). In the fixed effects model, it is impossible to estimate the impact of being near the mine, regardless of mine operation status, because the fixed effects already control for each property's unique physical characteristics. The main coefficients of interest in the fixed effects model are the coefficients for the indicators. The coefficient for *Mine Open* indicates the overall effect of the mine operating on all homes, whereas the coefficient for *Mine Open*Near Mine* indicates any additional effect of the mine operating on homes "near" the mine, specifically.

Results

Table 4-7 summarizes the regression results of both the multi-event hedonic regressions (Columns 1-3) and the fixed effects difference-in-difference regression (Column 4).

Hedonic Pricing Multi-Event Analysis

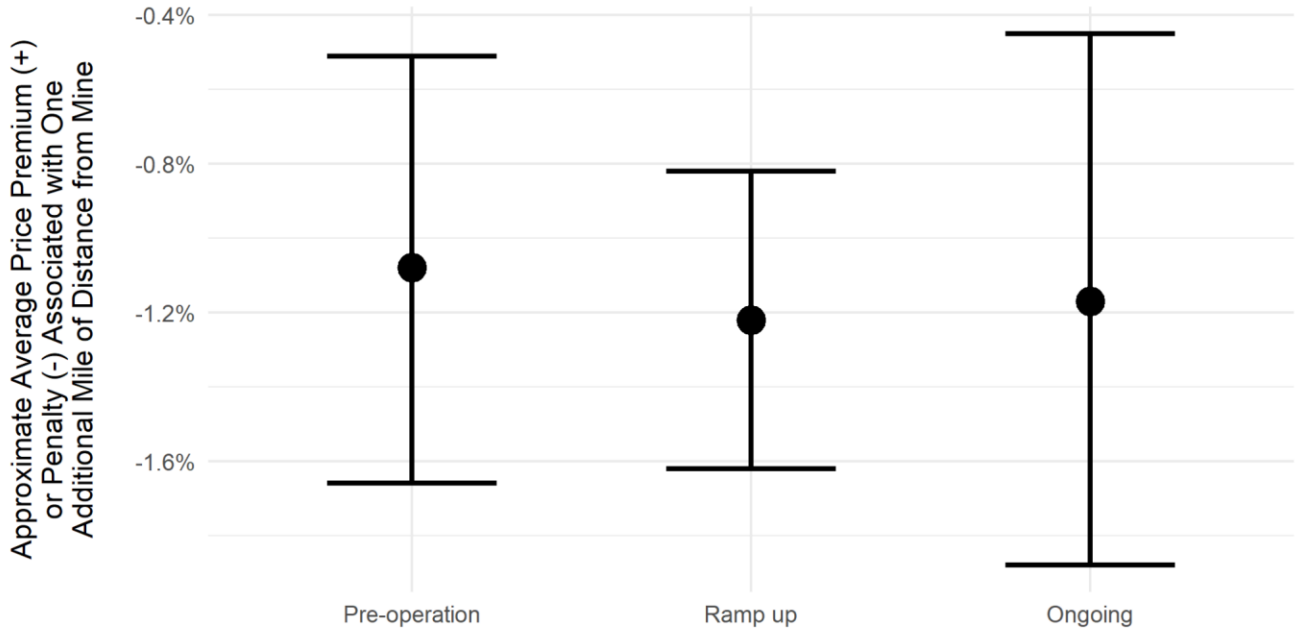
Columns 1 through 3 in Table 4-7 display the results of the hedonic pricing multi-event analysis. In all three columns, the coefficient on the distance-to-mine variable can be interpreted approximately as the percent change in the value of a home associated with an increase of one mile in the distance from the mine. The results of the analysis indicate that in our case study areas, throughout all three stages, distance from the mine results in a penalty, or negative premium, on home values at a rate of

approximately one percent per additional mile of distance. That is, controlling for observable characteristics, prices for homes closer to the mines are on average higher than for homes further away, with the price decreasing approximately one percent for every additional mile of distance from the mines.

Importantly, the coefficients on the distance-to-mine variable are stable across the three different stages, suggesting that any price premiums observed before the mine is fully approved and permitted are still observed during the ramp-up stage as well as the ongoing operation phase, which occurs after some of the uncertainty about the mines' spillover effects should have subsided.

Figure 4-4 displays the estimated home-value impacts of an increase of one mile in distance from the mines, with the corresponding 95 percent confidence intervals for the point estimates for all three stages. The clear overlap of the confidence intervals indicate that these estimates are indistinguishable from one another. That is, as indicated, we estimate that the impact is stable across time, suggesting that operations at the mines did not significantly change any pre-existing distance premiums or penalties.

Figure 4-4: Average Price Premium or Penalty associated with One Additional Mile from Case Study Mines

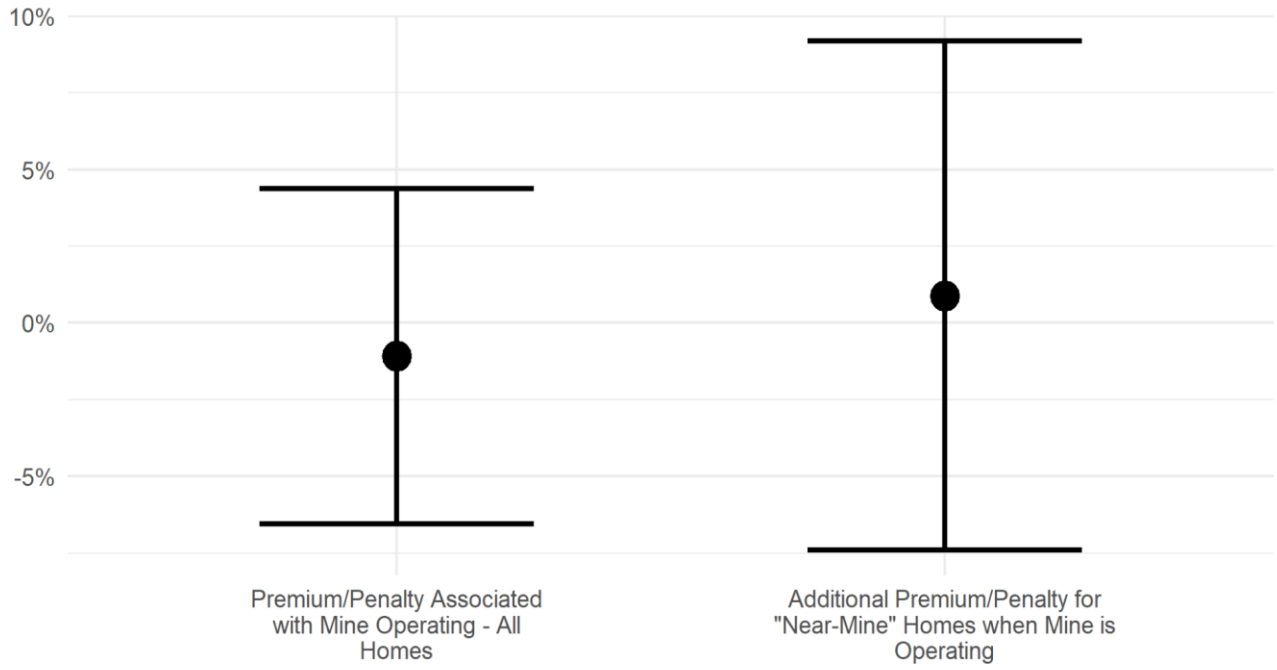


Fixed-Effects Difference-in-Differences Analysis

Column 4 in Table 4-7 displays the results of the fixed-effects difference-in-differences estimation. The small and negative coefficient on the *Mine Open* indicator variable is not statistically significant at the 95 percent level. What this means is that, at the chosen confidence level, the estimated effect is indistinguishable from a zero effect. The estimate and confidence interval on the left-hand side of Figure 4-5 displays this graphically, namely, that while the point estimate (which is a sample estimate) is approximately -1.0 percent, we are 95 percent confident that the true population parameter is between roughly -5.0 percent and +5.0 percent.

The coefficient on the *Mine Open*Near Mine* indicator variable is also statistically insignificant at the 95 percent level. Similar to the Mine Open indicator, what this means is that we are 95 percent confident that the true population parameter falls in a range that includes both positive and negative values. At the chosen confidence level, then, we cannot rule out that homes near the mine when the mine starts operating are not impacted, negatively nor positively, by the mine's operation. This is shown graphically on the right-hand side estimate and confidence interval in Figure 4-5.

Figure 4-5: Average Price Premium or Penalty associated with Location relative to Case Study Mines



Summary of Findings

Overall, the results of the regression analysis do not indicate a significant effect of comparable underground mining operations on property values. This result is consistent for both specifications; the first looking at the impact of distance to the mine as a continuous variable across different periods of operation and the second estimating if homes considered to be near the mine experienced different impacts than other properties. This impact is on aggregate, meaning that, on average, property values are not expected to be significantly impacted. However, this result is not an indication of a mine's impact on individual properties. For instance, certain homes may experience a reduction in value due to noise pollution, while others are sold at a premium due to increased demand for housing by workers of the mine and other households that move to the area for supporting jobs.

In addition to the results discussed above, RDN conducted several other analyses and specifications to account for biases in the selection of periods of operations, distances used to classify homes as near or far, and confounding variables. We also conducted sensitivity analyses to different model specifications by using spatial regression models that incorporate the location effects of surrounding properties, meaning that the sales price of a home could be partially impacted by the sale price of a home on the same street or block. All analyses pointed to the same conclusion that mining operations similar to the proposed project have not significantly impacted the home values of surrounding properties.

4.3 Survey of Local Real Estate Professionals

RDN assumes that real estate industry professionals based in western Nevada County have a better-than-average understanding of the major factors that determine home prices in the area. Because they work directly with prospective home buyers and sellers, they should also be attuned to the reasons why their clients want to buy or sell a property and how much clients think the properties are worth. As explained by Kiel and McClain (1995) and Taylor, Phaneuf, and Liu (2016), market expectations, speculation, and uncertainty can have a significant impact on property values. Real estate market participants assess value based on imperfect information, not only about the present, but also about what may or may not happen in the future.

RDN conducted several scoping interviews with local real estate professionals to understand local expectations for the Idaho-Maryland Mine's impacts to property values, if any. Following these interviews, RDN designed and distributed an online survey to 362 Realtors® based in western Nevada County. The survey prompted respondents to quantify and explain the magnitude and duration of the proposed project's impacts to property values for various areas. The following section summarizes the results of RDN's interviews and survey (the survey form is attached in *Appendix C—Realtor Survey*).

Scoping Interviews

Phone interviews were conducted with contacts selected from a list of local real estate industry professionals collected by RDN and reviewed by the County. This list includes Realtors®, brokers, general contractors, and rental property managers. Out of the approximately 30 contacts that RDN called, 11 agreed to an interview. Of the remaining 19 contacts, most simply did not answer or did not return RDN's voicemails. However, similar to our interviews with some business organizations, several contacts declined to be interviewed because they did not want to comment on what they perceive to be a controversial project despite assurances that their responses would be confidential.

Several interviewees said they do not expect that the mine would have any significant impact on property values. One respondent expects a moderate increase in sales prices and total sales due to the anticipated increase in population and jobs. Most interviewees, however, expect that the proposed project would negatively impact local property values. According to these respondents, Nevada County is a gateway to outdoor recreation and has long been a draw for retirees moving from the Bay Area or Los Angeles in search of a slower pace. Younger families have also been moving to the area, a trend that accelerated during the COVID-19 epidemic due to the proliferation of flexible work-from-home policies and people's increased desire for more space. A common thread between these groups is that many place a high value on natural spaces and resources. Thus, local preferences may be less accepting of large industrial or commercial developments as compared to communities in more developed areas. To support this notion, three real estate brokers interviewed for this study claimed they had first-hand experience with buyers who walked away from a potential sale due to concerns about the proposed project's environmental effects on the property. Though the homes ultimately sold, they either sold at lower prices or spent more days on the market than they otherwise would. According to one broker, information about the mine is one of the required disclosures when selling homes nearby.

RDN asked interviewees to explain the reasons why the proposed project would impact property values. While many cited the anticipated increases in traffic and noise along the proposed truck haul routes, the primary concern of those who expect large negative impacts is the possible draining or contamination of local wells and other water resources. Two interviewees specifically noted the case of the San Juan

Ridge Mine, located 7.5 miles north of Nevada City. In 1995, miners inadvertently drilled into an aquifer, flooding the mine. Ultimately, the accident drained and contaminated a dozen local wells (San Juan Ridge Taxpayers Assocation 2022). The EIR for the mine had not anticipated the possibility of such significant levels of flooding or its impact on local water resources. Some now see the Draft EIR for the Idaho-Maryland Mine within the context of the San Juan Ridge Mine and fear a similar outcome.

Some of the real estate professionals that RDN interviewed indicated that local fears about the mine's environmental impacts are likely overstated. Nonetheless, they acknowledged, the perceived increase in risk would impact local home sales, at least temporarily. Two interviewees opined that if the mine continued to operate without incident, eventually the risk premiums for the affected properties would subside and their values would recover. The exception would be properties directly next to or up to a few blocks from the truck haul routes, which most interviewees agreed would be negatively impacted due to the anticipated increase in traffic and noise.

Survey Population and Distribution

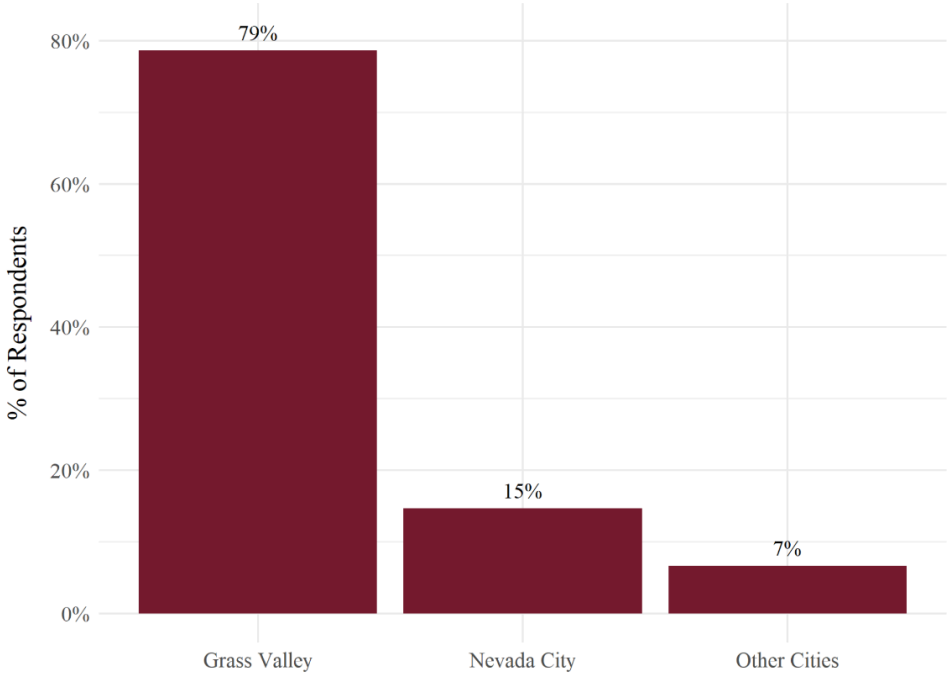
RDN collected office and email address information for 362 Realtors® who operate in western Nevada County by cross-referencing searches on Realtor.com with company websites and other sources. We decided to limit our survey to licensed Realtors® as a quality control measure, given that the broader real estate industry includes personnel with a wide range of experience and specialties. We distributed the online survey through the SurveyMonkey platform on 27 June 2022 using personalized email invitations. Reminder emails were sent to non-respondents on 30 June and 7 July. The survey closed on 9 July. Each email invitation included a unique survey URL linked to a specific respondent. To protect the integrity of the survey, we recorded only the first response from each unique URL.

RDN received a total of 75 responses from 362 potential respondents, which represents a 21 percent response rate. Of the 75 respondents, 87 percent fully completed the survey and the remaining 13 percent skipped one or more questions. Respondents were asked about their familiarity with the proposed project and the Draft EIR, as well as various questions related to their expectations regarding the project's impact to local property values. The following section summarizes the survey results for each and reflects only the aggregated opinions of those who volunteered to respond. It is important to note that that the opinions of those who responded to the survey may differ from those who did not respond to the survey.

Survey Results by Question

Figure 4-6 shows the distribution of respondents by city based on their office location as determined by RDN. The majority of respondents are based in Grass Valley (79 percent) or Nevada City (15 percent). Approximately 54 percent of respondents also indicated that they have 10 or more years of experience as a licensed real estate professional in Nevada County.

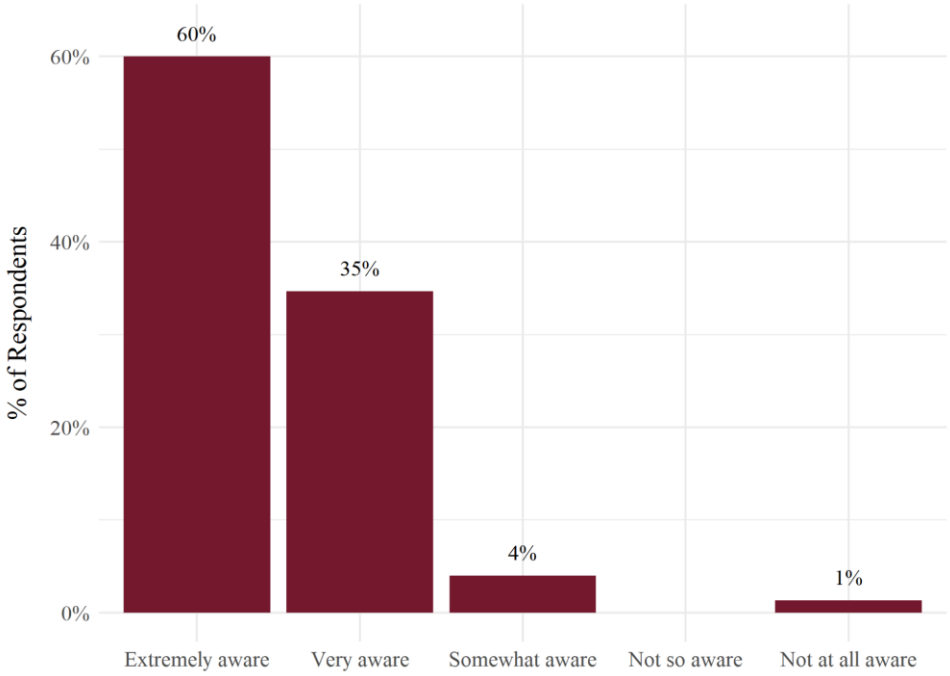
Figure 4-6. Respondents by City of Main Office



Note: numbers may not sum to 100 percent due to rounding.

Figure 4-7 displays respondents' self-reported level of awareness of the proposal to re-open the Idaho-Maryland Mine. A majority of respondents, 60 percent, reported being "extremely aware" of the proposed project, with 93 percent being at least "very" aware.

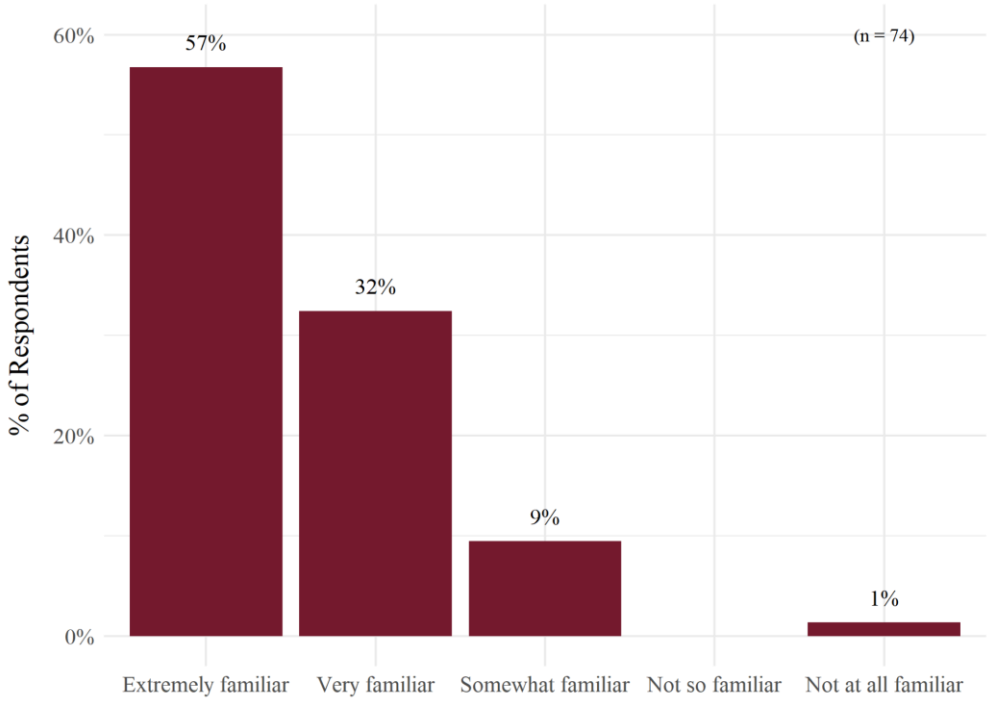
Figure 4-7. Are you aware of the proposal to re-open the Idaho-Maryland Mine?



Note: numbers may not sum to 100 percent due to rounding.

The majority of respondents also indicated that they are familiar with the project area (Figure 4-8).

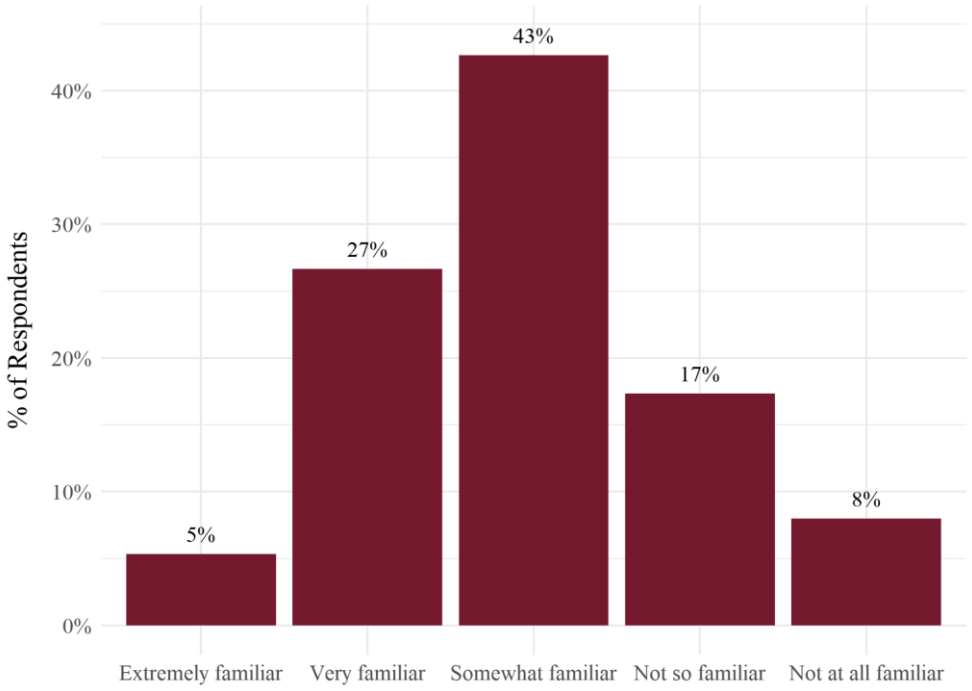
Figure 4-8. How familiar are you with the area around the proposed Idaho-Maryland Mine Project sites?



Note: numbers may not sum to 100 percent due to rounding.

Survey respondents were asked about their familiarity with the findings of the Draft EIR. Figure 4-9 summarizes this distribution, which indicates that 68 percent of respondents are at most "somewhat familiar" with the document, including 25 percent that are "not so familiar" or "not at all familiar." In contrast, 27 percent of respondents indicated that they are "very familiar" with the Draft EIR and only 5 percent said they are "extremely familiar." In contrast, approximately 60 percent of respondents said they were "extremely familiar" with the proposal to re-open the mine (Figure 4-7). Comparing these results, we can surmise that many people who are familiar with the proposed project are not familiar with the findings of the Draft EIR and are likely getting their information about the mine from other sources. As discussed in *Section 4.1: Literature Review*, the environmental impact of a site or speculation regarding its potential impacts can influence nearby property values.

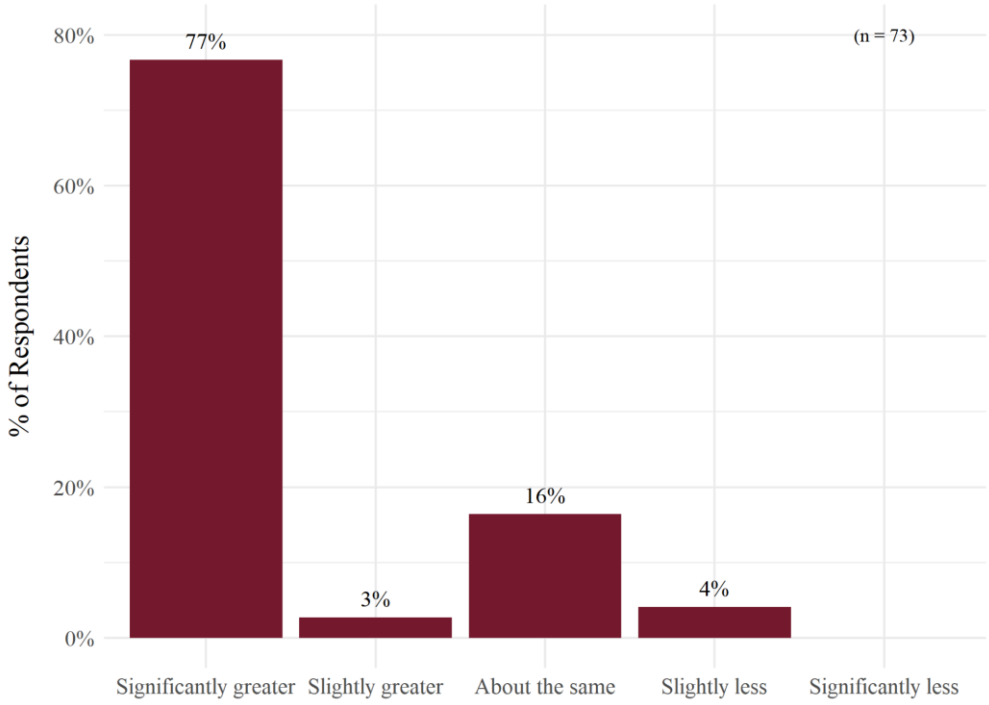
Figure 4-9. How familiar are you with the findings of the Draft Environmental Impact Report (EIR) on the Idaho-Maryland Mine Project?



Note: numbers may not sum to 100 percent due to rounding.

Respondents were also asked whether they believe the Draft EIR understates or overstates the environmental impacts of the proposed project. Figure 4-10 summarizes respondents' expectations relative to the document's findings. Approximately 77 percent of respondents speculate that the environmental impacts would be significantly greater than what is reported in the Draft EIR. This is a curious result given that only 32 percent of respondents claim to be "very familiar" or "extremely familiar" with the findings of the Draft EIR; it implies that many respondents may be forming their opinions on the Draft EIR based on secondary sources, which highlights the importance of these sources in shaping public perceptions of the Draft EIR and the proposed project.

Figure 4-10. Responses Summary: Do you believe the environmental impacts would be greater than or less than those stated in the Draft EIR?

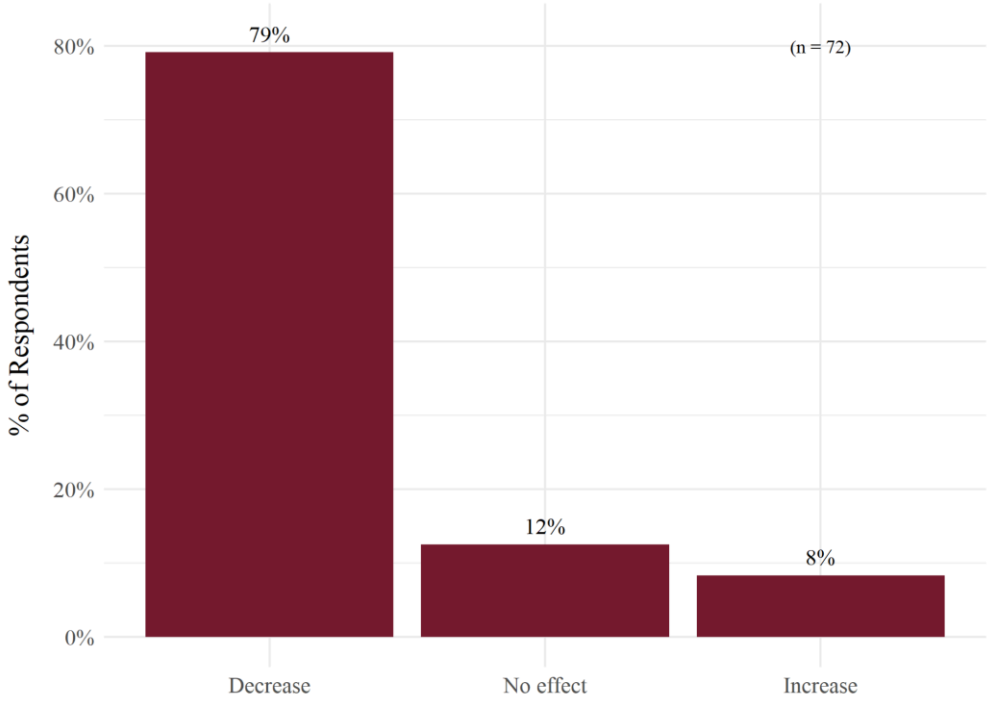


Note: numbers may not sum to 100 percent due to rounding.

The objective of RDN's literature review and case study analysis is to isolate the marginal effect of the proposed project on local property values while controlling for other factors. RDN similarly asked survey respondents to estimate the marginal impact that the proposed project would have on property values based on their local experience, assuming all other factors are held constant. Figure 4-11 reports the proportion of respondents that believe the mine would, on average, cause property values in Nevada County to increase, decrease, or neither (no effect).

Approximately 79 percent of respondents expect property values in Nevada County to decline if the Idaho-Maryland Mine re-opens. Only eight percent of respondents expect property values would increase. The remaining 12 percent do not expect the mine to impact property values. Of participants that included a written comment explaining their opinion, the most cited factor was the risk to water resources, which was mentioned by 37 percent of respondents. There is a strong presence of opinion that if water supply is impacted by the mine's activity, either by dewatering or pollutant run-off, property values would drop significantly. Increases in traffic and noise pollution were mentioned by 32 percent and 31 percent of respondents, respectively, as other causes for declines in property values. All respondents that expect increases in property values cited the increase in jobs and economic activity associated with the proposed project.

Figure 4-11. What would be the overall effect of the Project on the market value of residential properties in Nevada County?

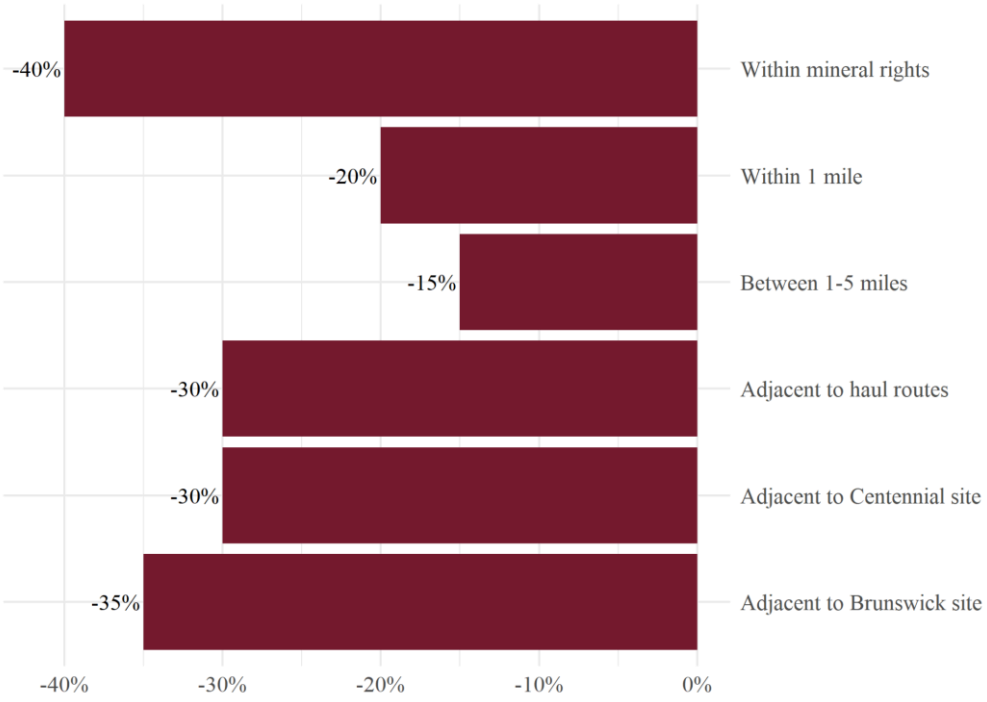


Note: numbers may not sum to 100 percent due to rounding.

RDN surveyed how real estate professionals expected property values to change in different areas near the mine, including properties on the proposed project's planned haul routes, near the Brunswick and Centennial sites, within the project's mineral rights boundary, within one mile of the project sites (e.g., Grass Valley), and between one and five miles of the project sites (e.g., Nevada City). When asked about specific areas, respondents overwhelmingly expect property values would decrease to some degree, with over 90 percent of respondents expecting some level of decrease in all defined impact areas.

Figure 4-12 summarizes the median estimated impact for the defined areas. The largest median decrease in property value is for properties within RGV's mineral rights boundary. (Note that the survey included reference maps of the proposed project's mineral rights boundary and hauling routes.)

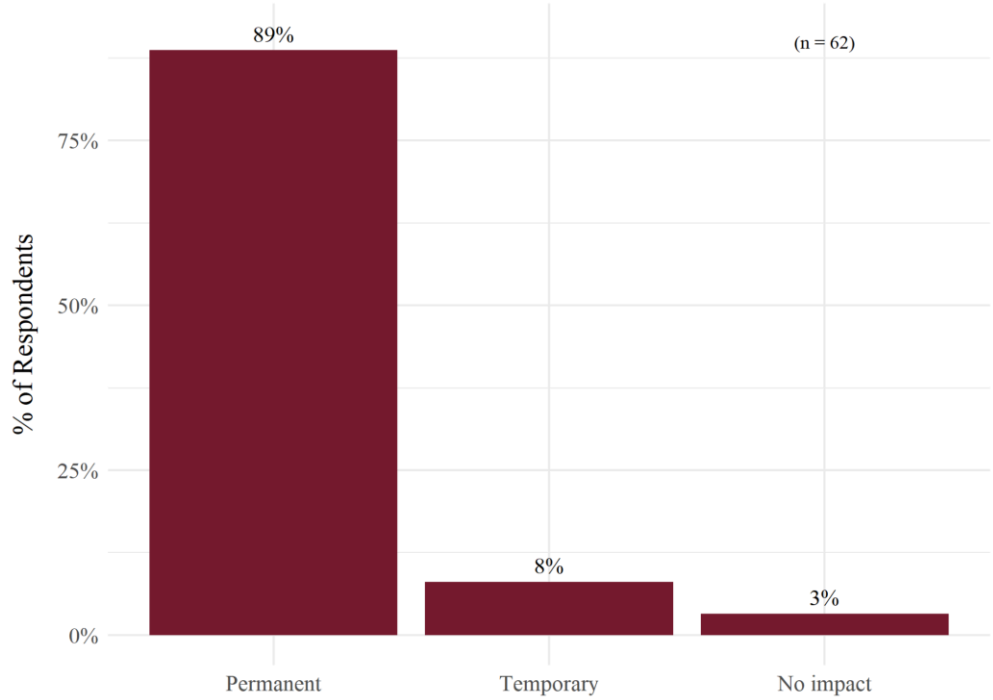
Figure 4-12. On average, how much do you believe residential property values in the following areas would change due to the Idaho-Maryland Mine Project?



Note: Reported numbers present the median, or middle, value of responses for each area.

Respondents were also asked whether they believe the anticipated change in property values caused by the proposed project would be temporary, permanent, or not applicable because they do not believe the mine would impact property values. Figure 4-13 charts the proportion of respondents who selected each answer choice. Overall, 89 percent of respondents expect that the proposed project would have a permanent impact on property values, whether positive or negative. However, of those who indicated the impact would be negative, 94 percent of respondents also indicated that the negative impact would be permanent.

Figure 4-13. In your opinion, do you expect the mine's impacts on property values would be temporary or permanent?



Note: numbers may not sum to 100 percent due to rounding.

For the final question of the survey, respondents were prompted to comment on why they believed the impacts would be temporary or permanent. Similar to previous comments, those who believe the impact would be negative and permanent cited degradation of water sources, increased traffic, and increased noise. In particular, respondents believe that damage to water resources would persist beyond the operational lifecycle of the mine. Consistent with their belief that the Draft EIR understates the environmental impacts, many respondents also believe that irreparable damage to water resources would permanently lower residential property values. Additionally, some respondents commented that these issues (traffic, noise, and potential well water contamination or depletion) would need to be disclosed to potential homebuyers, which would lower those properties' values to some extent regardless of whether these issues are ever realized.

Summary of Survey Results

The results of the Realtor® survey mirrored RDN's one-on-one interviews with local real estate professionals. If the proposed project moves forward, most respondents believe that home prices in nearby areas would decline. The estimated magnitude of the decline varies by area. The median expected change in property value ranged from -15 percent for properties between one and five miles away from the mine up to -40 percent for properties located within RGV's mineral rights' boundary. Respondents indicated that the negative impact would largely be the result of potential adverse environmental impacts to water quality and the increase in traffic and noise associated with the planned truck hauling routes.

Not all respondents expect that the proposed project would have a negative impact. Approximately 20 percent of respondents said that the proposed project would either have no impact or a positive impact

on property values in Nevada County. Most of these respondents cited the increased economic activity and jobs associated with the mine. Additionally, others noted that the haul route was already a busy road that potential buyers would already have accounted for in home purchases in the area.

The environmental concerns mentioned in our interviews and survey are discussed in the findings of the Draft EIR. However, respondents to the survey do not think that the Draft EIR adequately assesses the impacts of the proposed project. This result highlights the potential impact of market speculation on property values. Market speculation, or stigma, is discussed by Kiel and Williams (2007) as having a potential impact on property values that is highly dependent on the site in question. The results of the survey indicate that the expectations and public sentiment regarding the proposed project differ from the actual outcomes for those mines presented in the case study analysis.

4.4 Conclusion

Our review of the relevant literature found many studies on the environmental spillover effects of industrial developments on property values. Although most of these studies find net negative impacts on property values, none of them focus on the property value impacts from opening or reopening a modern, underground mineral mine. This limits our ability to use existing studies to draw conclusions about the likely impacts of the proposed project, as the environmental impacts of open pit or surface mines are generally considered more severe than those of underground mines. Additionally, new industrial sites in the United States, and especially in California, must comply with more stringent environmental safety requirements than some of the sites studied in the literature. According to the Draft EIR, the proposed project would implement mitigation measures that would reduce most of the potentially significant environmental impacts to an acceptable level. The long-term significant and unavoidable impacts that would remain relate to degraded views of the project site from public vantage points and traffic impacts at the Brunswick Road/SR 174 intersection.

RDN also performed interviews with real estate professionals and a survey of licensed Realtors® to better understand potential impacts of the proposed project to property values. The survey results indicate that most respondents believe that the proposed project would have large and permanent negative impacts, though the level of impact varies by area. Overall, the median respondent believes that the proposed project would cause an average 40 percent reduction in home values for properties located within RGV's mineral rights boundary. In contrast, the median respondent believes homes located farther away (1 to 5 miles) would see an average 15 percent reduction. In the case of the survey, almost all respondents who believe that the proposed project would have large negative impacts on property values also believe that the Draft EIR substantially understates the significance of its environmental impacts. Respondents were particularly concerned about permanent damage to local water resources. In contrast, the scope of this study is to evaluate the economic impacts of the proposed project assuming it operates as proposed by the applicant and documented in the project description in the Draft EIR. The Draft EIR indicates that most of the potentially significant environmental impacts would be mitigated such that the impact would be "Less than Significant," including potential impacts to water resources.

Given the lack of existing studies on the property value impacts of sites that are comparable to the proposed project, and that survey data is largely influenced by perceptions of the proposed project impacts rather than those defined in the Draft EIR, RDN performed our own study of modern mines in the United States that are reasonably similar to the proposed project. We identified three mines as viable case study locations, then acquired and analyzed residential sales transactions for parcels near these

locations over periods when the mines were both non-operational and operational. Overall, our analyses indicate that opening or recommissioning the selected mines did not have a statistically significant impact on nearby residential property values during the periods studied. Confidence intervals around the impact estimates, which are generally small, include both negative and positive values, and therefore contain the value of zero. A general interpretation of confidence intervals that contain zero is that, at the chosen confidence level, it is not possible to rule out the hypothesis that there is no effect (that the effect may in fact be zero).

As part of this analysis RDN planned to evaluate the total impact to property values and associated property taxes based on the anticipated average change in property values associated with the proposed project. Of the three types of research RDN performed for this analysis–the literature review, real estate industry survey, and case study analysis–the case study analysis strikes the balance of being the most robust and readily applicable for evaluating the proposed project. Therefore, RDN uses the results of the case study analysis to evaluate the proposed project. However, the results of the case study analysis are inconclusive regarding the magnitude, and even the direction, of any potential impacts. Because the results do not allow us to rule out the possibility that the operation of the mines in the case studies had no effect on surrounding property values, RDN is unable to rule out that this would also be the case for the proposed project. Accordingly, we do not estimate any anticipated average change in property values associated with the proposed project. This is not to say that we have certainty that the proposed project will not impact property values (positively or negatively), but rather that we do not have enough certainty to exclude the possibility of the project having no impact.

5. IMPACTS TO UTILITIES, PUBLIC SERVICES, AND THE GENERAL FUND

RDN conducted an analysis to estimate the impact of proposed project operations on utility providers, public services, and the County's General Fund. This analysis considers the ability of public providers to serve the proposed project's utility needs; potential increased costs to County departments that provide law enforcement, emergency, and administrative services; and potential impacts to public services provided by other jurisdictions and special districts. To understand the total fiscal impact of proposed project operations to the County's General Fund, this analysis evaluates anticipated costs to County departments and compares them to the estimated tax revenue associated with the proposed project.

5.1 Utility Providers

The proposed project would result in new demand for electricity, potable water, and waste disposal services to serve the project itself, new residents in the area, and households that switch from well water to municipal water supplied by the Nevada Irrigation District (NID). RDN conducted interviews with representatives at Pacific Gas and Electric (PG&E), NID, and Waste Management regarding the potential impacts to their services.

PG&E provides electrical service to almost the entire population of Nevada County and would serve the proposed project. Per the Draft EIR, operation of the proposed project would require an estimated total connected load of approximately 10 megawatts (MW), with a net load of approximately 6 MW. Although this would greatly increase electrical service demand in the area, PG&E would adjust their services to accommodate the change. PG&E operates a dynamic power grid that serves much of the State of California by transporting power from generation facilities to consumer. Through this system, PG&E would serve the increased demand for power from facilities throughout the state. Although the proposed project would require construction of onsite poles and a substation, it would not result in the need for substantial new infrastructure on public land that does not currently support PG&E infrastructure. Therefore, it likely would not change the amount of franchise taxes PG&E pays for the use of public land. Given PG&E is a private company with the capacity to serve the proposed project's electrical needs and that their franchise tax burden would not change, this activity would not financially affect the County.

NID is a multi-county water agency that provides water service to over 100,000 customers, including 700 in the Wolf Creek Area (i.e., the project area). According to the Draft EIR, the proposed project would increase water supplies by depositing an additional 1,000 acre feet of treated water into the Wolf Creek System, resulting in a net positive impact to water supply. Based on this finding and current supplies, NID has sufficient capacity to serve both the proposed project and an additional 30 residential properties along East Bennett Road that may transition from wells to their system. Although the Draft EIR finds the proposed project would not impact any additional wells, NID submitted comments on the Draft EIR suggesting that the County require RGV to supply a $14 million bond to ensure that costs for new pipelines and connection fees would be covered if the proposed project impacts any additional wells. Based on the findings of the Draft EIR and current conditions, NID has sufficient water supply to accommodate the proposed project and this activity would not financially affect the County.

Waste Management provides waste disposal services in the project area and would serve any new residents that move to the area. The proposed project would manage their own waste disposal and would not impact this service. Waste Management currently serves 44,000 residential properties in Nevada County, including 8,000 in the City of Grass Valley and 2,000 in Nevada City. Given the small

projected increase in new households, Waste Management would be able to absorb the additional demand from new residents without a substantial change to their service. Waste Management is a private company and changes to their service would not affect County finances.

5.2 Public Services

Operation of the proposed project involves industrial activities, including increased truck traffic, that may result in the need for additional public services, including law enforcement and emergency services. The costs for some of these services would be covered by funding provided by RGV through mitigation, while the rest would be supported by public funds. The proposed project would also draw new residents to the area to work at the mine and in jobs supported indirectly by the proposed project's local expenditures on payroll, supplies, and services. This additional population may also increase the need for public services. This section provides a discussion of anticipated impacts to public services provided by the County and other jurisdictions and special districts. The discussion of impacts to County departments also includes estimated costs for maintaining the existing level of service.

RDN conducted interviews with representatives at law enforcement agencies, fire districts, and County and city departments in Nevada County to understand each organization's anticipated changes in costs and employment related to (1) operation of the proposed project and (2) the anticipated increase in population. For these interviews, RDN directed stakeholders to consider the proposed project and potential impacts as presented in the Draft EIR when evaluating ways in which these operations could directly impact their agency or department. For impacts related to anticipated population growth, RDN inquired about potential impacts to the agency or department and whether costs would likely increase proportionally with population growth.

This analysis assumes the local population would grow by 240 residents, as presented in the Draft EIR. The Draft EIR estimates 99 workers would move to the area to work in the mine, each representing a new household. Since the average household size in Nevada County is 2.4 people, these new workers would result in approximately 240 new residents when accounting for family members that would move with them. When interviewing County and city departments, law enforcement agencies, and emergency services, RDN directed them to consider a population increase of 240 residents distributed in the areas surrounding the project site. Table 5-1 summarizes the estimated increase in population that would result from the proposed project in each jurisdiction.

Table 5-1. Projected Population Increase

Jurisdiction	Population[1]	New Residents	Percent of New Residents
Unincorporated Western Nevada County	67,506	191	80%
City of Grass Valley	14,016	40	17%
Nevada City	3,152	9	4%
Other (unimpacted) regions	14,743	0	0%
Total Nevada County	**99,417**	**240**	**100%**

[1] Population estimates from 2020 decennial census

Law enforcement agencies and emergency service providers indicated that operation of the proposed project would likely increase the need for their services. The primary factor that would drive this need is the projected increase in truck traffic on local roadways that would likely result in more vehicle accidents and associated calls to service. The anticipated increase in population would also result in

additional vehicles on the roadways, particularly during commute hours, which may also increase the need for law enforcement and emergency services. The costs for these agencies to maintain their existing levels of service while serving additional residents would likely increase proportionally to the increase in population in their service areas.

Most County and city departments expect little to no impact to their employment or annual operating expenses as a result of the proposed project. In most cases, they anticipate either (1) direct impacts from operation of the mine would be minimal and would not increase costs, or (2) the proposed project's mitigation measures would cover anticipated cost increases. In these cases, this analysis assumes there would be no impact to the County's General Fund. Some of these organizations cited potential increases in costs related to new residents moving to the area but generally concluded that 240 new residents would not substantially change their costs or employment. In these cases, RDN estimated the potential cost increase for County departments based on their current service population and budget.

County Departments

The County provides a variety of public services, many of which would be affected by the proposed project and associated increase in population. This section summarizes potential impacts during full operation of the proposed project to these services and estimates the resulting public costs to maintain these services at the existing level. Increased costs to these services that are not covered through mitigation measures or other fees would impact the County's General Fund.

The County Sheriff's Office provides law enforcement and coroner services, which include responding to calls for service in their service area and operating the coroner unit and County jail. This department anticipates the proposed project would result in additional calls for service due to increased traffic on local roads and associated vehicle accidents and deaths, as well other impacts related to new residents moving into the area. These additional service needs would increase the department's operational costs. The specific impact would be dependent on factors that are not entirely known, such as the character of new residents drawn to the area. The Sheriff's Office operates the County jail, which has high costs for each inmate (approximately $110,000 per year). To provide a general estimate of agency costs, this analysis assumes new residents drawn to the area by the proposed project have a similar incarceration rate to that of the existing County population. Given the anticipated need for increased services from the Sheriff's Office, this analysis assumes the department's operating costs would increase proportionally to the anticipated increase in population in unincorporated Western Nevada County.

The County provides disaster response services though their Office of Emergency Services (OES). In the case of large emergencies, OES manages the Emergency Operation Center, coordinates emergency response across agencies, and provides logistics and assistance to public agencies. OES expects the impact to their department to be minimal, assuming the mine complies with safety protocols and there are no unforeseen ancillary effects. The department would continue to provide services to the entire county, including new residents that move to the area as a result of the proposed project. Therefore, this analysis assumes the department's operating costs would increase proportionally to the anticipated increase in population in the county.

The primary County departments that would experience direct effects from the proposed project include Public Works, which is responsible for maintaining local roadways, and Planning, which is the primary department responsible for ensuring RGV complies with the conditions of project approval, including

implementation of the mitigation measures from the EIR process. Representatives from these departments indicated that anticipated costs associated with operation of the mine are being taken into consideration during the project approval process and would be covered through the proposed project's conditions of approval. These conditions include initial one-time payments toward roadway improvements as well as ongoing tonnage fees to cover the cost of roadway maintenance associated with the proposed project's trucking activity. RGV would also be required to reimburse the County for staff hours dedicated to monitoring the project's compliance with building codes and mitigation measures. Therefore, RGV would cover all of the direct costs to the Public Works and Planning departments related to the proposed project. These funds would be deposited to and withdrawn from the County's General Fund, thereby increasing the annual budget by the same amount as the increased cost. Therefore, the total impact to the General Fund associated with these public services would be $0.

The Public Works and Planning departments anticipate that increased costs related to an increase in population would either be negligible or covered by impact fees. An increase of 240 residents in the County represents a 0.2 percent increase in the population, which would not substantially affect department services. Additionally, if any new homes were constructed to accommodate the increase in population, these projects would be required to pay impact and permitting fees, which help support these departments' activities. Therefore, the increased population would not affect these departments such that they impact the County's General Fund.

The County's Transit Division and Housing and Community Services Department expect little to no impact to their annual budget from the proposed project. The project site is not currently served by public transit, and therefore the Transit Division does not anticipate any change to its operating costs. The Housing and Community Services Department anticipates a minimal increase in costs attributed to new residents, however, the department receives a minority of its funding from General Funds, with the majority sourced from grants. Therefore, the associated impact to the General Fund would be minimal.

Table 5-2 summarizes the estimated public cost impacts to County agencies and departments (i.e., those supported by the County General Fund). Departments with no anticipated cost increase or with all anticipated costs covered by mitigation reflect a $0 impact. For each department that expects a cost increase due to new residents associated with the mine, RDN used their latest annual budget and the county's population to calculate the per person budget and then multiplied it by the total projected population increase in the county.

Table 5-2. Annual Costs to County General Fund (rounded to thousands)

Agency/Department	Estimated Public Cost[1]
Nevada County Sheriff's Office	$141,000
Nevada County Office of Emergency Services	$8,000
Public Works (includes Solid Waste)[2]	$0
Planning Department[2]	$0
Transit Division[3]	$0
Housing & Community Services (County Funds)[3]	$0
Total Annual Impact to County General Fund	**$150,000**

[1] Numbers in 2022 dollars; numbers may not sum due to rounding
[2] Anticipated costs are covered by project mitigation
[3] Anticipated costs are below $500 per year

City Departments and Special Districts

RDN conducted interviews with representatives at additional public agencies and special districts to understand their anticipated impacts associated with the proposed project at full operation. This section provides a discussion summarizing these impacts. Increased costs to the following departments and organizations would not impact the County's General Fund.

The law enforcement agencies that provide services to the areas surrounding the project site expect that the anticipated increase in population associated with the proposed project would increase the need for traffic enforcement and response to calls for services, thereby increasing their operating costs. The daytime population in the City of Grass Valley exceeds the residential population because the city serves as an economic hub that supports workers that commute into the city from other areas. Although the proposed project would primarily result in the reverse effect since the project site is located outside the city, the Grass Valley Police Department would support new residents of the city, mine workers commuting through the city to access the project site, and commuters coming to the city for jobs supported indirectly by project operation. Nevada City is located farther from the project site, so the Nevada City Police Department would primarily service new residents that move to the city. The California Highway Patrol (CHP) Grass Valley Area also expects a slight increase in calls for service to serve new residents. For each of these departments, the total cost for providing service would likely increase proportionally to the increase in population in their service area.

The fire districts that provide services to areas surrounding the project site expect additional costs related to the anticipated increase in population associated with the proposed project. The Ophir Hill Fire Department is responsible for fire protection services to the project site and surrounding area, and therefore anticipates increased service costs and staffing needs associated with the proposed project and associated population increase. However, the project's mitigation would cover these increased costs by funding three full-time firefighters for the life of the project and the purchase of a new fire engine for the district. The Nevada County Consolidated Fire District anticipates the impact to their budget directly related to the proposed project would be minimal because the primarily impacted roadways are not in their jurisdiction. However, the district may receive additional calls for aid from neighboring districts as well as increased costs associated with new residents. The Grass Valley Fire District (GVFD) expects increased service needs related to increased truck traffic and related traffic incidents, which may also result in a need for additional staff. The Nevada City Fire District, which has a contract with GVFD for services, expects a similar impact. With the exception of Ophir Hill Fire Department, whose service cost increase would be covered by mitigation, service costs for local fire districts would likely increase proportionally to the increase in their service populations.

The City of Grass Valley expects the proposed project would not increase annual costs for their Community Development Department but would substantially impact their Public Works Department. Representatives at the City cited concerns about increased traffic congestion necessitating intersection and roadway improvements and heavy truck traffic heightening pavement maintenance needs. The City also anticipates the need for new residential development to support population growth. Although development fees typically cover a portion of development support, other costs such as unallocated staff time, associated support for necessary improvement projects, and ongoing service costs would require additional staff or consultants. The proposed project would pay development impact fees to the City to help cover costs associated with specific intersection and roadway improvements. However, these one-

time fees do not account for costs associated with ongoing pavement maintenance. The City estimates ongoing annual costs to be $120,000 for a full-time engineer and $50,000 for a maintenance worker.

RDN made multiple attempts to contact the Grass Valley and Union Hill school districts but were unable to reach representatives who could answer questions about the potential fiscal impacts of the proposed project and associated population increase to their districts. According to the Draft EIR, schools in the project area have experienced declining enrollment and are projected to experience continued reductions. Based on 2019-2020 enrollment numbers, the primary and secondary school districts serving this portion of the County have capacity to accommodate the anticipated number of additional students. These districts would receive additional funding from the state based on these new students. The vast majority of funding for these districts is from the state, though approximately seven percent of their budget is locally funded through property taxes.

5.3 Tax Revenue

Tax revenue from property, sales, and other taxes paid by RGV and associated with the proposed project's local spending and related economic growth would benefit local jurisdictions and special districts in the county. This revenue includes property taxes on land, improvements, and mineral property paid directly by RGV; sales and other taxes paid by RGV; and property, sales, and other taxes paid by local businesses and residents supported by RGV's local expenditures.

RGV's mineral property tax would represent a large portion of anticipated tax revenue and depend on the value of the proposed project's mineral property, which is currently undetermined. Therefore, this analysis includes assumptions about the mine's anticipated production in order to provide a range of the potential impact of the proposed project on local tax revenue. The assumptions used to develop this estimate are described below.

This section presents estimates of the total tax revenue the proposed project would generate for local agencies, including the County and cities and special districts in the county. It also breaks out the portion of this revenue that would be allocated to the County in order to estimate the total impact of the proposed project to the County General Fund. The remaining tax revenue would be allocated to cities and special districts in the county.

Rise Grass Valley Property Taxes

RGV currently pays property tax on the two project sites and would pay additional taxes for any improvements (e.g., buildings) on these sites once they are completed. RGV would also pay property tax on their mineral reserves (i.e., property) at the time they begin extracting this material.

Land and Improvements

Property owners pay taxes based on the assessed value of a property, including the land and any improvements, such as utility services or buildings. The assessed values of the existing Brunswick and Centennial properties are based on the fair market values (sales price accepted) assigned to the parcels at the time of their acquisition in 2017 and 2018, respectively. Per California law, the assessed value has increased by either the CPI or two percent, whichever is lower, each year since. Based on a two percent increase from last year, the assessed values for 2022/2023 are $2.9 million for the Brunswick property and $1.3 million for the Centennial property.

RGV currently pays property taxes for the Brunswick and Centennial properties and would continue to pay them throughout their ownership of these properties. These taxes are based on the one percent tax levy authorized under Proposition 13 and any additional voter-approved debt or special taxes associated with the service areas in which each property lies. The County receives approximately 13.8 percent of all Proposition 13 taxes paid in the County, with the remaining portion going to other jurisdictions and special districts. Because voter-approved debt and special taxes do not affect the County General Fund, they are not included in this analysis.

Table 5-3 summarizes the assessed values for RGV properties, the associated Proposition 13 property taxes, and the portion of these taxes that would go to the County General Fund. The property tax for RGV's existing properties is $43,000, with $6,000 of this revenue going to the County.

Table 5-3. Property Tax from Existing Properties in 2022/2023 (rounded to thousands)[1,2]

Property	Assessed Value	Prop 13 Tax	County Tax Revenue
Brunswick Industrial Site	$2,936,000	$29,000	$4,000
Centennial Industrial Site	$1,326,000	$13,000	$2,000
Total	**$4,261,000**	**$43,000**	**$6,000**

[1] Numbers in 2022 dollars

[2] Numbers may not sum due to rounding

Upon completing construction of proposed improvements and facilities on the Brunswick Industrial Site, RGV would pay property tax on these improvements as well. According to the proposed schedule, this would occur 18 months after initiation of the proposed project. Because RGV was not able to provide anticipated construction costs, RDN estimated the value of these improvements based on the IMPLAN analysis output associated with 52 construction workers over the course of 18 months (refer to *Section 2.1: Project Location and Description*). The estimated value of site improvements, which represents the assessed value, is $12.5 million. The proposed improvements at the Brunswick site would thus result in additional estimated property tax of $125,000, with $17,000 of this revenue going to the County.

Mineral Properties

Upon commencing mineral extraction, RGV would also begin paying property taxes on the assessed value of their "proved reserves" of gold, which is the measured volume and weight of gold that is economically mineable. The process for assessing mineral property is detailed in the Assessors' Handbook Section 560 (California State Board of Equalization 1997). This process involves categorizing mines as investment properties that may be purchased and sold for the possibility of generating future income. Therefore, the County uses an income approach to assess mineral property values. This approach considers the aggregate present worth of the property's future net income when assessing the property's current value for tax purposes. This approach is complex and sensitive to the information included in the appraisal. RDN's analysis takes a simplified method to estimating the mine's expected cash flow. An in-depth assessment would require detailed financial information and current mineral exploration data beyond what is currently available.

In order to account for mining being a high-risk industry, mineral property in California is generally assessed using a high discount rate for estimating the current value of future cash flows. Per discussions with the Nevada County Assessor and her staff, in order to establish a specific discount rate and define other factors that would affect the mineral property assessment for the proposed project, they would

work closely with the California State Board of Equalization. Based on discount rates used for other projects in the county and for high-risk projects in neighboring counties, they estimated they would apply a discount rate around 15 to 19 percent to assess RGV's mineral property since the proposed project would be a high-risk venture. They indicated the base year for mineral property assessments is generally the first year of full production since ramp-up costs often outweigh revenue during the ramp-up period. Based on this information, this study uses 17 percent as the discount rate and Year 4 of the proposed project (i.e., the first year of full production) as the base year to provide a general estimate of the anticipated mineral property value and associated taxes for the proposed project.

The assessed value of the proved reserves would be based on the price of gold, anticipated production schedule, and amount of proved reserves. This analysis uses the three-year rolling-average price of gold as of January 1, 2022, which is $1,659 per ounce. RGV provided production data for four comparable underground gold mining operations that have similar throughputs to the proposed project and similar reserve grades to historic production at the Idaho-Maryland Mine. These mines maintain approximately 5 to 11 years of reserves with an average of 8 years. Therefore, this analysis assumes the mine extracts proved reserves over eight years. RGV does not have any proved reserves because they are currently in the process of performing the exploration work to quantify these resources. Therefore, this analysis provides the potential tax impact for a range of proved reserves by providing a high-end and low-end estimate.

The high-end estimate uses projected annual production of 108,400 ounces of gold per year and assumes the mine continually maintains eight years of reserves. This projected annual production was obtained from the 2021 economic impact report commissioned by RGV (Applied Economics LLC 2021). Based on these assumptions, the initial proved reserves would be 876,200 ounces of gold. This scenario assumes additional proved reserves are discovered and assessed each year in the same amount as was extracted that year. In reality, mine production and discovery of proved reserves would not be this consistent. However, this approach helps estimate the average effects that would occur if RGV continually discovers new reserves, as they currently anticipate.

Table 5-4 shows the net present value calculation for the estimated mineral property value for the high-end scenario in the base year (i.e., first year of full production).

Table 5-4. Base Year Mineral Property Value Assessment – High-end Scenario (in millions of 2022 dollars)

Year[1]	Yearly Production	Revenue	Expenses[2]	Net Income	Present Value[3]
4	108,400	$179.8	$68.3	$111.5	$111.5
5	108,400	$179.8	$68.3	$111.5	$94.5
6	108,400	$179.8	$68.3	$111.5	$80.1
7	108,400	$179.8	$68.3	$111.5	$67.9
8	108,400	$179.8	$68.3	$111.5	$57.5
9	108,400	$179.8	$68.3	$111.5	$48.8
10	108,400	$179.8	$68.3	$111.5	$41.3
11	108,400	$179.8	$68.3	$111.5	$35.0
Total[4]	**867,200**	**$1,438.4**	**$546.1**	**$892.3**	**$536.7**

[1] Analysis uses Year 4 of the proposed project (i.e., first year of full production) as the base year

[2] Annual expenses during full operation were provided by RGV

[3] Applies a discount rate of 17% to account for the high risk associated with the mining industry

[4] Numbers may not sum due to rounding

Under this scenario, the estimated assessed value would be approximately $536.7 million, resulting in $5.4 million in Proposition 13 property taxes, with $0.7 million going to the County General Fund in the first year of full operation. Although the mineral reserves would be depleted each year, this scenario assumes RGV continually discovers and establishes additional proved reserves, which would be assessed and taxed by the County. This new mineral property would be assessed according to the California State Board of Equalization terms for "new construction," which includes any addition to land or improvements. Generally speaking, as reserves decline, property taxes decline, and as more proved reserves are established, property taxes increase. Because this scenario assumes the mine establishes proved reserves in the same amount as the material they mine each year, keeping the price of gold constant, the assessed value and resulting taxes would remain the same as well. This effect is reflected in the yearly high-end mineral property tax estimates provided in *Section 5.4: Nevada County General Fund*.

This analysis establishes a low-end estimate based on historic proved reserves and the assumption that the mine would not discover any additional reserves. The Emgold Mining Corporation produced the last reported measured reserves for the Idaho-Maryland Mine in November 2002, which they estimated as 212,000 ounces of gold. Therefore, the low-end estimate assumes the mine produces 26,500 ounces of gold per year over approximately eight years. Under this scenario, the proved reserves would be depleted by 26,500 ounces per year until none are remaining.

Table 5-5 shows the net present value calculation for the estimated mineral property value for the low-end scenario in the base year (i.e., first year of full production) .

Table 5-5. Base Year Mineral Property Value Assessment – Low-end Scenario (in millions of 2022 dollars)

Year[1]	Yearly Production	Revenue	Expenses[2]	Net Income	Present Value[3]
4	26,500	$44.0	$16.7	$27.3	$27.3
5	26,500	$44.0	$16.7	$27.3	$20.8
6	26,500	$44.0	$16.7	$27.3	$15.9
7	26,500	$44.0	$16.7	$27.3	$12.1
8	26,500	$44.0	$16.7	$27.3	$9.3
9	26,500	$44.0	$16.7	$27.3	$7.1
10	26,500	$44.0	$16.7	$27.3	$5.4
11	26,500	$44.0	$16.7	$27.3	$4.1
Total[4]	**212,000**	**$351.6**	**$133.5**	**$218.1**	**$101.9**

[1] Analysis uses Year 4 of the proposed project (i.e., first year of full production) as the base year
[2] Annual expenses provided by RGV scaled by yearly production for this estimate relative to that for the high-end estimate
[3] Applies a discount rate of 17% to account for the high risk associated with the mining industry
[4] Numbers may not sum due to rounding

The estimated assessed value in the base year would be approximately $101.9 million under the low-end scenario. Based on this valuation, the associated Proposition 13 property tax would be $1.0 million, with $0.1 million going to the County General Fund in the first year of full operation. Because this scenario assumes the mine does not discover any additional reserves, the remaining mineral property is reduced after each year of operation. Therefore, the assessed value and associated property taxes would decline each year. These declines are reflected in the yearly low-end mineral property tax estimates provided in *Section 5.4: Nevada County General Fund*.

Tax Revenue from Increased Economic Activity

RGV's local spending on payroll and purchases of goods and services would generate increased economic activity, which would increase local tax revenue. RGV's payroll and local operational spending would support direct and indirect jobs in the area. The employees that fill these jobs would spend a portion of their income on property, sales, and other taxes, some of which would be allocated to the County's General Fund. Additionally, RGV's local spending would generate sales tax revenue. This study used the IMPLAN model to estimate the total property, sales, and other tax revenue associated with the indirect and induced impacts generated by the proposed project's local spending. Refer to *Section 3.1: Project Payroll and Expenditures* for a description of the methodology used for this analysis.

Table 5-6 shows the estimated property, sales, and other tax revenue that would be generated in the county and the portion that would be allocated to the County's General Fund due to indirect and induced impacts of the proposed project.

Table 5-6. Property, Sales, and Other Taxes Generated by Local Spending (rounded to thousands)[1]

Type of Tax	Year 1	Year 2	Year 3	Year 4+
All Agencies and Districts in Nevada County				
Property Tax	$20,000	$105,000	$187,000	$483,000
Sales Tax	$13,000	$69,000	$123,000	$318,000
Other Tax	$3,000	$17,000	$31,000	$80,000
Total Tax Revenue[2]	**$37,000**	**$191,000**	**$342,000**	**$881,000**
Nevada County General Fund				
Property Tax	$3,000	$14,000	$24,000	$63,000
Sales Tax	$3,000	$13,000	$23,000	$60,000
Other Tax	$1,000	$5,000	$9,000	$24,000
Total Tax Revenue[2]	**$6,000**	**$32,000**	**$57,000**	**$147,000**

[1] Numbers in 2022 dollars
[2] Totals may not sum due to rounding
Source: IMPLAN Analysis by RDN

The proposed project's spending on payroll and operational expenses during full operation would generate an estimated $881,000 per year in tax revenue to local agencies and districts, including local governments and fire protection, school, and other special districts. The portion of these funds that would be allocated to the County's General Fund is approximately $147,000 per year.

Summary of Tax Revenue

Table 5-7 presents the total estimated tax effect of the proposed project in Year 4, which is the first year it would be fully operational. These estimates account for the high-end and low-end scenarios, with the low-end estimates assuming the proposed project would operate at a reduced capacity. This summary scales down tax revenue resulting from increased economic activity under the low-end scenario to account for fewer people moving to the area and lower employment and operational spending by RGV.

Table 5-7. Estimated Tax Revenue in the First Year of Full Operation (rounded to thousands)[1]

	Total Tax Revenue		County Tax Revenue	
	Low	High	Low	High
Property Taxes Paid by RGV				
Assessed Property	$46,000	$46,000	$6,000	$6,000
Improvements (new facilities)	$125,000	$125,000	$17,000	$17,000
Mineral Property	$1,019,000	$5,367,000	$141,000	$742,000
Taxes from Increased Economic Activity				
Property Tax	$118,000	$483,000	$15,000	$63,000
Sales Tax	$78,000	$318,000	$15,000	$60,000
Other Taxes	$19,000	$80,000	$6,000	$24,000
Total[2]	**$1,405,000**	**$6,418,000**	**$200,000**	**$912,000**

[1] Numbers in 2022 dollars

[2] Totals may not sum due to rounding

The total estimated tax effect in the first year of full operation is $1.4 to $6.4 million to local agencies and districts, including local governments and fire protection, schools, and other special districts. The County General Fund would receive a portion of these tax receipts, amounting to $200,000 to $912,000.

5.4 Nevada County General Fund

Operation of the proposed project would impact the Nevada County General Fund by increasing costs to some county services while also increasing the County's tax revenue. RGV's mineral property tax represents a sizable portion of the potential General Fund revenue. However, this analysis cannot provide a specific estimate for this revenue because the amount of gold reserves that are available and economically viable is unknown. This analysis, therefore, considers a range of potential impacts by evaluating the high-end and low-end scenarios outlined in *Section 5.3:Tax Revenue*.

Based on the estimated public costs and tax revenues, the anticipated net fiscal impact to the Nevada County General Fund of either the high-end or low-end scenario would be negative in Years 1 and 2 and positive from Year 3 onward through the productive life of the mine. Under the high-end scenario, the estimated net fiscal impact would be $763,000 in Year 4, which would be the first year of full operations, and decline to somewhere between $760,000 and $741,000 per year for as long as the mine continues to discover and produce approximately 108,400 ounces of gold per year, up to the 80-year permit period. At the time when the mine's reserves and productivity start to decline, the associated costs and revenues to the County General Fund would also decline.

Under the low-end scenario, the net fiscal impact would be approximately $163,000 in Year 4, and then decline through the eight-year productive life of the mine. Because all reserves would be exhausted by

the end of Year 11, this analysis assumes the mine would suspend operations in Year 12 and public costs and benefits would no longer accrue, with the exception of tax revenue associated with the property and improvements. Although the property would likely change ownership sometime after the mine's closure, the new assessment value and resulting tax revenue accruing to the County General Fund would reflect the value of any improvements that remain on the property (e.g., industrial buildings, roadways, etc.).

Table 5-8 and Table 5-9 present the estimated costs and revenues to the County General Fund that would result from the proposed project under the high-end and low-end scenarios, respectively. All values are adjusted to reflect current (2022) dollar values using historic and projected Consumer Price Index for all Urban Consumers (CPI-U) data from the Congressional Budget Office. These tables follow the anticipated project schedule, with construction and initial ramp-up occurring in Years 1-3 and full operation commencing in Year 4. Many of the costs and tax revenues in the table remain the same each year because they are reported in constant 2022 dollars. For the low-end scenario, this analysis scales down public costs and tax revenue resulting from increased economic activity to account for fewer people moving to the area and lower employment and operational spending by RGV. In both scenarios, construction workers were treated as new temporary residents who would increase public costs during the construction period since it is currently unknown if they would be hired locally or from outside the county.

Table 5-8. High-End Estimate of Fiscal Impacts from Proposed Project Operation on the County General Fund[1]

Year[2]	1	2	3	4	5	6	7	8	9	10	11	12+[6]
Annual Public Costs[3]												
Sheriff's Office	$37,000	$47,000	$55,000	$141,000	$141,000	$141,000	$141,000	$141,000	$141,000	$141,000	$141,000	$141,000
Office of Emergency Services	$2,000	$3,000	$3,000	$8,000	$8,000	$8,000	$8,000	$8,000	$8,000	$8,000	$8,000	$8,000

Total Cost	**$39,000**	**$27,000**	**$14,000**	**$37,000**	**$37,000**	**$37,000**	**$37,000**	**$37,000**	**$37,000**	**$37,000**	**$37,000**	**-**
Annual Tax Revenue												
Property Taxes Paid by RGV												
Assessed Property[5]	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000	$6,000 to $4,000
Improvements[5]	-	$9,000	$17,000	$17,000	$17,000	$17,000	$17,000	$17,000	$17,000	$17,000	$17,000	$17,000 to $13,000
Mineral Property[6]	-	-	-	$141,000	$123,000	$105,000	$87,000	$69,000	$52,000	$34,000	$17,000	-
Taxes from Increased Economic Activity												
Property Tax[5]	$3,000	$3,320	$5,937	$15,306	$15,246	$15,186	$15,126	$15,067	$15,007	$14,948	$14,890	-
Sales Tax	$3,000	$3,204	$5,729	$14,771	$14,771	$14,771	$14,771	$14,771	$14,771	$14,771	$14,771	-
Other Taxes	$1,000	$1,284	$2,297	$5,921	$5,921	$5,921	$5,921	$5,921	$5,921	$5,921	$5,921	-
Total Revenue	**$12,000**	**$22,000**	**$37,000**	**$200,000**	**$182,000**	**$164,000**	**$146,000**	**$128,000**	**$110,000**	**$93,000**	**$75,000**	**$22,000 to $17,000**
Net Revenue or Cost												
Low-End Estimate	**($27,000)**	**($5,000)**	**$23,000**	**$163,000**	**$145,000**	**$127,000**	**$109,000**	**$91,000**	**$74,000**	**$56,000**	**$39,000**	**$22,000 to $17,000**

[1] Numbers presented in 2022 dollars rounded to thousands; totals may not sum due to rounding

[2] Based on the anticipated project schedule, construction and initial ramp-up would occur in Years 1-3 and full operation would start in Year 4; Year 1 = FY 2023/2024

[3] The Public Works, Planning, and Housing and Community Services departments do not anticipate substantial costs that would impact the General Fund

[4] Anticipated costs for 240 new residents were scaled down by production under the low-end relative to the high-end estimate to account for the commensurate reduction in jobs

[5] Property assessments are capped at a 2.0% increase each year, so tax revenue may not increase proportionally to inflation; therefore, this analysis shows a gradual decline over time

[6] The low-end mineral property value is based on proved reserves of 212,000 ounces of gold, an extraction period of 8 years, average gold price of $1659, and no additional reserves

[7] The 12+ column presents costs and revenues following the 8-year productive life of the mine, which amounts to the tax revenue associated with the property and improvements

6. SUMMARY OF IMPACTS

This study evaluates the total economic impact of the proposed project and its anticipated impact to industries, residential property values, utility providers, public services, tax revenues, and the County General Fund. Given the uncertainty regarding the mine's production and resulting economic impact, these results require careful interpretation.

Although this study includes information about the economic impacts of the proposed project during multiple phases—construction, ramp up, and ongoing operation—the most critical impacts are those related to ongoing operation. These impacts are critical because they would be long term, lasting for the operational period of the proposed mining operations, up to the 80-year permit period. Therefore, this summary focuses on ongoing project operation.

Based on the assumption that the proposed project would operate as proposed by the applicant and documented in the project description in the Draft EIR, and that the projections for employment, payroll, and operational expenditures on goods and services that are presented in this study are accurate, the proposed project's anticipated long-term annual effects include the following:

- **Output**: The proposed project would generate total annual output of $202.8 million in Nevada County. This includes the direct impact of an estimated $179.8 million in revenue by RGV and $23.0 million in increased economic activity at local businesses (i.e., indirect and induced impacts) due to the multiplier effect. The portion of this impact that would affect the local community are the indirect and induced impacts and RGV's payroll spending, which combined total $61.1 million.

- **Employment and Labor Income**: The proposed project would directly employ an estimated 312 workers and generate an additional 163 indirect and induced jobs at local businesses, thereby supporting 475 local jobs. Total anticipated labor income includes RGV's anticipated payroll of $38.1 million and $7.3 million in indirect and induced labor income, for a total of $45.4 million. All employment and labor income would be local effects.

- **Commercial Businesses**: RGV expenditures on payroll and procurement of goods and services would increase economic activity at local businesses, with the largest impacts in terms of output occurring in the Retail Sales, Wholesale Suppliers, and Healthcare Services sectors. In terms of employment and labor income, the largest impacts would occur in the Retail Sales, Restaurants and Drinking Places, and Healthcare Services sectors.

- **Property Values:** RDN performed an extensive case study analysis of mining operations similar to the proposed project. The results of this analysis are inconclusive regarding the magnitude and direction of impacts to nearby property values. Thus, RDN is unable to rule out the possibility that the proposed project would have no effect on property values in Nevada County. Accordingly, we do not estimate any anticipated aggregate impact to property values associated with the proposed project.

- **Utility Providers**: The proposed project would result in new demand for electricity from PG&E, potable water from NID, and waste disposal services from Waste Management to serve the project itself, new residents in the area, and households that switch from well water to municipal

water. These utility providers confirmed that they would be able to accommodate these changes in demand and this activity would not financially impact the County.

- **Public Services and Costs**: The proposed project and associated increase in local population would increase demand and associated costs for public services, particularly law enforcement and emergency services due to the likely increase in vehicle accidents resulting from increased traffic. The estimated cost increase for County departments is $150,000 per year.

- **Tax Revenue**: The proposed project would result in tax revenue from property, sales, and other taxes paid by RGV and associated with the project's local spending and related economic growth. RGV's mineral property tax represents a sizable portion of potential tax revenue generated by the proposed project but cannot be precisely estimated because the amount of economically viable gold reserves is unknown. Using a range based on a low-end and high-end scenario, the anticipated tax effects in the first year of full operation would be $1.4 to $6.4 million to local agencies and districts, including local governments and fire protection, school, and other special districts, with $200,000 to $912,000 of these tax receipts going to the County General Fund.

- **County General Fund**: Based on the estimated public costs and tax revenues, the estimated net fiscal impact to the Nevada County General Fund of the high-end scenario, which assumes ongoing discovery of new gold reserves, is $763,000 per year in the first year of full operation, declining gradually to somewhere between $760,000 and $741,000 per year for as long as the mine is fully operational and continues discovering new reserves at the same rate. Under the low-end scenario, the net fiscal impact would be $163,000 in the first year of full operation, and then gradually decline over an eight-year productive life of the mine to somewhere between $22,000 and $17,000 per year after exhausting mineral reserves.

APPENDIX A—LITERATURE REVIEW: IMPACTS OF MINING AND INDUSTRIAL ACTIVITIES ON HOME VALUES

There is an extensive body of literature about the potential spillover effects of adverse environmental impacts on home prices. As an example, a 2011 meta-analysis focusing on the effect of waste sites on nearby home prices found 70 articles (Braden, Feng and Won 2011). Studies have also evaluated a wide range of other types of sites broadly considered to have a negative impact on home prices, including airports (Affuso, et al. 2019; Friedt and Cohen 2021), shale energy extraction operations (Gopalakrishnan and Klaiber 2013; Muehlenbachs, Spiller and Timmins 2015), power plants (Davis 2011), and crime hotspots (Linden and Rockoff 2008).

Focusing specifically on mining and its impact on home prices, there are relatively few rigorous, well-executed studies, and these studies cover a range of mining operations and locations. Williams (2011) and Fitzpatrick and Parmeter (2021) study the impacts of surface coal mines; Neelawala, Wilson, and Athukorala (2012) study the impact of mining and smelting on home prices in Queensland, Australia, where the production consists of lead, copper, silver, and zinc; Malikov, Sun, and Hite (2017) study the impacts of rock mining; while Ford and Seals (2018) focus on the operation of quarries. A 2020 article by Rivera explores the impact of mineral mining on rental prices in Chile.

However, our review of the academic literature did not yield any significant research on the impact to home values of mines that closely resemble the proposed project. Most studies focus on more visibly impactful activities, such as open pit mining or other major industrial activities, rather than underground mineral mining. The following discussion summarizes the results of those studies that RDN found most relevant to the proposed project. Please see *Section 7: References* of the main report for the complete list of papers RDN reviewed for this study.

Studies on the Impacts of Mining and Drilling Sites

RDN reviewed several studies on the impacts of mining or drilling operations on local property values. Ford and Seals (2018), using a variety of methods and examining multiple study areas in the United States, conclude that rock quarries do not have a statistically significant impact on nearby residential home prices. However, this study appears to be one of the few exceptions. Most studies that examine mining or similar operations, including coal mining, rock quarries, and shale gas drilling, conclude that the activity had a negative, statistically significant impact on nearby residential home values. Fitzpatrick and Parmeter (2021) examined surface coal mines in two Appalachian counties, reporting a 15.5 percent decrease in home value when the home is within 2.3 kilometers of an active mine. Malikov, Sun, and Hite (2017) estimated the impact of surface rock mining on home prices in Delaware County, Ohio. For homes within 10 miles of rock mining activity, they observed a 2.3 to 5.1 percent reduction in home price per mile closer to the mine, which they associate with elevated noise and dust levels from dynamite blasting and increased truck traffic.

Muehlenbachs, Spiller, and Timmins (2015) studied shale gas development in Pennsylvania and found a 9.9 to 16.5 percent reduction in home prices within 1.5 kilometers of shale gas drilling operations compared to homes further away. Noting the heated debate surrounding the potential for water contamination from shale gas development, the authors also found that nearby homes with wells saw large negative impacts while homes with piped water exhibited small positive impacts. Neelawala, Wilson, and Athukorala (2012) examined the impact of mining and smelting related pollution in

Australia, finding that homebuyers within four kilometers were willing to pay approximately AUS $13,947 more for each kilometer the home was farther away from the pollution source.

Lastly, Rivera (2020) used data on thousands of mines in Chile to estimate that cities where new mines opened between 2011 and 2016 exhibited 10.4 to 17.2 percent lower rental prices relative to cities that did not have any new mine openings, depending on the model specification. However, the results vary under different robustness checks, including a comparison of open pit versus underground mine openings. Controlling for other factors, the author found that new open pit mine openings exhibited over twice as large negative impacts to rent than new underground mine openings across several model specifications.

Studies on the Impacts of other Heavy Industry Sites

The vast majority of studies focusing on other industrial activities, such as incineration plants, power plants, and natural gas facilities, find the impact to residential home values is negative. An exception to these findings comes from Bakker (2021), who examined the impacts of industrial site development on home values in the Netherlands. The main result shows that homes within two kilometers of one of several industrial sites sold for an average 3.8 percent higher price after the sites were developed as compared to homes within the same radius that sold before site development and homes sold post-development but further away. However, in a sensitivity analysis that looked at only heavy industrial sites (e.g., large manufacturing parks), this positive impact was smaller and not statistically significant. Similarly, reducing the impact radius from 2 to 1.6 kilometers also yielded non-significant impacts. Kiel and Williams (2007), who examined changes in property values around 57 Superfund sites in the U.S., also found mixed results. Overall, 32 Superfund sites did not appear to have any statistically significant impact on the value of nearby homes, whereas 7 were associated with higher property values closer to the site, and the remaining 18 were associated with lower property values closer to the site. These results suggest that the magnitude and direction of an industrial project's impact on home values depends on both the particular characteristics of the industrial project and the characteristics of the surrounding area.

Despite the aforementioned exceptions, most industrial activities studied in the literature were found to negatively impact nearby residential property values. Boxall, Chan, and McMillan (2005) concluded that there is an approximately four to eight percent decline in property value in rural residential homes that are located within four kilometers of oil and gas facilities in Central Alberta, Canada. Brasington and Hite (2005) estimate that homes in U.S. metropolitan areas decrease in price by 0.03 percent for every 1.0 percent closer they are to the nearest perceived hazard (abandoned factories, landfills, etc.). Currie, et al. (2015) examined the opening and closing of 1,600 industrial plants in the United States, observing a 9.6 to 10.7 percent decline in home prices within 0.5 miles of toxic air emissions after a plant opens. Davis (2011) estimated that U.S. neighborhoods within 2 miles of a power plant had 4.1 to 7.1 percent lower sales prices than homes in comparable areas without power plants. Additionally, the magnitude of the difference was directly related to the size of the plants.

Using a similar methodology to other studies but including information about proximity to commercial and industrial sites, Taylor, Phaneuf, and Liu (2016) determined that proximity to an uncontaminated site reduces neighboring home values by 2.5 percent within 0.3 miles, while proximity to a site contaminated by hazardous waste reduces values by approximately 7.9 percent within 0.5 miles. Lastly, Kiel and McClain (1995) estimated changes in nearby home prices during various stages of the opening of an incinerator plant in Massachusetts. Relative to the average sales price for the area, they found that

home prices increased by 1.7 percent per mile away from the plant during construction, 3.2 percent per mile during early operation, and 2.7 percent per mile after four years of continued activity. Results from these last two studies suggest that uncertainty and risk aversion play a role in sites' impacts on local home values. A project that is perceived to have negative environmental impacts can cause decreases in home values even when there is no evidence of environmental contamination.

Summary Results of Key Studies

Table A-1 summarizes the findings of the key studies identified in RDN's literature review based on the type of site, the study area, and the direction and magnitude of the impact. The literature presents a wide range of impacts, from a positive impact of 3.8 percent for home sales within two kilometers of industrial sites in the Netherlands to a negative impact of up to 17.2 percent on rental prices in Chilean cities where new mines opened. For the studies RDN reviewed, the distance of measurable impacts ranged from 0.3 miles away for general hazardous waste sites to 10 miles away for open pit rock mines.

Table A-1: Summary of Key Study Findings

Author(s)	Site Type	Impact Area	Impact on Residential Property Values
Bakker (2021)	Industrial sites	2 kilometers (1.2 miles)	Premium of 4% for homes near an industrial site (i.e., homes cost more closer to the site)
Boxall, Chan, and McMillan (2005)	Natural gas facilities	4 kilometers (2.5 miles)	4% to 8% decline in value for homes near natural gas facilities
Brasington and Hite (2005)	General environmental hazards	Not applicable; study estimates a distance-to-hazard price elasticity	3% increase in home prices when distance from the nearest environmental hazard increases by 10%
Currie, et al. (2015)	Toxic plants	1 mile	11% decline in home prices within a half mile of a source of toxic air emissions; negative impact may remain even after closure of the source of pollution
Davis (2011)	Power plants	2 miles	Reduction between 3% and 7% for homes near power plants
Fitzpatrick and Parmeter (2021)	Coal mining	2.3 kilometers (1.4 miles)	15.5% decline in value for homes near coal mining
Ford and Seals (2018)	Rock quarries	In some specifications they estimate elasticities, so they do not use a specific distance; in other specifications they use	Finds no compelling statistical evidence that either the anticipation of, or the ongoing operation of, rock quarries negatively impact home prices

Author(s)	Site Type	Impact Area	Impact on Residential Property Values
		2 miles	
Kiel and McClain (1995)	Incinerator Plant	Not applicable; study estimates a distance-to-hazard price elasticity over a 28-square-mile area	Home prices increased by 1.7% per mile away from the plant during construction, 3.2% per mile during early operation, and 2.7% per mile after four years of continued activity
Malikov, Sun, and Hite (2017)	Rock mining	10 miles for near-zero effect (effects dissipate with distance)	2.3% to 5.1% reduction per mile closer to rock mining activity
Muehlenbachs, Spiller, and Timmins (2015)	Shale gas	1.5 kilometers (0.9 miles)	Reductions in value between 10% and 17% for homes near shale gas development
Neelawala, Wilson, and Athukorala (2012)	Mining of different resources	4 kilometers (2.5 miles)	6% to 7% increase in willingness to pay per kilometer of distance from mine/smelting operation
Rivera (2020)	Mining of different resources	Not applicable; study evaluates city-level data	10% to 17% reduction in rents in cities with new mine openings
Taylor, Phaneuf, and Liu (2016)	Contaminated and clean commercial/ industrial sites	Home impacted by a contaminated site if within 0.5 miles, and by a clean site if within 0.3 miles	Proximity to clean sites reduces neighboring home values by 2.5%; proximity to a contaminated site reduces values by about 8%; remediation of a contaminated site increases values by as much as 5%

APPENDIX B—LITERATURE REVIEW: METHODOLOGIES FOR ESTIMATING IMPACTS ON HOME VALUES

Establishing the factors that determine the prices of goods is challenging, especially in industries like residential real estate that are competitive (many buyers and sellers) but where the products are differentiated (each home being a unique product). Ultimately, prices represent the intersection of supply and demand for these goods. Both supply and demand can change at the same time, making it difficult to identify the specific determinants of observed prices. Despite these limitations, well-established methodologies exist for estimating the relationship between residential home values and their various determinants. The following sections discuss the primary methodologies used in the literature to estimate the impact of adverse environmental spillovers on residential home values.

Pricing Methods

Hedonic Pricing Method

The hedonic pricing method, based on the work of Lancaster (1966) and Rosen (1974), refers to the idea that a product's overall sale price is determined by adding up the value of all aspects or characteristics of that product. This methodology can be used to evaluate how specific aspects or characteristics of a good affect the price.

Real estate markets are often competitive with differentiated products, so they are a prime area in which to use hedonic pricing models. As Monson (2009) explains, one can think of a property as a collection of goods that determine its overall value. Home characteristics that are commonly used for this approach include, among others, property attributes (e.g., age of the home, square footage) and locational attributes (e.g., distance to amenities, such as the nearest school). Data from many real estate transactions, such as those found on sites like Zillow, can be used to estimate the value of each of these home attributes, which can in turn be used to predict total transaction prices.

A review of the literature using hedonic pricing in real estate markets revealed that this methodology is used extensively for many applications, including as a method to develop measures of environmental quality based on proximity to desirable or undesirable environmental features (Malpezzi 2003). A number of the papers in RDN's literature review used hedonic pricing models for this purpose, including estimating the impact of mining on housing prices in Queensland, Australia (Neelawala, Wilson and Athukorala 2012), and the impacts of traffic noise on housing values (Ozdenerol, et al. 2015).

The key feature of the hedonic pricing method is that home prices can be partially determined by the absence or presence of certain characteristics if the value of those characteristics can be estimated. Studies that use this approach to estimate impacts of some activity or industry often use distance to an activity (e.g., distance to a mine) or a discrete near-or-far classification as a characteristic for which the value can be estimated.

Repeated Sales Price Method

An alternative approach to estimate residential home value changes is the construction of repeated sales prices indices. This method looks at the difference in sale prices of the same home over time to assess how prices change, assuming characteristics of the home do not change between sales. A well-known example of this is the widely published set of Case-Shiller indices, based on the work of Case and Shiller (1987). Repeated sales price indices are best suited for estimating changes in prices rather than

estimating price levels. Also, they do not provide estimates of the value of the characteristics or features of homes. Nevertheless, since this methodology does not require detailed lists of home characteristics, it avoids biases related to omitting some important variable(s) from the estimation, which can be an issue in the hedonic pricing methodology (Malpezzi 2003). Using the repeated sales methodology, it is possible to compare price changes for homes defined as "near" the activity and price changes for homes that are "far" from the activity.

Methodological Improvements to Pricing Methods

Fixed Effects Model

The repeated sales methodology described earlier can be seen as a specific case of more general fixed effects models. In the context of estimating residential property values, fixed effects are variables that do not change over time for individual homes. These variables include attributes like building square footage or lot size, which can reasonably be assumed to remain constant throughout a home's lifespan. Fixed effects estimation allows a model to implicitly control for characteristics that are, when available, explicitly considered in a hedonic pricing approach , and isolate the impact of characteristics that change over time (e.g., specific market conditions). Fixed effects estimation has the additional advantage of accounting for unobserved characteristics that do not change over time. Currie, et al. (2015) uses a fixed effects model for this purpose to control for time-invariant characteristics of properties.

Difference-in-Differences Model

As Ford and Seals explain (2018), both hedonic pricing and repeated sales methods used for estimating potential impacts of a mine or other activity can suffer from selection bias, which broadly refers to any bias introduced by data that are not properly randomly selected. The reason is that, generally, the location of a mine is not chosen randomly. Factors that determine where mining or other activity takes place may also cause differences in home prices. Ideally, a study that seeks to estimate the impact of a particular activity should compare price differences between the areas believed to be impacted relative to other areas, both before the activity is in place and once the activity exists. Comparing the differences before and after allows for estimation of the causal effect of the activity on price differences. This methodology is generally known as difference-in-differences.

In their analysis of the impact of quarry operations on home prices, Ford and Seals (2018) address selection bias issues by combining hedonic pricing with a difference-in-differences approach. Effectively, this evaluates whether the hedonic price of being near a quarry before the quarry is operating is different from this same hedonic price when the quarry is operating. Other recent studies that use a combination of hedonic pricing and difference-in-differences include estimates of the impacts on home prices of environmental contamination (Taylor, Phaneuf, and Liu 2016), industrial site development (Bakker 2021), and estimates of the impact to rental prices in Chile from mining operations (Rivera 2020). Currie, et al. (2015) use a difference-in-differences approach to estimate the impact on housing values from exposure to environmental health risks. They are able to use this approach because their home sales transaction data covers periods and geographies in which a number of toxic plants open and/or close.

Similarly, a difference-in-differences approach can be combined with a repeated sales price method to identify causal relationships between a mine and changes in home prices. This approach offers the advantage of not requiring a rich dataset in terms of housing characteristics, though it relies on the

assumption of constant-quality of the housing units included in the analytical sample. Currie, et al. (2015) use this approach as a robustness check in their evaluation of home price impacts from exposure to environmental health risks. Similarly, Taylor, Phaneuf, and Liu (2016) complement their analysis of the impact of environmental contamination with estimates combining a repeated sales method with difference-in-differences.

Key Definitions

Impact Area Definition

A common consideration in evaluating the impact that the presence of an industry or activity has on real estate prices is defining the potentially impacted area. Fitzpatrick and Parmeter (2021) indicate that this often comes down to judgment by the analyst and that different definitions of the impact area may lead to different results.

To test the sensitivity of results to the definition of near and far areas, researchers often perform their analysis using different boundaries, where the boundaries may be set based on different criteria. Currie, et al. (2015) use U.S. Environmental Protection Agency data on hazardous air pollution and find that pollution levels fall quickly as distance from the polluting plant increases, with most pollutants being detectable only within one mile of a plant. This informs their use of radii of half a mile and one mile for classifying homes as near or far from a plant in the two specifications they use, with the comparison groups being homes between half a mile and one mile or between one mile and two miles from a plant, respectively.

Taylor, Phaneuf, and Liu (2016) prepare a first set of estimates using intervals of distance (bins) to determine the maximum distance at which homes may be impacted by their proximity to a hazardous waste site that is either contaminated or uncontaminated (clean). They use the evidence from these estimates to classify homes that are within half a mile of a contaminated site as being near the contaminated site and homes that are within one third of a mile of a clean site as being near the clean site. Using a somewhat similar approach, Bakker (2021) prepares a first set of estimates to determine a target distance for the impact of industrial sites, but rather than using distance bins, he uses a continuous distance variable, and finally settles on a model specification that defines being near a site as a distance of up to two kilometers.

Concerns about the arbitrary nature of defining impact areas have prompted research that attempts to provide more flexible ways of estimating impacts as well as more robust methods for determining what an impact area should be. Malikov, Sun, and Hite (2017) estimate the effect of rock mining on home prices using a methodology that does not require pre-specifying a distance threshold and that allows estimation of effects that dissipate with distance in a non-linear way. Fitzpatrick and Parmeter (2021) provide another alternative that focuses on determining optimal "treatment buffers" in hedonic models.

Multi-Event Definition

Another consideration explored by Kiel and McClain (1995) is that the impact of undesirable activities or land uses may not be constant through all stages of a project. Their study estimated the effect on property values of the construction and operation of an incinerator in North Andover, Massachusetts, from 1974 to 1992 through five stages of the project: (1) pre-rumor, (2) rumor, (3) construction, (4) online, and (5) ongoing operation. Their results indicated that real estate prices near the incinerator declined once construction, or a "ramp up" in activity, began. This finding indicates that undesirable

activities can influence home buyers and sellers in the local community even before operations commence, based only on expectations of adverse environmental or other impacts.

Kiel and McClain also considered an adjustment period, dubbed "ongoing operation," after which sufficient knowledge of the adverse impact should be known and real estate prices are no longer impacted by uncertainty about the plant's impacts. The inclusion of this period assumes that a significant contributor to the change in property values is the expectation of negative consequences, even if those consequences never materialize. Taylor, Phaneuf, and Liu (2016) support this notion by concluding that property values decrease near both contaminated and uncontaminated hazardous waste sites, indicating that the risk of future contamination is a consideration for homebuyers. A general use of the multi-event approach is limited by the difficulty of defining cutoff dates that determine the stages of the process. Kiel and McClain (1995) rely on local newspaper articles and contracts to specify key dates. Alternatives for determining cutoff dates may include using employment or production.

APPENDIX C—REALTOR SURVEY

RDN

Projected Impacts of the Idaho-Maryland Mine on Local Property Values

Purpose of this Survey

Robert D. Niehaus, Inc. (RDN) is an economic consulting firm. We have been hired by Nevada County to conduct an independent study of the economic impacts of the proposed Idaho-Maryland Mine Project near Grass Valley, CA.

We are surveying local real estate professionals to better understand their perspectives on how the Project would affect local property values. The following survey is 10 questions and takes an estimated five to eight (5-8) minutes to complete.

We understand that the Idaho-Maryland Mine Project is controversial. Project proponents emphasize its anticipated benefits, including local jobs, operational spending, and tax revenues. Project opponents emphasize its anticipated costs, including adverse impacts on the local environment and residents' quality of life.

This survey is completely confidential; RDN will anonymize and aggregate your response with others when we report our findings. The raw data will not be shared with anyone outside of RDN's project team. For questions or technical support, please contact us at survey@rdniehaus.com. Please press "NEXT" to continue.

Projected Impacts of the Idaho-Maryland Mine on Local Property Values

Your Experience and Familiarity with the Project

1. How many years of experience do you have working as a licensed real estate professional in Nevada County?

- ◯ 0-2 Years
- ◯ 3-5 Years
- ◯ 6-9 Years
- ◯ 10+ Years

2. Are you aware of the proposal to re-open the Idaho-Maryland Mine?

- ◯ Extremely aware
- ◯ Very aware
- ◯ Somewhat aware
- ◯ Not so aware
- ◯ Not at all aware

3. How familiar are you with the area around the proposed Idaho-Maryland Mine Project sites?

- ◯ Extremely familiar
- ◯ Very familiar
- ◯ Somewhat familiar
- ◯ Not so familiar
- ◯ Not at all familiar

4. How familiar are you with the findings of the Draft Environmental Impact Report (EIR) on the Idaho-Maryland Mine Project?

- ◯ Extremely familiar
- ◯ Very familiar
- ◯ Somewhat familiar
- ◯ Not so familiar
- ◯ Not at all familiar

ADN

Projected Impacts of the Idaho-Maryland Mine on Local Property Values

Draft EIR Findings

5. Summary of Draft EIR Findings (from Nevada County Planning Department): "The EIR identifies significant impacts for the following California Environmental Quality Act (CEQA) environmental topic areas: Aesthetics; Air Quality and Greenhouse Gas Emissions; Biological Resources; Cultural and Tribal Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Noise and Vibration; Transportation; and Wildfire.

However, the EIR includes mitigation measures that would reduce project impacts related to Air Quality and Greenhouse Gas Emissions; Biological Resources; Cultural and Tribal Cultural Resources; Geology and Soils; Hazards and Hazardous Materials; Hydrology and Water Quality; Noise and Vibration (off-site haul truck traffic noise; operational noise and vibration); Transportation (hazards related to construction traffic); and Wildfire to less-than-significant levels.

The EIR determined that the project would have certain impacts to Aesthetics; Noise (temporary construction noise along East Bennett Road); and Transportation (e.g., intersections) that would remain significant and unavoidable even after implementation of the feasible mitigation measures set forth in the EIR."

Do you believe the environmental impacts would be greater than or less than those stated in the Draft EIR?

- ◯ Significantly greater
- ◯ Slightly greater
- ◯ About the same
- ◯ Slightly less
- ◯ Significantly less

ADN

Projected Impacts of the Idaho-Maryland Mine on Local Property Values

Overall Impact

6. There are many factors that affect property values, but we want to estimate the "marginal effect" of the Idaho-Maryland Mine Project specifically, i.e. how the Project would affect property values assuming all other factors are held constant.

In your professional opinion, what would be the overall effect of the Project on the market value of residential properties in Nevada County? Would it cause a net INCREASE or DECREASE in property values?

- ◯ Increase
- ◯ Decrease
- ◯ No effect

7. Please help us understand why you selected the answer above:

ADN

Projected Impacts of the Idaho-Maryland Mine on Local Property Values

Location and Size of Impacts

8. On average, how much do you believe residential property values in the following areas would change due to the Idaho-Maryland Mine Project?

For each area, select the percent (%) change in the first column and "Increase" or "Decrease" in the second column. For reference, please scroll down to see maps from the Draft EIR.

	% Change	Increase or Decrease
Properties adjacent to the Project's haul routes		
Properties adjacent to the Project's Brunswick site		
Properties adjacent to the Project's Centennial site		
Properties under which the Project has mineral rights		
Properties within 1 mile of Project sites, excluding those in the areas above (e.g., Grass Valley)		
Properties between 1 and 5 miles of Project sites (e.g., Nevada City)		

Figure 3-13
Project Haul Routes

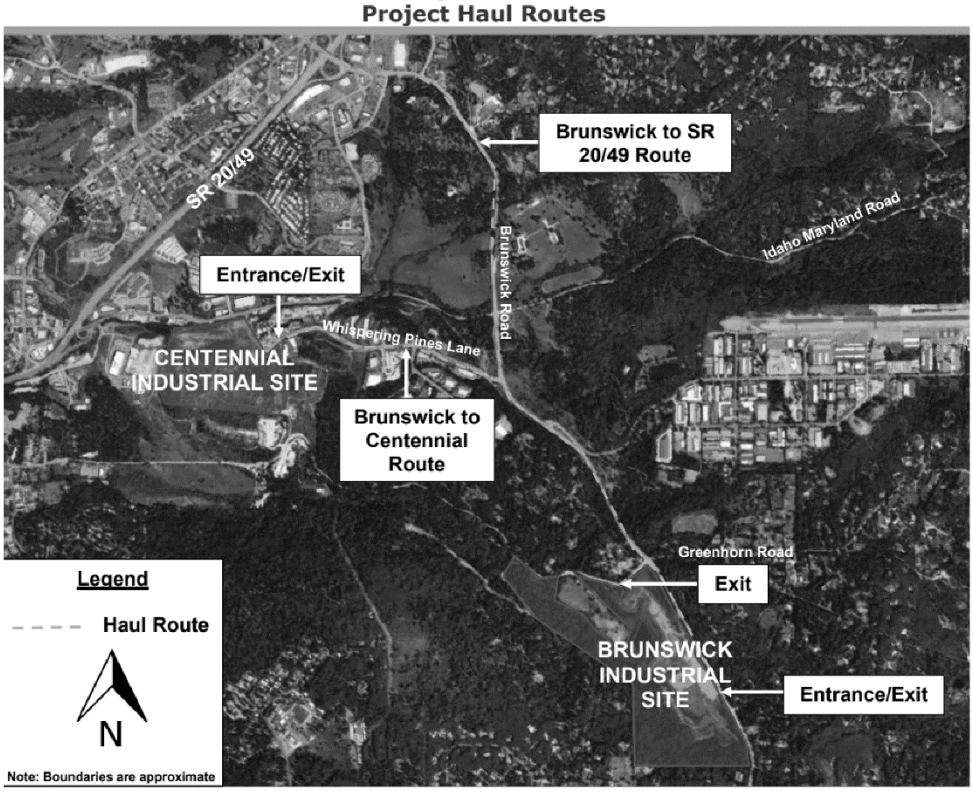

Figure 3-2
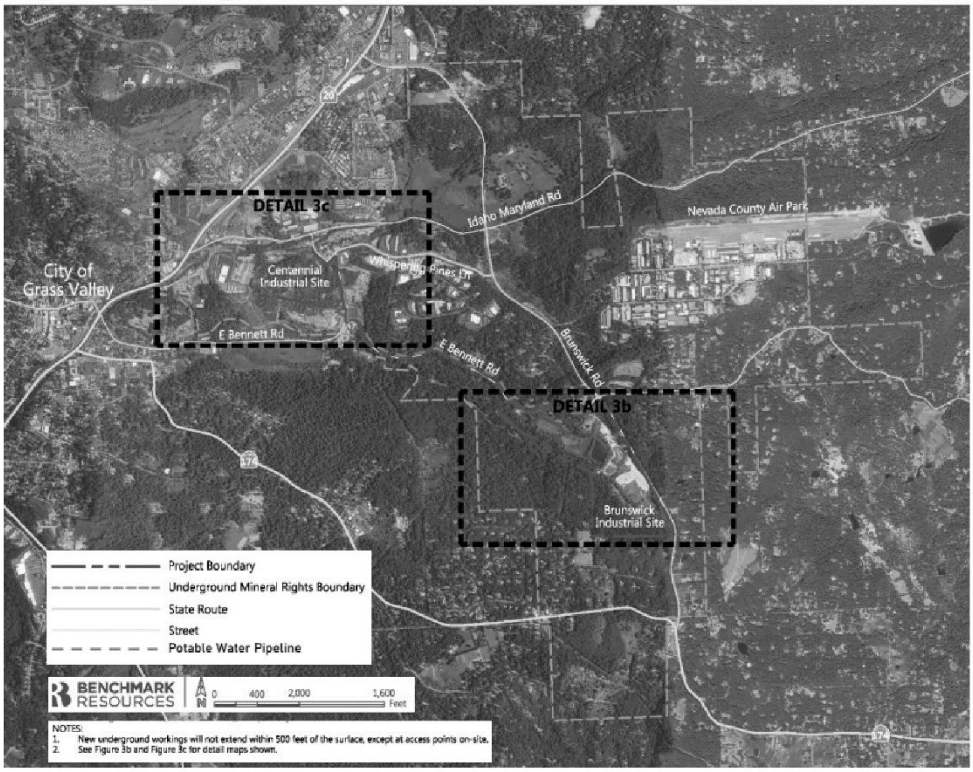
Project Location Map - Overview



RDN

Projected Impacts of the Idaho-Maryland Mine on Local Property Values

Duration of Impacts

9. In your opinion, do you expect the mine's impacts on property values would be TEMPORARY or PERMANENT?

- ◯ TEMPORARY, i.e. during construction or ramp-up of operations only
- ◯ PERMANENT, i.e. for as long as mine is active or longer
- ◯ No impact on property values

10. Please briefly explain what factors you are considering in your assessment of the location and duration of the Idaho-Maryland Mine Project's impacts on property values.

Common tire chemical implicated in mysterious deaths of at-risk salmon

Coho salmon in urban streams have been dying in the U.S. Pacific Northwest

3 DEC 2020 • BY ERIK STOKSTAD

Particles that erode from tires wash into streams used by coho salmon. KEVIN SCHAFER/GETTY IMAGES

SHARE:

For decades, something in urban streams has been killing coho salmon in the U.S. Pacific Northwest. Even after Seattle began to restore salmon habitat in the 1990s, up to 90% of the adults migrating up certain streams to spawn would suddenly die after rainstorms. Researchers suspected the killer was washing off nearby roads, but couldn't identify it. "This was a serious mystery," says Edward Kolodziej, an environmental engineer at the University of Washington's (UW's) Tacoma and Seattle campuses.

Online today in *Science*, researchers led by Kolodziej report the primary culprit comes from a chemical widely used to protect tires from ozone, a reactive atmospheric gas. The toxicant, called 6PPD-quinone, leaches out of the particles that tires shed onto pavement. Even small doses killed coho salmon in the lab. "It's a brilliant piece of work," says Miriam Diamond, an

environmental chemist at the University of Toronto. "They've done a tremendous job at sleuthing out a very challenging problem."

Manufacturers annually produce some 3.1 billion tires worldwide. Tire rubber is a complex mixture of chemicals, and companies closely guard their formulations. Because tire particles are a common component of water pollution, researchers have been examining how they affect aquatic life.

After Kolodziej arrived at UW's Center for Urban Waters in 2014, he joined the effort to solve the coho salmon mystery. The group created a mixture of particles from nine tires—some bought new, others provided by two undergraduates who moonlight as mechanics—to mimic what might wash off typical highways. They found several thousand unidentified chemicals in the mixture. Postdoc Zhenyu Tian spent more than 2 years narrowing down the list, separating the molecules based on their electrical charge and other properties. By May 2019, he had narrowed the focus to about 50 unknown chemicals, and then further work revealed the chemical formula of a prime suspect. "If you're looking for an unexplained toxicant that's killing fish, we had the perfect instruments and expertise," Kolodziej recalls.

But what was it? A 2019 report from the Environmental Protection Agency on chemicals in recycled tires mentioned 6PPD, which has a similar formula. The final clue was buried in an industry report from 1983, which contained the exact formula of 6PPD-quinone, the molecule created when 6PPD reacts with ozone. The team synthesized 6PPD-quinone and found it was highly lethal to coho salmon.

Now, the team is working to understand how the chemical kills fish. Kolodziej and colleagues say other species of fish should also be evaluated for sensitivity. Because you can't buy the molecule, Kolodziej's team is making it. "My lab might even be the only place that actually has this," he says.

ADVERTISEMENT

The researchers suspect the compound is present on busy roads everywhere. They've found it washes off pavement and into streams in Los Angeles and San Francisco, for example. The simplest solution might be for tire manufacturers to switch to an environmentally benign alternative. But Sarah Amick, vice president of environment, health, safety, and sustainability at the U.S. Tire Manufacturers Association, says it's too early to discuss alternatives. "It's important that additional research be done to validate and verify these results."

Another way to protect salmon is to filter stormwater through soil, but installing enough infiltration basins to treat road runoff before it reaches spawning streams would be very expensive, says co-author Jenifer McIntyre, an ecotoxicologist at Washington State University's Puyallup Research and Extension Center. In the meantime, Kolodziej says he "can't walk along a street without staring at all the skid marks," thinking about tire chemicals, and "wondering what's there."

Dozens of tires litter the mouth of Rodeo Creek, on San Pablo Bay's south shore. These tires are a likely source of 6PPD-quinone, which is toxic to fish. (Photo by Kate Golden)

Nature News

A Nasty Salmon-Killing Tire Chemical Is in Bay Waterways. Can It Be Cleaned Up?

6PPD-quinone comes from a long-used chemical that will be hard to replace in tires. But 'green infrastructure' may help stop it from entering our waters.

by Kate Raphael

March 2, 2023

When Heidi Petty began cleaning up Rodeo Creek nearly two decades ago, she pulled seventeen shopping carts out of the waterway, which runs from western Contra Costa County into San Pablo Bay. Since then, she has extracted mattresses, chairs, fake Christmas trees, a golf club, and a wig. But despite her efforts to clean up this creek-turned-dumping-ground, one particularly noxious type of trash keeps coming: tires. Parts of this urban watershed contain a mess of whole tires, mired in the mud like a monstrous serpent.

"There seems to be a pretty solid theme of using creeks as a disposal for highly toxic things," says Petty, the watershed program manager at the Contra Costa Resource Conservation District. "And tires are hard to get rid of."

Trouble is, they're not just eyesores but likely fish-killers. As tires break down, they release a cocktail of chemicals that leach into the water in creeks all over the Bay Area—which in turn empty into the broader San Francisco Bay. Most pollutants have more subtle impacts on wildlife. But now we have a new—or rather, newly identified—pollutant to worry about: 6PPD-quinone (aka 6PPD-q). This chemical is formed when 6PPD, a chemical long added to tires to prevent degradation, reacts with ozone in the atmosphere. In the past few years, researchers have learned it is lethal to steelhead trout, coho salmon, and chinook salmon; it kills cohos even at very low concentrations. Now, regulators and environmentalists are working to manage 6PPD-q pollution, to protect already imperiled local steelhead trout populations.

Many of the tires at Rodeo Creek's mouth appear to have been there a while. Nearby is a relatively out-of-sight easy access point for those with items to dump. (Photo by Kate Golden)

. . .

A 20-year mystery, solved

Scientists published the first research identifying 6PPD-q in late 2020, but researchers at the National Oceanic and Atmospheric Administration (NOAA) have been observing its effects on coho salmon for decades. 6PPD, its precursor, was first used in tires in the mid-1960s and was in widespread use by the 1970s, according to the U.S. Tire Manufacturers Association.

In the early 2000s, Barb French, a NOAA research chemist, was surveying fish in Puget Sound streams. She observed that when salmon returned to their natal streams to spawn, they grew disoriented. "They'd swim in circles and sideways through the water," French says. They splayed their fins and gaped their mouths, then died in a few hours. It shocked French. Having just returned from the ocean, these salmon were at a point in their life cycle when they should have been strong.

"That then led to 20 years of research to figure out the needle in the haystack of what was killing these fish," said French's colleague Nat Scholz, NOAA's ecotoxicology program manager.

French, Scholz, and their team linked the fish kills to roadway runoff, but they did not know which chemical was responsible. Stormwater is a complicated soup—and many chemicals used in tires are proprietary secrets, guarded by manufacturers. "You can't measure a lot of things in the stormwater if you don't know what they are," French says. Finally, at the end of 2020, another team led by Zhenyu Tian, then at the Tacoma, Washington-based Center for Urban Waters, separated urban stormwater into its components and identified the culprit of the fish kills: 6PPD-q.

Once French knew what was killing the coho salmon, she and her team began investigating how the chemical affected other fish. She and her colleagues exposed different types of salmonids to undiluted stormwater containing 6PPD-q. Steelhead trout and chinook salmon were susceptible to the chemical, exhibiting the same suite of symptoms French had seen among the coho salmon in the Pacific Northwest, though they were not as acutely vulnerable as cohos: In French's study, up to 42 percent of steelhead and 13 percent of the chinooks exposed to the stormwater died within two days, while over 90 percent of the cohos died.

A coho in its brilliant red spawning getup. Cohos haven't been seen in the Bay since the mid-to-late 1980s, but they still have North Bay spawning sites, including in Lagunitas Creek and the Russian River. Cohos have proved to be the most vulnerable to 6PPD-q. (Bureau of Land Management, CC-BY-2.0 via **Flickr**)

. . .

6PPD-q is here

Since steelhead and chinooks are both native to Bay Area waterways, scientists at the San Francisco Estuary Institute began testing for the chemical in streams and watersheds in and around the San Francisco Bay in late 2018, as part of the research efforts led by Zhenyu Tian.

"We've found quite high concentrations of 6PPD-quinone in our waterways," says Ezra Miller, a scientist at the institute, an independent scientific nonprofit that assesses and improves the Bay's health.

In an area as heavily urbanized and car-centric as the Bay Area, 6PPD-q is likely ubiquitous. Rodeo Creek runs beneath a "hub of freeways, overpasses, and underpasses, (built) with very little concern for wildlife," Petty says. In addition to the 6PPD-q that all those whole tires likely leach into the creek, the chemical also makes its way into watersheds via the small particles that tires slough off whenever they are rolling.

Rodeo Creek once teemed with fish, molluscs, and aquatic plants. But a series of construction projects destroyed the fish habitat: the creek was channelized, widened and lined with concrete, to prevent flooding in Rodeo; small dams called drop structures were added in an effort to slow erosion; and railroad construction diverted the creek's path.

"We're kind of working around bad infrastructure from a long time ago," says Petty. Today, Rodeo Creek's fish have completely disappeared.

It's a story that has played out for streams across the state.

. . .

Steelhead here 'face extinction'

To distribute water to California's Central Valley, the state built many dams, destroying salmon and trout habitat, as well as their migration routes. Climate change is warming waters and changing streamflows, making life harder for these coldwater fish. California steelhead trout and other salmonid populations have been declining for a long time, according to Peter Moyle, researcher and UC Davis fisheries professor emeritus.

The Bay's steelhead are part of a distinct population of fish that is federally listed as threatened and "face extinction in the next 100 years" unless there are "significant investments in monitoring, habitat restoration, and water management," according to a **2017 report** Moyle coauthored.

Pollution plays a role in the decline of these fish, explained Moyle, but the extent of its influence is hard to tease out.

The Center for Ecosystem Management and Restoration, an organization dedicated to rehabilitating California's streams until it closed its doors at the end of 2016, documented steelhead populations in many creeks neighboring Rodeo, including Pinole, San Pablo, and Walnut Creeks in Contra Costa County, and Codornices, San Lorenzo, and Alameda Creeks in Alameda County. And, according to Miller, testing of area creeks has shown that concentrations

of 6PPD-q sometimes exceed its LC50 for coho salmon. (LC50 is a term used by toxicologists—the "LC" means "lethal concentration"—that refers to the chemical concentration expected to kill half of exposed individuals in a group.)

Coho salmon appear to be more vulnerable to 6PPD-q than steelhead. But based on the data collected by the SFEI, Miller says Bay Area levels of 6PPD-q are potentially high enough to harm steelhead, too.

Coastal rainbow trout (*Oncorhynchus mykiss*, subspecies *irideus*) like this one, caught south of San Jose in October 2022, are the same species as steelhead. Steelhead, like salmon, spend time at sea, while rainbow trout live their lives entirely in fresh water. (Photo by prickly_sculpin via **iNaturalist**, CC-BY-NC)

. . .

Human health effects? Unknown.

In places where 6PPD-q is present at not-quite-fatal levels, the chemical may still have nasty sublethal effects scientists are only beginning to investigate. "It doesn't matter if they live, if they can't reproduce, if they can't eat, if they can't swim away from predators," says French.

Researchers are also studying whether 6PPD-q can be passed up the food chain to other predatory fish. "This particular compound looks to be metabolized in fish," says Scholz. That means that even if the compound harms or kills the fish, it most likely does not accumulate in their bodies, where it could harm other organisms that consume them—like people.

Humans are exposed to 6PPD and 6PPD-q, but scientists do not fully understand the mechanism through which 6PPD-q kills fish, let alone how the compound affects human health. 6PPD-q has not been found in drinking water, says Ezra Miller of the SFEI, as far as they know. "But that may be because we haven't been looking for it," they add. Scientists have found both 6PPD and 6PPD-q in the urine of adults and children in South China. Miller suspects the main exposure route in humans is via inhalation of very small tire particles, rather than through water, but more research is needed.

. . .

Chemical alternatives are a ways off

In May of 2022, the California Department of Toxic Substances Control initiated the process of designating 6PPD as a "priority product," which would force tire manufacturers to disclose their use of 6PPD and begin research to find safer alternatives for use in tires.

PPDs, the class of chemicals including 6PPD, were first developed by the U.S. government. "One of the biggest pushes for an improvement in durability for rubber happened between World War II and the Korean War," says Jamie McNutt, Director of Regulatory Science at the US Tire Manufacturers Association, or USTMA. US military officials found the tires on their combat vehicles had degraded since WWII, and in preparation for conflict in Korea, they developed PPD chemistry to fight tire degradation.

The chemistry worked exceptionally well, and 6PPD is now used in every consumer tire McNutt is aware of. "If you look at a tire, you think it's just one big black ball of rubber," says McNutt, but in actuality "it's a multiple-layered composite product," she says. And every layer except the innermost lining contains 6PPD. The chemical is essential in preventing the outermost layer of tire from cracking, but it also protects inner layers from oxidation that could lead to tire failure.

Tire manufacturers say they were unaware of the breakdown product 6PPD-quinone's presence in the environment—and its impact on fish—until Zhenyu Tian's research was published in 2020. Since then, the USTMA has advocated for analyses of alternative products to replace 6PPD, partnered with researchers to address data gaps around 6PPD-q, and invested in mitigation efforts to remove polluted stormwater, according to Sarah Amick, a USTMA senior vice president of environment, health and safety, and a senior counsel.

Tire manufacturing is complex. All the materials must work together and meet high standards for road safety. Finding an alternative for a chemical as essential and widely used as 6PPD represents a huge challenge that will likely take a long time. While tire manufacturers know how to test for performance, safety testing for toxicity is less well-defined. "Even if we had a material identified as an alternative, we do not know how to test it for safer toxicity," says McNutt.

Until there's a safer chemical alternative, scientists and engineers say, we must treat the stormwater itself. And once car tire particles, and the 6PPD-q in them, enter the environment, they may be extremely difficult to remove. Tiny tire particles can travel far from the roads where they originated, and once they reach creeks and larger bodies of water, there are no effective methods of filtering them from the water. How long 6PPD-q sticks around is still unknown.

But there are solutions.

. . .

Trap it!

One solution is to collect the tire particles and their pollutants before they reach waterways.

Soil filtration columns are cylinders of dirt designed to trap pollutants contained in urban stormwater as it passes through so that only clean, filtered water enters the environment. These types of green infrastructure projects **have effectively removed** 6PPD-q from urban stormwater, in research conducted by French's NOAA colleagues and other scientists.

Some of the 6PPD-q problem could be mitigated by green infrastructure projects already under way in the Bay Area that were designed to deal with old foes like mercury, copper, and polychlorinated biphenyls.

"We are steadily increasing the number of green stormwater infrastructure facilities, such as bioretention facilities," also known as rain gardens, wrote Terry Fashing, Oakland's watershed and stormwater program manager, in an email.

In the Rodeo Creek watershed, Heidi Petty is planning to install a "living levee" in an effort to remove pollutants like 6PPD-q and prepare to bring fish back into the creek. Typical levees usually incorporate a steep slope toward the water, with concrete or other human-made walls that leave no habitat for aquatic life. Petty aims to build a gradual slope and repopulate the area with native plants like eelgrass. "We're just basically recreating what should be there," says Petty. This type of living levee also creates a wetland further upland that can also filter out pollutants like 6PPD-q.

Eventually, Petty hopes to reintroduce steelhead back into the creek. It's not just about salmon. If the water can be made clean enough for sensitive salmonids to live in it, other species will benefit, too.

Petty is hopeful. She imagines a future restored tidal marsh at Rodeo's mouth similar to what existed centuries ago: The garbage is gone. Native aquatic plants like eelgrass attenuate the force of oncoming waves and prevent erosion. Oyster reefs filter out pollutants. The air is a soundscape of bird calls from clapper rails and terns, their stomachs free of plastic and pieces of tire. The steelhead return, their silvery bodies catching the glint of the sun.

ABSTRACT: We compared the sensitivity of closely related Pacific salmon and steelhead (*Oncorhynchus* spp.) to untreated urban stormwater runoff across three storm events. Juvenile coho, sockeye, steelhead, and Chinook were exposed for 24 h to untreated urban runoff and then transferred to clean water for 48 h. As anticipated from previous studies, coho were highly susceptible to runoff toxicity, with cumulative mortality rates ranging from 92%−100% across the three storms. By contrast, juvenile sockeye were unaffected (100% survival), and cumulative mortality rates were intermediate for steelhead (4%−42%) and Chinook (0%−13%). Furthermore, coho died rapidly following the onset of stormwater exposure (generally <4 h), whereas mortality in Chinook and steelhead was delayed by 1−2 days. Similar to previous findings for coho, steelhead and Chinook did not recover when transferred to clean water. Lastly, significant mortality occurred in coho even when roadway runoff was diluted by 95% in clean water. Our findings extend the urban runoff mortality syndrome in salmonids and point to a near-term need for sublethal studies in steelhead and Chinook to more precisely understand stormwater risks to threatened species recovery efforts in the western United States.

INTRODUCTION

Recent advances in analytical methods have made it increasingly possible to fractionate urban stormwater runoff into individual and identifiable toxic components. These efforts have yielded several chemicals of emerging concern (CECs) that are derived primarily from vehicle tires and therefore ubiquitous in roadway runoff.[1,2] Many are essentially unknown to ecotoxicology despite an apparent prevalence in the environment[3,4] and rapid mobilization in stormwater runoff.[5−7] One such CEC is *N*-(1,3-dimethylbutyl)-*N*′-phenyl-*p*-phenylenediamine (6PPD), an antiozonant added during the manufacture of tires to help prevent tread degradation. Ozone abiotically converts 6PPD into 6PPD-quinone, as well as other transformation products.[8]

For the past two decades, researchers in the Pacific Northwest of the United States (U.S.) have been studying a severe urban runoff mortality syndrome in coho salmon (*Oncorhynchus kisutch*). This forensic investigation eventually led to the discovery of 6PPD-quinone (6PPD-q) as the primary causal agent in the urban runoff mortality phenomenon.[4] Recurring, stormwater-driven dieoffs pose a significant threat to the near-term and long-term conservation of wild coho populations,[9] several of which are currently managed under the U.S. Endangered Species Act (ESA). The conservation implications for ESA-listed salmon are considerable, given high rates of premature death (up to 90% or more) among adult coho returning to spawn in urban watersheds, as documented in field surveys across multiple years in Puget Sound and elsewhere.[10,11]

At present, uncertainty around the extent to which roadway runoff toxicants, including 6PPD-q and other tire antioxidant/antiozonant transformation products, impact aquatic taxa beyond coho is spurring a global effort in ecotoxicology.[3,12,20] Although environmental health data are limited, there appears to be variation in vulnerability to roadway runoff even among closely related species of Pacific salmon belonging to the genus *Oncorhynchus*. This is evident from recent studies, wherein adult coho and chum (*O. keta*) were exposed to urban runoff or tire leachate, with high mortality observed in coho but not chum.[13,14] These differences in survival were consistent with observations from field surveys that previously documented

high rates of premature spawner mortality in coho but not chum in restored urban catchments.[10] However, the vulnerability of other Pacific salmonids to urban roadway runoff, including sockeye (*O. nerka*), Chinook (*O. tshawytscha*), and steelhead (ocean-going rainbow trout; *O. mykiss*), has not been determined. In the context of the ESA, this represents a major information gap, particularly for stream-type Chinook and steelhead that spend proportionately more time in freshwater habitats as juveniles, where they are more likely to be exposed to runoff from the transportation grid. Moreover, relative to coho, ESA-listed Chinook and steelhead populations encompass a much wider range of river basins in the western U.S., particularly in California (see www.fisheries.noaa.gov/species-directory/threatened-endangered for current ESA range designations).

It was recently shown that juvenile coho, in addition to spawning adults, are highly susceptible to the mortality syndrome.[15] Salmonids other than coho, including *O. mykiss*, also appear vulnerable.[12] In the present study, we extended these earlier observations by coexposing juvenile coho, sockeye, Chinook, and steelhead to runoff collected during multiple rain events. We focused on small subyearlings (coho, sockeye, Chinook) as well as larger age 1+ juveniles (coho, steelhead), and used coho as a positive control for the baseline toxicity of untreated stormwater (i.e., as confirmation of the mortality syndrome). Our study had three primary objectives: (1) determine whether ESA-listed species other than coho are vulnerable to acutely lethal stormwater toxicity, (2) evaluate the time course for mortality across species and whether affected fish recover in clean water, and (3) assess the role of dilution as a factor influencing survival, using juvenile coho as an indicator species.

MATERIALS AND METHODS

Urban Roadway Runoff Collection and Transport. Urban stormwater was collected from downspouts draining a short section of elevated urban arterial (west-bound onramp to State Route 520 from Montlake Boulevard in Seattle, Washington). Runoff from six storms was collected at different times of the year in 2018 (August 26, October 25, and December 17) and 2019 (March 12, March 25, and April 4). During each storm event, runoff was filtered through a fiberglass window screen to remove coarse debris and collected in 900 L or 1325 L stainless steel collection totes (Custom Metalcraft Inc., Springfield MO) for subsequent transport at ambient temperature to the Washington State University Research and Extension Center in Puyallup (WSU-P). Juvenile salmonid exposures were initiated within 24 h of each storm event. Note that 6PPD-q levels in runoff from this location have been previously measured across nine storms in 2017−2019,[4,19] including the October and December collection events used here in 2018; all storms contained 6PPD-q at concentrations expected to be lethal to juvenile coho (Table S3).

Juvenile Salmon and Steelhead. Juvenile coho, sockeye, and Chinook salmon as well as an ocean-migrating stock of *O. mykiss* (hereafter referred to as steelhead) were obtained from local hatcheries, held in a recirculating freshwater system at WSU-P on a 12:12 h dark:light cycle, and fed daily with commercial fish food (BioVita, Bio-Oregon). Fish rearing water consisted of municipal water treated with reverse osmosis and adjusted to pH 7.6 and a conductivity of 1500 μS/cm, then passed through a bead filter, UV reactor, bioreactor, and chiller. Sockeye prefer cooler waters (8 °C optimum), and thus exposure temperatures were maintained at 5.0−10.3 °C for the cross-species vulnerability experiments involving sockeye and the three other salmonids. For the dilution experiments (coho only), temperatures ranged from 10.0 to 12.1 °C. Fish sizes and water quality measurements for all experiments are described in the Supporting Information (Tables S3 and S4); experimental protocols were approved by Washington State University's Institutional Animal Care and Use Committee.

Stormwater Exposures to Assess Species-Specific Sensitivity. For the multispecies comparisons, replicate groups of juvenile salmonids were exposed to undiluted roadway runoff (100% stormwater) for 24 h following each of the three 2019 storm events and then transferred to clean (rearing) water for an additional 48 h (Table S1). Coho served as positive controls for the urban mortality syndrome in side-by-side exposures using subyearlings (coho, sockeye, and Chinook) and larger age 1+ salmonids (coho and steelhead). We selected an ocean-migrating stock of *O. mykiss* to differentiate the steelhead life history from domesticated, freshwater-resident strains of rainbow trout.

Static exposures were carried out in 35 L glass aquaria containing either 30 L of clean water or 100% stormwater. For the smaller fish (subyearling coho, Chinook, and sockeye), 9−10 fish were placed in each of the three replicate exposure tanks. For the larger (age 1+) coho and steelhead, n = 6 fish were placed in each of four replicate exposure tanks. A few fish escaped into the surrounding water bath and were excluded (Table S1).

Exposure tanks were supplied with air stones for oxygenation (>10 mg/L) and placed in flow-through water baths with chillers to maintain temperatures. Across all three storms, mortality was monitored throughout exposure periods at regular intervals (2, 4, 8, and 24 h). Final reported mortality counts included moribund fish that did not react to gentle prodding and were removed and euthanized with MS-222 (400 mg/L) followed by severing the spinal cord.

All fish surviving the 24 h exposure were transferred to larger (57 L) tanks containing clean water for a 48 h depuration. For the smaller fish (subyearling coho, Chinook, and sockeye), individuals were removed from the three replicate exposure tanks and grouped into a single depuration tank with a maximum number of 30 fish per tank. For the larger age 1+ coho and steelhead, fish from individual exposure tanks were divided evenly into two depuration tanks (n = 12 maximum per tank, to adjust for larger fish). Moribund and dead fish were monitored and removed midway through depuration (48 h) and at the end of depuration (72 h).

Stormwater Exposures to Assess the Influence of Dilution on the Mortality Syndrome. To evaluate dilution, juvenile coho were exposed to a graded stormwater concentration series for 24 h following three storms in 2018 (Table S2). Juvenile coho (age 1+; Table S4) were placed in static exposure chambers as described above. Glass aquaria (35 L) were filled with either 30 L of clean water or urban stormwater diluted to 25%, 11.2%, 5%, 2.2%, or 1% with clean water. For the August and December storms, individual fish (n = 8, adjusted for size) were placed in each of three replicate tanks per concentration. For the October storm, a mechanical failure (chiller) necessitated a shift in experimental design, whereby n = 10 fish were exposed in each of the two replicate

https://doi.org/10.1021/acs.estlett.2c00467
Environ. Sci. Technol. Lett. 2022, 9, 733−738
Attachment 24

tanks per dilution. Mortality was enumerated as described above.

Statistical Analyses. Statistical analyses were developed using R (https://www.r-project.org/) and RStudio (https://www.rstudio.com). Mortality was calculated in proportion to the total number of individuals across all tanks within a given treatment (e.g., exposure, species, time, and/or dilution; see data in Tables S1 and S2). For each observed proportion, the 95% confidence interval was calculated using the BinomCI function from the DescTools R package with the "modified Wilson" method to account for proportions near 0 and 1 (presented as percentages in Figure 1). Differences among treatments were determined by comparing confidence intervals around the observed proportions.

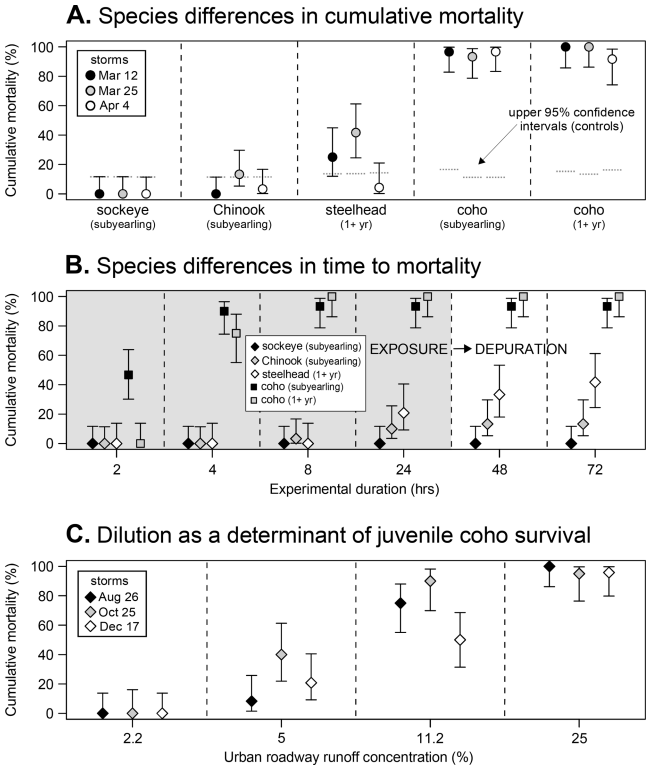

Figure 1. Cumulative mortality (% and 95% confidence interval) of juvenile Pacific salmonids exposed to urban roadway runoff. (A) Species differences across three storms following 24 h exposure and 48 h depuration. Upper 95% confidence intervals of controls are shown as dotted lines. (B) Species differences in mortality over time for a single storm (March 25) after 24 h exposure (gray shaded area) and 48 h depuration (unshaded area). (C) Mortality in coho (1+ yr) exposed for 24 h to different dilutions of roadway runoff over three storms. No mortality was observed in controls. (A–C) Data from all control and exposed fish are shown in Tables S1 and S2. Fish age is noted as subyearlings or 1+ yrs.

RESULTS AND DISCUSSION

Varying Mortality in Response to Untreated Stormwater Across Salmonid Species. Juvenile sockeye, Chinook, and steelhead, as well as two size classes of juvenile coho (positive controls), were exposed to untreated roadway runoff from three separate storm events (Figure 1A). As anticipated from earlier studies,[4,15,16] subyearling and larger (age 1+) coho were highly susceptible to toxic runoff, as evidenced by >90% cumulative mortality (Figure 1A; rightmost panels) across all three 2019 storms. Conversely, all juvenile sockeye survived 24 h exposures to runoff, irrespective of the storm, similar to previous observations of 100% survival for chum.[13,14] The response of juvenile Chinook was less consistent, with only modest mortality in response to the second (March 25) storm. Steelhead were intermediate between sockeye (no deaths) and coho (almost no survivors), with proportionately higher mortality for the first and second storms (Figure 1A).

Species-Specific Timelines for the Mortality Syndrome. Among Pacific salmonids, the stormwater mortality phenomenon has primarily been studied in coho, where the progression of the syndrome—from asymptomatic fish to visible distress (disorientation, loss of equilibrium) to death—occurs over a span of a few hours in fish exposed to 100% stormwater. In accord with earlier published results,[15] juvenile coho began dying soon during exposure (2–4 h), with near-maximal cumulative mortality within 8 h (Figure 1B; stormwater exposure window in shaded panels at left). Relative to coho (positive controls), the progressions of symptoms in Chinook and steelhead were qualitatively the same (surface swimming and gaping, loss of equilibrium) albeit with a delayed onset and a longer window for mortality thereafter, with fish generally dying toward the end of the 24 h exposure or after subsequent transfer to clean water. Hence, similar to coho,[15] the distress syndrome in Chinook and steelhead appears irreversible.

Influence of Dilution on Coho Survival. Our sourcing of stormwater from an urban arterial with high traffic volume (relatively concentrated runoff) is well suited for studies of green infrastructure effectiveness[16,17] but is less representative of exposure conditions in salmon habitats where stormwater is diluted by receiving waters. To evaluate the influence of dilution on survival, juvenile coho were exposed to runoff from three separate storm events for 24 h, at concentrations ranging from 1% to 25%. Mixtures containing 5% or more stormwater were generally lethal to juvenile coho (Figure 1C). Note that the upper end of the exposure range (25% runoff diluted in clean water) was chosen based on maximal coho lethality in pilot experiments; untreated surface runoff is likely to represent more than 25% of receiving surface water volumes in many urban watersheds.

Implications. In the U.S. Pacific Northwest, the urban runoff mortality phenomenon has been studied intensively for the past two decades, with a primary focus on adult coho returning from the ocean to spawn in urbanized Puget Sound watersheds.[10,18] Wild coho populations are unlikely to withstand the high rates of dying spawners previously and consistently documented in urban stream reach surveys.[9] The mortality syndrome was subsequently extended to juvenile coho,[15] which enabled relatively high-throughput testing of stormwater fractions and set the stage for the eventual discovery of 6PPD-q as the causative agent.[4] Because the parent compound (6PPD) and other chemicals similar in structure and function are ubiquitous in motor vehicle tires worldwide, there has been an expanding effort to identify other fish species at risk from exposure to untreated roadway runoff. Our current findings extend the urban runoff mortality phenomenon to steelhead and Chinook but with phenotypic nuances in severity (less) and time course (longer) relative to coho. Nevertheless, the characteristics of the syndrome in coho exposed to roadway runoff (e.g., the present study; Chow et al.[15]) or 6PPD-q alone (e.g., Tian et al.[4]) are the same,

https://doi.org/10.1021/acs.estlett.2c00467
Environ. Sci. Technol. Lett. 2022, 9, 733−738
Attachment 24

implying a common underlying mechanism. The discussion that follows therefore hypothesizes that the coho, steelhead, and Chinook toxicity observed here was caused by 6PPD-q across the different stormwater collections, an assumption further supported by recent findings for *O. mykiss*.[12] For context, coho are exceptionally sensitive to 6PPD-q toxicity, with lethality (LC50) in response to exposure concentrations less than 0.1 parts per billion.[19] In the present study, 6PPD-q levels were likely to have exceeded this acute lethality threshold for coho across all storms by an order of magnitude. This is supported by published 6PPD-q measurements in runoff from the same source (SR520 elevated bridge) across nine separate rain events in 2017−2019,[4,19] including the October and December stormwaters collected for the dilution experiments in Figure 1C (Table S3).

Our current findings are the first demonstration of urban runoff-driven mortality in Chinook, and our sockeye results reinforce what are apparently stark differences in vulnerability across closely related salmonids. For example, whereas coho (*O. kisutch*) are highly sensitive,[19] several field and laboratory studies have shown that congeneric chum salmon (*O. keta*) are not.[10,13] Similar to chum, zebrafish (*Danio rerio*) and medaka (*Oryzias latipes*) appear relatively insensitive to 6PPD-q,[20,21] along with Arctic char (*Salvelinus alpinus*) and white sturgeon (*Acipenser transmontanus*).[12] Conversely, Brinkmann et al.[12] recently showed that brook trout (*Salvelinus fontinalis*), like coho, are also highly sensitive to the acutely lethal toxicity of 6PPD-q. Intriguingly, in the same study, the time to death for rainbow trout (*O. mykiss*) was intermediate, with mortality occurring over a more protracted timeline of a few days. On the basis of these initial findings, the Salmonidae appear to sort into roughly three categories of vulnerability to 6PPD-q acute toxicity: high (coho salmon and brook trout), low (chum and sockeye salmon, Arctic char), and intermediate (steelhead/rainbow trout, Chinook salmon).

In the context of threatened species management, the recent *O. mykiss* results are particularly noteworthy. In addition to being a model test organism in aquatic toxicology, rainbow trout are an important aquaculture species for recreational fishing.[22] In the western United States, several distinct population segments (or evolutionarily significant units) of ocean-migrating *O. mykiss* (steelhead) are currently listed for protection under the U.S. Endangered Species Act (ESA). Accordingly, freshwater and estuarine habitats critical for steelhead conservation and recovery have been designated across major metropolitan areas in the coastal and interior regions of California, Oregon, and Washington. The overlap between these recovery domains and the expanding transportation grid, at the watershed and basin scales, is extensive. The ESA requires that federal natural resource managers consider the impacts of federal actions on listed species, and stormwater contaminants (e.g., 6PPD-q) represent a habitat factor that was largely unknown to science when steelhead were listed.

For *O. mykiss*, the initial evidence suggests that life history plasticity (i.e., freshwater residence vs ocean migration) is not a determinant of susceptibility, albeit premised on two important assumptions: (1) Variation in genetics or husbandry/culture practices between the *O. mykiss* stocks used here and those sourced for Brinkmann et al.[12] did not influence observed toxicity, and (2) 6PPD-q was the causative agent for *O. mykiss* deaths here, thus facilitating a direct comparison of mortality across the two studies. Irrespective, more work is needed—particularly experimental designs that consider phenotypic and genetic differences across wild steelhead stocks. The intermediate and delayed nature of the mortality syndrome in steelhead and Chinook (relative to coho) also raises the potential significance of sublethal toxicity. The recent discovery of 6PPD-q should expedite functional studies of neurobehavioral and cardiorespiratory dysregulation, to match the consistently dominant features of the distress phenotype (e.g., surface swimming and gaping, loss of orientation and equilibrium).

Our findings also directly address the potential role of dilution in receiving waters, as a conventional management strategy for reducing toxic impacts to aquatic communities. Recent laboratory study designs[14−17] have used urban runoff from a relatively intensively trafficked arterial, in part as a strategy to establish a clear baseline of toxicity in fish and invertebrates prior to green infrastructure treatments to evaluate pollutant removal and improved organismal health. While this approach was useful for challenging bioinfiltration soil systems,[16,17] exposures to undiluted arterial roadway runoff are not necessarily representative of receiving water quality conditions in large rivers or lakes or in habitats downstream from a site-specific stormwater discharge. Field surveys have consistently demonstrated high rates of coho spawner mortality across all urban watersheds where the phenomenon has been studied closely.[11] Therefore, a protective role for dilution has (to date) seemed unlikely, given these indirect lines of evidence.[10,11] Consistent with this, arterial runoff was acutely lethal to juvenile coho salmon, even when diluted in 95% clean water. Additional factors working against "dilution as the solution" to the urban runoff mortality syndrome include the ubiquitous and diffuse nature of stormwater inputs to salmon habitats (e.g., serial and repeated discharges along migration corridors), ongoing climate change (i.e., reduced receiving water volumes), and the possibility of sublethal toxicity at the lower end of the dilution exposure range examined here. To address these factors, future studies can focus on a few related chemicals (antiozonants and associated transformation products, as opposed to whole urban runoff), using an extensive and established set of tools for studying cardiorespiratory and neurobehavioral toxicity in fish (e.g., Blair et al.[23]). These studies are needed to more precisely define sublethal toxicity thresholds in ESA-listed steelhead and Chinook and to better understand what appear to be striking sensitivity differences across closely related species of salmon, trout, and char.

ABSTRACT: Stormwater exposure can cause acute mortality of coho salmon (*Oncorhynchus kisutch*), and 6PPD-quinone (6PPD-Q) was identified as the primary causal toxicant. Commercial standards of 6PPD-Q recently became available; their analysis highlighted a systematic high bias in prior reporting concerning 6PPD-Q. A 6PPD-Q commercial standard was used to re-confirm toxicity estimates in juvenile coho salmon and develop a liquid chromatography-tandem mass spectrometry analytical method for quantification. Peak area responses of the commercial standard were ~15 times higher than those of in-house standards, and the updated LC_{50} value (95 ng/L) was ~8.3-fold lower than that previously reported. These data support prior relative comparisons of the occurrence and toxicity while confirming the substantial lethality of 6PPD-Q. While environmental concentrations are expected to be lower, 6PPD-Q also was more toxic than previously calculated and should be categorized as a "very highly toxic" pollutant for aquatic organisms. Isotope dilution-tandem mass spectrometry methods enabled accurate quantification (limits of quantification of <10 ng/L) within environmental samples.

INTRODUCTION

Stormwater runoff is an important contaminant transport pathway in rapidly urbanizing areas,[1] and the complex mixtures of stormwater contaminants often substantially degrade receiving water quality.[2,3] While heavy metals and polycyclic aromatic hydrocarbons have long been regulated pollutants in stormwater, recent studies have reported numerous emerging organic contaminants such as various pesticides, pharmaceuticals, plasticizers, and vehicle and tire rubber-related contaminants.[4−7] Such contaminants can impact aquatic organisms; one compelling example is the stormwater-linked urban runoff mortality syndrome (URMS) of coho salmon (*Oncorhynchus kisutch*) in the Pacific Northwest (USA). Every autumn, recurrent acute mortality occurs when adult coho salmon return to near-urban creeks to spawn.[8] Across subbasins, mortality rates were most correlated with road density and traffic intensity.[9,10]

While investigating URMS, we previously identified 6PPD-quinone {6PPD-Q; 2-anilino-5-[(4-methylpentan-2-yl)amino]-cyclohexa-2,5-diene-1,4-dione}, an ozonation product of 6PPD, as the primary causal toxicant for long-standing observations of coho mortality.[11] Exposure experiments demonstrated acute toxicity at trace levels (LC_{50} of 0.8 μg/L), and retrospective analysis confirmed detection within roadway runoff and receiving waters, including during URMS events. Because the parent antioxidant compound 6PPD is ubiquitous in tire rubbers, 6PPD-Q would be expected to occur widely in roadway-impacted environments globally, although the hazards of its exposure and toxicity to humans and other organisms remain mostly unknown. Recent studies have confirmed the occurrence of 6PPD-Q in surface waters,[12,13] dusts,[14,15] and fine particulates.[16] Therefore, its potential toxicological effects and ubiquitous occurrence merit monitoring of 6PPD-Q to understand its environmental fate and enable management.

As a newly discovered transformation product, the toxicological experiments and quantification reported by Tian et al.[11] used our own 6PPD-Q standards purified from ozone synthesis and tire wear particle leachate (see the Supporting Information). Recently, a commercial standard and an isotope-labeled standard (D5-6PPD-Q) became available. During analysis, we observed a substantially higher (~15-fold) peak area response of the commercial 6PPD-Q standard versus those of our in-house standards (Figure S1). This observation implied a systematic high bias to the environmental and

exposure concentrations we reported previously.[11] The lower responses of in-house standards could be caused by the limited solubility or sorption of 6PPD-Q, and we also are investigating possible oxidative polymerization and solid formation within our in-house stocks as potential fate outcomes for quinones.

To correct for potential inaccuracy in previous 6PPD-Q reporting due to the lower purity and/or performance of our in-house standards, we repeated our exposures to juvenile coho salmon with the commercial standard and revised our measured environmental concentrations. We also developed an isotope dilution analytical method based upon liquid chromatography-tandem mass spectrometry (LC-MS/MS). Using these improved quantitative methods, these data represent a timely communication of our current knowledge of the toxicity and expected environmental concentrations of 6PPD-Q.

MATERIALS AND METHODS

Chemicals. Commercial standards of 6PPD-Q (10 mg, 98.8% purity, solid) and D5-6PPD-Q (solution in acetonitrile, 100 mg/L) were purchased from HPC (Atlanta, GA). Methanol (LCMS grade), ethanol (absolute, 200 proof), and formic acid (HPLC grade) were purchased from Fisher Scientific. Deionized water (18 MΩ-cm) was generated by a Milli-Q Ultrapure Water System. The 6PPD-Q stock solution (stored at −20 °C) was made by dissolving 5 mg of the HPC standard in 50 mL of ethanol.

Coho Salmon and Exposure Experiments. Juvenile coho salmon used for exposures were obtained courtesy of the Puyallup Tribe of Indians, from the same stock (Diru Creek) and cohort (now age 1+, 30−64 g) as in the previous study.[11] Fish were reared at Washington State University's Puyallup Research and Extension Center on a 12 h:12 h light:dark cycle in a custom recirculating water system and fed commercial food (Biovita, Bio-Oregon, Oregon, WA). Fish system water was dechlorinated municipal water treated by reverse osmosis to Type 3 (>4 MΩ-cm, <0.25 μS/cm) in a RiOs 200 purification system (Millipore Sigma) and then reconstituted with buffered Instant Ocean (Blacksburg, VA) salts to pH ∼7.6 and 1300 μS/cm conductivity at 10−13 °C. Experiments conformed to Experimental Protocol 04860-002, approved by Washington State University's Institutional Animal Care and Use Committee.

For exposures, glass aquaria were randomly placed in recirculating water baths to control temperature. Static aerated exposures were prepared by diluting various volumes of the 6PPD-Q stock solution in 10 mL of ethanol (350−1400 ng/mL), which was then mixed with 70 L of system water; negative controls were pure ethanol (10 mL). Solvent:exposure water ratios matched those of Tian et al.[11] Solutions and negative controls were made within 24 h of exposure. Larger exposure volumes (70 L) and fewer fish per aquarium (N = 6) were used here to accommodate the larger fish (30 L with 8−10 fish per aquarium used previously[11]). In two range-finding experiments (0.16−4.0 μg/L and 20−200 ng/L), five concentrations were tested, with five or six fish per concentration. To determine LC_{50}, six concentrations of 6PPD-Q and a negative control were tested. Exposures were repeated in triplicate (batches 1−3, across 3 weeks). Including 30 fish in the second range finding and 108 fish in the three definitive experiments, 138 fish contributed to dose−response exposures (Table S1; controls not included). Four fish jumped out of aquaria during exposures, so 134 fish contributed to the dose−response curve. In all aquaria, safe conditions of temperature (10−13 °C), conductivity (1170−1370 μS/cm), pH (7.6−8.0), and dissolved oxygen (>98% saturation) were verified before fish were transferred. Just prior to the introduction of fish, 1 L of exposure water was sampled from each aquarium, stored on ice or refrigerated, and extracted within 24 h for analysis. For all exposures, mortality rates were recorded at 24 h. Dose−response curves were calculated in R 3.6.2 using a two-parameter log−logistic model in the *drc* package.

Analytical Method. For quantification, duplicates of 200 mL of exposure water from each aquarium (corresponding to one concentration) were spiked with 5 ng of D5-6PPD-Q (100 ng/mL, 0.05 mL) as the internal standard, mixed, and equilibrated (20 min) before extraction. Solid phase extraction (SPE) used Oasis HLB cartridges (6 mL, 200 mg) (see the Supporting Information for details). Eluents were concentrated under a gentle nitrogen flow and volumized to 1 mL for analysis.

Quantification used an Agilent 1290 (Santa Clara, CA) Infinity ultra-high-performance liquid chromatograph (UHPLC) coupled to an Agilent 6460A triple-quadrupole mass spectrometer. Detection used electrospray ionization (ESI+) and multiple-reaction monitoring (MRM) modes. 6PPD-Q concentrations were estimated from a seven-point calibration curve [0.025−50 μg/L (Figure S2)] with D5-6PPD-Q as the isotopic internal standard (25 μg/L, identical to the concentrations of sample extracts). Detailed parameters and method information can be found in Tables S2 and S3 and the text of the Supporting Information.

Quality Assurance/Quality Control. Negative controls were included in batches 1−3 of definitive exposures for LC_{50} determination; all coho salmon (N = 18) survived negative controls. Negative controls were processed in a manner identical to that of dosed samples, and additional SPE method blanks were included by extracting and analyzing 200 mL of DI water using identical methods. After laboratory materials (e.g., rubber stoppers) with potential to generate background signals had been screened and removed, 6PPD-Q was not detected above the limit of detection in blanks. Intraday/interday precisions were determined by comparing 2.5 μg/L standard responses multiple ($N \geq 3$) times across one analytical batch or in batches across different dates. All exposure water samples were extracted in duplicate, and then measured and nominal concentrations were compared.

Matrix spikes were performed by spiking 6PPD-Q (5 and 50 ng/L) into Miller Creek (47°27′2.2″N, 122°20′44″W; Burien, WA) baseflow and DI water samples. Absolute recoveries were 58−95%; relative recoveries were 89−116% for the spikes (details in the Supporting Information). The limits of detection (LOD) and quantification (LOQ) were determined as the lowest concentrations giving signal:noise (S:N) ratios of 3 and 10, respectively. The instrumental LOD and LOQ were calculated from low-concentration 6PPD-Q standards (0.025 and 0.1 μg/L), and the method LOD and LOQ (reflecting the mass concentration via SPE) were calculated from spiked creek water samples.

RESULTS AND DISCUSSION

Peak Area Response and Toxicity Confirmation. Upon receipt, we first compared the commercial standard (HPC) to our in-house standard[11] across the same nominal concentration range and observed an unexpected difference between

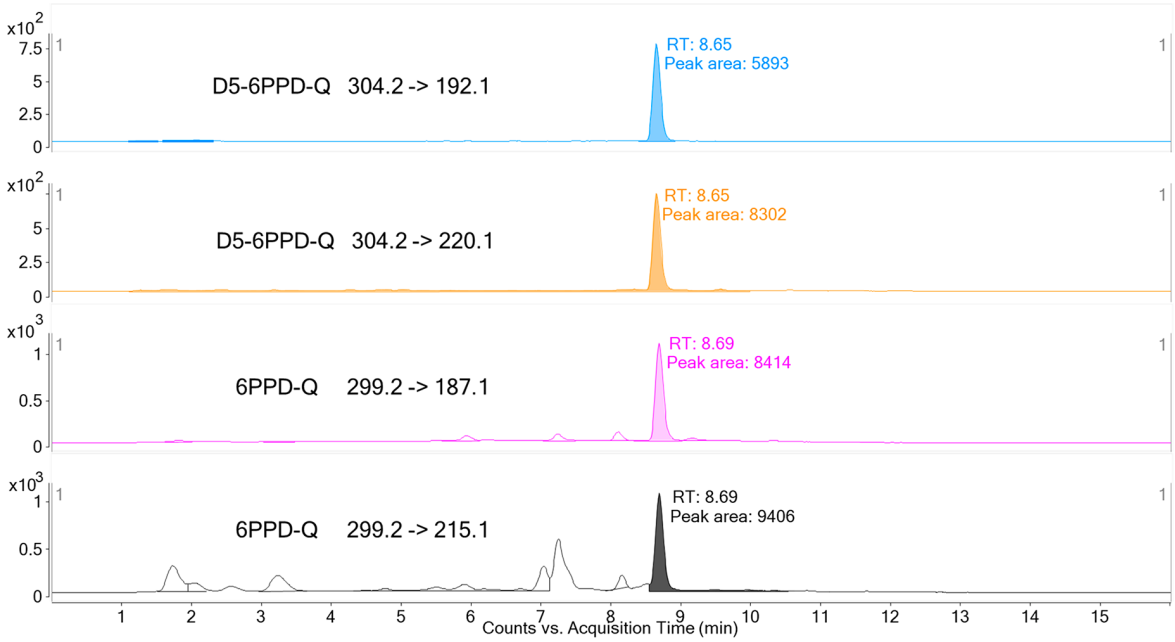

Figure 1. Chromatograms of 6PPD-Q in a stormwater-impacted creek measured by HPLC-MS/MS in MRM mode (measured concentration of 48 ng/L). The top two transitions were the quantitative and qualitative ions of D5-6PPD-Q (internal standard, spiked at 25 ng/L), and the bottom two transitions were the quantitative and qualitative ions of 6PPD-Q. RT, retention time.

the peak area responses of the two calibration curves (Figure S1). The peak area difference was confirmed on both qTOF-HRMS (~15-fold) and MS/MS (~18-fold) instrument platforms, with slight differences caused by the different sensitivities and/or linear ranges of the two instruments. Meanwhile, at identical nominal concentrations, the red/magenta color of the commercial standard solution was visually more intense than that of in-house standards. Ultraviolet−visible spectrophotometry also indicated substantially reduced absorbance for the in-house stock solutions versus the commercial standard stocks at key diagnostic wavelengths [e.g., 360 nm (Supporting Information and Figure S3)].

We then evaluated the toxicity of the commercial 6PPD-Q standard to juvenile coho salmon through two range-finding exposures. Our first exposure utilized a wide nominal concentration range (0.16−4.0 μg/L) that included our previously reported LC_{50} value (0.8 μg/L, derived from exposures using in-house stocks). Observed mortality rates were 100% (five of five) at 0.8, 1.8, and 4.0 μg/L, while four of five coho salmon died at 0.16 and 0.36 μg/L. Notably, coho salmon in the 4.0 μg/L aquarium were symptomatic in ~40 min and all perished in <2 h, which is faster than any of our prior observations. Another exposure series (0.02−0.2 μg/L) demonstrated 100% mortality (six of six) at 0.2 μg/L 6PPD-Q, 67% (four of six) at 0.1 μg/L, and 0% (zero of six) at 0.02, 0.04, and 0.06 μg/L. These results confirmed the substantial toxicity of 6PPD-Q for coho salmon but also indicated that our previous observations with in-house standards had systematically underestimated toxicity.

On the basis of mass spectrometry and these preliminary exposures, we concluded that the 6PPD-Q masses of our in-house standards were lower than we expected. In considering various options for mass loss, we most suspected that we had inadvertently formed a solid precipitate or similar impurity not detected by LC-HRMS or NMR during the end stages of our 6PPD-Q purification or handling processes. The reduced responses of in-house 6PPD-Q might be caused by lower than expected solubility and sorption losses to some filter and system materials; quinones also can undergo many interesting reaction types such as oxidative polymerization and other complexations.[18−20] Although we continue to investigate potential loss mechanisms, we cannot yet conclusively explain this mass loss. On the basis of our experience, while noting the potential for redox-active quinones to exhibit some complex and uncommon fate mechanisms, we caution other investigators to carefully track 6PPD-Q stability and recovery (e.g., peak area response, validated against commercial standards, measured vs nominal concentrations[21]) over time and under experimental conditions. Further research should characterize the fate and stability of 6PPD-Q under a broad range of conditions.

Quantification Method. To improve quantification accuracy, we developed an isotope dilution analytical method using the commercial standard and an isotopic internal standard (D5-6PPD-Q). Using high-performance LC-MS/MS detection, we evaluated transitions of both native and deuterated 6PPD-Q standards (Figure S4), optimized the instrumental parameters to improve sensitivity, and validated performance with environmental samples. These studies indicated that the complex matrix in stormwater and roadway runoff was the primary challenge to analytical performance, with matrix suppression at large extraction volumes (e.g., 1 L) sometimes completely suppressing 6PPD-Q detection.[11] Matrix dilution and reduced extraction (or injection) volumes mitigated matrix suppression and tended to improve performance; thus, we used 200 mL extraction volumes to optimize sensitivity. For location-specific stormwater or roadway runoff sampling, we recommend adjusting extraction volumes in response to observed matrix suppression or sample compositions. Spiking concentrations of the isotopic standard (25 ng/L in samples, 5 μg/L in extracts) were adjusted to reflect

Attachment 24

expected environmental concentrations while maintaining sufficient sensitivity.

Chromatograms of 6PPD-Q and D5-6PPD-Q in a creek stormwater sample are shown (Figure 1). With optimized parameters (Table S2), the instrument limit of quantification was 0.16 pg on column (31 ng/L in solutions). When applied to analysis of baseflow and stormwater samples in receiving water, method limits of quantification were 2.5 and 5.1 ng/L, respectively. In comparison with our original semiquantification method using LC-qTOF-HRMS,[11] the improved sensitivity came from the more specific MS/MS transitions used for quantification, an optimized processing procedure, the increased detector linear range, and higher standard purity. Spike recovery trials indicated 89−116% relative recovery of 6PPD-Q in creek samples and <3% intraday and interday variation. Given the highly toxic nature of 6PPD-Q and often trace (<100 ng/L) environmental concentrations present in runoff-impacted receiving waters, sensitive, accurate, and robust methods will be needed to maintain performance even at concentrations of ≤10 ng/L.

Updated Dose−Response Curve. To update the dose−response curve and LC_{50} estimate with the commercial standard, we performed additional 6PPD-Q exposures on juvenile coho salmon. Exposure concentrations were quantified using the LC-MS/MS analytical method; Table S1 reports nominal concentrations, measured concentrations, and mortality details. From the updated dose−response curve (Figure 2),

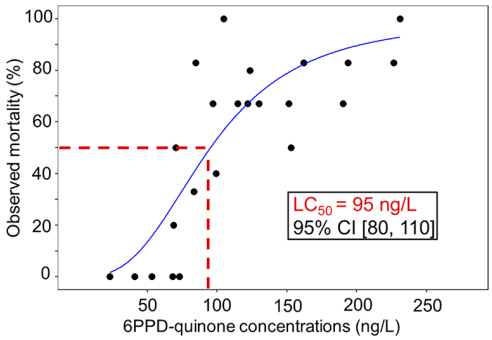

Figure 2. Dose−response curves for 24 h juvenile coho salmon exposures using the commercial HPC 6PPD-Q standard (N = 134 fish). All negative control fish survived and did not show any symptoms (N = 24; six in range finding and 18 in definitive exposure). Curves were fitted to a two-parameter logistic model. CI, confidence interval.

an LC_{50} of 95 ng/L was estimated for 6PPD-Q [95% confidence interval (CI [80, 110])]. This result was substantially lower than our previous result (790 ng/L, 95% CI [630, 960]) estimated from our in-house standards and was consistent with more dilute 6PPD-Q stock solutions. This ∼8.3-fold difference in the LC_{50} is a combined result of the peak area response (∼15-fold) and the 6PPD-Q recovery without internal standard normalization (60−70%).

Environmental Significance. The commercial standard analysis exposed a systematic high bias to our previously reported environmental concentrations and toxicity assessment for 6PPD-Q. Therefore, while *relative* comparisons between environmental concentrations and the LC_{50} in our previous work remain valid[11] (all retrospective analysis and dose−response curves were based on the same standard and quantification method), *absolute* concentrations should be revised lower on the basis of our current knowledge of the peak area response for 6PPD-Q. In general, the environmental concentrations and LC_{50} values for coho salmon should be approximately 1 order of magnitude lower than we previously reported.[11,17,22]

To illustrate the updated LC_{50} and observed environmental concentrations, we revised our previous occurrence data[11] while including additional 6PPD-Q data reported recently (Figure 3). Consistent with previous results, 6PPD-Q concentrations in almost all roadway runoff samples exceeded the LC_{50} for coho salmon and concentrations in runoff-impacted receiving waters, including storms where acute mortality occurred, were again near or above the LC_{50}. We note that environmental concentration data in Figure 3B, derived from archived sample extracts,[11] still employ semi-quantification without isotopic standard correction as an inherent aspect of retrospective analysis. Because they are not recovery-corrected, these data likely still underestimate actual concentrations by ∼30−40%. With isotope dilution normalization, more stormwater samples would be expected to contain concentrations above the LC_{50}. Overall, these results re-confirm the lethality of 6PPD-Q to coho salmon and the substantial capability for mortality outcomes at environmentally relevant concentrations.

Since the initial identification, additional reports of 6PPD-Q occurrence[13−15,23] have confirmed its ubiquity in roadway-impacted environments at reported concentrations up to the low microgram per liter range. Because rubber products like tires, including end-of-life applications in recycled and repurposed materials, are ubiquitous in modern society, continued documentation of 6PPD-Q in various environmental compartments (e.g., soil, air, and biological tissues) is expected. As demonstrated by our quantitative difficulties, accurately characterizing previously unknown contaminants, especially unintentionally produced transformation products that lack commercial standards, remains a challenging and yet critical task for environmental researchers. The updated LC_{50} (95 ng/L) suggests that 6PPD-Q is among the most toxic chemicals known for aquatic organisms, at least to coho salmon.[21] Compared directly to pollutants categorized as "very highly toxic" to sensitive aquatic organisms (mortality at <100 ppb, Table 1, rationale in the Supporting Information), the LC_{50} for coho salmon (mortality at ∼0.1 ppb) places 6PPD-Q among a very small group of pollutants, mostly organophosphate or organochlorine pesticides, with acute toxicity expectations at tens of nanograms per liter.

Many pressing knowledge gaps remain with respect to the environmental fate, transport, and toxicological implications of 6PPD-Q in tire rubber-impacted environments. Aspects of quinone stability and fate, representing contaminant structures less commonly considered and documented in environmental fields, are clearly both analytically and environmentally important to understand. The mechanisms of toxicity of 6PPD-Q to coho salmon need to be characterized, while its toxicity, both acute and sublethal, to additional organisms needs to be broadly evaluated, including insights into mechanisms of species-specific sensitivities.[21,22] Critically, 6PPD-Q reminds us that many synthetic chemicals do not simply disappear upon environmental release; we should be especially careful with chemicals like antioxidants that may have toxic properties[24] and are also designed to react. The lifetime mass balance of 6PPD, 6PPD-Q, and related chemicals in rubber tires that are subject to widespread environmental

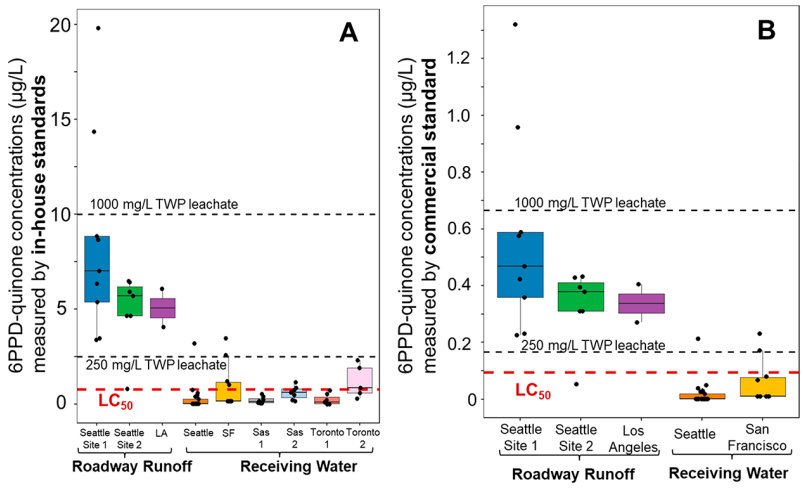

Figure 3. 6PPD-Q environmental concentrations and toxicity estimates derived from different standards. (A) 6PPD-Q concentrations estimated using in-house standards. Data for Seattle, San Francisco, and Los Angeles were taken from ref 11. Sas 1 and Sas 2 were snowmelt and surface water samples from Saskatoon, Canada, reported in ref 12. Toronto 1 and Toronto 2 were surface waters from Toronto, Canada, reported in refs 13 and 23. (B) Updated 6PPD-Q concentrations and toxicity thresholds estimated using a commercial standard (HPC), reflecting data reported in ref 11. The updated concentrations are based on retrospective UPLC-qTOF analysis of archived sample extracts, divided by a factor of 15 (qTOF peak area difference between the in-house and commercial 6PPD-Q standards). 6PPD-Q was quantified in roadway runoff and runoff-impacted receiving waters. Each symbol corresponds to duplicate or triplicate samples; boxes represent first and third quartiles. For comparison, the 95 ng/L LC_{50} value for juvenile coho salmon and detected 6PPD-quinone levels in 250 and 1000 mg/L TWP leachate are included. Modified from ref 11 with permission from AAAS.

HIGHLIGHTS

- Characterized the chemistry and toxicity of highway runoff from six storm events.
- Highway runoff caused lethal and sublethal toxicity in juvenile salmon and their prey.
- We treated highway runoff via infiltration through a bioretention soil media (BSM).
- BSM was 60% sand: 15% compost: 15% shredded bark: 10% water treatment residuals.
- Bioretention treatment of runoff prevented all mortality and sublethal toxicity.

ABSTRACT

Green stormwater infrastructure (GSI), or low impact development, encompasses a diverse and expanding portfolio of strategies to reduce the impacts of stormwater runoff on natural systems. Benchmarks for GSI success are usually framed in terms of hydrology and water chemistry, with reduced flow and loadings of toxic chemical contaminants as primary metrics. Despite the central goal of protecting aquatic species abundance and diversity, the effectiveness of GSI treatments in maintaining diverse assemblages of sensitive aquatic taxa has not been widely evaluated. In the present study we characterized the baseline toxicity of untreated urban runoff from a highway in Seattle, WA, across six storm events. For all storms, first flush runoff was toxic to the daphniid *Ceriodaphnia dubia*, causing up to 100% mortality or impairing reproduction among survivors. We then evaluated whether soil media used in bioretention, a conventional GSI method, could reduce or eliminate toxicity to juvenile coho salmon (*Oncorhynchus kisutch*) as well as their macroinvertebrate prey, including cultured *C. dubia* and wild-collected mayfly nymphs (*Baetis* spp.). Untreated highway runoff was generally lethal to salmon and invertebrates, and this acute mortality was eliminated when the runoff was filtered through soil media in bioretention columns. Soil treatment also protected against sublethal reproductive toxicity in *C. dubia*. Thus, a relatively inexpensive GSI technology can be highly effective at reversing the acutely lethal and sublethal effects of urban runoff on multiple aquatic species.

1. Introduction

Polluted stormwater runoff is one of the most important threats to water quality in the developed and developing world. Green stormwater infrastructure (GSI), also known as low-impact development, encompasses a set of evolving technologies designed to mimic the hydrologic and filtration capacity of undeveloped landscapes. Examples include green roofs, bioretention systems, and permeable pavement (Dietz, 2007; Ahiablame et al., 2012). The overarching aim of GSI is to slow, spread, and infiltrate stormwater runoff in the urban environment, thereby improving water quality and reducing risks to public safety from flooding and combined sewer overflows. In urbanized areas of the United States, the National Pollutant Discharge Elimination System (NPDES) regulates the release of potentially toxic stormwater runoff. To meet permit requirements, municipalities are increasingly incorporating the use of GSI to reduce runoff pollution to waterways (US EPA, 2010).

Urban runoff impacts the hydrology, geomorphology, and thermal regime of urban streams (Paul and Meyer, 2001; Sheeder et al., 2002; Konrad et al., 2005; Kinouchi et al., 2007). Runoff also trans-

Attachment 24

ports chemical contaminants to receiving waters, many of which are toxic to fish (Skinner et al., 1999; Kayhanian et al., 2008; Corsi et al., 2010), invertebrates (Hall and Anderson, 1988; Marsalek et al., 1999; Kayhanian et al., 2008; Corsi et al., 2010), and aquatic plants (Kayhanian et al., 2008). Field assessments have helped disaggregate the impacts of stormwater quantity and quality on stream taxa. This includes, for example, the role of water quality in the recurrent die-offs of adult coho salmon returning to spawn in urban watersheds in western North America (Scholz et al., 2011). More generally, however, it remains difficult to attribute poor indices of biological integrity to degraded water quality versus other known and important drivers of the urban stream syndrome such as increased flow volume and rates (Roy et al., 2003; Morgan and Cushman, 2005; Walsh et al., 2005, 2007).

The identification of inexpensive, scalable GSI technologies that improve water quality and protect or restore aquatic communities is a key goal in the evolving science of stormwater management. The conventional metrics for success are typically reduced surface flows (DeBusk et al., 2011) and contaminant removal, including metals (Davis et al., 2003) and polycyclic aromatic hydrocarbons (PAHs) (LeFevre et al., 2012). Water quality treatment through physical filtration, sorption, and other soil chemistry mechanisms is a common GSI tenet, and green roofs, rain gardens, and bioretention planters are all examples of GSI practices that use soil mixes of different compositions as treatment media. Moreover, soil mixes may or may not be planted with vegetation to further extract excess nutrients or other pollutants (Hunt et al., 2012). The capacity for soil systems to retain or adsorb toxics in runoff is well established. For example, high removal efficiencies have been documented for metals (Davis et al., 2009), PAHs (DiBlasi et al., 2009), oil (Chapman and Horner, 2010), pesticides (Zhang et al., 2010), and nutrients (Davis et al., 2006). By contrast, the effectiveness of soil bioretention mechanisms as a means to reduce or eliminate adverse health effects to aquatic species has not been widely studied.

Here we characterized the toxicity of first flush runoff collected from an urban arterial in Seattle (Washington, USA) across six distinct storm events. This source of stormwater contains pollutants that are typical for roadways with a relatively high motor vehicle traffic volume year-round. Baseline toxicity was measured in terms of the survival and reproductive success of the cladoceran *Ceriodaphnia dubia* – a common model invertebrate in toxicology. For the final storm, we assessed the effectiveness of one GSI technique by filtering highway runoff through large experimental bioretention columns. In addition to survival and reproduction in *C. dubia*, we monitored the survival of juvenile coho salmon (*Oncorhynchus kisutch*) and wild mayfly nymphs (*Baetis* spp.) exposed to GSI-treated and untreated stormwater. Salmon are a keystone species of temperate coastal regions and mayfly nymphs are an important prey item for juvenile salmon as well as many other species.

2. Methods

2.1. Highway runoff collection

Stormwater was collected during six distinct storms between August 2011 and September 2012, following antecedent dry periods (ADP) of 5–50 d. Runoff was captured at NOAA's Northwest Fisheries Science Center (NWFSC; Seattle, WA, USA) from downspouts draining a busy elevated urban highway (annual average daily traffic = 94 000 vehicles in 2011, 67 000 in 2012; WA DOT, 2012). A diverter (Rain Harvesting, AquaBarrel, Gaithersburg, MD, USA) collected the first flush into glass carboys. Coarse detritus was pre-filtered with fiberglass window screen to prevent clogging the intake. Runoff from each storm event was frozen (−20 °C) within 4 h of collection, a procedure that did not alter the toxicity of samples (McIntyre et al., 2014).

The sixth storm (September 2012) was a source of stormwater runoff for the bioretention treatment. Collected runoff (250 L) was transported on ice from Seattle to the Washington State University Research and Extension Center in Puyallup, WA (WSU-P). A larger volume of runoff could not be collected due to the small size of the storm (0.3 mm). The collected sample was therefore diluted to a total volume of 410 L with rainwater collected at WSU-P to achieve sufficient volume for juvenile coho salmon exposures. For experiments with salmon, the runoff (untreated and treated) was used on the day of collection. For experiments with macroinvertebrates, treated and untreated runoff samples were stored in amber glass bottles at −20 °C and thawed at room temperature on the day of use. Carboys were scrubbed with hot water and rinsed with acetone and methylene chloride between storm events.

2.2. Bioretention treatment

Runoff collected during the September 2012 storm event was filtered through experimental soil columns at WSU-P as previously described (McIntyre et al., 2014). Briefly, the stormwater was transferred from glass collection carboys to a high-density polyethylene cistern for homogenization. Pre-treatment runoff was then sampled, and the remaining water in the cistern was filtered through 12 soil bioretention columns (22 L each) at a rate of 0.058 mm s^{-1}. Each column (36 cm diameter) contained a 61 cm deep mixture of 60% sand, 15% compost, 15% shredded bark, and 10% drinking water treatment residuals (City of Anacortes, WA) overlying a 30-cm deep gravel aggregate drainage layer (Palmer et al., 2013). Half of the columns were planted in November 2011 with the sedge *Carex flacca*, while the other half had no plants (Fig. 1). Treated effluent (19 L from each column) was composited by treatment into glass aquaria prior to water sample collection, resulting in three replicates of each water treatment: untreated runoff (Runoff), bioretention with soil only (No Plants), and bioretention with both soil and plants (Plants). An additional three aquaria were filled with WSU-P fish lab water (described below) as a negative control ('Control'). Exposure waters for each

Fig. 1. The two sets of bioretention columns used to filter runoff from the September 2012 storm event. All columns contain a mixed layer of bioretention soil medium overlying a gravel aggregate drainage layer. The columns on the left are planted with *Carex flacca*.

treatment were collected and chemically analyzed as previously reported (McIntyre et al., 2014). Additionally, water chemistry for the Control treatment (juvenile coho and *Baetis* tests) is described in Table S1, Figs. S1, and S2. Within each treatment, composite samples across triplicate aquaria were frozen at −20 °C in amber glass bottles for subsequent biological analyses with *C. dubia* and *Baetis* spp. The remaining water in each aquarium was used immediately for juvenile coho exposures.

2.3. Baseline toxicity of untreated stormwater to C. dubia

To assess the toxicity of untreated highway runoff across multiple storms, cladocerans (*C. dubia)* were cultured at WSU-P as previously described (Deardorff and Stark, 2009). Exposures to runoff or reconstituted de-ionized water (controls) were carried out in glass beakers maintained in an environmental chamber (25 °C; 50% relative humidity; 18:6 h light:dark photoperiod). For exposures lasting 48 h, 10 neonates (<24 h old) were placed in each of four replicates of 30 mL, fed 0.2 mL of food solution at test onset to improve control survival, and counted at 48 h. The significance of *C. dubia* 48 h replicate survival relative to unexposed controls was determined by *t*-test for each runoff event. Reproductive success was measured following longer (7 d) exposures. For each of the five storms, 10 neonates were placed in each of four replicates of 100 mL and received 1 mL of food solution daily. On day 7, the survival of females and the number of offspring per replicate were counted relative to controls. Statistical significance was determined using multivariate general linear models (GLM) with numbers of adults and neonates per adult as dependent variables. All statistics were performed with SPSS v. 21 software (IBM) with an $\alpha = 0.05$. Individuals were added in groups of ten to each treatment by replicate number (i.e., Control 1, Exposed 1, Control 2, Exposed 2, etc.) and were assessed in the same order.

2.4. Toxicity to invertebrates and juvenile salmon pre- and post-soil infiltration

The survival and reproductive success of cladocerans before and after infiltration of stormwater through bioretention columns was assessed using runoff from the September 2012 storm event and significance tested by ANOVA (48 h survival) and multivariate GLM (7 d survival and neonates per adult) with Dunnett post hoc tests. One neonate (<24 h) was placed in each of ten 50 mL glass beakers containing 30 mL of solution and fed 0.2 mL of food solution daily as per U.S. Environmental Protection Agency guidelines for reproductive toxicity testing (U.S. EPA, 2002a). Neonate survival and reproduction was monitored daily for 7 d. Control replicates met minimum survival, brood number, and offspring counts (U.S. EPA, 2002a).

Wild mayfly nymphs, an important source of prey for juvenile salmon, were collected from the protected and nearly pristine Cedar River near Landsburg, WA. Live benthic macroinvertebrates were capture by kicknet and transported in aerated river water to WSU-P. Individual mayflies (*Baetis* spp.) were isolated and placed in groups of 10 in each of six replicate chambers by replicate number (i.e. Control 1, Exposed 1, Control 2, Exposed 2, etc). Chambers consisted of 250 mL Erlenmeyer flasks lined with clean river stones and containing 100 mL of exposure solution. Each flask was capped and fitted with an aeration tube. Flasks were suspended in a cold water bath at 13 °C on a 12:12 light:dark regime. Surviving individuals were counted at 48 h, and replicate survival relative to controls was analyzed by one-way ANOVA with a Dunnett post hoc. Error bars in all figures are one standard error (SE) of the mean unless noted as standard deviation (SD).

Juvenile coho salmon were obtained from the hatchery facility at the NWFSC (Seattle, WA) and maintained at WSU-P in flow-through circular fiberglass tanks supplied with dechlorinated city water at 13 °C on a 12:12 light:dark regime. The subyearling coho ($\bar{x}$, SD: length = 70, 10 mm; weight = 2.8, 1.2 g) were exposed to untreated and treated stormwater (or hatchery control water) in 35-L glass aquaria supplied with an airstone and maintained at 13 °C using a water bath. Aquaria were randomly assigned to water baths. Per U.S. Environmental Protection Agency guidelines for acute toxicity testing (U.S. EPA, 2002b), ten coho were sequentially placed in each aquarium. The pH and dissolved oxygen (DO) measurements at the outset of each test were within a normal range for maintaining healthy juvenile coho (pH = 7.16–7.85, DO = 7.36–9.13 mg L^{-1}).

Dissolved oxygen levels in both the untreated and treated runoff declined over the first 12 h to <6 mg L^{-1}. By this time, 100% of the juvenile coho exposed to untreated runoff had died (vs. 0% in the treated runoff). We therefore placed a new set of live fish in the untreated exposure aquaria and increased aeration in all aquaria. Dissolved oxygen, measured daily, remained within the recommended range for the remainder of the 96 h test (DO = 7.89–10.10 mg L^{-1} at test termination). Survival was monitored daily. Surviving coho were euthanized after 96 h in MS-222. Individual lengths and weights were measured and bile was collected by puncturing the gall bladder with a solvent-rinsed scalpel. Bile was stored at −20 °C until analysis for PAH metabolites at NWFSC (Seattle, WA) using high performance liquid chromatography with fluorescence detection (HPLC-F) (Yanagida et al., 2012), as detailed in Supporting Information (Text S1). Due to the small volume of bile per fish, triplicate samples could only be acquired for one treatment (Plants). Bile from the remaining fish was composited into one replicate per treatment. These unique values (No Plants and Control) for each PAH metabolite (naphthalene, phenanthrene, pyrene, benzo[a]pyrene) were compared to a range of 3 ∗ SD (standard deviation) of the mean values for Plants. Because 3 ∗ SD should encompass 99% of the actual distribution, values beyond this range were assumed to be from a different distribution. Gill tissue, sampled with Teflon scissors and plastic forceps, was composited across replicates in plastic Whirl-paks and stored at −20 °C until metals analysis at Trace Elements Research Laboratory (College Station, TX) by ICP-MS, as detailed in Supporting Information (Text S2). Differences in metal concentration among treatments were analyzed by multivariate GLM.

3. Ethics Statement

Juvenile coho salmon were maintained and euthanized following protocol #00435-001 approved by the Institutional Animal Care and Use Committee at Washington State University. Mayflies were collected under a scientific collection permit issued by the Washington State Department of Fish and Wildlife (Permit #12-250). Humane euthanization was not employed prior to the end of the study because mortality was an important endpoint for each test. Animals were monitored daily. Surviving animals were euthanized at the end of each study by MS-222 overdose (coho salmon), submersion in 80% ethanol (mayfly nymphs), or freezing (*C. dubia*). A total of 150 coho salmon were used, 240 mayflies, and 790 *C. dubia*.

4. Results

4.1. Biological effectiveness of bioretention: macroinvertebrates

Highway runoff caused acute mortality (Fig. 2) and reproductive impairment (Fig. 3) in *C. dubia*. At the end of the 48-h exposure, mortality was significant for five of the six storms (Fig. 2); specifically August 2011 ($t(4) = 7.0$, $p = 0.002$), October 2011

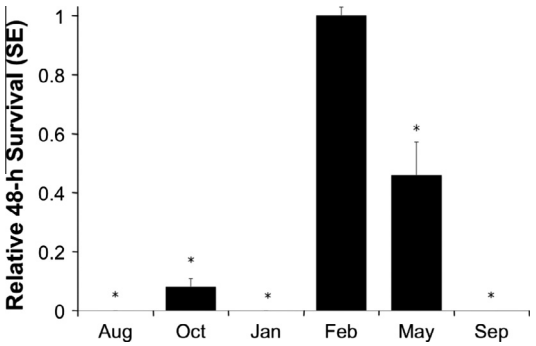

Fig. 2. Survival of *C. dubia* following 48-h exposure to first flush highway runoff relative to control survival for each storm event tested. Asterisks indicate runoff exposures that significantly affected survival relative to controls.

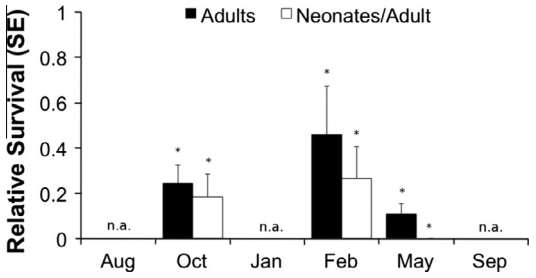

Fig. 3. Survival and reproductive impairment for *C. dubia* following 7-d exposure to highway runoff relative to control values for each storm event tested. Survival and reproduction were impaired following exposure to all runoff samples. n.a. indicates runoff that caused 100% mortality before *C. dubia* reached reproductive maturity.

(t(6) = 10.752, $p < 0.001$), January 2012 (t(6) = 12.333, $p < 0.001$), May 2012 (t(6) = 3.922, $p = 0.008$), and September 2012 (t(6) = undefined; 100% mortality in runoff vs. 0% mortality in controls), but not February 2012 (t(6) = 0, $p = 1.000$). For storms with survival beyond 48 h, the 7 d test indicated mortality was significant after 7 d in all remaining untreated runoff (Fig. 3); specifically October 2011 (F(1,1) = 78.400, $p < 0.001$), February 2012 (F(1,1) = 6.316, $p = 0.046$), and May 2012 (F(1,1) = 289.00, $p < 0.001$). For the August 2011 event (48 h survival assessment), mortality declined from 100% in the fresh sample to 0% after cold storage (4 °C) in the dark for 7 d. Untreated September 2012 highway runoff was also acutely lethal to wild mayflies (82% mortality; Fig. 4).

Reproduction of *C. dubia* was impaired after 7-d exposure for all runoff events (Fig. 3). No neonates were produced when stormwater treatments resulted in 0% female survival (August 2011, January 2012, September 2012 runoff), but in exposures with surviving females, significantly fewer offspring were produced per female in runoff compared to control water (October 2011 (F(1,1) = 62.837, $p = 0.001$), February 2012 (F(1,1) = 16.435, $p = 0.007$), and May 2012 (F(1,1) = 30.082, $p = 0.002$).

For daphniids and mayflies, treatment with bioretention (with or without plants) conferred complete protection against the lethal toxicity of stormwater runoff, with survival rates that were not significantly different from controls (Fig. 4). Although *C. dubia* neonate production in bioretention-treated waters initially lagged behind controls (Fig. 5), production was not significantly different from controls by the end of 7 d (F(3,39) = 37.674) for daphniids exposed to treated runoff in bioretention with plants (Dunnett post hoc, $p = 0.980$) or without plants ($p = 0.949$).

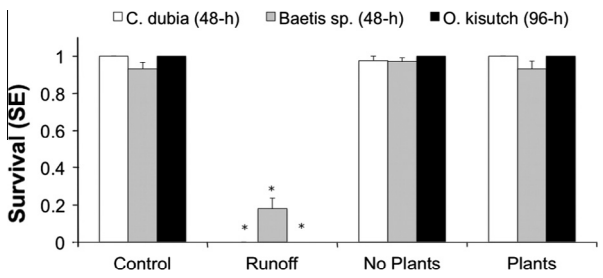

Fig. 4. Survival of three test organisms exposed to control water, untreated September 2012 runoff, runoff treated with bioretention without plants (No Plants), and runoff treated with bioretention with plants (Plants). Asterisks indicate survival significantly lower than control. Error bars are ± one standard error of the mean.

4.2. Biological effectiveness of bioretention: juvenile salmon

Untreated highway runoff was acutely lethal to juvenile coho salmon (*O. kisutch*), with 100% mortality occurring within 12 h of exposure, with or without dissolved oxygen supplementation. As with the macroinvertebrates, treatment of runoff through the bioretention soil medium prevented mortality (Fig. 4).

Because coho salmon exposed to untreated runoff did not survive to test termination, bile was not collected for analysis of PAH exposure. The bile metabolites measured in surviving salmon from the post-filtration treatments (96-h exposures) were modestly higher than controls, as indicated by being more than 3 SD of the mean (Fig. 6). This indicates that PAHs were still bioavailable in the water passing through the soil columns. The presence of plants in the soil columns reduced the naphthalene-equivalent

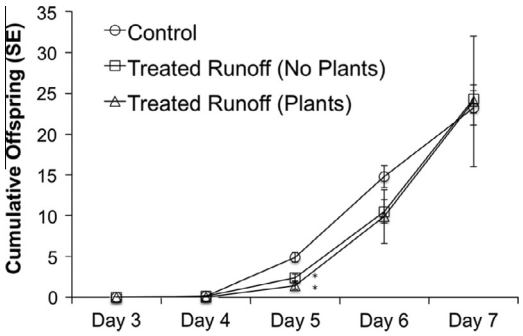

Fig. 5. Cumulative neonate count during the 7-d exposure of *C. dubia* to September 2012 runoff treated with bioretention compared with controls. Neonate production began on Day 4, was significantly lower on Day 5 for treated water exposures, but was not different among treatments by the end of the test period.

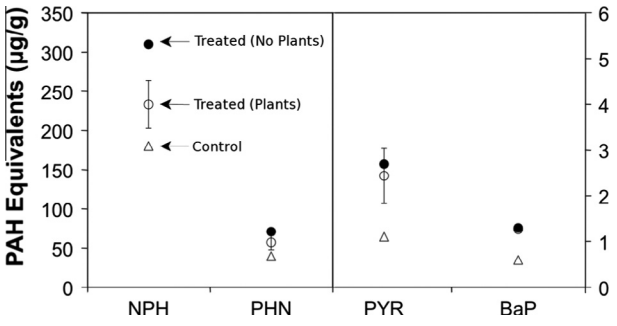

Fig. 6. Biliary metabolites of PAHs in juvenile coho salmon at the end of the 96-h exposure to control water or runoff treated with bioretention, with and without plants. Equivalents of PAHs are for napthalene (NPH), phenanthrene (PHN), pyrene (PYR), and benzo(*a*)pyrene (B*a*P). The error bars on the 'Plants' treatment are ±3 * SD of the mean for the three replicates. Control and 'No Plants' are composite samples of all replicates for those treatments.

Table 1
Mean metal concentrations (mg/kg wet weight) in triplicate samples of gills of juvenile coho salmon exposed to control water or highway runoff treated with bioretention, without plants or with plants.

Mean	Zn	Cu	Cd	Ni	Pb
Control	340	4.473	1.527	<0.502[a]	<0.502
No Plants	383	4.805	2.160	<0.508	<0.508
Plants	320	3.840	1.540	<0.502	<0.502
Std. Dev.[b]					
Control	43	0.568	0.208	n.a.[c]	n.a.
No Plants	13	0.445	0.085	n.a.	n.a.
Plants	47	1.039	0.693	n.a.	n.a.

[a] '<' Indicates value less than detection limit.
[b] One standard deviation of the mean.
[c] Not applicable since below detection limit.

and phenanthrene-equivalent PAH metabolites in coho bile relative to the treatment without plants whereas levels of pyrene and benzo(*a*)pyrene equivalents in coho bile, while higher than controls, were not different among the two bioretention treatments (Fig. 6). The concentration of PAHs in treatment waters was not different among bioretention-treated and control waters (Fig. S1). Metal content of juvenile coho gills was not significantly different ($F(2,8) = 1.439–0.084$, $p = 0.321–0.920$) among controls and fish exposed to runoff treated with bioretention, with or without plants (Table 1), despite large differences in metal concentration among treatment waters (Fig. S2).

5. Discussion

Bioretention is a non-proprietary, relatively inexpensive, and readily transferable green infrastructure approach for treating polluted runoff. Here we have assessed the extent to which soil infiltration prevented adverse ecological impacts in the form of lethal and sublethal toxicity to juvenile coho salmon and their invertebrate prey. For the most part, untreated runoff was highly toxic to all species tested. Conversely, stormwater filtered through bioretention columns was strikingly less harmful to coho, mayflies, and cladocerans. We also found that bioretention treatment reversed reproductive impairment in *C. dubia*, a sensitive sublethal indicator of urban stormwater quality (Ireland et al., 1996; Marsalek et al., 1999; Kayhanian et al., 2008; Corsi et al., 2010; McQueen et al., 2010). We found no additional ameliorating effect of plants on aquatic species survival or reproduction, in part because the soil treatment alone was so effective. Overall, these results demonstrate that bioretention can achieve a central aim of green stormwater infrastructure; namely, preventing harm to aquatic animals.

Highway runoff collected for this study contained a suite of contaminants typical of high-use roads (Shinya et al., 2000), including elevated metals, PAHs, and organic matter (McIntyre et al., 2014). Filtration through the soil columns reduced metals by 30–99%, PAHs to levels at or below detection (>92%), and organic matter by over 40% (McIntyre et al., 2014). Tissue concentrations of metals in the gills of juvenile coho salmon exposed to treated runoff and unexposed controls were not significantly different, suggesting that the metals in the post-treatment exposure waters were biologically unavailable. The bioavailability of metals to aquatic animals is determined to a large extent by the presence of dissolved organic matter which sequesters metal ions (Santore et al., 2001; McIntyre et al., 2008; Linbo et al., 2009). For example, whereas dissolved copper is acutely toxic to peripheral sensory neurons in the lateral line of larval zebrafish (*Danio rerio*) at low dissolved organic carbon concentrations (IC50 = 11.5 ppb copper at 0.1 ppm DOC), it becomes much less toxic with relatively modest increases in DOC (IC50 = 50.3 ppb copper at 4.3 ppm DOC) (Linbo et al., 2009). Untreated highway runoff can have very high levels of DOC (37–400 ppm; McIntyre et al., 2014). Although bioretention treatment reduced metals and DOC, the DOC remaining in the effluent was evidently sufficient to prevent metal accumulation in the juvenile coho gill. Thus metals in these highway runoff samples do not appear to be a significant contributor to toxicity, before (McIntyre et al., 2014) or after soil infiltration.

Storing runoff at 4 °C for 7 d eliminated acute mortality in *C. dubia*. We previously found that this storage period resulted in a very significant reduction in PAHs, likely due to microbial degradation (McIntyre et al., 2014). This suggests that organic contaminants are necessary or perhaps even sufficient to cause the mortality observed from exposure to highway runoff. Organic contaminants (vs. metals alone) were also suspected of causing lethal and sublethal effects observed in zebrafish exposed to untreated highway runoff (McIntyre et al., 2014), and have previously been implicated in studies attempting to identify the putative toxicants in urban runoff (McQueen et al., 2010).

Although asymptomatic, juvenile coho salmon exposed to treated runoff had measurably elevated levels of PAH metabolites in their bile relative to controls. Thus, although PAH levels were at or below detection limits in both the treated and control water samples, a small amount of PAHs likely passed through, or were generated by, the soil columns. The concentrations of PAHs in fish bile are commonly higher than in water; e.g., in past studies comparing PAH levels in the bile of caged fish and co-located passive sampling devices relative to surrounding surface waters (Verweij et al., 2004). Although the levels of PAH metabolites were slightly higher in coho exposed to treated runoff relative to controls, the phenanthrene-equivalents in the bile of these fish were at or below the threshold concentrations for harm in juvenile salmonids (Meador et al., 2008). This reflects the exceptional sensitivity of common biomarkers for diagnosing PAH exposure in fish, including bile chemistry and the upregulation of detoxification pathways involving CYP1a and related metabolic enzymes (Lee and Anderson, 2005).

The toxic impacts of urban runoff on aquatic species are often particularly severe during the first flush of a storm (Marsalek et al., 1999; Kayhanian et al., 2008; McQueen et al., 2010; Mayer et al., 2011). As anticipated from previous studies, the first flush from the storms assessed here killed most or all of the fish and invertebrates. Contaminant concentrations in the first flush may be 20-fold higher than the corresponding event mean concentration (EMC) derived from integrated sampling across an entire runoff event (e.g., Shinya et al., 2000). Although EMCs are a conventional metric in stormwater science, toxicity studies based on EMC values often report little or no biological response (Kayhanian et al., 2008). Future GSI effectiveness studies should focus on peak contaminant concentrations in the first flush to minimize underestimates of baseline toxicity and maximize the likelihood of detecting differences in pre- and post-treatment water quality.

Our present results notwithstanding, several important questions specific to the effectiveness of green stormwater infrastructure remain. In the case of bioretention, for example, these include the relative influence of different soil compositions (Carpenter and Hallam, 2010), the influence of biota (particularly plants and microbes; Endreny et al., 2012; LeFevre et al., 2012; Barrett et al., 2013; Palmer et al., 2013), and performance consistency between laboratory and field installations (Carpenter and Hallam, 2010). Another practical consideration, from the perspective of real-world maintenance, is the performance of bioretention systems on a timescale of month to years. Initial long-term effectiveness studies, while limited in number, indicate that metals removal persists on a timescale of decades (Ingvertsen et al., 2012; Paus et al., 2014). While more work is needed in the above areas, our current findings provide preliminary evidence of the biological effectiveness of GSI technology, using metrics that could be

expanded to include additional species and endpoints (e.g., endocrine disruption or behavioral changes in fish). Framing effectiveness in terms of aquatic animal health is a relatively novel approach to validating GSI technologies, and our initial findings suggest considerable promise for the success of these types of mitigation methods.

In closing, this and previous studies highlight the considerable hazard that untreated urban runoff poses for aquatic species in receiving waters. In the urban environment, there are often important constraints on the amount of land available for treating stormwater. As a small footprint and relatively inexpensive mitigation technology, the soil columns used here prevented lethal and sublethal toxicity to juvenile coho salmon and their invertebrate prey in response to runoff from a section of densely used four-lane highway. With appropriate scaling (e.g., the installation of sequential bioretention systems along transportation corridors), it may be possible to considerably reduce the harmful toxic impacts of this type of urban runoff.

Acknowledgements

We thank the many volunteers who made the bioretention test possible including Julann Spromberg, Richard Edmunds, Mary Jean Willis, Lyndal Johnson, Kate Macneale, Alisan Beck, Tiffany Linbo, and Tanya Swarts. This research project received agency funding from the U.S. National Oceanic and Atmospheric Administration (Coastal Storms Program), the U.S. Fish and Wildlife Service National Contaminants Program, and the U.S. Environmental Protection Agency Region 10. Additional funding was supplied by a Russell Family Foundation grant to JDS (13k-3780-4759). The funders had no role in the study design, data collection and analysis, decision to publish, or preparation of the manuscript. Lake Wildwood Tennis Facility Lighting Expansion
PLN22-0008; AAP22-0001; VAR22-0004; EIS22-0008

Project Location: 12960 Thistle Loop, Penn Valley. Further located east of Pleasant Valley Road and north of the intersection of Wildflower Drive and Pleasant Valley Road within the Lake Wildwood Subdivision in unincorporated Western Nevada County.

Project Description: The project is an application for an Amendment to Approved Use Permit U92-09 for the installation of 32 lights within four existing tennis courts located within the Lake Wildwood Subdivision Tennis Facility to allow nighttime tennis play from dusk until 10:00 P.M. for Lake Wildwood Association members. As proposed some of the light poles would have two lights installed, resulting in 32 lights distributed between 24 light poles. Due to the requirements of championship tennis play, along with matching the height of the existing lights, which are located at the Commadore Park tennis courts, located within Lake Wildwood; the light poles are proposed at a height of 20 feet tall, which would exceed the height limitation of 15 feet established by Section L-II 4.2.8 of the Nevada County Land Use and Development Code. Therefore, the project is being processed with a Variance to the light pole height restrictions.

PUBLIC REVIEW: As a Lead agency in accordance with CEQA, Nevada County is distributing the Draft Initial Study / Mitigated Negative Declaration (IS/MND) to interested public and regulatory authorities for review and comment for a period of 32-days. Nevada County is inviting comments and concerns regarding the IS/MND during the public comment period spanning **July 22, 2022 to August 22, 2022 at 5:00 p.m.** Final action on the proposed MND will be taken by the Nevada County Planning Commission after the completion of the public review period at a duly noticed public hearing.

DOCUMENT AVAILABILITY: The Draft Initial Study / Mitigated Negative Declaration is available for review on Nevada County's Website at https://www.nevadacountyca.gov/994/Environmental-Documents. Hardcopies may be reviewed at the Nevada County Planning Department, 950 Maidu Avenue, Suite 170, Nevada City, CA 95959.

Written comments should be sent to the following address: Matt Kelley, Senior Planner, Nevada County Planning Department, 950 Maidu Avenue, Suite 170, Nevada City, CA 95959 - Phone: 530-264-1423 - Email: matt.kelley@nevadacountyca.gov; on or before **August 22, 2022 at 5:00 p.m.**

Pursuant to the State of California Public Resources Code and the "Guidelines for Implementation of the California Environmental Quality Act of 1970," as amended to date, a Draft Mitigated Negative Declaration has been prepared because no substantial evidence exists, as indicated in the attached Initial Study, that the proposed project may have a significant environmental effect that is not mitigated to a level of less than significance.

Zoning District: Single-Family Residential (R1) – Planned Development (PD)

General Plan Designation: Planned Residential Community (PRC)

Project Location: 12960 Thistle Loop, Penn Valley. Further located east of Pleasant Valley Road and north of the intersection of Wildflower Drive and Pleasant Valley Road within the Lake Wildwood Subdivision in unincorporated Western Nevada County.

Project Description: The project is an application for an Amendment to Approved Use Permit U92-09 for the installation of 32 lights within four existing tennis courts located within the Lake Wildwood Subdivision Tennis Facility to allow nighttime tennis play from dusk until 10:00 P.M. for Lake Wildwood Association members. As proposed some of the light poles would have two lights installed, resulting in 32 lights distributed between 24 light poles. Due to the requirements of championship tennis play, along with matching the height of the existing lights, which are located at the Commadore Park tennis courts, located within Lake Wildwood; the light poles are proposed at a height of 20 feet tall, which would exceed the height limitation of 15 feet established by Section L-II 4.2.8 of the Nevada County Land Use and Development Code. Therefore, the project is being processed with a Variance to the light pole height restrictions.

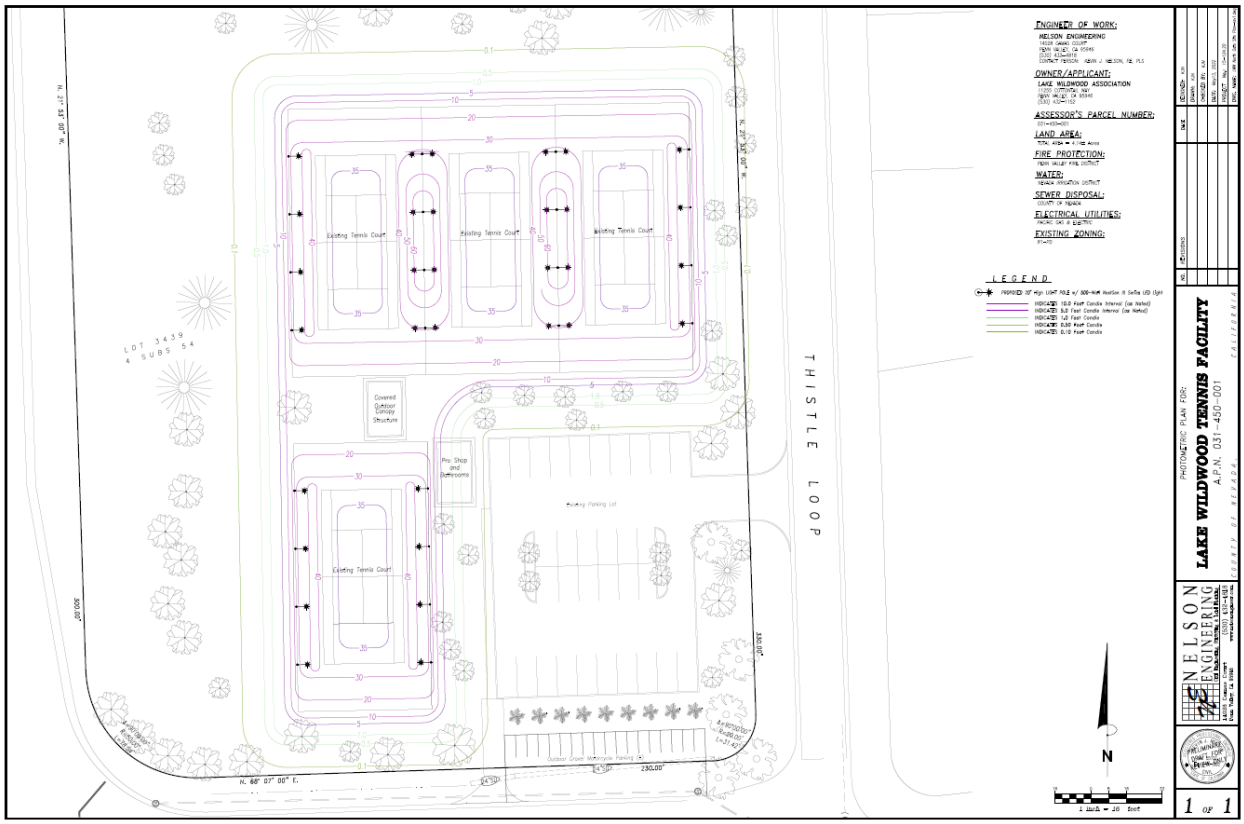

Figure 1 - Site Plan

Project Site and Surrounding Land Uses: The parcel is located in the unincorporated part of Western Nevada County at 12960 Thistle Loop (Assessor Parcel Number 031-450-001) within the Lake Wildwood Subdivision. The project area is proposed to be within the four existing northern tennis courts, which are located along Thistle Loop and north of the northern entrance gate at the Lake Wildwood Tennis facility.

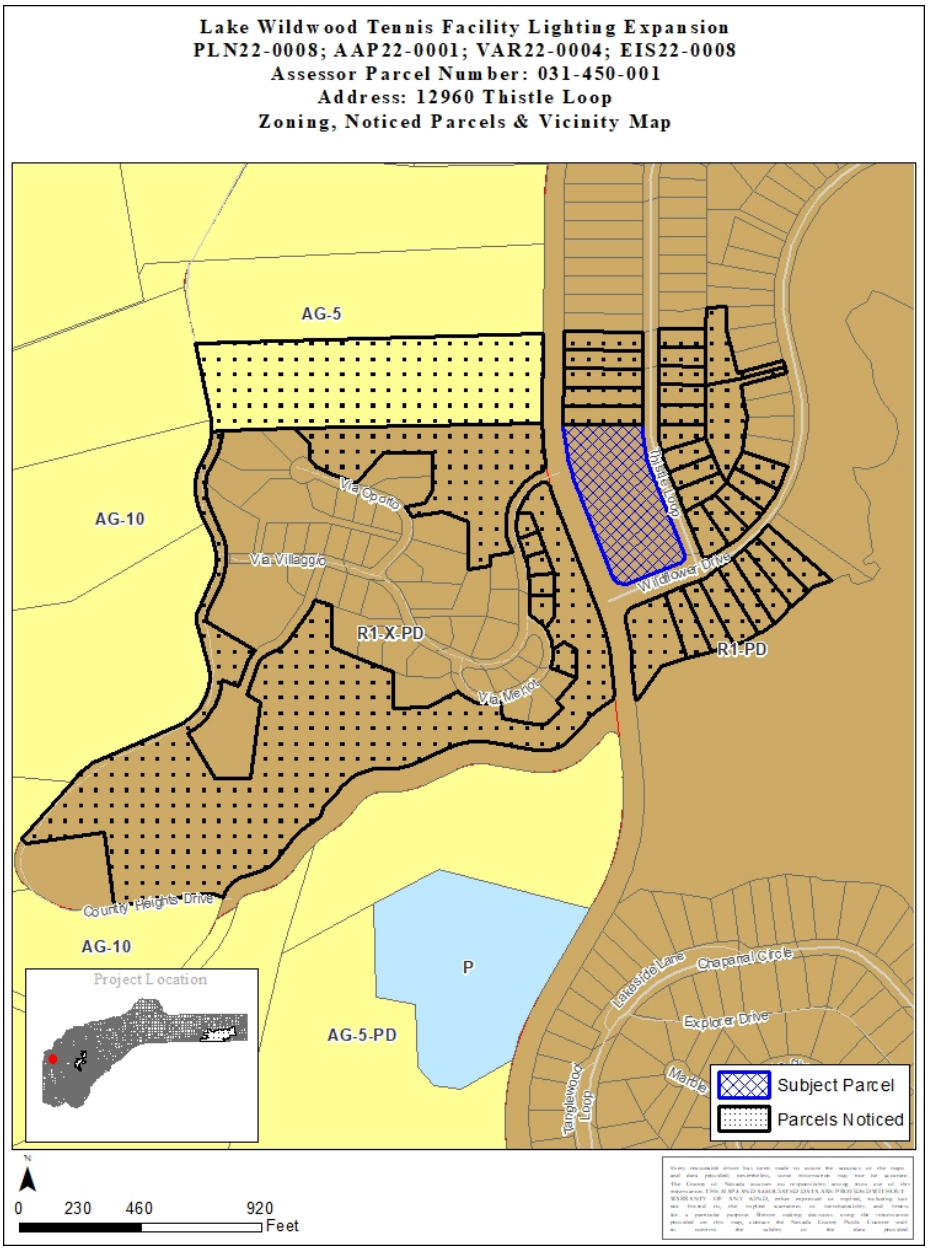

Figure 2 - Vicinity Map

The subject parcel is zoned Single-Family Residential (R-1) with Planned Development (PD) combining district. The subject parcel contains the existing Lake Wildwood Tennis Facility that is open to Association members and is developed with four tennis courts, a tennis Pro-Shop and off-street parking area with 31 off-street parking spaces. The surrounding parcels, which are located north and east, are developed with existing single-family residences. The northern-gated entrance to Lake Wildwood is located south of the Tennis Facility.

Other Permits, Which May Be Necessary: Based on initial comments received, the following permits may be required from the designated agencies:

1. Building Permits- Nevada County Building Department

Relationship to Other Projects: U92-09 approved the development of the tennis facility, which included four tennis courts, an approximately 480-square-foot pro-shop and associated off-street parking. The project is proposing the addition of 32 lights mounted on 24 light poles which would be 20 feet tall, to allow tennis play from dusk until 10:00 P.M.

This analysis does not intend to "reopen" the environmental review of the approved Mitigation Negative Declaration for the Use Permit (U92-09). The aforementioned documents can be viewed at the Nevada County Planning Department Office located at 950 Maidu Avenue, Suite 170, Nevada City, California 95959. This environmental assessment is intended to be a tiered document pursuant to the California Environmental Quality Act Guidelines Section 2109(b) and shall use both new information and existing information provided with the existing permits. As previously mentioned, the project includes a Variance to Zoning Regulations. Pursuant to Section 15305(a) of the CEQA Guidelines, a Variance is typically categorically exempt from environmental review.

Tribal Consultation: Have California Native American Tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

California Native American Tribes with ancestral land within the project area were routed the project during distribution. The California Native American Tribes will be sent a Notice of Availability for Public Review and Notice of Intent to Adopt a Mitigated Negative Declaration for this project, which will allow the California Native American Tribes the opportunity to comment on the analysis of environmental impacts. Mitigation has been included in Sections 5 and 18 of this initial study to address a plan for further consultation, if needed.

SUMMARY OF IMPACTS and PROPOSED MITIGATION MEASURES

Environmental Factors Potentially Affected:
All of the following environmental factors have been considered. Those environmental factors checked below would be potentially affected by this project, involving at least one impact that is "Less Than Significant with Mitigation" as indicated by the checklist on the following pages.

__	1. Aesthetics	__	2. Agriculture / Forestry Resources	✓	3. Air Quality
__	4. Biological Resources	✓	5. Cultural Resources	__	6. Energy
✓	7. Geology / Soils	__	8 Greenhouse Gas Emissions	__	9. Hazards / Hazardous Materials
__	10. Hydrology / Water Quality	__	11. Land Use / Planning	__	12. Mineral Resources
✓	13. Noise	__	14. Population / Housing	__	15. Public Services
__	16. Recreation	__	17. Transportation	✓	18. Tribal Cultural Resources
✓	19. Utilities / Service Systems	__	20. Wildfire	✓	21. Mandatory Findings of Significance

Summary of Impacts and Recommended Mitigation Measures:

3. **AIR QUALITY:** To offset potentially adverse air quality impacts associated with the project activities, the following mitigation measures shall be required:

Mitigation Measure 3A: Implement dust control measures. Prior to the approval of any Grading or Building Permits, to reduce short-term construction impacts, all future development permits shall comply with the following standards to the satisfaction of the Northern Sierra Air Quality Management District, which shall be noted on all grading and improvement plans and shall be included in project bidding documents:

1. The applicant shall implement all dust control measures in a timely manner during all phases of project development and construction.

2 All material excavated, stockpiled or graded shall be sufficiently watered, treated or converted to prevent fugitive dust form leaving the property boundaries and causing a public nuisance or a violation of an ambient air standard. Watering should occur at least twice daily, with complete site coverage.

3. All areas (including unpaved roads) with vehicle traffic shall be watered or have dust palliative applied as necessary for regular stabilization of dust emissions.

Would the proposed project:	Potentially Significant Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact	Reference Source (Appendix A)
b. Conflict with existing zoning for agricultural use or conflict with a Williamson Act contract?				✓	A, 18
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resource Code section 12220(g)), timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?				✓	A, L, 18
d. Result in the loss of forest land or conversion of forest land to non-forest use?				✓	L, 18
e. Involve other changes in the existing environment, which due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?				✓	A, L, 7

Impact Discussion:

2a-e: The site is designated as "Urban & Built-Up Land" by the Farmland Mapping and Monitoring Program and would thus will not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. The proposed project would not involve other changes in the existing environment which could result in conversion of Farmland to a non-agricultural use. The project site is not subject to a Williamson Act contract, and it is not located within a Timberland Production Zone and will not result in the rezoning of forest land. Thus, as outlined above the proposed project is anticipated to have ***no impact*** on agricultural resources

Mitigation: **None required.**

3. AIR QUALITY

Existing Setting:

Nevada County is located in the Mountain Counties Air Basin. The overall air quality in Nevada County has improved over the past decade, largely due to vehicles becoming cleaner. State and Federal air quality standards have been established for specific "criteria" air pollutants including ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, lead, and particulate matter. In addition, there are State standards for visibility reducing particles, sulfates, hydrogen sulfide, and vinyl chloride. State standards are called California Ambient Air Quality Standards (CAAQS) and federal standards are called National Ambient Air Quality Standards (NAAQS). NAAQS are composed of health-based primary standards and welfare-based secondary standards.

Western Nevada County is classified as a Serious Nonattainment Area for the 2008 ozone NAAQS and Moderate Nonattainment for the 2015 ozone NAAQS. It is also Nonattainment for the ozone CAAQS. The area is also Marginal Nonattainment for the 2008 ozone NAAQS and is Nonattainment for the ozone CAAQS. Most of western Nevada County's ozone is transported to the area by wind from the Sacramento area and, to a lesser extent, the San Francisco Bay Area. Ozone is created by the interaction of Nitrogen Oxides and Reactive Organic Gases (also known as Volatile Organic Compounds) in the presence of sunlight, especially when the temperature is high. Ozone is mainly a summertime problem, with the highest concentrations generally observed in July and August, especially in the late afternoon and evening hours.

Nevada County is also Nonattainment for the PM10 CAAQS, but Unclassified for the PM10 NAAQS due to lack of available recent data. The number after "PM" refers to maximum particle size in microns. PM10 is a mixture of dust, combustion particles (smoke) and aerosols, whereas PM2.5 is mostly smoke and aerosol particles. PM2.5 sources include woodstoves and fireplaces, vehicle engines, wildfires and open burning. PM10 sources include the PM2.5 plus dust, such as from surface disturbances, road sand, vehicle tires, and leaf blowers. Some pollen and mold spores are also included in PM10, but most are larger than 10 microns. All of Nevada County is Unclassifiable/Attainment for the PM2.5 NAAQS and Unclassified for the PM2.5 CAAQS (US Environmental Protection Agency, 2015).

Ultramafic rock and its altered form, serpentine rock (or serpentinite), both typically contain asbestos, a cancer-causing agent. Ultramafic rock and serpentine are likely to exist in several areas of western Nevada County; however, the area of the project site is not mapped as an area that is likely to contain natural occurrences of asbestos (California Department of Conservation, 2000). A Biological Inventory of the project site also found that no serpentine or gabbro-derived soils in the Aiken loam and Aiken cobbly loam soils series are mapped near the project area (Dunn, 2021).

Please see Section 8 of this Initial Study for a discussion on project impacts related to Greenhouse Gas Emission.

Would the proposed project:	**Potentially Significant Impact**	**Less Than Significant with Mitigation**	**Less Than Significant Impact**	**No Impact**	**Reference Source (Appendix A)**
a. Conflict with or obstruct implementation of the applicable air quality plan.				✓	A,G
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?		✓			A,G
c. Expose sensitive receptors to substantial pollutant concentrations?		✓			A,G,L
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?		✓			A,G
e. Generate substantial smoke ash or dust?		✓			A,G

Impact Discussion:

3a: Nevada County's General Plan, Chapter 14 Air Quality Element, contains numerous policies to protect air quality in Nevada County. With the exception of General Plan Air Quality Element Policy 14.7A, which requires compliance with Northern Sierra Air Quality Management District Rule 226, the Nevada County General Plan Air Quality Element policies are intended to apply to development that generates new residents or new employees. The addition of lights to the existing Lake Wildwood Tennis Facility would not create any new residents or employees. By assessing air pollution and emissions associated with the proposed project and recommending mitigation measures based on Thresholds of Significance established by the Northern Sierra Air Quality Management District (NSAQMD), the project as proposed would comply with Northern Sierra Air Quality Management District regulations. In addition, the project has been mitigated, as discussed below to be complaint with the NSAQMD construction guidelines in compliance with Rule 226, which is related to the control of dust emissions as required by Mitigation Measure 3A. In addition, based on the County's review of the NSAQMD Rules and Guidelines for Assessing and Mitigation

Air Quality Impacts of Land Use Projects, it appears several of the objectives of the NSAQMD regulations are achieved through the application of mitigation measures provided below and due to the size and type of the project, the minimization of heavy equipment idling times as required by Mitigation Measure 3B, the use of alternative methods to open burning for vegetation disposal, and the compliance with Asbestos Airborne Toxic Control Measures.

Therefore, given the above discussion, the project itself will not violate any established policies or standards for the protection of air quality nor would it conflict with or obstruct implementation of any quality plan, therefore there is ***no impact***.

3b-e: Western Nevada County is in non-attainment for the Federal 8-hour ozone standard, and the entirety of Nevada County is in non-attainment for the State 1- and 8-hour ozone standards and PM10 standards. While most of the ozone in the County is transported from urban areas to the southwest, PM10 sources primarily come from within the County. PM10 violations in winter are largely due to wood smoke from the use of woodstoves and fireplaces, while summer and fall violations often occur during forest fires or periods of open burning. The proposed project would result in a temporary but incrementally small net increase in pollutants due to minor land disturbance and construction vehicle and equipment emissions related to the installation of the 24 light poles and trenching for underground electrical. Additionally, the construction of the project would entail some ground disturbance, which would be relatively small in nature due to the scope of the proposed project. Although this amount of disturbance would not result in the need for a Dust Control Permit, Mitigation Measure 3A to minimize dust emissions is recommended to reduce dust impacts in a way commensurate with the amount of grading being proposed. Reasonable precautions may include watering vehicle traffic areas, as well as any stockpiled material, and limiting traffic speeds. Such methods will be required to be noted on the improvement plans prior to approval.

Short-term project construction activities have the potential of generating dust and impacting the local ambient air quality with grading and excavation, vegetation removal, and construction activities from site preparation, the installation of underground utilities, and associated light poles. If improperly managed or controlled, and depending upon the time of year and air conditions, the construction activities associated with this project may have the potential to produce off-site dust impacts. The Northern Sierra Air Quality Management District (NSAQMD) therefore recommends mitigation during the construction phase of this project including Mitigation Measure 3B requiring that diesel construction equipment not be idled for more than 5 minutes to prevent smoke and ozone precursors.

Serpentine soils and ultramafic rock are not mapped on the project site, pursuant to the Northern Sierra Air Quality Management District and the National Geologic Map Database provided by the United States Geologic Service. However, although unlikely, there is always the potential to encounter these soil types during grading activities. According to the NSAQMD, ultramafic rock typically contains asbestos, a cancer-causing agent. Disturbance of this rock and nearby soil during project construction can result in the release of microscopic cancer-causing asbestos fibers into the air, resulting in potential health and safety hazards. Health risks related to project grading would be reduced by the incorporation of Mitigation Measure 3C, which would require compliance with the Asbestos Airborne Toxic Control Measure (ACTM) for construction.

The mitigation measures recommended above will minimize the potential adverse impacts associated with construction and operational emissions to a level that is ***less than significant with mitigation***.

Mitigation: To offset potentially adverse air quality impacts associated with the project activities, the following mitigation measures shall be required:

Mitigation Measure 3A: Implement dust control measures. Prior to the approval of any Grading or Building Permits, to reduce short-term construction impacts, all future development permits shall comply with the following standards to the satisfaction of the Northern Sierra Air Quality Management District, which shall be noted on all grading and improvement plans and shall be included in project bidding documents:

1. The applicant shall implement all dust control measures in a timely manner during all phases of project development and construction.

2 All material excavated, stockpiled or graded shall be sufficiently watered, treated or converted to prevent fugitive dust form leaving the property boundaries and causing a public nuisance or a violation of an ambient air standard. Watering should occur at least twice daily, with complete site coverage.

3. All areas (including unpaved roads) with vehicle traffic shall be watered or have dust palliative applied as necessary for regular stabilization of dust emissions.

4. All land clearing, grading, earth moving, or excavation activities on a project shall be suspended as necessary to prevent excessive windblown dust when winds are expected to exceed 20 mph.

5. All on-site vehicle traffic shall be limited to a speed of 15 mph on unpaved roads.

6. All inactive disturbed portions of the development site shall be covered, seeded or watered until a suitable cover is established. Alternatively, the applicant shall be responsible for applying non-toxic soil stabilizers to all inactive construction areas.

7. All material transported off-site shall be either sufficiently watered or securely covered to prevent public nuisance.

Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

Mitigation Measure 3B: Minimize Construction Equipment Idling. In order to reduce emissions from construction equipment, the applicant shall include the following standard note on all Grading Plans, Site Plans or Improvement Plans: "During construction, the contractor shall minimize idling time to a maximum of 5 minutes for all diesel-powered equipment. Signs shall be posted in the designated queuing areas of the construction site to remind off-road equipment operators that idling is limited to a maximum of 5 minutes. Idling of construction-related equipment and construction related vehicles is not recommended within 1,000 feet of any sensitive receptor."
Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans*
Reporting: *Planning Department approval of Grading Permits or Building Permits / Complaint driven*
Responsible Agencies: *Planning and Building Department, Code Compliance Division*

Mitigation Measure 3C: Comply with the Asbestos Airborne Toxic Control Measure (ACTM) for construction. If serpentine, ultramafic rock, or naturally occurring asbestos is discovered during construction or grading, the Northern Sierra Air Quality Management District shall be notified no later than the following business day and specific requirements contained in Section 93105 of Title 17 of the California Code of Regulations shall be strictly complied with. This measure shall be included as a note on all grading and improvement plans.
Timing: *Prior to issuance of the grading permits and improvement plans and during grading activity*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

4. BIOLOGICAL RESOURCES

Existing Setting: The subject property is currently used for the Lake Wildwood Tennis Facility and contains four existing tennis courts, a Tennis Pro Shop and associated off-street parking spaces. The proposed tennis court lights and poles would be located within the existing tennis courts. There are no stream or riparian areas within the project site or adjacent to it. Furthermore, the project applicant has verified that no trees would be removed for the installation of the light poles.

Would the proposed project:	Potentially Significant Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact	Reference Source (Appendix A)
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?			✓		K,19, 25
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?			✓		A, K, L,19,22
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				✓	A, K, L,19,29
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?			✓		A, 19
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?			✓		A,19
f. Conflict with the provisions of an adopted Habitat Conservation Plan, or other approved local, regional, or state habitat conservation plan?				✓	A,19
g. Introduce any factors (light, fencing, noise, human presence and/or domesticated animals) which could hinder the normal activities of wildlife?			✓		A,19

Applicant: Bill Clark – Auburn Ski Club
P.O. Box 729
Soda Springs, CA 95728

Project Location: 19749 Boreal Ridge Road, Soda Springs, CA 95728. The project site is located near the western edge of the Boreal parking lot near the Auburn Ski Club Nordic Center in unincorporated Eastern Nevada County, off of Interstate 80.

Project Description: An Amendment to Approved Use Permit U89-039 to install 40 light poles along the 2-kilometer lower loop of an existing 10-kilometer cross-county skiing trail system and to allow nighttime skiing from dusk until 8:00 P.M. on Wednesday through Saturday nights from early November through March at the Auburn Ski Club Nordic Center. Some of the light poles will have two lights installed, resulting in a total of 48 lights distributed between the 40 poles. Due to the high levels of snow on Boreal Ridge during the winter, the light poles are proposed to be 40 feet tall which exceeds the height limitation of 15 feet established by Section L-II 4.2.8 of the Nevada County Land Use and Development Code. Therefore, the project is being processed with a variance to the light pole height restrictions.

PUBLIC REVIEW: As a lead agency, in accordance with CEQA, Nevada County is distributing the Draft Initial Study/Mitigated Negative Declaration IS/MND to interested public and regulatory authorities for review and comment for a period of 31-days. Nevada County is inviting comments and concerns regarding the IS/MND during the public review period spanning **July 8, 2022 to August 8, 2022 at 5:00 p.m.** Final action

on the proposed MND will be taken by the Nevada County Zoning Administrator after the completion of the public review period at a duly noticed public hearing.

DOCUMENT AVAILABILITY: The Draft Initial Study/Mitigated Negative Declaration is available for review on Nevada County's website at https://www.mynevadacounty.com/994/Environmental-Documents. Hardcopies may be reviewed at the Nevada County Planning Department, 950 Maidu Avenue, Suite 170, Nevada City, CA 95959.

Written comments should be sent to the following address: David Nicholas, Assistant Planner, Nevada County Planning Department, 950 Maidu Avenue Suite 170, Nevada City, CA 95959 - Email: david.nicholas@co.nevada.ca.us; on or before **August 8, 2022 at 5:00 p.m.**

Pursuant to the State of California Public Resources Code and the "Guidelines for Implementation of the California Environmental Quality Act of 1970," as amended to date, a Draft Mitigated Negative Declaration has been prepared because no substantial evidence exists, as indicated in the attached Initial Study, that the proposed project may have a significant environmental effect that is not mitigated to a level of less than significance.

Assessor Parcel Number: 047-450-004

Applicant/Owner: Bill Clark
Auburn Ski Club, Inc
P.O. Box 729
Soda Springs, CA 95728

Zoning District: Forest-40 (FR), Recreation (REC)

General Plan Designation: FOR-40, REC

Project Location: 19749 Boreal Ridge Road, Soda Springs, CA 95728. The project site is located near the western edge of the Boreal parking lot near the Auburn Ski Club Nordic Center in unincorporated Eastern Nevada County, off of Interstate 80.

Project Description: An Amendment to Approved Use Permits U89-039 to install 40 light poles along the 2-kilometer lower loop of an existing 10-kilometer cross-county skiing trail system and to allow nighttime skiing from dusk until 8:00 P.M. on Wednesday through Saturday nights from early November through March at the Auburn Ski Club Nordic Center. Some of the light poles will have two lights installed, resulting in a total of 48 lights distributed between the 40 poles. Due to the high levels of snow on Boreal Ridge during the winter, the light poles are proposed to be 40 feet tall which exceeds the height limitation of 15 feet established by Section L-II 4.2.8 of the Nevada County Land Use and Development Code. Therefore, the project is being processed with a variance to the light pole height restrictions.

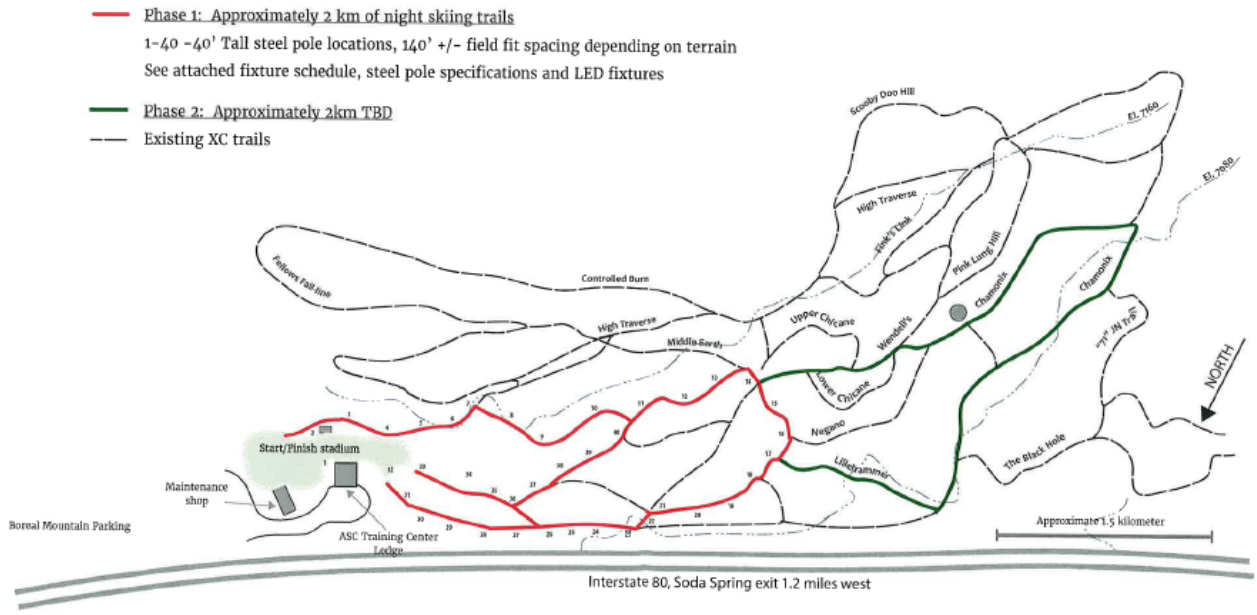

Figure 1 - Site Plan

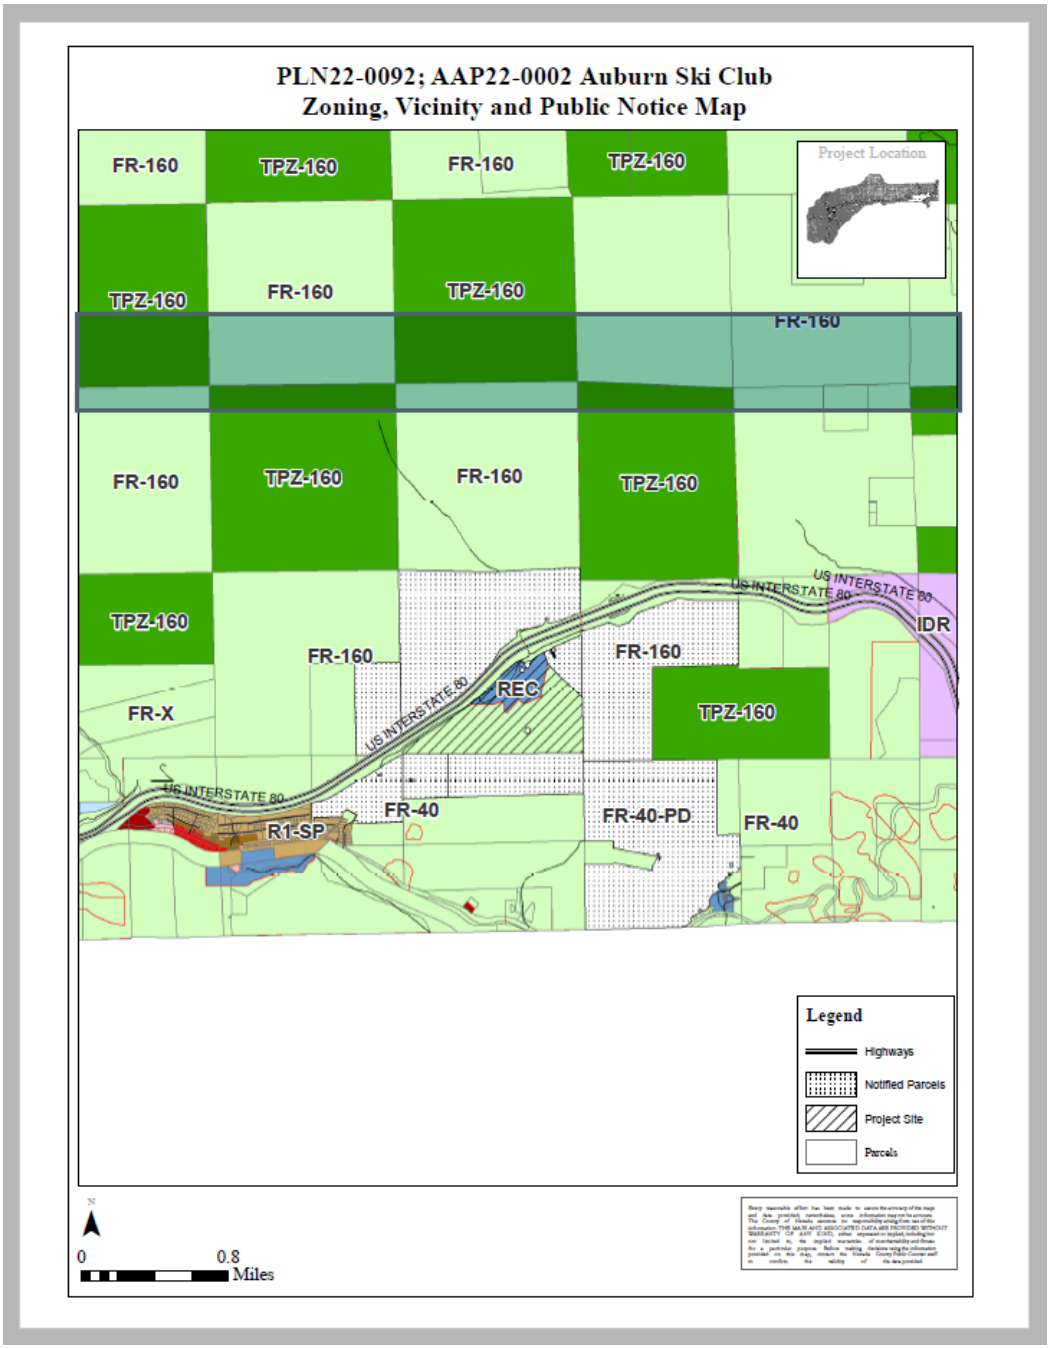
Project Site and Surrounding Land Uses: The parcel is located in the unincorporated part of eastern Nevada County at 19749 Boreal Ridge Road (APN 047-450-004). The project area is proposed to be within a small portion at the existing Auburn Ski Club Training Center towards the western end of the parcel. Interstate 80 is directly adjacent to the northern property line and connects the local area to Sacramento, California, 90 miles to the southwest and Reno, Nevada, 42 miles northeast.

The area of the proposed trails is zoned as Forest – 40 (FR-40), and Recreation (REC). The parcel is surrounded by other Forest zoning districts with minimum parcel sizes ranging from 40 to 160 acres. These surrounding parcels are mostly undeveloped and the only potentially sensitive land use in the vicinity is Interstate 80. Auburn Ski Club owns the adjacent parcels to the northwest and north, the United States Forest Service owns the parcel to the north and east, and Donner Summit Tramways owns the parcel to the southeast. Donner Summit Tramways is also known as Donner Ski Ranch and will not be impacted by lights on a cross-county skiing trail that is on the other side of Boreal Ridge.



Other Permits, Which May Be Necessary: Based on initial comments received, the following permits may be required from the designated agencies:

1. Building Permits- Nevada County Building Department
2. Electrical Service Development – Truckee Donner Public Utility District
3. Dust Control and Operations Permits – Northern Sierra Air Quality Management District

Relationship to Other Projects: U89-039 approved a three-kilometer trail expansion to the existing seven kilometers of trails that had been used since the 1970s. The project is proposing the addition of 40 light poles along the lower 2-kilometer loop.

This analysis does not intend to "reopen" the environmental review of the approved Mitigation Negative Declaration for the Use Permits (U89-39). The aforementioned documents can be viewed at the Nevada County Planning Department Office located at 950 Maidu Avenue, Suite 170, Nevada City, California 95959. This environmental assessment is intended to be a tiered document pursuant to the California Environmental Quality Act Guidelines Section 2109(b) and shall use both new information and existing information provided with the existing permits. As previously mentioned, the project includes a Variance to Zoning Regulations. Pursuant to Section 15305(a) of the CEQA Guidelines, a Variance is typically categorically exempt from environmental review

Tribal Consultation: Have California Native American Tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code Section 21080.3.1? If so, is there a plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

California Native American Tribes with ancestral land within the project area were routed the project during distribution. The California Native American Tribes will be sent a Notice of Availability for Public Review and Notice of Intent to Adopt a Mitigated Negative Declaration for this project, which will allow the California Native American Tribes the opportunity to comment on the analysis of environmental impacts. Mitigation has been included in Sections 5 and 18 of this initial study to address a plan for further consultation, if needed.

SUMMARY OF IMPACTS and PROPOSED MITIGATION MEASURES

Environmental Factors Potentially Affected:
All of the following environmental factors have been considered. Those environmental factors checked below would be potentially affected by this project, involving at least one impact that is "Less Than Significant with Mitigation" as indicated by the checklist on the following pages.

__	1. Aesthetics	__	2. Agriculture / Forestry Resources	✓	3. Air Quality
✓	4. Biological Resources	✓	5. Cultural Resources	__	6. Energy
✓	7. Geology / Soils	__	8 Greenhouse Gas Emissions	__	9. Hazards / Hazardous Materials
✓	10. Hydrology / Water Quality	__	11. Land Use / Planning	__	12. Mineral Resources
✓	13. Noise	__	14. Population / Housing	__	15. Public Services
__	16. Recreation	__	17. Transportation	✓	18. Tribal Cultural Resources

✓	19. Utilities / Service Systems	__	20. Wildfire	✓	21. Mandatory Findings of Significance

Summary of Impacts and Recommended Mitigation Measures:

3. **AIR QUALITY:** To offset potentially adverse air quality impacts associated with the project activities, the following mitigation measures shall be required:

Mitigation Measure 3A: Implement dust control measures. Prior to the approval of any Grading or Building Permits, to reduce short-term construction impacts, all future development permits shall comply with the following standards to the satisfaction of the Northern Sierra Air Quality Management District, which shall be noted on all grading and improvement plans and shall be included in project bidding documents:

1. The applicant shall implement all dust control measures in a timely manner during all phases of project development and construction.

2 All material excavated, stockpiled or graded shall be sufficiently watered, treated or converted to prevent fugitive dust form leaving the property boundaries and causing a public nuisance or a violation of an ambient air quality standard. Watering should occur at least twice daily, with complete site coverage.

3. All areas (including unpaved roads) with vehicle traffic shall be watered or have dust palliative applied as necessary for regular stabilization of dust emissions.

4. All land clearing, grading, earth moving, or excavation activities on a project shall be suspended as necessary to prevent excessive windblown dust when winds are expected to exceed 20 mph.

5. All on-site vehicle traffic shall be limited to a speed of 15 mph on unpaved roads.

6. All inactive disturbed portions of the development site shall be covered, seeded or watered until a suitable cover is established. Alternatively, the applicant shall be responsible for applying non-toxic soil stabilizers to all inactive construction areas.

7. All material transported off-site shall be either sufficiently watered or securely covered to prevent public nuisance.

Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

Mitigation Measure 3B: Minimize Construction Equipment Idling. In order to reduce emissions from construction equipment, the applicant shall include the following standard note on all Grading Plans, Site Plans or Improvement Plans: "During construction, the contractor shall minimize idling time to a maximum of 5 minutes for all diesel-powered equipment. Signs shall be posted in the designated queuing areas of the construction site to remind off-road equipment operators that idling is limited to a maximum of 5 minutes. Idling of construction-related equipment and construction related vehicles is not recommended within 1,000 feet of any sensitive receptor."

Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans*
Reporting: *Planning Department approval of Grading Permits or Building Permits / Complaint driven*
Responsible Agencies: *Planning and Building Department, Code Compliance Division*

Mitigation Measure 3C: Use Alternative Methods to Open Burning for Vegetation Disposal. Open burning of site-cleared vegetation is prohibited. Among suitable alternatives are chipping, grinding, hauling to an approved disposal site, cutting for firewood, and conversion to biomass fuel.
Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans and during construction*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

Mitigation Measure 3D: Comply with the Asbestos Airborne Toxic Control Measure (ACTM) for construction. If serpentine, ultramafic rock, or naturally occurring asbestos is discovered during construction or grading, the Northern Sierra Air Quality Management District shall be notified no later than the following business day and specific requirements contained in Section 93105 of Title 17 of the California Code of Regulations shall be strictly complied with. This measure shall be included as a note on all grading and improvement plans.

Timing: *Prior to issuance of the grading permits and improvement plans and during grading activity*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

4. **BIOLOGICAL RESOURCES:** To reduce potential construction impacts to biological resources, the following mitigation is required to be outlined on project construction plans for implementation during project construction:

Mitigation Measure 4A: Avoid impacts to nesting raptors and migratory birds. To avoid or minimize potential impacts to nesting birds (including special status species), all project construction activities such as site grubbing, excavation, grading, and the operation heavy equipment occur between September 1 and January 31, outside of the nesting season to the extent feasible. If construction occurs between February 1 and August 31, a pre-qualified biologist shall conduct pre-construction surveys for nesting raptors and migratory birds pursuant to California Department of Fish and Wildlife requirements and according to the Migratory Bird Treaty Act. These surveys should be accomplished within **7 days** prior to commencement of grading activities. In any nesting birds (including special status species) are detected during the pre-construction survey or during construction, work in that area shall be suspended and consultation with County Planning Department staff will immediately commence and CDFW and/or USFWS will be consulted to determine the course of action. If a legally-protected species' nest is located in a tree for removal, the removal shall be deferred until after August 31 or until the adults and young are no longer dependent on the nest, as determined by a qualified biologist.

If any active nests are located onsite, an appropriate no disturbance buffer zone shall be established around the nests, as determined by the qualified biologist. The biologist shall mark the buffer zone with construction tape or pin flags and maintain the buffer zone until the end of the breeding season or until the young have successfully fledged. Buffer zones are 100 feet for migratory bird nests and 250 feet for raptor nests. If active nests are found in areas of work, a qualified biologist shall

3. AIR QUALITY

Existing Setting:

Nevada County is located in the Mountain Counties Air Basin (MCAB). The MCAB includes the central and northern Sierra Nevada Mountain range with elevations ranging from several hundred feet in the foothills to over 6,000 feet above mean sea level along the Sierra Crest. The MCAB generally experiences warm, dry summers and wet winters. Ambient air quality in the air basin is generally determined by climatological conditions, the topography of the air basin, and the type and amount of pollutants emitted. The project site is on the eastern side of the Sierra Nevada Mountain Range and is located within the higher elevations of the Air Basin. During the winter months, temperatures can go below freezing and large quantities of snow can accumulate at the project site. In the summer months, temperatures in the project vicinity are generally mild with daytime peaks between 70 and 80 degrees Fahrenheit. Precipitation rates in the region average about 30 inches annually. The prevailing winds in this area of Nevada County are generally westerly; however, inversions are common in this area during periods of calm winds and clear skies in the fall and winter. The Northern Sierra Air Quality Management District has responsibility for controlling air pollution emissions including "criteria air pollutants" and "toxic air pollutants" from direct sources (such as factories) and indirect sources (such as land-use projects) to improve air quality within Nevada County. To do so, the District adopts rules, regulations, policies, and programs to manage the air pollutant emissions from various sources, and also must enforce certain statewide and federal rules, regulations and laws. The Federal Clean Air Act of 1971 established national ambient air quality standards (NAAQS). These standards are divided into primary and secondary standards. Primary standards are designed to protect public health and secondary standards are designed to protect plants, forests, crops, and materials. Because of the health-based criteria identified in setting the NAAQS, the air pollutants are termed "criteria" pollutants. California has adopted its own ambient air quality standards (CAAQS). Criteria air pollutants include ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, lead, and particulate matter. CAAQS include the NAAQS pollutants, in addition to visibility reducing particles, sulfates, hydrogen sulfide, and vinyl chloride. A nonattainment area is an area where a criteria air pollutant's concentration is above either the federal and/or state ambient air quality standards. Depending on the level of severity, a classification will be designated to a nonattainment area. Failure of a state to reach attainment of the NAAQS by the target date can trigger penalties, including withholding of federal highway funds. Table 1 shows the current attainment/nonattainment status for the federal and state air quality standards in Nevada County.

Nevada County has two federally recognized air monitoring sites: The Litton Building in Grass Valley (fine particulate matter, also called PM2.5, and ozone) and the fire station in downtown Truckee (PM2.5 only). For eight-hour average ozone concentrations, Nevada County is serious nonattainment for both the 2008 and 2015 state and federal ozone standards of 75 and 70 parts per billion, respectively (Table 1). Unlike other pollutants, ozone is not typically released directly into the atmosphere from any sources. Ozone is created by the interaction of Nitrogen Oxides and Reactive Organic Gases (also known as Volatile Organic Compounds) in the presence of sunlight, especially when the temperature is high. The major sources of Nitrogen Oxides and Reactive Organic Gases, known as ozone precursors, are combustion sources such as factories, automobiles and evaporation of solvents and fuels. Ozone is mainly a summertime problem, with the highest concentrations generally observed in July and August, when the days are longest, especially in the late afternoon and evening hours. Ozone is considered by the California Air Resources Board to be overwhelmingly transported to Nevada County from the Sacramento Metropolitan area and, to a lesser extent, the San Francisco Bay Area. This recognition of overwhelming transport relieves Nevada County of

CAAQS-related requirements, including the development of a CAAQS attainment plan with a "no-net-increase" permitting program or an "all feasible measures" demonstration. For particulate matter, ambient air quality standards have been established for both PM l0 and PM2.5. California has standards for average PM l0 concentrations over 24-hour periods and over the course of an entire year, which are 50 and 20 µg/m3, respectively. (The notation "µg/m3" means micrograms of pollutant per cubic meter of ambient air.) For PM2.5, California only has a standard for average PM2.5 concentrations over a year, set at 12 µg/m3, with no 24- hour-average standard. Nevada County is in compliance with all of the federal particulate matter standards, but like most California counties it is out of compliance with the state PM10 standards. Particulate-matter is identified by the maximum particle size in microns as either PM2.5 or PM l0. PM2.5, is mostly smoke and aerosol particles resulting from woodstoves and fireplaces, vehicle engines, wildfires, and open burning. PM-10 is a mixture of dust, combustion particles (smoke) and aerosols from sources such as surface disturbances, road sand, vehicle tires, and leaf blowers.

Table 1: Attainment Status by Northern Sierra Air Quality Management District

of State and Federal Air Quality Standards. In addition, the entire district is either Attainment or Unclassified for all State and federal NO_2, SO_2, Pb, H_2S, visibility reducing particles, sulfates, and vinyl chloride standards.

Pollutant	State Designation	Federal Designation
Ozone (O_3)	Nevada County: Non-attainment (due to overwhelming transport)	2008 O_3 Standard (75 ppb) Western Nevada County: Serious Non-attainment; Eastern Nevada County: Unclassifiable.
		2015 O_3 Standard (70 ppb) Western Nevada County: Serious Non-attainment; Eastern Nevada County: Unclassifiable.
PM_{10}	Nevada County: Non-attainment	Unclassified
PM2.5	Nevada County: Unclassified	2012 Annual Standard (12µg/m^3) Nevada County: Unclassifiable/Attainment
		2012 24-hour Standard (35µg/m^3) Unclassifiable/Attainment
CO	Nevada: Unclassified	Unclassifiable/Attainment

Ultramafic rock and its altered form, serpentine rock (or serpentinite), both typically contain asbestos, a cancer-causing agent. Ultramafic rock and serpentine are likely to exist in several areas of western Nevada County. The area of the project site is not mapped as an area that is likely to contain ultramafic rock, but it is adjacent to an ultramafic rock unit (California Department of Conservation, 2000). Natural occurrences of asbestos are more likely to be encountered in, and immediately adjacent to areas of ultramafic rock.

Please see Section 8 of this Initial Study for a discussion of project impacts related to Greenhouse Gas Emissions.

Would the proposed project:	Potentially Significant Impact	Less Than Significant with Mitigation	Less Than Significant Impact	No Impact	Reference Source (Appendix A)
a. Conflict with or obstruct implementation of the applicable air quality plan.				✓	A,G
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?		✓			A,G
c. Expose sensitive receptors to substantial pollutant concentrations?		✓			A,G,L
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?		✓			A,G
e. Generate substantial smoke ash or dust?		✓			A,G

Impact Discussion:

3a: Nevada County's General Plan, Chapter 14 Air Quality Element, contains numerous policies to protect air quality in Nevada County. With the exception of General Plan Air Quality Element Policy 14.7A, which requires compliance with Northern Sierra Air Quality Management District Rule 226, the Nevada County General Plan Air Quality Element policies are intended to apply to development that generates new residents or new employees. The addition of lights to the trail system or the extended hours of skiing will not create any new residents or employees. By assessing air pollution and emissions associated with the proposed project and recommending mitigation measures based on Thresholds of Significance established by the Northern Sierra Air Quality Management District (NSAQMD), the project as proposed would comply with Northern Sierra Air Quality Management District regulations. In addition, the project has been mitigated, as discussed below to be complaint with the NSAQMD construction guidelines in compliance with Rule 226, which is related to the control of dust emissions as required by Mitigation Measure 3A. In addition, based on the County's review of the NSAQMD Rules and Guidelines for Assessing and Mitigation Air Quality Impacts of Land Use Projects, it appears several of the objectives of the NSAQMD regulations are achieved through the application of mitigation measures provided below and due to the size and type of the project, the minimization of heavy equipment idling times as required by Mitigation Measure 3B, the use of alternative methods to open burning for vegetation disposal, and the compliance with Asbestos Airborne Toxic Control Measures.

Therefore, given the above discussion, the project itself will not violate any established policies or standards for the protection of air quality nor would it conflict with or obstruct implementation of any quality plan, therefore there is ***no impact***.

3b-e: Eastern Nevada County is in non-attainment for the Federal 8-hour ozone standard, and the entirety of Nevada County is in non-attainment for the State 1- and 8-hour ozone standards and PM10 standards. While most of the ozone in the County is transported from urban areas to the southwest, PM10 sources primarily come from within the County. PM10 violations in winter are largely due to wood smoke from the use of woodstoves and fireplaces, while summer and fall violations often occur during forest fires or periods of open burning. The proposed project would result in a temporary but incrementally small net increase in pollutants due to minor land disturbance and

construction vehicle and equipment emissions related to the installation of the 40 light poles and trenching for underground electrical.

Construction and Operational Impacts

The California Emissions Estimation Model (CalEEMod) provides a means to estimate potential emissions associated with both construction and operation of land use projects. Using the parameters specific to this proposed project, the CalEEMod model identified potential increases in the pollutants of concern during various stages of the construction phase of the project (*CalEEMod Version 2016.3.2*). Construction, including site preparation and grading, was assumed to occur over a period of a 60 days to provide a conservative analysis. There is expected to be 6,886 square feet of trenching for electrical utilities and 640 square feet of site preparation for the installation of the light poles. The highest amount in any given year over the life of construction was used, with the default variables for the construction of the proposed additions.

Table 1. Project Construction Air Quality Impacts

Pollutant	NSAQMD Threshold*	Project Impact
NOx	24-136 lbs/day	1.13 lbs/day (0.206 tons/year)
ROG	24-136 lbs/day	0.11 lbs/day (0.021 tons/year)
PM10	79-136 lbs/day	0.136 lbs/day (0.025 tons/year)
CO	N/A	1.06 lbs/day (0.194 tons/year)

*These thresholds are "Level B" in NSAQMD's *Guidelines*. All projects require basic mitigations under Level A, which is under 24 pounds per day of any pollutant shown above.

As shown above on Table 1, no mass of pollutant emissions will exceed thresholds established by NSAQMD. Although PM10 is not anticipated to exceed the per diem threshold adopted by NSAQMD, this constituent has been identified in Nevada County as exceeding ambient air quality standards and should be mitigated to the extent possible through dust control measures such as watering and stabilizing of excavated materials, slow vehicle speeds on-site, and halting work during windy periods as required in Mitigation Measure 3A.

Short-term project construction activities have the potential of generating dust and impacting the local ambient air quality with grading and excavation, vegetation removal, and construction activities from site preparation, the installation of underground utilities, and associated light poles. If improperly managed or controlled, and depending upon the time of year and air conditions, the construction activities associated with this project may have the potential to produce off-site dust impacts. The Northern Sierra Air Quality Management District (NSAQMD) therefore recommends mitigation during the construction phase of this project including Mitigation Measure 3B requiring that diesel construction equipment not be idled for more than 5 minutes to prevent smoke and ozone precursors and a requirement for alternatives to open burning of cleared vegetation, as outlined in Mitigation Measure 3C.

Ultramafic Rock

Serpentine soils and ultramafic rock are not mapped on the project site, pursuant to the Northern Sierra Air Quality Management District and the National Geologic Map Database provided by the

United States Geologic Service. However, although unlikely, there is always the potential to encounter these soil types during grading activities. According to the NSAQMD, ultramafic rock typically contains asbestos, a cancer-causing agent. Disturbance of this rock and nearby soil during project construction can result in the release of microscopic cancer-causing asbestos fibers into the air, resulting in potential health and safety hazards. Health risks related to project grading would be reduced by the incorporation of Mitigation Measure 3D, which would require compliance with the Asbestos Airborne Toxic Control Measure (ACTM) for construction.

The mitigation measures recommended above will minimize the potential adverse impacts associated with construction and operational emissions to a level that is ***less than significant with mitigation***.

Mitigation: To offset potentially adverse air quality impacts associated with the project activities, the following mitigation measures shall be required:

Mitigation Measure 3A: Implement dust control measures. Prior to the approval of any Grading or Building Permits, to reduce short-term construction impacts, all future development permits shall comply with the following standards to the satisfaction of the Northern Sierra Air Quality Management District, which shall be noted on all grading and improvement plans and shall be included in project bidding documents:

1. The applicant shall implement all dust control measures in a timely manner during all phases of project development and construction.

2 All material excavated, stockpiled or graded shall be sufficiently watered, treated or converted to prevent fugitive dust form leaving the property boundaries and causing a public nuisance or a violation of an ambient air standard. Watering should occur at least twice daily, with complete site coverage.

3. All areas (including unpaved roads) with vehicle traffic shall be watered or have dust palliative applied as necessary for regular stabilization of dust emissions.

4. All land clearing, grading, earth moving, or excavation activities on a project shall be suspended as necessary to prevent excessive windblown dust when winds are expected to exceed 20 mph.

5. All on-site vehicle traffic shall be limited to a speed of 15 mph on unpaved roads.

6. All inactive disturbed portions of the development site shall be covered, seeded or watered until a suitable cover is established. Alternatively, the applicant shall be responsible for applying non-toxic soil stabilizers to all inactive construction areas.

7. All material transported off-site shall be either sufficiently watered or securely covered to prevent public nuisance.

Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

Mitigation Measure 3B: Minimize Construction Equipment Idling. In order to reduce emissions from construction equipment, the applicant shall include the following standard note on

all Grading Plans, Site Plans or Improvement Plans: "During construction, the contractor shall minimize idling time to a maximum of 5 minutes for all diesel-powered equipment. Signs shall be posted in the designated queuing areas of the construction site to remind off-road equipment operators that idling is limited to a maximum of 5 minutes. Idling of construction-related equipment and construction related vehicles is not recommended within 1,000 feet of any sensitive receptor."
Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans*
Reporting: *Planning Department approval of Grading Permits or Building Permits / Complaint driven*
Responsible Agencies: *Planning and Building Department, Code Compliance Division*

Mitigation Measure 3C: Use Alternative Methods to Open Burning for Vegetation Disposal. Open burning of site-cleared vegetation is prohibited. Among suitable alternatives are chipping, grinding, hauling to an approved disposal site, cutting for firewood, and conversion to biomass fuel.
Timing: *Prior to issuance of Grading Permits, Building Permits or Improvement Plans and during construction*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

Mitigation Measure 3D: Comply with the Asbestos Airborne Toxic Control Measure (ACTM) for construction. If serpentine, ultramafic rock, or naturally occurring asbestos is discovered during construction or grading, the Northern Sierra Air Quality Management District shall be notified no later than the following business day and specific requirements contained in Section 93105 of Title 17 of the California Code of Regulations shall be strictly complied with. This measure shall be included as a note on all grading and improvement plans.
Timing: *Prior to issuance of the grading permits and improvement plans and during grading activity*
Reporting: *Approval of the grading permit and improvement plans*
Responsible Agency: *Northern Sierra Air Quality Management District*

4. BIOLOGICAL RESOURCES

Existing Setting: The habitat of the project area consists of Pacific Northwest Subalpine Forest and Montane Conifer Forest. The United States Geological Survey identifies Upper Castle Creek on the north-eastern end of the parcel as a watercourse, but it will not be impacted by the project since it is not in the same vicinity of the project site. No other wetlands or other aquatic features were identified on the USGS map. Based on history provided by the applicant, the cross-county skiing trails are essentially modified old logging roads. The Boreal lease area of the parcel is highly developed with a ski lodge, chair lifts, an eight-unit condominium, a large parking lot, an extreme sports training facility, outdoor skate parks, an equipment maintenance shop, cellular towers, and other less prominent structures. The portion of the parcel related to the Auburn Ski Club has less intense development and includes a time keeping tower, a retaining wall for snow, an equipment repair shop, the lodge, and a parking lot. The site is developed with many culverts to control the flow of water from the melting snow and to prevent flooding. Based on a walk of the lower loop, the proposed locations of the poles are along a dirt path that is covered with only light amounts of vegetation or rocks. The land is predominately barren because the snow cover appears to have killed the underlaying vegetation. There are many trees in the area which are mainly second growth lodgepole pines and red fir. Higher up in sunny areas are some Jeffery pines and a scattering of western white pine. The project applicant has verified that no trees will be removed for the installation of the light poles.

4.2 AIR QUALITY

Section 4.0, Environmental Analysis, provides a description of the analytical methodology that DPR applied to each resource category, including Air Quality, from a Program perspective.

4.2.1 EXISTING CONDITIONS

4.2.1.1 Methods

Quantification of air quality emissions resulting from Program Actions implemented at Remediation Areas was conducted and assumptions documented to ensure that: (1) Project Actions at Remediation Areas were consistent with the programmatic approach; (2) identified impacts not previously considered in the programmatic analysis would be reduced to less than significant by implementing Standard and Specific Project Requirements and mitigation measures evaluated in the Program EIR; and (3) Project Requirements and all applicable mitigation measures identified in the Program EIR would be incorporated.

4.2.1.2 Climate

The Park is located in the foothills of the Sierra Nevada Mountains in western Nevada County, an area with gentle to steep topography, warm to hot and dry summers, and cool and wet winters. The area has a semi-Mediterranean climate type, with pronounced summer and winter seasonal variation in temperature and precipitation. Monthly average summer temperatures range from 54° to 85°F and monthly average winter temperatures range from 32° to 54°F. Most precipitation occurs from late October through early May with winter precipitation falling as rain or snow. Wind direction tends to be from the southwest; winds from the west can transport pollutants into the area from the Sacramento Valley and Bay Area. Surface and elevated inversions are common in the late summer and fall. These inversions can cause stagnation of airflow, allowing air pollutants to become concentrated.

Air quality is affected by both the rate and location of pollutant emissions and by meteorological conditions that influence movement, dispersal and formation of pollutants. Atmospheric conditions such as wind speed, wind direction, and air temperature gradients, along with local topography and sunlight, provide the link between air pollutant emissions and air quality.

Existing Regional Air Quality

Pursuant to the 1990 Federal Clean Air Act Amendments, the USEPA classifies air basins (or portions thereof) as "attainment" or "nonattainment" for each of the criteria air pollutants, based on whether or not the National Ambient Air Quality

Standards (NAAQS) had been achieved. Similarly, the California Air Resources Board (CARB) evaluates the attainment status of air basins based on the California Ambient Air Quality Standards (CAAQS). Table 4.2-1, Mountain Counties Air Basin Attainment Status, shows the current attainment status of the air basin that the Empire mine is located. The Mountain Counties air basin, which includes Nevada County, is in attainment or unclassified for all federal standards except the eight-hour ozone standard. The air basin is designated non-attainment for the ozone and PM_{10} CAAQS.

TABLE 4.2-1
MOUNTAIN COUNTIES AIR BASIN ATTAINMENT STATUS

Pollutant	Averaging Time	State Standard	State Standard Attainment Status	National Primary Standard	National Standard Attainment Status
Ozone	1 hour	0.09 ppm	Non-attainment	–[1]	Non-attainment
	8 hours	0.070 ppm2		0.075 ppm	
Carbon Monoxide	1 hour	20 ppm	Unclassified	35 ppm	Unclassified/ Attainment
	8 hours	9.0 ppm		9 ppm	
Nitrogen Dioxide	1 hour	0.18 ppm	Attainment	–	Unclassified/ Attainment
	Annual Avg.	0.030		0.053 ppm	
Sulfur Dioxide	1 hour	0.25 ppm	Attainment	–	Unclassified
	24 hours	0.04 ppm		0.14 ppm	
	Annual Avg.	–		0.030 ppm	
Respirable Particulate Matter (PM_{10})	24 hours	50 µg/m3	Non-attainment	150 µg/m3	Unclassified
	Annual Avg.	20 µg/m3		–	
Fine Particulate Matter ($PM_{2.5}$)	24 hours	–	Unclassified	35 µg/m3	Unclassified/ Attainment
	Annual Avg.	12 µg/m3		15 µg/m3	
Lead	30-day avg.	1.5 µg/m3	Attainment	–	Attainment
	Quarterly	–		1.5 µg/m3	
	Rolling 3-month avg.3	–		0.15 µg/m3	
Hydrogen Sulfide	1 hour	0.03 ppm	Unclassified	–	–
Sulfates	24 hour	25 µg/m3	Attainment	–	–
Visibility Reducing Particles	8 hour	Extinction of 0.23/km; visibility of 10 miles or more	Unclassified	–	–

Notes:
[1] Federal One Hour Ozone National Ambient Air Quality Standard was revoked on June 15, 2005.
[2] This concentration was approved by the Air Resources Board on April 28, 2005 and became effective May 17, 2006.
[3] Final rule signed October 15, 2008. Proposed standard not yet effected – Nevada County will be nonattainment upon effective date.

Source: California Air Resources Board, 2007b. Area Designation Maps,http://www.arb.ca.gov/desig/ad m/adm.htm, Maps current as of February, 2009.

Compliance with ambient air quality standards is determined for some pollutants with the use of a stationary monitoring network. The Northern Sierra Air Quality Management District (NSAQMD) maintains ambient air quality monitoring stations in Nevada County. The closest monitoring station is located in the City of Grass Valley (at the Litton Building), approximately 16 miles from the Park. The Grass Valley monitoring station currently monitors ozone and particulate matter with aerodynamic diameters equal to or less than 10 microns (PM_{10}) and equal to or less than 2.5 microns ($PM_{2.5}$). The most recent published data for the monitoring station are presented in Table 4.2-2, Air Quality Data Summary (2004-2008). Table 4.2-2 includes a comparison of monitored air pollutant concentrations from the Grass Valley station with state and national ambient air quality standards.

TABLE 4.2-2
AIR QUALITY DATA SUMMARY (2004-2008)

Pollutant-Monitor Location	Monitoring Data by Year						
	Standards[a]						
	National	State	2004	2005	2006	2007	2008
OZONE-GRASS VALLEY-LITTON BUILDING							
Highest 1 Hour Average (ppm)[b]	–	0.09	0.126	0.128	0.112	0.113	0.111
Days over State Standard			11	15	19	5	8
Highest 8 Hour Average (ppm)[b]	0.075	0.07	0.111	0.120	0.105	0.096	0.108
Days over National 8-hour Standard			42	42	60	36	24
Days over State 8-hour Standard			71	66	81	55	42
PARTICULATE MATTER (PM_{10})-GRASS VALLEY-LITTON BUILDING[c]							
Highest 24 Hour Average (µg/m3)[b]-National Measurement	150	50	37.8	32.7	52.1	NA	NA
Days over National Standard[d]			0	0	0	NA	NA
Annual Arithmetic Mean (µg/m3)[b]		20	NA	NA	NA	NA	NA
PARTICULATE MATTER ($PM_{2.5}$)-GRASS VALLEY-LITTON BUILDING							
Highest 24 Hour Average (µg/m3)[b]	35		17.0	10.0	32.0	22.0	102.2
Days over 24-hour National Standard			0	0	0	0	NA
National Standard Annual Average (µg/m3)[b]	15		NA	NA	6.2	4.9	NA
State Standard Annual Average (µg/m3)[b]		12	NA	NA	6.2	NA	NA

Notes:
Values in bold are in excess of at least one applicable standard. NA = Not Available.
a. Generally, State standards and national standards are not to be exceeded more than once per year.
b. ppm = parts per million; µg/m3 = micrograms per cubic meter.
c. No State measurement and exceedance data is available for PM_{10} at his monitoring station.
d. PM_{10} is not measured every day of the year. Number of estimated days over the standard is based on 365 days per year.

4.2.1.3 Sensitive Receptors

Sensitive receptors include individuals as well as groups relating to specific land uses; some receptors are considered more sensitive than others to air pollutants. Greater than average sensitivity results from pre-existing health problems, developmental age, proximity to emissions source, and/or duration of exposure to air pollutants. The ARB has identified the following people who are most likely to be affected by air pollution: children under 14, the elderly over 65, athletes, and people with cardiovascular and chronic respiratory diseases. These groups are classified as sensitive receptors. Locations that could contain a high concentration of these sensitive population groups include residential areas, hospitals, daycare facilities, elder care facilities, long-term care facilities, schools, and parks. For example, residential areas could be considered locations including sensitive receptors because people usually stay home for extended periods of time, with associated greater exposure to ambient air quality and some residents will be members of sensitive population groups. Another example is that recreational areas are also considered potential locations of sensitive receptors because engaging in vigorous exercise placing a higher demand on the human respiratory system.

Six houses and two mobile home pads used for DPR Park personnel housing are situated within the Park; currently three of the houses and one of the mobile home pads accommodate eight year-around residents (Clark 2008, Munson 2008a). In addition, private homes are located along Osborne Hill Road. Osborne Hill Road is a private, residential street situated to the east of Osborne Hill and the Park boundary (Wells 2008).

Two public facilities, Grass Valley Seventh Day Adventist Church on Osborne Hill Road and Calvary Bible Church of Grass Valley on SR 174, are situated within several hundred feet of the eastern Park boundary and within ½ mile of Osborne Hill. Both of these facilities include could include sensitive receptors (Superpages.com 2008).

Schools within close proximity of the Park include: Union Hill Elementary School (approximately ¼ mile from the Park), Hennessy Elementary School (approximately 1 mile from the Park), Lyman Gilmore Middle School (approximately 2 miles from the Park), and Sierra Foothills High School (approximately 1 mile from the Park) (Google Maps 2008) (see Figure 4.10-1).

4.2.1.4 Pollutants and Effects

This subsection provides a general background of typical air contaminants.

Ozone

Ground level ozone (O_3) is not emitted directly into the atmosphere, but is a secondary air pollutant produced through a complex series of photochemical reactions involving reactive organic gases (ROG) and nitrogen oxides (NO_x). Significant ozone production generally requires ozone precursors to be present in a stable atmosphere with strong sunlight for approximately 3 hours. Precursors are emitted by a number of industrial and mobile sources. Ozone is a regional air pollutant because it is not emitted directly by sources, but is formed downwind of sources of ROG and NO_x under the influence of wind and sunlight. Ozone concentrations tend to be higher in the late spring, summer, and fall, when the long sunny days create conditions conducive to the formation and accumulation of secondary photochemical compounds, like ozone.

Short-term exposure to ozone can irritate the eyes and cause constriction of the airways. Besides causing shortness of breath, both short-term and long-term exposure to ozone can aggravate existing respiratory diseases such as asthma, bronchitis, and emphysema. Long-term exposure to ozone can potentially cause damage to natural ecosystems such as forests and foothill communities and damages agricultural crops and some man-made materials, such as rubber, paint and plastics.

Because ozone is formed by secondary photochemical reactions and isn't directly emitted from any Project sources, it was not evaluated quantitatively. ROGs and NO_x were evaluated as a surrogate for ozone.

Carbon Monoxide

Ambient carbon monoxide (CO) concentrations normally are considered a local effect and typically correspond closely to the spatial and temporal distributions of vehicular traffic. Wind speed and atmospheric mixing also influences CO concentrations. Under inversion conditions, CO concentrations could be distributed more uniformly over an area that could extend some distance from vehicular sources. When inhaled at high concentrations, CO combines with hemoglobin in the blood and reduces the oxygen-carrying capacity of the blood resulting in reduced oxygen reaching the brain, heart, and other body tissues. This condition is especially critical for people with cardiovascular disease, chronic lung disease, or anemia, as well as for fetuses. Even healthy people exposed to high CO concentrations can experience headaches, dizziness, fatigue, unconsciousness, and even death. The health threat from lower levels of CO is most serious for those who suffer from heart disease, like angina, clogged arteries, or congestive heart failure. For a person with heart disease, a single exposure to CO at low levels could cause chest pain and reduce that person's

ability to exercise; repeated exposures could contribute to other cardiovascular effects.

Carbon monoxide concentrations have declined dramatically in California due to existing controls and programs. Most areas of the state including the Project region have no problem meeting the state and federal carbon monoxide standards. Carbon monoxide concentrations are expected to continue declining due to the ongoing retirement of older, pollution-prone vehicles from the mix of vehicles on the road network.

Nitrogen Dioxide

Nitrogen dioxide (NO_2) is a reddish brown gas that is a by-product of combustion processes; automobiles and industrial operations are the main sources of NO_2. NO_2 could be visible as a coloring component of a brown cloud on high pollution days, especially in conjunction with high ozone levels.

NO_2 is an air quality concern because it acts as a respiratory irritant and is a precursor of ozone. NO_2 is a major component of the group of gaseous nitrogen compounds commonly referred to as nitrogen oxides (NO_x). NO_x are produced by fuel combustion in motor vehicles, industrial stationary sources (such as industrial activities), ships, aircraft, and rail transit. Typically, NO_x emitted from fuel combustion are in the form of nitric oxide (NO) and NO_2. NO is often converted to NO_2 when it reacts with ozone or undergoes photochemical reactions in the atmosphere. Therefore, emissions of NO_2 from combustion sources are typically evaluated based on the amount of NO_x emitted from the source. Additionally, besides contributing to tropospheric ozone, NO_2 also contributes to the formation of PM_{10} and $PM_{2.5}$, both of which contribute to respiratory disease and visibility degradation.

Respirable Particulate Matter

Respirable particulate matter consists of particulate matter that is 10 microns (a micron is one-millionth of a meter) or less (PM_{10}) in aerodynamic diameter and 2.5 microns or less ($PM_{2.5}$) in aerodynamic diameter, respectively. PM_{10} and $PM_{2.5}$ represent fractions of particulate matter that can be inhaled into the air passages and the lungs and can cause adverse health effects. Some sources of particulate matter (such as wood burning in fireplaces, demolition, and construction activities) are more local in nature, while others, such as vehicular traffic, have a more regional effect. Very small particles of certain substances (e.g., sulfates and nitrates) can cause lung damage directly, or can contain adsorbed gases (e.g., chlorides or ammonium) that could be injurious to health. Large dust particles (diameter greater than 10 microns) settle out rapidly and are easily filtered by human breathing passages. This large dust is of more concern

as a soiling nuisance rather than a health hazard. The remaining fraction, PM_{10} and $PM_{2.5}$, are a health concern particularly at levels above the federal and state ambient air quality standards. $PM_{2.5}$ (including diesel exhaust particles) is thought to have greater effects on health, because these particles are so small and thus, are able to penetrate to the deepest parts of the lungs.

Scientific studies have suggested links between respirable particulate matter and numerous health problems including asthma, bronchitis, acute and chronic respiratory symptoms such as shortness of breath and painful breathing. Recent studies have shown an association between morbidity and mortality and daily concentrations of particulate matter in the air. Children are more susceptible to the health risks of PM_{10} and $PM_{2.5}$ because their immune and respiratory systems are still developing.

Despite important gaps in scientific knowledge and continued skepticism, a comprehensive evaluation of the research findings provides persuasive evidence that exposure to fine particulate air pollution has adverse effects on cardiopulmonary health (Dockery and Pope 2006). The California Air Resources Board (ARB) has estimated that achieving the ambient air quality standards for PM_{10} could reduce premature mortality rates by 6,500 cases per year (ARB 2002).

As the discussion above illustrates, the main regulatory focus for controlling PM_{10} and $PM_{2.5}$ is to reduce potential health risks; however, particulates can also damage materials and reduce visibility.

Sulfur Dioxide

Sulfur dioxide (SO_2) is a combustion product of sulfur or sulfur-containing fuels such as coal, fuel oil, and diesel. SO_2 is also a precursor to the formation of atmospheric sulfate, particulate matter and contributes to potential atmospheric sulfuric acid formation that could precipitate downwind as acid rain.

SO_2 also contributes to the atmospheric formation of suspended particulate in the PM_{10} and $PM_{2.5}$ size fractions. Ambient SO_2 concentrations have been reduced in recent years due to restriction on the sulfur content in fuel.

Lead

Lead is a criteria pollutant for which there are federal and state ambient air quality standards, as well as a TAC. In the Project area, ambient lead concentrations currently meet state standards, which are more stringent than federal standards. Lead has a range of adverse neurotoxin health effects, and was formerly released into the atmosphere primarily via leaded gasoline

products. The phase-out of leaded gasoline in California resulted in decreasing levels of atmospheric lead. However, due to lead concentrations in some soils at the Park that were above the U.S. EPA Region 9 PRG, lead was evaluated as a possible soil PCOC for this assessment.

Odors

Though offensive odors from stationary sources rarely cause any physical harm, they are unpleasant and can lead to public distress. The frequency and severity of the odor impacts depend on the nature, frequency and intensity of the source; wind speed and direction; and the sensitivity of receptors. The CEQA Guidelines recommend that odor impacts be considered for any proposed new odor sources located near existing receptors, as well as any new sensitive receptors located near existing odor sources. Generally, increasing the distance between the receptor and the source will mitigate odor impacts.

Greenhouse Gases

Some gases in the atmosphere affect the Earth's heat balance by absorbing infrared radiation. These gases can prevent the escape of heat in much the same way as glass in a greenhouse. This is often referred to as the "greenhouse effect," and it is responsible for maintaining a habitable climate. On Earth, the gases believed to be most responsible for global warming are water vapor, carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6). Enhancement of the greenhouse effect occurs when concentrations of these gases exceed the natural concentrations in the atmosphere. Of these greenhouse gases (GHG), CO_2 and methane are emitted in the greatest quantities from human activities. Emissions of CO_2 are largely by-products of fossil fuel combustion, whereas methane primarily results from off-gassing associated with agricultural practices and landfills and from the natural decay of materials in the environment. SF_6 is a GHG commonly used in the utility industry as an insulating gas in transformers and other electronic equipment. SF_6, while comprising a small fraction of the total GHGs emitted annually world-wide, is a much more potent GHG with 23,900 times the global warming potential as CO_2. Global warming potential is the potential of a gas or aerosol to trap heat in the atmosphere. CO2 is assigned a global warming potential of 1. There is widespread international scientific agreement that human-caused increases in GHGs has and will continue to contribute to global warming, although there is much uncertainty concerning the magnitude and rate of the warming.

Globally, climate change has the potential to impact numerous environmental resources through potential, though uncertain, impacts related to future air temperatures and precipitation patterns. In California the effects of global

warming could include loss in snow pack, sea level rise, more extreme heat days per year, more high ozone days, more large forest fires, and more drought years (ARB 2007f). The projected effects of global warming on weather and climate are likely to vary regionally; however, these are expected to include the following direct effects (IPCC 2001):

- Higher maximum temperatures and more hot days over nearly all land areas;
- Higher minimum temperatures, fewer cold days and frost days over nearly all land areas;
- Reduced diurnal temperature range over most land areas;
- Increase of heat index over land areas; and
- Increased intensity of precipitation events.

Also, there are many secondary effects that are projected to result from global warming, including global rise in sea level, impacts to agriculture, changes in disease vectors, and changes in habitat and biodiversity. Because the possible outcomes and the feedback mechanisms involved are not fully understood, more research is required, and the potential for substantial environmental, social, and economic consequences over the long term could be great.

Toxic Air Contaminants

Non-criteria air pollutants, or TACs, are airborne substances that are capable of causing short-term (acute) and/or long-term (chronic or carcinogenic, i.e., cancer-causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. They could be emitted from a variety of common sources including gasoline stations, automobiles, dry cleaners, industrial operations, and painting operations. The current California list of TACs includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

Diesel Particulate Matter (DPM)

In 2001, the ARB assessed the statewide health risks from exposure to diesel exhaust and to other toxic air contaminants. It is difficult to distinguish the health risks of diesel emissions from the other air toxics, since diesel exhaust contains about 40 different TACs. The ARB study (ARB 2000) detected diesel exhaust by using ambient air carbon soot measurements as a surrogate for diesel emissions. The Study reported that in 2000, the statewide cancer risk from exposure to diesel exhaust was about 540 cancer cases per million people as compared to a total risk for exposure to all ambient air toxics of 760 cancer cases per million. This

estimate of risk from diesel exhaust, which accounts for about 70 percent of the total risk from TACs, included both urban and rural areas in the State. It can be considered a plausible worst-case for the State, since it assumes constant exposure to outdoor concentrations of diesel exhaust and does not account for expected lower concentrations indoors, where people spend most of their time.

The California Office of Environmental Health Hazard Assessment (OEHHA) has determined that chronic exposure to DPM can cause carcinogenic and non-carcinogenic health effects. OEHHA has specified an acceptable exposure level (AEL) of DPM as a non-carcinogen of 5 µg/m3 (micrograms per cubic meter) (annual average). OEHHA has also established a unit risk value for DPM, which is the increased probability of contracting cancer if exposed to an average concentration of 1 µg/m3 for 70 years. The unit risk value established for DPM is 300 in a million per microgram per cubic meter.

TAC Metals (Arsenic/Lead/Cadmium)

Project areas containing contaminants in soil are potential sources of air quality impacts. From 2006 to 2008, MFG measured metal concentrations in soils and mine waste rock materials at various Park locations. MFG analyzed the materials for the following metals and their concentrations at the Park: antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, molybdenum, nickel, selenium, silver, thallium, vanadium, zinc, and mercury. Of these seventeen metals, arsenic, lead, and cadmium were found to be PCOCs within the Park and Remediation Areas when compared with the commercial/industrial CHHSLs or, in the case of lead, the U.S. EPA PRG.

Average metal concentrations that are below the commercial/industrial CHHSL/PRG values are generally expected to be below thresholds for risk to human health; therefore, the remaining metals are not considered PCOC (see screening analysis in Appendix D, Air Quality Assessment Calculations and Results). The use of the industrial/commercial CHHSL values are considered conservative for construction activities that would occur over relatively short periods of time. Commercial/industrial CHHSLs were developed using an exposure scenario of 250 days per year for 20 years. Although park workers could be on-site for such exposure periods, remediation activities would likely not occur for such a continuous, extended period.

Arsenic (As) is a metallic element with three allotropic forms, yellow, black, and gray, of which the brittle, crystalline gray is the most common. Arsenic

exists as both organic and inorganic compounds. Inorganic and organic arsenic occur naturally in the environment with inorganic forms being more abundant. Inorganic arsenic is associated with other metals in igneous and sedimentary rocks, and it also occurs in combination with other elements, especially oxygen, chlorine and sulfur. Organic arsenic contains carbon and hydrogen and is usually less harmful than inorganic arsenic; therefore, inorganic arsenic is the only PCOC at the Park. The majority of atmospheric arsenic is inorganic arsenic. Through ingestion, inhalation and skin permeation, arsenic can cause minor to serious health effects. California has stated under Assembly Bill 1807 and Proposition 65 that inorganic arsenic compounds are cancer-causing compounds. Non-cancer effects from arsenic exposure include irritation of the eyes, nose and bronchi, vascular disorders (hemolysis), neurological disturbances, adverse reproductive effects, and liver or kidney damage.

Lead (Pb) is a bluish gray metal that occurs naturally in various mineral forms in the earth's crust. It has been widely used for hundreds of years because it is readily shaped and molded, and is resistant to corrosion. California considers lead to be a cancer-causing metal. Non-cancer effects from lead are regulated through the ambient air quality standard for lead (discussed in the criteria pollutant section for lead above).

Cadmium (Cd) is a soft, bluish-white metal that occurs naturally at low concentrations in various mineral forms. Materials more concentrated in cadmium can result from refinement and processing. California considers cadmium to be a cancer-causing metal. Target organs for non-cancer effects include the kidneys and the respiratory system.

Asbestos

Asbestos refers to several naturally-occurring fibrous minerals that can be found throughout California. Asbestos is most commonly found in ultrabasic rock that has undergone partial or complete alteration to serpentine rock, which often contains chrysotile asbestos. Asbestos fibers are released when ultrabasic or serpentine rock is abraded, broken, or crushed. The largest concern regarding asbestos is from breathing the fibers which can stay airborne for very long periods once disturbed. If inhaled or swallowed, asbestos fibers can cause cancer and other diseases by remaining and accumulating in the lungs or digestive tract.

The Grass Valley Gold Mining District contains areas of ultrabasic rocks. However, no serpentine or serpentinite soils have been identified within the Park at Project sites (Breedy and Brussard 2002). Therefore, asbestos is not considered a COC in subsequent air analyses.

Potential Constituents of Concern at the Park

Air pollutant emissions include mobile sources such as construction equipment and fugitive dust from surface disturbances. Mobile sources would result in tailpipe emissions containing criteria pollutants (ozone, carbon monoxide, nitrogen dioxide, PM_{10}, $PM_{2.5}$, and lead) and TACs. For construction equipment tailpipe emissions, diesel particulate matter contains many TACs and is a primary concern.

Fugitive dust from surface disturbances would consist of particulate matter containing historically placed Potential Constituents of Concern (PCOC). PCOC are substances that could potentially exceed regulatory screening levels and become Constituent of Concern (COC). COC are identified for each Remediation Area when the concentrations of PCOC exceed screening levels for protection of human health or water quality objectives. Residential CHHSLs have been used to identify COC in soil for the Mine Yard and Stamp Mill, Historic Grounds, and Residences and Residences' Yards, while the commercial/industrial CHHSLs or industrial PRG for lead and cyanide have been used for the other Remediation Areas. EPA storm water benchmarks or Basin Plan water quality objectives have been used to identify COC for waters. COC could potentially be discharged to waters of the state and cause, or threaten to cause, pollution or a nuisance, including impacts to beneficial uses of waters of the state. Release of COC could pose unacceptable risk to human health and the environment.

4.2.2 REGULATORY SETTING

Air quality within the region is addressed through the efforts of various federal, state, regional, and local government agencies. These agencies work jointly, as well as individually, to improve air quality through legislation, regulations, planning, policy-making, education, and a variety of programs. The air pollutants of concern and agencies primarily responsible for improving the air quality and the pertinent regulations are discussed below.

4.2.2.1 Federal

The Federal Clean Air Act (FCAA) requires the U.S. EPA to identify National Ambient Air Quality Standards (NAAQS or national standards) to protect public health and welfare. National standards have been established for ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, PM_{10}, $PM_{2.5}$, and lead.

The FCAA has provisions that require each state to prepare an air quality control plan referred to as the State Implementation Plan (SIP) and requires that states containing areas that violate the NAAQS revise their SIP to incorporate additional control measures to reduce air pollution. The SIP is periodically modified to reflect the latest

emissions inventories, planning documents, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The U.S. EPA reviews all state SIPs to determine if they conform to the mandates of the FCAA and will achieve air quality goals when implemented. If the U.S. EPA determines a SIP to be inadequate, it can prepare a Federal Implementation Plan (FIP) for the non-attainment area and can impose additional control measures. Failure to submit an approvable SIP or to implement the plan within mandated timeframes can result in sanctions being applied to transportation funding and stationary air pollution sources in the air basin.

4.2.2.2 State

The ARB manages air quality, regulates mobile emissions sources, and oversees the activities of County Air Pollution Control Districts and Regional Air Quality Management Districts. ARB establishes state ambient air quality standards and vehicle emissions standards.

California has adopted some ambient standards that are more stringent than the federal standards for the criteria air pollutants. These are shown in Table 4.2-1. Under the California Clean Air Act (CCAA) patterned after the FCAA, areas have been designated as attainment or nonattainment with respect to the state standards. Table 4.2-1 summarizes the attainment status with California standards in the Project area. Nevada County, in the Mountain Counties air basin, is in attainment or unclassified for all state standards except the one-hour ozone standard and the PM_{10} standard.

Toxic Air Contaminants

The California Health and Safety Code defines TACs as air pollutants which could cause or contribute to an increase in mortality or in serious illness, or which could pose a present or potential hazard to human health. The State Air Toxics Program was established in 1983 under Assembly Bill (AB) 1807 (Tanner). A total of 243 substances have been designated TACs under California law; they include the 189 (federal) hazardous air pollutants (HAPs) adopted in accordance with AB 2728. The Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588) seeks to identify and evaluate risk from air toxics sources; however, AB 2588 does not regulate air toxics emissions. Toxic air contaminant emissions from individual facilities are quantified and prioritized. "High-priority" facilities perform a health risk assessment and, if specific thresholds are violated, are required to communicate the results to the public in the form of notices and public meetings. NSAQMD implements AB 2588, and is responsible for prioritizing facilities that emit air toxics.

In August 1998, ARB identified particulate emissions from diesel-fueled engines (DPM) as TACs because of their ability to cause cancer. ARB subsequently developed the Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines and Vehicles (ARB 2000). The document represents

proposals to reduce diesel particulate emissions, with the goal of reducing emissions and associated health risks by 75 percent in 2010 and by 85 percent in 2020. The program aims to require the use of state-of-the-art catalyzed diesel particulate filters and ultra low sulfur diesel fuel on diesel-fueled engines. ARB regulations and programs that have been implemented to achieve these goals and that would apply to the project include the following (ARB 2004):

- Cleaner Diesel Fuel: In 2003, the ARB adopted a new regulation lowering the sulfur content of diesel fuel to enable the use of advanced emission control technologies for diesel engines.
- Standards for New On-Road Diesel Engines: In 2001, ARB adopted new PM and NO_x emission standards to clean up large diesel engines that power big-rig trucks, trash trucks, delivery vans and other large vehicles. These standards took effect in 2007 and as the new trucks meeting these standards replace older trucks, the newer trucks will have dramatically reduced diesel PM emissions compared to the average on-road engines currently used in California.
- Standards for New Off-Road Diesel Engines: U.S. EPA has proposed new standards that would reduce the emission from off-road engines to levels similar to the on-road engines discussed above by 2010-2012. These standards will dramatically reduce diesel PM emission compared to the off-road engines currently sold in California. In addition, ARB adopted a new regulation effective May 16, 2008 to reduce emissions from existing off-road diesel vehicles used in California construction, mining and other industries. The regulation is expected to significantly reduce emissions of NO_x and PM. In total, the regulation is expected to reduce 187,000 tons of NO_x emissions and 33,000 tons of PM emissions between 2009 and 2030. The regulation is expected to achieve the 2020 goal of reducing PM 85 percent from 2000 baseline levels set forth in ARB's 2000 Diesel Risk Reduction Plan. It is also projected to reduce PM emissions 37 percent from the 2000 baseline by 2010, and 92 percent by 2020. NO_x is expected to be about 13 percent lower in 2015 as a result of the regulation, and by 2020, NO_x emissions would be 32 percent lower than would occur in the absence of the regulation.
- New Regulations for In-Use Diesel Engines:
  - Stationary Engines Standards (Adopted 2004): Most stationary diesel-fueled engines in California are used as emergency backup in the event of a power failure. Others are used to pump water in some areas, to run compressors, and other equipment. ARB standards for these engines will bring an approximate 80 percent PM reduction by 2020 through stricter standards for new engines and requirements to retrofit existing engines.

- Portable Engines Standards (Adopted 2004): Most portable diesel engines in California are used to power pumps, airport ground support equipment, oil drilling rigs, generators, and a variety of other equipment. ARB's rule requires four stepped reductions in emissions from portable engines, reaching a 95 percent reduction in PM emissions in 2020 with concurrent significant cuts in smog-forming emissions.

Air Quality and Land Use Handbook

ARB recently published the Air Quality and Land Use Handbook: A Community Health Perspective (ARB 2005). The primary goal in developing the handbook was to provide information that will help keep California's children and other vulnerable populations out of harm's way with respect to nearby sources of air pollution. The handbook highlights recent studies that have shown that public exposure to air pollution can be substantially elevated near freeways and certain other facilities. However, the health risk is greatly reduced with distance. For that reason, ARB provided some general recommendations aimed at keeping appropriate distances between sources of air pollution and sensitive land uses, such as residences.

Climate Change and Greenhouse Gases

In 2005, in recognition of California's vulnerability to the effects of climate change, Governor Schwarzenegger established Executive Order S-3-05, which sets forth a series of target dates by which statewide emission of greenhouse gas would be progressively reduced, as follows:

- By 2010, reduce greenhouse gas emissions to 2000 levels;
- By 2020, reduce greenhouse gas emissions to 1990 levels; and
- By 2050, reduce greenhouse gas emissions to 80 percent below 1990 levels.

In 2006, California passed the California Global Warming Solutions Act of 2006 (Assembly Bill No. 32; California Health and Safety Code Division 25.5, Sections 38500, et seq., or AB 32), which requires the ARB to design and implement emission limits, regulations, and other measures, such that feasible and cost-effective statewide greenhouse gas emissions are reduced to 1990 levels by 2020 (representing an approximate 25 percent reduction in emissions).
In June 2007, ARB directed staff to pursue 37 early actions for reducing greenhouse gas emissions under the California Global Warming Solutions Act of 2006 (AB 32). The broad spectrum of strategies to be developed (including a Low Carbon Fuel Standard, regulations for refrigerants with high global warming potentials, guidance and protocols for local governments to facilitate greenhouse

gas reductions, and green ports) reflects that the serious threat of climate change requires action as soon as possible (ARB 2007c).

In addition to approving the 37 greenhouse gas reduction strategies, ARB directed staff to further evaluate early action recommendations made at the June 2007 meeting, and to report back to ARB within six months. The general sentiment of ARB suggested a desire to try to pursue greater greenhouse gas emissions reductions in California in the near-term. Since the June 2007 ARB hearing, ARB staff has evaluated all 48 recommendations submitted by several stakeholder and several internally-generated staff ideas and published the Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions In California Recommended For Board Consideration in October 2007 (ARB 2007d). Based on its additional analysis, ARB staff is recommending the expansion of the early action list to a total of 44 measures.

The 2020 target reductions are currently estimated to be 169 million metric tons/year of CO_2 equivalent (CO_2e) (ARB 2008b). In total, the 44 recommended early actions have the potential to reduce greenhouse gas emissions by at least 42 million metric tons/year CO_2e emissions by 2020, representing about 25 percent of the estimated reductions needed by 2020. ARB staff is working on 1990 and 2020 greenhouse gas emission inventories in order to refine the projected reductions needed by 2020. The 44 measures are in the sectors of fuels, transportation, forestry, agriculture, education, energy efficiency, commercial, solid waste, cement, oil and gas, electricity, and fire suppression. The Program Actions evaluated in this Draft PEIR do not fit into any of these sectors.

In addition to identifying early actions to reduce greenhouse gases, ARB is also developing mandatory greenhouse gas reporting regulations pursuant to requirements of AB 32. The regulations are expected to require reporting for certain types of facilities that make up the bulk of the stationary source emissions in California. Currently, the draft regulation language identifies major facilities as those that generate more than 25,000 metric tons/year of CO_2e. Cement plants, oil refineries, electric-generating facilities/providers, cogeneration facilities, and hydrogen plants and other stationary combustion sources that emit more than 25,000 metric tons/year CO_2e, make up 94 percent of the point source CO_2e emissions in California (ARB 2007e).

In January 2008, the California Air Pollution Control Officers Association (CAPCOA) issued a "white paper" on evaluating greenhouse gas emissions under CEQA (CAPCOA 2008). The CAPCOA white paper strategies are not guidelines and have not been adopted by any regulatory agency; rather, the paper is offered as a resource to assist lead agencies in considering climate change in environmental documents.

The ARB published a Climate Change Draft Scoping Plan (ARB 2008b) that outlines reduction measures to lower the state's greenhouse gas emissions to meet the 2020 limit. The Draft Scoping Plan "proposes a comprehensive set of actions designed to reduce overall carbon emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, and enhance public health while creating new jobs and enhancing the growth in California's economy." ARB will release a Proposed Scoping Plan in early October to the Board for consideration at its meeting in November 2009. Measures included in the Scoping Plan will be developed over the next three years and be in place by 2012.

4.2.2.3 Regional

As a state agency, DPR is exempt from local regulations, including general plans, specific plans, and zoning ordinances, to the extent that such requirements conflict with DPR's own General Plan for the Park (California Constitution Article XI Section 7). However, DPR must comply with the Park's General Plan, as well as applicable state and federal rules and regulations governing historic buildings, structures, and districts and any local regulations applicable to impacts located outside the Park boundaries.

Northern Sierra Air Quality Management District

The Project is under jurisdiction of the NSAQMD, which regulates air quality according to the standards established in the Clean Air Acts and amendments to those acts. The NSAQMD regulates air quality through its permitting authority and through air quality related planning and review activities over most types of stationary emission sources.

The NSAQMD is comprised of three contiguous, mountainous, rural counties in northeastern California (Nevada, Sierra, and Plumas counties). The NSAQMD is part of the Mountain Counties Air Basin. The NSAQMD enforces controls on stationary sources of air pollutants through its permit and inspection programs and regulates open burning. Through its permitting authority, the NSAQMD enforces limitations of criteria and toxic air contaminant emissions. Other NSAQMD responsibilities include monitoring air quality, preparing of implementation plans, and responding to citizen air quality complaints.

The NSAQMD reviews development proposals to ensure that air quality impacts are adequately assessed and mitigated in accordance with attainment planning efforts. Planning efforts are focused on preventing air quality degradation and violations of the California and national ambient air quality standards. Additional responsibility includes acting as a lead or commenting agency on CEQA evaluations. For this purpose, the NSAQMD has prepared the "Guidelines for Assessing and Mitigating Air Quality Impacts of Land Use Projects." These

Guidelines explain that the NSAQMD has adopted District Rule 226 which requires dust control plans that are vital in limiting fugitive emissions from surface-disturbing activities.

4.2.2.4 Local

Nevada County General Plan

The overall air quality in Nevada County is very good. However, there are several pollutants that do not meet state and federal AAQS. The Nevada County General Plan includes an Air Quality element (Nevada County 1996) that contains a number of guiding goals, and objectives that would apply to the proposed Project. The County has adopted the following applicable goals, objectives, and policies in the Air Quality element.

Goal 14.1: Attain, maintain and ensure high air quality.

Objective 14.2: Implement standards that minimize impacts on and/or restore air quality.

Policy 14.4: Encourage and cooperate with the NSAQMD, or any successor agency, to:

a. Adopt control measures to reduce pollutant emissions from open burning;
b. Develop a program to regulate and control fugitive dust emissions from construction projects; and
c. Identify and establish visibility standards for air quality in the County.

Policy 14.5: Encourage and cooperate with the NSAQMD, or any successor agency, to develop and implement a long-term monitoring program to quantify air quality in the County. The County shall work with the District to identify areas for monitoring and to develop an implementation program to begin on-site monitoring upon project application where a proposal will result in an increase of more than 25 tons per year of non-attainment pollutants (or precursors). The County will also cooperate with the District in developing a monitoring program for CO emissions at key intersections as a basis for consideration of short- to long-term air quality in the preparation of the County Road Improvement Program.

4.2.3 THRESHOLDS OF SIGNIFICANCE

The following thresholds have been prepared based on the State CEQA Guidelines (Appendix G) and Section 15065 of the State CEQA Guidelines. The Project would have a significant impact on air quality if it will:

- Conflict with or obstruct implementation of the applicable air quality plan;
- Violate any air quality standard or contribute substantially to an existing or projected air quality violation;
- Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is a non-attainment zone under an applicable federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);
- Expose sensitive receptors to substantial pollutant concentrations; and
- Create objectionable odors affecting a substantial number of people.

With respect to Greenhouse Gases (GHG) Emissions (OPR 2009) the Project would have a significant air quality impact based on:

- The extent to which the Project could help or hinder attainment of the state's goals of reducing greenhouse gas emissions to 1990 levels by the year 2020 as stated in the Global Warming Solutions Act of 2006;
- The extent to which the Project could result in increased energy efficiency of and a reduction in overall greenhouse gas emissions from an existing facility;
- The extent to which the Project impacts or emissions exceed any threshold of significance that applies to the Project; and
- The extent to which the Project could increase the consumption of fuels or other energy resources, especially fossil fuels that contribute to greenhouse gas emissions when consumed.

Thresholds of significance illustrate the extent of an impact and are a basis from which to apply mitigation measures. In January 2009, the state of California, through the OPH/SCH, published its Interim Greenhouse Gas thresholds (see Table 4.2-3, CARB's Interim GHG Significance Threshold).

The NSAQMD has developed a tiered approach to significance levels for criteria pollutants. A project with emissions qualifying it for Level A thresholds would require the most basic mitigations. Projects that qualify for Level B would require more extensive mitigations, and subsequently, those projects that qualify for Level C would require the most extensive application of mitigation measures. The tiered thresholds for Level A, B and C are given in Table 4.2-4, NSAQMD Emission Significance Thresholds,

for a project's estimated emissions of criteria pollutants in pounds per day. These tiered thresholds will be compared to Program Actions per NSAQMD guidelines.

TABLE 4.2-3
CARB'S INTERIM GHG SIGNIFICANCE THRESHOLD

	CARB
Policy Objective	Capture 90 percent of statewide stationary project emissions.
Exemption	Apply applicable exemption.
Regional GHG Reduction Plan	N/A.
Thresholds	Project < 7,000 $MTCO_2eq/yr$ & meets construction & transportation performance standards.
Performance Standards	See above.
Offsets	Off-site substitution allowed.
Determination	GHG emissions significant, EIR is prepared, if meeting none of the above.

TABLE 4.2-4
NSAQMD EMISSION SIGNIFICANCE THRESHOLDS

Threshold Level	NOx (lbs/day)	ROG (lbs/day)	PM10 (lbs/day)
Level A Thresholds	< 24	< 24	< 79
Level B Thresholds	24-136	24-136	79-136
Level C Thresholds	> 136	> 136	> 136

Source: NSAQMD, 2007.

If emissions for NO_x, ROG and/or PM_{10} exceed 136 pounds per day (Level C), then there is a significant impact; below Level C the impact would be potentially significant. The NSAQMD guidelines suggest that projects with higher emissions (Level C Thresholds) should automatically mitigate more emissions, quantitatively, than would a lower impact project (Level A). Also according to the guidelines, if a new project is unable to provide adequate on-site mitigation of their long-term air quality impacts, an off-site mitigation program could be necessary.

For TACs, the Project's emissions are significant if they result in either of the following:

- A lifetime excess cancer risk greater than 10-in-a-million, or
- An acute or chronic hazard index greater than 1.0.

These thresholds are typical for CEQA air quality assessments throughout California.

In a risk assessment, cancer risk for an individual is expressed as the probability of developing cancer over a 70-year lifetime. The predicted concentrations and health impacts (e.g., cancer risk) presented in a site-specific health risk assessment are assumed to exist in excess of background concentrations or resulting health risks. Cancer risks are typically expressed as “chances per million”.

For example, if the excess cancer risk were estimated to be 10-in-a-million as a result of emissions from a specific source, then the probability of an individual developing cancer would be expected to not exceed 10 chances in a million above the existing probability of developing cancer from other background risks. If a population (e.g., 1 million people) were exposed to the same potential cancer risk (e.g., 10 chances per million), then the statistics would predict that 10 of those million people exposed are likely to develop cancer from a lifetime of exposure (70 years) due to TAC emissions from an emitting source.

Non-cancer health risk of an air toxic is measure by the hazard quotient, the ratio of the reported concentration of an air toxic compound to an acceptable or REL. Typically, for a given set of chemicals, hazard quotients are summed for each organ system that each chemical can affect to obtain a total hazard index. For any organ system, a total hazard index exceeding 1.0 indicates a potential adverse health effect.

4.2.4 ENVIRONMENTAL IMPACTS AND MITIGATION MEASURES

The Program and Project Actions are described in detail in Section 2.0 of the Draft PEIR. The discussion below lists each type of air quality impact identified and provides an analysis of potential impacts from Project Action(s), assesses the significance of each impact, and if necessary, identifies measures that would mitigate impacts to a level below significance.

The COC concentrations in fugitive dust that are considered in the air quality impact analysis are based on concentrations measured at the Project areas throughout the Park. Because it was determined that those areas with the highest pre-project COC could have a potentially significant air quality impact, a programmatic approach has been taken when evaluating each potential Remediation Area. For areas with COC above specified levels, a project-level evaluation will be completed as part of characterization before a particular remediation option is selected for a Remediation Area.

This air quality impact analysis does not evaluate the impacts following completion of the Project (such as exposure to visitors walking on trail systems), but the impacts as a result of the Project Actions that would occur during Project implementation. Fugitive dust from the Remediation Areas is assumed, for the air quality impact analysis, to contain contaminants at pre-remediation concentrations.

This baseline air quality analysis was based on maximum proposed mobile equipment use, hours of operation, and surface disturbance acreage to evaluate compliance with applicable thresholds of significance. These assumptions have been incorporated into all Standard and Specific Project Requirements to ensure that air quality impacts have been considered to the extent feasible prior to determination of whether additional mitigation measures need to be implemented during Program implementation. If Program Actions are implemented within Remediation Areas meeting certain criteria (e.g., ensuring compliance with CEQA significance thresholds) consistent with Standard and Specific Project Requirements, no additional CEQA evaluation would be necessary on an area-specific basis. For those Remediation Area exceeding the criteria specified later in this section, additional characterization and additional mitigation measures could be required.

The following sub-section provides an air quality analysis to determine the anticipated impacts of the proposed Project Actions. Implementation of particular Program Actions at specific Remediation Areas has not been finalized at this time. However, many likely Program Actions have been identified for each Remediation Area. In this resource section, air quality impacts have been analyzed for activities that would be common throughout the proposed projects, including tailpipe emissions from construction equipment and impacts from fugitive dust that would result from surface disturbance. These activities have been analyzed to determine if they could be implemented at the Park while adhering to applicable CEQA significance threshold criteria outlined in Section 4.2.3, above.

4.2.4.1 Sources of Air Quality Impacts

To evaluate the potential air quality impacts and environmental effects of the Project, it is necessary to understand the Project Actions that are likely to be sources of emissions. Program Actions are described in Section 2.6.3. The key Project Actions that could result in air pollutant emissions include:

- Operation of heavy construction equipment;
- Transportation of contaminated soils leaving the Park and importation of clean fill material entering the Park;
- Mobilization and demobilization of heavy construction equipment to the Park;
- Demolition and/or removal of any structures, including temporary facilities;
- Importation of supplies and materials that could be used for remediation activities;
- Temporary and permanent fencing installation;
- Grading activities;
- Boring activities;

- Excavation activities;
- Blasting activities;
- Scarifying activities;
- Planting and seeding activities;
- Stormwater BMP installation and maintenance activities;
- Removal of trees and other vegetation;
- Construction of ancillary structures, including utilities for either a temporary or permanent active water treatment facility;
- Construction and installation of permanent exclusion barriers;
- Construction and maintenance of access roads; and/or
- Monitoring activities.

Based on the Project Actions, the following pollutants and potential sources of air quality impacts were assessed:

1. Criteria pollutants, greenhouse gases (GHGs) and toxic air contaminants (TACs) from mobile exhaust emissions; and
2. Criteria pollutants and TACs from fugitive dust sources.

The TACs of specific concern as a result of the proposed Project Actions are diesel particulate matter (DPM) from on-site mobile construction equipment exhaust (trucks, generators), and arsenic, lead, and cadmium in the soils where the concentration is above the Commercial/Industrial California Human Health Screening Level (CHHSL), or the U.S. EPA Region 9 Preliminary Remediation Goal (PRG) in the case of lead. Asbestos-containing rock, which can be found throughout California, has not been identified within the Park (according to U.S. Geological Survey map data). Therefore, asbestos fibers are not considered a concern from historic mining activities or proposed surface disturbances.

The approach used in this Draft PEIR for the air quality assessment is to provide a analysis to determine the anticipated impacts of Project Actions. Since some of the specific details of the Project Actions have not been finalized at this time, assumptions needed to be made to complete the quantitative portions of the air impact assessment. Before actual Project Actions are carried out at individual Project Areas at the site, the specific details of the planned actions will need to be compared to the assumptions in this impact assessment to determine if the potential impacts have been adequately characterized, or if additional assessments are required (as would be the case when COC levels exceed specified levels as discussed further later in this section).

4.2.4.2 Criteria Pollutant Assessment

The assessment of criteria pollutants takes into account emissions from Project Actions as described above. The assessment also includes associated activities such as worker commute trips. The evaluation of criteria pollutants in this assessment is limited to a comparison of estimated emissions to associated thresholds of significance established by the NSAQMD.

4.2.4.3 Toxic Air Contaminant Assessment

TAC impacts are evaluated by determining if a particular chemical poses a significant risk to human health and, if so, under what circumstances. Both contaminated soil and diesel internal combustion exhaust were considered as potential sources of TAC emissions to air. DPM and metals determined to be COCs are discussed below.

Exposure Pathways

An exposure pathway describes the route a COC could take from its source to its end point and how human and ecological receptors (wildlife, aquatic life, and plants) can come into contact with (or be exposed to) the COC along the route. An exposure pathway has five parts:

1. A source of COC, such as mine and mill related materials;
2. A way for the COC to travel to the point of contact (e.g., water transporting a COC downstream, or wind blowing a COC through the air);
3. A point of exposure or contact with the constituent;
4. A route of exposure such as ingestion (eating, drinking), inhalation (breathing), or dermal contact (touching); and
5. A receptor, such as humans or sensitive wildlife, birds, and plants.

The exposure pathway is considered to be complete when all five parts are present. Conversely, if any one of these five parts is not present, the exposure pathway is considered to be incomplete.

Completed Pathways of Exposure

Completed pathways demonstrate the link between the environment and human exposure. Assumptions were made based on how receptors might come into contact with soil contamination from fugitive dust/soil at the Park. Once reasonable exposure pathways were determined, chronic daily intake was quantified in milligrams of contaminant per kilogram body weight per day. The chronic daily intake (CDI) is the quantity of a chemical which is available to the body for absorption at a membrane exchange boundary, be it via ingestion,

dermal, or inhalation exposure. It is different from the absorbed dose, which is a direct measurement of the concentration of chemical in the blood.

Constituents of Potential Concern (Arsenic/Lead/Cadmium from Soil Contaminants)

The COCs in soil chosen for the air quality assessment for Project Actions (were PCOCs in the soil with average measured concentrations above the CHHSL values, or the U.S. EPA Region 9 PRG for lead. The use of these screening thresholds is conservative in this case because the impacts being assessed are not for human receptors that would be located at the site where Project Actions are taking place, but rather to receptors located at some distance from where these activities are occurring.

PCOC concentrations used for screening purposes were determined based on either the average concentration (calculated as the 95th percentile upper confidence level of the mean), when at least 15 sample values were available, or the maximum concentration, for each potential Remediation Area.

A review of much of the available data suggested that only arsenic, lead, and cadmium concentrations would be above the CHHSL evaluation thresholds for any potential Remediation Area. For purposes of this assessment, it was assumed that the actual concentrations of other metals in soil to be disturbed would be below these thresholds.

Based on the available data, it was estimated that actual PCOC concentrations would not exceed the following values:

- Arsenic: Average concentration of 407 mg/kg; maximum concentration of 15,300 mg/kg.
- Lead: Average concentration of 904 mg/kg; maximum concentration of 5,599 mg/kg.
- Cadmium: Average concentration of 9.9 mg/kg; maximum concentration of 68.2 mg/kg.

Cancer Risks

The cancer risks from COC metals contained in fugitive dust could occur through several pathways (see Table 4.2-7). The total maximum lifetime excess cancer risk due to COC metals exposure was predicted for emissions resulting from Project Actions as well as other non-inhalation pathways.

TABLE 4.2-7
PCOC METALS EXPOSURE PATHWAY SUMMARY

Exposure Route	Pathway Quantified	Exposure Likelihood	Rationale
Inhalation	Yes	Completed pathway	Execution of Program Actions would potentially increase soils coming into contact with public receptors
Ingestion	Yes	Completed pathway	
Dermal contact	Yes	Completed pathway	

Non-Cancer Risks

PCOC metals were also evaluated based upon their known chronic and acute non-carcinogenic human health effects (where applicable). Chronic non-carcinogenic health effects were evaluated for the same exposure pathways assessed for carcinogenic effects. Acute non-carcinogenic health effects were evaluated for the inhalation pathway only, as this was expected to be the most sensitive exposure pathway for acute effects.

Diesel Particulate Matter

When evaluating health risks from diesel exhaust exposure, the potential cancer risk from inhalation exposure to DPM will outweigh the potential non-cancer health impacts. Therefore, inhalation cancer risk is the primary consideration for health effects according to OEHHA and ARB guidelines. When comparing the toxicity of diesel exhaust as a whole to the combined toxicity of the speciated components of diesel exhaust (e.g., Polycyclic Aromatic Hydrocarbon [PAHs], metals), calculated potential cancer risk from inhalation exposure to whole diesel exhaust will outweigh the calculated multipathway cancer risk from the speciated components. For this reason, an analysis of multipathway risk for DPM is not necessary (California EPA 2003). Both carcinogenic and non-carcinogenic health effects from DPM emissions are estimated in this assessment.

Toxic Air Contaminants Impact Assessment Methodology

U.S. EPA's SCREEN3 model was used to determine exposure point concentrations in air for both DPM and PCOC metals. The SCREEN3 model is an appropriate conservative model for determining estimated maximum pollutant concentrations at discrete distances from emissions sources. Emission rates used in the SCREEN3 model were based on particulate matter emissions from both fugitive dust and equipment that result from a maximum daily scenario (discussed further below). The SCREEN3 model was used to calculate

estimated maximum 1-hour concentrations. Maximum annual average concentrations were estimated by multiplying the 1-hour maximum impacts by a conversion factor of 0.1, representing the upper end of the range recommended by the U.S. EPA.

DPM (from mobile equipment exhaust) and PCOC metals (contained in fugitive dust) were modeled as area sources. The area source was defined based on the estimated area that emissions might occur over as a result of Project Action activity. Concentrations at discrete distances from the area source were obtained and the maximum concentration estimated by the SCREEN3 model regardless of distance from the area source was used to determine the maximum exposure point concentration for inhalation health effects.

Health and cancer risk were determined for the maximum daily scenario. The NSAQMD has a significance threshold for health risk exposure to diesel emissions of 10 cancers per million for 70-year exposure. Accordingly, the NSAQMD Nevada County Land Use Guidelines requires that DPM from diesel engine exhaust emissions be identified or evaluated using an approved emissions model.

Cancer Risks

As discussed above, cancer risks from DPM and COC metals concentrations in air would occur through the inhalation pathway. In addition, cancer risk from COC metals was also assessed for the ingestion and dermal contact exposure pathways.

The first step in assessing potential lifetime excess cancer risk (LECR) is to use models to estimate maximum lifetime average exposure point concentrations of DPM and COC metals at locations that members of the public might be exposed. From these concentrations, exposure factors are used to estimate total average dose rates to these hypothetical individuals.

Finally, accepted dose-response factors (e.g. slope factors) are used to estimate the LECR due to potential exposures to DPM and COC metals.

The methodologies used to estimate LECR for each of these TACs and exposure pathways are provided in Appendix D, Air Quality Assessment Calculations and Results.

Non-Cancer Health Effects

As discussed above, chronic non-cancer health effects from DPM and COC metals concentrations in air would occur through the inhalation pathway. In addition, chronic non-cancer health effects from COC metals were also assessed for the ingestion and dermal contact exposure pathways. Acute non-cancer health effects were also estimated for arsenic only (none of the other TACs assessed have acute toxicity factors available for California).

The first step in assessing potential noncancer hazard is to use models to estimate maximum annual average (chronic) or hourly average (acute) exposure point concentrations of DPM and COC metals at locations that members of the public might be exposed. From these concentrations, exposure factors are used to estimate total average dose rates to these hypothetical individuals (no adjustment is made for acute exposure). Finally, accepted health threshold factors (e.g. reference exposure levels) are used to estimate the hazard quotients due to potential exposures to DPM and COC metals.

The methodologies used to estimate a hazard quotient for each of these TACs and exposure pathways are provided in Appendix D.

Exposure of Human Receptors

This assessment conservatively evaluates worst-case human health impacts to Park employees, Park users, and nearby off-Park residents and occupational workers. Due to the conservative exposure assumptions used, exposures for actual human receptors are expected to be significantly less than those estimated in this assessment.

Maximum Daily Scenarios and Impact Assessment Results

In most instances, area-specific information (referred to as a Remediation Area in Section 2.5.2 of the Draft PEIR) is not yet available on which to base assumptions for the quantification of air emissions. Hence, for the purposes of this air quality impact assessment, it is necessary to conduct an evaluation that is broader in nature to determine what level of activity related to Program Actions would result in emissions and ambient impacts that are less than significant when compared to the NSAQMD significance thresholds. This level of activity (for Program Actions) is termed the Maximum Daily Scenario (MDS) and it is an estimate of foreseeable Program Actions that could be occurring either concurrently or consecutively that are likely potential sources of emissions.

Specific Project Requirements contain provisions that will be incorporated into the MDS, which would allow Project Actions to be conducted at a specific activity level and would result in air quality impacts below NSAQMD significance thresholds. For example, the requirement to keep activity levels, daily disturbed areas, and soil hauling below specified levels, and requirements for daily watering, will ensure that the maximum actual air quality impacts will be below those specified in this assessment.

For the purposes of quantification and simplification of analysis, Project Actions were assumed to take the form of one of four construction activities. That is, any proposed interim or remediation action could be one of four "construction activities" namely; (i) Grubbing and Land Clearing, (ii) Grading and Excavation (includes soil hauling emissions), (iii) Drainage and Utilities and (iv) Paving.

Table 4.2-8, Construction Activities and Associated Equipment Usage and Quantity, and Table 4.2-9, Engine Tiers by Horsepower and Year, lists the type, quantity, and horsepower of each piece of equipment that has been evaluated in the MDS.

TABLE 4.2-8
CONSTRUCTION ACTIVITIES AND ASSOCIATED EQUIPMENT USAGE AND QUANTITY

Construction Activities (Urbemis Phase Descriptions)	Equipment Used (Quantity)	Horsepower Rating
Grubbing and Land Clearing (Mass Grading)	Rubber Tire Dozer(1)	357
	Scraper (1)	313
Grading and Excavation (Fine Grading)	Scraper(1)	313

Notes: I = Interim standard

Scenarios 1 and 2

Under Scenario 1, the only construction activity permitted is grading and excavation (includes soil hauling emissions). The types of equipment that would be assumed would be one Scraper, one Grader, one Rubber Tire Loader, and Haul Trucks that would be utilized to transport material to and from the Remediation Area.

Under Scenario 2, the types of construction activities that could occur include grubbing and land clearing, installation of drainage and utilities and paving. The types of equipment that would be assumed include one Dozer, two Scrapers, one grader, one Plate Compactor, one Trencher, on Paver, two pieces of Paving Equipment, and one Roller that would operate at the Remediation Area.

In addition to the equipment list, the MDS is correlated to the following hypothetical operating scenario:

1. The maximum disturbed acreage should be 5 acres or less;
2. The soil is assumed to be weathered rock and or soil;
3. The amount of soil imported/exported should not exceed 10,000 cubic yards over a 2-month period during scenario; and
4. The truck capacity for off-site hauling is 20 cubic yards.

Emissions were quantified using URBEMIS Version 9.2.4 for the construction activities that lead to the maximum daily scenario (MDS) and are presented in Table 4.2-10, Emissions of Scenarios that Lead to the MDS. The URBEMIS program output files are provided in Appendix D.

TABLE 4.2-10
EMISSIONS OF SCENARIOS THAT LEAD TO THE MDS (POUNDS/DAY)

Scenarios	ROG[a] (lbs/day)	CO (lbs/day)	NO_x[a] (lbs/day)	PM_{10}[a] (lbs/day)	$PM_{2.5}$ (lbs/day)	CO_2 (lbs/day)

NSAQMD Level C Thresholds	>136	-	>136	>136	-	-

Notes:
[a] NSAQMD thresholds only exist for these pollutants.

Maximum Annual Scenario for COC Metals

COC metals at the Park could be released into the air from contaminated soils/dust and respired from either wind or other disturbances of the soil. Inhalation of soil from wind erosion could pose some risk; however, of greater concern are mechanical disturbances of the soil by remediation contractors engaging in short-term Project Actions that could produce much larger quantities of dust.

Inhalation of non-volatile COC metals adsorbed to respirable particles (generally particulate matter 10 microns in diameter or PM_{10}) was based on predicting the annual average concentration during periods of exposure from fugitive PM_{10} emissions (based on the MDS) using the SCREEN3 dispersion model.

Human exposure was based on the assumption that implementation of Program Actions would occur for six months per year, five days per week, and 8.0 hours per day for one year. Human exposure receptors were assumed to be present during all periods of Project Actions, consistent with residential exposure assumptions. Exposure parameters, such as daily breathing rates, were also conservatively based on residential exposure assumptions.

Inhalation Exposure

Based on estimated emissions of COC metals adhering to fugitive dust, human receptors subjected to Program Actions as described above for a 1-year period were estimated to have a maximum average exposure concentration of 1.47E-07 $\mu g/m^3$ for arsenic, 3.27E-03 $\mu g/m^3$ for lead, and 3.57E-05 $\mu g/m^3$ for cadmium. The resulting maximum LECR from COC metals due to the inhalation exposure pathway is estimated to be 1.58E-01 in a million (calculations are provided in Appendix D). The resulting maximum chronic HQ from COC metals due to the inhalation exposure

pathway is estimated to be 9.98E-02 (calculations are provided in Appendix D). Acute impacts from arsenic exposure are discussed separately below.

Soil Ingestion

Soils contaminated by fugitive dust resulting from Program Actions are assumed to contain up to 4.36E-02 mg/kg of arsenic, 9.71E-02 mg/kg of lead, and 1.06E-03 mg/kg of cadmium (calculated values are provided in Appendix D). Based on the assumed ingestion rates, the resulting maximum LECR from COC metals due to the ingestion exposure pathway is estimated to be 3.35E-03 in a million (calculations are provided in Appendix D). The resulting maximum chronic HQ from COC metals due to the ingestion exposure pathway is estimated to be 1.78E-02 (calculations are provided in Appendix D).

Dermal Exposure

Soils contaminated by fugitive dust resulting from Program Actions are assumed to contain up to 4.36E-02 mg/kg of arsenic, 9.71E-02 mg/kg of lead, and 1.06E-06 mg/kg of cadmium (calculated value are provided in Appendix D). Human receptors are assumed to have up to 4,700 cm2 of skin surface exposed at any one time. Based on the assumed dosing rate, the resulting maximum LECR from COC metals due to the dermal contact exposure pathway is estimated to be 2.57 E-04 in a million (calculations are provided in Appendix D). The resulting maximum chronic HQ from COC metals due to the dermal contact exposure pathway is estimated to be 6.69E-03 (calculations are provided in Appendix D).

Acute Exposure to Arsenic

Arsenic is the only COC metal with a 1-hour acute reference exposure level published by the California Air Resources Board (CARB). Because of the presence of some localized pockets of materials within the Park with relatively high arsenic concentrations, the potential exists for significant impacts from fugitive emissions of soil materials containing arsenic in these areas. Therefore, the evaluation of potential acute health impacts from Program Actions was subdivided based on three levels of Remediation Areas:

1) Those Remediation Areas with maximum arsenic concentrations less than or equal to 363 mg/kg, within which only Standard and Specific Project Requirements would be necessary when Program Actions were taking place in accordance with the MDS.

2) Those Remediation Areas with maximum arsenic concentrations less than or equal to 3,500 mg/kg, but greater than 363 mg/kg, within which additional Mitigation Measures would be necessary when Program Actions were taking place, which include modifications to the MDS.

3) Those Remediation Areas with maximum arsenic concentrations greater than 3,500 mg/kg, within which a project-specific approach and MDS would need to be developed and assessed outside of this Program EIR. Project-specific requirements would then be developed to ensure that less than significant acute hazard impacts result.

Therefore, before Program Actions are commenced for a given Remediation Area, the area would be classified as described above, and the appropriate Project Requirements implemented. This will result in acute hazard impacts with a hazard index less than 1.0 for all Program Actions.

Total COC Metals Exposure

The total health effects resulting from exposure to COC metals from the exposure pathways discussed above is simply the sum of either the LECRs or the HQs. The sum of the individual HQs is referred to as the hazard index (HI). Therefore, the maximum total LECR due to potential exposure to COC metals is 1.62E-01 in a million and the maximum total chronic HI due to potential exposure to COC metals is 1.24E-01. The maximum total acute HI due to potential exposure to arsenic is less than 1.0 as described in the preceding section.

Maximum Annual Scenario for Diesel Particulate Matter

The maximum annual scenario for particulate matter is based on the summation of Scenarios 1 and 2. DPM emissions from Scenario 2 are greater than DPM emissions from Scenario 1 and are predicted to be 3.37 lb/day over a 5-acre area during the course of an 8-hour work day. The annual total DPM emissions were used to determine an area source emissions rate from which a maximum average DPM 1-hour concentration is estimated. Using the SCREEN3 model, the hourly concentration was used to determine the average annual DPM concentration by applying a factor of 0.1 to derive a concentration of 1.64E-01 $\mu g/m^3$.

The resulting maximum LECR from DPM due to the inhalation exposure pathway is estimated to be 1.56 in a million (calculations are provided in Appendix D).

The resulting maximum chronic HQ from DPM due to the inhalation exposure pathway is estimated to be 3.28E-02 (calculations are provided in Appendix D).

Impact 4.2-1: Program Actions Could Generate Criteria Pollutant Emissions at the Park

Project Action-related dust emissions would vary from day to day, depending on the level and type of activity, silt content of the soil, and the weather. Emissions of PM_{10} could potentially affect local visibility and concentrations in the air could be adversely affected; however, only on a temporary and intermittent basis during these activities.

Combustion emissions from heavy equipment and construction worker commute trips would also vary from day to day, and could contribute incrementally to regional ozone concentrations during the implementation of Project Actions.

Fugitive dust would occur both during implementation of Project Actions and as a result of wind erosion over exposed earth surfaces. Clearing and earthmoving activities generally comprise the major source of construction dust emissions; however, traffic and general disturbance of the soil also generate dust emissions.

As shown in Table 4.2-10, emissions would be below the NSAQMD Level A threshold for ROG and PM_{10} and below the Level B (potentially significant) threshold for NO_x. The NSAQMD does not have significance criteria for SO_2, CO, or $PM_{2.5}$.

To ensure that criteria pollutant emissions are less than significant, the Project Proponents will comply with all applicable NSAQMD and State Rules and Regulations (where applicable) during the execution of Project Actions. These include District Rule 226 (Dust Control), the Statewide Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying, and Surface Mining Operations, as well as the Statewide Asbestos Airborne Toxic Control Measure for Surfacing Applications.

Standard Project Requirement AIR-1 requires that all active construction areas will be lightly sprayed with dust suppressant to reduce dust without causing runoff during dry, dusty conditions. AIR-1 further states that all trucks or light equipment hauling soil, sand, or other loose materials while implementing Program Actions on public roads will be covered or required to maintain at least two feet of free board. Additionally, AIR-1 requires that all gasoline-powered equipment will be maintained in good mechanical condition (according to manufacturer's specifications), and in compliance with all state and federal requirements.

Pursuant to AIR-1, paved streets adjacent to the Park will either be swept or washed at the end of each day, or as required, to remove excessive accumulations of silt and/or mud that could have resulted from remediation construction activities. Finally, AIR-1 requires that excavation and grading activities will be suspended when sustained winds

exceed 15 miles per hour (mph), instantaneous gusts exceed 25 mph, or when dust occurs from construction related activities where visible emissions cannot be controlled by watering or conventional dust abatement controls.

With the implementation of Standard Project Requirement AIR-1, air quality impacts from criteria pollutant emissions (including NO_x) associated with Project Actions will be less than significant.

Level of Significance Before Mitigation: Less than Significant

Mitigation Measures: None Required

Impact 4.2-2: Program Actions Would Generate TAC Emissions and Increase Exposure to TAC Emissions at Nearby Receptors

Exposure levels of TACs generated by Project Actions were estimated by conducting an analysis to determine their concentrations from TAC sources at the Park. Figure 4.2-1, Location of Potential TAC Emissions for Remediation Areas 1-4 and 6-9, shows the location of Remediation Areas that could result in potential TAC impacts.

TAC emission sources evaluated in this health risk assessment are DPM from mobile equipment exhaust and COC metals present in onsite soils that could become airborne fugitive dust (COC metals are the only soil contaminants assumed to have concentrations in soil above CHHSL levels, or the U.S. EPA Region 9 PRG in the case of lead).

The emissions from these sources were entered into the USEPA SCREEN3 model to calculate maximum ambient air concentrations at the Park. The maximum concentrations were then used to assess cancer risks and non-cancer health effects (see Appendix D).

Cancer Risk

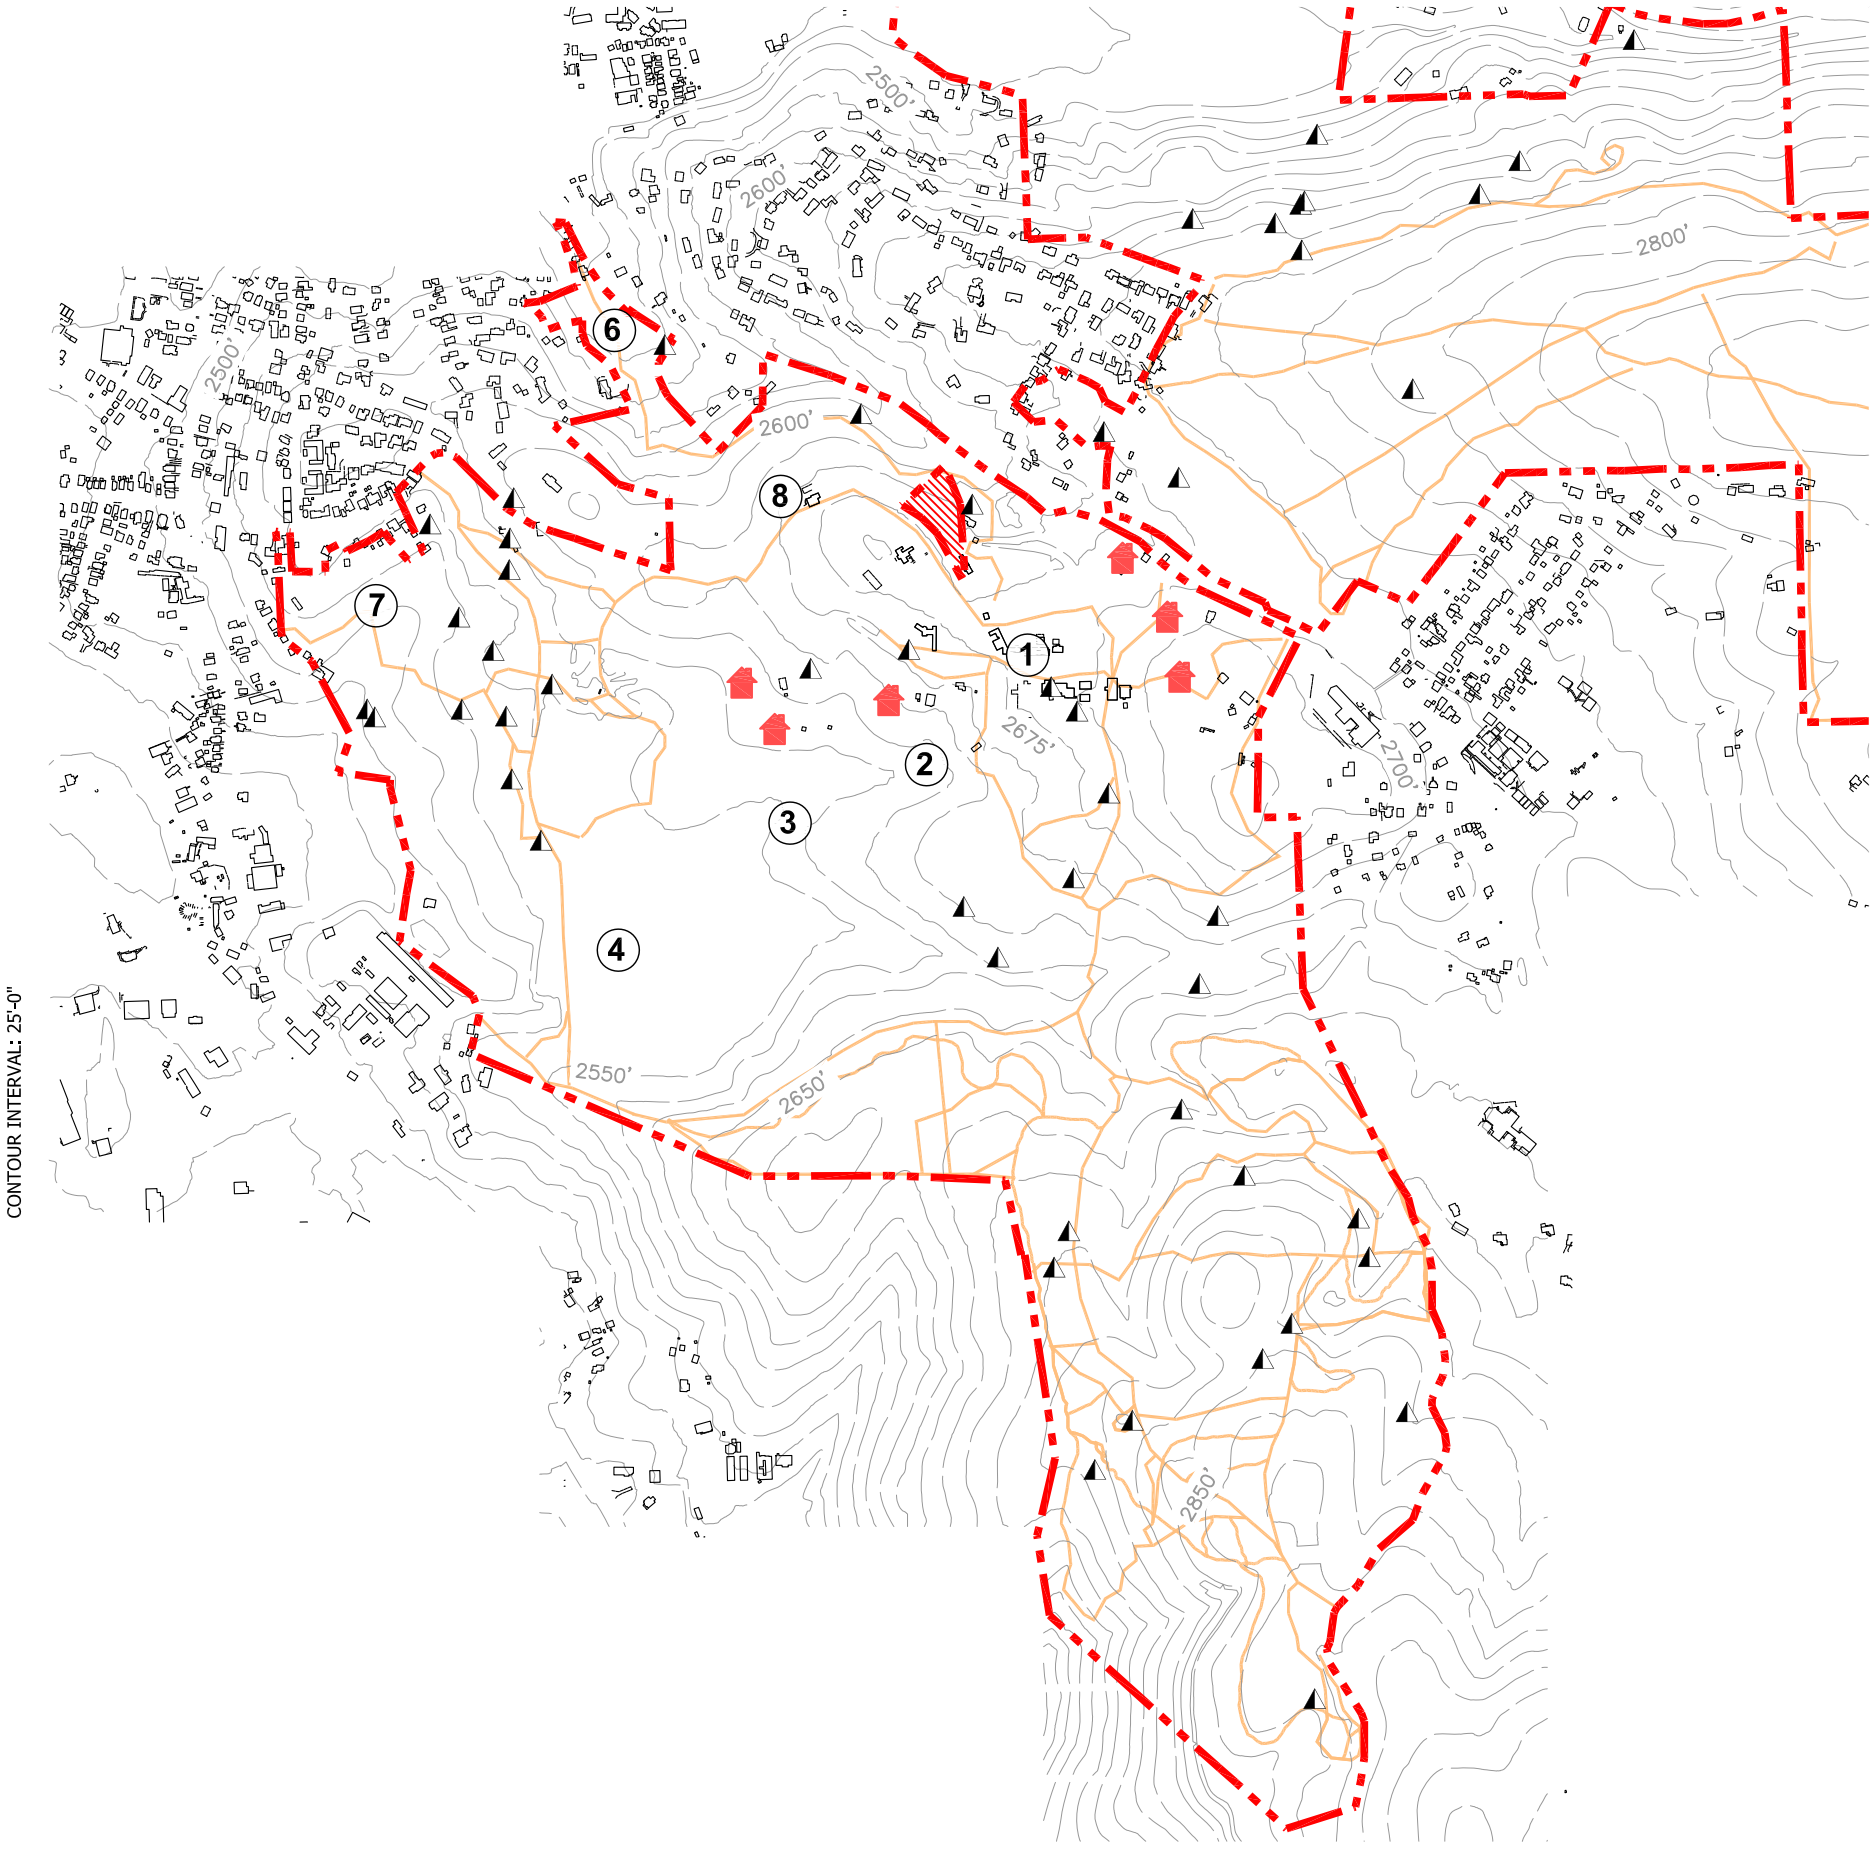
The maximally exposed individual (MEI) receptor as predicted to be 325 and 140 meters from the area sources of DPM and COC metals-containing fugitive dust respectively

The MDS is proposed to operate over a 2-year time period, for 6 months (125 working days) within each year. Assuming that the MEI receptor would be exposed to maximum annual average concentrations for 2 years over a 70-year lifetime, the LECR would be 1.56 and 1.62E-01 in a million for DPM and COC metals respectively, or a total LECR of 1.72 in a million. This is less than the associated significance threshold (10 in a million LECR) in regard to cancer risk at the MEI receptor.

It is important to note that cancer risk has been evaluated assuming that the peak daily emissions would occur over the entire span of the Project implementation to present a conservative approach. Therefore, actual impacts from the Project would likely be much lower than predicted in this assessment.

Non-Cancer Risk

Non-cancer adverse health effects, both for acute (short-term) and chronic (long-term) time periods, are assessed using the HQ, which is defined as the ratio of the predicted incremental exposure concentration or dose from the Project to a published threshold concentration or dose that could cause adverse health effects as established by OEHHA. The sum of the HQs for each non-carcinogenic substance that affects a certain target organ system is added to produce an overall HI for that target organ system. Overall HIs are generally calculated for each target organ system and if the overall HI for the highest-impacted target organ system is greater than one, then the impact is considered to be significant. Conservatively, however, the HQ for each individual TAC can simply be added together irrespective of the target organ system affected; this is the approach used in this health risk assessment.



Remediation Areas:

1. Mine Yard and Stamp Mill (DPM)
2. Cyanide Plant Area (DPM)
3. Conveyance Corridor and Adit Project (DPM)
4. Sand Dam Area (DPM)
5. Historic Mine and Mill Sites (DPM) **(Area 5)**
6. Magenta Drain Area (DPM)
7. Stacy Lane Pond Area (DPM)
8. Historic Grounds Area (DPM)
9. Residences and Residences Yards (DPM) **(Area 9)**
10. Trails (DPM and As) **(Area 10)**

Attachment 24

Acute Health Hazard

Acute hazard was assessed for arsenic only and only for the inhalation exposure pathway (since other COC metals and exposure pathways did not have applicable toxicity data provided by CARB). Within each Remediation Area, maximum arsenic concentrations would be classified as following levels:

1) Those Remediation Areas with maximum arsenic concentrations less than or equal to 363 mg/kg, within which only Standard and Specific Project Requirements would be necessary when Program Actions were taking place in accordance with the MDS.
2) Those Remediation Areas with maximum arsenic concentrations less than or equal to 3,500 mg/kg, but greater than 363 mg/kg, within which additional Mitigation Measures would be necessary when Program Actions were taking place, which include modifications to the MDS.
3) Those Remediation Areas with maximum arsenic concentrations greater than 3,500 mg/kg, within which a project-specific approach and MDS would need to be developed and assessed outside of this Program EIR. Project-specific requirements would then be developed to ensure that less than significant acute hazard impacts result.

For Remediation Areas in classification Level 1, the maximum HI is estimated to be less than 1.0, resulting in less than significant acute health impacts.

For Remediation Areas in classification Level 2, potential significant acute health impacts could result without implementation of additional mitigation. However, with implementation Mitigation Measure 4.2-1: Additional Dust Suppression Measures would result in less than significant impacts.

For Remediation Areas in classification Level 3, potential significant acute health impacts could result. However, an area-specific Remediation and Mitigation Plan would be developed to ensure that acute hazard from arsenic would have Hazard Index of less than 1.0. This would involve the selection of a remediation option (e.g., Placement of cover over selected areas) that would ensure that less than significant acute health impacts would result.

Chronic Health Hazard

Chronic non-carcinogenic health hazard was assessed for both DPM and COC metals. The MEI receptor for chronic health hazard was calculated to have HI's of 3.28E-02 and 1.24E-01 respectively for DPM and COC metals, for a total combined HI of 1.57E-01. Since the maximum chronic HI is less than 1.0, this impact would be less than significant.

Asbestos

Asbestos was not evaluated in this PEIR as no asbestos-containing soils were discovered at the Park and the NSAQMD requires that all projects that would disturb more than one acre submit an Asbestos Dust Mitigation Plan (which would include adopted standards for grading, excavation, blasting, and other construction or operational activities that could generate asbestos containing fugitive dust) before beginning any clearing, grading or construction activities, and implementation of an approved plan would result in impacts from asbestos that are less than significant.

Level of Significance Before Mitigation: Less than Significant for all TAC impacts except for acute health impacts from arsenic in Remediation Areas classified as Level 1. For Remediation Areas classified as Level 2 or 3, acute health impacts from arsenic could be significant; therefore, mitigation measures will be implemented.

Mitigation Measure 4.2-1 (a): Additional Dust Suppression Measures: For Project Actions within Remediation Areas classified as Level 2 (maximum arsenic concentrations less than or equal to 3,500 mg/kg, but greater than 363 mg/kg) the Project Proponents will implement the following:

- All active construction areas will be watered whenever material being disturbed is not moist. This includes areas subject to vehicle travel; material to be excavated, dozed, scraped, etc.; and material being hauled if it is not otherwise covered.
- Enclose, cover, water to maintain moist conditions, or apply (non-toxic) soil binders to exposed stockpiles containing materials with arsenic concentrations within the Level 2 classification range.
- Hydroseed or apply (non-toxic) soil stabilizers to inactive construction areas (previously graded areas inactive for 5 days or more).
- Limit the area subject to excavation, grading and other construction activity at any one time to as small as practically possible, but not to exceed 2.5 acres per day

Mitigation Measure 4.2-1 (b): Remediation and Mitigation Plan

If area-specific characterization indicates that a Remediation Area is classified as Level 3 (maximum arsenic concentrations greater than 3,500 mg/kg), the Project Proponents will develop a Remediation and Mitigation Plan that demonstrates that acute arsenic health impacts have an Hazard Index less than 1.0, and are therefore less than significant. This Plan will likely require selection of a

remediation option that reduces potential exposure to unacceptable health risks associated with arsenic (e.g., Placement of cover over selected areas).

Level of Significance After Mitigation: Less than Significant

When mitigation measures are implemented within Remediation Areas classified as Level 2 (maximum arsenic concentrations less than or equal to 3,500 mg/kg, but greater than 363 mg/kg) and when a Remediation and Mitigation Plan is developed for Remediation Areas classified as Level 3 (maximum arsenic concentrations greater than 3,500 mg/kg), the acute arsenic health impacts would have an Hazard Index less than 1.0, and would be less than significant.

Impact 4.2-3: Program Actions Would Generate Localized CO Emissions at Intersections and Roadways in the Project Vicinity due to Offsite Worker and Haul Truck Emissions

Increased traffic levels generated by the Project have the potential to affect carbon monoxide concentrations along surface streets in the Project area due to commuting by Project workers, and haul trucks bringing equipment and material to and from the Park. Such increases in traffic typically have the highest impacts at intersections, where vehicles idle in the queues formed at the intersection. These areas are often referred to as CO "hot spots."

As noted in Section 4.11, several regulatory entities have traffic number and capacity thresholds that would trigger a specific Traffic Impact Study (TIS), the most stringent of which comes from the City of Grass Valley, with a threshold of 50 peak hour trips. Specific Project Requirements have been developed for this Project limiting peak hour truck trips and providing guidance as to when a TIS would be prepared.

For purposes of this Draft PEIR, it was assumed that carbon monoxide concentrations at locations impacted by any increases in off-site traffic would be less than significant at levels below 50 peak-hour trips (i.e. a TIS not required). If it was identified through Project Requirements that a TIS is required, a demonstration of insignificant impact (i.e. peak concentrations less than the applicable CO ambient air quality standards) would be completed. For comparison, the Bay Area AQMD considers most increases in traffic less than 100 peak hour trips to be less than significant under CEQA.

Based on implementation of the Specific Project Requirements for traffic, the impacts from localized CO emissions associated with Project Actions at intersections and roadways are less than significant.

Level of Significance Before Mitigation: Less than Significant

Mitigation Measures: None Required

Impact 4.2-4: Program Actions Could Lead to Increases in Odor Emissions

The proposed work would not result in the long-term generation of odors; however, Program Actions-related emissions could result in a short-term generation of odors, including diesel exhaust and fuel or solvent vapors. Some receptors could consider these odors objectionable. However, Program Actions would be short-term and odor emissions would be limited and dissipate rapidly in the air with increased distance from the source.

Level of Significance Before Mitigation: Less than Significant

Mitigation Measures: None Required

Impact 4.2-5: Program Actions Could Conflict with Implementation of State Goals for Reducing Greenhouse Gas (GHG) Emissions and thereby have an Adverse Effect on Global Climate Change

The geographic scope of potential cumulative greenhouse gas impacts encompasses the NSAQMD jurisdiction, statewide considerations, and contribution to attainment of State global climate change policies. ARB is required under AB 32 to develop methods to estimate and report emissions of GHG from facilities that emit GHG. This reporting will help establish a baseline from which to measure progress toward the emission reduction goals of AB 32. ARB has also been directed to develop lists of potential early actions to reduce GHG emissions statewide. In addition, SB 97 directed OPR to establish draft CEQA guidelines for the mitigation of GHG in CEQA documents by July 1, 2009, and adopt final guidelines by the beginning of 2010.

As with other individual projects (even major projects that emit more than 25,000 metric tons/year CO_2e), the project specific emissions from this Project would not individually be likely to have an impact on global climate change, but it could conflict with the State goals for reducing greenhouse gas emissions (AEP 2007) and therefore could constitute a cumulatively but minimal contribution to global climate change.

Several types of analyses are used to determine whether a project could be in conflict with the State goals for reducing greenhouse gas emissions. The analyses are reviews of:

1. The potential conflicts with the ARB 44 early action strategies;
2. The relative size of the project in comparison to the estimated greenhouse reduction goal of 174 million metric tons/year of CO_2e emissions by 2020 and in comparison to the size of major facilities that are required to report greenhouse gas emissions (25,000 metric tons/year of CO_2e);

3. The basic energy efficiency parameters of a project to determine whether its design is inherently energy efficient; and
4. Project GHG Emissions < 7,000 $MTCO_2eq/yr$.

The Project does not pose any apparent conflict with the most recent list of the ARB early action strategies (see Table 4.2-3). In addition, the Project is predicted to generate approximately 5.52 metric tons of CO_2 per day and an estimated yearly amount of 690 metric tons of CO_2 which is considerably less than the interim threshold of 7,000 metric tons of CO_2 per year as established by ARB.

Level of Significance Before Mitigation: Less than Significant

Mitigation Measures: None Required

4.2.5 EFFECTS CONSIDERED NO IMPACT OR LESS THAN SIGNIFICANT WITHOUT PROJECT REQUIREMENTS

No impacts have been identified as having no impact or having a less than significant impacts without incorporation of Project Requirements. All air quality CEQA thresholds are addressed in Impacts 4.2-1 through 4.2-4, above.

4.2.6 FINDINGS

The proposed remedial options are projected to result in less than significant air quality impacts for all Remediation Areas assuming the Project Proponents adhere to analytical assumptions (including MDS), incorporate all applicable Standard and Specific Project Requirements, and implement mitigation measures 4.2-1(a) and 4.2-1(b), as applicable.

EXHIBIT L

3.3 Air Quality

This section of the Draft Environmental Impact Report (Draft EIR; DEIR) includes a summary of applicable regulations, a description of existing air quality conditions, and an analysis of potential air quality impacts associated with the proposed project. Mitigation measures are recommended, as necessary, to reduce significant air quality impacts. All technical analyses related to this section are contained in **Appendix 3.3-A**.

3.3.1 SETTING

CLIMATE, METEOROLOGY, AND AIR POLLUTION POTENTIAL

The project site is located in western Nevada County south of the Lake of the Pines community and in the Mountain Counties Air Basin (MCAB). The MCAB consists of nine counties or portions of counties stretching from Plumas County on the north to Mariposa County on the south. The Northern Sierra Air Quality Management District (NSAQMD) is the local agency for air quality planning with authority over air pollutant sources.

Nevada County exhibits large variations in terrain and consequently exhibits large variations in climate, both of which affect air quality. The western portions of the county slope relatively gradually with deep river canyons running from southwest to northeast toward the crest of the Sierra Nevada range. East of the divide, the slope of the Sierra is steeper, but river canyons are relatively shallow. The warmest areas in Nevada County are found at the lower elevations along the county's west side, while the coldest average temperatures are found at the highest elevations (NSAQMD 2005).

The prevailing wind direction over the county is westerly. However, the terrain of the area has a great influence on local winds, so that wide variability in wind direction can be expected. Afternoon winds are generally channeled up-canyon, while nighttime winds generally flow down-canyon. Winds are, in general, stronger in spring and summer and weaker in fall and winter. Periods of calm winds and clear skies in fall and winter often result in strong, ground-based inversions forming in mountain valleys. These layers of very stable air restrict the dispersal of pollutants, trapping these pollutants near the ground, representing the worst conditions for local air pollution occurring in the county (NSAQMD 2005).

Regional airflow patterns have an effect on air quality patterns by directing pollutants downwind of sources. Localized meteorological conditions, such as light winds and shallow vertical mixing, and topographical features, such as surrounding mountain ranges, create areas of high pollutant concentrations by hindering dispersal. An inversion layer is produced when a layer of warm air traps cooler air close to the ground. Such temperature inversions hamper dispersion by stratifying contaminated air near the ground.

AMBIENT AIR QUALITY STANDARDS

Pollutants subject to federal and state ambient standards are referred to as "criteria" pollutants because the U.S. Environmental Protection Agency (USEPA) publishes criteria documents to justify the choice of standards. These standards define the maximum amount of an air pollutant that can be present in ambient air without harming the public's health. An ambient air quality standard is generally specified as a concentration averaged over a specific time period, such as 1 hour, 8 hours, 24 hours, or one year. The different averaging times and concentrations are meant to protect against different exposure effects. The USEPA has established two types of ambient standards: primary standards, which protect public health, and secondary standards, which protect public welfare from non-health-related adverse effects. The State of California

has also adopted ambient air quality standards. **Table 3.3-1** summarizes federal and state ambient air quality standards.

TABLE 3.3-1
SUMMARY OF AMBIENT AIR QUALITY STANDARDS

Pollutant	Averaging Time	California Standards	National Standards	
			Primary[1]	Secondary[2]
Ozone (O_3)	1-hour	0.09 ppm	–	Same as primary
	8-hour	0.070 ppm	0.075 ppm	
Particulate Matter (PM_{10})	AAM	20 $\mu g/m^3$	–	
	24-hour	50 $\mu g/m^3$	150 $\mu g/m^3$	
Fine Particulate Matter ($PM_{2.5}$)	AAM	12 $\mu g/m^3$	15 $\mu g/m^3$	
	24-hour	No Separate State Standard	35 $\mu g/m^3$	
Carbon Monoxide (CO)	1-hour	20 ppm	35 ppm	None
	8-hour	9 ppm	9 ppm	
	8-hour (Lake Tahoe)	6 ppm	–	
Nitrogen Dioxide (NO_2)	AAM	0.030 ppm	0.053 ppm	Same as primary
	1-hour	0.18 ppm	0.1 ppm	
Sulfur Dioxide (SO_2)	24-hour	0.04 ppm	–	–
	3-hour	–	–	0.5 ppm
	1-hour	0.25 ppm	0.075 ppm	–
Lead	30-day average	1.5 $\mu g/m^3$	–	–
	Calendar quarter	–	1.5 $\mu g/m^3$	Same as primary
	Rolling 3-month average	–	0.15 $\mu g/m^3$	Same as primary
Sulfates	24-hour	25 $\mu g/m^3$	No federal standards	
Hydrogen Sulfide	1-hour	0.03 ppm		
Vinyl Chloride	24-hour	0.01 ppm		
Visibility-Reducing Particle Matter	8-hour	Extinction coefficient of 0.23 per kilometer —visibility of 10 miles or more (0.07—30 miles or more for Lake Tahoe) due to particles when the relative humidity is less than 70%.		

Notes:

CURRENT AMBIENT AIR QUALITY

The primary criteria air pollutants of concern in the project area include ozone (O_3) and coarse particulate matter (PM_{10}). Ambient concentrations of carbon monoxide (CO) are typically low, though localized concentrations, particularly near congested roadway intersections, are a potential local concern.

In Nevada County, ambient air quality is currently monitored at stations located in the City of Grass Valley, in the Town of Truckee, and at one seasonal location in Nevada County known as White Cloud Mountain. The closest monitoring site to the proposed project is the Grass Valley-Litton Building air quality monitoring station, which monitors ambient concentrations of O_3 and both coarse and fine particulate matter. **Table 3.3-2** summarizes the last three years of published ambient air quality data obtained from this monitoring station.

TABLE 3.3-2
SUMMARY OF ANNUAL AMBIENT AIR QUALITY DATA

Grass Valley-Litton Building Monitoring Site			
Ozone (*number of days standard exceeded*)			
State 1-hour standard	5	8	3
Federal 8-hour standard	36	24	17
State 8-hour standard	55	42	38
Particulate Matter (*number of days standard exceeded*)			
State 24-hour standard (PM_{10})	NA	NA	NA
Federal 24-hour standard (PM_{10})	*	*	*
Federal 24-hour standard ($PM_{2.5}$)	0	26.3	0

Note: Ambient ozone and PM concentrations were obtained from the Grass Valley-Litton Building monitoring station. Measured days are those days that an actual measurement was greater than the level of the state daily standard or the national daily standard. Measurements are typically collected every 6 days. The number of days above the standard is not necessarily the number of violations of the standard for the year.
** = There is insufficient (or no) data available to determine the value.*
N/A – indicates that certain pollutant is not measured at monitoring site.
Source: CARB 2010b

AMBIENT AIR QUALITY ATTAINMENT STATUS

Table 3.3-3 shows the federal and state attainment status for Nevada County. The region is nonattainment for federal ozone standards and nonattainment for state ozone and PM_{10} standards (CARB 2010c).

Areas with air quality that exceed adopted air quality standards are designated as nonattainment areas for the relevant air pollutants. Areas that comply with air quality standards are designated as attainment areas for the relevant air pollutants. State Implementation Plans (SIPs) must be prepared by states for areas designated as federal nonattainment areas to demonstrate how the area will come into attainment of the exceeded federal ambient air quality standard.

As detailed in the Regulatory Framework discussion below, both the California Air Resources Board (CARB) and the USEPA have established air pollution standards in an effort to protect

human health and welfare. Geographic areas are designated attainment if these standards are met and nonattainment if they are not met.

TABLE 3.3-3
FEDERAL AND STATE AMBIENT AIR QUALITY ATTAINMENT STATUS FOR NEVADA COUNTY

Pollutant	Federal	State
1-hour Ozone (O_3)	–	Nonattainment
8-hour Ozone (O_3)	Nonattainment	Nonattainment
Coarse Particulate Matter (PM_{10})	Unclassified	Nonattainment
Fine Particulate Matter ($PM_{2.5}$)	Unclassified/Attainment	Unclassified
Carbon Monoxide (CO)	Unclassified/Attainment	Unclassified
Nitrogen Dioxide (NO_2)	Unclassified/Attainment	Attainment
Sulfur Dioxide (SO_2)	Unclassified	Attainment
Hydrogen Sulfide (H_2S)	–	Unclassified

AIR POLLUTANTS OF CONCERN AND HEALTH EFFECTS

One of the most important reasons for air quality standards is the protection of those members of the population who are most sensitive to the adverse health effects of air pollution, termed "sensitive receptors." The term "sensitive receptors" refers to specific population groups, as well as the land uses where individuals would reside for long periods. Commonly identified sensitive population groups are children, the elderly, the acutely ill, and the chronically ill. Sensitive receptors are facilities that house or attract children, the elderly, people with illnesses, or others who are especially sensitive to the effects of air pollutants. Hospitals, schools, residential dwellings, and convalescent-care facilities are examples of sensitive receptors (CARB 2005). Select criteria air pollutants, emission sources, and associated health and welfare effects are summarized in **Table 3.3-4.**

TABLE 3.3-4
SUMMARY OF SELECT CRITERIA AIR POLLUTANTS, COMMON SOURCES, AND EFFECTS

Pollutant	Major Man-Made Sources	Human Health & Welfare Effects
Ozone (O_3), a colorless or bluish gas.	Formed by a chemical reaction between reactive organic gases (ROG) and nitrous oxides (NO_x) in the presence of sunlight. Motor vehicle exhaust, industrial emissions, gasoline storage and transport, solvents, paints and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. Damages rubber, some textiles and dyes.
Particulate Matter (PM), airborne solid particle and liquid particles. Grouped into two categories: PM_{10} and $PM_{2.5}$.	Power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles and others.	Increased respiratory symptoms, such as irritation of the airways, coughing, or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).

Pollutant	Major Man-Made Sources	Human Health & Welfare Effects
Carbon Monoxide (CO), an odorless, colorless gas.	Formed when carbon in fuel is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous systems. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO_2), a reddish-brown gas.	Fuel combustion in motor vehicles and industrial sources. Motor vehicles; electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Contributes to global warming, and nutrient overloading which deteriorates water quality. Causes brown discoloration of the atmosphere.
Sulfur Dioxide (SO_2), a colorless, nonflammable gas.	Formed when fuel containing sulfur, such as coal and oil, is burned; when gasoline is extracted from oil; or when metal is extracted from ore. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, large ships, and fuel combustion in diesel engines.	Respiratory irritant. Aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid which can damage marble, iron and steel; damage crops and natural vegetation. Impairs visibility. Precursor to acid rain.
Lead, a metallic element.	Metal refineries, smelters, battery manufacturers, iron and steel producers, use of leaded fuels by racing and aircraft industries.	Anemia, high blood pressure, brain and kidney damage, neurological disorders, cancer, lowered IQ. Affects animals, plants, and aquatic ecosystems.

Source: CARB 2010d

With regard to human health, the air pollutants of primary concern in Nevada County include ozone and coarse particulate matter, as previously mentioned. The standards for carbon monoxide, nitrogen dioxide, sulfur dioxide, hydrogen sulfide, and lead are either unclassified or are being met within the region.

Ozone

O_3 is the most prevalent of a class of photochemical oxidants formed in the urban atmosphere. The creation of ozone is a result of complex chemical reactions between reactive organic gases and nitrogen oxides in the presence of sunlight. Unlike other pollutants, ozone is not released directly into the atmosphere from any sources. The major sources of nitrogen oxides and reactive hydrocarbons, known as ozone precursors (i.e., ROG and NO_x), are combustion sources such as factories and automobiles, and evaporation of solvents and fuels. The health effects of ozone are eye irritation and damage to lung tissues. Ozone also damages some materials such as rubber, and may damage plants, crops, and marine life. The ozone problem in the MCAB is further aggravated by the transport of emissions from the metropolitan Sacramento area. Ozone is a seasonal problem, typically occurring during the months from May through October, when there is plenty of sunlight. Within the MCAB, the primary source of ozone precursors is motor vehicles.

Particulate Matter

Particulate matter consists of solid and liquid particles of dust, soot, aerosols, and other matter, which are small enough to remain suspended in the air for a long period of time. Particulate matter can be divided into several size fractions. Coarse particles (PM_{10}) are between 2.5 and 10 microns in diameter and arise primarily from natural processes, such as wind-blown dust or soil. Fine particles ($PM_{2.5}$) are less than 2.5 microns in diameter and are produced mostly from combustion or burning activities. Fuel burned in cars and trucks, power plants, factories, fireplaces, and wood stoves produces fine particles. The level of $PM_{2.5}$ in the air is a public health

concern because it can bypass the body's natural filtration system more easily than larger particles and can lodge deep in the lungs. The health effects vary depending on a variety of factors, including the type and size of particles. Research has demonstrated a correlation between high PM concentrations and increased mortality rates. Elevated PM concentrations can also aggravate chronic respiratory illnesses such as bronchitis and asthma.

A portion of the particulate matter in the air is due to natural sources such as wind-blown dust and pollen, which are associated with the aggravation of respiratory conditions. Man-made sources include combustion, automobiles, field burning, factories, and road dust. A portion of the particulate matter in the atmosphere is also a result of photochemical processes. The effects of high concentrations on humans include aggravation of chronic disease and heart/lung disease symptoms. Non-health effects include reduced visibility and soiling of surfaces.

Primary sources of PM_{10} emissions in the MCAB are road traffic, construction, open burning, and wildfires. The amount of particulate matter and PM_{10} generated is dependent on the soil type and the soil moisture content. Traffic also generates particulate matter emissions through entrainment of dust and dirt particles that settle onto roadways and parking lots. Burning of wood in residential woodstoves and fireplaces and open agricultural burning are other sources of PM_{10}. As stated above, sources of $PM_{2.5}$ include fuel burning automobiles, power plants, factories, fireplaces, and wood stoves.

Toxic Air Contaminants

Toxic air contaminants (TACs) are not considered criteria pollutants in that TACs are not addressed through the setting of federal or state ambient air quality standards. Instead, the USEPA and CARB regulate hazardous air pollutants (HAPs) and TACs, respectively, through statutes and regulations that generally require the use of the maximum or best available control technology to limit emissions. In conjunction with NSAQMD rules, they establish the regulatory framework for TACs. At the national level, the USEPA has established National Emission Standards for HAPs (NESHAPs), as required by the federal Clean Air Act Amendments. These are technology-based source-specific regulations that limit allowable emissions of HAPs.

At the state level, CARB has authority for the regulation of emissions from motor vehicles, fuels, and consumer products. In 1998, CARB added diesel-exhaust particulate matter (DPM) to the list of TACs. DPM is the primary toxic air contaminant of concern for mobile sources. Of all controlled TACs, emissions of DPM are estimated to be responsible for about 70 percent of the total ambient TAC risk. CARB has made the reduction of the public's exposure to DPM one of its highest priorities, with an aggressive plan to require cleaner diesel fuel and cleaner diesel engines and vehicles.

Local air districts have authority over stationary or industrial sources. All projects that require air quality permits from the NSAQMD are evaluated for TAC emissions. The NSAQMD limits emissions and public exposure to TACs through a number of programs. The NSAQMD prioritizes TAC-emitting stationary sources, based on the quantity and toxicity of the TAC emissions and the proximity of the facilities to sensitive receptors. The NSAQMD also requires a comprehensive health risk assessment for facilities that are classified in the significant-risk category, pursuant to Assembly Bill 2588.

Land Use Compatibility with TAC Emission Sources

The location of a development project is a major factor in determining whether it will result in localized air quality impacts. The potential for adverse air quality impacts increases as the distance between the source of emissions and members of the public decreases. While impacts

on all members of the population should be considered, impacts on sensitive receptors are of particular concern.

In 2005, CARB released an informational guide entitled, "Air Quality and Land Use Handbook: A Community Health Perspective." The purpose of this guide is to provide information to aid local jurisdictions in addressing issues and concerns related to the siting of sensitive land uses near major sources of air pollution. The handbook includes recommended separation distances for various land uses, which are summarized in **Table 3.3-5**. These recommendations were based on analyses that suggested that health risks associated with mobile sources, particularly DPM, increased within 300 feet of a major freeway, and that a 70 percent reduction in ambient particulate levels occurs at 500 feet from the source (CARB 2005).

Within urbanized areas, the CARB handbook currently recommends that new sensitive land uses not be located within 500 feet of a freeway, urban roadways with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day. However, these recommendations are not site-specific and should not be interpreted as defined "buffer zones." The recommendations of the handbook are advisory and need to be balanced with other state and local policies (CARB 2005). The nearest major roadway in relation to the project site is State Route (SR) 49, which is located west of the project site. Based on estimates obtained from the California Department of Transportation, the adjacent segments of SR 49 currently average approximately 21,500 vehicles per day (Caltrans 2010).

TABLE 3.3-5
RECOMMENDATIONS ON SITING NEW SENSITIVE LAND USES
NEAR AIR POLLUTANT SOURCES

Source Category	Advisory Recommendations
Freeways and High-Traffic Roads	Avoid siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day.
Distribution Centers	Avoid siting new sensitive land uses within 1,000 feet of a distribution center (that accommodates more than 100 trucks per day, more than 40 trucks with operating transport refrigeration units (TRUs) per day, or where TRU unit operations exceed 300 hours per week).
	Take into account the configuration of existing distribution centers and avoid locating residences and other new sensitive land uses near entry and exit points.
Rail Yards	Avoid siting new sensitive land uses within 1,000 feet of a major service and maintenance rail yard.
	Within one mile of a rail yard, consider possible siting limitations and mitigation approaches.
Ports	Avoid siting of new sensitive land uses immediately downwind of ports in the most heavily impacted zones. Consult local air districts or CARB on the status of pending analyses of health risks.
Refineries	Avoid siting new sensitive land uses immediately downwind of petroleum refineries. Consult with local air districts and other local agencies to determine an appropriate separation.
Chrome Platers	Avoid siting new sensitive land uses within 1,000 feet of a chrome plater.
Dry Cleaners Using Perchloroethylene	Avoid siting new sensitive land uses within 300 feet of any dry cleaning operation. For operations with two or more machines, provide 500 feet. For operations with 3 or more machines, consult with the local air district.
	Do not site new sensitive land uses in the same building with perchloroethylene dry cleaning operations.
Gasoline Dispensing Facilities	Avoid siting new sensitive land uses within 300 feet of a large gas station (defined as a facility with a throughput of 3.6 million gallons per year or greater). A 50-foot separation is recommended for typical gas-dispensing facilities.

Note: Recommendations are advisory, are not site-specific, and may not fully account for future reductions in emissions, including those resulting from compliance with existing/future regulatory requirements, such as reductions in diesel-exhaust emissions anticipated to occur with continued implementation of CARB's Diesel Risk Reduction Plan.

Source: CARB 2005

California Diesel-Risk Reduction Plan

In September 2000, CARB adopted the Diesel Risk Reduction Plan (DRRP), which recommends many control measures to reduce the risks associated with DPM and achieve a goal of 75 percent DPM reduction by 2010 and 85 percent by 2020. The DRRP incorporates measures to reduce emissions from diesel-fueled vehicles and stationary diesel-fueled engines. Ongoing efforts by CARB to reduce diesel-exhaust emissions from these sources include the development of specific statewide regulations, which are designed to further reduce DPM emissions. The goal of each regulation is to make diesel engines as clean as possible by establishing state-of-the-art technology requirements or emission standards to reduce DPM emissions.

Since the initial adoption of the DRRP in September of 2000, CARB has adopted numerous rules related to the reduction of DPM from mobile sources, as well as the use of cleaner-burning fuels. Transportation sources addressed by these rules include public transit buses, school buses, on-road heavy-duty trucks, and off-road heavy-duty equipment. Some of the more notable rules and programs recently adopted by CARB are discussed in more detail below.

Standards for New Off-Road Diesel Engines

CARB has worked closely with the USEPA on developing new PM and NO_x standards for engines used in off-road equipment such as backhoes, graders, and farm equipment. The USEPA has proposed new standards that would reduce the emission from off-road engines to similar levels to the on-road engines discussed below by 2012. These standards will reduce DPM emissions by over 90 percent from new off-road engines currently sold in California.

Standards for New On-Road Diesel Engines

In 2001, CARB adopted new particulate matter (PM) and NO_x emission standards to clean up large diesel engines that power big-rig trucks, trash trucks, delivery vans, and other large vehicles. The new standard for PM took effect in 2007 and reduces emissions to 0.01 gram of PM per brake horsepower-hour (g/bhp-hr.) This is a 90 percent reduction from the pre-2007 PM standard. New engines will meet the 0.01 g/bhp-hr PM standard with the aid of diesel particulate filters that trap the particulate matter before exhaust leaves the vehicle.

Odors

Although offensive odors rarely cause physical harm, they can be very unpleasant, leading to considerable stress among the public and often generating citizen complaints to local governments and agencies. Some facilities are commonly known to produce odors, including wastewater treatment facilities, chemical manufacturing, painting/coating operations, feedlots/dairies, composting facilities, landfills, and transfer stations. Because offensive odors rarely cause physical harm and no requirements for their control are included in state or federal air quality regulations. Any actions related to odors are based on citizen complaints to local governments and the NSAQMD. No major sources of odors were identified in the project area.

3.3.2 REGULATORY FRAMEWORK

Air quality in the project area is regulated by several jurisdictions including the USEPA, CARB, NSAQMD, and the County of Nevada. Each of these jurisdictions develops rules, regulations, and policies to attain the goals or directives imposed upon them through legislation. Although the USEPA regulations may not be superseded, both state and local regulations may be more stringent.

FEDERAL

USEPA and the Federal Clean Air Act

At the federal level, the USEPA has been charged with implementing national air quality programs. The USEPA's air quality mandates are drawn primarily from the federal Clean Air Act (CAA), which was signed into law in 1970. Congress substantially amended the CAA in 1977 and again in 1990.

The Clean Air Act required the USEPA to establish National Ambient Air Quality Standards (NAAQS) and also set deadlines for their attainment. Two types of NAAQS have been established: primary standards, which protect public health, and secondary standards, which protect public welfare from non-health-related adverse effects. The CAA also required each state to prepare an air quality control plan referred to as a State Implementation Plan (SIP). The federal Clean Air Act Amendments of 1990 added requirements for states with nonattainment areas to revise their SIPs to incorporate additional control measures to reduce air pollution. The SIP is periodically modified to reflect the latest emissions inventories, planning documents, and rules and regulations of the air basins as reported by their jurisdictional agencies. The USEPA has responsibility to review all state SIPs to determine conformance to the mandates of the Clean Air Act Amendments, and the amendments thereof, and determine whether implementation will achieve air quality goals. If USEPA determines a SIP to be inadequate, a Federal Implementation Plan may be prepared for the nonattainment area that imposes additional control measures. Failure to submit an approvable SIP or to implement the plan within the mandated time frame may result in sanctions being applied to transportation funding and stationary air pollution sources in the air basin.

STATE

CARB and the California Clean Air Act

CARB is the agency responsible for coordination and oversight of state and local air pollution control programs in California and for implementing the California Clean Air Act of 1988. The California Clean Air Act (CCAA) requires that all air districts in the state endeavor to achieve and maintain California Ambient Air Quality Standards (CAAQS) for ozone, carbon monoxide, sulfur dioxide, and nitrogen dioxide by the earliest practical date. Plans for attaining CAAQS were to be submitted to CARB by June 30, 1991. The CCAA specifies that districts focus particular attention on reducing the emissions from transportation and area-wide emission sources, and the act provides districts with authority to regulate indirect sources. Each district plan is required to either (1) achieve a 5 percent annual reduction, averaged over consecutive three-year periods, in district-wide emissions of each nonattainment pollutant or its precursors, or (2) provide for implementation of all feasible measures to reduce emissions. Any planning effort for air quality attainment would thus need to consider both state and federal planning requirements.

Other CARB duties include monitoring air quality (in conjunction with air monitoring networks maintained by air pollution control districts and air quality management districts), establishing CAAQS (which in many cases are more stringent than the NAAQS), and setting emissions standards for new motor vehicles. The emission standards established for motor vehicles differ depending on various factors including the model year and the type of vehicle, fuel, and engine used.

Assembly Bills 1807 and 2588 – Air Toxics

Within California, toxic air contaminants (TACs) are regulated primarily through AB 1807 (Tanner Air Toxics Act; codified at Health and Safety Code Sections 39650, 39655, 39656–39659, 39660–39664, 39665–39669, 39670–39671, 39674–39675) and AB 2588 (Air Toxics Hot Spots Information and Assessment Act of 1987; codified at Health and Safety Code Sections 44300–44309). The Tanner Air Toxics Act sets forth a formal procedure for CARB to designate substances as TACs. This includes research, public participation, and scientific peer review before CARB designates a substance as a toxic air contaminant. Existing sources of TACs that are subject to the Air Toxics Hot Spots Information and Assessment Act are required to: (1) prepare a toxic emissions inventory; (2) prepare a risk assessment if emissions are significant; (3) notify the public of significant risk levels; and (4) prepare and implement risk reduction measures.

Senate Bill 656 – Reducing Particulate Matter in California

In 2003, the Legislature passed Senate Bill (SB) 656 (codified at Health and Safety Code Section 39614) to reduce public exposure to PM_{10} and $PM_{2.5}$. The legislation requires CARB, in consultation with local air pollution control and air quality management districts, to adopt a list of the most readily available, feasible, and cost-effective control measures that could be implemented by air districts to reduce PM_{10} and $PM_{2.5}$. The legislation establishes a process for achieving near-term reductions in PM throughout California ahead of federally required deadlines for $PM_{2.5}$ and provides new direction on PM reductions in those areas not subject to federal requirements for particulate matter. Source categories addressed by SB 656 include measures to address residential wood combustion and outdoor green waste burning; fugitive dust sources such as paved and unpaved roads and construction; combustion sources such as boilers, heaters, and charbroiling; solvents and coatings; and product manufacturing.

LOCAL

Nevada County General Plan

The Nevada County General Plan serves as the overall guiding policy document for the unincorporated areas of Nevada County. A summary of the project's consistency with applicable General Plan air quality-related policies is contained in **Appendix 3.0-A**. While this Draft EIR analyzes the project's consistency with the General Plan pursuant to California Environmental Quality Act (CEQA) Section 15125(d), the Nevada County Board of Supervisors makes the ultimate determination of consistency with the General Plan.

Northern Sierra Air Quality Management District

The Northern Sierra Air Quality Management District (NSAQMD) is the agency primarily responsible for ensuring that federal and state ambient air quality standards are not exceeded and that air quality conditions are maintained. Responsibilities of NSAQMD include, but are not limited to, preparing plans for the attainment of ambient air quality standards, adopting and enforcing rules and regulations concerning sources of air pollution, issuing permits for stationary sources of air pollution, inspecting stationary sources of air pollution and responding to citizen complaints, monitoring ambient air quality and meteorological conditions, and implementing programs and regulations required by the federal CAA and the CCAA. NSAQMD rules and regulations applicable to the proposed project include, but are not necessarily limited to, the following:

Rule 205, Nuisance. This rule prohibits the discharge of air contaminants or other material from any source which cause injury, detriment, nuisance, or annoyance to any considerable number of persons, or to the public, or which endangers the comfort, repose, health, or safety of any such persons, or the public or which cause to have a natural tendency to cause injury or damage to business or property.

Rule 226, Dust Control. This rule requires the submittal of a Dust Control Plan to the NSAQMD for approval prior to any surface disturbance, including clearing of vegetation.

Rule 302, Prohibited Open Burning. In accordance with this rule, no person (except as otherwise authorized in Sections 41801–41805.6, 41807–41809, and 41811–41815 of the Health and Safety Code) shall use open outdoor fires for the purpose of disposal, processing, or burning of any flammable or combustible material as defined in Section 39020 of the Health and Safety Code; or unless issued a permit by NSAQMD and in accordance with other applicable NSAQMD rules and regulations, including, but not limited to, Rule 308, Land Development Clearing, and Rule 312, Burning Permits.

Rule 308, Land Development Clearing. The NSAQMD finds it more economically desirable to dispose of wood waste from trees, vines, and bushes on property being developed for commercial or residential purposes by burning instead of burial at a sanitary landfill. In such instances, disposal by burning shall comply with NSAQMD rules, including, but not limited to, Rule 312, Burning Permit Requirements; Rule 313, Burn Days; Rule 314, Minimum Drying Times; Rule 315, Burning Management; and Rule 316, Burn Plan Preparation.

Rule 501, Permit Required. Before any source may be operated, a Permit to Operate shall be obtained from the Air Pollution Control Officer. No Permit to Operate shall be granted either by the Air Pollution Control Officer or the Hearing Board for any source constructed or modified without authorization or not in compliance with other NSAQMD rules and regulations, including those specified in NSAQMD Regulation IV.

3.3.3 IMPACTS AND MITIGATION MEASURES

STANDARDS OF SIGNIFICANCE

The impact analysis provided below is based on the application of the following State CEQA Guidelines Appendix G thresholds of significance, which indicate that a project would have a significant impact if it would:

1) Conflict with or obstruct implementation of any applicable air quality plan.

2) Violate any air quality standard or contribute substantially to an existing or projected air quality violation.

3) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

4) Expose sensitive receptors to substantial pollutant concentrations.

5) Create objectionable odors affecting a substantial number of people.

NSAQMD thresholds have also been used to determine air quality impacts in this analysis. To assist local jurisdictions in the evaluation of air quality impacts, the NSAQMD has published a guidance document for the preparation of the air quality portions of environmental documents that includes thresholds of significance to be used in evaluating land use proposals. Thresholds of significance are based on a source's projected impacts and are a basis from which to apply mitigation measures (NSAQMD 2009). The NSAQMD has developed a tiered approach to significance levels: a project with emissions meeting Level A thresholds will require the most basic mitigations; projects with projected emissions in the Level B range will require more extensive mitigations; and those projects which exceed Level C thresholds will require the most extensive mitigations. The NSAQMD-recommended thresholds are identified in **Table 3.3-6** below.

TABLE 3.3-6
NSAQMD-RECOMMENDED SIGNIFICANCE THRESHOLDS

Significance Level	Project-Generated Emissions (lbs/day)		
	NO_x	ROG	PM_{10}
Level A	<24	<24	<79
Level B	25–136	25–136	80–136
Level C	≥137	≥137	≥137

Source: NSAQMD 2009

According to the NSAQMD (NSAQMD 2009), these thresholds are recommended for use by lead agencies when preparing initial studies. If, during the preparation of the initial study, the lead agency finds that any of the following thresholds may be exceeded and cannot be mitigated to Level B, then a determination of significant air quality impact must be made and an EIR is required.

For evaluation of project-related air quality impacts and considering that this EIR has been prepared to analyze the project, implementation of the proposed project would be considered significant if the project would:

- Exceed NSAQMD-recommended significance thresholds, as identified in **Table 3.3-6**. In accordance with NSAQMD-recommended thresholds of significance, project-generated short- or long-term increases in emissions in excess of Level C thresholds for NO_X, reactive organic gases (ROG), or PM_{10} would be considered significant. The NSAQMD has not adopted thresholds of significance for $PM_{2.5}$. However, because $PM_{2.5}$ is a subset of PM_{10}, significant increases in PM_{10} would be considered to also result in significant increases in $PM_{2.5}$.

  It is important to note that in cases when predicted emissions are projected to be below the Level C thresholds but exceeding the Level A thresholds (thereby placing project-related air quality impacts at Level B), the project would be considered potentially significant, subject to the recommended measures of NSAQMD's *Mitigation for Use During Design and Construction Phases for Classifications as Level B Threshold* (NSAQMD 2009). Implementation of the appropriate NSAQMD mitigation from this collection of measures would reduce Level B air quality impacts to a less than significant level.

- Exceed the NSAQMD health risk public notification thresholds set at 10 excess cancer cases in a million for cancer risk, or a Hazard Index of greater than one (1.0) for non-cancer risk.

- Contribute to localized concentrations of air pollutants at nearby receptors that would exceed applicable ambient air quality standards.

- Result in the frequent exposure of sensitive land uses to odorous emissions.

METHODOLOGY

Short-Term Impacts

Short-term construction emissions were estimated using the URBEMIS2007 (Version 9.2.4) computer program, as recommended by the NSAQMD. The URBEMIS2007 program is designed to model construction emissions for land use development projects and allows for the input of project-specific information. Modeling was based primarily on the default settings contained within the computer program for Nevada County and included emissions from off-highway mobile equipment, travel on unpaved surfaces, soil disturbance, and evaporative emissions from asphalt paving and architectural coating applications, as well as on-highway worker commute trips. Initial site preparation activities during phase one of project construction include export of 6,000 cubic yards of soil and 11 round trips per day (hauling) with a round-trip distance of 20 miles. Modeling was conducted for each of the proposed project phases assuming an overall 6-month construction period for each phase. It is anticipated that phases one and two would begin in the spring of 2012. Phases three through ten would continue buildout of the project to the outer areas surrounding the Village Center, including additional project amenities, cottage-style homes for independent living, duplexes, fourplexes, cohousing affordable units, and assisted living and nursing care units. It is anticipated that phases three and four would begin in spring of 2013 and, assuming favorable market demand, phases five and six would begin in 2014. Buildout of the project would be anticipated by 2016.

Modeled construction phases and associated proposed land uses are summarized in **Table 3.3-7**. Short-term construction emissions impacts are described under Impact 3.3.1**.**

Long-Term Impacts

Regional area- and mobile-source emissions were estimated using the URBEMIS2007 (Version 9.2.4) computer program. Emissions were calculated for annual operational conditions based on the default parameters contained in the model for Nevada County. Default trip-generation rates contained in the model were amended to correspond with trip-generation rates identified in the traffic analysis prepared for this project. Modeling was conducted for weekday and annual operational conditions. Emissions associated with the use of hearth devices were based on the modeling default assumptions.

The evaluation of local mobile-source CO concentrations was conducted using a screening procedure developed by the Bay Area Air Quality Management District (BAAQMD), which is a methodology previously approved for use by the NSAQMD. The BAAQMD screening procedure is based on the CALINE4 computer model, which was developed by the California Department of Transportation. Localized concentrations were quantitatively assessed for roadway intersections projected to operate at unacceptable levels of service (i.e., LOS E or worse), based on data obtained from the traffic analysis prepared for the proposed project. Ambient CO concentrations were based on the highest measured background concentrations measured at the nearest monitoring station for the last three years of available data. Emission factors were derived from the Emfac2007 computer model for Nevada County, for winter operational conditions. Eight-hour concentrations were calculated based on predicted 1-hour concentrations and assuming a persistence factor of 0.7. Exposure to localized concentrations

of odors and TACs were qualitatively assessed based on the projects potential to result in increased exposure of sensitive receptors to new or existing emission sources.

PROJECT IMPACTS AND MITIGATION MEASURES

Short-Term Construction-Generated Emissions of Criteria Air Pollutants (Standard of Significance 2)

Impact 3.3.1 Construction-generated emissions would exceed applicable significance thresholds and could result in a significant contribution to local and regional pollutant concentrations. This impact is **potentially significant**.

Construction of the proposed project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern in Nevada County include ozone-precursor pollutants (i.e., ROG and NO_x) and PM_{10}.

Construction-generated emissions are short term and of temporary duration, lasting only as long as construction activities occur, but possess the potential to represent a significant air quality impact. The construction and development of residential, commercial, and industrial uses would result in the temporary generation of emissions resulting from site grading and excavation, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate matter are largely dependent on the amount of ground disturbance associated with site preparation activities.

The predicted maximum daily construction-generated emissions of ROG, NO_x, and PM_{10} associated with project construction are summarized in **Table 3.3-7**. Based on the modeling conducted, maximum unmitigated construction-generated emissions of NO_x and PM would occur during the initial site preparation/grading of the project site. Emissions of ROG would largely occur during the building construction phase, associated with the application of architectural coatings, as well as during road construction, associated with asphalt application. As indicated in **Table 3.3-7**, emissions would vary depending on the project phase, the specific land uses being constructed and the specific activities conducted. As previously stated, emissions were calculated using the URBEMIS2007 computer program as recommended by NSAQMD (NSAQMD 2009). The air quality model assumes one-quarter of the project phase area would be actively disturbed on any given day and an overall estimated 6-month construction period for each project phase. Project construction is estimated to require the import of 6,000 cubic yards of soil. For the purposes of this analysis, this soil is estimated to be imported with 11 round trips per day (hauling) at a round-trip distance of 20 miles during Phases 1 and 2.

TABLE 3.3-7
ESTIMATED SHORT-TERM EMISSIONS OF CRITERIA AIR POLLUTANTS
FOR THE PROPOSED RINCON DEL RIO CONTINUING CARE RETIREMENT COMMUNITY

Project Phase	Emissions (lbs/day)			
	ROG	NOx	PM_{10}	$PM_{2.5}$
Phase I and Phase 2 (constructed in 2012)	141	44	62	14.5
Phase 1 and Phase 2 with mitigation	*127*	*44*	*35*	*9*
Phase 3	74	21	23	5.5
Phase 4	23	21	12	3
Phase 5	55	19	19	4.5
Phase 6	20	19	12	3
Phase 7	20	18	9	2.5
Phase 8	79	30	29	7.5
Phase 9	45	16	16	4
Phase 10	34	16	17	4
Trail System Development Phase	6	38	18	5
NSAQMD Level A/C Thresholds	24/137	24/137	79/137	None
Individual Project Phases Exceed NSAQMD Level A/C Thresholds?	Yes/Yes	Yes/No	No/No	NA

As previously stated, the NSAQMD considers emissions in excess of Level C thresholds to have a significant air quality impact. Emissions below Level C thresholds are considered potentially significant and subject to the recommended mitigation of NSAQMD's *Mitigation for Use During Design and Construction Phases for Classifications as Level B Threshold* (NSAQMD 2009). NSAQMD-recommended mitigation measures are dependent on level of impact in comparison to NSAQMD-recommended significance thresholds (NSAQMD 2009). Accordingly, implementation of NSAQMD-recommended mitigation measures sufficient to reduce emissions to levels below 137 lbs/day are considered adequate to reduce air quality impacts to a less than significant level. NSAQMD-recommended significance thresholds are defined in **Table 3.3-6** above.

Based on the modeling conducted, estimated short-term daily emissions of NO_x and PM_{10} associated with the individual project phases would not exceed the NSAQMD-recommended Level C significance threshold of 137 pounds per day (lbs/day). However, emissions would exceed the NSAQMD-recommended Level C ROG significance threshold of 137 lbs/day during Phases 1 and 2.

In addition, emissions would exceed the Level A significance threshold of 24 lbs/day for ROG during Phases 3, 5, 8, 9, and 10 and for NO_x during construction Phases 1, 2, and 8, as well as during installation of the trail system.

As noted earlier in this section, Nevada County is currently designated nonattainment for the ozone and PM_{10} ambient air quality standard. Short-term increases of ozone-precursor pollutants (ROG and NO_x) could potentially contribute to existing nonattainment conditions, depending on the construction phase. As a result, short-term increases of ROG and NO_x would be considered

potentially significant and mitigation is required to reduce these increases. In the case of Phases 1 and 2, ROG emissions would have to be reduced to a level below 137 lbs/day during those phases. ROG emissions generated during construction Phases 3, 5, 8, 9, and 10 would trigger the requirement for NSAQMD-recommended mitigation measures from NSAQMD's *Mitigation for Use During Design and Construction Phases for Classifications as Level B Threshold.* NO_x emissions generated during construction Phases 1, 2, and 8 and during trail system installation would also be subject to these NSAQMD-recommended measures.

In addition, NSAQMD Rule 226, Dust Control, requires the submittal of a Dust Suppression Control Plan to the NSAQMD for approval prior to any surface disturbance, including grading activities and the clearing of vegetation. In accordance with NSAQMD Rule 226, Dust Control, a Dust Suppression Control Plan (DSCP) shall be submitted for approval by the Nevada County Community Development Agency and NSAQMD. The DSCP must identify project phases and construction schedules to be implemented in order to ensure that mitigated construction-generated emissions would not exceed NSAQMD-recommended significance thresholds. The DSCP is required to include, but is not limited to, the following NSAQMD-recommended measures for the control of fugitive dust emissions:

- The project applicant shall be responsible for ensuring that all adequate dust control measures are implemented in a timely manner during all phases of project development and construction.

- All material excavated, stockpiled, or graded shall be sufficiently watered, treated, or covered to prevent fugitive dust from leaving the property boundaries and causing a public nuisance or a violation of an ambient air standard. Watering should occur at least twice daily, with complete site coverage.

- All areas with vehicle traffic shall be watered or have dust palliative applied as necessary for regular stabilization of dust emissions.

- All on-site vehicle traffic shall be limited to a speed of 15 mph on unpaved roads.

- All land clearing, grading, earth moving, or excavation activities on a project shall be suspended as necessary to prevent excessive windblown dust when winds are expected to exceed 20 mph.

- All inactive portions of the development site shall be covered, seeded, or watered until a suitable cover is established. Alternatively, the applicant may apply County-approved nontoxic soil stabilizers (according to manufacturers' specifications) to all inactive construction areas (previously graded areas which remain inactive for 96 hours) in accordance with the local grading ordinance.

- All material transported off-site shall be either sufficiently watered or securely covered to prevent public nuisance, and there must be a minimum of 6 inches of freeboard in the bed of the transport vehicle.

- Paved streets adjacent to the project shall be swept or washed at the end of each day, or more frequently if necessary, to remove excessive or visibly raised accumulations of dirt and/or mud which may have resulted from activities at the project site.

- Prior to final occupancy, the applicant shall re-establish ground cover on the site through seeding and watering in accordance with the local grading ordinance.

The following mitigation is required to address increases in the ozone-precursor pollutants, ROG and NO_x. Mitigation measures **MM 3.3.1c** and **MM 3.3.1d** are sourced from NSAQMD's *Mitigation for Use During Design and Construction Phases for Classifications as Level B Threshold*, and mitigation measure **MM 3.3.1a** has been adapted from these recommendations in order to be more specific to the project and thus more stringent. Mitigation measure **MM 3.3.1b** is in addition to NSAQMD-recommended mitigation measures.

Mitigation Measures

MM 3.3.1a The project applicant shall submit to the NSAQMD for approval an Off-Road Construction Equipment Emission Reduction Plan prior to groundbreaking demonstrating that all off-road equipment (portable and mobile) meets or is cleaner than Tier 2 engine emission specifications unless prior written approval for any exceptions is obtained from NSAQMD. Note that all off-road equipment must meet all applicable state and federal requirements.

Construction contracts shall stipulate the following:

- Emissions from on-site construction equipment shall comply with NSAQMD Regulation II, Rule 202, Visible Emissions.
- The primary contractor shall be responsible to ensure that all construction equipment is properly tuned and maintained.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes when not in use (as required by California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturers' specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- Existing power sources (e.g., power poles) or clean fuel generators shall be utilized rather than temporary power generators where feasible.

Timing/Implementation: *The Off-Road Construction Equipment Emission Reduction Plan shall be submitted and approved prior to issuance of grading permits for the first phase of construction. The plan shall be implemented during all phases of construction.*

Enforcement/Monitoring: *Nevada County Community Development Agency; Northern Sierra Air Quality Management District*

MM 3.3.1b All architectural coating activities associated with construction of the proposed project shall be required to use interior and exterior coatings that contain less than 250 grams of volatile organic compounds (VOC/ROG) per liter of coating.

Timing/Implementation: *During construction*

Enforcement/Monitoring: *Nevada County Community Development Agency; Northern Sierra Air Quality Management District*

MM 3.3.1c Grid power shall be used (as opposed to diesel generators) for construction site power needs where feasible during construction.

Timing/Implementation: *During construction*

Enforcement/Monitoring: *Nevada County Community Development Agency; Northern Sierra Air Quality Management District*

MM 3.3.1d Deliveries of construction materials shall be scheduled to direct traffic flow to avoid the peak hours of 7–9:00 AM and 4–6:00 PM.

Timing/Implementation: *During construction*

Enforcement/Monitoring: *Nevada County Community Development Agency; Northern Sierra Air Quality Management District*

In accordance with NSAQMD Rule 226 and mitigation measures **MM 3.3.1a** through **MM 3.3.1d**, the project would be required to prepare a Dust Suppression Control Plan and an Off-Road Construction Equipment Emission Reduction Plan, employ the use of interior and exterior coatings that contain less than 250 grams of VOC/ROG, use grid power when feasible thus reducing diesel fuel consumption, and schedule off-peak-hour material deliveries. The DSCP would be required to identify construction schedules and project phases to be implemented, which would ensure that multiple project phases or construction activities would not occur simultaneously, thus reducing the amount of pollutants emitted in a single day.

Based on the proposed project phasing schedules, and with implementation of the above mitigation measures, maximum predicted construction-generated emissions would be reduced to a less than significant level. Due to limitations in the air quality computer model, only air pollutant reductions associated with watering the construction site twice daily as mandated by NSAQMD Rule 226 and the requirement to use interior and exterior coatings that contain less than 250 grams of VOC/ROG (mitigation measure **MM 3.3.1b**) can be quantified. Accounting for the reductions from these two mitigation strategies alone would reduce maximum predicted construction-generated emissions to approximately 127 lbs/day of ROG during Phases 1 and 2 when the Level C ROG significance threshold would be exceeded without mitigation, as shown in **Table 3.3-7**. However, it should be noted that emissions would most likely be reduced to an even further extent with implementation of the remaining aspects of Rule 226 and mitigation measures **MM 3.3.1a, MM 3.3.1c**, and **MM 3.3.1d**, which as previously stated could not be quantified. This is especially noteworthy in the case of NO_x emissions, which are addressed under mitigation measure **MM 3.3.1a**.

The NSAQMD considers ROG and NO_x emissions of less than 137 lbs/day to have a less than significant impact, and as demonstrated above, with incorporation of mitigation measures, no construction-generated emissions would exceed this threshold. The NSAQMD considers emissions that are below the Level C thresholds but exceeding the Level A thresholds to be potentially significant, subject to mitigation in order to be considered less than significant. Mitigation

measures **MM 3.3.1c** and **MM 3.3.1d** are sourced from NSAQMD's recommended mitigations, and **MM 3.3.1a** has been adapted from these recommendations in order to address generated emissions that exceed Level A thresholds.

With implementation of the proposed mitigation measures, this impact would be considered **less than significant**.

Short-Term Exposure of Sensitive Receptors to Toxic Air Contaminants (Standard of Significance 4)

Impact 3.3.2 Health risks associated with intermittent exposure to construction-generated diesel-exhaust emissions would not be anticipated to exceed applicable thresholds. As a result, short-term exposure of sensitive receptors to TACs would be considered **less than significant**.

Potential sources of toxic air contaminants (TACs) associated with construction-related activities are primarily associated with the airborne entrainment of asbestos due to the disturbance of naturally occurring asbestos-containing soils, as well as emissions of DPM associated with the use of diesel-powered construction equipment. The proposed project is not located within an area designated by the State of California as likely to contain naturally occurring asbestos (DOC 2000). As a result, construction-related activities would not be anticipated to result in increased exposure of sensitive land uses to asbestos. Construction of the proposed land uses would, however, result in construction-generated diesel-exhaust emissions. Particulate exhaust emissions from diesel-fueled engines (DPM) were identified as a toxic air contaminant by CARB in 1998.

Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer. For residential land uses, the calculation of cancer risk associated with exposure to TACs is typically based on a 70-year period of exposure. The use of diesel-powered construction equipment would be temporary and episodic and would occur over a relatively large area. In addition, mitigation measures incorporated for the control of particulate emissions from on-site construction equipment would substantially reduce emissions of DPM by approximately 40 percent or more. For these reasons, DPM generated by project construction, in and of itself, would not be expected to create conditions where the probability of contracting cancer is greater than 10 in 1 million for nearby receptors. Long-term health risks associated with short-term construction activities would therefore be considered **less than significant**.

Mitigation Measures

None required.

Long-Term Emissions of Criteria Air Pollutants (Standard of Significance 2)

Impact 3.3.3 Project-generated long-term operational emissions would exceed applicable significance thresholds and could contribute to regional nonattainment conditions. As a result, this impact is considered **potentially significant.**

Long-term operation of the proposed project would generate emissions of ozone-precursor pollutants (i.e., ROG and NO_x) and PM_{10}. Long-term increases in area- and mobile-source emissions associated with the proposed land uses were estimated using the CARB-approved URBEMIS2007 computer program. Trip-generation rates assigned to the proposed land uses were based on those identified in the traffic analysis prepared for this project. Predicted maximum daily operational emissions were calculated for winter and summer conditions. Annual emissions, in tons per year, were also calculated.

Predicted operational emissions are summarized in **Table 3.3-8**. Based on the modeling conducted, mobile sources resulted in the greatest predicted contribution to project-related emissions during the summer months. However, during the winter months, estimated daily emissions would increase due to the assumed use of wood-burning fireplaces and stoves within proposed residential dwelling units, as well as the reentrainment of road dust due to the increased sanding of area roadways. Emissions from these two primary sources are discussed in more detail below.

Sewer Lift Station Pump Generator

The project proposes to construct an on-site sewer lift station (and possibly an intermediate lift station) and extend a 6-inch force main from the project site to Rodeo Flat Road. From the high point near the intersection of Rodeo Flat and Timber Ridge, the line would then gravity flow down Timber Ridge Road and eventually terminate at an existing manhole located on Riata Way near the Lake of the Pines Sewer Treatment Facility. All off-site construction of the sewer main would be located within existing public utility easements (PUEs) (the proposed wastewater system is illustrated on **Figure 2.0-16**).

The on-site sewer lift station is anticipated to include an emergency power generator, control panel, exhaust fans, and booster pump. The booster pump would be located below grade in an underground vault. The remaining equipment would be located above ground and housed in an enclosed structure. The emergency power generator would run on diesel fuel and therefore be an intermittent source of emissions as its operation will be rare and intermittent. Therefore, while the emergency power generator would be a source of air pollutant emissions, their use would be limited and resultant emissions negligible.

Wood-Burning Devices

The calculation of emissions from wood-burning devices assumes that 35 percent of the residential dwellings would be equipped with wood-burning stoves and 10 percent would be equipped with wood-burning fireplaces, based on default modeling assumptions contained in the URBEMIS2007 computer model for Nevada County. Based on the modeling conducted and in comparison to summer emissions, wood-burning appliances (i.e., fireplaces and stoves) would result in increased daily emissions of approximately 93 lbs/day of ROG, 12.5 lbs/day of NO_x, 97 lbs/day of PM_{10}, and 94 lbs/day of $PM_{2.5}$. During the winter months, estimated emissions from wood-burning hearth devices constituted a majority of the estimated project-generated ROG and NO_x emissions, resulting in increased emissions of these pollutants. However, despite the projected increases, NSAQMD's Level C significance thresholds would not be exceeded.

Reentrained Roadway Dust

The calculation of reentrained road dust is dependent, in part, on various factors including roadway conditions, vehicle speed, vehicle weight, and what is referred to as silt loading. The term "silt loading" can be defined as the amount of particles less than 74 microns in diameter per unit area of surface. The default assumptions contained in the URBEMIS2007 model are largely based on an average silt-loading factor of 0.1 grams per meter, which accurately reflect site-specific conditions of the project site.

As previously stated, operational emissions were calculated using the URBEMIS2007 (v9.2.4) computer program, based on default vehicle fleet distributions, trip characteristics, and emissions data contained in the model, except as noted. Trip-generation rates are based on the traffic analysis prepared for this project, and it is assumed that hearth devices are made up of 35

percent wood-burning stoves, 10 percent wood-burning fireplaces, and 55 percent natural gas fireplaces. The silt-loading factor of 0.1 gram/meter^2 for summer and winter conditions was used. Predicted operational emissions are summarized in **Table 3.3-8**.

TABLE 3.3-8
ESTIMATED OPERATIONAL EMISSIONS AT BUILDOUT WITHOUT MITIGATION

Source	Estimated Emissions[1]								
	Summer (lbs/day)			Winter (lbs/day)			Annual (tons/year)		
	ROG	NO_x	PM_{10}	ROG	NO_x	PM_{10}	ROG	NO_x	PM_{10}
Area Sources	25	4.5	--	118	17	94	8.2	1.2	4
Mobile Sources	13	12	18	12	17.5	3	2.3	2.5	3.2
Total	38	16.5	18	130	35	97	10.5	3.7	7.2
NSAQMD Level A/C Thresholds	24/137	24/137	79/137	24/137	24/137	79/137	None	None	None
Individual Project Phases Exceed NSAQMD Level A/C Thresholds?[2]	Yes/No	No/No	No/No	Yes/No	Yes/No	Yes/No	None	None	None

As previously stated, the NSAQMD considers emissions in excess of Level C thresholds to have a significant air quality impact. Accordingly, implementation of NSAQMD-recommended mitigation measures sufficient to reduce emissions to levels below 137 lbs/day is considered adequate to reduce air quality impacts to a less than significant level. In addition, the NSAQMD considers emissions that are below the Level C thresholds but exceeding the Level A thresholds to be potentially significant, subject to mitigation of NSAQMD's *Mitigation for Use During Design and Construction Phases for Classifications as Level B Threshold* (NSAQMD 2009) in order to be considered less than significant. NSAQMD-recommended significant thresholds are defined in **Table 3.3-6** above.

Estimated operational emissions of ROG, NO_x, and PM_{10} would not exceed the NSAQMD's Level C significance threshold of 137 lbs/day during either the summer or winter months. However, emissions of ROG, NO_x, and PM_{10} are projected to exceed the NSAQMD's Level A significance threshold. According to NSAQMD guidance, emissions exceeding the Level A significance threshold would contribute to existing nonattainment conditions and may also interfere with the region's ability to maintain ambient air quality standards if no mitigation is implemented. This impact would be considered **potentially significant**, and the following mitigation is required.

Mitigation Measures

MM 3.3.3 The project applicant shall adhere to the following NSAQMD-recommended mitigation measures to reduce long-term operational emissions:

- Use of wood-burning stoves or fireplaces within interior and exterior areas of residential land uses shall be prohibited. Each residence shall be equipped with a non-wood-burning source of heat.
- The project applicant shall provide, operate, and fund a green-waste drop-off site for residents.

Timing/Implementation: *Throughout the time span of project operations*

Enforcement/Monitoring: *Nevada County Community Development Agency; Northern Sierra Air Quality Management District*

In addition to this mitigation, mitigation measure **MM 3.5.1b** (see Section 3.5, Climate Change and Greenhouse Gases, of this DEIR) Furthermore, many of the NSAQMD-recommended mitigations (NSAQMD 2009) are already proposed as part of the project. For instance, the proposed project would incorporate mixed land uses (residential and commercial) as well as recreational amenities and a minimum of two paratransit vehicles for the purposes of transporting facility residents to various business appointments, grocery and service needs, recreation, and special events. Each of these measures would reduce automobile trips and thus air pollutant emissions.

Implementation of the NSAQMD-recommended mitigation measures **MM 3.3.3** would result in substantial reductions in project-generated emissions, as shown in **Table 3.3-9**. Furthermore, mitigation measure **MM 3.5.1b** and various project proposals would also reduce air pollutant emissions during project operations, yet these reductions are unable to be quantified accurately. These measures would reduce pollutant emissions and conform to NSAQMD guidance regarding impacts that surpass the Level A significance threshold.

TABLE 3.3-9
ESTIMATED OPERATIONAL EMISSIONS AT BUILDOUT WITH MITIGATION

Source	Estimated Emissions[1]								
	Summer (lbs/day)			Winter (lbs/day)			Annual (tons/year)		
	ROG	NO_X	PM_{10}	ROG	NO_X	PM_{10}	ROG	NO_X	PM_{10}
Area Sources	25	4.5	--	22	7	0.2	4	0.8	0
Mobile Sources	13	12	18	12	17.5	18	2	2.4	3
Total	38	16.5	18	34	24.5	18	6	3.2	3

Notes:

[1] Operational emissions were calculated using the URBEMIS2007 (v9.2.4) computer program, based on default vehicle fleet distributions, trip characteristics, and emissions data contained in the model, except as noted. Trip-generation rates based on the traffic analysis prepared for this project; hearth devices assume no wood-burning stove and no wood-burning fireplaces; silt-loading factor of 0.1 g/m^2 for summer and winter conditions.

The NSAQMD considers emissions of less than 137 lbs/day to have a less than significant impact, and as demonstrated in **Table 3.3-8**, no operational emissions would exceed this threshold.

The NSAQMD considers emissions that are below the Level C thresholds but exceeding the Level A significance thresholds to be potentially significant, subject to mitigation in order to be considered less than significant. As shown, prohibiting the use of wood-burning heating devices as mandated with mitigation measure **MM 3.3.3** would reduce area-source winter emissions to a total of approximately 22 lbs/day of ROG, 7 lbs/day of NO_X, and 0.2 lbs/day of PM_{10}. In total, project-generated winter emissions from both area and mobile sources would be reduced to approximately 34 lbs/day of ROG, 25 lbs/day of NO_X, and 18 lbs/day of PM_{10}. With implementation of mitigation measure **MM 3.3.3**, project-generated emissions would be reduced and the project would be in conformance with NSAQMD guidance regarding impacts that surpass the Level A significance threshold. Furthermore, mitigation measure **MM 3.5.1b** and

various project proposals would also reduce air pollutant emissions during project operations. This impact would be considered **less than significant**.

Contribution to Near-Term Local Mobile-Source CO Concentrations (Standard of Significance 4)

Impact 3.3.4 Implementation of the proposed project would not contribute to localized concentrations of mobile-source CO that would exceed applicable standards. This impact would be considered **less than significant.**

The primary mobile-source criteria pollutant of local concern is carbon monoxide (CO). As noted previously, Nevada County is currently designated attainment for both state and national CO ambient air quality standards, and the county typically experiences low background CO concentrations.

Concentrations of CO are a direct function of the number of vehicles, length of delay, and traffic flow conditions. Transport of this criteria pollutant is extremely limited; CO disperses rapidly with distance from the source under normal meteorological conditions. Under certain meteorological conditions, however, CO concentrations close to congested intersections that experience high levels of traffic and elevated background concentrations may reach unhealthy levels, affecting nearby sensitive receptors. Given the high traffic volume potential, areas of high CO concentrations, or "hot spots," are typically associated with intersections that are projected to operate at unacceptable levels of service (LOS E or worse) during the peak commute hours. Modeling is therefore typically conducted for intersections that are projected to operate at unacceptable levels of service during peak commute hours.

Based on the traffic analysis prepared for this project (KD Anderson 2011), the intersection of State Route 49 and Rincon Way would be projected to operate at an unacceptable level of service under future cumulative conditions. The State Route 49/Rincon Way intersection will operate with the westbound approach at an LOS F condition in the PM peak hour with implementation of the project. Modeling was conducted based on PM peak hour traffic volumes for winter operating conditions. To ensure a conservative analysis, predicted 1-hour and 8-hour CO concentrations were calculated assuming background CO concentrations of 3.4 and 2.6 ppm, respectively, based on data obtained from the nearest monitoring station. A persistence factor of 0.7 was used to convert predicted hourly concentrations to 8-hour concentrations. The predicted 1-hour and 8-hour CO concentrations for future cumulative conditions are summarized in **Table 3.3-10**.

TABLE 3.3-10
PREDICTED LOCAL MOBILE SOURCE CARBON MONOXIDE CONCENTRATIONS
FUTURE PLUS PROJECT CONDITIONS (YEAR 2023 – ASSUMED PROJECT BUILDOUT)

Interchange	Predicted CO Concentration (ppm)	
	1-hour	8-hour
State Route 49/Rincon Way	4.1	5.5
California Ambient Air Quality Standards (CAAQS)	20	9
Predicted Concentrations Exceed CAAQS?	No	No

Note: Predicted CO concentrations are the sums of a background component, which includes the cumulative effects of all CO sources in the project area vicinity and the proposed project's contribution.

As noted in **Table 3.3-10**, under future conditions predicted maximum 1-hour CO concentrations at the State Route 49/Rincon Way intersection are estimated at 4.1 parts per million (ppm) and predicted 8-hour CO concentrations would be 5.5 ppm. Predicted 1-hour and 8-hour CO concentrations would not exceed even the most stringent corresponding California Ambient Air Quality Standards (CAAQS) of 20 and 9 ppm, respectively. Since the proposed project would not contribute to predicted localized concentrations of mobile-source CO that would exceed applicable ambient air quality standards, this impact would be considered **less than significant**.

Mitigation Measures

None required.

Exposure of Sensitive Receptors to Odorous Emissions (Standard of Significance 5)

Impact 3.3.5 Implementation of the proposed project would not result in increased exposure of sensitive receptors to odorous emissions. As a result, potential exposure of sensitive receptors to odors would be considered **less than significant**.

The occurrence and severity of odor impacts depends on numerous factors, including the nature, frequency, and intensity of the source, wind speed and direction, and the sensitivity of the receptors. While offensive odors rarely cause any physical harm, they still can be very unpleasant, leading to considerable distress among the public and often generating citizen complaints to local governments and regulatory agencies. Projects with the potential to frequently expose members of the public to objectionable odors would be deemed to have a significant impact. Land uses commonly considered to be potential sources of odorous emissions include wastewater treatment plants, sanitary landfills, food processing facilities, chemical manufacturing plants, rendering plants, paint/coating operations, and agricultural feedlots and dairies.

No major sources of odors were identified in the vicinity of the project site that could potentially affect proposed on-site residential land uses. In addition, implementation of the proposed project would not result in the development or long-term operation of any on-site sources of odors. As a result, exposure of sensitive receptors to odorous emissions would be considered **less than significant**.

Mitigation Measures

None required.

Long-Term Exposure of Sensitive Receptors to Toxic Air Contaminants (Standard of Significance 4)

Impact 3.3.6 Implementation of the proposed project would not result in increased exposure of planned residential land uses to mobile-source TACs. As a result, this impact is considered **less than significant**.

No major existing stationary sources of toxic air contaminants (TACs) were identified within one-quarter mile of the project site (CARB 2009). However, the proposed project would result in the construction of support services including a café, post office, recycling center, bakery, theater, ice cream parlor, pub, pharmacy, market/deli, beauty shop, bank, and dry cleaning, which could generate emissions of TACs. Such sources of TACs would be subject to NSAQMD rules and regulations, including NSAQMD Regulation IV (Authority to Construct), Regulation V (Permit to Operate), and Regulation IX (Toxics Air Contaminants). All stationary sources that have the potential to emit TACs are required to obtain permits from the NSAQMD. Permits may be

granted to these operations if they are constructed and operated in accordance with applicable regulations. As part of the NSAQMD's permitting requirements, sources having the potential to emit TACs would be required to implement measures designed to ensure that potential health risks to nearby receptors would not exceed established standards.

In addition to stationary sources of emissions, mobile sources of emissions may also contribute to localized concentrations of TACs that could adversely affect sensitive population groups. The project site is located east of State Route 49. Diesel-powered trucks traveling along State Route 49 are a source of DPM, which could adversely affect proposed sensitive land uses. Most researchers believe that diesel exhaust particles contribute the majority of the risk (roughly 70 percent by some estimates) because the particles in the exhaust carry many harmful organics and metals. Based on information obtained from CARB, population-weighted statewide average DPM concentrations for year 2010 are estimated to result in approximately 450 excess cancer cases per million people over a 70-year exposure period. It is important to note that this estimated cancer risk is best interpreted as background cancer risk. Cancer risks would be greater in areas located near major transportation corridors and stationary sources.

CARB released the *Air Quality and Land Use Handbook: A Community Health Perspective* in 2005. According to the handbook, sensitive land uses should generally not be located within 500 feet of a freeway with 100,000 vehicles per day. The project site is located approximately 1,300 feet east of State Route 49 at the closest point, well beyond the CARB-recommended buffer. Furthermore, existing traffic volumes along the closest segment of State Route 49 average approximately 56,000 vehicles per day (Caltrans 2010). Existing State Route 49 traffic volumes do not exceed CARB's handbook criteria of 100,000 vehicles per day for freeways.

Given that the proposed project is well beyond the CARB-recommended buffer of 500 feet from a highway which does not generated 100,000 vehicle trips per day, the proposed project would not result in increased exposure of planned residential land uses to mobile-source TACs. This impact would be considered **less than significant**.

Mitigation Measures

None required.

3.3.4 CUMULATIVE SETTING, IMPACTS, AND MITIGATION MEASURES

CUMULATIVE SETTING

The cumulative setting for air quality includes Nevada County in its entirety and the Mountain Counties Air Basin. Nevada County is currently designated nonattainment for ozone and PM_{10} standards. Cumulative growth in population, vehicle use, and industrial activity could inhibit efforts to improve regional air quality and attain the ambient air quality standards.

CUMULATIVE IMPACTS AND MITIGATION MEASURES

Contribution to Cumulative CO and TAC Concentrations (Standard of Significance 4)

Impact 3.3.7 Implementation of the proposed project, in combination with existing, approved, proposed, and reasonably foreseeable development in the Mountain Counties Air Basin, would not contribute to localized concentrations of mobile-source CO or TACs that would exceed applicable ambient air quality standards. This impact would be considered **less than cumulatively considerable.**

Proposed CCRC Development

As noted in the discussion for Impact 3.3.4, the criteria mobile-source air pollutant of primary local concern is carbon monoxide. However, implementation of the proposed project would not be anticipated to contribute to localized concentrations of CO that would exceed applicable ambient air quality standards under future cumulative conditions. In addition, as noted in the discussion for Impact 3.3.6, implementation of the proposed project would not result in the long-term operation of any major stationary sources of toxic air contaminants, and no major stationary sources of TACs have been identified in the vicinity of the proposed project site. As a result, the proposed project's cumulative contribution to localized concentrations of criteria and hazardous air pollutants would be considered **less than cumulatively considerable**.

General Plan and Zoning Ordinance Text Amendments

As discussed in further detail in Section 4.0, Cumulative Impacts Summary, the proposed General Plan and Zoning Ordinance text amendments are policy actions that would not directly contribute to localized concentrations of CO and TAC in the cumulative setting. Although CCRCs would be permitted in either a PD (Planned Development) or SDA (Special Development Area) land use designation with approval of a zone change after implementation of the proposed project, such rezoning applications would be subject to further CEQA analysis of project-specific impacts (proposed Zoning Ordinance amendment Section L.II 2.7.11(C)(4)), including air quality impacts. At a programmatic level, the environmental impacts associated with development of all PD and SDA designated areas in the county were analyzed in the Nevada County General Plan Environmental Impact Report, Volume I, SCH #1995102136 (1995). Future site-specific CEQA analysis would result in project-specific mitigation to address CO and TAC concentrations. Therefore, cumulative regional air quality impacts associated with the proposed General Plan and Zoning Ordinance text amendments are considered **less than cumulatively considerable**.

Mitigation Measures

None required.

Contribution to Cumulative Regional Air Quality Conditions (Standards of Significance 1 & 3)

Impact 3.3.8 Long-term operation of the proposed project, in combination with existing, approved, proposed, and reasonably foreseeable development in the Mountain Counties Air Basin, would contribute to cumulative increases in emissions of ozone-precursor pollutants (ROG and NO_x) and PM_{10} that could contribute to future concentrations of ozone and PM_{10}, for which the region is currently designated nonattainment. This impact would be considered **cumulatively considerable.**

Proposed CCRC Development

The county is designated nonattainment status for ozone and PM_{10}. As a nonattainment area, the NSAQMD is required to prepare a federally enforceable State Implementation Plan (SIP) for western Nevada County in accordance with the Clean Air Act. The SIP is an air quality attainment plan designed to reduce emissions of ozone precursors enough to re-attain the federal ozone standard by the earliest practicable date. The air quality attainment plan (titled *Reasonably Available Control Technology State Implementation Plan Revision for Western Nevada County 8-Hour Ozone Non-Attainment Area)* includes various pollution control

strategies. Overall emissions of ozone precursors must be reduced in western Nevada County (consistent with Reasonable Further Progress requirements specified in the Clean Air Act) until attainment is reached. As discussed for Impact 3.3.1, predicted short-term construction-generated emissions of ROG would exceed NSAQMD's Level C significance thresholds, though they would be mitigated to a less than significant level (see mitigation measures **MM 3.3.1a** through **3.3.1d**). In addition, with implementation of mitigation measure **MM 3.3.3**, project-generated operational emissions would be reduced to a less than significant level. Adherence to these mitigation measures would ensure the project, by itself, does not surpass NSAQMD significance thresholds and therefore does not conflict with the goals of the SIP.

According to NSAQMD guidance, impacts of local pollutants are cumulatively significant when modeling shows that combined emissions from the project and other existing and planned projects will exceed air quality standards. As discussed for Impact 3.3.1, predicted short-term construction-generated emissions of ROG would exceed NSAQMD's Level C significance thresholds, though they would be mitigated to a less than significant level and project-generated operational emissions would also be reduced to a less than significant level. However, other projects are planned within the county. For example, the Loma Rica Ranch Specific Plan project has proposed to develop 700 residential units, 54,000 square feet of commercial and retail building space, and 364,161 square feet of business and light industrial building space in Grass Valley. The combined emissions from the Loma Rica Ranch Specific Plan and the proposed project would exceed NSAQMD's Level C significance thresholds.

General Plan and Zoning Ordinance Text Amendments

As discussed in further detail in Section 4.0, Cumulative Impacts Summary, the proposed General Plan and Zoning Ordinance text amendments are policy actions that would not directly contribute to cumulative increases in emissions of ozone-precursor pollutants (ROG and NO_x) and PM_{10} in the cumulative setting. Although CCRCs would be permitted in either a PD (Planned Development) or SDA (Special Development Area) land use designation with approval of a zone change after implementation of the proposed project, such rezoning applications would be subject to further CEQA analysis of project-specific impacts (proposed Zoning Ordinance amendment Section L.II 2.7.11(C)(4)), including air quality impacts. At a programmatic level, the environmental impacts associated with development of all PD and SDA designated areas in the county were analyzed in the Nevada County General Plan Environmental Impact Report, Volume I, SCH #1995102136 (1995). Future site-specific CEQA analysis would result in project-specific mitigation to address impacts.

Mitigation Measures

Implement mitigation measures **MM 3.3.1a** through **MM 3.3.1d** and **MM 3.3.3**.

According to NSAQMD guidance, impacts of local pollutants are cumulatively significant when modeling shows that combined emissions from the project and other existing and planned projects will exceed air quality standards. As discussed above, other projects, in combination with the proposed project, are planned within the county. Just the combined emissions of the Loma Rica Ranch Specific Plan proposal (700 residential units, 54,000 square feet of commercial and retail uses, and 364,161 square feet of business and industrial uses) and the proposed project would exceed NSAQMD's Level C significance thresholds. As a result, increases in project-related emissions, though considered less than significant at the project level, could on a cumulative basis contribute to existing nonattainment conditions. As a result, this impact would be considered **cumulatively considerable** and **significant and unavoidable.**

3.8 Greenhouse Gas Emissions

3.8.1 Introduction

This section evaluates the greenhouse gas (GHG) emissions impacts of the Project. The following discussion is based, in part, on a GHG emissions calculations prepared by Illingworth & Rodkin, Inc. in February 2017 and revised in August of 2021 (Illingworth & Rodkin, Inc. 2021). Calculation tables and model output from that analysis are included as Appendix D to this EIR.

3.8.1.1 Greenhouse Gas Emissions and Global Climate Change

Climate change is caused by GHGs emitted into the atmosphere around the world from a variety of sources, including the combustion of fuel for energy and transportation, cement manufacturing, and refrigerant emissions. GHGs are those gases that have the ability to trap heat in the atmosphere, a process that is analogous to the way a greenhouse traps heat. GHGs may be emitted as a result of human activities, as well as through natural processes. Increasing GHG concentrations in the atmosphere is leading to global climate change resulting in direct and indirect impacts to loss in snow pack; sea-level rise; more extreme heat days per year; more high ozone days; more extreme forest fires; more severe droughts punctuated by extreme precipitation events; increased erosion of California's coastlines and sea water intrusion into the Sacramento and San Joaquin Deltas and associated levee systems; and increased pest infestation (OPR 2018).

Carbon dioxide (CO_2) is the most important anthropogenic GHG because it comprises the majority of total GHG emissions emitted per year and it is very long-lived in the atmosphere. Other common GHGs include methane (CH_4), nitrous oxide (N_2O), and halocarbons (a group of gases containing fluorine, chlorine, or bromine). Typically, when evaluating GHG emissions they are expressed as CO_2 equivalents, or CO_2e, which is a means of weighting the global warming potential (GWP) of the different gases relative to the global warming effect of CO_2, which has a GWP value of one. Other GHGs, such as CH_4 and N_2O, which are commonly found in the atmosphere, but at much lower concentrations, have a GWP of 21 and 310, respectively. In the United States, CO_2 emissions account for about 80 percent of the GHG emissions, followed by CH_4 at about 10 percent and nitrous oxide at about 7 percent (USEPA 2021).

3.8.2 Regulatory Setting

3.8.2.1 Federal

The U.S. participates in the United Nations Framework Convention on Climate Change (UNFCCC). In 2007, the U.S. Environmental Protection Agency (USEPA) identified CO_2 as an air pollutant as defined under the Clean Air Act, and that the USEPA has the authority to regulate emissions of GHGs. The USEPA has promulgated several GHG regulations, which for the most part, apply to larger facilities that emit large amounts of CO_2 or its equivalent in other regulated GHGs. These regulations include the Federal Mandatory Reporting of Greenhouse Gases (Mandatory Reporting Rule) and the Title V Greenhouse Gas Tailoring Rule (Tailoring Rule). The Mandatory Reporting Rule, which requires reporting of CO_2 and other GHG emissions,

applies to particular facility types that emit GHGs (primarily large facilities that emit 25,000 metric tons per year or more of CO_2e emissions) and to most upstream suppliers of fossil fuels and industrial GHGs, as well as to manufacturers of vehicles and engines (USEPA 2009). Since the quarry would emit well under 25,000 metric tons CO_2e per year, it would not be subject to this rule.

The USEPA also issued a rule addressing GHG emissions from stationary sources and requirements under Title V and Prevention of Significant Deterioration (PSD) permitting programs. This rule is known as the PSD and Tailoring Rule. The Sargent Quarry would not be a major GHG source under the PSD or Tailoring Rule permit regulations.

Light-Duty Vehicle Greenhouse Gas and Corporate Average Fuel Economy Standards

In addition to setting emission standards for stationary sources, the USEPA sets nationwide emission standards for mobile sources, which include on-road (highway) motor vehicles such as trucks, buses, and automobiles, and non-road (off-road) vehicles and equipment used in construction, agricultural, industrial, and mining activities (such as bulldozers and loaders). The USEPA also sets nationwide fuel standards, such as the Corporate Average Fuel Economy (CAFE) standards (adopted in 2010) that require improved fuel economy and lower GHG emissions.

In 2018, the USEPA and the U.S. Department of Transportation's National Highway Traffic Safety Administration (NHTSA) proposed the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One and Part Two. Part One revokes California's authority to set its own fuel economy and greenhouse gas standards and zero-emission vehicle mandate, and Part Two increased the federal greenhouse gas emissions and fuel economy standards (84 Federal Register 51,310 for Part One and 85 Federal Register 24,173 for Part Two).

On April 22, 2021, NHTSA proposed to formally roll back portions of the SAFE Rule, thereby restoring California's right to set more stringent fuel efficiency standards. NHTSA is also planning to issue a new rule to increase the national fuel economy standard for light duty vehicles beyond those in Part Two of the SAFE Vehicles Rule (Federal Register 2021).

3.8.2.2 State

In response to the increasing body of evidence that GHGs will continue to affect the global climate, the State has enacted key legislation and promulgated regulations in an effort to reduce the State's contribution to climate change.

Executive Orders

There are three primary EOs related to the State's GHG reduction efforts. In general, EOs provide direction to State government agencies but do not place mandates on regional or local governments or the private sector.

- **EO S-03-05:** Established GHG-reduction targets for 2010 (2000 emission levels), 2020 (1990 emission levels) and 2050 (80 percent below 1990 levels).

- **EO S-30-15:** Established a GHG reduction target for 2030 (40 percent below 1990 levels).
- **EO B-55-18:** Established a new statewide goal "to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter." This EO directs CARB to ensure future Climate Change Scoping Plans (discussed below) identify and recommend measures to achieve the carbon neutrality goal.

Assembly Bill 1493

California Assembly Bill 1493 of 2002 (Pavley) required the California Air Resources Board (CARB) to develop and adopt regulations that reduce GHGs emitted by passenger vehicles and light duty trucks. Responsive regulations adopted by CARB apply to 2009 and later model year vehicles. CARB estimates that the regulation will reduce GHG emissions from light duty passenger vehicles in California by an estimated 18 percent in 2020 and by 27 percent in 2030 (CARB 2021b).

Assembly Bill 32 and Senate Bill 32

In 2006, Assembly Bill 32 (AB 32), the *California Global Warming Solutions Act of 2006* was adopted and codified in California Health and Safety Code Division 25.5. Under AB 32, CARB established a statewide GHG emissions cap for 2020, adopted mandatory reporting rules for significant sources of GHGs, and adopted a comprehensive plan, known as the Climate Change Scoping Plan, identifying how emission reductions would be achieved from significant GHG sources.

In 2016, SB 32 amended the California Global Warming Solution Act. SB 32 and accompanying Executive Order B-30-15 require CARB to ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. CARB updated its Climate Change Scoping Plan in December of 2017 (CARB 2017) to express the 2030 statewide target in terms of million metric tons of CO_2e ($MMTCO_2e$). The 2008 Climate Change Scoping Plan shows 1990 emissions at 426.6 $MMTCO_2e$ (CARB 2008). Based on the emissions reductions directed by SB 32, the annual 2030 statewide target emissions level for California is 260 $MMTCO_2e$. The 2017 Climate Change Scoping Plan identifies measures for how California could achieve the 2030 GHG reduction target established in SB 32,and substantially advance towards the 2050 reduction goal identified in EO S-3-05.

Cap-and-Trade Program

The California Cap-and-Trade Program is a core strategy that the state is using to meet its GHG reduction targets for 2020 and 2030, and ultimately achieve an 80 percent reduction from 1990 levels by 2050. CARB designed and adopted the California Cap-and-Trade Program to reduce GHG emissions from "covered entities" (e.g., electricity generation, petroleum refining, cement production, and large industrial facilities that emit more than 25,000 MTCO2e per year), setting a firm cap on statewide GHG emissions and employing market mechanisms to achieve reductions. Under the Cap-and-Trade Program, an overall limit is established for GHG emissions from capped sectors. The statewide cap for GHG emissions from the capped sectors commenced in 2013. The cap declines over time. Facilities subject to the cap can trade permits to emit GHGs.

Senate Bill 100

On September 10, 2018, Governor Brown signed SB 100, establishing that 100 percent of all electricity in California must be obtained from renewable and zero-carbon energy resources by December 31, 2045. Specifically, the law increases the percentage of energy that both investor-owned utilities and publicly-owned utilities must obtain from renewable sources(i.e., the renewables portfolio standard) from 50 percent to 60 percent by 2030. Incrementally, these energy providers must also have a renewable energy supply of 33 percent by 2020, 44 percent by 2024, and 52 percent by 2027.

Senate Bill 375

Senate Bill 375 (SB 375), known as the *Sustainable Communities Strategy and Climate Protection Act*, was signed into law in September 2008. SB 375 builds upon AB 32 by requiring CARB to develop regional GHG reduction targets for automobile and light truck sectors for 2020 and 2035. The initial per-capita GHG emissions reduction targets for passenger vehicles in the San Francisco Bay Area included a seven percent reduction by 2020 and a 15 percent reduction by 2035. In 2018, CARB set updated targets for a 10 percent reduction by 2020 and a 19 percent reduction by 2035 (CARB 2018).

Senate Bill 1383 (Short-Lived Climate Pollutants)

SB 1383, enacted in 2016, requires statewide reductions in short-lived climate pollutants across various industry sectors. The climate pollutants covered under SB 1383 include methane, fluorinated gases, and black carbon—all GHGs with a much higher warming impact than CO2 and with the potential to have detrimental effects on human health. SB 1383 requires CARB to adopt a strategy to reduce methane by 40 percent, hydrofluorocarbon gases by 40 percent, and anthropogenic black carbon by 50 percent below 2013 levels by 2030. The methane emissions reduction goals include a 75 percent reduction in the level of statewide disposal of organic waste from 2014 levels by 2025.

3.8.2.3 Regional

2017 Clean Air Plan

The BAAQMD prepared the 2017 Clean Air Plan to reduce air pollution, protect public health, and reduce GHG emissions (BAAQMD 2017b). The plan defines a vision for transitioning the region to a post-carbon economy needed to achieve ambitious GHG reduction targets for 2030 and 2050, and provides a regional climate protection strategy that will put the Bay Area on a pathway to achieve those GHG reduction targets.

The 2017 Clean Air Plan includes control measures designed to reduce emissions of CH_4 and other super-GHGs that are potent climate pollutants in the near-term, and to decrease emissions of CO_2 by reducing fossil fuel combustion.

Plan Bay Area

Consistent with the requirements of SB 375, the Metropolitan Transportation Commission (MTC) partnered with the Association of Bay Area Governments (ABAG) to prepare Plan Bay Area 2050, the region's Sustainable Communities Strategy (SCS), as part of the Regional Transportation Plan process. However, the SCS would not be directly applicable to Sargent Quarry, because the reductions would be achieved through the promotion of compact, high-density, mixed-use neighborhoods near transit, and alternatives to single passenger vehicle use.

3.8.2.4 Local

County of Santa Clara General Plan

Section G of the Health Element of the Santa Clara County General Plan (County of Santa Clara 2015) addresses GHG and Climate Change. This element includes several GHG-related policies that pertain to this Project:

> ***Policy HE-G.3:*** Fleet upgrades. Promote Air District mobile source measures to reduce emissions by accelerating the replacement of older, dirtier vehicles and equipment, and by expanding the use of zero emission and plug-in vehicles.
>
> ***Policy HE-G.4:*** Off-road sources. Encourage mobile source emission reduction from off-road equipment such as construction, farming, lawn and garden, and recreational vehicles by retrofitting, retiring and replacing equipment and by using alternate fuel vehicles.
>
> ***Policy HE-G.5:*** GHG reduction. Support efforts to reduce GHG emissions from mobile sources, such as reducing vehicle trips, vehicle use, vehicle miles traveled (VMT), vehicle idling, and traffic congestion. These efforts may include improved transit service, better roadway system efficiency, state-of-the-art signal timing and Intelligent Transportation Systems (ITS), transportation demand management, parking and roadway pricing strategies, and growth management measures.
>
> ***Policy HE-G.10:*** Conservation. Promote energy conservation and efficiency in homes, businesses, schools, and other infrastructure to reduce energy use and criteria pollutant and greenhouse gas emissions.
>
> ***Policy HE-G.11:*** Renewable energy. Encourage renewable energy, such as solar and wind turbines, on commercial, industrial, and residential buildings.
>
> ***Policy HE-G.12:*** Energy technologies. Support regional and local initiatives that promote integrated building systems, distributed generation, demand response programs, smart grid infrastructure, energy storage and backup, and electric transportation infrastructure.

3.8.3 Environmental Setting

3.8.3.1 U.S. Emissions

In 2018, the U.S. emitted about 6,677 $MMTCO_2e$, with 75.4 percent of those emissions coming from fossil fuel combustion. Of the major sectors nationwide, transportation accounts for the highest amount of GHG emissions (approximately 28 percent), followed by electricity (27 percent), industry (22 percent), commercial and residential buildings (12 percent), and agriculture

(10 percent). Between 1990 and 2018, total U.S. GHG emissions rose by 6 percent, but emissions have generally decreased since peaking in 2005. Since 1990, U.S. emissions have increased at an average annual rate of 0.2 percent (USEPA 2020).

3.8.3.2 California Greenhouse Gas Emissions Inventory

CARB compiles GHG inventories for the state. Based on the 2019 GHG inventory data (i.e., the latest year for which data are available from CARB), California emitted 418.2 $MMTCO_2e$, including emissions resulting from imported electrical power (CARB 2021a).

California has experienced both population and economic growth in the last 20 years, but GHG emissions have actually declined. Between 1990 and 2020, the population of California grew by approximately 10 million (from 29.8 to 39.8 million) (CDF 2020a). This represents an increase of approximately 34 percent from 1990 population levels. In addition, the California economy, measured as gross state product, grew from $773 billion in 1990 to $3.14 trillion in 2019, representing an increase of approximately 306 percent (more than three times the 1990 gross state product) in today's dollars (CDF 2020b). Despite this growth, CARB's 2019 statewide inventory indicated that California's net GHG emissions in 2019 were below 1990 levels (i.e., 431 $MMTCO_2e$), which is the 2020 GHG reduction target codified pursuant to AB 32.

Table 3.8-1 identifies and quantifies statewide anthropogenic GHG emissions and non-anthropogenic sinks (e.g., carbon sequestration due to forest growth) in 1990 and 2019. As shown in the table, the transportation sector is the largest contributor to statewide GHG emissions at approximately 40 percent in 2019.

TABLE 3.8-1
STATE OF CALIFORNIA GREENHOUSE GAS EMISSIONS

Category	Total 1990 Emissions Using IPCC SAR ($MMTCO_2e$)	Percent of Total 1990 Emissions	Total 2019 Emissions Using IPCC AR4 ($MMTCO_2e$)	Percent of Total 2019 Emissions
Transportation	150.7	35%	166.1	40%
Electric Power	110.6	26%	58.8	14%
Commercial and Residential	44.1	10%	43.8	10%
Industrial	103.0	24%	88.2	21%
Recycling and Waste[a]	—	—	8.9	2%
High GWP/Non-Specified[b]	1.3	<1%	20.6	5%
Agriculture/Forestry	23.6	6%	31.8	8%
Forestry Sinks	-6.7	-2%	—[c]	—

3.8.3.3 Bay Area GHG Emissions

The BAAQMD 2017 Clean Air Plan presents GHG inventory data for the Bay Area compiled by BAAQMD. **Table 3.8-2** shows the Bay Area GHG inventory by source category, organized according to the economic sectors used in the AB 32 Scoping Plan Update. The four largest sectors—transportation, stationary sources, energy, and buildings— collectively account for 91 percent of the total inventory (BAAQMD 2017b).

TABLE 3.8-2
2015 BAY AREA GHG EMISSIONS (CO_{2E} PER YEAR)

Source Category	Total Emissions by Source (CO_2e)
Transportation	**35,420,000**
On-road	30,750,000
Off-road	4,670,000
Electricity/Co-Generation	**12,240,000**
Co-generation	5,880,000
Electricity generation	5,080,000
Electricity imports	1,280,000
Buildings	**9,270,000**
Residential fuel usage	5,450,000
Commercial fuel usage	3,820,000
Stationary Sources	**22,360,000**
Oil refineries	15,680,000
Natural gas combustion	4,980,000
Natural gas distribution*	460,000
Cement manufacturing	990,000
Fugitive and process emissions*	250,000
Waste Management	**2,300,000**
Landfills*	1,850,000
Composting/POTWs*	450,000
Fluorinated Gases	**3,560,000**
HFCs and PFCs (commercial, industrial, and transportation)*	3,470,000
SF_6 (electricity production and semiconductor manufacturing)*	90,000
Agriculture	**1,390,000**
Animal waste*	760,000
Soil management	280,000
Agricultural equipment	230,000
Biomass burning	120,000
TOTAL EMISSIONS (CO_2e)	**86,540,000**

NOTES:

* Significant source of super-GHGs.

POTWs = treatment of water and wastewater at publicly owned treatment works.
HFCs = hydrofluorocarbons.
PFCs = perfluorocarbons.

SOURCE: BAAQMD 2017b.

3.8.3.4 Project Site GHG Emissions

The majority of Sargent Ranch is undeveloped, and there are limited GHG-emitting activities at the Project site associated with cattle ranching (e.g., CH_4). As shown in Table 3.8-2, agricultural activities in the Bay Area region represent only 1.6 percent of total GHG emissions, and the cattle operation at the Project site would produce only a small portion of the overall agricultural emissions. For the purposes of a conservative analysis, it is assumed that the existing cattle ranching activities at the site would be moved to another area at Sargent Ranch, and therefore the associated emissions are not considered to be baseline emissions for the Project.

3.8.4 Impact Evaluation

3.8.4.1 Approach to the Analysis

The GHG assessment evaluates proposed mining and processing operations based on the quantity of processed aggregate proposed be exported from the quarry, processing equipment and processing rates, off-road mobile equipment for use in mining and processing, the number and types of quarry vehicles, and the operation schedule.

GHG emissions associated with the Project were calculated consistent with the methods identified for calculation of the air pollutants described in Section 3.3, Air Quality, using the CalEEMod, EMFAC2021, and OFFROAD Orion models. The following sources of GHG emissions were identified as part of the Project:

- On-site operation of mobile quarry mining equipment (bulldozers, excavators, loaders, scrapers);
- On-site vehicle travel (haul trucks);
- On-site operation of processing equipment (screens, washers, and conveyors);
- On-site emergency generator;
- Off-site vehicle travel (rail and haul truck transport and worker traffic); and
- Electricity usage, including on-site rock processing equipment.

For the Project, it is conservatively assumed that the proposed maximum throughput of 1,860,000 tons of sand and aggregate materials per year could be reached by 2024.[1] Therefore, to determine the significance of the increase in GHG emissions, the projected GHG emissions for 2024 are compared to the significance threshold.

Construction and operational activities were calculated separately. For the construction period, exhaust emissions were calculated from construction-related equipment and vehicles. The Project's total short-term construction emissions were amortized over the 30-year mining term to annualize the emissions. The emergency generator would be located on site to provide back-up power in the event of an electrical outage. No other stationary sources of combustion emissions are proposed.

[1] Emissions modeling was conducted assuming construction in 2022 and operations starting in 2023. This results in a conservative estimate of emissions, because emission rates decrease with future years due to improvements in engine and fuel technology plus retirement of older, dirtier engines from the fleet.

Vehicle Travel and Equipment Exhaust Emissions

GHG emissions from vehicle travel, both on- and off-site, along with equipment operation were computed using the same modeling techniques as conducted to estimate the criteria air pollutants. This methodology is described in detail under Impact 3.3-1 in Section 3.3, *Air Quality*.

Indirect Emissions from Electricity Usage

The processing plant and conveyoer belts would use electric power to operate, so they would not directly emit GHG. The quarry processing facility would include numerous fixed equipment that would be powered by electricity such as washing, separation, and classification equipment, and screens, conveyors, and stacking conveyors. Electricity also would be used to power water pumps and to support the office. Operation of the quarry would require 1,250 megawatt-hours per year (Illingworth and Rodkin, Inc. 2021).

Indirect emissions of CO_2e would occur at the power plant(s) that would generate the electricity that would be consumed by the Project. Silicon Valley Clean Energy (SVCE) is the official electricity provider for Santa Clara County. SVCE purchases carbon-free electricity and partners with PG&E to deliver this electricity over existing power lines that they maintain. SVCE provides nearly 100-percent carbon-free energy (CAPCOA 2021), so CO2e emissions associated with electricity for the project operations would be negligible.

Significance Thresholds

On April 20, 2022, the BAAQMD adopted new CEQA Thresholds for Evaluating the Significance of Climate Impacts from Land Use Projects and Plans (BAAQMD 2022a). The revised CEQA thresholds are designed for "land use development" projects based on what will be required of such projects to achieve California's long-term climate goal of carbon neutrality by 2045. The BAAQMD found that GHG emissions associated with new land use development projects would be considered to result in less-than-significant impacts if they incorporate design elements such as restricting natural gas usage and the wasteful, inefficient, or unnecessary energy usage at buildings; achieving VMT reductions for residential, office, and retail projects: and compliance with state off-street electric vehicle requirements (BAAQMD 2022b). These significance thresholds are not directly applicable to industrial quarry projects, such as the Project, and are therefore not used in this analysis.

The BAAQMD CEQA Air Quality Guidelines (BAAQMD 2017a) identifies GHG significance thresholds for operation of stationary source projects and for operation of land use development projects that do not include stationary sources. The Project processing plant and generator would be subject to BAAQMD permitting requirements for stationary sources. The threshold for stationary sources is 10,000 metric tons CO_2e per year, but this threshold is not applicable because the Project would include both stationary and mobile sources of GHG emissions. Following are the three thresholds of significance options for GHG emissions of land use development projects: 1) compliance with a qualified GHG reduction strategy; 2) 1,100 metric tons CO_2e per year; or 3) 4.6 metric tons CO_2e per service population (residents + employees) per year.

The first threshold is not applicable because the County has not adopted a qualified GHG reduction strategy. Similar to the BAAQMD's new significance thresholds, the second and third thresholds of significance, which were primarily developed by the BAAQMD for residential, office, or mixed-use projects in urban infill locations, are not directly applicable to the Project because it would be an industrial use located in a rural unincorporated area. In addition, these significance thresholds were designed for the BAAQMD to meet the AB 32 goal of reducing GHG emissions to 1990 levels by 2020, and BAAQMD has not updated its significance thresholds to be consistent with the more recently adopted SB 32 target of reducing statewide GHG emissions to 40 percent below 1990 levels by 2030.

In the absence of an updated mass emissions threshold for industrial uses in rural areas that is applicable to the Project and consistent with the targets established by SB 32, this EIR in Impact 3.8-1 considers any net increase in Project-related GHG emissions to be significant.

3.8.4.2 Significance Criteria

The Project would result in a significant impact related to GHG emissions if it would:

a) Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs.

3.8.4.3 Project Impacts

Impact 3.8-1: The Project would generate greenhouse gas emissions directly and indirectly, contributing to global climate change. (Less than Significant with Mitigation)

This impact addresses Significance Criterion (a).

All Components

Table 3.8-3 reports the estimated amortized construction GHG emissions and operations emissions for the Project assuming the first year of maximum quarry throughput operations. The Project would cause an increase in GHG emissions of 7,408 metric tons CO_2e annually. These emissions include construction emissions amortized over the proposed 30-year mining period. Emissions would decrease in subsequent years due to a reduction in tailpipe emissions from on-road mobile sources in the future, and because not every year would be a maximum throughput year. The majority, or 65 percent, of the emissions would be associated with off-site truck travel, followed by 30 percent that would be associated with on-site off-road equipment. The GHG estimates are based on the emission calculations provided in Appendix D. The resulting emissions are greater than the significance threshold value of zero, so the impact would be **significant**.

TABLE 3.8-3
PROJECT ANNUAL GHG EMISSIONS

Emission Source	2024 CO2e (tons/year)
Amortized construction emissions	8
Off-road equipment exhaust (dozers, loader, graders, and scrapers)	2,266
On-site quarry vehicle exhaust (service trucks, pickup trucks, and water trucks)	116
Rail emissions	288
Off-site vehicle emissions (haul truck and employee vehicles)	4,730
Electricity consumption[1]	~1
Total[2]	7,408
Threshold	**No net increase**
Above Threshold	**Yes**

NOTES:

1. Based on assumption that the Project would use electricity that is nearly carbon-free supplied by SVCE.
2. Numbers may not add exactly due to rounding.

SOURCE: Illingworth and Rodkin, Inc. 2021.

Mitigation Measure 3.8-1a: Prior to the commencement of the construction activities, the Applicant shall purchase offset credits in the amount of 7,408 metric tons CO_2e. This amount represents amortized construction emissions plus estimated first year operational emissions. The Applicant shall provide verification to the County that carbon offset credits have been purchased.

The Applicant shall prioritize offsets within Santa Clara County, BAAQMD boundaries, the rest of California, and from other states with offset laws at least as strict as California's, in order of preference. The carbon offset credits shall be real, permanent, quantifiable, verifiable, additional, and enforceable, as defined by 17 CCR 95802. Offset protocols must also be consistent with CARB requirements under 17 CR 95972. Carbon offsets must meet these requirements and be purchased from offset programs verified by a recognized third-party registry such as the American Carbon Registry, Verra, or Climate Action Reserve. For each subsequent year of Project operations, the Applicant shall choose one of the following options.

- ***Option 1*:** The Applicant shall continue to make the offset payment each subsequent year in the complete amount of 7,408 metric tons CO_2e.
- ***Option 2*:** The Applicant shall purchase offset credits in the amount of 7,408 metric tons CO_2e minus the difference between 7,408 metric tons and the actual CO_2e emissions that the project generated in the prior year. Based on actual Project construction and/or subsequent year operational activities that resulted in GHG emissions, the Applicant shall calculate annual GHG emissions, including consideration of any measures that have been taken to reduce project GHG emissions, and provide emissions estimates to the County for review and approval. Within 60 days of County approval of the estimated emissions, the Applicant shall provide verification to the County that carbon offset credits have been purchased for the amount identified by the County-approved emissions estimates.

Mitigation Measure 3.8-1b: For construction and operational off-road equipment, the Applicant shall replace diesel and gasoline-powered vehicles with electric or other low or zero-GHG emissions equipment as feasible, based on availability of the technology and whether the cost would be prohibitive. In addition, biodiesel or renewable diesel shall replace traditional petroleum-based diesel to fuel off-road equipment where feasible, based on availability of the technology and whether the cost would be prohibitive. Any resulting changes to the Project fleet or fuel type shall be reflected in the calculations of GHG emissions for Option #2 of Mitigation Measure 3.8-1a. Prior to the commencement of construction activities, and every five years afterward, the Applicant shall provide the County with a report for County review and approval describing the feasibility of using low carbon-emitting equipment and fuels for the Project.

Mitigation Measure 3.8-1c: If and when electric haul trucks are used for product hauling associated with the Project, the Applicant shall install conduit and EV charging stations at locations where trucks will be parked or idling. The Applicant shall notify the County when installation of conduit and EV charging stations is completed, following which the County shall verify installation. Any resulting changes to the Project fleet shall be reflected in the calculations of GHG emissions for Options #2 in Mitigation Measure 3.8-1a. This mitigation measure will also reduce future NOx emissions from trips to the site.

Significance after Mitigation: Less than significant.

Implementation of Mitigation Measures 3.8-1a through 3.8-1c would reduce the significant impact to a less-than-significant level. Specifically, pursuant to Mitigation Measure 3.8-1a, the Applicant would be required to purchase carbon credits to offset GHG emissions associated with the Project to achieve the net zero significance threshold, taking into account the implementation of Mitigation Measures 3.8-1b and 3.8-1c.

Impact 3.8-2: The Project could conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. (Less than Significant with Mitigation)

This impact addresses Significance Criterion (b).

All Components

The Project would emit GHGs in the amount shown in Table 3.8-3. Because it would increase GHG emissions, the Project would impede the state's efforts to achieve the GHG reductions needed to comply with the SB 32, the CARB 2017 GHG Scoping Plan, and Executive Order B-55-18. As such, the impact would be **significant**.

Mitigation: Implement Mitigation Measures 3.8-1a through 3.8-1d.

Significance after Mitigation: Less than significant.

Mitigation Measures 3.8-1a through 3.8-1d would reduce the GHG emissions associated with the Project to zero. This would not conflict with the SB 32 reduction goal for 2030, CARB 2017 GHG Scoping Plan, or Executive Order B-55-18. Therefore, as mitigated, the Project would not conflict with plans, policies, or regulations to reduce GHG emissions.

3.8.4.4 Cumulative Analysis

Although the geographical extent of GHG emissions and climate change is global, as climate change is caused by GHGs emitted into the atmosphere around the world from a variety of sources, the analysis in this EIR focuses on GHG emissions within California to evaluate the significance of the Project's contribution. In the CEQA context, because an individual project could not alter the climate, a project's GHG emissions are inherently cumulative because they contribute to significant statewide cumulative GHG emissions. Because they exceed significance thresholds, Impacts 3.8-1 and 3.8-2 are also cumulatively considerable, but would be reduced to less-than—cumulatively considerable and less-than-significant levels by Mitigation Measures 3.8-1a through 3.8-1d.

Petition
in Opposition to the Reopening
of the Idaho-Maryland Mine

Containing the signatures of Nevada County business owners, homeowners, and conservationists who are aligned in opposition to the reopening of the Idaho-Maryland Mine

July 12, 2022

MINEWATCH

ADDITIONAL COMMENTS

July 12, 2022
Dear Nevada County Supervisors,

More than 5500 people signed the paper and online petitions expressing their opposition to the reopening of the Idaho-Maryland Mine through June 22, 2022. **Over 3000** of those were collected online on the www.MineWatchNC.org website which included the following "standard message".

"Dear Nevada County Supervisors,
Businesses, homeowners, and conservationists in Nevada County are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. We, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community."

Amongst the online petition signers, **1531 took the time to write their own personalized messages**, which are included in the following pages.

We sincerely hope you will sit back, grab your beverage of choice, and read this extensive collection. The content ranges from simple to deeply insightful.

In order to make your job just a little easier, we sorted the comments alphabetically. While this sort isn't perfect, we did find it seemed to group some similar sentiments together. We hope it will save you some time.

If you have questions about any of these entries, please feel free to contact: mineconcerns@cea-nc.org.

Sincerely,
The CEA Foundation/MineWatch team

First Name	Last Name	Zip	City	Street Address	Comment
Loraine	Webb	95959-9726	Nevada City	11110 White Oak Way	"We" had to fight off this Very Bad Idea over 10 years ago. "We" are very tired, but still begging you, our guardians of the public trust, to hear us when we Just Say "NO!" Thank you.
Chris	Themelis	95959	Nevada City	11022 Banner Mine Way	#1 - Noise from trucks and ore processing all day and all night will destroy our peaceful neighborhood and lower our property values. #2 - We don't need "jobs" here. Really. You can't find anyone to do anything around here, demand is so high and hiring is so difficult.

2037

Attachment 24

Adella	Abiani	95946	Penn Valley	PO Box 66	. Pollutes our air with fugitive dust from rock crushing, loading, and truck hauling . Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years . Devours our power using 12% of Nevada County's consumption annually and putting our power grid under further strain . Completely erases our County's plan to cut greenhouse gas emissions . Drains our water using South Fork Wolf Creek as a storm drain . Threatens 300+ private wells . Reduces property values and property tax revenue
Pete	Christakes	95945	grass valley	13030 Holly branch ct	80 years of noise pollution air pollution water pollution excess traffic property value drops, loss of tourism Please just vote no Quality of life health is everything Thank you. drilling, balsting excess truck traffic, polluted air over pumping of the ground water, discharge into an already comprimised wolf creek, lost ground wells, lower property values . The list goes on andon. Please vote no to this insane industrial idea. Promote tourism biking and hiking and a healthy country living. I believe the mine will pollute the air and water the noise polution , the excessive truck traffic and the strain on the electrical grid, the list can go on and on with reasons not to open this mine. Please vote no thank you
Harry	Wyeth	95949	Grass Valley	14393 osborne hill rd	A 24/7 mining operation in our residential neighborhood is so obviously incompatible with Nevada County lifestyles! The opposite might be true if they were planning in the middle of Nevada, but not nere!
Gill	Costa	95648	Lincoln	480 Valley View Circle	A certain consequence of gold mining will resurfacing and of heavy metals and other pollutants associated with all mining operations will inevitably impact our drinking water and contaminate our groundwater resources as usual an untouchable corporation will pack up and leave.
brion	dunbar	95959	nevada city	11577 bourbon hill rd	A hundred years ago a mine was appropriate. Now we are dependent on tourism and attracting people to a clean and quiet place. The mine site is surrounded by 1-5 acre parcels, each one on a well. Approval of a mine in this situation opens the county up to a financial disaster.
John	Brady	95945	Grass Valley	13034 Wood Rose Way	A local well drilling expert tells a manager at a local Realty that likely 300 wells will be ruined by this plan of Rise Gold to pump 3.6 million gallons per DAY for 6 months. Then 1.2 million a day for the next 80 years. Dramatic subsidence will likely add to the disaster. A shocking 400-year drought appears to have taken hold of the entire Western US. Not a good time to play Russian Roulette with an already stressed water table. This is just the tip of the iceberg
Grace	Debbeler	95959	Nevada City	11023 Ridge Rd	A mine cannot be the future of our town.
Sharon	Loucks	95975	Rough and Ready	Po box 86	A mine is the last thing we need. Environmental impacts are the worst. Please don't let this happen.
Kay	Pena	95713	Colfax	720 Hi Pines RanchbRd	A mine uses too much water. We can't spare any water at this time.
Kristie	Stevens	95945	Grass Valley	11532 Myrna Dr	A mine would hurt our tourism, a sustainable, non polluting income source. Mining is a destructive industry generating a massive amount of waste (and truck traffic to transport it). Mining should not be allowed adjacent to Grass Valley.
Zachi	Anderson	95945	Gv	19511 wymer	A really bad bad idea in a beautiful urban area where the water table has already been dropping substantially every year
Ken	Getz	95945-505272	Grass Valley	172 Ryans Ln	A really bad, destructive idea. Just a money grab say no!
Jason	McLean	95949	Grass Valley	10740 Cub Court	A ridiculous idea, propelled by sheer greed.

2038

Attachment 24

Robert	Clampitt	95959	Nevada City	14742 Boquest Drive	A theme park would support many local jobs more than a mone. The I-M Mine area would do more for the community as a public park; or possibly a theme park, which would not affect the water tables in the area.
Robert	Light	95949	Grass Valley	14824 Stoddard Estate Lane	A truly dangerous idea that threatens the environment and health of your people that you should protect.
Sue	Boldi	95975	Rough and Ready	10791 S. Ponderosa Way	Absolutely dispicable that the BOS would put our community at risk for clean air, water, our wells, more energy used- all for money. This is a question to do the right thing.
Paul	Koenig	95949	Grass valley	10106 Schroeder Way	Absolutely no mine, this shouldn't even be an option. I will not only vote against all of you on the board of supervisors next election. I will leave grass valley my home of 9 years now and Nevada county my home of 22 years. How dare you even make this a concern right now! Our children have not even come close to recovering from what Covid has done to their education. I'm appalled that this is even an issue. Pull your heads out and look out for your community. All of you - not just your district but your entire community. Shame on you, focus on our children returning to some degeee of normalcy in school. That should be our primary focus at current!
Lisa	White	95959	Nevada City	13011 Red Dog Road	Absolutely NO to the damn mine! Seriously, I wonder what is in it for BOS members if they vote to approve this. Remember, you're elected to represent your constituents and their preferences. Seems to me most locals oppose the mine.
Michelle	Newbon	95959	Nevada City	518 Nimrod Street	Absolutely no to the mine.
Dawn	Krusi	95959	Nevada City	12586 Summit Ridge Dr	Absolutely Not. I cannot even believe this is being considered. Are we going to ruin our environment and way of life so a few people from another country can make money? Congest our roads. Pollute our water and air? Drilling? Blasting? Dumping? NO! NO! NO! Do not agree to this. I am 100% against this mine opening and I will actively work to vote out any supervisor who supports opening this mine. Our environment is the primary concern.
Ruth	Berdan	95959	Nevada City	588 Railroad ave	Absolutely the wrong thing for our county. Please do not allow this mine to be opened. Save our community.
Janice H	Reed	95949	Grass Valley	114 Peabody Ct.	Absolutely will end up being destructive to the land, water table, and quality of life for the community.
Sandra	Carrion	95945	Grass Valley	2 Dever Lane	Absurd plan! What happened to common sense?
Theodora "Teddi"	Alves	95959	Nevada City	12655 Little Deer Creek Lane	According to an article in the Union, dated July 31st, 123,000 gallons of groundwater will be consumed by this mine on a daily basis. Where is that volume of water coming from in the face of continuing droughts in this area? In the same edition of the Union, there's an article about the drought impact upon Lake Tahoe. How can the decision makers of Nevada County justify throwing away 123,000 gallons of our precious groundwater, that is needed to serve our local human beings and agriculture??? How does this fact alone, make sense???
Doug	Rodrick	95959	Nevada city	402 Redbud Way	After one hundred years of after over 100 Years of mining restoration, Hirschman's Pond is finally looking decent and a lovely place to be. We have learned that this practice is not environmentally sustainable and a hazard to our health. Let's not make this mistake again with reopening Idaho Maryland mine. I am an elder of this County, and I have seen great progress , as well as many mistakes made by Nevada County officials with good intentions related to growth, development and the economy. Giving the nod to Rise Gold would be a huge mistake in so many realms. This inexperienced company has blanketed our County with a magnitude of misinformation, lies and unbacked promises. Please respect our wishes, and the findings of so many environmental experts. Reject the Idaho Maryland mine.

2039

Attachment 24

Jim	Daugherty	95959	Nevada City	420 Calvary St	After reading about Rise Gold's past actions I seriously doubt Ben Mossman is anything more than a CEO/politician who would do and say whatever it takes to get his project approved. His past actions show he really does not care about the environmental damage that may occur as a result of re-opening the mine and would actually choose to intentionally inflict damage to the environment and community if he thought he could get away with it. The Truck traffic would be too much for our community to absorb while remaining rural and quite.
Mike	Amsler	95959-9365	Nevada City	12476 Robinson Rd	After researching more in depth about this proposed mine reopening, I feel deeply concerned by it the negative impacts it could and will have. Do NOT allow this to happen.
Peter	Mason	95959	Nevada City	12023 Crystal Wells Rd	After reviewing the DEIR and reports describing how the principals of Rise Gold declared bankruptcy in order to avoid cleaning up a mining site in Canada, I urge you to reject this project. These individuals have clearly demonstrated bad faith in the Canadian venture and should not be trusted.
Linda	Carlson	95945	Grass Valley	306 Pleasant St. Apt 2	Air and water pollution, false promises. The mine will cause pollution both in our air and water. There is no state regulation representative to control them.
Ellen	O'Donnell	95945	Grass Valley	104 Hill Street	All I can say is "I can't even believe we are entertaining this". All the cons are so obvious given how we have been seeing such a shift in our environment. Plus, there are no pros that can't be negated by a con.
Richard	Church	95949	Grass Valley	10126 Alta Sierra Dr., #117	All of us have experienced the devastating after-effects of previous mining operations in Nevada County. Why would the county even consider the re-opening of Idaho Maryland by such an irresponsible operator?
Cecil K.	Moore	95712	Chicago Park	15969 Durango Lane	All residents of Nevada County should object strenuously to this destructive Rise Gold proposal. Thoughtful, informed articles in The Union over several years have made that quite clear. Gold Rise's talk is sweet (especially to their investors). Their actions in the field, not so much. They understand bankruptcy too.
Ralph	Mertens	95959	Nevada City	13002 Golden Eagle Way	All the above reasons seem pretty solid
Jonas	Echols	95945	Grass Valley	11325 Dray Ct	All through my childhood I was taught the myriad ways mining ruined the environment of California. To allow the mine to open is a despicable and evil act. I beg that you make the right decision.
Nancy	Anderson	95949	Grass Valley	15787 Sunnyvale Lane	Allowing the mine to reopen would be a complete disaster!
R. Joseph	Abrell	95959	Nevada City	12319 Hillcrest Dr.	Allowing this mine to open would be the biggest mistake this community ha made for decades. It would be unconscionable.
Douglas	Cornish	95959	NEVADA CITY	11846 N Bloomfield Rd	also have house on Cordell Ct Grass Valley with borders on Empire state park and city limits of Grass Valley
Jeannie	Judd	95621	Citrus Heights	6728 Flaming Arrow Drive	Although I do not currently live in Nevada County, I may move there in the future and I would like to know that it will remain the same beautiful unpolluted area that it is today. Thank you.
Paul	Boisvert	95519	McKinleyville	1831 Lime Ave	Although I have recently moved, I was a six-year resident of Grass Valley and I have closely followed the proposed reopening of the Rise gold mine. I still have connections to the area and am concerned that my friends health and safety will be harmed -- especially the impact on individual water wells. I urge that the permit for this mine be denied. Thank you.
Anara	Guard	95819	Sacramento	5315 Spilman Avenue	Although I live in Sacramento County, I am a frequent visitor to Nevada County, enjoying the beauty that your region has to offer. The proposed mining is such a bad idea: it will be destructive to air, water, land, and your way of life. Out of sight does not mean without effect and I do not trust the corporate projections of how non-intrusive or non-invasive it will be. Please reject this shortsighted proposal.
Lynn	Rossman	95472	Sebastopol	3335 Harrison Grade Road	Although I may not live near the mine, I cherish the beauty of your community. Please ensure that the quality of your community remains intact and does not sell out to short-term mistakes.

2040

Attachment 24

Beth	Leydon	95959	Nevada City	11775 Forest Knolls Ct.	An 80 year project means we are responsible for subjecting the next three generations or more to the ramifications of this mine. Mining was an environmental disaster to the area during the original gold rush and there are no adequate mitigations to ensure it won't be one again.
Nancy	Henson	95959	Nevada City	14178 Grizzly Hill Road	An 80 year project such as Rise Gold's proposal would impair our already compromised air quality, would threaten our source of water in times of drought and climate change, and would negatively impact our quality of life in the areas of traffic, noise, and habitat destruction. No amount of mitigation would bring these impacts to acceptable levels. Let our mining legacy remain in the past!
Stephanie	Siehr	95945	Grass Valley	10774 Dolores Drive	An extractive, damaging project from a problematic Canadian company is a bad idea for our County! This is a classic case of "take the money and run" -- and leave an expensive mess behind. I, along with neighbors, community groups and businesses in Nevada County, urge you to reject the Rise Gold proposal to re-open the Idaho-Maryland Mine. Instead, let's invest in real, long-lasting economic development that protects our neighborhoods, our
Paul	Nichols	95949	Grass Valley	17726 Norlene Way	An old Indian sage once said, "we do not own the earth, we are only borrowing it from our children". Let's take action today so that our children's earth is still in good shape.
Mary	Devore	95945	Grass Valley	436 Lamarque Court	and damage to our fragile area. This corporation has a very bad track record. We don;t need it. I love the heritage of our mining but it is not our future
Ellen	Macdonald	95945	Grass Valley	10581 Bragg Avenue	And I am not convinced that the Mine will not have a significant impact on our water, both in water supply and water quality.
Eileen	Blodgett	95959	Nevada	11225 Golden Oaks Ct	And... the economics is f all the jobs and salaries posed by the developer are not accurate.
Kathy	Triolo	95959	Nevada City	15472 Shannon Way	Any benefits of having Rise Gold here is not worth the risk, given their terrible track record.
Steven	Sparks	95945	Grass Valley	13407 Saffron Dr	Any politician who allows Rise Gold to re-open the Idaho-Maryland mine will be compromising their political future. It will be difficult to count on public support, if the public is harmed by your decision to allow the mine to re-open.
Patricia	Fuenzalida	95959	NEVADA CITY	14574 SUNROCK RD	Anyone who has done the research can conclude that reopening the mine in Grass Valley would be a huge step backward for our community on every level. We need forward thinking leadership to attract business and jobs to our area that is innovative and conscientious not exploitive and greedy. This is a new century that requires us to learn from last mistakes and but be doomed to repeat those of the past. We deserve better.
David	Ward	95959	Grass valley	10583 Valencia rd	Appalled by this project please deny them approval! Thank you
Wendy	Heaton	95959	Nevada City	12974 Robin Rd.	Approving Rise Gold's application risks the long-term health and well-being of our community for very little short-term gain. Their CEO's prior track record with mining projects has devastated other communities. We can literally not afford to make same mistake.
Douglas	Potter	95946	Penn valley	13002 country heights dr	As a 33 year local I'm Discusted to think Nevada County would even consider this at this point. Mining is history for many reasons. Cannabis is the future. Let's use a little logic and common sense on this decision.
Janet	Jensen	95959	Nevada City	327 Clay St	As a 35 year resident of Nevada County I pleaded with you NOT to approve this Corporation to forever harm and change our county forever. Water is precious in the foothills and California. Dewatering will damage our water table and reduce property values. The pollution and the noise caused by the ever running trucks up and down Brunswick hill will be a disaster. Brunswick Hill is one of the most dangerous places in a snowstorm. And they want to travel up and down that hill hundreds of times a week no matter what the weather. Save our towns!

2041

Attachment 24

Kelly	Youngren	95945	Grass valley	11573 view drive	As a 40 year local born and raised, I will be disappointed by this decision which threatens all the locals home value, 300 + wells, uses our water resources, pollutes our air which effects wildlife and people. I can go on and on. If you choose to allow this mine, I will assume you are retired... meaning you don't care if your home value is affected your homes probably paid off, or you're not seeing what the future holds for the rest of us . You've heard that saying when people don't need they don't understand those who do? Well, this is a class at case of if you're not in the same boat as the rest of us meaning that we need this to move to be stopped, please don't allow a non- necessity mine to hurt all of us in some way shape or form. This mine will affect the locals air quality the animals, our resources, and our property values. If you allow this mine you'll be making a very selfish decision. This old Mining town needs to be protected and keep as many locals as possible, allow the charm of our county to continue. We are pushing the original locals out. We already have enough people moving into our area ruining it in many ways in addition to increasing property values for locals who are not able to find affordable housing anymore adding to our already problematic local system if you will. I will be completely disappointed and honestly disgusted by the decision to allow this mine in our beautiful foothill town. If you allow this mine to open it will show that you do NOT care about us. I hope all of you on the board take this to heart and consider where YOU live, if you personally won't be as close to the mine as many of us. Or think about the future wildfires that are a threat to all of us and by needing natural water resources you are also taking away from our safety. These types of decisions are pushing the original locals out I hope that I can look at this town as the same charming town I was born in 40 years ago and want to continue living here myself please make the difference for all of us and show some faith that this town is what it once was. I understand progression but this mine will be a luxury to those who profit from ruining the mine, and anything but progression for the rest of us, pushing us out one at a time. This mine will wreck havoc on the rest of in many shapes and forms. Please don't hurt your community members by allow this mine. Thank you for your time and consideration.
Ellen	Sommers	95945	Grass Valley	11082 Copper Drive	As a a homeowner that will be effected directly by the noise, dust and traffic that is related to the reopening of the Idaho Maryland Mine, I ask that you, as my representative, reject this destructive proposal and protect our community!
Corinna	Fish	95818	Sacramento	2115 14th Street	As a Californian who loves to visit Nevada County frequently throughout the year, I support the Nevada County businesses, homeowners and conservationists who oppose reopening the Idaho-Maryland mine. Sarah	Powers	95959	Grass Valley	12803 MacBoyle Way	As a descendent of generations living in the area, I can attest that there is more to be gained from not re-opening the mine. The wildlife and climate is of paramount importance, more than ever. More sustainable practices can be introduced to the area to achieve similar goals.
Mike	Pasner	95946	Penn Valley	14318 Pilot Peak Ln.	As a down stream business owner and water user, I oppose the permitting of Rise Gold. Mike Pasner Indian Springs Organic Farm

2042

Attachment 24

Alisa	Pierini	95331	Sacramento	6800 Riptide Way	As a gold country native and California citizen, I oppose Rise Golds bid and business anywhere in our state. As a company that is based in Vancouver, B.C., Canada, they do not have our local interests at heart. As a company who has mocked and berated our local indigenous people, the Nisenan of Nevada County, they have illustrated they lack empathy or respect for the people and the land they claim to want to work alongside. Their website makes vague promises of environmental concern and community relations and yet they cannot respect those who live closest to and have the oldest bond with the land we all currently enjoy. To allow Rise Gold to do business in this county is to admit a stranger with no understanding of our environment or community to take resources and ultimately the financial and physical yields out of our county and out of our country with minimal (if any) benefit to our direct community. As a non-US-based company, the cream of their earnings will not be spent in the community but lining the pockets of their chief officers in another country entirely, let alone county. This is not an endeavor that benefits our people and should be haulted immediately.
Patrick	Dutrow	95945	Grass Valley	12552 Burma Road	As a Grass Valley resident, my primary concern is the noise pollution from trucks on Brunswick Road and the depletion of the water table as I rely on well water in the proximity of the proposed mine. PLEASE VOTE NO!
Travis	Baker	95945	Grass Valley	12641 Anvil Road,	As a home owners 2 miles from the mine I am concerned about the water table and my well and the significant vehicle and truck traffic. Please don't ignore the impact on our beautiful rural community
Erik	Heinrich	95945	Grass Valley	12670 Blackberry Trail	As a homeowner and member of the community in the area near the proposed mine reopening I implore the Board of Supervisors to reject this destructive proposal and instead protect our community. I have young children, who would suffer great harm from exposure to airborne particulates, waste water runoff, heavy equipment air pollution, noise pollution and traffic hazards. We treasure our beautiful, safe and quiet community. Again, as a voting resident I expect to be represented and I do not want this mine reopened.
Rick	Williams	95959	Nevada City	14052 Wings of Morning Dr	As a homeowner in Nevada County I join together with other residents to protect our neighborhoods, our local economy, our well water, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
John	Babin	95949	GRASS VALLEY	11509 Shangrila Lane	As a homeowner in Nevada County who lives relatively closeto the proposed mine are primarily concerned with the effects of dewatering our own personal well water supply. We are also joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
Jon	Banwellund	95945	Grass Valley	10514 C st	As a homeowner in Nevada County, I stand against the mine. Do not let them come here with their horrible track record of destruction and cause damage to our water table and beautiful ecosystem. No to the mine!!
PAULA	STRANG	95610-0845	CITRUS HEIGHTS	8150 PHOEBE WAY	As a homeowner in Nevada County, I vehemently oppose reopening the Idaho-Maryland Mine. We must stop putting money ahead of the environment. Please do not approve this proposal which would threaten private wells, reduce property values and tax revenue, increase greenhouse gas emissions, and pollute the air.
Kimberly	Carlsen	95945	Grass Valley	328 Second Street	As a homeowner, Real Estate Agent, mother of 3 young kids , active community member of more than 20 years in Grass Valley/Nevada City , I strongly oppose the Rise Gold proposal to re-open the Idaho-Maryland Mine. I believe it will have a dramatic and very negative impact on our quality of life, and on real estate prices it will most definitely have a deeply harmful impact. Please protect our community and all that we have worked so hard to build here over the years. Thank you kindly
Kristopher	Kolodjay	95945	Grass Valley	11074 Cedar Ridge Drive	As a lifelong resident of Grass Valley, I am deeply concerned about this proposal. I live behind the proposed mine site and it is tranquil and beautiful, a neighborhood full of walkers, bike riders, children playing. The noise alone will make this neighborhood uninhabitable and I know that I will move out of the area with my family to seek a better quality of life should the mine open. I work at the hospital and I would be heartbroken to leave but I fear that the quality of life in Grass Valley would be so low with the mine open that I would have to seek employment elsewhere. Keep our community intact, keep families and healthcare providers in the area, protect our water sources and environment! Please vote no!

2043

Attachment 24

Amelia	Coffin	95945	Grass Valley	125 Townsend Street	As a lifelong resident of Nevada County, I feel the need to protect our community is the most important thing!
Jeff	Lauder PhD	95960	North San Juan	PO Box 951	As a lifetime resident of California and researcher of forest health and environmental quality in the Sierra Nevada, I urge you to take the logical, precautionary approach to the Idaho-Maryland Mine, and reject the proposal to re-open it. The destructive nature of gold extraction is readily apparent in our area. More than a century ago, prospectors overtook the region to strip it of its gold, leading to the first ever federally-mandated environmental restriction (at Malakoff Diggins). Even now, we continue to grapple with the toxic legacy of gold mines, from Mercury contamination in our streams to altered groundwater flow paths and highly modified, eroded watersheds. Further, as a water quality monitor of local streams for over a decade, as well as a trained data scientist, I find the environmental review that Rise Gold has performed thus far to be woefully inadequate and frankly a misrepresentation of the true impacts of the proposed mine. I beg you to not let history repeat itself. In a region that is still recovering from the impacts greed wrought on our community, the decision to reject the mine is simply a logical one.
DonnaJo	Woollen	95945	Grass Valley	13833 Rattlesnake Rd	As a local homeowner I am strongly opposed to the proposal to reopen the Idaho-Maryland mine. I urge the Nevada County Supervisors to reject this proposal. I fear for the health of my well water, for our already compromised air quality, for my property value and the future of our planet if this destructive industry is allowed to go forward.
Kristopher	Delacoeur	95959	Nevada City	16388 Banner Quaker Hill Rd	As a local member of Nevada County. I strongly disagree with the opening of the Idaho Maryland mine.
SHAWN	ORGEL-OLSON	95945	Grass Valley	214 Lloyd Street	As a local property owner, I'm fully opposed to reopening the move which will ruin quality of life and tourism in our area. No mine! Protect our water, environment, and tourism
Ean	Price Murphy	95949	Grass Valley	10126 Alta Sierra Drive #103	As a local resident and business owner I strongly oppose the Idaho-Maryland mine or any new mining plans. We are still recovering from the environmental impact of the previous mining projects. Please protect our community and say no to the mine.
Lisa	Frankel	95945	Grass Valley	422 Pine Street	As a long time homeowner and conservationist in Nevada County I feel that it is imperative that we protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. I urge the Board of Supervisors to reject this destructive proposal that will pollute the air and water, erase our county's plan to cut greenhouse gas emissions, and threaten hundreds of wells as well as contribute other negative effects to life in our community. It is your obligation as County Supervisors to protect this community.
Erin	Thomasrose	95945	Grass Valley	16118 Greenhorn Rd	As a longtime resident of Greenhorn Rd. I have huge concerns about the reopening of the Idaho Maryland Mine. Our community due to population density, has grown beyond the capability of having a highly toxic mine within its borders. I really fear for our water, the quality of life due to noise pollution, and the added traffic impact especially upon a neighborhood already too dependent upon one narrow point of egress. My property value would likely plummet should this toxic industry be allowed to consume the neighborhood.. My husband was born and raised on the property we inhabit. As historically quaint as it sounds to reopen the gold mines our quality of life would suffer mightily. Please do not allow this toxic past history to pollute the present.
Heidi	Dilley	95945	Grass Valley	208 Maiden Ln	As a member of our beautiful county, I urge you to protect our neighborhoods, our local economy, and our quality of life by denying the Rise Gold proposal to re-open the Idaho-Maryland Mine. We, the undersigned, implore the Board of Supervisors to reject this destructive proposal and instead make the right decision and protect our community.
Stuart	Beach	95945	Grass Valley	13506 Barker Lane	As a Nevada county resident since 1994 I am very concerned about the board even considering the mine. The only positive thing to come out of the mine will be a few local low paying jobs. Look at rise gold history and environmental damage. Just look at our existing closed mines and the toxic damage to this day.

2044

Attachment 24

Angie	Maxson	95959	Nevada City	12551 Deer Park Dr	As a Nevada County resident, educator, and mother, I oppose the reopening of the mine. I urge you to reject the mine re-opening. The environmental impact on air, water use, roads, alone are reason enough. Let alone the impact on neighbors, property values! Build a park there instead!
Kristen	McDonald	95959	Nevada City	20682 New Rome Road	As a newcomer to the area and a water policy specialist, I know the impacts of mining and the value of water in this climate change vulnerable region. Water is more precious than gold, and with it's terrible track record Rise Gold should not be allowed to come anywhere near our watersheds which could easily be further degraded and depleted by this mine.
Samantha	Hill	95603	Auburn	1165 Star Ln	As a non-resident with very close ties to Grass Valley, the place my family lives, my friends, and my place of employment, I do not approve of the re-opening of the Idaho-Maryland mine. I worry for the fauna, flora and future of Grass Valley and the surrounding areas of this mine were to re-open. There will have to be pollution, it is an unavoidable evil for a mining production to begin. I want to continue to see this place flourish for many generations to come. No to re-open!
Mark	Machado PE	95945	Grass Valley	13640 Kantorbery Court	As a professional engineer and a semi-retired general contractor, it's troubling to understand how anyone could endorse a long term, deep rock, large-scale mining operation, a mere 2 miles from downtown Grass Valley. These are the kind of operations that are approved many, many miles from city centers and residential neighborhoods, not literally in the middle of them! As a homeowner/mechanical engineer, with a residential well one mile from the mine's proposed location, it unfathomable to believe the continuous de-watering of the mine's shafts will have no adverse effect on my only source of usable/drinkable water. Please consider the significant, long-term negative impact this proposed operation will have on our community, our quality of life and the air we breathe. The community thrives on tourism, retirement and the arts. Promote that, not the opposite.
Aria	McLauchlan	CA 95945	Grass Valley	10857 Vernon Way	As a renter, property owner and leader of a soil health/agriculture non-profit, all in Grass Valley - Nevada County, I strongly object to the proposal to reopen the Idaho-Maryland Mine. In addition to the negligible job creation from this project (and likelihood of those jobs being sourced outside of the local community), this project would hurt our economy and local businesses by increasing air, noise and water pollution, increasing traffic, and decreasing overall quality of life. Furthermore, I'm very concerned about the impacts on water quality and underground water sources, including the impacts that polluted wells would have on our surrounding farms and food supply. I urge the Board of Supervisors to protect our community, our environment and our economy and reject the proposed mine.
Mark	Reilly	95945	Grass Valley	118 Conaway Avenue	As a resident and small business owner in Grass Valley, I strongly urge you to urge you reject the proposal from Rise Gold to re-open the Idaho-Maryland Mine. Rise has been spreading misinformation about their proposal, the head of the company has a reputation for creating environmental destruction then claiming bankruptcy and not taking responsibility for the damage, and they don't have the funds to pay for all their promises. The people of Nevada County and the citizens of Grass Valley deserve better, and it's your responsibility to protect our community.
Ani	Kington	95945	Grass Valley	506 Mill St.	As a resident of downtown Grass Valley, I STRONGLY oppose this project.
gary	pierazzi	95945	Grass Valley	13997 emerald Ct.	As a resident of Grass Valley for the last 30+ years, I feel the reopening of the Idaho-Maryland Mine would change the beauty, quiet and rural feel of our community, impacting it and unleashing and industrial mess for the next 80 years. I'm hopeful that you will see the folly of the proposal by Rise Gold to be permitted.

2045

Attachment 24

Karin	Quinn	95959	Nevada City	10171 Sun Ridge Ct	As a resident of Nevada City I feel that it is necessary to add my concern about the proposed mine. One of our most precious resources is water, none of us can exist without it. The past 2 years of drought has caused many wells to dry and according to forecasts we may well see another this year and continuing on. This mine will further jeopardize the water supply for those near and downstream from the mine. This is not a resource that is easy to replenish, nor is it cheap to do so if possible. As far as the economic argument for bringing "well paid" jobs to the area, that is not a given and will the money earned here be spent here? Who can say that the jobs will be done by locals and not commuters from Placer County and beyond? The other issues of air pollution, noise, traffic I will leave for another time.
Kelly	McCown	95959	Nevada City	15268 Airport Rd.	As a resident of Nevada City, I urge you to vote no on the Rise Gold mine proposal. It is clear to me that this would be an environmental disaster for our community, with repercussions that will not be fully realized for a decade or longer.
Michelle	Montgomery	95945	Grass Valley	210 Sutton Way #204	As a resident of Nevada County, I am OPPOSED to the opening of this mine. It would be detrimental to our environment, and for our future.
Flavia	Polo	95959	Nevada City	14618 Tyler Foote Rd. #206	As a resident of this beautiful county, I am deeply concerned about the impacts of thurs mine on our ecology, water systems, and quality of life. We do not want to sacrifice our wellbeing for the profit of others. We do not want the damaging effects of others profit to ruin this beautiful and peaceful area. Please reject this proposal, and stay true to your community.
Alexandra	Stefancich	95959	Nevada City	152 Grove St	As a resident of this community and an employee of an organization dedicated to helping to protect people from and understand the long lasting impact of mining's toxic legacy, I am distrought that there is the possibility of reopening a mine in our area. We have one of the highest rates of breast cancer in the country- all from our mining history. And, with a new mine bringing up all sorts of new heavy metals from the ground, it will only go up. I am also deeply concerned about the amount of water that will be used by the mine. Nevada County, and the whole of the west is already in a deep drought. Does it make sense to let an outside company profit by destroying the water table when we already barely have enough to go around. The local economy is highly dependant on tourism dollars and this mine will certainly NOT make more people want to come to our area, loud explosions, heavy truck traffic, and piles of mine tailings do not make people think "oh lets go for a visit". I urge you to do your part to protect the community from this environmental devistation.
Lars	Ortegren	95945	Grass Valley	11080 Gold Hill Dr	As a resident who lives within 2 miles of the site, and as a contractor working in Nevada County, this project not only threatens wells of our residents, but threatens the economy that we all have grown to enjoy. By adding industrial mining to such a vital local area, adding the traffic, and particulates into the air-at a time when our community is going through a housing boom is absolute nonsense. I urge the Nevada County Supervisors to see through this scheme that threatens the fabric of what makes our community so special, and the values of our homes and businesses on the rise.
Christopher	Kohler	95945	Grass Valley	14046 Meadow Dr	As a tax-paying homeowner, local business owner in Nevada County and Sierra Commons Business Ignitor board member I urge you to reject Rise Gold's proposal to reopen the Idaho Maryland Mine. Sierra Commons mission is to educate and empower local small business. The natural beauty of our community is an irreplaceable resource we should not put at risk. As a measure of my commitment, I will vote against any BoS member who indicates they are in favor of this proposal in future election cycles. We can grow this economy without large extractive corporate interests.
Lauren	Sorensen	90039	Los Angeles	4015 Veselich Ave	As a visitor and tourist, a mine would be an unwelcome addition, not to mention an ecological disaster.

2046

Attachment 24

Jessica	Toney	95959	Nevada City	10567 Lost Dog Road	As a young person who has lived in Nevada County most of my life, and hopes to continue living here, I can tell you now - this mine will be the death knell for almost any young person hoping to move and build a future here, and contribute positively to our community and enjoy our beautiful outdoor spaces that draw so many to visit or settle down in the first place. More than ever, the new generations scrutinize the quality of our water, the air we breath, the soil we grow their food in. Nevada County STILL suffers from the effects of mining from over a hundred years ago. We still have mercury in our waterways from mining. We still get sinkholes where we least expect them. We still have to check for mining toxins before granting approval for architectural projects. What's the point in having checks for mining toxins if we're just going to dump more into our community? As a reminder: the current CEO of Rise Gold has already skirted the law (thus far) for polluting the watershed of a vulnerable community in Canada. Will Nevada County be able to take Rise Gold to task if their CEO allows the company to do the same here? Will Rise Gold pay to remediate any damage they cause, or will they just file for bankruptcy and not pay a cent - considering this worked in Canada? Which would leave the burden on Nevada County to pay for and play clean up (when again, we are STILL remediating toxins from gold mining that took place over 100 years ago!). Not to mention, if any fine for damage caused is less than the cost for preventing said damage in the first place (which it likely would be), there is ZERO incentive for a company to prevent damage in the first place! And even if Nevada County would be paid for any damages incurred on our environment, is any payout really going to fix, or be worth the years, decades - even a century - of possible damages, when we already are beset by environmental disasters like drought, forest fires, bark beetle infestations, and more? Opening this mine will deter both tourists and people hoping to make their permanent home here. It is inviting disaster into our community, and is a MISTAKE. PLEASE STOP THE IDAHO-MARYLAND MINE.
Bryan	Thomas	95946	Penn Valley	14394 Sun Forest Dr	As a young resident of Nevada County, I must implore you to reject the return of big mining in gold country. The future of this beautiful place we call home is not in the past. The legacy of that past is still reverberating decades and centuries later, and yet most of the wealth that was pulled out of the ground was taken to make outsiders richer. The same is inevitable today if we don't learn from our history. The Nevada County of tomorrow should capitalize on what already attracts it to so many - natural beauty and opportunity. If we fail to make this choice, I fear we will repeat the mistakes that have doomed so many other small towns before. Please put our people over the profits of a few foreign investors. Please say no to this mine.
Barbara	Dougherty	95949	Grass Valley	16201 Brewer Rd.	As business owners located in the Brunswick area off Loma Rica, we are very concerned about the air quality, the traffic problems from large trucks operating 24/7, the vibrations and noise created by this activity, plus the pollution of our creeks and wells in the area. Stop the reopening.

2047

Attachment 24

Lauran	Rinck	95945	Grass Valley	12884 Chatsworth lane	As homeowners in Grass Valley we would like to express our concerns regarding the reopening of the Idaho-Maryland Mine based on the permit application by the Rise Gold Corporation. The reopening of the mine will negatively impact the community in the following areas: 1. Location - The proposed re-opening, with its buildings that require multiple variances, is proposed in an established residential area. Not to mention it is very close to a school that is for children kindergarten through 8th grade. The mine wants to operate 24 hours a day. They will be blasting, dumping and hauling tons of rock from 6a - 10p. Residents will be unable to open their windows or enjoy the great outdoors due to the noise. The noise will make it difficult for the school to conduct classes. In addition they are not sure which way the wind will carry the dust and particles. Would you want your child inhaling this during recess? 2. Health and wellness. As noted, the proposed mine will be dumping and hauling tons of fill rock contains asbestos and silica each day. Once asbestos particles become airborne you have the danger of them being inhaled and causing Mesothelioma - a fatal asbestos lung cancer. We have no idea which way the wind will take these particles. While you may think this is just another "ambulance chaser" legal action - having watched a relative die from this disease and gasp for their last breath due to asbestos exposure at work - I can assure you this disease is no joke. This company will be exposing all our residents to this toxin. The company has also said the rocks and dirt hauled out can be used for local constructions projects. Really - what construction project is going to accept contaminated fill? 3. Water - They propose to pump out over one million gallons of ground water per day. When ground water from aquifers was depleted in Santa Clara county, they saw the ground sink as much as 13 feet in some area making the area unstable and causing damage to structures, roads and even dams. in addition depletion of ground water can impact peoples wells and make it harder for them to reach water as the water table will be lower. Many here are dependent on wells as their primary source of water. This depletion can also cause residents increased costs for treatment as the depletion of surface water can impact the quality of the remaining water. How will the depletion of water impact the health of our forests? We are already in a high risk fire area and [illegible]
Aaron	Simon	95945	Grass Valley	15397 Flying Cloud Drive	As homeowners near the proposed mine site, we are joining together to protect our neighborhood, our local economy, and our quality of life from the clearly dangerous Rise Gold proposal to re-open the Idaho-Maryland Mine. We urge the Board of Supervisors to reject this destructive proposal and protect our community.

Attachment 24

Edward	Szymanski	95959	Nevada City	12367 Palmer Rd.	As much as gold mining is part of Grass Valley's heritage, it would be a grievous error to resurrect this toxic sleeping giant in the 21st century. First in 2005, it was Emgold, also a Canadian company; now it is the financially dubious Rise Gold. What's with these Canadians: Did they run out of beautiful areas in Canada to despoil? Gold mining is our area's legacy from the past and that is where it should remain. It is a legacy of historical importance but also one rife with onerous impacts. One example is that to this day, there are posted signs at numerous Nevada County lakes advising limited consumption of fish due to the mercury left over from those glorious mining days of yore. The demographics here have changed. People now come, or even move to the area, not for gold ore, but for the gold to be found in its natural beauty. Families move here for the area's natural recreation, relatively clean air, and the lack of traffic congestion. How many families would have moved to Grass Valley or Nevada City if an industrialized mining operation was one of the area's defining features. Now Rise Gold is probably promising state-of-the-art technology to reduce water and air pollution to what? Acceptable limits according to state guidelines. Why should the community be subjected to those limits when we now experience no exposure to that kind of industrial pollution. If you're not a hermit living in a cave, then almost everyone here knows that ozone blows against this foothill region from Sacramento and sits here mainly during the warmer months, ironically, making our air quality poorer than one would expect for a rural locality. So let's throw caution to those same winds and add to the ozone pollution with a countless number of trucks going to and from the Idaho-Maryland Mine, probably every day of the week. Not to mention the traffic congestion impacts that would occur. If traffic congestion is still rated from A to F, then the DEIR may have Rise Gold claiming a mitigation of traffic concerns to a C level. However, this is not concrete, only speculation on what Rise Gold hopes to achieve. More realistically traffic at intersections and freeway ramps could be reduced to a D or F level of service. Now the County finds a D level of service acceptable but would such a diminishment be acceptable to actual daily drivers. The County may have no qualms about Roseville-izing Grass Valley but I would hope most residents feel differently. California has some of the strictest environmental regulations in effect; nevertheless many times it's a paper tiger because there is not enough manpower to enforce these standards. Will Rise Gold be another company left to itself to self-regulate? Will Rise Gold sign a contract stating that it will not add CO2. NOX, SOX, TAC,s, etc to our air? Giving it an eighty year permit seems like the old "promise of jobs' gambit has allowed this spurious company to dictate its own terms. There are so many negative issues with this proposed mine reopening, from the blatant inexperience of the company and the [illegible]
Danielle	Rigney	95945	Grass Valley	13652 Barker Lane	As my Representative, I expect you to speak for your constituents. No Mine!! The Risks are not worth the Benefits!
Shelly	Byers	95945	Grass Valley	15148 Greenhorn Rd	As our local area has a mining legacy, consider it as our past and not our future. With the proposed reopening of the Idaho-Maryland mine, Rise gold puts our community's water resources at further risk. I urge you to reject approving this proposal and protect our precious water. Thank you for your time,
Samuel	Willis	95949	Grass Valley	13859 Mirage Court	As recent transplants and home owners in Grass Valley, it worries us greatly that this mine is being considered to reopen. Under no circumstances will we be staying in Grass Valley if the Board of Supervisors so willingly hands over our current way of life for greed. To do show would show the lack of representation for what your citizens actually stand for.
Rebecca	Uptmor	95008	campbell	1031 normandy dr	As someone who just purchased a home in Nevada City, I am sickened to learn that this mine might be reopened. This will hurt the environment, lower property values, and lower tourism. This must be stopped!!!

Attachment 24

Neysa	King	95945	Grass Valley	19449 Mountain Lion Rd.	As the end of the comment period rapidly approaches I am writing to encourage your continued vigilance in building a healthy and safe future for our community by rejecting the proposal to reopen this mine in the middle of our town. As the uncertainty of the pandemic and a warming climate continue to affect our quality of life and future, we ask you to stand strong and to remain focused on the common values we share for a healthy and safe future in Nevada County. Our homes, schools, businesses and quality of life should not be sacrificed for economic gains of a private company and the unmitigated impacts of this project on water quality, air quality, noise and the production of hazardous materials are sufficient to warrant continued scrutiny and denial to protect our community. Thank you for your focus and willingness to prioritize our community's future. I am writing to urgently request that you deny the permit request to reopen for operation of the Idaho-Maryland Mine. This mine is centrally located in the community of Grass Valley, which is a growing town within the Sierra headwaters. Our area supports incredible and important watersheds that have been impacted by past mining and resource extraction that has impacted the quality of our environment and water bodies today. I urgently recommend that as we try to understand the current issues we must face associated with our water supply and water quality, a project with the potential impact and duration of this proposal is not granted permission. Natural resources and water supply will be dramatically impacted by climate change and our current ability to meet our water demand is questionable. Please protect our water and environment.
Laura	Geeslin	6840	New Canaan	70 Seminary St #1	As the mother and grandmother of residents of Nevada County I am writing to urge you to reject the proposal from Rise Gold and the Idaho-Maryland Mine.
Jessie	Dykstra	95945	Grass Valley	19240 Tiger Lily Lane	As the mother of young children who had hoped to raise them and give back to the County for the long-term, I am distressed by the idea that my children would be exposed to all of the harms that reopening the mine would bring, and would seriously consider leaving the County as a result of this degradation of our quality of life. I, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Ken	Johnson	95602	Auburn	23568 Singing Hills Court	As you know, Nevada County is a wonderful place to live. It has a thriving tourist industry complemented by a wonderful variety of EXCELLENT restaurants, wineries and breweries, recreation opportunities and much more. Our water supply is limited, and perhaps even more so in the future. Our local economy is clean without jeopardizing it with pollution and risking our fresh water supply. Please, look past the golden calf and reject this mine proposal. God created only one Nevada County. Thank you.
Richard	Rodriguez	95959	Nevada City	12807 Madrone Forest Dr	Attn: Nevada County Supervisors, stop the Mine Now!
Paula	Evans	95946	Penn Valley	13233 Country Heights Drive	Bad decision to re-open the mine! Bad for our environment, bad for the community and bad for the future!
Stuart	Coben	95959	Nevada City	20834 New Rome Rd	Bad for community
Chris	Griffin	95959	Nevada City	14201, Idaho Maryland Rd	bad timing.
ARTHUR	DERBY	95821	SACRAMENTO	2041 EDISON AVE	Be brave and stand up for our land. Protect your constituents from this ecological disaster.
Kurt	Specht	95125	San Jose	1903 Huxley Court	Be forewarned that as a tourist who visits the area regularly, this project will likely cause me to visit other areas with less congestion and higher quality of environmental factors. I urge the Board of Supervisors to reject this project to help protect the greater Nevada County area from this destructive proposal.
Summer	Moe	95959	Nevada City	12969 Banner Lava Cap Rd.	Because I LIVE HERE 💜 and I want to live peacefully where I grew up as a child without oppressive mining operations disturbing the peace and poisoning the land & water supply in the name of greed . It does no good for any living thing .

2050

Attachment 24

John	Coggins	95949	Grass Valley	22912 Montclaire Court	Because reopening the mine will do the following: Pollutes our air with fugitive dust from rock crushing, loading, and truck hauling Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years Devours our power using 12% of Nevada County's consumption annually and putting our power grid under further strain Completely erases our County's plan to cut greenhouse gas emissions Drains our water using South Fork Wolf Creek as a storm drain Threatens 300+ private wells Reduces property values and property tax revenue Thank you for your serious consideration and help.
James	Moore	95949	Grass Valley	14809 Goldcone Dr	Besides the environmental impact, the background of Rise Gold and its owner should be cause for alarm. If the project were to go ahead and not prove profitable will Rise abandon the site without tending to the cleanup?
Giedre	McLees	95959	Nevada City	12196 Madrona way	Blessings to once who stand together
Maryalice	Ritti	95945	Grass Valley	145 Success Mine Loop	Both my husband and I are very against this proposal. We have lived in California 43 years. People our drawn to the area for it's beauty, it's culture and it's strong sense of community. Many of us have committed to California, it's a challenging state. Beatrix	Treiterer	95628	Fair Oaks	4420 Shady Oak Way	Businesses, homeowners, and conservationists in Nevada County-- AND downstream in Sacramento County -- are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. The environmental review of this project is inadequate. Furthermore, the project has major long term environmental consequences with little benefit to the local community.
Brett	Hall Jones	95959-8703	Nevada City	16191 Indian Flat Rd	Businesses, homeowners, and nature lovers in Nevada County our very concerned about the rise gold proposal to re-open the Idaho-Maryland mine. We feel it is your duty to protect our environment and our way of life which would be threatened by this retrograde mine project.
Victor	Traverso	95945	Grass Valley	13910 Green Haven Ln.	Businesses, homeowners, conservationists and community members throughout Nevada County are joining together to protect our neighborhoods, our local economy and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. I, the undersigned, am 100% opposed to Rise Gold being approved to re-open the Idaho Maryland Mine! Our community must be protected and I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Joanne	Traverso	95945	GRASS VALLEY	13910 Greenhaven Ln	Businesses, homeowners, conservationists and community members throughout Nevada County are joining together to protect our neighborhoods, our local economy and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. I, the undersigned, am 100% opposed to Rise Gold being approved to re-open the Idaho Maryland Mine! Our community must be protected and I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Amy	Steed	95959	Nevada City	14200 Idaho Maryland Road	Clean water and air top any mining from a sketchy company any day.

2051

Attachment 24

Joshua	Latimer	94945	Grass Valley	14412 Rattlesnake Rd	Clearly the DEIR is just greenwashing what will be a nightmare of pollution, noise and long term damage for this community with very few benefits accruing locally. The few jobs that won't be filled by out of area technical workers are not likely to be filled by the people bearing the brunt of the immediate negative impacts, much less the long term ones. In no world does this project make any sense for our community
Sloane	Morton	95959	Nevada City	15584 Applewood Lane	Come on guys, even IF the mine manages to turn a profit, the majority of that money is going to leave not just the county, not just the state, but the COUNTRY. The Idaho-Maryland mine has no interest in our county beyond exploitation. Our county's history is be rooted in gold-mining -- but that ought to offer all the reminder you need to reject a greedy, uncaring bid for resources: ecological scars and pollution remain from the mining that began over a hundred-and-fifty years ago. The profits (which, again, won't be staying in county) will dry up far, far sooner than the damage can heal. Allowing the mine to go forward would be incredibly reckless and irresponsible not just for our county's environment but its economy and spirit.
Steve	Knebl	95949	Grass Valley	17675 Alexandra Way	Concerned over damage to environment. Especially wells, chemicals being used, wildlife. Higher paying jobs at the expence of the community. Mining is destructive. When they finish mining, how much will it cost to repair the land. Right now the land, rivers, wells, wildlife, dont need fixing. This is a residential area.
Shira	Steinberg	95946	Penn Valley	18390 Fair Oaks Dr	conservationists in Nevada County are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
gary	cartzdafner	95945	grass valley	159 park ave	CONSIDER COMMON SENSE , NOT POTENTIAL $$$$$$$ FOR ONCE Rise Gold (A CANADIAN CO) has never made a profit and never opened a mine. Rise Gold's CEO Ben Mossman's previous company polluted tribal waters, went bankrupt, and left Canadians with a mess to clean up. Businesses, homeowners, and conservationists in Nevada County are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine .I, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community. Pollutes our air with fugitive dust from rock crushing, loading, and truck hauling Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years Devours our power using 12% of Nevada County's consumption annually and putting our power grid under further strain Completely erases our County's plan to cut greenhouse gas emissions Drains our water using South Fork Wolf Creek as a storm drain Threatens 300+ private wells Reduces property values and property tax revenue CONSIDER COMMON SENSE, NOT POTENTIAL $$$$$$$ FOR ONCE
Mindy	Oberne	95949	Grass Valley	13169 Twin Star Lane	Corporations around the world have devastated countries to get their resources. I love our community and would hate to have it destroyed by a greedy corporation wanting our gold. I love our community and allowing the mine to reopen would be incredibly detrimental to our environment and threaten many homeowner's wells, not to mention the tremendous increase in large vehicle traffic. We need to protect this wonderful place in which we live.

2052

Attachment 24

Charly	Price	95959	Nevada City	Po Box 1445	Covid created a work place experiment. Corporations and employees have both found the benefits of working from home. This has created a migration of well paid professionals out of the major urban areas to rural areas like ours. Now is not the time to Degrade our human environment.
Kim	James	95959	Nevada City	11088 Crescent Drive	Damage from this mine is irreversible. It's ridiculous that you have to get permits to build a garage, but not for miles of underground tunnels.
Karin	Meadows	95945	Grass Valley	119 Mainhart Drive	Dear Community Leaders, Please, do whatever you can to protect our local community from outside interests. The health and well being of our children, our groundwater, our traffic conditions, our neighborhoods, these things are not the priority of any company that is looking for gold here. It's just not a value for them, it's an inconvenience. We aren't in a place to let go and trust. There isn't a system that is in place to monitor any and all ill affects. The consequences are too great for relatively small benefit, and such benefit isn't for the benefit of the whole. If you are also able to put in place a clear message to other good seekers, that their efforts aren't worth it here, that would also be of service to our community. I live here, quite close to the proposed mine, and I hope you will consider my feedback, and the feedback of many others. Maybe folks aren't all giving you feedback, let's consider that these times may be providing our community with fatigue. Please do what you can do not add to it and to even help

The people do not want this. 300 jobs? Thanks to our ridiculous govt policies- there are so many unwanted jobs already in this county. There are no benefits to anyone here except the people who own the mine.
Josh	Kissler	95658	Newcastle	311 Old Oak Road	Dear Folks, who will be making a decision which will have tremendous impact on our health, our families' livelihood, our children's future, our environment and wildlife, our property value, and our overall quality of life...I don't envy you. This decision regarding the opening of the Idaho-Maryland mine is monumental in it's potentially negative impact on so much we hold dear. I cannot personally see EVEN ONE redeeming benefit to re-opening the mine. After reading everything I can find about the situation for the past few months, and watching videos regarding the impact of previous re-openings, I believe we have nothing to gain and everything to lose by allowing Rise Gold to invade our home and cause such devastating damage to us. Being the recipient of dishonest and misleading advertisements from Rise Gold, I imagine that they are not above Bribery to get what they want - Free access to our land without the need for due diligence, following the rules, keeping their empty promises, or having any regard for us or our land. Thank you for listening to the many voices in Nevada County protesting this re-opening.

2053

Attachment 24

Tracie	Krause	95945	Grass Valley	242 E Main St	Dear Supervisor Miller, I vehemently oppose the proposal to re-open the Idaho-Maryland Mine. Please don't let this disastrous project be approved. Our community is counting on you to do the right thing and reject Rise Gold. My 3 housemates agree, and also vote in District 3.
Linda	Munoz	95945	Grass valley	19131 jones ridge road	Definitely Reject the Rise Gild proposed mining operation in future because of huge environmental issues that are huge! Will reduce property values in a major way and we own property on greenhorn road 2 streets from Brunswick. The traffic problems and impact will be impossible. No one could possibly mitigate the effluence of mine materials On the waters above and below ground if this mine starts. Very surprised the Board let this proposal go this far. Thank you!
Jackson	Wagner	95960	North San Juan	27215 Blue Sage wy	Did we really not learn anything from over a century of disastrous ecologic consequences?
Michael	Shira	95945	Grass Valley	12696 Rodriguez Court	Direct impact is a threat to my water well. The city of Grass Valley currently does not plan to bring city water to my neighborhood.
SUSAN M.	CRAIG	95945	Grass Valley	12552 Honeydew lane	Do not allow mine. It is way too close to residents. It will detract from sales of properties including the new development at Sutton as well as is there planning for infrastructure to support all this? ROAD REPAIR..WATER...ELECTRICAL SYSTEM IS BARELY HOLDING NOW...
Katherine	Arth	95945	Grass Valley	13220 Avelina Way	DO NOT allow the Idaho=Maryland Mine or any other mining operation destroy the essence of why we live here. Too may hands get greased at the expense of residents, the environment and quality of life. Be the ones who stand up to greed and profit at our expense.
Gabriele	Schneider	95712	Chicago Park	PO Box 550	Do not allow the Rise Gold to mine in our community. Raise Gold has proven they are not a responsible mining company.
Jan	Crowell	95949	Grass Valley	20380 Buck Ridge Rd	Do not allow this Corporation to come into our community and corrupt our environment waterways roadways Etc I do not trust this Corporation to do the right thing by this community. Stop the Mine! We don't need the pollutants in our water, draining our wells, increased traffic, all the trucking, all the bull crap that goes along with this!
Wendy	Hawkins	95945	Grass Valley	12400 pine cone circle	Do NOT allow this mine to be reopened! It is a danger to our health.
John	Palmer	95959	Nevada City	624 Nivens Lane	Do not approve the reopening of the Idaho=Maryland minute. It will be a disaster for this area in every way.
Shari	Brookler	95959	Nevada City	11431 Tyler Foote Rd.	Do not approve this project!! This project has the potential to cause great harm to our community and negativity impact our environment
Detlef	Kiesler	95959	Nevada City	11293 Ridge Rd.	Do not approve this project. We don't need this industry in this beautiful area.
mark	Toelkes	95945	Grass Valley	10555 bragg ave	do not be fooled or bought!!!

Rob	Katzenstein	95945	Grass Valley	245 N AUBURN ST	do we really need the gold???? DO WE REALLY WANT THE NOISE? do you want your kids working underground for a Canadian Corperation? No mine is the only way to go.....
Dena	Malakian	95959	Nevada City	13471 Red Dog Rd	Do we really want to repeat history when we know the devastating impact mines had on our environment, way before we were as populated as now? I don't understand how this can be a consideration with the mine so close to residential areas, the airport and our one and only hospital!! No amount of jobs or financial benefits (if we can even be sure there will be) are worth the risk. Please stop this madness!!
Karen	Farlee	95959	Nevada City	12444 Tesla Pl	Do what is right for our community. Do not open a mine in the middle of our beautiful town. Please stop the opening of the Rise Fold mine. It is not the time or the place. Water and our environment are a much more important to our community than a couple jobs.
Joe	Hohenrieder	95946	Penn Valley	13481 Forest Park Circle	Do you Nevada county supervisors: After considering the pros and cons of re-opening this mine it definitely seems that it would be detrimental to the community and environment. I hear-by request that you deny the application.
James	Ahlberg	95945	Grass valley	19729 bow valley rd	Don't bend to big money. This mine has more negative impacts than positive outcomes for the community.
Ayla	Rose	95959	Nevada City	11079 Beckville rd	Don't destroy our environment and our community with this mine.
Karen	Johnson-Carroll	95949	Grass Valley	13326 Hallwood Place	Don't ruin our home! Grass Valley needs your help in keeping out this destructive and uncaring opening of the Idaho Maryland mine. Your help, your vote can keep our city free of the damage this mine could incur.
Kathryn	King	95959	Nevada City	12572 Gayle Lane	Don't want mining. I moved here for its beauty and peacefulness and clean fresh air
Michele	Mahaffey	95959	nevada city	104 gold nugget ct	Don't change our town
Pierre	Perreault	95959	Nevada City	14539 Pello Court	Don't let greed and deceptive tactics from Rise Gold influence your decision. We all need to do everything we can to protect our fragile environment. Water cannot be replaced with dollars. VOTE NO on the Idaho-Maryland Mine.
Corrie	Gorson	95945	Grass Valley	135 Carpenter St	Don't let this short-sighted venture irreperably damage our most precious resource -- the natural beauty and ecology that our families and tourism industries rely on.
Peter	Fraczek	95946	Penn Valley	13284 Thistle Loop	Don't need truck traffic on Brunswick. Check out what owners did in Canada.
Jimena	Saravia	95977	Smartsville	7644 hammonton smartsville road	Don't poison our land with this.
Thomas	Kluge	95945	Grass Valley	10830 Lantana Lane	Don't re-zone the property to allow the mine to get build, please. We don't want to lose our well etc.. What city is looking to bring a mine to their town? It never turns out well for the people living there. What is the longterm cost we will pay to have them pollute the land again! Haven't we learned our lesson?
Jason	Roozen	95682	Penn Valley	20344 Wildwood West Road	Don't ruin the whole area with24 hour traffic and ruin our wells so we pay for shitty city water. Rise doesn't care about this beautiful area
Donn	Carlson	95945	Grass Valley	10805 Gold Hill Dr	Dont want it. Dont need it. Are we requiring a large bond to cover any future clean up costs, if Rise Gold files bankruptcy or abandons the project? Bond needs to be enough to ensure the county is not left holding the bag. In 70 or 80 years, even a billion dollars might not be enough.
Cynthia	Berger	95602	Auburn	23690 Woodhaven pl	Don't wont mine. Noise
Sharon	Heinze	95838	Sacramento	1816 Verano St.	DON'T. DO. THIS!!!!!!!!!!!!!!!!

2055

Attachment 24

John	Huggins	95959	Nevada City	15595 Lewis Rd	Draining the water table is insane. These jobs will not be filled by local citizens. With water tables dropping locally how could we even consider draining the mines? The hard labor jobs promised will not be taken by local workers.
Lindsay	Bellows	95945	Grass Valley	10960 Cedar Way	During the Gold Rush, mines totally destroyed and polluted our local landscape. Have we not learned from that tragedy? This mine will certainly have devastating environmental, human, and economic (tourism) impacts. Please please please REFUSE this and all future mines from operating in our area.
Ellen	Hall	95959	NEVADA CITY	404 RED BUD WAY	Earth needs our protection, not more destructive and polluting enterprises.
Paul	Schwartz	95945	Grass Valley	13812 Meadow Dr	Environmental and economic sustainability need to go hand in hand. Where there is conflict we must side with the environment and resolve economic conditions that are incompatible.
Rosalie	Adduci	95945	Grass valley	12465 oak circle	Environmental impacts will degrade quality of my life
Dennis	Tucker	95959	Nevada City	11727 Cement Hill Rd	Environmental risks and noise and traffic impacts.
Elizabeth	Hammond	95959	Nevada City	12148 Vee Court	Every decision does not have to be based on short-term economic returns--we can do things that are good for the community, its environment and the health of those who live here. Those have long-term economic rewards as well and are far more important than allowing developers to fill their pockets.
Deborah	McCrary	95949	Grass Valley	15798 Annie Drive	Exceedingly bad idea to have a mine; have you not looked into the History of mining and the potential environmental Negative impact. This mining company is only interested in the bottom line: making a Profit at this expense of the larger community.....
Cameron	Redford	95959	Nevada city	13500 summit ridge dr	Extremely concerned about the impact of this mine on our community.
Alvaro	Lainez	95713	Colfax	21190, Snooks Rd	F RiseGold
Sam	Raymond	95945	Cedar Ridge	12018 Lower Colfax Road	Facing a very dangerous threat to my family's access to water, asset values, and future health from the Idaho Maryland Mine reopening, I urge you to reject this project. Not only is reopening a mine for scant short term economic gains an ill conceived mission, not one single person can guarantee no negative effects from this project. So, with the water and beauty and forests of our area being the true draw and value, how can allowing the loss of massive water supply, the storage of massive tailings (in town?!), and the guarantee that Rise will up and leave the second the gold is gone, the community's future will sit square in each of your legacies. And never forgotten. Please study Bend, OR as an old logging mill town turned flourishing recreation town. See Wallace, ID as a mining town turned recreation hot spot. See the myriad of towns from Minnesota to Appalachia that are dumping their mine economies for recreation and exploding in population and revenue. Folks, mines take us backwards. Mines can ruin towns for decades. SuperFund is gone. There is no help if this mine reopens and destroys our water table, soil, or tunnel collapses. Lastly, please look very closely at the men and women behind Rise. What they did to the San Juan Ridge. What they did to Prince Rupert. The existing lawsuits into their characters. The stone cold lie they've told about NID hooking us all up (they are not - each supervisor has explicitly said they are not guaranteeing anything to anyone). These are not good humans. They are hiding and lying and will screw us all over. How many times do we need to see their actions across the west to prove it? Thank you for reading. Rise owns the mineral rights below our property. We're invested.

2056

Attachment 24

Catalina	Davis	95924	Cedar Ridge	11010 Brunswick Drive	For all the reasons you listed. I moved here to have a peaceful place in the woods. That does not sound inductive to that happening. It's not something that benefits the Whole. It needs to be a win-win or it is nothing. To agree to this is to be lost in greed again.
Ishan	Hill	95959	Nevada City	16772 Lake Vera Purdon Rd	For the love of all that is holy, please do not allow this g-d damned mine to be opened.
Deena	Miller	95949	Grass Valley Ca	14805 Auburn Rd	For the sake of future generations please let us not reopen this mine. There's been enough devastation to this area from mining, it would behoove us to stop now.
Gina	Dwyer	95959	Nevada City	14026 Mandolin Way	For the sake of my future and that our children, we urge the Board of Supervisors to REJECT this destructive proposal and instead protect our community.
Nancy	Ramsey	95945	Grass Valley	14586 Meadow Dr	Frankly, I am shocked that in this day and age this proposal to open a mine is even being considered! I have NEVER been a NIBY, and I am not now. Extraction and it's aftermath is harmful to our environment.
Patty	Caro	95713	Colfax	20915 Magnolia Ranch Rd	Fresh water that is uncontaminated is so vital for our existence it should not even be a question to polute. Keeping our water clean is not joke and certainly not worth what the mine opening may do for the economy.
TJ	Da vis	959569	Nevada City	240 Boulder	From all that I hear, this project, will increase air and water pollution and leave the area a mess. All for a few jobs. Just not worth it
Gudrun	Zomerland	95946	Penn Valley	12720 Golden Trout Way	From everything I read and hear, this mine project will have a tremendous impact on the environment, and people living in the area in form of road noise and expenses for the city of Grass Valley (e.g. repairing roads from the constant heavy truck traffic). This community is turning into a cultural treasure, attracting tourists and retirees, and an active mine project has no place in it.
Sarah	Williamson	95959	Nevada City	206 Sacramento Street	From my experience as a business owner who's primary material is gold our industry has been quickly arcing in the direction of sustainable materials only. The clients demand it. Your mine proposal comes from an antiquated way of thinking and is not forward focused. You will not be here in 80 years to clean up the mess. You will leave the community with the mess when you're done. The small amount of jobs promised aren't worth the destruction. I have personally lived in multiple former gold mining towns in California and British Columbia and know these promises are hollow at best. In my former home of Ymir, British Columbia you could still see the purple rainbow soil from the heavy metals and chemicals used many years after a mine was ever in operation. I oppose this mine and it's far fetched promises and the board of supervisors should as well. Consider the people, the businesses and jobs you will lose to "gain" 70 jobs and consider the future generations who hope to call this their home.

2057

Attachment 24

Pamela	Kissler	95602	Auburn	23382 LaCosta Court	Given the devastating impacts of re-opening the mine, why would anyone even consider letting this company, which is apparently facing a number of lawsuits regarding negligence in detoxifying previous project areas, come here and destroy our environment, our watershed, and our quality of life. Wolf Creek is the boundary of my 28 acres of property in Grass Valley, and it sounds as if I will be flooded out for the 6 mths. during which the mine proposes to pump water out of the mine, and into the creek. During the winter months, the creek often runs at full capacity, and I have experienced massive flooding twice in January, 1996, and January, 2006. With the current drought in California, our water table is the lowest I have seen in 26 yrs. In addition to the destruction of native plants, animals, and habitats, the water coming from the mine works will poison our wells with several toxic metals. There would be no oversight to insure that the water from the working of the mines would be detoxified before pouring into Wolf Creek, even were it possible to actually remove heavy metals from water. It seems as if plain, common sense would dictate what a disaster we would be inviting into our lives, should the mine be allowed to re-open. Thank you for your thoughtful consideration of this matter. The Canadians are still trying to clean up the explosives and tailings and destruction to their environment caused by this mining company. Now they want to destroy Nevada County out of personal greed. No amount of jobs or money to the county is worth this tragedy.
Robert	Shulman	95945	Grass Valley	238 N. Auburn St	Gold is a luxury metal, not worth the environmental trade-offs in most places, and certainly not here in Nevada County. Significant impacts abound, and an EIR that claims the contrary is legally vulnerable. You the Board/County have the ultimate power to override significant impacts. Therefore, you should want an EIR that fully discloses impacts. My specific focus is Noise, and I intend to, and hereby reserve my right to, comment on the EIR's faulty treatment of noise from the proposed mine's operations. Thank you for your attention.
Peter	Yaholkovsky	95945-8645	Grass Valley	13454 Fawn Hill Drive	Gold is only good for making money for the mine owners, while externalizing the cost to the environment and to the local population.
Karsten	Stemmann	95946	Penn Valley	18010 Chaparral Dr	Gold mining at the expense of our environment is no longer acceptable. We are now in the 21st century.
Inga	Vankriedt	95959	Nevada City	12637 Murphy rd	Gold mining destroys all the small guys.

Attachment 24

Jeff	Bellucci	95945	Grass Valley	13007 Iron Rock Rd.	Gold mining in California has been romanticized (we even have a football team named after the influx of settlers that came here in 1849). However, now that I've actually lived in Grass Valley for a number of years, I've learned a more complete history, including why most mines were closed in the first place. When I walk on local trails, I see all the signs for areas off limits because of high levels of poisons, like arsenic and mercury. There are superfund sites left behind in this area that will likely never be fully cleaned up. Despite bringing many people to the area in the past, mining did a huge amount of irreparable environmental harm. If Rise Gold is successful in re-opening the Idaho-Maryland mine, how many wells will run dry? How many roads will be destroyed by the thousands of dump trucks they weren't designed to carry? Where will all that toxic runoff that they pump out of their tunnels and shafts end up? How much will our property values be negatively impacted by the constant noise and truck traffic? No one can adequately or definitively answer those questions which makes their plan a total non-starter. I never agreed to heavy industry about a mile from my door when I bought my home in Cedar Ridge. The fact that myself and other residents have no say in this matter is unconscionable. This should be a ballot measure, but it's not. Since normal democracy has failed us, you have a duty to stop this mine from proceeding. I am sure you are already aware of how much damage was done to the landscape and environment of this area by past gold mining operations, which is all the more reason to be against this project by a Canadian gold company trying to profit from our area without any regard for the inevitable consequences. If things go sideways with the operation at any point, Rise will just declare bankruptcy, and all that burden will be on us. How will you afford that very real possibility? Just look to North San Juan, where a mining company took zero responsibility for dry wells and damage to the local aquifer. The Idaho-Maryland Mine has the potential to affect potentially 10 times as many wells or more. The fact that this is even being considered is so incredibly short-sighted.

2060

Attachment 24

Ben	Thum	95949	Grass Valley	10282 Quail Creek Rd	Greed may be what fuels Wall Street but it's a dumb idea to open a mine in Grass Valley. We must not move forward with this foolish pursuit. Our land, air and water are in harm's way at this moment. Please be sensible. Greed could kill us all!
Elizabeth	Leece	95062	Santa Cruz	2895 Capitola Rd #14	Having grown up and spent most of my childhood in the northwestern foothills, I feel the responsibility and accountability to stand up and voice my immense concern for this destructive and extractive proposal. I am writing to the Board of Supervisors to detest and reject the Rise Gold proposal to re-open the Idaho-Maryland Mine. Hasn't Nevada County already extracted and exploited enough of it's environment? Instead of continuing these destructive processes, let's create proposals and projects strengthen communities and the environment hand-in-hand, symbiotically, regeneratively. Let's move forward, NOT backwards. In loving relationship with Nevada County
Gail	Hugger	95070	Saratoga	19118 Vinyard Ln.	Having spent time in the Grass Valley - Nevada City on educational tours that included experts on the mines in this area - their past and present history and condition.....and their presence under the above mentioned towns - it would seem a very poor risk to re-open mines in this area - urging the Nevada County Supervisors to re-think whatever short-term benefits that might be realized against the very real and present risk and danger to the environment, towns and people of Grass Valley and Nevada City if the choice is made to go forward with re-opening plans.
Jack	Mann	95959	Nevada City	10496 Banner Lava Cap Rd	Having spent many beautiful years growing up and appreciating the community and spaces Nevada County provides, I'm so deeply affected by the notion of re-opening of destructive gold mine practices. Please, consider marking this as our history, and find better, cleaner, more productive ways for our community and state to move forward.
Jean	Gruber	95949	Grass Valley	18641 Hiers Rd	Hellbent to destroying beautiful Grass Valley/Nevada County is NOT an option! NO to Rise Gold Mine.
Rachel	Gagliasso	55940	Hayfield	71506 220th Ave	Hello, this mine directly impacts my hundreds of private wells as well hundreds of thousands of citizens in the Sacramento River valley. In addition, the prospect that members of the Board are being paid by the Mine prospects to approve is disturbing. Individual's who are only looking for their own benefit and not looking to help prevent the destruction of thousands of people are selfish and should not be leaders in the community!
Larla	Maloney	95959	Nevada city	11339 deer creek lane	Hello, this project would be detrimental based even only on their projected water use of 3 billion gallons of water per day for 6 months and 1 billion gallons per day for 80 years. Just say no, let's leave mining in our past. Thanks.
Meghan	Archer	95959	Nevada City	13668 mckitrick	Hello. Our connection is too sacred to be violated with a loud polluting mine. The water table can not handle this industry. Reject this proposal.

Attachment 24

Alexa	Rohn	95949	Grass Valley	16673 McCourtney Road	Hi Alexa Rohn here, a homeowner in district four. This comment is in regards to Rise Gold's application to reopen the mine in Nevada County. I received the shiny mine brochure recently and thought, hmm, somethings not quite right. Drive anywhere in Nevada county and everywhere you look are "now hiring" signs. My feed store (I'm a local farmer), my bank, the locally owned hardware store, burger shops and other restaurants I frequent...they're all struggling to find help. It's becoming harder to run my own business when the shops I frequent close early and lines are long from lack of help. I love this gorgeous area, but it breaks my heart to watch fellow business owners struggle to serve their community because of lack of help. Pitching "more jobs" as a perk when local businesses that have invested years in supporting our community can't find help is concerning. And you could say that the places I mentioned don't pay as well as the mine will, that's valid. Except, my husband runs a successful handyman business here in town and starts his workers at $25 an hour. This is comparable (from what I saw in that shiny brochure), to the rates and physicality of the work the mine will be offering. It's a struggle every day for my husband to find workers who will show up, even at those rates. This begs the question, where will the mine fill these jobs from? Already our area needs thousands of housing options for our current residents, housing in the price range of people working jobs with rates like the ones projected for the mine. If our current businesses can't find workers I imagine they will have to attract new folks from out of town to fill those vacancies, where will those people live? We're already crunched with a housing problem, and a problem with finding people to fill the jobs that are already vacant in Nevada County. This makes reopening the mine right now risky for our beautiful community. I'm not opposed to mining, we need precious metals. But I am opposed to undermining the quality of life for our existing residents by bringing a small, unproven mining company to town. Countless times small companies like RiseGold, once they get their metals, have been shown to hide their assets and declare bankruptcy. Leaving a town's ecosystem ravaged in spite of their promises to "leave it better" than they found it. From what I hear RiseGold has a track record of using a similar playbook in Canada where they left tribal waters polluted and dipped on the bill. The bond system with mining cleanup is very broken. If we want to reopen the mine, let's look for someone too big to fail. (No [illegible]
Anita	Rossovich	95959	Nevada City	12093 Crystal Wells Rd	Hi strongly disapprove of the mine opening in Nevada County thank you
Alan	Schaub	95945	Grass Valley	19633 Tiger Lily Lane	Hold the line, no mine! We can live without gold, but not without water.
Diane	Chang	95945	Grass Valley	11174 Weatherly Pl.	Honestly can't believe this Mine proposal even got off the ground, with it's overwhelmingly bad effects on our environment, peaceful enjoyment of our huge number of valuable residential properties, and horrible traffic consequences that will drive many from driving into town to support our local businesses. We count on you to support US, the citizens of Nevada County, and not play Russian roulette with our daily lives, by trusting a bankrupt, lying Canadian businessman thinking he can "play" a small town.
Michael	Leydon	95959	Nevada City	11775 Forest Knolls Ct	Honorable Members, Nevada County Board of Supervisors, I address you here to ask that you deny the application to re-open the Idaho-Maryland Mine. This applicant demonstrates no ability to conduct a profitable and environmentally sound mining operation. On the contrary, his record is one of documented failures in both conducting a profitable mining operation and in safeguarding the environment while doing so. His mining record is one of bankruptcy, environmental violations, and criminal charges filed against him as a result of those violations. This is the wrong applicant pursuing the wrong project. Please deny this ill-advised application. Michael Leydon

Erin	Sullivan	95949	Grass Valley	21914 Cottage Hill Dr	Honorable supervisors, As Nevada County moved away from mining as a main source of business revenue and toward opportunities, it allowed for residential developments within close proximity of this former mine and for increased downstream access to the water sources that would otherwise be affected by mining activities. It is unthinkable to now be dismissive of these people and their needs and of the life they have come to enjoy that does not involve massive noise pollution from mining activities (refer to the history of Empire Mine) and concerns about water. In addition, the prospective mining operators have shown themselves to be bad actors in the past in their dealings with other small communities. Do not allow us to be the next set of victims. With respect but also concern.
Micki	Besancon	95959	Nevada City	11731 Stillwater Creek Rd	How can we even be talking about this mine when we are in a drought cycle that doesn't look to ending anytime soon! The air pollution, noise pollution, traffic from trucks running all day to and from the mine site. There is no way this should be approved!
Robin	Lo	95945	Grass Valley	219 Fairmont Dr	How can you even consider approving such a gross industry in our sweet town. Every gallon of water You let them use is One less gallon for our dinner table!

Melissa	Cade	95945	Grass Valley	932 W. Main St APT 39	I absolutely, unequivocally DO NOT support re-opening the Idaho-Maryland mine. Nevada County is in tremendous need of brave stewardship that can provide a strong, healthy future for today and for decades to come. Rise Grass Valley's plan to build a mismanaged, short-sighted mine that badly disrupts neighbors and our natural environment while creating irreversible harm for at least 80 years is a crossroads to revitalize our local priorities. Re-opening the mine assumes that their employees want unsafe, short-term careers with a negative impact that is immeasurable, including devastating pollution. The mine will spur a bottleneck of massive truck traffic, intolerable noise, increased dust magnitudes, damage to both our area water sources and private wells combined with depleting electric power resources in a drought region. THIS PROJECT IS UNSAFE and significantly affects the health, security, and peace of Nevada County residents and their families and will disrupt locals' prosperous lives. Rise Grass Valley has an outdated, unwanted, self-serving project for Nevada County. Jaspen	Amodeo	95959	Nevada City	12102 Red Gate Road	I absolutely, unequivocally DO NOT support re-opening the Idaho-Maryland mine. Nevada County is in tremendous need of brave stewardship that can provide a strong, healthy future for today and for decades to come. Rise Grass Valley's plan to build a mismanaged, short-sighted mine that badly disrupts neighbors and our natural environment while creating irreversible harm for at least 80 years is a crossroads to revitalize our local priorities. Re-opening the mine assumes that their employees want unsafe, short-term careers with a negative impact that is immeasurable, including devastating pollution. The mine will spur a bottleneck of massive truck traffic, intolerable noise, increased dust magnitudes, damage to both our area water sources and private wells combined with depleting electric power resources in a drought region. THIS PROJECT IS UNSAFE and significantly affects the health, security, and peace of Nevada County residents and their families and will disrupt locals' prosperous lives. Rise Grass Valley has an outdated, unwanted, self-serving project for Nevada County. I URGE THE BOARD OF SUPERVISORS AND OTHER COUNTY OFFICIALS TO PROTECT OUR LOCAL COMMUNITY BY STRONGLY CONDEMNING THE RE-OPENING OF THE IDAHO-MARYLAND MINE.
Sarah	Prechter	95945	Grass Valley	110 Arden Court	I agree 100% for having the Mine not to go in and operate. I thought we are on a water shortage and we would get charged extra money for going over our water limit? So if we put the mine in that would mean that the mine would be using a ton of water. The other thing is that it sounds like to me that the board of Supervisors and Grass Valley Supervisors are not well educated about the mine. Plus there was a gentleman who fell into the cement tower and plus the mine isn't safe to have put in. Because you will have children going in and out of there and they can get seriously hurt. I feel that the board of supervisors did not think about the safety of children entering the mine during the evening hours when nobody is there. What are we going to hire a security guard 24 hours to keep out of there. We are short of money as it is because of the Corona Viruses and for all the people who cannot afford to keep their Businesses open because they cannot pay their rent because the rent is go high. And then we put in a mine then Definitely we would not be able to afford more stuff in Nevada county. What are we trying to do have everybody move out of Nevada County because we cannot afford to live here. That's not right at all so what are we thinking of putting in a mine that's going to be a huge cost in expenses.
Terri	Johannsen	95945	Grass Valley	2405 Ridge Road	I am 100% against this mine project. Please vote against this to protect our community and residents!
Jill	Southard	95959	Nevada City, CA	324 Jordan Street	I am 100% opposed to the reopening of the mine - it is a short-sighted plan that will negatively affect the environment and quality of life for generations to come!
Lisa	Doenecke	95949	Grass Valley	21460 Duckabush Ct	I am 100% opposed to the Rise Gold mining operation. For way too many reasons to list.
Jennifer	Gerstung	95949	Grass Valley	11898 Auburn rd	I am 5th generation here and I will sue the board of supervisors if they pass this.
Marjorie	Plog	95945	Grass Valley	103 Bawden Ave	I am a home owner in the neighborhood which borders the proposed mine project. My property is on a hillside which has existing old & closed mine shafts surrounding.Too many to name. Already,the current drought conditions have killed many ponderosa pines, and multiple layers of dead vegetation in the two large parcels bordering my property.This landis smack in the middle of Grass Valley downtown...within site of the Idaho Maryland Round About. Allowing a permit for a mine to "de-water" is insane. Hope that the Board remembers all of the costly sinkholes in our town...including the recent one at Idaho Maryland Roundabout. Reject this destructive proposal.
Stephen	Ballaron	95945	Grass Valley	409 Daisy Court	I am a homeowner directly above the mineral rights area. I run an astronomical observatory that provides important astronomical data for asteroids to the International Occultation and Timing Association. This requires my telescope to be vibration free for tracking potentially dangerous near Earth asteroids. Mining operations under my observatory will prevent this. Please do not allow this mine.

2064

Attachment 24

Mary	Caridi	95618	Davis	1709 Donner Ave. #1	I am a homeowner in Grass Valley, currently renting my home out but planning to move back to Grass Valley this summer after a long absence. I have looked forward to moving back up the hill from Davis for so many years. I am so disheartened to hear about the proposed mind. Yulia	Van Doren	95945	Grass Valley	415 Marshall Street	I am a homeowner in Grass Valley.
Gregory	Weisswasser ND	95945	Grass Valley	10938 Bubbling Wells Rd	I am a land owner and business owner in proximity to this new mining proposal. I am against this project do to the effects on our way of life, the environment, the heath of our citizens and damages to property and community use. I advise the board to deny this application or citizens like me may have to leave with our businesses.
Stephen	Tassone	95945-8883	Grass Valley	19641 View Forever Lane	I am a native of Nevada County and am very concerned regarding the reliability of the Rise Gold operation based on past performance of CEO Ben Mossman. Our community has moved way beyond the gold mining days and the environmental destruction left behind. Please vote no on this proposal. I am firmly against the reopening of the Idaho-Maryland Mine. Rise Gold is run by a CEO who has shown no reliability in previous business adventures. It would be ridiculous to allow his company to get an 80 year permit to destroy our quality of life. Such an important issue should be put up to a vote of the citizens.
Kristy	Ratel	94949	Grass Valley	13792 Dog Bar Road	I am a Nevada County Native and while a appreciate the rich mining history our town is known for and the tourism and money it brings. Environmental this would truly be a mistake to allow the mine to be reopened. The destruction and pollution this would cause far out weighs any benefit of allowing Rise Gold to move forward and re-open the mine. Please consider the opinion of the generations of families who still live here, and the families and people who live here now we DO NOT WANT THIS IN OUR BACKYARDS. It's time you listen to the people who put you in the seats you fill, it's time to WORK FOR US your community members, like we entrusted you to when we voted you into office. NO ON RE-OPENING THE IDAHO MARYLAND MINE!!!
Paige	Perdue	95945	Grass Valley	13101 Somerset Dr	I am a new resident to Nevada County and opening the Idaho Maryland Mine would considerably devalue my property and make the quality of life that I moved here for unsalvageable.
Mariah	Howard	95945	Grass Valley	14399 Tim Burr Lane	I am a resident of Grass Valley who would be directly impacted by the reopening of the Idaho-Maryland Mine. I live very close to one of the mines and it would be devastating if it reopened. We moved here to be closer to nature and have a better quality of life and the mine would destroy the peace and tranquility of this beautiful place. Every aspect of our life here would suffer if this mine reopens; from water quality to noise, electricity to property values. I can't imagine how we could stay here and raise our family if the mine reopens. Please, we beseech you, to do the right thing and keep Grass Valley green and safe for our community and say no to Rise Gold's plan. Thank you.
Maria	Benner	95945	Grass Valley	17071 Pine Peak Rd	I am a resident of Nevada County and Im worry about the reopening of this main. The reputation of Rise Gold. The pollution, the extraction of water and other minerals. Seems so backwards to move in this direction instead of actually taking care of our resources. Specially water and air quality.

2065

Attachment 24

Heidi	Simmons RDH	95945	Grass Valley	129 Murphy Street	I am absolutely 100% opposed to this mine. I fear for the health of myself and my family ! We have five generations here in this county. I fear for the health of myself my parents my grandparents my children and my children's children! The dust and the pollution will be unavoidable the noise in the trucks and the traffic sound like a terrible idea. We have more than enough of an influx of new residents. This is not a good idea and must be stopped please please for the sake of the locals don't do this to us! I live here locally and I have not received one item in the mail asking me what my opinion on this Mine is. The only information I have gotten in the mail recently was a flyer from rise grass valley that is pro mine. What is going on? Why is this not being advertised and discussed amongst locals. Why have we not received any information in the mail or via the telephone. I had to hunt this information down myself this is not fair. We are going to get swindled into having this mine if we do not all have an opinion and a voice!
Maris	Sanford	95959	Nevada City	103 Perseverance Mine Ct.	I am adamantly against this mine, and any future mines. Those days belong in our history. We all know the lasting devastation of gold mining seen in our county, areas where we cannot go, scenery irreversibly wrecked from different mining techniques. All from greed before conservation. This is the time to start protecting our earth and not gouging more from her!! What we are not told is the constant sight of huge dump trucks through our town and streets, all the rocks flung onto our cars and windows, the ugly humongous MOUNTAIN of tainted soil they are going to create, building it bigger and bigger and bigger. Once they are here we will never be able to get them out or control them. If the Board of Supervisors are going to make a decision that is going to affect generations of us from here on, it this decision right here. Vote NO. Vote absolutely NO. Vote FOREVER NO. This our home and we do not want it to be an industrialized ugliness. Trust me, dump trucks are NOT a tourist attraction! COVID taught us about working from home, expanding possibilities digitally, more people want to move to the country which will prompt more employment to meet their needs. There are many many ways to provide employment than turning our community into one big garbage dump of toxic soil. Would you want your children playing in that dirt?? It shouldn't be allowed. I am abhorred that the whole idea has even gotten this far!! Why have you, the Board of Supervisors even considered this as an option??? VOTE NO. You are representing me and I am saying vote No. Definitively, Definitely, Irrevocably NO MINE. Thank you. Protect our community, do not destroy it. We do not want industrial presence in our community 24/7. Once they get a foothold, we will never get rid of them. Deny opening up the mine. They have no other operations to examine their ability, and the prior history shows that they do NOT go the extra mile to consider the environment. We all live here because of the quiet, rural community not because there are huge, loud, dusty, rock throwing dump trucks churning through our towns, parking lots, restaurants, and highways, gutting our earth, spreading their noise to every nook and cranny. Let protecting why we all live here as your legacy, not destroying it.
Michael	Stanley	95404	Grass Valley	13413 Greenhorn Road	I am adamantly in opposition to any kind of mining in our town.
Devaed	sherman	96960	Nevada County	13319 Crescent Street	I am adamantly opposed to this disastrous project. Please protect our local quality of life and environment! Thank you!
Janet	Sheffner	95959	Nevada City	13920 Miller Road	I am against reopening the mine. I saw the film clip of Rise Gold's owner at a conference in Canada saying they chose Nevada County because we have the weakest regulations and easiest permit process they could find. A mining company who has never mined? And they want to learn how to do it at the risk of our health and our economy? There are other jobs here for our residents. Please do not fold under pressure from people who pretend there is no other way to make a living here. Rise Gold is playing us for suckers. Without a mine, we will continue to thrive as a gateway to unpolluted nature and as a vibrant cultural hub. Any analysis done with good critical thinking skills leads to the conclusion that the mine would harm our way of life. The scars are still on our county from mines closed long ago. I am a Nevada County taxpayer and I hope I can count on you to protect us, thanks for reading, Janet Sheffner

Jori	Hook	95945	Grass Valley	684 Morgan Ranch Drive	I am against reopening the mine. Our land is still recovering from the scarring from previous mining operations in this area.

Deleaua	Shannon	95949	Grass Valley	800 Freeman Lane, #303	I am against the idea of opening a mine in Grass Valley. This is a town that thrives on tourists, and is not compatible with a mining operation. In today's world big corporations promise anything they think you want to hear, then they move ahead and do as they please. They do NOT have our best interests at heart. Their goal is to make money in whatever way possible. I urge the Board of Supervisors NOT to go forward with this project.
LuAnn	Hague	95949	Grass Valley	11241 Alta Sierra Dr	I am AGAINST the mine project!
Beverly	Schorr	95959	Nevada City	13696 Miller Rd.	I am against the reopening of the Idaho-Maryland Mine. It will have a negative affect on our environment in our rural community.
Molly	Hale	95946	Penn Valley	11888 Elnora Court	I am amazed the reopening of the Mine is even being considered. The downside for humans and everything in the environment is absolutely clear... there is no win here for anyone except the Mine owners. Rise Gold would make out like bandits... hmmm? bandits?... and most everyone else would be dealing with the destruction they would perpetrate on this beautiful area. I am casting a firm "NO".
Kendra	DelRio	95945	Grass Valley	12787 The Burma Road	I am asking you not to allow the the re-opening of the Idaho Maryland Mine. Ben Mossman has a bad track record. Please don't let him do to Grass Valley what he did to Northwest British Colombia. I know they are promising our county and residence a lot of money but for everything we could gain there are even more potential losses.
George L	Morgan	95945	Grass Valley	163 Horizon Circle	I am astounded that we are actually having a proposal and serious conversation (Dan Miller are you listening?) to reopen the Idaho Maryland Mine? Are you people serious? If so, really? Is there a 'pay off'? This proposal could seriously destroy the lives of many Grass Valley and rural Nevada County residents who have lived in the area of this ridiculously proposed mine! Some of these nearby residents have lived in their homes their whole life! Is it really more important to you, Nevada County Supervisors, to work to approve this mining operation so that the county will get a few 'crumbs' of tax dollars and almost no serious amount of long term employees? I am truly astounded at the absurdity of this proposed mine. It is and will continue to be a complete disaster to our region for decades to come? VOTE NO! VOTE YOUR CONSCIENCE!!!
Ross	Hermann	95945	Grass valley	413 Marshall st	I am born an raised in Nevada county, and I strongly oppose the reopening of this mine
Peter	Traugot	95959	Nevada City	111909 Cement Hill Rd	I am completely against the 1 percenter money grab going on here. There is no value to the residence, only the pockets of politicians and the mine operator. The residence will see little to no new money flow into the economy once they get their cut. No new jobs (it will be primarily automated, otherwise it would be too expensive to operate), will, screw with the ecosystem, traffic, noise, etc etc.
Camille	Wilkinson	95945	Grass Valley	239 Mill St, Apt 3	I am completely against the resurrection of the Idaho Maryland mine for so all of the reasons noted.

2067

Attachment 24

Beverley	Warner	95945	Grass Valley	561 Idaho Maryland Rd.	I am completely opposed to the opening of the mine. This will have disastrous effects on our local community in so many ways. My understanding is the shafts are currently filled with water. The removal of said water will compromise the integrity of the ground in which many structures are dependent, not to mention the people that live or conduct business in the area. We personally have an animal hospital within a few hundred feet of the shaft opening. My next concern is the quality of the water that is coming from the shaft and is supposed to be directed to the NID. I am sure there will be contamination to the NID system with no determination of the consequences to people, animals and our community. There are people that rely on the NID as a water source in their homes. While I have just moved here 13 months ago, I see the beauty of the region, the quality of the people with a communion of keeping it this way! There are all kinds of progress that has taken place in this area without compromising the integrity of the area. Let's not compromise our beauty and quality with a poorly thought-out idea. I am completely opposed to the idea and pray this does not happen.
Merle	Ethridge	95602	Auburn	24066 Timber Ridge Dr.	I am concerned about my well water and also the impact of trucking in a city not designed for it.
Jeannine	Mayer	95949	Grass Valley	16372 Auburn rd	I am convinced that the mine will severely effect the ground water and effect wells .Wells will go dry then what???
Micah	Panzich	90814	Long beach	369 Mira Mar Ave	I am currently relocating to Grass Valley and we are not looking for property within a three mile radius from the mine - so this is proof right there that this will have a negative effect on property values in the area. Nothing like this ever goes well. Nobody wants their children or family or neighbors to get sick from issues that will be caused from the mine. There are always accidents. There is always poor management. This is not worth the risk to the community or the future of the area. We urge the board to reject this proposal.
Hayley	Wingerd	95975	Rough and Ready Ca.	13649 rough and ready hwy	I am deeply concerned about the unknown water impacts that this reopen of the mine could have on our community. Also how much environmental change that would be involved as well. I do not support this mine in our community or the Elected officials that would support this project.
David	White	95945	Grass Valley	14036 Diamond Ct	I am deeply concerned about: Property value decrease Noise Well going dry Air pollution Traffic Pollution from crushed rock disposal Crime with influx of miners Gases being vented from the mine Well going dry
christopher	higgins	95949	Grass Valley	10070 Oak Dr	I am extremely against the reopening of the Idaho mine. I don't want temporary profit's and greed to ruin our post mining era communities future. This area will never completely recover from the effects of mining from the past , why make it worse?
Mary	Dodd	95949	Grass Valley	800 Freeman Lane, 210	I am extremely concerned about the use of precious water in this time of severe drought that will be used for the extraction of gold. I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
David	Wills	95945	Grass valley	13550 lower anchor lane	I am extremely opposed to the reopening of the Idaho Maryland mine. I live close to the mine & believe it would be very detrimental to my neighborhood & our county.

2068

Attachment 24

Amanda	Dupuy	98118	Seattle	4657 S Frontenac St	I am from Nevada County originally and all of my family still lives there. My little sister loves extremely close to the mine and is on well water and I am concerned for her and her families health that their water will be polluted in addition to the other environmental impacts that will cause harm for the health and well being of the people who live into the area in addition to the environmental damage
Rachel	Woodward	95945	Grass Valley	13995 Edgewood Dr.	I am going to move if this mine comes though...already bad air here..do we really need more?
Ravynn	Noble	95945	Grass valley	10602 cedar ave	I am joining the petition against the Rise gold proposal to open the Idaho-Maryland mine in order to protect not only our beloved home, but also our quality of life. I strongly urge you to reject this proposal and protect our air, water, and community.
Paul	Cappa	95945	Grass Valley	12859 bradford drive	I am not in favor of opening up the IMM. What a shame for our council members to even allow the process to get this far.
Amanda	Ashley	95959	Nevada City	11390 red ranch rd	I am not in favor of the reopening of the mine. I reject any efforts for this to happen in the community where I live and do work. The threat posed to the natural resources around the proposed reopening is not worth the trade offs. I refuse to trade clean drinking water for profit
Gary	Ambuehl	95945i	Grass Valley	10701 Bragg Ave	I am opposed to this mine being re-opened for a myriad of reasons and have written the board of supervisors accordingly. Listen to your constituents and do your job. Vote no on re-opening this mine which could cause an environmental nightmare in our local community long after Rise leaves with their profits. The Rise Gold environmental assessment is flawed and shows disregard for local concerns. Don't let them pull the wool over your eyes. Vote "no" on re-opening the Idaho/Maryland Mine!
Janet E.	Brisson	95949	Grass Valley	20693 Dog Bar Road	I am opposed to this project of opening the idaho mine. Not only would our county have to deall with many pollutions such as air, water and noise, it would turn our quiet historic town into a mining town with horrendous traffic and threatens wells in the area. Again, I am opposed and deeply concerned that I was not asked to participate in any survey. Thank you, Janet Brisson
Jes	Taber	95959	Nevada City	111 mill street	I am part of the many locally raised Nevada County business owners here in Nevada City who believe that this mine will only create chaos, destruction and loss of habitats for our wildlife, waterways, and so much more. We are still dealing with the aftermath of the empire state mine along with all of the other mines that have polluted our soil, waterways and done the grave damage to our land only humans can do. I'm happy to hear that so many fellow business owners are campaigning with the same message: NO TO THE MINE.
Elizabeth	Lipski	95959	Nevada City	14531 Echo Ridge Drive	I am raising my family here and protecting our community from the mine is extremely important. Thank you.
Michele	Stewart	95945	Grass Valley	15515 Mattson Ln	I am signing this petition and not the recall petition because I have belief that the NCBS will make the right choice for the people of Nevada county and deny the reopening of the Idaho Maryland mine.
Jessica	Panico	96161	Truckee	11130 Barnes Dr	I am strongly against the re-opening of the Idaho-Maryland Mine, especially by the Rise mining company. The destruction, environmental pollution, and community devastation from mining operations is well-documented, and the history of Rise's lack of concern precedes them. They didn't care in the past and this foreign-owned company won't care about its damages here either. They are greed-driven, profit-seeking, and will exploit Nevada County for it's resources. My vote is a hard NO.
Andrew	Birkhoff	95949	Grass Valley	14811 Winding Creek Court	I am strongly opposed to reopening the mine, having an understanding of the environmental impact to our community. I don't want my well contaminated. I don't want the added truck traffic, the added dust and the noise from living in an industrial community. There is not an environmentally safe way to mine gold. We don't want to turn western Nevada County into an industrial area with the accompanying noise, pollution, and increased truck traffic. There will not be sufficient employment to offset the damage to ground water and our wonderful communities.

2069

Attachment 24

Colleen	Young	95945	Grass Valley	720 Morgan Ranch Drive	I am strongly opposed to the mine due to environmental dangers.
Beverly	Stout	95945	Grass Valley	312 Horizon Circle	I am strongly OPPOSED to the opening of the Idaho Maryland Mine. In fact, if the mine is approved, although I have been living here nearly 30 years, I will be moving out of this county. It is a reckless waste of our resources and money. It is sure to degrade our air, WATER, and roads in a time when these are precious resources already challenged by climate change. These are NOT the kind of jobs we want to attract to this county. I was a recipient of the telephone survey, and it was the most biased survey I have ever encountered. It was not designed to elecit thoughtful and rational opinions, but designed to obtain YES answers. This is NOT a company that can be trusted. I do NOT support the opening of the mine by Rise Gold. First, their reputation for dishonesty and irresponsibility precedes them, so I do NOT believe they will apply successful mitigation efforts in any area. They have proven in the past that they do not follow through on mitigation efforts. Second, this is not the type of business that we need to invite to our county. We would be better off investing in strengthening internet reliability and speed, mental health support, and improving options for the homeless.
Josie	Crawford	95949	Grass Valley	17627 Vintage Dr	I am the Executive Director of the Wolf Creek Community Alliance. We are firmly opposed to the reopening of the mine because of the potential negative effects of the dewatering of the creek into the vulnerable habitat of South Fork Wolf Creek and Wolf Creek. The creeks and surrounding forests support native rainbow trout, California spotted owls, possibly black rails, a rare species of flannelbush, and many other species. Mining might have been an important part of our future but our communities have not stopped paying for those mines since the mines closed in the mid-50s. Rise Gold may not be using mercury or cyanide but the water that fills and will fill those old shafts will always leach arsenic, manganese and iron from the rocks and inevitably those toxins will find their way into our water and soils. Spills happen and as Climate Change continues to cause extreme weather events, we know that high intensity storms will occur and cause spills. We cannot afford it, not the community and not the environment.
Wendy	Thompson	95959	Nevada City	267 Bourbon Hill Road	I am truly shocked we are even considering this proposal. We have already had a major legacy of watershed damage from Gold Mining, we do not need further impacts to our watershed, including heavy metals entering Wolf Creek, with immense amounts of water flowing through daily for decades. Also the diversity of our native plant species would disappear. This diversity is the heritage we need to applaud and continue to further throughout the future of our county and local watersheds. Thank you for your sincere and thorough consideration. Businesses, homeowners, and conservationists in Nevada County are joining together to protect our Watershed, our neighborhoods, our local economy, and our beautiful quality of life we enjoy here from the Rise Gold proposal to re-open the Idaho-Maryland Mine. We know that this mine will not benefit our county in any way, not in jobs, not for our creeks, and not for a quiet peaceful existence. Thank You!
Karen	Lynaugh	95949	GRASS VALLEY	17455 Anona Ct.	I am urging the board of supervisors to reject the opening of the Idaho-Maryland mine!! The negative impacts to our environment and residents will outweigh the financial gain!! I strongly oppose the opening of the I-M Mine. Rise Gold has a poor track record of safeguarding the environment and people close to there mines. Please vote NO on this project!!!
Michael	Parker	95945	Grass Valley	111 Bank St. #158	I am vehemently opposed to the mine. I believe the benefits it may bring to our community will be very small compared to the costs. I believe the approval of the mine is very short-sighted and borderline corrupt (similar to Los Angeles selling their streetcar system to the tire companies long ago).

2070

Attachment 24

Deborah	Shriver	95945	Grass Valley	14057 Collier Rd	I am vehemently opposed to the reopening of the Idaho-Maryland Mine.One needs only to look into CEO Mr. Mossmans reputation for environmental violation and the decimated properties and mines he has abandoned.Please protect this beautiful community and all who reside here. Absolutely no good can come of it.
Tina	Spriggs	95945	Grass Valley	13480 Lower Anchor Lane	I am very afraid of losing our well if this mine opens. We are already in a massive drought in which the water table has lowered. By pumping millions of gallons of water out of the mine, it will lower the table even further...possibly making our well run dry. If that happens our house will be worthless...either to live in or to sell. Please stop this mine.
Carlyle	Miller	95959	NEVADA CITY	609 REDBUD WAY	I am very concerned about air quality and water quality pollution as well as noise pollution.
Dodie	Menet	95945	Grass Valley	13173 Omegact	I am very concerned about my well water.
Susan	Fuller	95949	Grass Valley	23077 Cottage Hill Dr	I am very concerned about our water table. This proposed project will use our precious water and there will then be the polluted waste water. This will be very bad for residents in Grass Valley and other local communities. It will turn our quiet town into an industrial city with the noise and pollution that will come with it. This mine will potentially cause a lot of ecological damage to our county. On our road we all have wells. The mine is in the middle of residential neighborhoods. I agree with everything written above. NO MINE!
Partch	Karen	95949	Grass Valley	16984 Scott Way	I am very concerned about the environmental impact of this mine: to our water and to the area where my office I located in WhisperPines due to the trucking and dumping of tailings nearby. The road there is already in poor shape this will make it worse, not to mention the impact of increased diesel exhaust and other dust and dirt into the air. Please stop this development! My office is in the same building as Rise Golds' office. They are never there, clearly are not a part of our community.
Kebby	Margaretich	95945	Grass Valley	652 S. Auburn St	I am very concerned about the impact on businesses in our area. The Rise Mine proposal does not answer questions I have about noise and air pollution. Also this will be a project that will drive people out of our area due to an industrial mine running 24/7 with trucks clogging our streets.
John	Reeder	95945	Grass Valley	12677 Jack Pine Rd	I am very concerned about the unknowable impacts on local hydrology, air quality, noise, and traffic. I see no identifiable need that this project will fill, yet many significant risks are easily identified. I urge the Supervisors to defeat this project. The mine is an awful idea and if approved we will very likely leave Nevada County for good.
Ursula	Young	95945	Grass Valley	20818 Red Dog Rd	I am very concerned about this project, and this out-of-area company coming in to cause so much destruction. Our natural resources are already getting depleted due to population growth and climate change, and we are in a precarious place - we must find ways of carefully managing our environment to fit with the needs of the community, and save our water resources. I strongly urge you to listen to the people of Nevada County and stop this mine from happening.
Beverly Kim	Derby	95949	Grass Valley	10591 Salcido Lane	I am very concerned for the environmental health of Wolf Creek.The potential for pollution and danger to the fish and wildlife is real.
Jack	Jarrett	95959	Nevada City	11328 Yuba Ridge Dr	I am very much against the reopening of this mine .I will not vote for anyone in support of reopening the mine. The environment is more important than any economic benefits from this reopening.
Sheerlie	Ryngler	95959	Nevada city	14401 nimbus dam rd	I am writing to express my grave concern over the proposed reopening of the Idaho-Maryland mine, which I understand will be expanded to 3,000 acres of underground mines, further disturbing approximately 200 acres above ground in a last forested outpost. I feel this will be a devastation to our peaceful community, causing environmental degradation that may irrevocably compromise the safety, beauty, and peace of the already delicate and still-healing lands we love. The community is overwhelmingly against this proposed project! Please do EVERYTHING in your power to stop this plan from moving forward! It has the potential to destroy our local economy, pristine nature and quality of life.

2071

Attachment 24

Maria	Dicintio	95945	Grass Valley	16691 Colfax Hwy	I am writing to urge you to protect our precious local resources. The Rise Gold proposal to reopen the Idaho Maryland Mine is an irresponsible risk to our water and soil quality. Please reject this destructive proposal and defend our community health.
Heidi	Breuer	95945	Grass Valley	18354 Raccoon Trail	I am writing to urge you to reject the proposal by Rise Gold to re-open the Idaho-Maryland mine. I cannot under any circumstance support the mining of gold in light of the disastrous natural resource impact this endeavor will cause. While concern for water is my top worry, I am also concerned about noise and air pollution and the lack of long term planning and unknown impacts that blasting and mining operations may cause to neighboring homes, the city and county. No amount of job growth is worth the risk that we'll likely require a monstrous clean up effort after even a small amount of mining if is begins. The financial responsibility by Rise Gold towards any unintended (or intended) impact seems too lightly planned, and given the track record and willingness to declare bankruptcy as a way to walk away from accountability in the past, Rise Gold doesn't seem to be looking like a trustworthy partner for our community. Please don't let this ridiculous plan be implemented. Please block the reopening of the mine. We must not allow Rise Gold to reopen the Idaho-Maryland mine. Our water and air resources are already struggling to stay at acceptable levels given climate change. We cannot predict what additional natural stressors will look like for these life critical resources as smoke from fires and drought conditions continue into our future. Pleas do not support an assault on our towns and county resources that this mine will inflict, all for the desire to pull material out of the earth - gold- that only serves to feed our human sense of superiority and greed. We can't drink or breathe gold. Every former mining site is an environmental wreck. There is such thing as worse. A mine in our community will change for the negative our local quality of life and potentially cause irrevocable environmental damage. Do not support this endeavor.
Shirley	Kinghorn	95959	Nevada City	16633 Indian Flat Road	I as a resident and concerned citizen of Nevada City I am writing to let you know that the proposal to open the Idaho Maryland mine is a disaster in the making! It is imperative that the mine company coming from outside our community are not able to decimate our environment through mining for their gain at our expense. Please do the right thing and reject the dangerous plan to reopen the mine here.
Sue	Bowmanwulf	95945	Grass valley	15033 Towle ln	I beg you not to permit the re-opening of the Idaho-Maryland Mine. The impact on the people who live near the mine stand to suffer greatly, the environment is not safe, and the past record of Mr Mossman speaks volumes. Please listen to the outcry of all of us who have been fighting tooth an nail for so long, it would be a horrible mistake. There is a community around the mine. It's is not good for our county. There are better uses for that land. The company lies, period!

2072

Attachment 24

Kathy	Ogburn	95945	Grass Calley	300 Vistamont Drive	I believe both re-opening the Idaho Maryland Mine and Rise Gold's involvement with our community are hugely damaging. There would be inevitable irreparable damage to our community's economy, environmental stability and quality of life. As a reminder, Jeff Kane's article in the Union clearly states the argument against the mine. https://www.theunion.com/opinion/columns/jeff-kane-reviving-the-idaho-maryland-gold-mine-what-a-deal/?__vfz=medium%3Dstandalone_top_pages The DEIR is missing a vital component- the assessment of COMMUNITY VALUES as a threshold of significance. Rise Lies. There needs to be official fact checking on anything they communicate to Nevada County citizens and corrections made known in all possible venues. Don't sell us out!
Bradley	Carson	95945	Grass Valley	15143 Rattlesnake Road	I believe it is reckless to allow the mine to monitor their own environmental impacts. Also the fact that they have admitted the operation will effect some homeowners wells admits that their operation will change subsurface water to an extent that they can't possibly predict.
Clyde	Brantley	95959	Nevada City< CA	11750 Deer Park Drive	I believe this is not asn appropriate industry for our area. NO MINE! NO noise pollution, no traffic impact, no water well issues. Stop the nonsense!
Daniel	Bashin	95959	Nevada City	431 Zion Street	I believe this mine will not serve the greater health and economic interests of this county and Grass Valley. I believe it would be a great detriment to our public health, safety and well-being - utilizing our much needed water which is in very short supply and create permanent damage to the ecology of the surrounding area. Please do not let greed get in the way of our future and our children's future.
John	Kelly	95959	Nevada City	19688 James Lane	I believe this proposed project jeopardizes the whole of our area, as a decent place to live. It sounds to me as if the DEIR has missed many salient factors; and I will follow up on this. The project seems to be ecologically, commercially and financially unsound. I can see no good reason to re-open the mine. Every aspect of the proposed program is likely to be a disaster for the whole area. Apart from the noise/traffic/chemicals the threat to our scarce water supply is HUGE. The Idaho Maryland mine should not be re-opened by anyone. Rise gold has already run biassed surveys and is definitely not to be trusted.
Tara	Mitchell	95945	Grass Valley	13177 Brunswick Rd	I believe we need to protect our neighborhoods, our quality of life, and our local economy. I believe the mine will be detrimental to the people who live here and the economy of our beautiful town. I have lived and raised my kids here for 12 years. We are now facing having our well go dry as one of the many tragedies reopening the mine will force upon the people of this area. I stand with many others in saying NO the the mine being reopened.
reinette	senum	95959	Nevada City	214 Drummond St.	I ca n't believe we have to fight for this. Our county supervisors should be all over this, pushing back and saying no. The fact that they are as silent as they are stinks to high hell. Same with The Union. They always side with big business, rarely on the side of our community. No good will come from this for our community, just the loss of water, good enviro, serenity, electricity, property values... and for what? Somebody else's gain.

2073

Attachment 24

Karen	Stone	95959	NEVADA CITY	P. O. Box 1758	I can hardly believe that I have to write this letter. What Stupidity to even be entertaining the possibility of opening this mine. What is the MATTER with PEOPLE? Can everyone not see that this is a TERRIBLE IDEA?? Mining is Over, we HAVE to go in another direction now, honoring our Earth instead of continuing to destroy it. I moved here 20 years ago for the beautiful peaceful nurturing environment, and will MOVE OUT if this travesty happens, as will many others I am sure. The pitiful amount of "jobs" that might be created are NOTHING compared to the devastation that will be created. STOP THIS THING PLEASE!!! It is RIDICULOUS AND INSANE!! Thank you.
Sandra	Shackelford	95946	Penn Valley	11134 Pleasant Valley Road	I can not believe in this day and age "our" supervisors can even think this is good for Nevada County or it's people. We DO NOT want the mine!
Erica	Randall	95959	Nevada City	18281 Goa Way	I can see very little that this mine will help and so much destruction that it will cause. Please don't allow the re-opening.
Brian	Swagerty	95945	Grass Valley	14296 Tahoe View Dr	I cannot believe that we are even considering opening the Idaho-Maryland Mine. After reading the draft environmental impact report, I am very concerned about pumping 1,000,000 gallons of water a day from the mine; the impact on our roads, both traffic and road deterioration; and the increased noise and dust from the mining operation. I am also concerned about the increased pressure on our overtaxed housing market. We are sacrificing this so that a Canadian corporation can make a profit?
Kody	Woerner	95959	Nevada City	633 Nevada St Ext	I cannot believe we still have to fight for there not to be a mine, get this polluting nightmare out
Maniko	Dadigan	95959	NEVADA CITY	16486 COOPER RD	I cannot stress enough how much Rise Gold's wish to open the Idaho-Maryland Mine IS A TERRIBLE PROPOSAL! Businesses, homeowners, and conservationists in Nevada County are joining together to protect our neighborhoods, our local economy, and our quality of life from the RAVAGES OF Rise Gold's extractive greed. I urge the Board of Supervisors to REJECT this destructive proposal and instead protect our community.
Din	Morris	93023	Ojai	509 Palomar Rd	I currently live and work in Southern California. Nevada County has been a rescue remedy for my nervous system and my sanity. I have found peace here over the past 8 years in the waters that flow clean and wild nourishing the land, animals, and people like myself who not just enjoy but cherish our natural resources.. I stand with businesses, homeowners, and conservationists in Nevada County who are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
John	Girton	95945	Grass Valley	11100 Nugget Lane	I depllore the falseness and inaccuracies the the environmental impact report for the mine re-opening. I'm now totally against this project.
Shelley	Salvatore	95959	Nevada City	10424 Sun Shadow Circle	I do not believe that our community will not be sorely devastated bu opening up a mine! What are you thinking?
Alizah	CROWE	95949	Grass valley	18501 fay ridge court	I do not approve of this mine re opening.
Donna	Hampton	95670	Rancho Cordova	2900 Calle Del Sol Way	I do not believe making money should be put above the disruption of the town and residents. The mining could go on for generations! I say no to the mining.
Patricia	Grijalva	95945	Grass Valley	12915 Lost Lake rd	I do not support reopening the mine. It is surrounded by homes and the noise and water pumping and discharge down Wolf Creek would be too destructive to our community. I drive on Brunswick rd daily and I shudder to think of the number of trucks that will be traveling on the road daily. This mine will significantly affect our quality of life. Please do not allow this to happen
Maureen	Cuthbert	95713	Chicago Park	Po box 549	I do not support the Idaho-Maryland Mine. It will have negative impact on surrounding communities due to toxic waste, aid pollution, taxing power grid, and most significantly, water demand in an already stretched water availability situation and severe drought conditions. I can't with this magnitude of negative impact that this is even being considered. Added to that, Rise Gold is a Canadian based company with a bad track record and profits if any will go to Canada not Nevada County.
Corrine	Parker	95946-8928	Penn Valley	10485 Broken Oak Ct	I do not support the proposed mine for multiple mostly environmental reasons. Also I've lived around gold mines before, they extract the wealth, provide some decent but mostly highly dangerous jobs and when the gold is gone so are they and the gold. The money doesn't stay here, it's not like the old days. All that gold is going far far away
Sean	Baker	95945	Grass Valley	20033 Casa Loma Dr	I do not support the reopening of this mine. It will be an ecological disaster for generations to come.

2074

Attachment 24

Alyssa	Keys	95945	Grass Valley	442 Pine St	I do not support this mine in any way. We need to keep tourism alive and our waters clean!
Shianne	Frank	95946	Penn Valley	13295 Sugarbush Court	I do NOT support this mine. We have recreation, tourism, agriculture, and biomass, alternative housing to focus on. These are more in line with our sustainability and resilience values. On inclusion and representation of our community, please listen to your constituents - we do NOT want this mining operation in our town.
Jessica	Gibson	95959	Nevada City	13923 Idaho Maryland	I do not want a mining company in my area destroying anymore water sources.We already have water issues here in our area . We as a family do not stand for polluted waters,protect waters for the future generations. I'm a very concerned mom!
Arthur	Broughton	95945	Grass Valley	16 Juan way	I do not want the Mine.
Kimberly	Scott	95949	Grass Valley	17098 Jody Ct.	I do not want this imine anywhere near where we live. This mine is a horrible idea. Mines inevitably cause air and water pollution. We have enough issues with Roundup in our groundwater. Humans do not need to ingest need more poison.
John	Mincks	95945	Grass Valley	12894 Greenhorn Road	I Do Not want this Mine Open.
Linda	Gehlen	95959	Nevada City	11199 MANHATTAN MINE LN	I do not want this mine to open in our community. This would be a disaster.
Liz	K	95945	Grass Valley	10161 Owl Road	I do NOT want this mine. There has already been so much UNREPAIRED damage from the last mine. Abandoned mine shafts all over the county which cause sink holes. I know. My mother had one in her backyard in Nevada City decades ago, when I was a child. Why would we as a community welcome another irresponsible mining entity destroy more of our beautiful forest? This mine would increase traffic, potentially pollute our water or stop it completely and definitely pollute our air with their diesel trucks. Additionally, there are very little reparations offered for future damages the mining would cause for all houses in the vicinity. Nay, all people in our town. Please do not allow the mine to open. Please don't put profits over people. This is a bad idea.
Sarah	Boan	95945	Grass Valley	13905 clover leaf ct	I do not want to risk my health, the health of those I love, and that of my future children. The fact this mine is possibly reopening during our climate crisis and world's current dire state is beyond comprehensible. We must put an end to the mine!
Misty	Nickel	95959	Nevada City	11209 Woodwardia Pl	I don't know why go back to mine again? Not worth the price. Stop the mine
Cora	Conner	95714	Dutch flat	32536 Ridge Rd	I don't want my community to be endangered, the waters to be contaminated, and soils sick. You can't eat gold, you can't drink oil or leachate. Imagine having to clean up all the destruction of the mine, imagine what you sacrifice, imagine how you can't even know the effects and future headlines
Mary	Brooding	95949	Grass Valley	15447 Kingsbury cir	I don't want Nevada County air quality, water ways, quality of life to be messed with. I moved up here to get away and have a better quality of life. If you lived here you would not want any of this in your backyard. Go some where else and destroy someone else's property not Nevada County!!!
VeeAnne	Marquis	95945	Grass Valley	11179 Weatherly Place	I don't want the mine to reopen due to it's proximity to my home. The water will be polluted and the noise and traffic will be a great nuisance.
Mary	Sivila	95949	Grass Valley	19075 Tiger Tail Rd	I don't want to increase noise, traffic, or dirty the air quality in Nevada County. I also fear contamination of my well water. I am not a NID client and don't want to be forced in to becoming one either. No Rise Gold Mine in Nevada County!
Stacy	Lewis	95826	Sacramento	8732 Brigham Way	I don't want to return to my hometown from Sacramento to find it congested with bad air and traffic. As well as bad well water. Do not allow this mining company to ruin our lovely town.
Karen	McLaughlin	95959	Nevada City	11256 Ridge Road	I don't know how anyone can look at this reopening as anything but a concern. The negative impact outweighs the benefits to a small company stealing the quality of life from an established community. It's hard to believe in our state of California that this project would even be considered-please vote NO on re-opening this mine!!
Bill	Michel	95945	Grass Valley	115 Independence Ct.	I don't know of a better example of a "no brainer".

2075

Attachment 24

Johnny	Pomatto	10003	New York	1 Irving Pl Apt. VPHB	I don't like to visit my hometown to see it gone to hell by mining resources with questionable benefits. I'm considering moving back to town, and things like this give me significant hesitancy to do so.
Linda	Siska	95945	Grass Valley	214 N School St	I don't see any potential benefit to the mine and a ton of potential harm -- to our water supply, our air, our environment, and to our quality of life. If this mine is allowed to open, I foresee professional miners being brought in from Canada or elsewhere to do the mining (all in need of housing), plunging property values in the noisy, dusty, congested vicinity of the mine, a drop in tourism for the same reasons, and an environmental disaster that reduces the quality of life in our beautiful town for generations to come.
Jessica	Higgins	95949	Grass Valley	14722 S Ponderosa way	I dont' support reopeinign the mine for many reasons. The environmental impact is too great. We don't a power hungry business here, reversing our strides toward more green sustainable living, endangering our watershed with polluted water going into our creeks and streams. We also need to protect the private wells (of your constituents - the people you are supposed to advocate for). The mining company has a long history of unsavory, unethical business practices! Vote NO!!
Leslie	Parman	95945	Grass Valley	300 A Glenbrook Drive	I don't think it's a good idea to let Rise Gold reopen the mine for many reasons! Their past history is a big red flag as to what could happen here in our town as well. Air, water, ground & sound pollution, the possibility of people's wells drying up, strain on our local supplies. I don't think it's worth all of the risks to our town and townspeople's health & safety!
Barbara	Perkins	95945	Grass Valley	210 Northridge Dr.	I don't think it's wise to allow a mine operation in this area that will further pollute air, cause noise, as well as constant traffic of large trucks and machinery.
Mary	Menconi	95945	Grass Valley	10131 Alta Vista Dr	I don't think that the few jobs created by the mine are worth the impacts to water, air quality, traffic, and overall quality of life. I don't trust Rise Gold, based on their history elsewhere
Carol	Rouhani	95959	Nevada City	16870 Oak Hollow Cir	I feel strongly that now, more than ever, it is crucial to protect the water supply of Nevada County. The proposed mine reopening is a disaster in the making.
Yvonne	Navarro	95959	Nevada City	529 Jordan St	I feel that the proposed Mine will greatly affect the ecosystem in and around the proposed area and pollute the creeks.
Michael	Schmidt	95959	Nevada City	307 Gracie Rd.	I feel the Rise Gold proposal is a horrible idea. The damage it would do to the environment and to the ambience of our communities far outweighs any possible benefit.
Shera	Banbury	95945	Grass Valley	199 Highlands Ct	I find it quite incredible that this is even being considered an option. There is no economic victory when such actions lead to environmental risk and potential disasters.
Tim	Proffitt	95945	Grass Valley	141 Independence Ct	I for one cannot understand how such a company can be allowed to operate here. This year is going to be one of the worst droughts in many years. This operation from my calculations will be using over a million gallons a day if operated 24 hours a day. This will be an undeniable and huge mistake to allow them to operate the mine. Please do not permit them to destroy our wonderful way of life here in Nevada County.

2076

Attachment 24

Alex	Ezzell	95959	Nevada City	16913 Old Downieville Hwy	I grew up in Nevada County and left to go to college. After several years of adventures around the world, I chose to return home, because we live in a wonderful community. This is where I have decided to raise my family. It is difficult to comprehend how the proposal to reopen this mine could be taken seriously given what we already know, in our community about the impact of such an operation. Not long ago a similarly small company reopened a mine on the San Juan Ridge. The impacts of that were extensive, including the dewatering of numerous wells - including that of a local public school. The impacts are still being felt in that community. The threat to wells and the location of an industrial operation bumping up against downtown Grass Valley is simply not worth the small number of jobs this would create. I concur that the history of Nevada County as a friendly environment to businesses could be far better. The ball was dropped when Mountain People's Warehouse was not encouraged to stay here. The fact that The Grass Valley Group was also not worked with by local government was a huge loss. These employed hundreds and hundreds of people in a growing business, and a growing field. But let's be selective about the businesses we attract to our community. Let's invest in businesses that will be sustainable and not negatively impact not just our way of life but the very economy that we are seeking to build. Already folks are selling homes near the mine location, hoping to avoid the inevitable depreciation of real estate in that area if the mine were to open. The final part of this plan that I am dismayed by is the plan to dewater the mine and send that water down the S Fork of Wolf Creek. While there are plans to make that water safe, there is no doubt that at some point there will be a spill or a failure in the system. And that water will go down the creek, and through the entrance to a public k-8 school in our community. Are we really going to dewater an old mine and send that water through a school campus attended by hundreds and hundreds of our children, not to mention sending it though a portion of the town of Grass Valley, including two parks and a pedestrian walking trail? I ask you to think about the long term ramifications to our community and vote against the reopening of the Idaho Maryland Mine.
Ryannah	Tannarome	95949	Grass Valley	15500 Nancy Way	I grew up in Placer County and recently moved here to Grass Valley. I am very concerned about the proposed mine. The possible benefits for our county and the people who live here seem to be far smaller than the probable negatives. I have read the information provided by different sources and it appears that the profits from this company will not go back to our county but instead will go to a Canadian company and PG&E. The environmental impact will have to be mitigated by our community. How is this beneficial to our county? I have not seen a clear breakdown of how this project has any monetary benefit, but instead could saddle us with environmental degradation, noise, dust, ruined wells, lowered property values and water waste. Please reconsider allowing the mine to move forward especially when there is no clear local benefit and the company that would benefit is not even based in the United States.
Asba	Whipple	95945	Grass valley	12778 lost lake rd	I grew up on lost lake road, born in the very house currently under threat from this mine. The well that has provided for our family for 45 years will be contaminated. Our lives will be uprooted, our life savings will be decimated and we will be forced to move and our property value will have plummeted. You are elected by the citizens, now please do your job and protect the people who have put their faith in you. selling out our town's natural resources, trading in its rustic beauty and charm for quick profits...It is short sighted, exploitative, unethical. Do right by the community. The mine benefits no one but the company set to make a killing. And it comes at a cost to everyone in the community. You know this. You know mines are horribly detrimental to the environment. To the community. To the tourism. Please please please think about it as if your house was just down the road. How would you vote if it was your back yard? Your well? Your property values? Your neighborhood casually being discussed on the brink of ruin?

2077

Attachment 24

Lisa	Brown	95945	Grass Valley	13831 ChristopherRobin way	I have a family to protect!!!! We are the 5 th generation to live in the home our family built. Grass Valley was chosen for it's quietness and beauty. DONT RUIN IT!!!!!!
Brad	Peceimer	95949	Grass Valley	16730 Brewer Rd	I have a serious concern with the reopening of this mine, but mainly with the company that is proposing for this to happen. they in the past have not shown due diligence to following guidelines, rules, as well as a number of other issues and have had walked away from other projects leaving the stakeholders, in this case Nevada County, holding the financial bag for remediating environmental issues that they should have handled. I am a person that believes that past performance will dictate future actions, in this company has not handled their past required duties in a manner that I would approve of. I think after a reasonable evaluation of this project that the cons are much greater than the positives for Nevada County
Robert	Wheatley	38571	Crossville	1512 Bowman Loop	I have an interest in a property on Salcido Lane, Grass Valley CA. To protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. I, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community. I am especially concerned at the prospect of depletion/contamination of ground water as the property water supply is by means of a well which currently provides water for domestic use and if the need should arise, fire suppression.
Shelby	Richardson	95959	Nevada City	340 Long Street	I have been a Nevada county local for over 20 years now. I know first hand the damag this proposal would bring to our town in a multitude of ways. I urge you to protect our precious community and reject this dangerous proposal.
Sabrina	Szymanski	95959	Nevada city	20058 rector road	I have been lucky to call Nevada county home for almost 20 years. As someone who prizes and loves the place they call home, I vehemently urge you to reject this proposal.
Luci	Estep	63130	St. Louis	7915 Blackberry Ave	I have family in the area and grew up staying the summers here. Please don't ruin it with this mine. Its not worth it. We need to change the way we do things now. Not in 80 years. Thanks.
John	Glinka	95918	Browns Valley	9621 Sicard Flat Rd	I have family that live closet this mine. The questions of wells,property values, noise and quality of life have not been addressed
Matthew	Kramer	95662	Orangevale	9206 Madison Green Ln Apt 36	I have lived and worked in Nevada County and regularly hike and enjoy the beautiful land up there. Please keep this place beautiful and wild. Don't destroy our backyard and the homes of wildlife, trees, and water. We have so few places that are truly beautiful in this world. Don't let us lose this one.
Cheryl	Martin	95949	Grass valley ca	10322 Kenwood Dr	I have lived and worked in the community for over 20 years. The added pollution and traffic would cause me to start looking for work and home elsewhere.
James	Lingenfelter	959458	Grass VAlley	373 Glenwood Pines Ct	I have lived here in this area for for 43 years, and this is the worst threat to the county I have seen. We can't let the reopening happen. It would be disastrous to our environment! And this is not hyperbole.
Wrynna	Kohler	95946	Penn Valley	11040 oak canyon dr	I have lived here my whole life and I now own a business in downtown grass valley. I am heavily invested in our community and believe that this mine will upset our economy. It will drive away home owners nearby the mine, drive away tourists and devistate our peaceful and eco-Conscious county.
Frank S	Cabral	95959	Nevada City	11781 Forest View Drive	I have lived in for over 60 years and see this project would be detrimental to the environment with no long term benefit, In spite of what RiseGrassValley claims and the 300 jobs they claim they are not investing in Nevada County they seem bent on destroying our land and community for their profits. I have lived in for over 60 years and see this project would be detrimental to the environment with no long term benefit, In spite of what RiseGrassValley claims
Rebecca	Jurado	95945	Grass Valley	14921 Chattering Pines Rd	I have lived in Grass Valley for half my life. The thought of the town I have loved so much to be consumed and disrupted by the proposal to open the Idaho Maryland mine is disheartening. 2078

Attachment 24

Margaret	Florence	95945	Grass Valley (Chicago Park)	15470 Mt Olive Rd	I have lived in my home for 35 years. This year my neighborhood suffered through the River Fire, some did not survive it. With all that people are dealing with from the environment now, we do not need to suffer more from a destructive enterprise such as Rise Gold opening the mine in our neighborhood. As you are elected to represent us, the only correct way to vote is against this unconscionable proposal. I urge you to not allow the outside interest to cause destructive measures in our community. This is our home. The reopening of this mine will cause so much unnecessary damage to our community, it is unfathomable that you could entertain a single thought to allow Rise Gold access to this land. Your job is to represent the people of this community and stop this horrendous proposal by Rise Gold.
Jennifer	Johns	95945	Grass Valley	14296 Tim Burr Lane	I have lived in my neighborhood for 11 years and we just bought the house. It's a nice quiet neighborhood. I would like to keep it that way
Trinity	Rodriguez	95945	Grass Valley	120 Berryman Street	i have lived in this town 19 years my whole life i don't want a mine
Riki	Colby	95945	Grass Valley	139 Glenwood Ave	I have lived through this with Siskon Gold Corp. We do not need a operating gold mine owned by a out of country company. They have a bad track record from Canadian operation. Why would you consider letting them ruin or lovely town and community's. I say NO to Rise Gold Mine Remember Siskon Gold Corp. claimed all the same prosperity to our community, lies all lies. My well was ruined as well as the new well Siskon drilled to replace it with.
Patricia	Gregory	95306	Carnichael	4900 Puma Way	I have owned a cabin in CASCADE SHORES for 35 years and I am adamantly against this project. Have you researched this RISE company? Are you aware that they share an office with 3-4 other penny stock mines in Vancouver, British Columbia. Are you aware of the problems with paper mining companies on the Canadian Stock Exchange. The President of Rise Company is board member of the other penny stock mining companies in his Vancouver Office. WE ARE ASKING FOR A DISASTER IF YOU APPROVE THE REOPENING OF THE IDAHO-MARYLAND MINE.
Thomas	Potter	95959	NEVADA CITY	12331 WILLOW CREEK LN	I have read though the EIR, specifically the water-related items. I am highly concerned that the pumping of water will significantly damage underground water supplies and the mitigation suggestions (?) in the EIR will fail our community.
Jill	Shoemaker	95945	grass Valley	13506 Barker Lane	I have reviewed the EIR and I am deeply concerned about impact to our environment, private wells, property values and quality of life. What will you do to address these impacts if you approve the mine? Our community is already vulnerable with the drought, wildfire risk and now the latest storm. We have our second state of emergency in 6 months. I don't understand why this is even being considered, especially when Rise Gold has a poor record, and not even a viable business plan. Thank you for protecting our water, air and quality of life!

2079

Attachment 24

Charles and Mary	Brock	95959	Nevada City	PO Box 269	I have spent upwards of20 hours reviewing the Draft EIR. What jumps out at me are the "Significant and Unavoidable Impacts" noted on pages 1006 - 1009. The assumption of Rise Gold and the EIR process seems to be that because these impacts cannot be avoided we should just accept them and go forward with the reopening of the mine. This viewpoint begs the question of why even conduct the EIR? At numerous other places in the DEIR (pages 577, 541, 542, 544, & 1016 to note a few) language refers to the need for further needed study after the project is approved. Quoting from the footnote at the bottom of page 1016 - "Thus it is conservatively concluded that the proposed project could result in significant impact related to substantially altering the drainage pattern of the site or area, increasing the rate or amount of surface runoff." While I have not read the whole DEIR I have read numerous references to impacts which Rise Gold makes light of numerous risks. I was heartened to read that when petroleum spills occur at the Brunswick site Rise will immediately have their subcontractor remediate the spill with "sawdust and kitty litter". Rise Gold recently sent a letter to local Realtors assure us that the mine is good to go with minimal risk to our community. What I wonder is fi they have any idea of what they are doing. The Draf EIR raises many unanswerable questions, which they seem to cavalierly brush aside as if their is not risk. If this attitude prevails and the mine is approved our community will be damned and doomed. As a Realtor in Nevada County since 1980, I can guarantee you that values will not only decline, but the desirability of our rural community will be denigrated to a level that will decimate demand for real estate in Western Nevada County. People will not want to move here. I vane already had clients not purchase here once having learned of the possibility of a mine opening. I could go on, but you get the picture. I strongly urge you to NOT APPROVE the reopening of the Idaho Maryland Mine. Thank you for your service and hard work to make Nevada County a better place to live, I beg you do not blow all your previous good work by approving this community destroying project. Sincerely, Realtor Emeritus, Founding Director of Nevada County United Way, Past President of Nevada County Board of Realtors
Robin	Stoenner	95945	Grass Valley	15308 Green Way Place	I have taught county history for 25 years in Nevada County to my 3rd graders and one thing shone through, the destruction of the ecosystems of our home area. This is not a modern or well thought out plan for sustainability for our county. Please vote no on reopening this mine. We need to do better for our children. I have lived in Nevada County for 40 years and taught here for 25 years. In my curriculum, I taught the history of the Gold Rush and the environmental effects of the gold digging and refining process. I am surprised that our community is even thinking of opening mining again. Please take into consideration the detrimental effects that will be loosed upon our community and waterways and vote no on reopening the mine.
Sterling	Bailey	95945	Grass Valley	14167 Loma Rica Drive	I have worked with the US Dept. of Energy on waste disposal and leakage impacting water quality. Based on this I believe the mine project would create a major problem for Nevada County residents that far out weighs the questionable benefits. Please do not allow this unqualified firm to proceed.

2080

Attachment 24

Deva	Hauber	95959	Nevada City	11951 Banner Lava Cap Road	I hope that you take seriously the outpouring from the community against the mine. Looking at the actions of the mining community in general and this company specifically I have a hard time believing any promises of benefits to our community. They are looking to strip the land and make as much money as they can as quickly as they can without long-term thought or investment in this place and these people. As you can see in the wreckage of previous mines throughout the county very little is done to clean up in the end. We need to be bringing in companies and people who are enriching and strengthening our community rather than simply taking from it. Thank you. I know looking at the mine that it's easy to see the promise of short-term benefits, but when I look at the long-term harm done to the community there's no question for me that the mine will be detrimental. One of the greatest draws for people to this area are be beauty and access to nature. If we start chipping away at that in the hope of short-term gain We will deteriorate the foundation that we live on. Please listen to our concern about the negative impact of reopening the Idaho-Maryland Mine. They do not come from this community nor do they have the communities well being in mind. They are here to extract what they can and then leave behind an economic and environmental path of destruction. By granting them access you will be opening the door for them and changing the landscape and serenity of that part of our area. There are many more long term economic benefits for our region in tourism and local economy then in giving our resources away.
diana	gardener	95959	nevada city	13670 mckitrick ranch rd	I hope you say no to the mine. Not only would it cause water, air, and noise pollution, but mining would create green house gasses and use precious electricity. Protect and think about the community, not the profits of corporations.
Pamela	Osgood	94110	SF	580 Capp St., apt 815	I lived many years in GV , and continue to visit often. I am very concerned about the distruction opening the Idaho Maryland Mine will create. Please reject this proposal.
Blake	Larsen	95959	Nevada City	10293 Harmony Ridge Rd.	I implore you to oppose and STOP the re-opening of Idaho-Maryland Mine. Please terminate Rise Gold projects with haste. This gold mine project has zero benefit to the citizens of Nevada County, and will only taint our water, environment, quality of life, and far more. The excavation, noise, traffic, and the 1500 TONS of rock which will be transported DAILY will decrease and hugely hurt our property values. Zero benefit will come to those of us living near this project. Please Nevada County Board of Supervisors, have some wise vision, and invite beautiful attractions to our county instead of ugly tragedy. This mine must be stopped.

2081

Attachment 24

Aimee	Had	95959	Nevada City	10293 Harmony Ridge Rd.	I implore you to oppose and STOP the re-opening of Idaho-Maryland Mine. Please terminate Rise Gold projects with haste. This gold mine project has zero benefit to the citizens of Nevada County, and will taint our water and environment. The excavation, noise, traffic, and the 1500 TONS of rock which will be transported DAILY will decrease and hugely hurt our property values. Zero benefit will come to those of us living near this project. Please Nevada County Board of Supervisors, have some vision, and invite beautiful attractions to our county, instead of ugly tragedy. This mine must be stopped. I strongly oppose and object to the Rise Gold proposal of re-opening Idaho-Maryland Mine. We CANNOT further diminish our resources; too much stress burdens this community with our current struggles already . This mine will render a huge portion of this county diminished and uninhabitable. This mine risks private property wells running dry. Peters Well (Grass Valley), has stated that hydrology studies of this area are near impossible, and therefore Developer-Mines-and destructors are not held accountable in court when and if problems arise. When it comes to water, nothing is easily proven by law. Property values will be tragically diminished, air quality will become dirty. Traffic, noise, and power-grid consumption will make living in this area sad. Aquifers underground could become tainted and sucked dry. The destruction to clean water, rivers, air, traffic, and regular peace which this mine will cause, does NOT justify the piddly-minor employment it may, or may not, bring. This mine must be terminated. Thank you so very much for caring about our Nevada County.
Margaret	Joehnck	95602-8124	AUBURN	12501 WANDERER RD	I join with many others in the community asking you to not allow the reopening of the Idaho-Maryland mine. The potential negative effects on the environment, local wells and streams, is not worth any gain of possible jobs that might come from it. Please vote no.
Janine	Rickard	95959	Nevada City	12576 Robinson Road	I just don't see how this will enhance our community, other than provide a few jobs...if it were in my backyard I would be outraged and the noise and fumes and worried about water. Nevada County is unique in the quality of life it offers, and heavy industry, of any kind , would greatly reduce it. We must find better ways to develop and there are so many opportunities ahead as supply chains change. Come on this is a crazy use of precious water.
David	Wills	95945	Grass Valley	13550 Lower Anchor lane	I just received a flier in the mail from rise gold corp. asking me to sign a postcard giving my support to the re-opening of the Idaho Maryland mine. I want to post my strong opposition to the opening of this mine. How can you possibly think this would be good for Nevada County? Just pumping the water out of the mine is a catastrophe for our aquafer in the county, let alone all the other things that come with the mine such as truck traffic, mine waste, etc. Please do not let this project go thru. It will affect this county for long after you supervisors are gone.

2082

Attachment 24

Martha	Naythons	95949	Grass Valley	15450 S Ponderosa Way	I know that the Rise Gold people say that they will mitigate any evironmental mishaps, but their history does not support that. They have yet to even start to clean up the mess that they made on the mine they had on Banks Island in BC. They simply don[t have the funds to do that. What makes you think that it will be any different here? Also, if they dewater the wells surrounding the mine (mind you the tunnels are expansive) there is no way to get water to those affected in a reasonable, timely manner. Besides that, where is NID getting the water? Who is paying for the infrastructure to pipe it? There are already parts of Empire Mine that are off limits to the public due to toxins in the mine tailings. What makes you think that this will be any different? They Say that they will truck them all away. How would you like those trucks going by your house at all hours. And, where will they take them? I'm not sure that there is an open market for mine waste!!
Laura	Solano	95945	Grass Valley	14065 Glenn Pines Rd	I live 1/2 Mile from the proposed mine. This mine will directly affect my water and property values. Please look at the record that rise gold has with the environment and don't let my home and my health be collateral damage for a money making scheme that will only benefit a few and leaves our community in environmental shambles.
Michael	Angelillo	95949	Grass Valley	13026 Hidden Valley Road	I live 2 miles from the former dump and if that site and the ensuing litigation is any indicator for what our future holds with this mine I am firmly against it. Additionally, I have relatives that have worked in the coal mines of West Virginia and Kentucky and my observation is the mine never helps the local community. The environment gets destroyed, congestion goes way up, we're left with the clean up and repair bill as the company either dissolves and then reorganizes to ruin another community, the profits are not shared, the jobs are not only dangerous, but they often don't pay well enough for the risks, and they generally lead to severe health problems and premature death.
ariana	zimmerman	95945	grass valley	18810 jones ridge road	I live 2 miles from the proposed mine. I moved here to be in an environmentally correct area, where we all love the quiet,peaceful, surroundings. I am also on a well and do not want that water involved. the mine did not work for canada and will not work here. our quality of life will definately be threatened and the only one who wins is this bankrupt owner who polluted and was fined in canada because of all his pollution and waste screwing up their land and environment. Please protecect our community from such folly.
Chris	Horwath	95959	Nevada City	16885 Banner Quaker Hill Rd	I live above a diggins. Even after 100 years the land has not healed. The tailings have filled Greenhorn Creek and marginalized habitat. Mercury and arsenic are in our river gravels. The Yuba Goldfields are an example of more destroyed habitiat. Our habitat. Malakoff diggings puked out wad of yellow sludge down the Yuba river recently. We haven't been able to repair the damage from the first rounds of gold mining, why would we embark down this same road again? NO MINE.
Judi	Walcom-Wade	95945	Grass Valley	13192 Colfax Highway	I live adjacent to the mine, thus I am opposed to the re-opening of the mind.
Grant	Rubino	95945	Grass Valley	12890 Greenhorn road	I live close to Brunswick Road off Greenhorn. I hear traffic as it is now from the intersection. The proposed truck traffic was said to be as loud as peak traffic is now but 24-7. #1 I did not move here to listen to that kind of noise 24-7 #2 Who will compensate myself and others for home values depreciating? #3 I have a well for irrigation. Who will compensate me if my well goes dry after the mine is dewatered? I do not think this is a good idea for this area of NOW residential homes that primarily were built to be out of the city and industrial areas of the county. Please help us fight for NOT reopening the MINE.
Erica	Langley	95945	Grass Valley	10721 Pine Hill Drive	I live far too close to this.
patricia	Hays	95945	CA - Grass Valley	14006 LIQUIDAMBAR LN	I live here with my parents and my 2-year-old daughter. My parents are seniors and cannot afford to pay for water if they lose their well. I don't want to find out later in life that my 2-year-old has been poisoned by aluminum, etc. Please reconsider this mine as the person that is the CEO is not to be trusted.

2083

Attachment 24

Eli	Ferrier	95924	cedar ridge	po box 1498	I live in a neighborhood very near the mine site. I am about 2-3 miles away and in the wolf creek drainage. Our well is a shallow well (80ft deep) and my concerns about the impact of the proposed mine have not been assuaged by reading the EIR from Rise Gold company. The low number of wells that is stated would be effected by the massive hydrologic changes to the area would not include my home or my neighbors. Yet, following the basics of hydrology, It seems likely that my well would very likely be dewatered by a lowering of the water table due to the pumping proposed mine site. I firmly believe that the mine is a foolish and short sighted venture that will lower property values and be the final straw for a born and raised local like myself to finally give up on this place and move away. The impacts of noise and truck traffic in our rural neighborhood seem inescapable and these impacts, when coupled with the high stress of fire season, I may well leave and take my two businesses with me. Please stop this mine.
Mary	Smith	,95667	Placerville	8992 Quiet Canyon	I live in Placerville and support the protest against the mine.
Christine	Gilbert	95975	Rough and Ready	PO Box 292	I live in Rough and Ready and I keep getting mailers from Rise Gold. I guess they feel my opinion about re-opening the Idaho-Maryland Mine is important even tho I may not be directly affected by it. However, I do have friends living in that area that will be most affected if the mine opens. I adamantly oppose the reopening the Idaho-Maryland Mine. We need to protect our neighborhoods, our local economy, and our quality of life so I urge the Board of Supervisors to reject this destructive proposal and instead protect our community. Thank you!
David	Freeman	95959	nevada city	11582 wintermoon way	I live near the lookout & don't want to lose my water.
Sarah	Carr	95945	Grass valley	12560 los cedros lane	I live near the mine and the impacts that it can have on my family and home are not worth the risk. We won't be able to have clean water and it will directly impact many others when the ground water is contaminated and people cannot afford the $35,000 that NID has quoted us for the water to be put at our residence, that is not including the costs of permits from the county, an engineer and other contractors that will have to be involved. This is going to harm our quality of life in Nevada County.
Alicia	Frost	95945	Grass Valley	106 Leahy Road	I live within half a mile of the processing site. I am very concerned about the noise from the trucks, every ten minutes, seven days a week. I already hear the garbage trucks from the hill. I will hear those trucks. Every day. Until I die. If I want to sit outside and enjoy some sunshine, I will also have that punctuated by the passing of heavy trucks and vague rumbles and thuds. This amount of traffic also won't be good for town. And processing the ores requires lots of water to reduce dust. Why waste water??! On this??? Also I am concerned about long term water pollution or loss. And all for what? A foreign company's profits? And some jobs. Most will probably be filled by experts from out of town. So some jobs. And money? There are other ways to create long term sources of tax revenue. (And I must be honest, I'm not even sure what sort of tax a foreign company will pay) What attracts tourists to our county is not industry. We already have museums to satisfy their curiosity about the Gold Rush. I just really can't see why this is the right choice for our home, given the risks. Let's go with something else that has no chance of jeopardizing our water.
Susan	Glinka	95901-4951	Marysville	228 E 12th St	I lived and still work in Grass Valley the mine is a horrible idea!!!
Lucinda	Bernheimer	90049-3423	Los Angeles	11421 Cashmere Street	I lived in Grass Valley for 6 years between 2007-2013. During that time another agency fought to re-open the mine. The same arguments against it are relevant today - the deleterious effect on the environment, pollution of the air which is already a victim of the fires, the impact on traffic, the effect on property values.

2084

Attachment 24

JUDITH	DUDNEY	95946	PENN VALLEY	20055 ECHO BLUE DRIVE	I lived in Sonora,Tuolumne County in the 90's and an attempted mine was proposed in a rural area about 6 miles from downtown and adjacent communities including Jamestown. It would have affected Wells and Roads to mention a small portion of the Project and They will LIE to you to get what They want! It took about 2 yrs and many expensive EIR reports as well as huge Community involvement to Stop It.....and we Won!! IT IS A VERY BAD IDEA! I lived in Tuolumne County in 1985 and on...when a Mine was proposed in a very rural area about 7 miles from downtown Sonora and Jamestown. It was going to use a 2 lane country road for hauling materials. It is a lovely area of Tuolumne county called Algerine-Wards Ferry Rd. full of history. It would have impacted Groups,Land values,Future Homes in a devastating way. Also we were told lies! So after several years..enough of the surrounding Communities and beat it. Sometimes it might be a good idea to resurrect a Project..however it this case..That Was Then..This is Now!
Masha	Crawford	95945	Grass Valley	540 Ivy St	I love Nevada County. I vote in Nevada County. I love its beauty and its small towns, its beautiful creeks, its quiet roads. Industrialized mining jeopardizes everything we value most about this area. The promised imaginary mining jobs would be far out-weighed by the losses to real, existing jobs in hospitality, tourism, recreation, agriculture, and dropping property values. Please reject this deceptive and destructive proposal.
Megan	Perez-Carpenter	95945	Grass Valley	10461 Silver Way	I love the quality of life here and don't want it ruined by this mine project!
Levirt	Griffin	95746	Granite Bay	8314 Parus Way	I love visiting Nevada county so much we are considering purchasing a very expensive home that would increase property tax revenue. I am not alone. The thing that is giving me pause is the potential negative environmental and health impacts due to carcinogenic materials becoming airborne and or impact well water. 300 jobs is not worth this. Keep the natural environment pristine and attractive to long term residents and potential new residents.
Elizabeth	Barron	95945	Grass Valley	10880 Footwall Drive	I love where I live and I don't want it destroyed by a corrupt company.
Pamela	Vadakan	95945	grass valley	426 west main street	I moved to Nevada County for its peace and beauty. This mine would destroy this precious tranquility, by causing air, water and noise pollution and compromising our beautiful landscape. I stand with my neighbors, business owners and conservationists against this mine. I urge the Board of Supervisors to stand with its community and reject this proposal. This is not what the community wants!
Rich	Laws	95959	Nevada City	21025 Running Horse Road	I moved to this community 5 years ago given it's appreciation for nature. We can't allow this mine to reopen. The potential negative impacts are TOO great. Please don't let us down!
Valerie	Kack	95949	Grass Valley	10350 Smith rd	I object to this mine reopening as I have for years, read EIRs and seen what this company has done in the past. They are not local, don't understand the reasons the mines have closed here and as one who lives on Wolf Creek, I see oily, red algae pools as mines along the creek have flushed after rains. It is horrible and I vow to move from this county if the mine goes through. I have lived here 39 years. Keep them OUT of our county!
Jason	Bilicki	95946	Penn Valley	19077 Sanctuary Rd	I only have one question about the mine. There is gold under our county, clearly everyone has known this since 1849. If we are letting outsiders come in to mine it, what's our cut? What percent of the gold goes to the people of Nevada County? Those natural resources should belong to this county. Any company that extracts such wealth should have to relinquish a percentage of the gold to the County of Nevada, to be used for the common good. Negotiations should start at 25%, to be deposited in a trust. Has the county negotiated a percentage? I oppose any reopening of the mine that does not return a direct percentage of gold to the people of Nevada County
Clay	Olson	95945	Grass Valley	PO Box 3565	I oppoose opening the mind.
Rhonda	Harmon	95949	Grass Valley	17170 Oscar Drive	I oppose the mine because our environment and our health is more important that greed. You cannot put a price on a happy, healthy community!
Caroline	Sheller	95945	Grass Valley	11025 Gold Hill Drive	I oppose the mine opening due to the risk to my neighborhood, the city and the people who live here.
Teresa	Livengood	95949	Grass Valley	11512 Cane Lane	I oppose the mine opening.

2085

Attachment 24

DAVID	DE LA YSLA	95959	Nevada City	PO BOX 2512	I oppose the mine. Draining millions of gallons of water has to pull water from somewhere. The mine tailings will have to be put some where. Even if it is not here. Even if the company has good intentions accidents happen and the mine owners who have little or no interest in the community would probable just pack up and leave. Leave any gold where it is. Screwing up our homes is not worth letting some else try and get rich
Deborah	Curtis	95945	Grass Valley	196 Rockwood Drive #2	I oppose the mine. I think the DEIR underestimates the amount of water and other local resources that will be necessary to remediate the environmental impacts.
Rose	Gander	95946	PENN VALLEY	11208 Sierra Circle	I oppose the mine. Risks with no benefit.
Jessica	Reed Perak	95959	Nevada City	11213 Ridge Rd	I oppose the mine. The benefits do not outweigh the potential harm. It's not a risk worth taking. Please - we already have to worry about fire. Don't add this additional threat.
Joan	Modrich	95945	Grass valley	915 Morgan Ranch dr	I oppose the mines in Grass Valley
Peter	Stevenson	95959	Nevada City	12481 Palmer Road	I oppose the opening of Idaho-Maryland Mine as a detriment to the quality of community and the ecology of Nevada County and that any mitigation promised by Rise Gold will prove substantially lacking in both substance and execution. The Board of Supervisors could possibly be found criminally negligent should they proceed over the objections of all the well established issues presented to them regarding its management and operations.
Zachary	Witte	95945	GRASS VALLEY	10511 Hanging Wall Dr	I oppose the proposal to re-open the Idaho-Maryland Mine. Nevada County does not need to export our natural resources - we need to preserve them. We love this area because of its natural beauty. Let's keep it that way and let's keep that mine out.
Risa	Roseman	95945	Grass Valley	245 N Auburn St	I oppose the proposed re opening of Idaho Maryland mine by Rise Gold. The mine would drain our underground water supply, homeowners wells. The noise and traffic will change the tranquility of our towns. It will hurt our local economy, with noise, pollution Turing away tourist dollars. Who will want to buy homes? Our property values will fall. Less tax dollars for the county. I do not support the mine. I urge the Board of Supervisors to reject this proposal.
Patti	Miller	97266	Portland	8940 se rural	I oppose the reopening of the Idaho-Maryland mine. Though I am living in the neighboring state, this still concerns me. This project is not going to receive the kind of attention you were hoping for. It's time to learn from our mistakes and move forward instead of defaulting to our old, destructive, checked out way of living. Don't look the other way on this.
C ELISE	THOMPSON	95959	Nevada City	12345 Kilham Mine Rd	I OPPOSE THIS DISASTROUS MINE FOR THE FOLLOWING REASONS! - QUALITY OF LIFE DISTURBED BY DRAINED WELLS, DANGEROUS POLLUTION OF WATER, NOISE, OUR AIR AND OUR LANDS. LOCAL ECONOMY WILL SUFFER FROM "NOT IN MY BACK YARD" PERSPECTIVE. BUSINESSES WILL LEAVE FROM NEGATIVE IMPACTS THE MINE INEVITABLY WILL ACCOMPLISH. I AND MY FAMILY SAY "NO MINE" I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Richard	Mintzlaff	95945	GRASS VALLEY	14582 Silver Pick Court	I oppose this mine and it's outrageous that the re-opening of the Idaho-Maryland Mine is even being considered. Our Grass Valley residents will experience an environmental disaster from this mine! Also, I just read that there won't be any environmental oversight. this mine will destroy Grass Valley. It will drain the aquifer and some of our neighbors wells will dry up, it will destroy Brunswick Road and Whispering Pines Ln with the heavy trucks hauling rocks from the mine. I've read that home prices will decline within a 10 mile radius. This must stop. Let's hope the supervisors haven't been paid off!

2086

Attachment 24

Maya	Pachman	95959	Nevada city	220 Nevada St	I oppose this mine in every way.
Jennifer	Brumbeloe	95949	Grass valley	16639 Tierra road	I oppose this mine wholeheartedly. It is incredible that this operation is even being considered while our community continues to deal with the toxic legacy of historical mining. Nevada county has one of the highest rates of breast cancer IN THE NATION due to heavy metal pollution resulting from mining activities. If this mine operation is allowed to move forward, I fear for our county and our community. How are we supposed to protect our children and future generations from mining waste?
Abbie	Whitehead	95945	Grass Valley	349 Pleasant Street	I own a business on Idaho Maryland Road. The number of trucks per day is unacceptable. The noise from all the grading will be horrible. It will be directly behind my property. No Way!!
Debra	Christenson	95030	Los Gatos	20 E Main St	I own a home on Banner and am worried about the environmental effects that may make my retirement home unlivable.
Gary	Van Meter	93013	Carpinteria	1271 Franciscan Court, Unit 1	I own a house in Alta Sierra and am very concerned about the possibility of re-opening the mine! Please stop it!
Jessica	Bottomley	95945	Grass Valley	13700 Sojourners Lane	I own property and am raising my two boys, age 7 and 11, just down the road from the proposed site of the Idaho-Maryland Mine. We live off of Hwy 174 and are extremely concerned about the myriad of impacts this mine will have on our water, our daily commute to town, our property value, and our overall quality of life. The potential and known problems far outweigh the negligible projected benefits to a very small segment of our community. I strongly urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
isaac	rappaport	95945	Grass Valley	13700 Sojourners Lane	I own property and am raising my two kids just down the road from the proposed site of the Idaho-Maryland Mine. We are extremely concerned about the myriad of impacts this mine will have on our water, our daily commute to town, our property value, and our overall quality of life. I strongly urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
susan	smith	95949	Grass valley	15149 Sunny hill	I personally cannot believe you have even given serious consideration to this; the wholesale destruction of the quality of life here. The damage by a mine is immense. You must know that.
Steven	Turner	95959	Nevada City	12602 Madrone Forest Drive	I personally witnessed a similar mine opening in another state with promised jobs. It created less than 20 continuous jobs that were barely above minimum wage with automated equipment and drained wells in the surrounding area. Don't do it -- there is no economical way to open a gold mine and do it without negatively impacting the community.
Alex	Coffman	95959	Nevada City	203 S Pine St Apt 110	I rented a property on Cooper Rd. The first year I moved in, the well went down to a trickle. This while only two people lived on the property with a very small vegetable garden. We can afford the water use the mine will take. Not too mention how it could very possibly poison our wells! If my district supervisor votes in favor of this I'll make sure to vote against you next election. DON'T RUIN OUR TOWN!

2087

Attachment 24

Todd	Burton	95949	Grass Valley	17700 Dog Bar Rd.	I respect that we need good jobs in this county, but we need those jobs to be from companies with a good tract record and who will act in good faith. This foreign company does not have a good tract record. They are only promising 300 good paying local jobs. That's not good enough for what it is that rise gold is getting in return and using Wolf Creek as a waste drain which is already an impaired water body that may effect my well. It would have to be a hell of a lot more jobs to make it worthwhile.
Edward	Keegan	95946	Penn Valley	17756 Chaparral Drive	I retired to the Nevada County with my family, and am frankly scared to death that you could possibly consider the Mine to be an approvable enterprise in our county. A Gold mine is a relic of the past of greedy owners wreaking environmental havoc on the earth, and taking their money and leaving. I urge you to reject this proposal. A Yes vote on this mine will never be forgotten. The biggest danger to our community are the untrustworthy people behind the mine ,making promises regarding the mine, without the financial ability to keep these promises for the 80 year timeframe they are requesting a permit for. The promises of mitigation and abatement dissolve when they walk away without hard cash guarantees. See Canada experience, and anticipate worse. This is a crazy idea that jeopardizes the primary income source for all of Nevada County, to generate money for people from another country!
Shirley	Fenile	95945	Grass Valley CA	543 Scadden Dr.	I say no way to Rise Gold! These CEOs of Rise Gold have already polluted their own country and violated their environmental standards. Asking the same men to self regulate here is naive and dangerous. After our area is polluted it will be too late to turn back Mother Nature. If the housing mkt plummets as a result of their incompetence, the tax assesors will need to reassess & devalue property taxes. I see only an advantage to trained workers they bring in and nothing for the storage, rental mkt and water usage here. These areas are already overburdened. Please vote against the supposed gold flow that Rise Gold will abstract before we see the negatives that they will cause.
Nina	Cunningham	95959	Nevada City	11566 Valencia Rd	I see no benefit coming to the County from the opening of the mine. From the DEIR I see that water availability for the mine project is based on past years, not on current extreme drought conditions. Rise Gold has grossly underestimated the impact water use and water removal will have on the water table and adjacent homes, while offering a paltry mitigation time period within the 80 years of their lease. The noise and vibration from trucks and blasting, diesel and heavy metal mine dust pollution are all dangerous to our health and businesses. Dumping massive amounts of water into Wolf Creek will stir up past mining toxins in the stream channel and destroy habitat. We already live in a cancer hot spot. We have already experienced the toxic effect of the past mining era. New safety technologies can not mitigate all this. And why does anyone trust Ben Mossman of Rise Gold? His Banks Island Gold, polluted tribal waters, went bankrupt and left a mess for Canadians to clean up. He and others involved have 18 pollution charges that are going to trail in April. Ben Mossman has never successfully opened a mine. My business is located in the town of Grass Valley. I already am negatively impacted from the noise, vibration and bad air along the 49/South Empire corridors. I DO NOT WANT an industrial gold mine at my front door and I don't know a single person, no matter their political persuasion who thinks this mine is a good idea. For God's sake please find another source of tax dollars that will actually benefit the community. Rise hold has failed to clean up their mine waste in the past. Why do you think that will act differently now. I am so angry that the board of supervisors would even entertain such a destructive business in our town. Do you not read the public record of what they've done? You are being scammed and you are hurting people and our environment if you allow rise gold to operate here. There are many better alternatives if you are looking for tax dollars

2088

Attachment 24

Teresa	Poston	95945	GRASS VALLEY	415 NEAL ST	I speak for my entire family in our opposition to the reopening of the Idaho Maryland mine. After the mines shut down in the previous century, our community embraced a different path to prosperity capitalizing on our natural environment, tourism, arts, and clean industry. We urge you to reject this distructive proposal and keep the mining legacy where it belongs....part of our history!
Marilyn	Crenshaw	95063	Santa Cruz	PO Box 4204	I spend a few months every summer in Nevada City for mountain and lake recreation. Nevada County is very special, particularly because of the pristine natural beauty of the environment.
John	DeMarco	95935	Dobbins	14298 Hart Ln	I stand in solidarity with the people of Nevada County who are opposed to the re-opening of the mine. My position is based on environmental concerns as well as the right of those living near the mine to exist peacefully.
Ashley	Khammar	95977	Big Oak Valley	10151 wild turkey Lane	I strongly disagree with reopening the Idaho Maryland Mine. I have children who will have to live with the long-term consequences of such pollutants to our natural environment. I feel that the repercussions of such a mine are not being considered and it is painful to see corporate and financial interests in the short term deemed more important than the quality of life and health of our community. I urge you, the Board of Supervisors to reject this most destructive proposal. Please protect us, and our wonderful community. Thank you
David	Bacon	95945	Grass Va	David Bacon Construction, 16698 Fritillary Way	I strongly encourage all supervisors to vote no on opening the mine. I will not vote for my supervisor if they vote to yes to open the mine.
Blair	Boudousquie	95959	Nevada City	11472 Rocker Road	I strongly feel that this would be a poor choice for our community. Please do the right thing and reject this proposal.
Shiree	Swenson	95959	Nevada City	12351 Hillcrest Drive	I strongly feel this mine will ruin our beautiful town.
Karen	Wedge	95949	GRASS VALLEY	11147 RAGAN WAY	I strongly oppose the mine. The only one benefiting is the company itself. It has long and short term consequences for all of the residents. It should NOT be allowed to proceed. The citizens of Nevada County don't want it!
Jacqueline	Meehan	95949	Grass valley	10911 wolf rd	I strongly oppose this implementation of this mine. It will harm our community in innumerable ways. Stop this mine from coming to Nevada county!!
Anna	Welle	95946	Penn valley	17002 Piper Lane	I strongly oppose this mine for many reasons. The top reasons being that it threatens the safety of our water, will add noise and air pollution, and harms the environment. Please help stop the mine. Thank you!
Jean	Wiles	95945	Grass Valley	617 Whiting St	I strongly oppose this mining project. Nevada County needs to protect its water and the neighbors that adjoin the mining project. We don't need this mining project here. More and more information is coming out about this that looks negative. Please vote no!
Laura	Brewer	95959	Nevada City	11401 Winter Moon Way	I strongly urge the board of supervisors to reject the application by Rise Gold. The opening of the mine is not in the best interests of any of the city or county residents and risks our safety and our ability to enjoy our property and our homes. The environmental Impacts will negatively affect our quality of life, our property values, and our safety. As our representatives, I strongly urge you to vote for the interests of the residents and vote no to Rise Gold's application. If you would like to do something to make a positive impact on the economy and vitality of the area, redouble your efforts to bring broadband Internet to all residents This will do more than Rise Gold could possibly do to invigorate our economy.
Jeffrey	Russell	95945	Grass Valley	10728 Footwall Dr	I support immediately voting out of office any supervisor who supports the mine re opening This is the worst idea ever
Dane	LeFrancois	95959	Nevada City	12149 Casci Court	I think it's an awful idea to let this mine continue when it's so close to Brunswick. We need to keep that place clean and this mine will throw a wrench in that plan.

2089

Attachment 24

Denise	Rockwood	95946	Penn Valley	14291 Pepperwood Drive	I think many people in our community would agree that if we wanted to live in an area where big business was the priority there are many places that we could move to. In other words people in our community are here for a small community way of life. Certainly supporting a financial venture from a country that is not our own and who has no vested interest in our quality of life should be extremely suspect. I have to wonder, if this is such a great deal then why don't they provide this opportunity to citizens of their own country and leave us alone? In my research I see no evidence or track record that supports the promises they are making.
Gregory	Figone	95946	Penn valley	14136 Long Valley Ct	I think this is a bad idea for our community. Our planet is toxic enough and the resources will not go towards our communities advantage.
Theodore	Wunderlich	95945	grass valley	15402 sams rd	I THINK THIS MINE IS A BAD IDEA There are still many wells in the county that have polluted groundwater from previous mines. This mine can affect many additional wells.with pollution. Also I am very concerned of the impact on S fork wolf creek. We are not in the 1860s anymore. There are many established residential families in this area that will be impacted by truck traffic , blasting etc. This is a long term project for this mining company. So once they are established there is no going back Despite their assurances and eco reports there is no way of knowing the problems beforehand. Also ..my understanding is that this is a Canadian company. Soo why don't they go do this up in Canada and wreck their own area instead of ours? Because you can be sure of one thing. This Mine will change our environment and damage the quality of life for many that live here. And once they are done mining they will close up shop and leave the mess for our descendants to live with
Trinh T	Huynh	11238-1194	Brooklyn	66 Saint James Place Apt 2LR	I urge the board of supervisors to re asset their actions and commitment to protect the land and it's water. Look to the past and see the destructive impact it will leave the earths already fragile survival.
Judith	Hill-Weld	95959	Nevada City	18354 Boogle Hill Road	I urge the Board of Supervisors to reject the proposal to reopen the Idaho-Maryland Mine. Not only does it pose significant risk to the quality of air and water in the area, but Rise Gold is not a trustworthy company. I am not opposed to all mining, but this is the wrong location and the wrong company.
Kathleen	Dillingham	95959	Nevada city	11949 Banner Lava Cap Rd	I urge the Board of Supervisors to reject this destructive proposal and instead protect our community
Mark	Maulhardt	95945	Grass Valley	13018 Somerset Drive	I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Ofer	Kolton	95959	Nevada City	16346 Red Dog Rd	I urge the Board of Supervisors to reject this destructive proposal and instead protect our community. Any supervisor the approves the mine or all will have to deal with a campaign to unseat them and I will personally donate money and be involved in a campaign to do so.
David	Wong	95945-8022	Grass Valley	13580 N. Meadow View Dr.	I urge the Board of Supervisors to reject this destructive proposal and instead protect our community. The only upside of the mine is for the company proposing it. The community will suffer greatly with all the environmental hazards. The proposed economic gains for a few people employed pale against the cost to the community's health and well-being as a great place to live. There are too many issues that pose risks and environment damage without adequate safe guards in this project. Further, the promised returns are vague and there is no guarantee of their reality. Seems to be little to offer our beautiful area and much to potentially loose.

2090

Attachment 24

Meghan	Neeley	95959	Nevada City	15691 cascade loop	I urge the Board of Supervisors to reject this destructive proposal and instead protect our community. As a homeowner I never would have purchased a home here if I knew mining would return.
Barbara	Kroczak	95945	Grass Valley	145 Independence Court	I urge the Board of Supervisors to reject this destructive proposal and instead protect our community. It is a terrible idea to restart mining in Grass Valley. The negative impact will be felt for decades and generations. Reopening the mine will cause devastating changes to our environment. Greed is not a reason to do this.
Deborah	Dash	94558	Napa	3743 Newark Drive	I urge the Board of Supervisors to reject this destructive proposal and instead protect the human and precious botanical community.
Karen	Donaldson	95945	Grass Valley	PO Box 3215	I urge the Board of Supervisors to reject this proposal and instead protect our community from the overwhelming potential for great harm that this presents. No amount of purported revenue to the county will justify the jeopardy these practices pose for our residents. Do the right thing and do not fall for the sales pitch from a company with a poor track record. We have not yet sufficiently mitigated the effects of mining here from 1850 to 1950, do not add a greater burden to the area. We have not managed to mitigate the effects of the mining industry and activities from the 1800s through 1950 or so. Our water is still poisoned with mercury and arsenic and other contaminants from mining activities. Pumping water from the flooded Idaho-Maryland Mine will cause untold dangerous effects. The roads and local infrastructure is ill-equipped to handle the many dump truck loads leaving the site via Brunswick Rd. etc. We need economic stimulus to be sure. We cannot afford Rise Gold. Please do the right thing and protect our community from these greedy developers with a documented dodgy track record.
Rick	Shefstad	95959	Nevada City	14131 Sierra Woodlands Ct.	I urge the Board of Supervisors to reject this proposal.
Ingrid	Bauer	95959	Nevada City	13445 Jones Bar Rd	I urge the Board of Supvisor to reject the new Idaho Maryland mine project. Please let's work together to focus on more environmentally sustainable ways to grow jobs and promote a healthy community.
Monique	Kolster	95602	Auburn	5195 Westridge Circle	I urge the board to reject this proposal.
Karey	Nickerson	95959	Nevada City	12251 Tomales Way	I urge the BOS to reject this proposal.
John	May	CA 95945	Grass Valley	117 Townsend Street	I urge The Nevada County Supervisors to reject this destructive, irresponsible proposal by Rise Gold.
Hallie	Dalsimer	95959	Nevada City	11901 Miwok Path	I urge you to protect our community and deny the Rise Gold proposal to re-open the Idaho Maryland Mine. As a homeowner on Banner Mountain, I am deeply concerned about the impact of reopening the mine, not only on my well-water, but on the surrounding wildlife and the quality of life of those who live and work in proximity to the mine. Despite Rise Gold's claims, it seems extremely doubtful that any wealth extracted through the project would actually benefit the local community. We do not want this happening in our home. Please do the right thing and protect our wellbeing. Thank you.
Jonathan	Collier	95959	Nevada City	10696 Cedarsong Road	I urge you to reject Rise Golds proposal to re-open the Idaho Maryland Mine. The impacts, and risks significantly outweighs the possible benefits. As much as they "claim" there will be no impacts they have no proof. If things go wrong the industry standard is to file bankruptcy and leave the mess for others to clean up. This is reinforced by Ben Mossman's last project. We have so many other potential economic drivers, many of them which are at odds with mining and resource exploitation. Listen to the voice of the people and reject Rise Gold's proposal.

2091

Attachment 24

Debra	Penn	95945	Grass Valley	118 Maryland Dr	I urge you to reject the destructive proposal to reopen the mine and not only protect our community at large, but especially protect those of us along the route to and from the mine whom will be daily, directly impacted by its operation. I have lived and worked in this community for 30 years, have owned my home for the last 21 years and now, if the mine is opened, instead of being able to enjoy my retirement, I can only look forward to constant noise and traffic and inevitable devaluation of my home.
Gary	Zimmerman	CA 95959	Nevada City	11453 Snowline Road	I urge you to reject this risky proposal!
Michael	Henderson	95945	Grass Valley	11676 Jodette Ln	I use Nevada Irrigation District water, which now includes well water from a site within 2 miles of the proposed mine site.
Karen	Loro	98275	Mukilteo	11700 Mukilteo Speedway	I used to live in Nevada City and visit often . I have friends living near the area of Brunswick and Bennett. Their wells will be impacted, as well as traffic , neighborhoods, noise , trucks , impact to wildlife , destruction of habitat for birds as well as native plants .... so much destruction for little gain of a few who do not live in the area (venture capitalists).... this mine makes no sense and degrades the community and quality of life of the residents in grass Valley. NO MINE ... protect the people
Owen	Scott	92602	Irvine	50 Bandana	I visit Nevada City often - I would stop going there if the area was impacted by mining.
Ari	Shirvanioun	95945	Grass Valley	114 E Main St, Apt F	I want Nevada County to stay clean, healthy, and beautiful for as long as possible. By allowing the mine to reopen, we are risking too much to earn back so little. This is my community, and this is the land I love. DON'T RUIN OUR QUALITY OF LIFE, OUR BEAUTIFUL COUNTY, OUR ABLITY TO LIVE HERE FOR GENERATIONS. WE HAVE HONORED OUR "MINING HERITAGE" ENOUGH.
Jim	Wahler	95945	Grass Valley	10420 mercury dr.	I was a city planner for Lake County, Illinois from 1970-1973. During that time we were doing a lot of land use reports for that area. I can tell you that a project of this kind, the Idaho-Maryland Mine operation would never have been allowed, considering the air, water, and noise factors to the community. And looking at the track record of the developer, not being able to clean up the mess from other projects that he has done, that in itself would not even warranted his consideration to attempt it in an community as large as Grass Valley/Nevada City. It would be a tragedy to this area, a hugh mistake, I would say catastrophic!!! I sincerely hope you can exercise your natural sense of planning ethics while making any decisions. They should be looking for somewhere in the high desert away from destroying the environment of a major populated area. I haven't read the report you speak of, and I'm not an export at noise and vibration, but if the report makes a statement about the noise level on East Bennett being less than it is today if the mine reopens: Use the mind you were given. It's like a wolf saying to a flock of sheep, I'm one of you, you're safe with me here. I'm a former city planner and in my estimation the county shouldn't even be considering the reopening of a mine that was closed 70 years ago. One more thing to really think about, the people who actually live here, have you experienced the air quality we get when fires are burning, well the mine activity will only make that worse and all year long, not just during fire season. Think, Think, Think. Saying No, No, No, is a no brainer!!!!!!!!!

2092

Attachment 24

Karen	Donaldson	95945	Grass Valley	5 Rockwood Dr.	I was an historical museum curator/director for 15 years with an emphasis on hard rock mining and the Gold Rush. Have we learned nothing from our past? Do not be taken in by these hustlers and speculators who have an extremely poor track record. Our community deserves better. Please do the right thing and say NO to the re-opening of the Idaho Maryland Mine. We're counting on you. Please do the right thing for the environment, our health, our local economy, and our children's future in Nevada Co. Reject the proposed re-opening of the Idaho Maryland Mine by Rise Gold. No good will come of this and we really do not need the dangerous side effects.
Rachel	McCullough	95945	GRASS VALLEY	14015 LIVE OAK LN	I was born and raised here in Nevada County, I am adamantly opposed to reopening the Idaho Maryland mine. My children and family are already dealing with autoimmune issues, directly related to heavy metals. It would be a travesty for this to happen. I know volunteers that work for the Empire Mine State Park, whom believe this is pure insanity to even consider it! This entire area is laced with toxins, heavy metals and contamination. Re-disturbing it would be for financial gain only, with no care or concern for the residents that live here. The traffic and congestion is already an issue on Brunswick, I believe this would also further impact those issues. With all the new housing developments, this could lead to even longer wait times at the stop signs and lights. Please don't let this happen, it will force myself and my entire family to move out of concern for their health and safety. With the retirement community we have here, it would be a shame to lose all the younger folks. They need people to work for them. I have my own business, my daughter is a CPA, my 2nd daughter is studying pre-vet and our youngest attends high school in Grass Valley.
Sage	Zimmerman	95713	Colfax	747 Mt. Howell Rd.	I was raised in Nevada County. I love Nevada County. I love its history, my family home was near an old mill site with its abandoned foundations of a town that once was. I cannot fathom the forward progress in our changing ecological environment be challenged by the opening of a mine. The old rules don't apply anymore and we don't have time to waste to try to find ways to deal with the waste from a mine in the middle of town. Please don't approve this mine project, the impacts are too detrimental to gamble with the health and safety of the people, the water, and the environment that we all cherish so deeply.
Allison	Cooper	CA	Nevada city	358 gold flat road	I was shocked when I found out that there was talk of reopening the mine. With the knowledge we have in 2021, of what mining does to our lands, it's insane. We should be protecting our lands not putting them in danger. We purchased a home in NC in 2016, and land in 2020. There is no amount of money that is worth putting our lands in danger. The money generated from the mine does not outweigh the potential catastrophic environmental impact.
Patricia	Phillips	95945	Grass Valley	10858 Bartlett Dr.	I will be adversly directly effected by opening this mine. You know the reasons. Please do not allow the opening. No good has come from any recent mine openings her in Nevada County and this company has a bad track record. So No good will come of opening the I_M mine. Also it will impact me personally regarding noise and traffic which I will decrease my quality of life and property value. I have lived here over 40 years and am well aware of mine pollution and decline in everyday life they mean. I also attribute my breast cancer to be partly caused by environmental pollution from mining.
Belinda	Fuenzalida	95945	Grass Valley	11901 Nancy Lane	I will do everything i can to help stop this mine to saves my childrens and grandchildrens future
Louisa	Suta	95959-8403	Nevada City	10406 N Bloomfield Rd	I would be a horrorble travisty to pollute our water especially in times of drought. Opening the mine by a documented enivormental abubuser is unconscionable.

2093

Attachment 24

Mark	Wilcox	95946	Penn Valley	20020 Echo Blue Drive	I'm a 20 year-plus resident of Nevada County and am writing to express my strong opposition to the proposed re-opening of the Idaho Maryland mine. My primary concerns: 1. Nevada county continues to grow both as a tourist destination and as a bucolic, desirable place to live. Re-introducing a toxic, heavy industry such as mining would be devastating to this growth, Please look the big picture and the long-term health and viability of our county and the character of its community. A toxic heavy industry just outside of town has no place in the modern, healthy, vibrant, appealing vision of our county now or in the future. 2. Mining actives will adversely impact noise levels, traffic levels, water quality, water tables and air quality. The county and its residents don't want or need this type of toxic impact on our lives and the county. There is already a toxic legacy from decades past that we have to deal with even now. Why add to this? 3. There are far more healthy and viable businesses to bring to Nevada County — retail, high tech, and real estate development are just a few that immediately come to mind. Having an active mine, with its noise and pollution would discourage clean businesses to invest in the county. If your goal is growth, please choose an option that is not a toxic one. Please invest in inviting businesses that have a positive impact on the county — not a negative one. Thank you for your time and for doing the right thing for the majority of the residents of Nevada County.
Jack	Simpson	95959	Nevada City	18422 Purdon Rd	I'm a 3rd generation Nevada County resident and absolutely oppose the reopening of the mine. It will be a detriment to our community and our environment.
Lancie	King	95945	Grass Valley	13579 Loma Rica Dr	I'm afraid I'm going to lose my well and be out of water with no other options to have water. I will have to vacate and return the house to the bank, losing $400,000 in equity. I'll claim bankruptcy due to the poor decision of the county.
Kate	Dumont	95945	Grass Valley	219 South Church Street, 2	I'm concerned with an active mine in a highly congested location, with many residences nearby. The vibrations and the constant 24 hour heavy truck traffic, associated noise and pollution. And the seismic activity already increases in our region. No mine!
Amanda	Holcombe	95959	Nevada City	252 Brock Rd.	I'm in opposition!
Laurie	Agee	95945-9043	Grass Valley	11585 Brunswick Pines Rd	I'm losing sales trying to sell my home due to the mine
Patti	Christopherson	95945	Grass Valley	79 Primrose Lane	I'm so against this it.
Raelynn	Noel	95959	Nevada city	13344 poplar Meadow lane	I'm strongly AGAINST THE MINE.
William	Bone	95959	Nevada City	14132 Bitney Springs Rd	I'm willing to put forth efforts to stop the mining
Laurel	Gavin	95945	Grass valley	11150 Squirrel Creek Road	I've been a resident of Nevada County for almost 40 years and vehemently oppose the Gold Rise mine proposal. I think it's your responsibility to protect the citizens of the county from their corporate greed.
Rachael	Raderman	14223	Fairbanks	Po Box 10229	I've lived in Nevada county off and in and I know that mines are not what our community needs! There's a lot of concern around environmental impacts, traffic, and not having tribal input.
kathryn	finn	95945	grass valley	11727 pine cone circle	Iam strongly opposed to Rise Gold's proposal of re-opening the Idaho Maryland Mine. It will have deleterious affects on tourism, traffic, the quantity and quality water resources, and the general quality of the life we so value in Nevada County.
Christina	Andersen	95945	Grass Valley	14475 Makikuja Dr	If allowed to go through this mine will have catastrophic affect on our community and our world. A BIG HUGE NO to this attempt at destroying our beautiful community and our health!
Scott	Shaw	95945	Grass Valley	13579 Loma Rica Dr	If I lose me well, my home will be worthless. I will not be able to live in Grass Valley. I spend $200,000 a year to the local economy.

2094

Attachment 24

K	Stehmeyer	95959	Nevada City	11896 Crystal Wells Road	If it were only about water, this proposed mine should be prohibited, but it is so much more.
Ryan	Fanning	5045	Grass Valley	13579 Loma Rica Dr	If the mine goes in, I will lose my job at Hills Flat Lumber, because I will not be able to live here anymore.
Nancy	Anderson	95949	Grass Valley	16338 Norlene Way	If the mine reopens and drains all water from citizens wells, who is going to be responsible for digging the well deeper until it hits water? No citizen should have to pay for this if it's the fault of Rise Gold.
Peter	Brewer	95959	Nevada City	11401 Winter Moon Way	If the object is to create jobs and stimulate the local economy, then instead bring fiber-optic high-speed Internet to the County. That is far more predictably likely to bring educated and highly paid remote workers to our area, and without any environmental damage. The promises of economic benefit are bullshit. If you want to stimulate the economy of this area, move heaven and earth to bring fiber-optic Internet to all neighborhoods. Then you will really see some economic growth.
Denise	Ilmanen	95945	Grass Valley	213 Celesta Drive	If this mine is allowed to re-open it would be a travesty and disaster of great proportion. Our little community simply cannot afford to allow this to happen. It would be extraordinarily short sighted for the Grass Valley City Council to allow this travesty to go forward.
Carol	Levow	95945-6300	Grass Valley	317 Washington St	If this Mine project is approved I will move out of this county. I believe it will devastate the quality of life here! Please do not approve this project, it is not in the best interest of those that live here!
Ana	Albert	95945	Grass Valley	219 Horizon Circle	If this mine re-opens. I am out of here. I firmly believe opening this mine will destroy the ambience of this quiet bedroom community.
Tristan	Hurst	95949	Grass Valley	17241 Virginia Way	If you look at say the forbes.com List of most and least toxic places in America, the Environmental Protection Agency toxins reports show that metal mining is a huge contributor (hugest!?) of toxins. Look at Alaska on that list because of mining and all of the most toxic places in CA is because of active gold mines! Don't let this happen to our beautiful home!
Mary	Marcyes	95945	Grass Valley	12977 Somerset Dr	If you want to be re-elected in the future, do the right thing for the residence. We are depending on you. Do the right thing and protect the community and families in it
Francis	Hamilton	95945	Grass Valley	12161 E Bennett Rd	IF YOU WANT TO BE RE-ELECTED, DO NOT REOPEN THIS MINE!
Ross	Daniels	95945	Grass Valley	12052 Cordell Ct	I'll bet you would feel differently if you lived near the proposed mine. My well is the deepest in the area, at 450', and I really don't want NID service, even if Mossman is paying for it. Unfortunately, GV is no longer the peaceful city I moved to in 2001. Daily I hear trucks and sirens from hwy 49. I can't imagine the noise and additional traffic from their operation running 24/7, 365. Do you actually think Rise would say anything negative about their operation? Have you looked at Mossman's history in Canada? This whole project will be a disaster for GV, and it's in your hands to stop this madness. Thank you!
Chris	Buzzini	95945	Grass Valley	244 DORSEY DR, APT 19	I'm 100% opposed to the mine reopening. Noise from the trucks alone will ruin the tranquility of the area. The fwy noise is bad enough already. If the mine is reopened, for the next 20 years, trucks will make up to 100 trips a day, averaging 50, from 6 a.m. to 10 p.m., seven days a week. The round-about ought to be great fun when the huge rock trucks make the circle. I think that Rise Grass Valley has shown their true colors in two simple sentences included in the propaganda brochure titled "THE SCIENCE IS CLEAR." Quote: "The results are exactly what we've said all along. The mine will be safe, modern, well-regulated and environmentally sound." Pretty bold to be saying/pushing that from the get go. This is all about $$$ and most of it will not stay here in Nevada County. NO MINE!!!
Joanna	Yates	95924	Cedar Ridge	PO Box 1751	I'm 76 & live in a Cedar Ridge neighborhood close to the mine site. I simply cannot imagine having the years I have left ruined by a project which shouldn't be allowed to happen and the value of all I have in the world, my house, devalued. And personal effects aside, local government has a duty to do all it can to keep our community and environment free from impact by pure profit motive.

2095

Attachment 24

Jeffrey	Mason	95959	Nevada City	13838 Marigold Way	I'm a sixth-generation resident of western Nevada County, descended from Cornish gold miners. Their day is over. We cannot allow this mine. And please note that the Environmental Impact Report is written to present the problems as manageable, very slanted toward helping the mine go forward. Please don't let it happen.
Mykola	Kindrat	95945	Grass Valley	PO Box 172	I'm against the reopening of the mine. While it sounds "safe" on the promotional pamphlets that Rise sent out to our county residents in an effort to swing the vote and influence your decision, these are basically assumptions, as nobody can give 100% guarantee that: our wells will not dry out; our air, water and soil will not get polluted; not to mention accidents.
Claudia	Wulf	95945	Grass Valley	12607 Pine Cone Circle	I'm an old lady and retired here. Please don't allow the destruction of this beautiful place.
Mary	Volmer	94556	Moraga	123 Alta Mesa Court	I'm from Grass Valley, visit my parents often, and plan to return to live in the town. Protect the town, the local economy, and quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. Reject this destructive proposal. This town is treasure and should be preserved for residents and visitors alike in its natural beauty, not sacrificed for uncertain, short term gain.
Donna	Abreu	95945	Grass Valley	11067 Copper Dr	I'm fully against it!
Carol	Kuczora	95945	Grass Valley	11198 Butler Road, P.O. Box 536	I'm one of those whose lungs were already damaged by toxic chemicals. I'm sensitized to petroleum products, and my circulatory system reacts to fine particulates as well. They affect my heart. The Bay Area was quite intolerable, but I was OK at this altitude. WAS!
Eric	Millette	95959	Nevada city	19480 chalk bluff road	I'm opposed to the mine reopening!
Kimberly	Acuna	95945	Grass Valley	12607 Pine Cone Circle	I'm permanently disabled homeowner retired in Grass Valley. This is where I plan on staying till I die. I can't stay if I don't have the healthy environment here that I do now. Destroying the well water and environment will create a physical and financial hardship on me. The reason I live here is because it's ADA friendly right now. Please don't ruin it by allowing this mine to open. There is nothing that mine offers me but heartache and hardships.
Melanie	Biesecker	95949	Grass Valley	18644 Wolf Creek Rd	In a time of catastrophic destruction already facing our planet and natural resources due to climate change, I am shocked and appalled by the proposal to re-open the Idaho-Maryland Mine. I implore you to think beyond the proposed economic benefits to and instead focus on the obvious environmental impacts of mining on our air quality and watershed. There are so many things that are outside of our control, when it comes to the planet, but this is something completely avoidable. Please reject this proposal.
Sabrina	Godfrey	95959	Nevada City	12235 Big Blue Road	In a time of extreme drought, it appears a total waste of our water to be flushing out a mine and sending the precious water downstream! Please reconsider passing this mine proposal in this extreme time! Save our water supplies! Thank you.
Julie	Becker	95959	Nevada City	13345 Evergreen Dr	In a time of severe climate crisis, there is no way that this project can be accepted in good conscience. It's a disaster in the making ... leading to serious air pollution, heavy truck traffic, lowering of the water table, noise from blasting, loss of property values etc. etc. No one will gain from this ill-conceived proposal .
Michelle	Plante	95945	Grass valley	184 Lucas Lane	In a time when the world around us has never needed our help more, to build this mine is incredibly irresponsible. We have to look locally to do the right thing in all of our development in order to sustain the world for future generations. Our most valuable resource in this county is its nature. It's what attracts visitors that drives commerce. Not only would the the Rise Gold proposal to re-open the Idaho-Maryland Mine jeopardize water quality and disrupt habitat in its immediate vicinity, the daily noise pollution from mining and the increased truck traffic would make it a MUCH less desirable place to live and to visit. This makes it a poor decision even from a purely economic stand point.
Gwen	Walker	95945	Grass Valley	10201 Ridgeview Drive	in addition, I am an individual with a higher than average cancer risk due to my birth mother having had breast cancer. this mine could release carcinogens into our water which could make people like me VERY sick

2096

Attachment 24

Sandy	Saccomanno	95924	Cedar Ridge	P.O. Box 515	In all my travels around the county running errands, going to meetings and appointments or visiting friends, I have NEVER SEEN ONE SIGN that says Support the Mine .... NOT ONE .... it is clearly the most insane action we can contemplate at this time. What survey? I didn't know about a survey and nor does anyone I ask? Hmmm .... At a time when we are dealing with wildfires that pollute the air, droughts that are impacting wells and pollution of all kinds, how can we even consider allowing an outside mining company with a history of delinquent lawsuits to exponentially exasperate all of these conditions -- absolutely unfathomable and reckless -- so shortsided -- yes someone(s) will make a quick buck but at the expense of a beautiful community and all the beings (human, animal, plant) that reside there.
ALFREDO	PEREYRA	95945	Grass Valley CA	15148 GREENHORN RD	In another time when the area wasn't as populated, maybe yes. This type of heavy industrial production is inappropriate so close to residential neighborhoods and Grass Valley proper. Water, considering incessant droughts and failing wells is the true gold in California. This is shortsightedness and greed by a foreign corporate entity with no regard to our future well-being and health is an affront on our environment, community and future.
David	Schlothauer	95949	Grass Valley	13914 La Barr Pines Drive	In general, I am in favor of "pro-business / pro-growth" proposals, as long as they do not make a significant impact on the neighboring residents, businesses or the local environment. As difficult as it is today to maintain a labor force that can sustain basic services such as grocery stores, restaurants and medical services, it is difficult to think adding yet another industrial business to our area will have enough positive outcomes to outweigh the long term negative affects and impacts outlined in the EIR. Please use a clear head when casting your vote, there is very little our community stands to gain, yet there is a long list of negative impacts that can/will affect all current and future residents of our county. VOTE NO.
Lisa	Hioki	95945	Grass Valley	337 Alta St	In light of all of the environmental disasters occurring with increasing severity and frequency, opening the mine through a company with an EXTREMELY questionable reputation and shady history seems the absolute definition of insanity. Please, protect our beautiful little slice of heaven and our property values, as well! Thank you for caring,
Carol	Meals	95959	Nevada City	223 Bridge Street	In the middle of the drought we have no business using and polluting more water.
Joanne	Evers	95945	Grass Valley	19111 Louis Rd	In the same way that the 27 million was spent for 174 being remade, you now want to trick us into thinking we're going to reap the benefits from jobs, and prosperity now you think we will do it again with this mine. Yes, there has to be responsible development but tearing up our resources and polluting water is not beneficial to us. Please take your jobs seriously, we elected you for a reason.
Steven	Rugge	95959	Nevada City	12811 Spring Rd.	In this day and age, water is more valuable than gold. Let's NOT be draining millions of gallons of water a day from our underground storage while at the same time asking residents to restrict use of water because of the megadrought. It really makes no sense to do this.
steve	holyhead	95959	Nevada City	11498 Banner Lava Cap Rd	In this era of unprecedented drought we cannot afford to gamble with our County's drinking water and air. We simply won't have a viable County, Towns or Cities if we allow the Canadian Company Rise Gold to pilfer our natural resources and then leave when they have their profits. Increased jobs and tax revenues are good... but at what cost? Who will refill our wells? Who will clean the air? Who will ultimately pay the price? It truly frightening that this would even be under consideration. I, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
joe	landi	95945	Grass Valley	15230 apple blossom way	In this time of history there are better ways to keep the rural landscape and reduced the environmental damage that to reopen mines that have the potential danger with contaminated well water, adding noise pollution and contributing to lower property values for the citizens of Grass Valley.

2097

Attachment 24

Mary	Englund	95959	Nevada City	P.O. Box 1755	In times when we need to be concerned about conserving water, it doesn't seem feasible to allocate the millions of gallons of water PER DAY that a mine operation would require. This area has been harmed enough by past mining operations. It's time to say no more.
Steve	Nicholson	95959	Nevada City	15662 Lewis Rd.	It breaks my heart to think that a mining company is going to come to our community, extract value to line their pockets, pollute our air and water, then leave the mess for someone else to clean up. Because we all know that's what's going to happen. It's what always happens. We need to look to the future for our prosperity, not the past.
MOLLY	HARRISON	95959	Nevada City	15240 Lewis Rd	It has never been more important than now to consider our environment and the quality of our community. Please do not approve the Rise Gold proposal for us and our children and future generations' sake.
Gwendolyn	Reeder	95945	Grass Valley	12677 JACK PINE RD	It is almost beyond comprehension that there is any justification for re-opening the Idaho-Maryland Mine. The consequences for our community would be devastating. Any benefits cited by Rise Gold Corporation are questionable and self-serving at best, and dangerously misleading. I implore you: please, if you love this community and want to serve the people in it, reject this proposal.
Kathleen	Woodson	95945	Grass Valley	11547 Brunswick Pines Road	It is difficult to comprehend why anyone in this county or any county that has grown into a thriving community and city would want to have an environmentally dirty, noisy, and disruptive activity reinstated to basically line the pockets of people from a foreign country.. The gold mine had it's day when the area was not so highly populated. It is now unsafe and unhealthy to reinstate a mine when so many lives will be adversely effected.
Amata	Albero	95945	Grass Valley	311 Bennett st apt 12	It is disturbing that the beauty and sanctity of our land will be once again disrupted by the mining industry. Although the Rise Grass Valley Plan reports that reopening the mine would be safe, there is no trust toward this such interest driven "Indipendent analysis". Mining will affect the ecosystem and our water resources, the quality of the air and the harmony of the land. This project must be stopped. The community will strongly oppose this none sense. Clean water and ecological justice come first.
Emily	Michaud	95959	Nevada city	13542 idaho Maryland rd	It is going to destroy our water levels, traffic for commuting, pollution, noise pollution. I live so close, it might cause neighbors and myself to have to relocate and no longer contribute to our community.
Diedra	Spohler	95946	Penn Valley	18163 Lake Forest Drive	It is harmful to our water table, to our air, to our basic quality of life here in the beautiful Sierra foothills.
Marion	Blair	95945	Grass Valley	12182 Sunset Avenue	It is inconceivable to me that the reopening the Idaho Maryland mine by Rise Mine would even be considered when the facts about likely impacts are taken into consideration. These include: the noise and shaking from blasting; the rumbling of dozens of large diesel trucks daily with their associated harmful emissions and traffic problems; the dust associated with hard rock mining which could contain asbestos found in serpentine soils; the waste of millions of gallons of precious water during extended drought; the pollution caused from the barely treated water emptied into Wolff Creek whose drainage is eventually the American River and the Delta. There are more impacts than these, but these are sufficient to ruin the quality of life in Grass Valley. In a cost-benefit analysis, I question any benefit. Your vote for this would mean I will NEVER vote for you in any office.
Julie	Ristow	95946	Penn Valley	15293 Big Dog Rd	It is not fair to pollute our air and water, and lower our property values just so a company can profit. We have the right to clan air and water.
Robin	DeMartini	95959	Nevada City	12434 Silk Tassle Cir	It is our highest hopes that you consider all facets of the proposed Idaho/Maryland Rise Mine proposal. We love our county and community because we are away from the big cities, pollution, noise, toxins, traffic and broken down roads. Please also consider the current drought in CA, and how the Mine pulling and flushing millions of gallons of water per day will affect our people, land, resources, creeks, rivers and life (animals and humans alike)! It feels that Common Sense trumps this issue on so many levels. Politicians rant and rave about Greenhouse Gases and pollution and our carbon footprint...this Mine would be all that and more and needs to be corralled! Please say NO to the MINE. Thank you!

2098

Attachment 24

Patrick	Poulson	95945	Grass Valley	242 Arcadia Drive	It is time that we stop polluting and degrading this wonderful land we live in. The Rise Gold will bring only more destruction. I urge the Board of Supervisors to stop this before it is too late.
saiman	hsu	95959	nevada city	206 nevada street	It is unbelievable that in this era where we are polutting the world on a day by day basis are even considering this type of business. How come the county is against fiber internet but willing to accept potential opening of a mine? if you want to create jobs there are other ways-
Saskia	Martin	95949	Grass Valley	15151 Ballantree Lane	It is unbelievable that you woud even consider approvibg this mine. There are so many reasons why this should not be allowed, and there are so many lies being promoted by the foreign corporation that wants this to happen. This would a step backwards and in no way would benefit nevada county. Please we place are trust in you to not approve this farce. Thank you.
Christy	Sherr	95959	Nevada City	505 Redbud Way	It is very difficult to believe that in this day and age, with what we know about the types of pollution and community disruption this mine would bring, that we are even wasting time deliberation about reopening the mine. The company has no proven positive track record. This mine would be devastating to our already compromised air quality, and could seriously impact our water quality in an era when drought and water shortages will become the norm. Let's please move on from this insanity.
Catherine	Streitwieser	95949	Grass valley	10224 Virgil Ct	It is very important that the Board of Supervisors heed the concerns and known negative impact of allowing mining again in this community. It is especially concerning that a company with such a destructive and blatant disregard for laws, mandates, and respect for this rural community be allowed to proceed in any fashion with this detrimental plan. Please, STOP the reopening of the mine.
Maxima	Putnam	95959	Nevada City	13317 Evergreen Dr	It is way past time that we stop the senseless destruction of our lands and pollution of our waters and begin living in more respectful, caretaking relationship with our precious resources. We don't need this mine. We don't want this mine.
Shana	Maziarz	95959	Nevada City	10145 Tillicum Way	It makes absolutely no sense to allow an out of town company that is in no way beholden to our community to take on such a risky endeavor. We all know very personally the negative impact that mining has already had on our land and water. We should be focusing our efforts on cleaning up the impacts of legacy mining not beginning mining anew. Thank you for your commitment to our community.
Bonnie	Walker Torres	95959	Nevada City	12965 Daisy Blue Mine Road	It seems unfathomable to me that this project would be approved in this day and age. It's not as if the mine is located in a remote area of the county where there is little traffic, few homes and roads not used as commute. In addition, the environmental damage to the area would be tremendous! I hope you, as the board of supervisors, would deny this project especially given the track record of the man wanting to run the project!
Dana	Coffman	95602	Auburn	11466 Inverness Way	It should be about community, not MONEY. Please put the health of our community above putting proceeds into pockets.
Debora	Chapman	95959	Nevada City	15691 Lewis Rd	It will affect our quality of life in a VERY negative way. NO MINE!! STOP THIS INSANITY! Do the right thing board of supervisors!
Janet	Dunstan	95945	Grass Valley	19595 Bow Valley Road	It will completely erase our County's plan to cut greenhouse gas emissions. It will wreck my neighborhoods with drilling, blasting, and truck traffic for 80 years. It threatens 300+ private wells which will effect my friends and neighbors.

2099

Attachment 24

Jerry	Wetherall	96822	Honolulu	3566 Kumu Place	It would be a grave mistake to move ahead with the Idaho-Maryland Mine. The mine would benefit mostly business investors with no local roots exploiting vestigial ores that once supported generations of Cornish miners who long ago were the heart of this community. I remember the mine whistles marking work shifts when I was a teenager. I remember the sinkholes created in my high school athletic field and toxic mine wastes in a super-fund site. People who move to Grass Valley now are looking to escape heavy road traffic, dust, air pollution and noise common in areas with extractive industries. They don't want this mine. They don't want a degraded water supply when severe drought is becoming more common. They don't want threats to Wolf Creek and other parts of the watershed where their kids will play and hope to catch their first trout. They want peace and quiet and high environmental quality. They want this for their children who will grow up here and have a family of their own. You want to attract people like these to build the community into the future. Their vision of the future includes a clean economy. The mine would take the community backwards. It should have no place in its future. My parents lived here for almost 60 years. They were glad to see the mines finally closed and the town move on to better ways of life. If they were alive today they would be fighting the mine tooth and nail, but with grace as always.
John	Bassett	95949	Grass Valley	11699 Pamela Drive	It's clearly evident that the mine only makes sense for the owners and/or the for shareholders of the mine. There doesn't appear to be a large number of long term jobs with the opening. Insatiable thirst for materials may eventually be the doom of us all. Proper recycling as well as products that are designed to be thrown away is a major first step we must take.
Talia	Moore	11205	Brooklyn	225 Franklin Ave	It's important that we center community safety and prioritize the preservation of the natural environment of the land. In solidarity...
Hannah	Greenpine	95945	Grass Valley	14326 Star Dr	It's important to protect our water and land for our children!
Michael	Eldon	95959	Nevada City	14699 Oak Ridge Road	It's just wrong to risk the safety and beauty of Western Nevada country and the Nevada City - Grass Valley community for the hopes of a few individuals to get rich. The expected ecological damage alone could never be corrected with all of the money the mine could possibly make, and the "responsible parties" are never held responsible when something goes wrong. Please avoid this large risk by voting no for reopening the mine. Thank you.
Lorraine	Hunt	95946	Penn Valley	10761 Baker Downs	It's not worth it. you can do the right thing for all of living here now and for generations to come.
Michael	warchild	95946	Penn Valley	12062 Chances R Road	It's obvious that the community is not for this move or the consequences that come along with it. Please think about the future of our community. No to the mine!
Roland	Rouda	95959	Nevada City	11649 Side Hill Circle	It's profoundly incomprehensible to me that Nevada County's Board of Supervisors would deem this proposal worthy of merit, on any level. The enormous and quite possibly disastrous environmental, economic, and psychological consequences that would very likely decimate our community for decades represents, in my opinion, an egregious breech of public trust.
Daniel	Behn	95959	Nevada City	12424 sesame Street	It's time that lazy folks like myself get off our butts and take action. This is some serious crap rise gold is trying to throw at our City. It's times such as these to send out a call to resist. We need a Huey Newton persona to lead this band of rebels.
Tristan	Newbon	95959-2830	Nevada City	518 Nimrod St	It's too bad that we're spending all of these resources perusing this issue when overwhelmingly as a community it isn't compatible... we have so many more important issues to be addressed than this. Please shut this down and get back to addressing issues that brings progress in alignment with the majority of your constituents Thank you
Darla	Decker	95949	Grass Valley	10681 Quail Creek Rd	It's very little upside for our community but a LOT of potential downside

2100

Attachment 24

Shila	Van Wagenen	95946-9435	Penn Valley	11047 Chances R Rd	It's been a bad idea from the start; there is absolutely NO benefit to us our our community. It simply must be stopped and I'm personally requesting that any & all citizens and caring members of our community get involved and take a stand against this potential destruction of our beautiful county. Thank you! Reopening this mine would have absolutely no advantages to our community; but would be detrimental in every single way! Furthermore, it would render the entire community unlivable, if for the reason of toxic substances in the air we breathe. That alone should convince anyone who values life and health to vote NO!!!!
Johanna	Lane	95959	Nevada City	578 Main St.	It's clear that mines should be left in the 19th century. Nevada City needs to be protected.
Lydia	Watson	95949	Grass Valley	10273 East Lime Kiln Road	It's imperative that our community has a voice which will be honored by our representatives.The majority of our community do realize what a destructive situation would unfold, if the proposal to reopen the Idaho-Maryland Mine is approved.
Christine	Weber	95945	GRASS VALLEY	10862 CONE TREE TRL	It's not worth it.
Andrea	Sargenti	95945	Grass Valley	346 Pleasant St. Apt. B	Ive lived here for 27 years and I oppose this reopening. It will not benefit our town and communities in anyway. Please dont allow this to happen.
Suzona	Pitkin	95959	Nevada City	P.O. Box 2171	I've lived in Nevada County for over 41 years. To re-open the Idaho-Maryland Mine will cause so much disruption it will be an environmental and societal nightmare! If you value our small towns this needs to be stopped!
Georgie	Huff	95112	SAN JOSE	645 S 16TH ST	I've read all the information available. This must be stopped. Thre's only one entity that benefits from this, the rest of us will be damaged.
willaim	clark	95945	grass valley	324 vistamont dr.	I've reviewed the consultant's reports for the past 2 years plus the recently issued DEIR. Without reservation I do not thing the IMM Rise Gold project should be permitted for it's 80 year span. The proposed design has major flaws in almost every category and the Mitigations proposed will require a massive oversight effort and will require large budget increases to staff for the oversight effort. Don't let our mining past be a prologue for the future. Deny the permit.

2101

Attachment 24

James	Thornton	95959	NEVADA CITY	10134 CEMENT HILL RD	Jeff Kane | Other Voices Here's a conversation I might have had with a guy I met on the street: Let me tell you about the gold mine we're planning here in Nevada County. Yeah, tell me. After all, that's our history. Are you gonna dip a pan into the South Yuba? Well, it's a little bigger than that. We'll dig for it at the old Idaho-Maryland site. Oh? How big a dig? We'll go underground and remove about 1,500 tons of rock. Sounds like a lot. Ahem. Ah, 1,500 tons every day. Every day? Where will you put it? We have a 56-acre parcel on Centennial Drive, near your hospital and most of your nursing facilities. We'll haul 1,000 tons of it every day and pile it there. And pile it and pile it. Eventually the pile will be 70 feet high. Wow! How will all that rock get from the mine to the pile? We'll haul it there with trucks. About 50 to 100 round trips a day. With your pickup? Aw, can't use pickups. Even your Ford F-150 can only carry just under a ton. We'll use 20-ton diesel trucks, 16 hours a day. So let's see. That means if I stand in front of Peaceful Valley Farm Supply I'll see one of these huge diesels go by about every eight minutes. Won't that be loud? Depends what you mean by loud. To us it's the sound of money. Uh huh. So what's in it for us, the people who live here? Jobs, Dude. You folks could use more employment, and this project means 300 jobs. I see. By the way, aren't the mine tunnels full of water? Hey, you know your stuff. Indeed they are. So we just pump the water out. How much water? The first six months we'll pump out about 3 1/2 million gallons a day. [illegible]
Wayne	Jarosh	95959	Nevada City	11588 Ridge Road	Jobs are always an important factor to consider, but not at the expense of our environment. There are dozens of other occupations that would be more in keeping with the area that we live in. I have never heard of a single mine anywhere on earth that doesn't create more problems than it solves for the people that live there. That's why most mines are out of sight of the general population. I can't imagine why we would want to pump billions of gallons of water directly to the bay and ocean when we are likely to have even more droughts due to global warming. Do we really need to see more people draped in gold necklaces and jewelry? I don't think so.
Shannon	Hale	95945	Grass Valley	13353 Peardale Road	Just don't
john	johnson	95949	grass valley	10461 Grandpas Pl	Just for starters, 6 million gallons of water in Wolf Creek a day! No way that can be good. Don't pollute our water, our air, our peace of mind.
Fran	Logue	95946	Penn Valley	14199 Sun Forest Dr	Just NO!
Serena	Moore	95945	Grass Valley	10844 Bartlett Drive	Just read about the destruction Rise Gold left at their last attempt. Really, no noise or negative consequences for sale of homes and no water issues... Really a bad idea to vote yes

2102

Attachment 24

Erin	Alonso	95959	Nevada City	10955 Northview Drive	Just recently, my husband and I relocated from the Bay Area to Nevada City, my hometown. I loved growing up in Nevada City. The commitment to protecting the environment, the quiet mornings, the plethora of wildlife, and the quaint, small-town feel. I wanted for my children what my parents provided me, I wanted a Nevada City life. I am horrified that an out-of-country business can come to Nevada County and threaten this community's environment and quiet life for monetary profit. Rise is deluding Nevada County residents with the lies that reopening the Idaho Maryland Mine will bring good-paying jobs to Nevada County, be environmentally neutral, and add to our historical community. Rise will damage our water table, bring dust, noise, and industry to a quaint mountain town, and will ruin Nevada County.
Carmen	Mateo	95959	Nevada City	12469 Pinewoods Road	Just Say No, California farmers are going without water, it would be ludicrous to hand over our much needed water to a gold mining company that has no good standing. Simple common sense please, that's all we need here.
Cheryl	Zook	95946	Penn Valley	15543 Indian Springs Rd	Keep gold mining in the past and protect our future, our water, our air and our quality of life.
Zachary	Keyes	95949	Grass Valley	953 Freeman Ln	Keep the creeps out of town!
Victoria	Adams	95959	Nevada City	15443 Cascade Drive	Keep the greed and destruction out of our small town. No No No Mine.
Naomi	Desalegn	87106	Albuquerque	1901 Univeristy Blvd SE	Leave nature alone. Stop destroying the earth for profit
Colin	Irwin	95946	Penn Valley	11405 Penn View Lane	LEOPARDS DON'T CHANGE THEIR SPOTS. The head of this start up has a history of walking away from his problems and leaving the locals to clean up the mess, reference... what happened up in Canada. If the supervisors allow this, you are ignoring history that's right in your face. That's all that needs to be said about the mine re-opening.
Hunter	Parmentier	98651	Underwood	31 Paula Dr.	Let the wildlife be.
Jeff	Conklin	95959	Nevada City	11099 Success Cross Rd.	Let's keep mining, and the destruction it brings to our community in our history.
Mark	Copeland	95713	Colfax	26150 Silvergate Lane	Let's keep our foothill community pristine. NO MINE ! This is a really really bad idea. Say no.
Heidi	Walrath	83815	Coeur d'alene	3323 Wedgewood loop	Let's move forward not backwards! Clean renewable healthy options for the planet. Not mines!
james	giotta	95945	Grass Valley	10519 C Street	Let's protect the remaining biodiversity and insure health for our future generations.

Stephen	Barr	95945	GRASS VALLEY	14311 CAHILL LN	Living off of You Bet Rd., I deal with the noise and congestion of the gravel trucks daily from Hansen Bros. quarry, so I personally know what it's like to be on a 2-lane road with semis. Please don't let the developers fool you.
Mary	Bennett	95945	Grass Valley	13376 Noel Lane	Long time owner - Do not want a mine operation in Grass Valley.
P. Debbie	Lindh	95945	Grass Valley	642 Partridge Rd	Look at this Company's previous dealings, they leave damage in their wake and never keep what they have promised. This community does not want this! I am concerned on many levels, including, environmental pollution, noise pollution, massive water usage in a drought, dewatering causing sink holes, and the largest investment I have made, my home losing value. Please care about the community you represent and say no to the mine! Their words are meaningless it's action that speaks truth, they have horrible consequences in their wake of other projects. Please, we do not want issues that damage our lives and community. Say no to them, care about the community you represent!

2103

Attachment 24

Ken	Bebensee	95959	Nevada City	12637 MURPHY RD	look into the lawsuit in British Columbia as to how the Rise company regards destroying a healthy environment and community for their profit. Nobody here wants this destruction to invade our community. The pollution from mining is already in our history and we only have a limited amount of clean water and land why dig up more toxins for only a few people who profit while most of the community suffers?
Mary	Eve	95945	Grass Valley	419 Eskaton Circle	Many of us have done a lot of research on the pros and cons, and we believe this proposal is very destructive in this area, surrounded by neighborhoods. And the results of getting lots of gold, iwhich is not probably, will certainly not bring more money into our lives.
Gelsey	Goldenberg	95949	Grass valley	13329 Mount Olive road	Mines are dirty even with modern improvements. With California experiencing extreme droughts we cannot risk losing so much water to this effort to line the pickets of a foreign company. This is unconscionable. Our water sources are too important to pollute.
Austin	Smith	95667	Placerville	8992 Quiet Canyon Rd.	Mines do not belong close to residential areas and the Idaho-Maryland Mine will degrade quality of life for Nevada County residents.
Jamie	Newman	95959	Nevada City	11362 Cour Royal	Mines historically case permanent damage to the environment, and there are many real life examples of mines not protecting the environment, filing bankruptcy, and leaving the clean up to local government. It's not worth it, and I don't see any reason to support the mine. The statistics on new jobs is overstated and the company has so many problems that are obvious from the EIR, it would be a disservice to okay the project.
David	Kimmel	95946	Penn Valley	18163 Lake Forest Drive	Mines historically damage their surroundings. Why would we want to take that risk? How would this mine benefit me? I would say zero. How would it benefit my county? I would say the benefit is low to minimal. The risk? Very high. It just doesn't make sense.
Avila	Lowrance	95945	Grass Valley	11741 Alta Vista Avenue	Mining in Nevada County has caused irreparable harm to people, animals, and the environment. We can see the damage every day. That we would opt to give permission for another toxic mine in our county would be a crime against nature.
John	Lumiere-Wins	95945	Grass Valley	16791 Greenhorn Rd	Mining in this area has caused irreparable damage to the environment and the water quality leaving poisons in the land, the water and in the air. We cannot afford this. Also, it doesn't make sense to spend millions of dollars excavating gold ore out of the ground and refining it only to put in underground again. Why not use ground penetrating radar to assess the gold within the area and credit the company with the value without destroying our beautiful environment and poisoning our drinking water? Mining was stopped in this area for good reasons. Please do not foolishly return to this destructive enterprise.
Robert	Hart	95949-7502	Grass Valley	14860 Fine Dr.	Mining in this area is history and it should stay there. All the collateral damage to the environment is unacceptable for this community. Grass valley is no longer part of the Pax-Americana limitless frontier to be plundered by a few for personal wealth.
Karen	Wyeth	95945	Grass Valley	14393 Osborne Hill Rd.	Mining is a heavy industrial use any way you look at it. You will inevitably be in a position of having to adopt Findings of Overriding Considerations after the EIR process is over, because all impacts will not be able to be mitigated. Such a use should not be located near residential uses. It needs to be in an isolated area as is the one in Napa County. I do not support this proposal, nor does anyone else I know who lives here.
Diana	Behn	95959	Nevada City	12424 Sesame St	Mining is a part of our history and should remain in history only. We are still dealing with toxins in our environment from years ago and mines that should never have been reopened. Ben Mossman and Rise Gold do not have funding if things go wrong. Money received from investors is even too low to handle a project of this magnitude. We will end up paying the price in the end when they claim bankruptcy like prior project in Canada. The fact that they unlawfully fired the safety manager on Ben's prior project should give us insight into the type of business morales he has. Please vote no for our community on this project. This is one of the worst scenarios for our communities to consider. Mr. Mossman does not have the financial stability or backing to take in a project of this magnitude. Please vote no and save the communities you work for. It's all smoke and mirrors to bilk investors and ruin our communities, properties, waterways, and health.

2104

Attachment 24

Patricia	Minor	95949	Grass valley	13886 beyers lane	Mining is inherently polluting noise water fouling air particulates road surface destruction land destruction. Grass valley is no longer an undeveloped land area but communities with homes families and vulnerable senior citizens. No more mining in Nevada county
Dolores	Lopez	95949	GRASS VALLEY	13139 Hidden Valley Rd	Mining is no longer a good industry for this area. We must consider that G.V. and N.C. have grown, and continue to grow, and that we must protect limited resources. I believe the risks will outweigh any benefits.
Evan	Purdy	95975	Rough and ready	16698 rocker rd	Mining is our past not our future. The environmental impact on the community and what that will do to our kids and livelihoods is too great. We do not need a mine to thrive economically as a small town. Tourism and remote industry is enough. We are good.
Azriel	LaMarca	95959	Nevada City	11205 Icon Way	Mining is our past, not our future. I don't agree with inviting a corporation from out of the area to come in and exploit our resources. Water is as precious a commodity as gold, in my opinion, and we cannot lose our wells. I lived on the San Juan Ridge when the Siskon Gold mine caused wells in my neighborhood to go dry, and the school I attended had to ship in water - no drinking fountains there. We live in a beautiful, desirable community. Let's keep it that way!
Holly	Hart	95949	Grass Valley	16102 Ariel Court	Mining is outdated. Let's move forward, not back in time.
Julie	Herrlinger	95975	rough and ready	12345 pioneer Rd	Mining is so yesterday, too destructive for today's more conscientious society. Besides, you can sell gold that is still.in the ground and never have to mine it or take it out to sit in a bank! This mine is a terrible idea in so many ways! Please keep our beautiful nature clean and protected
Susan	Dunn	95945	Grass Valley	507 Neal Street	Mining was big, profitable business in the 19th and early 20th c. Nevada Co. is now a haven for recreation and retirement. Mining noise, pollution and traffic don't belong in our beautiful, quiet mountains. Re-opening the Idaho -Maryland mine is an environmental disaster for our pristine community. The era of mining has come and gone in California. The foothills now belong people, not miners.
Hindi	Greenberg	95959	Nevada City	15802 Shannon Way	Mining was fine and profitable in the 19th and early 20th centurys (although it made a mess of the area), but now Nevada County is a residential/tourist/business location. We don't need wells dewatered, noise, pollution, tailing dust blowing around the area, multiple truck trips destroying the roads and making noise, and for what? For a Canadian company to make money on gold extraction, offering a few local jobs and a lot of aggravation--and for 80 years! Why will this company, headed by a man who didn't meet his Canadian obligations, do any better here than his similar company did in Canada? No Mine!
Jon	Fox	95949	Grass Valley	16237 Patricia WAY	Mining was fine in the past. But not here, not now.

2105

Attachment 24

Steven	Millard	95945	GrassValley	13055 BlueJay Hill Road	Money doesn't care about quality of life issues? Mr Mossman is a salesman pitching the lure of gold & riches to prospective investors while touting how easy it is to open a mine in GrassValley because all you have to do is acquire the land & you get to do what you want? His history is one of of being kicked out of Canada for polluting the river at his last venture so my question is why trust him? Why give a person who cut & ran leaving the cleanup to the government or any body else really while he simply moves on to his next victims claiming how easy it will be because we don't care? This isn't the Wild West! We own properties in & around this long closed legacy mine site replete with toxins just below the surface that his operations will disturb then dump into Wolf creek. His plans are grandiose & failure would be catastrophic for this community & in essence he is saying to prospective investors no one would allow this but you, a pretty bold claim for an outsider to make in a takeover bid to pull off yet another speculative gamble? Don't be fooled, he is young ambitious & doesn't live in this area? He doesn't care about our wells but you should, because you & the county will be on the hook for dealing with the aftermath of a failed attempt of mining directly under habited properties & what about the people who bought land that didn't come with the mineral rights adjacent to the mine would we also be thrown under the proverbial bus by greedy corporations taking a buyout from his company to tunnel under us as well? Nobody wants that! We didn't retire to this community only to be treated this way by our county going for the gold & leaving their constituents with the shaft! He could take whatever money's he can get out of the country while saddling us with a nightmare environmental disaster to deal with while tunneling under everyone's properties all the way to Nevada city! Just say no! So what happens if they buy the mineral rights under our properties in close proximity to the mine & the mineral rights are held by a land corporation?
Tiffany	Schoepp	95959	Nevada city	16914 pasquale road	More destruction to our environment is the very last thing any of us need. Let's vote to protect our land and a healthy community. Do not reopen any local mines in Nevada county!!
Karen	Wiese	95945	Grass Valley	16062 Orchard Springs Road	My career was Staff Environmental Scientist, for the Department of Conservation's Office of Mine Reclamation, where I reviewed and wrote reclamation plans for hundreds of mines throughout California and Supervising Minerals Administrator for the Tahoe National Forest. The proposed Rise Gold Mine is a travesty to our area. The location is no place for a gold mine. The noise, toxics, traffic, threat to groundwater, and loss of our precious community are a few of the egregious effects of this proposed project. This mine, no matter how good the environmental safeguards that are put into place, will permenately destroy the surrounding environment, such as vegetation, topsoil, and visual aesthetics. What will be left is a barren wasteland. No matter how careful the revegetation plan is executed, it takes fifty to one hundred years to gain the vegetation that was lost; and that is in an enviroment of ample precipitation. I vehemently oppose this mine because of its location being too close to Grass Valley, the serious detriment to water quality of the area, the decrease already compromised air quality and the traffic. Please do not approve this poorly planned project. We, as a community have too much at stake to let a mine into our back yard.

2106

Attachment 24

Brenna	B	25811	Huntsville	131	My children's children need this protected. The natural world is I loan from our future families. Please reconsider and protect innocent pure natural wonder.
Amanda	Riley	95959	Nevada City	13730 Country Air Lane	My entire family is completely opposed to this mine!
Brittany	Roussel	95949	Grass Valley	15364 Norvin Way	My family and I are mid purchase of a property that runs along the Wolf Creek, and have well waters that come from it. This greatly will impact our access to our water system, will impact our property value, and decimate the animal sanctuary that we so enjoy. Please do not allow this to happen!
Lea	Wheatley	38571	Crossville	1512 Bowman Loop	My family has a cabin on Wolf Creek which we have enjoyed for many years. It is a place where my family from all over comes together. I am very concerned about the environmental effect this would have on this area. This mine project would be not be in the interest of the community! Please stop this movement. Thank you!
Melody	Burns	95945	Grass valley	340 pleasant st, Apt 8	My family has been here since the 1800's we dont need to open back up the mine there...
Erin	Graham	95826	Sacramento	8687 Fallbrook Way	My family has owned a cabin along wolf creek since before I was born. This will ruin our water supply and forever change my beloved family traditions.
David	Sheaffer	95835	Sacramento	5129 Corazon Court	My family has owned property off of Lime Kiln Road for over 50 years. Wolf Creek runs through the property. It has been a source of recreation and solace for generations. Please don't let the treed of a company with a poor track record for meeting their promises destroy this irreplaceable resource for the next 80 years.
Nancy	Chew	97540	Talent	40 Allen Lane	My family lives here and I don't want to expose them to health hazards.
Larry	Sprock	36574	Seminole	18540 Hunting Club Road	My family property is on Wolf Creek. We've had it since the 60s. I was born and raised in Sacramento. I spent my childhood in the hills of Grass Valley and summers enjoying Wolf Creek. Please do not do this.
Tyler	Sheaffer	95949	Grass Valley	10591 Salcido Lane	My family's property that I've been enjoying since childhood is right on Wolf Creek. We do NOT want this mine — our community doesn't need the pollution to our beautiful environment. We ask that you REJECT the proposal for this mine, and protect the property rights of the community on Wolf Creek, protect our environment for future generations, and keep Grass Valley a beautiful piece of paradise.
Penelope	Curtis	95945	Grass Valley	19486 Tiger Lily Lane	My father, before he became a professor of geology at Berkeley, for 2 ('42-'44) years was a mining engineer and geologist for Christmas Copper Mine in Arizona. After he quit, he never entered a mine again. He only had negative comments about mining! Were he here today, he would be totally opposed, as I am, to the opening of the Idaho-Maryland. He was a huge water conservationist and would be furious with any mine that would deplete the water of the area and cause environmental damage. YOU must tell Rise Gold to return to Canada yesterday!!! The recent storm showed how low our water table is. The last time we had soaking rain was 5 years (2017). Since then the ground has gotten drier and drier. The Ponderosa and oaks showed how their lack of water weakened them. They snapped and fell more than in any other storm I have experienced in the 30 plus years I have lived here. Rise Gold is planning to dewater their mine which will cause more devastation to our groundwater, thus causing deep harm to our environment. This means our land will become a tinderbox with fires starting all the time! The question for you is does Nevada County need a gold mine that feeds the greed need of Ben Mossman more than a healthy environment with the trees and less fire danger??? I IMPLORE you to NOT grant a conditional use permit! Thank you! We are now in a 1,200 year drought! Rise Gold will take very valuable water from the surrounding aquifers & drain the watershed creating massive death to the trees & plants above increasing the potential for massive wildfires!!! Be smart! STOP THIS INSANITY!!!

2107

Attachment 24

Lawrence	Geeslin	6840	New Canaan	70 Seminary St. #1	My grandson, his parents, and his in-laws live practically on top of some of these mining shafts. I have invested in gold and silver mining for many years and I would never put something like this in a suburban population area. I have not had a chance to read all of the the EIR and I am sure they are doing everything they can to mitigate the many problems that such a mine might present, but there's no way to eliminate all the problems and the potential harm they could cause. I would prefer to play it safe with the health of my beloved relatives. Gold and silver mines belong in the wilderness.
Kathryn	Chilton	95959	Nevada City	15353 N Bloomfield Rd	My great grandfather not only invested in the Mayflower Mine but at one point owned 19,000 shares of Idaho Maryland. My mother remembered visiting Nevada City while they were still being worked. For obvious reasons they stayed far away from the mines when they visited from Alameda. Those shares and those days are gone and neither Grass Valley nor Nevada City needs the downsides of mining brought back. I moved here for the beauty of the area, and active mining will only detract.
song	kowbell	95946	penn valley	po box 1594	My home on the San Juan Ridge was within the area of the mine - so our well was monitored weekly- in one week our well dropped 20 feet.Please, do not take us backwards- Deny this mine- our health and that of our water depends on it.
Ricki	Heck	95945	Grass Valley	13641 Greenhorn Road	My home sits atop the mineral rights area. I have lived on a pristine well for 40 years. I am very afraid of the impacts to my water source. Please, if approved, demand as a condition of approval that all wells within 1000 feet of the mineral rights area be tested for a base line, monitored and post a bond for a fresh, treated water supply for all potentially impacted homes. Thank you.
Jane	Rydberg	95945	Grass Valley	11288 Alpine Ln	My husband and I are against this mine. The effects it will have on neighborhoods, property values, water quality, personal wells, etc.,have been studied and shown to be detrimental to our standard of life.
Susan	Miller	95959	Nevada City	11255 Banner Mine Way	My husband and I are definitely against the reopening of the Idaho Maryland mine. Anyone supporting it will not get out vote in any elections. The residual effects of mining from long ago are still felt today, and the impact on the water table for Banner Mountain and surrounding areas could be catastrophic for those who have wells. Please think seriously about your vote on the mine. Please join with all those who wish to protect our community and quality of life by rejecting the Rise Gold proposal to re-open the Idaho-Maryland Mine. We have enough challenges with the climate and fire danger, we don't need it all exacerbated by the reopening of the mine. Please don't re-open the mine.
Jeree	Waller	95949	Grass Valley	17247 Patricia Way	My husband and I build our home here in 1980 and have lived her since. I used to play lots of tennis, almost year-round, but the air quality got so bad that I eventually had to give up this fun sport. I have mild asthma, and, as Dr. Jeff Kane stated at the meeting, even a small fraction of increased dust and air pollution will be a problem for many of us. Stop the mine! Thank you.
Barbara	Drew	95959	NEVADA CITY	11750 Trish Ct	My husband and I retired here because it is a quiet, peaceful, beautiful small town community in the foothills. The mine would ruin this by noise, air and water contamination. Please do not allow this to happen to our community!

2108

Attachment 24

Brian	Miner	95945	Grass Valley	13024 Colfax Hwy	My husband and I strongly object to the opening of the Idaho Maryland Mine. We believe that it would be detrimental to our community, environment, water supply, wildlife, real estate values, and most importantly our quality of life in this beautiful community we've called home for the last 5 years. Our home would be adversely affected by the reopening of the mine, as we would be subjected to the constant noise, pollution, and traffic the opening would generate, due to the proximity of our home in Cedar Ridge. It is no longer the 1940s when this area was a small little mountain town. It is a sprawling beautiful community and the impact of this reopening would be devastating to our community and all those that call it home. Additionally, the company proposing the reopening of the mine has a dubious and untrustworthy record. The cost to the community and the surrounding area would be too great to warrant any positive gains, and MUST NOT HAPPEN. And for the reasons stated, we vehemently object to the reopening. Thank you for your time. We hope you will do the right thing for our community and it's citizens and object to the opening and VOTE NO and urge the county board to vote NO as well.
Katherine	Schugren Meyer	95945	Grass Valley	508 Brighton St	My husband and I want our two small children to grow up in a healthy environment. Please reject this proposal.
STEPHEN	Strang	95610-0845	CITRUS HEIGHTS	8150 PHOEBE WAY	My mailing address is Citrus Heights; however, I own property in Nevada County. I respectfully urge the Board of Supervisors to reject the proposal to reopen the Idaho-Maryland Mine. This project will inflict numerous negative impacts upon Nevada County's residents, wildlife, environment, water wells and air quality. Why should we entertain this project when the only ones who will benefit are the mine owners, at the expense of the quality of life for so many.
Felicia	Gagliasso	94559	Napa	1111 Evans Ave	My mom is a resident of Grass Valley and my children and I visit often. We enjoy visiting the town and area for hiking and being closer to nature in general. Our world is dying. Mining is unbelievably bad for the environment and the future of our planet. There is zero need for this other than human greed. It will destroy the town, and the community, it will deplete the ground water and well water, and add to the destruction of the planet. Say NO to opening mines in Nevada County!
Anna	Brandysiewicz	95949	Grass valley	11975 Lodestar Drive	My property is not only my home, but also my work place. Mine will endanger our well-being. Please restore my confidence in the board of supervisors
Jeff	Hall	95945	Grass Valley	13129 Wood Rose Way	My wife and I moved here in 1997 and both of our two boys attended Union Hill School during the time when the new gym was being built and probaably stirred up mine tailings that were dumped there during the mining activity in previous times. Both of our boys were stricken with Type 1 diabetes, as did a disproportionate amount of other kids their age that attended Union Hill during the same period. No one else in either of our families in several generations have had Type 1 diabetes. I have no other explanation of how this could have happened. Do the right thing and don't let this mine reopen.
Michael	Fanucchi	95945	Grass Valley	13007 Madrona Leaf Ct	Myself and my entire family and neighborhood, strongly object to this mine oroject. We also fear that this would destroy our water wells, making our home of 45 years uninhabited and worthless.
Branden	Burch	95946	Penn Valley	14713 nutmeg court	Nature is so important to me and the idea of mining in an area already stripped dry from mining the past is disgusting to me, leave nature to its untamed beauty
Jeanene	Lenz	95959	Nevada City	190 Grove St	NCBOS, PLEASE reject the Idaho Maryland Mine proposal, and protect our community from the devastating effects such an operation would have on our community. We are already at extreme risk of continued drought and low water tables, wildfires and destruction of our forestland and biosphere. The mine reopening would only add to our already vulnerable habitat.

2109

Attachment 24

Jim	Weir	95945	Grass Valley CA	13993 Downwind Court	Neighbors ... It was my honor and privilege to see this entire scene from the inside about 30 years ago on a similar mine reopening. Your elected officials acted responsible at that time and I have everything to believe the current Board will act in accord with similar principles and honor. Nevada County Supervisor District III (retired) VP Engineering, RST Engineering (still plugging along)
Elizabeth	Schroeder	94510	Benicia	353 Canyon Ct	Nevada City is our first and second home. Please help us protect it from destruction.
Angie	Pereira	95959	Nevada City	11056 Crescent Drive	Nevada County does not need this mine. It will in fact negatively impact the community and the environment in many ways. Let's think long term and protect the place where we live.
GEORGE	LANDSBURG	95959	NEVADA CITY	511 DEAN ALLEY	Nevada County has finally, nearly recovered from the mining devastation or nearly a century ago. It does not have the water, the air, the infrastructure or any economic reason to allow new mining to debase one of the highest rated places to live in the United States.
Joanna	Gilbert	95949 9546	Grass Valley	19927 Venus Court	Nevada County has the highest low level ozone pollution on top of all the carcinogenic smoke pollution, and more. This company proposing the opening of the Idaho-Maryland Mine will greatly add to the air pollution already here. Noise pollution is also already a big problem here. There is no way the removal of all the ground water is not going to have an impact on the area. Profit for one company is not more open the Idaho-Maryland Gold Mine important than the huge area and surrounding areas this project would negatively impact. I already can not see the hills across from my hill most times because of all the smoke pollution. We need to go to zero carbon emissions, AND reduce carbon emissions! Not add a whole bunch more. NO to toxic Gold Mining practices! STOP the Idaho-Maryland Mine from reopening!
Judi	Mosley	95959	Nevada City	12549 Little Deer Creek Lane	Nevada County is steeped in mining history, but it had devastating environmental impacts. While earlier generations may not have understood the full impact of their actions, we know better now. We can honor our history by learning from our past. We owe it to future generations to protect our community. Please reject the Rise Gold proposal to reopen the Idaho-Maryland Mine.
Lucy	Guthrie	97007	Beaverton	13920 SW Linda Lane	Nevada County is such a beautiful area. It would be incredibly unwise to destroy that. A mine would wreck tourism and the local economy.
SALLEE R	ALLEN	95959	NEVADA CITY	16032 INDIAN FLAT RD	NEVADA COUNTY NO LONGER LIVES IN THE TIME OF MINES. MINING IS NOT THE FUTURE OF THIS COUNTY. IT IS NOT RELEVANT IN THE TIME OF DROUGHT AND WATER SHORTAGE, NOR IN THE TIME OF TOURISM. LARGE SCALE MINING WILL HURT THE ECONOMY, AND FURTHER DAMAGE THE ENVIRONMENT OF THE AREA.
Denise	Cruz-jimenez	95701	Alta	2351 moody ridge rd	Nevada county only stands to benefit from rejecting the mine proposal. You only have to turn to the success of the yuba river to see the how beneficial protecting the environment is in Nevada county. The mine would reduce home values, increase traffic and all around reduce the tourist appeal of Nevada county. It would inhibit the free movement of the community's working class and increase risk of fire and complications during fire season. no no no. NO MINE Businesses, homeowners, and conservationists in Nevada County AND ALL THOSE WHO WORK AND ENJOY THE BOUNTY OF THE VALLEY are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
Michele	Taylor	95945	Grass Valley	10582 Bragg Ave	Nevada County Supervisors - Please do not sell out our town for the promise of jobs from a company with a poor record. The proposed mine will add to our current levels of air and water pollution. The roads are already overburdened. Adding more truck traffic is not environmentally correct. Please find something more suitable for that property

2110

Attachment 24

patricia	dwyer	95959	nevada city	17173 sages road	nevada county supervisors, i urge you to reject the opening of the idaho maryland mine. this county is in a drought phase and has increased wild fires,all water is precious and not to be wasted. rise gold has a less than stellar past history in mining attempts. please protect our community.
Sarah	Smayda	95945	Grass Valley	15590 Poverty Pond Rd	Nevada County Supervisors, As officials elected to represent the residents of Nevada County, I hope you take the time to read the comments and listen to the voices of citizens taking time out of their days to reach out. The reopening of the Idaho-Maryland Mine by RiseGold would be reckless and irresponsible and the benefits do not outweigh the risks. There is one, single benefit of the reopening of this mine, which is the creation of more jobs in the county. The risks involve pollution to our waterways, heavy traffic impacts, dangerous risks to the laborers, the dewatering of a significant amount of groundwater, the reduction of home values in the area, et cetera. Putting our trust in this specific group, RiseGold, is extremely risky as well for obvious reasons if you looked into the history of that company. They are not from here, they do not represent our best interests, and this is exploitation of resources and the trust of a community. NO MINE! Thank you for your time.
J	Petersen	83713	Boise	1425 N Cloverdale RD, PMB 124	Nevada County's Natural beauty draws many tourists and relatives. The residents are warm, welcoming, creative, and possess an obvious entreprenurial spirit. Nevada County displays Nature at its best with its tranquility, calm, and green environment. To build a mine on such a peaceful, breath-taking piece of land would have an extremely negative impact on tourism as well as the mining would DESTROY the physical beauty, its clean, healthy air, and welcoming quiet that Nevada County has offered for generations.. We would no longer visit nor consider Nevada County a special, gorgeous get-away nor fun, relaxing retreat. The presence of The Idaho-Maryland Mine Co. will ruin this priceless treasure.
Max	Zeigler	95945	Grass Valley	13021 Somerset Dr	No amount of economic benefit (in the form of estimated new jobs) justifies the negative impact on the environment and quality of life of current residents.
Nora	Risen	95713	Colfax	1737 Deerhaven Lane	No Conditional use permit for Rise Gold! Our HEALTH before their WEALTH! WE are more valuable than GOLD!
Izabella	Suehead	95602	auburn	5285 Stanley drive	NO EXTRA POISON in our water, earth, or wildlife. Our children, grand children, and all the current/future residents of Grass Valley to be healthy.
Julianna	Mona	95602	Auburn	12241 Lakeshore S	No good can come from any agreement that holds a community hostage for 80 years. I'm a resident of Lake of the Pines and it is adherent that any private well could be threatened by this project let alone becoming an energy hog by staring the energy grid.
Ken	Rohrbach	95946	Penn Valley	18507 Songsparrow Ct	NO GOOD CAN COME FROM FOOLING WITH THE WATER TABLE ESPECIALY WITH THE CURRENT WATER SITUATION
steven	Russell	95602	Auburn	13432 Torrey Pines Drive	No mine
Ronald	Bost	95945	Grass Valley	14099 Judy Lane	NO MINE
Susan	Flynn	95945	Grass Valley	14185 Sontag Hill Rd	No mine
Dalyne	King	95945	Grass valley	10428 Robin Ave	No Mine
Dan	Carson	95949	Grass valley	16381 Gibboney lane	No mine
roberta	McRae	95949	Grass Valley	11463 ragan way	no mine
Johnathan	Simpson	95949	Grass Valley	10261 Timberland Dr	No mine
Mary	Beresky	95959	Nevada city	14695 Moonshadow dr	No mine

Attachment 24

Diannr	DiDomenico	95959	Nevada city	219 Gethsemane St	No mine
David	Taylor	95946	Penn valley	13643 wildwood heights drive	No mine
Margaret	Berliner Powers	95945	Grass Valley	12803 MacBoyle Way	NO MINE EVER, PLEASE!!!
Perissa	Busick	95959	Nevada City	p.o. box 742, 000000	NO MINE HERE. This mine benefits Rise Gold, not Nevada County. Neither our residents, nor our businesses will benefit from the destruction that this mine will cause. Our health will suffer. Our children's health will suffer. Our property values will decline. We will lose new residents who will not want to live in an environment of environmental degradation. We will lose established residents who will be forced to sell their homes for low prices because of noise and pollution. NO MINE in Nevada County. thank you. When I moved to Nevada County, forty two years ago, I assumed the destructive mining practices were a thing of the past and that we had learned from them and were now going to protect our air, water and quality of life. We now have the science to tell us how dangerous to our health gold mining is. Please vote NO. We do not want our air and water polluted for Rise Gold's profit. thank you.
Julia	Hamaker	95949	Grass Valley	11525 Betty Way	NO MINE in my backyard!!!
Kate	DiMaggio	95946	GRASS VALLEY	119 independence ave	No mine please
Christine	Nys	95945	Grass Valley	11010 Gold Hill Drive	NO Mine PLEASE!!!! Not in my backyard!!!
Robin	De Martini	95959-9674	Nevada City	12434 Silk Tassle Circle	NO MINE RENEWAL, save our water from heavy metals

Erica	Schwanke	95959	Nevada City	13447 Idaho Maryland Rd	No mine!!!!! The pollution is enough of a reason.

2112

Attachment 24

Richard	De Martini	95959-9674	Nevada City	12434 Silk Tassle Circle	NO MINE, NO POLLUTION, SAVE OUR SACRED WATER. Vote for the mine and you will be voted OUT>
Tiffany Marin	Graves	95945	Grass Valley	10815 Banner View De	No mine.
Samantha	MABIE TUINSTRA	95959	Nevada City	12240 slate creek road ne	No mine.
BILL	JACOBSON	95949-8798	Grass Valley	17069 Vintage Dr	NO MINE. NO CANADIAN GOLD SCAM!!!!
BJ	Flint	95949	Grass Valley	20902 Big Spring Dr.	No mine. Please protect our community and reject this destructive proposal.
Luke	Richter	95945	Grass Valley	14663 La Noria Ct	No mine. Protect water. Protect life.
Joseph	Padua	95946	Penn Valley	14093 JASMINE LOOP	No mines for Nevada County.
Courtney	Adams	95959	Nevada city	11023 Lowell hill rd	No mines!
Jollene	Emery-Jones	95945	Grass Valley	422 Maryland Dr	No mining
Anthony	Koenn	95959	Nevada city	17810 state hwy 20	No mining
Donna	Peizer	95945	Grass Valley	347 Horizon circle	No mining here!
Julie	Hardin	95946	Penn Valley	13312 Long Valley Road	No mone - ! Keep our county healthy and prosperous - a treasure to live in and visit...
Joy	Gray	95959	Nevada City	243 Nile St	No more mines in our towns.
Elizabeth	Swisher	94117	San Francisco Ca	547 Page St 5	No more mines!
Yanira	Martinez	95949	Grass valley	14455 ballantree ln	NO MORE MINING
Edward	Hicks	95959	Nevada City	549 N Pine St	No more mining. Protect our water
Jonathan	Rowe	95959	Nevada City	15258 Pasqule Rd	No more pollution from mining
Tracey	Timpone	95949	Grass Valley	14688 Magnolia Rd	No more pollution. No mine.
giovanni	airaghi	CA 95959	Nevada City	15566 Lewis Road	no need to burden this area and community with one more negative economical and environmental disaster ! No mine please
Caroline	Courtright	95949	Grass Valley	12025 LARKSPUR LN	No on the insanity of opening a mine in a residential area. We don't have the water, we don't have adequate roads for their industrial needs. And there is no back 40 for them to do their toxic mess without contaminating our community and our homes and our wells.
amanda	green	95949	Grass Valley	13205 mccarter way	NO ON THE MINE !!!!
Matt	Tanaka	95959	Nevada city	358 gold flat road	No on the mine!
Cassie	Robertson	95959	Nevada City	10769 Eagle Circle	No on the mine.
Kristin	Donahue	95945	GRASS VALLEY	20111 Tanglewood Road	No one wants a job working underground in a mine. How do we stop this?
Jesse	Edwards	95949	Grass Valley	12503 Loma rica #10	No thank you! Mine somewhere else!
Connie	Dorland	95959-0724	Nevada City	PO Box 724	No thanks to reopening the mine! This is a ridiculous endeavor that our BOS needs to seriously think about and deny. Do you live within the scope of the mine? I think not if you approve reopening this mine.
megan	Cosy	95959	nevada city	11781 banner mountain trail	No to noise, no to pollution, no to mining. I'm joining with my neighbors to say no to this mine. Protect our precious land!
Diane	Walker	95945	Grass Valley	10201 Ridgeview Drive	No to the Grass Valley mine. The mine will create noise, air pollution, wear and tear on our roads, increase congestion in Brunswick area, risk local wells, threatens Wolf Creek, creates more green house emissions, and will lower property values. There will be no benefit for Nevada County. NO TO THE MINE!!!
John	Dunbar	95945	Grass Valley	123, Stanford Ct.	No to the mine!
Natasha	O'Connor	95945	Grass Valley	12867 Chatsworth Ln	NO to the mine!
Donna	Whitehill	95949	Grass Valley	15887 Norvin Way	No to the mine! The risks are too high. Integrity of the company is too suspect. The rewards are being misrepresented. Say no to the pollution! And Our well water is precious. Don't mess with our water table.

2113

Attachment 24

Carol	Fenner	95949	Grass Valley	25830 Harvey Rd.	NO to this project. No to the use of our precious water (NID and ground) for it as we face continuing drought/climate change. No amount of gold can buy us the water we need for Nevada County's agriculture, fire-fighting, homes and gardens. No to defiling the land with trailings/waste. No to more CO2 emissions, noise and other pollutants. This is a totally inappropriate proposition having no benefit to the area, including "jobs" which are unhealthy and undesirable.
Marilyn	Nyborg	95945	Grass Valley	14480 Craig Lane	NO Water intensive businesses in a severe draught. Promises to set up NID for those impacted.....whose paying the monthly costs to that???? I question the recent poll that indicates we want it here.....who paid for it? What were the questions asked? WHO was interviewed? and what were they told??
Gaylene	Ramsey	95945	Grass Valley	13579 Loma Rica Dr	No water, I'm going to lose my property.
Diane	Ryles	95722	Meadow Vista	16431 Winchester club dr	No way
Barbara	Galindo	95959	Nevada City	12627 Sleepy Hollow Wy	NO WAY SHOULD THIS HAPPEN We have lived here for 60 years and we do not want the environmental impact of this disastrous mining waste and traffic We are a quiet community and we want to keep it that way No way..not here
Sharon	Hollis	95959	Nevada City	14495 Echo Ridge Drive	No way. Don't do it. Don't through Nevada County residents under the bus for false promises and profits. We are still cleaning up from past environmental disasters from mining.
Tammi	Taber	95945	Grass Valley	11141 Alpine Ln	No! No mine. No destroying our water sources with mine poisons!
Lori	Perry	95945	Grass Valley	1549 Redwood Dr.	NO! Just a BIG no to the opening of this mine.
Janah	Campbell	95959	Nevada Ctiy	320 Broad St	NO!!!!
Roberta	Hues	95959	Nevada City	10453 Park Ave. Ext.	No, No, No mine. We do not need the pollution and the corruption of this Corporation. Look at their history.
Sally	Mitchell	95949	Grass Valley	10016 e lime kiln	NO, NO, NO. We don't want this opened, it will ruin property values and be an environmental disaster, not to mention huge amounts of water during a DROUGHT!
Lisa	Lehr	95949	Grass Valley	10197 Woodleaf Circle	Nobody who lives here wants this.
Joan	Robertson	95945	Grass Valley	13287 Rattlesnake Road	Noise, pollution, and environmental impact
Redger	Parker	95959	Nevada City	12841 Big Blue Road	Nooooo
Eric	Jorgensen	95959	Nevada City	11065 Peaceful Valley Rd	Not again. Another destructive proposal for urban mining in Nevada County. How about putting residents, water quality, energy fossil fuel requirements and transportation disruption ahead of outside mining interests. Protect our community once and for ever against these outside interest who want to mine our community.
Carol	Rossi	95949	Grass Valley	20689 Jaguar Court	Not beneficial or add to our community in any kind of positive way
wendy	davis	95945	Grass Valley	11883 Nancy Lane	Not in favor of mining reopening here in Nevada County
Cathleen	Bazan	95949	Grass valley	11419 Alta Sierra dr	Not worth it
Pamela	Shyne	95959	Nevada City	12433 Summit Ridge Drive	Nothing about opening this mine makes sense to me. It's a disaster waiting to happen. It will severely down grade our quality of life in the foothills. The safe evacuation in an emergency would not be possible. What has happened to common sense in planning?
Ryan	Menig	95945	Grass Valley	546 Glenwood Rd	Nothing good will come from opening this mine. Mark my word

2114

Attachment 24

Lisa	Rowe	95945	Grass Valley	126 Jan Rd	Now is not the time to jeopardize our tourism and property values. A traffic and noise impact, as well as the potential for long term risks to water and air, helps no local business, employees or residents. Just the Mine share holders are benefitting. As a long time resident and homeowner in downtown Grass Valley, I appeal to your wisdom and love of this community. Do not approve the re-opening of the Idaho Maryland Mine. The mine would have devastating impacts on the tourism and property values of Grass Valley and Nevada City. The noise, traffic and possible water issues are simply not worth it. Also, Rise Gold has a terrible track record with environmental spills and not cleaning up. Thank you for considering my concerns. A multigenerational local.
Crystal	Helbig	95959	Nevada City	514 Nursery Street	Now is the time to stop climate and community destroying ventures like this, not start them.
Nicholas	Vaughan	95945	Grass Valley	10960 Cedar Way	On the use of water alone, this should be a nonissue. We are a community, not a profit opportunity.
Logan	Hayes	95835	Sacramento	11 Suffolk Hills Place	Once you let a mine into your county, youll never be able to get rid of them. Theyll have a hold over you that'll feel like extortion. You cant go back on a mistake like this. Why now, would you believe that a mining company has Nevada county's interests in mind? They only care about money for themselves, and in a lot of ways are legally demanded to do so once the mine exists. Don't let them get their foot in the door.
Linn	Aosjia	95945	Grass Valley	13287 Grizzly Trl	One does not have to look too far afield to know the research on mining and impact to the surrounding environment. Please consider your integrity over bribes, and make a stand for our towns' futures. The mine can make money from tours. What have you promised already? Why is this mine even possible? Stop. Now.
Joan	Pancharian	95949	Grass Valley	20458 Tiger Tail Rd	One HUGE negative of operating the mine would be the depleting of local water resources. ESPECIALLY in drought times allowing this to happen makes no sense!
Jan	Brenner	95959	Nevada City	11865 Black Oak Drive	Opening the mine will be toxic to our community and ruin our water supply.
William	Maas	95959	Nevada City	16131 Countrywood Ln.	Opening the mine would be an ecological disaster!
Amy	Harper	95959	Nevada City	12543 Mindy Lane	Opening this mine again is the opposite of progress - it is moving in the wrong direction and making the mistakes of the past! We have already learned from history the terrible impact these mines have on air, water and wildlife. We need to REDUCE greenhouse gas emissions, not create more. This mine is destructive and we DO NOT NEED this is our community.
Suzan	Smith	95945-9519	GRASS VALLEY	12594 HIGH SIERRA WAY	Opening this mine will ruin the quality of this beautiful county. Please do not allow this to happen to our community.
Jeramy	Hale	95946	Penn Valley	11888 Elnora Ct	Other than the fact that greed exists, I am amazed this mining is even under consideration. The degradation to our lives is a given. Mining is a filthy, noisy earth disruption all for the greed of a few. The damage to the years-old "aquafer" the old tunnels have become is irreparable.
Lance	Goddard	95945-9628	Grass Valley	14165 Talking Pines Road	Our air is already contaminated with effluent from Sacramento and the valley. We wish to breathe pure air and also avoid the other obvious downside that this boondoggle proposal is being pushed.
Bekah	Benedict	95945	Grass Valley	130 E Empire St	Our air quality is already terrible, please don't add to our pollution and destroy our beautiful mountain town!!
Joni	Brantley	CA 95959	Nevada City	11750 Deer Park Dr	Our beautiful community is at risk! Having a working gold mine in the heart of Grass Valley would be devastating to our current lifestyle. Tourism would surely suffer. Who would want to travel here when they have to dodge a plethora of dump truck rumbling along our roads. Air quality is already at risk in our area from wildfires and smog from the valley. Imagine the extra pollution from all those vehicles. When the mines are pumped of their water cave ins will occur and people will also be at risk of losing their wells. Our quiet, quaint community lifestyle will be in jeopardy and I encourage a no vote on a mine operation in our town.

2115

Attachment 24

Beth	Moore	95945	Grass Valley	535 Mill St	Our business is all about supporting our community. The mine clearly is not. Please join us in opposing this poorly planned mine, run by folks who've already been convicted for pillaging their prior victim communities. Don't let ours be next!
Aaron	Corsini	95838	Sacramento	1981 roanoke ave	Our collective focus must be on healing the land and the people living here and the relation between land and people, not extracting our beautiful earth's natural resources to "boost our economy". Choosing to mine is a short term rise in the economy but in future generations leave this sacred land stripped of life and richness. We together United, the people who care for this land and the waters will not allow this. I am so grateful for every single one of you who helped create this movement to rise and speak for our cause! I am so grateful! The mine will only bring suffering to the workers, the animals, the rivers, the people living here.
susan	ferrier	95945	grass valley	110 carpenter street	Our community cannot afford the water, environmental and traffic costs of this project.
George	Crews	95949	Grass Valley	10148 Omega Way	Our community does not have the infrastructure to handle the load that this industry will put on our resources. We need to look at the real externalities as far as what this is going to cost our community. I believe that when we take all of them into account this quickly becomes a bad deal for us. While yes this may create some jobs and revenue for the area, there are so many other avenue we can take that will not harm is in the process.
Annie	Ballard	96161	Truckee	16490 Robertson Rd	Our community does not need this mine to stimulate the economy. What we need desperately--our number one priority--is workforce housing and affordable housing, so that those who want to take the jobs that already exist are able to do so. Please say no to the false "economic stimulus" propaganda being touted by this reckless company.
April	Minick	95959	Nevada City	105 Perseverance Mine Ct	Our community is already busting at the seams. It's over populated. Housing is an issue as well as our over crowded roads. The small town feel of Grass Valley and Nevada City is vanishing pretty quickly. It's awful to watch being I'm a native!
Joshua	Goldstein	95959	Nevada City	11911 Whisperwood Way	Our community will not benefit from the mine reopening. The negatives greatly outweigh the positives. It seems like this should be a no brainer if we are thinking about what is best for our community as a whole.
Daniel	King	95945	Grass Valley	10061 Mills Rd	Our economy does not need an artificial boost from resource extraction. Water is already a scarce resource and tenuous issue, we cannot risk further risk to our agriculture, environment, and future generations.
Melissa	Craven	95959	Nevada city	10152 bitney springs road	Our family and so many neighbors reject the value of building a local mine. The environmental impacts on our beautiful land and water resources in this record drought make it unacceptable. Please please reject it so we can drink great water and love where we live.
Sandra	Scott	95959	Nevada City	PO Box 1446	Our family has lived in Nevada County for almost forty years. In that time we've seen several attempts to reopen mines in now residential neighborhoods. As a former school board member I've experienced the dewatering of wells in our community which sickened several families and forced the elementary school to shut down its drinking fountains. The cost to the health of our families and our well established way of life is far too high to allow this mine to open. Please act on behalf of the health and welfare of our community. Our children's future in this county depend on your decision.
Misty	Conklin	95959	Nevada City	11099 Success Cross Rd.	Our gold country history has shown us the devastation mining can have on our health, environment and quality of life. I urge the board of supervisors to choose to protect our community and reject the mine proposal.
Howard	Hersh	Ca 95959	Nevada City	13079 Daisy Blue Mine Road	Our greatest asset is our environment. Save Nevada County for the present and future generations. NO MINES!
Daniel	Kennerson	95977	Smartsville	8367 Smartville Road	Our historic town should not even consider allowing itself to be taken advantage of by this mines proposal. So many things wrong with it, it's ridiculous, and this is coming from someone who owned a mining company and believes we should be using mining to create good jobs here. This is not the way to do it.
Carol	Anderson	95945	Grass Valley	15285 Panorama Drive	Our household vehemently opposes the opening and operations of Idaho-Maryland Mine as it poses serious environmental risks that no one in our community can afford to take.
Lara	Love	95945	Grass valley	14965 honey hollow rd	Our land , water and peace are not able to be bought.
Steven	Ruckels	95945	Grass Valley	13060 Somerset Drive	Our quality of life and the future of our community are far more important than the potential profits this foreign corporation may realize.

2116

Attachment 24

Judy	Miner	95944	Grass Valley	13024 Colfax Hwy	Our quality of life, environment, water sources, and property values are at grave risk. I oppose the opening of the mine.
Jennifer	Long	95959	Nevada City	16665 Eden Ranch Road	Our tourist economy and water supplies are under threat - do not let "Rise Gold" and Ben Mossman re-open the Idaho Maryland Mine. I have lived in the area for over 45 years, and worked for the county library for 14 years.
Barbara	Heinemann	95945	Grass Valley	961 Laurel Lane	Our town does not need more traffic up here and our water being polluted into our creeks. Also the mind being reopened can cause sink holes down the road. There filtration system is long term and will not clean the water from the poisons.
Christina	Reed	95959	Nevada city	12102 red gate rd	Our water is worth more than gold to the people who live here. Our children's lives are worth more than 80 years of this crap!
Aurora Denita	Packard	95945	Grass Valley	420 Kate Hayes St.	Our water, our air, our terrain, and the healthy future of our community depend on your actions. With the high rates of cancer and chronic health conditions that have been scientifically proven to relate to historic mining waste already here, we cannot risk our lives any further for these destructive and toxic mining practices. As well, we already are honeycombed by mining tunnels beneath our feet. Rise Gold Mine will create more destruction leading to catastrophic sinkholes and other irreversible damage. We know you care about your constituents. We did not ask for this mine. Please help us stop it for good, and for the future of our community.
CHRISTY	CARRUTHERS	95945	Grass Valley	12876 Lost Lake Road	Our well are already running on empty-without water our homes are worthless and we will be financially devastated. Rise Gold has made it clear that they will assume NO responsibility for the vast volume of water they plan to pump out of the old Idaho-Maryland mine. We have no way to prove that their dewatering of our wells is caused by their pumping. Lost Lake is already a Superfund Cleanup Site from the catastrophe at the old Banner Lava Cap Mine. Mercury and other toxic chemicals have made our lake a dangerous place where we can no longer enjoy this special place. We are all community and need to have our community and families put first. Please vote your conscience and keep our community a beautiful and peaceful place.
E Pierce	Stewart Jr	95949	Grass Valley	17980 Remle Ln	Our well is only one quart a minute at the end of summer. We can't afford to lose any part of that and de-watering the Idaho-Maryland mine may eliminate that amount. We live too far from the NID supply to connect.
Wendy	Keethe	95959	Nevada City	11089 Will O Wisp Ct	Outrageous to consider doing this in our community. How many lawsuits will result? How many of you will remain in your positions if you vote for the poisoning and destruction of our community? NO MINE
Lyn	Coring	95602	Auburn	14131 Torrey Pines Dr	Over the last seven decades Grass Valley has evolved into a delightful semi-rural/urban community which is in keeping with the local environment and aesthetic, and has gained a reputation as a go to destination to experience the customs, beauty and charm of the Sierra Mountains foothills. A fully functioning mining operation in the midst of this community would forever negatively impact the charm and resort destination appeal that is significantly the heart of the community. Additionally, the irreversibly damaging effect on the environment, infrastructure, water, air quality, real estate values, and quality of life is incalculable. The long term health and well being of the community of Grass Valley should not be ignored and sacrificed in the hopes of any potential for short term financial gain. Approval of an active gold mining venture would cast a huge shadow over the landscape and usher in the ultimate demise of the charming community that it is today. Please vote NO to this destructive proposal.
Joseph	Ciucci	95602	Auburn	23085 Broadmoor Ct.	Past behavior is a prime way to predict the future. There is a superfund-level of toxic waste currently on the site. Until this is cleaned up, there should be no further consideration of mining activity there. If you read the proposed staffing on the Rise Gold website, about half will be junior positions, paying about half of the normal wages. There is no doubt that there will be increased economic activity from wage earners spending here. the key question to ask: What will be the total cost of these wages?

2117

Attachment 24

Kelli	Reese	95975	Rough And Ready	13672 Quail Aly	People here in Nevada County are coming together to protect this amazing place we have the privilege to reside, work, and play. The Rise Good proposal to re-open the Idaho-Maryland Mine is not aligned with the Nevada County of today. I urge you to reject this destructive proposal and instead protect our community for today and the future. Thank you.
Joan	Goddard	95945	Grass Valley	14165 Talking Pines	People move to this community because it is so beautiful. The mine will ruin this beauty - the water, the air, the traffic, the noise - for years to come. There is a questionable reputation to this company wanting to open the mine. Why would we put our community in their hands? Please protect our community from the potential devastating consequences from re-opening the Idaho-Maryland Mine. Our natural resources and quality of life are depending upon you!
Donald	Lewis	95949	Grass valley	17569 Alexandra way	Please ,,, No Mine...
Yvonne	Henderson	95959	Nevada City	PO Box 374	Please adopt a common sense attitude! The last thing this county needs is an avoidable environmental assault, increased traffic on narrow already dangerous highways, or more humans to house in an already challenged housing market. And, lastly, a company with a proven poor track record should NOT be entertained as a viable business option for a delicate ecosystem. Please, learn from the past, don't repeat it.
Rebecca	Vandiver	95946	Penn Valley	13004 Golden Trout Way	Please ask this developer if he will act as he has done in the past, abandoning the project and leaving a trail of destruction. And, if he says no, ask for specifics about how there will be a different result this time No Mine!
Lynda	Duncan	95841	Sacramento	4776 Clothier Way	Please be aware that there are MANY more implications of trying to re-open this mine! Don't be shortsighted & selfishly adversely impact others! Plus these are only TEMPORARY positions!
Charles	Youngflesh	95959	Nevada City	14101 Marigold Way	Please choose environment over profits
Nancy	McAtee	95945	Grass Valley	14581 Anchor Lane	Please choose people and community over money! The people will be losing so much if you allow this company access. We have lived here in this community and had our home near the mine sit for over 30 years. We have contributed to this community in many ways. And now we are faced with this unethical company coming in and taking away our peace and quiet, our water, our home that we have invested in to supply us with our retirement income. This is NOT community love and kindness. Please choose us the faithful and loyal citizens of this community and not money hungry companies like RISE! They will ruin our neighborhood. They say he will be doing our community a favor by adding jobs but right now our community is hurting from lack of workers to support the businesses we have. Please vote NO on RISE coming into our area! I rust you and that you will support the people of this community over a company. With Grateful appreciation. Please DO NOT choose money over people! We moved to this area because of the peace and natural beauty and bought our home here and raised our kids just miles from the mine site. And now with the proposed access to reopen the mine we will lose so much that cannot be replaced. Our quiet, our peaceful surroundings, low traffic and low noise levels, and our water! We will be put into positions of stress due to this and our peaceful forest environment traded for one of noise, pollution, stress. All for money. Please DO NOT allow this company in! They are not reputable, once allowed in we will be stuck with the negative consequences. Vote against Rise Gold coming into our area . Thank you and my grandchildren thank you too!!
andrew	bosher	95945	Grass Valley	549 Glenwood road	Please conserve our water. Please do not allow continues pollution of our air.

2118

Attachment 24

Jade	Mariconi	95945	Grass Valley	14689 Towle Ln	Please consider our children and grandchildren's health above wealth
Jessica	Tucker	95945-4318	Grass Valley	760 S Auburn St	Please consider rejecting this proposal and protect our fommy!
Haley	Schreier	95945	Grass Valley	13871 Greenhaven Ln	Please consider the holistic health of your community members as well as the land we call home in the foothills when making this decision. This mine has the potential to irreparably damage the environment and quality of life in Nevada County. And please, for the love of God, think of clean water and how deeply this state needs to maintain access to unpolluted water sources as we approach yet another drought-ladened summer. Thank you for taking the time to read my sincere sentiments. Best and God bless
Joshua	Wise	95945	Grass Valley	13016 Somerset Dr	Please consider the longterm negative environmental impact of re-opening this mine. This will negatively impact our neighborhoods, community, water, air and quality of life. Please consider your legacy. Please consider our children. This is not what is best for the community.
Rosemary	Hill	95945-7511	Grass Valley	168 W Empire St	Please consider the present and future lives of our city over profits.
Charly	Price	95959	Nevada City	12655 Little Deer Creek Lane	Please consider the total effect of all the negative impacts on our counties desirability. And the total those negative impacts will have on every aspect of business and home life in our county.
Angel	Fredricks	95945	Grass Valley	258 Cypress Hill Dr	Please consider, this is a horrifying prospect. Prospect. It could go so wrong, and you can almost guarantee it will. Will. This is not what we need. It will destroy this town, this county. Personally do not trust the company that is prospecting to prospect and very likely contaminate the environment here. Rob our citizens of water and peace and quiet. And then what? What? You're sorry? Nothing would be done if and when things go wrong. Please please please consider the people that live here and what we have before selling out. Thank you
J	Murphy	95949	Grass valley	10126 Alta Sierra dr	Please do not allow any new mines. Our resources are very limited. No good can come from a new mine in Nevada County. NO MINE
Adriana	Jimerfield	95945	Grass valley	265 Sutton Way apt 412	Please do not allow our small fragile community be destroyed fo the inordinate desire for money. Money is not the answer to anything. And can ruin much. No. Our environment is very compromised already. Stop raping the beautiful land please
Sue	Nepstead	95945	Grass Valley	661 Morgan Ranch Drive	Please do not allow Rise Gold to come to Grass Valley and mine...or do anything else, here.
Tom	Behlmer	95945	Grass Valley	12448 Old Mine Rd	Please do not allow Rise Gold to reopen the mine
Stefanie	Martinez	95945	Grass Valley	10919 Drift Aly	Please do not allow Rise Gold to reopen the mine. I'm deeply concerned for the negative impacts it will cause to the health and well-being of our local environment and community, and the undeniable pollution and destruction it will cause for not only our current citizens and ecosystems, but for our future generations as well. It is imperative that we learn from the past and take a stand to protect our homes and our future. We are living in a critical time in history where it is imperative to steer all efforts and decisions towards an encompassing healthier outcome of our environment.
Kelly	Alves	95945	Grass Valley	16889 Pine Peak Road	Please do not allow the mind to re-open! Or wells will be contaminated traffic will be increased the air quality will be poor and what will we do if our wells become contaminated who will be responsible please do not let this happen
Maryanne	Haberle	95949	Grass Valley	13978 Beyers Lane	Please do not allow the mine project to go through Preserve the health of our land, water, air and community
Daniel	Trautman	95945	Grass valley	119 Eureka St	Please do not allow the re-opening of the Idaho Maryland mine. The negative impacts are far greater that any benefits prposed.
Gale	Peach	95959	Nevada City	14242 Derp Creek Rd	Please do not allow the re-opening of the mine!

2119

Attachment 24

Deanna	Bratt	95945	Grass Valley	14368 Mill Creek Lane	Please do not allow them to send-water the mine. It is beyond insanity to think of doing any such thing in the current climate crisis and high fire risk area in which we are all living. We need our well water to sustain and protect us. Do not approve the Idaho-Maryland mine proposal, I beg you and so do my neighbors. Thank you so much for your time.
Gabriel	Maloney	95945	Grass Valley	14276 Mill Creek Ln	Please do not allow this irresponsible company come in and further damage our fragile environment. Nevada county has had more than enough mining for the next few thousand years. Our water system is an important and precious resource. Please reject this destructive proposal and protect our environment.
Lois	Aswell	95946	Penn Valley	13930 Lodgepole Court	Please do not allow this mine to move forward...too risky for our community & environment.
Thomas	Dykstra	95959-2223	NEVADA CITY	116 Orchard Street	Please do not allow this mine! Thankyou.
Jan	Prins	95959	Nevada City	18555 Pebble Place	Please do not allow this mine. Not what is needed here. Also not why we moved here.
Dianne	Anderson	95946	Penn Valley	13821 Lake Wildwood Dr	Please do not approve reopening this mine! Just the thought of all that possibly tainted water pouring down Wolf Creek is sickening. I've been a volunteer on Wolf Creek for 8 years now. It's a beautiful creek with so many wonderful access areas and a brand new trail. It needs to be protected not used as a water waste dump for a gold hungry foreign corporation. I can not believe you are even considering this. Please vote no!
Beverly	Shefstad	95959	Nevada City	14131 Sierra Woodlands Ct	PLEASE do NOT approve the mine. The vast majority of citizens who live near the proposed mine are against it. People live in this area to enjoy nature and a clean environment. Thanks
Donna	Donna	95949	Grass Valley	17151 dog bar rd	Please do not approve the mine. Our air and water resources are vital to our quality of life. That is one of reasons we live here.
Suzan	Minshall	95949	Grass Valley	11880 Scotts Drive	Please do NOT approve the re-opening of the Idaho Maryland mine. The environmental impact will be devastating! The amount of water use alone should be reason enough to deny it's operation. We are in an historic drought of epic proportion with no end it sight. ANY entity that will use massive amounts of water is a serious threat to our water supply and would be irresponsible to approve. I implore you to do your job and protect your community. Do NOT put short term profits above our basic quality of life, and property values. We will hold you responsible should our wells run dry and/or water be contaminated.
Stephanie	Steyer	95975	Rough and Ready	13672 Quail Alley	Please do NOT approve the reopening of the Idaho-Maryland mine. The quality of life in this beautiful area is too valuable compared to the minimal amount of jobs the Rise Gold company is promising. We pride ourselves in our small town quality. The incredible beauty of this community is too important and irreplaceable. Don't allow this company to destroy our towns! Thank you for considering all sides equally. Let's protect our lands and this wonderful community for future generations as well. What we do today matters!
Jana	Lombardo	95945	Grass valley	128 wood st	Please do not approve this mine!
Heidi	Klopfer	95949	Grass Valley	11545 Polaris Dr	Please do not approve this project. It will destroy our community.
Diana	Abrell	95959	Nevada City	12319 Hillcrest Dr.	Please do not authorize this project for a multitude of reasons.
Setsuko	Poland	95945	Grass Valley	12321 Old Stagecoach Road	Please do not destroy our quality of life in Grass Valley.
Lalita	Gonzalez	95959	Nevada City	13437 Grunt Hill Rd	Please do not do this. Water is sacred and is everyone's right to have clean water. For our children and our future.
Marian	Dockham	95945	Grass Valley	11612 Alta Vista Ave	Please do not endorse this mine project..I can not imagine, well actually I can...envision the trucks on the roads encountering them, their wear and tear.The noise from mining, the pollution, the impact on are already fragile drought water. It is a bad idea. Say NO vote NO..
Crystal	Lanier	95945	Grass Valley	15411 Lakeview Dr	Please do not give into pressure by developers who do not even live here. This is our home. They will promise protections they cannot guarantee, that others like them have broken before. Please do not believe them. There are other ways to bring jobs into the area.

2120

Attachment 24

Toni	Mann	95949	Grass Valley	12714 Friar Tuck Rd	Please do not let the residents of Grass Valley down by allowing mining operations in our county. Please do not destroy our quality of life by agreeing to fill our air with pollutants and our water with toxins. Is this what you really want your legacy to be? Do you really want to be remembered as the Board of Supervisors that allowed our community to suffer because you allowed such a mismanaged corporation as Rise Gold to entice you with false information? Please protect our community from the harm that Rise Gold and other similar future mining operations would cause.
Cynthia	Sprock	36574	Seminole	18540 Hunting Club Road	Please do not let them destroy a place I have enjoyed with my husband's family.
Diana L	Caselas	95602	Auburn	11734 Skylark Ct	Please do not open the mine a spoil our beautiful community.
Linda	Lanzoni	95945	Grass Valley	14149 Christopher Robin Way	Please do not pass this atrocity! If you don't live nearby, you don't care so much, though you WILL be negatively affected... if you do live nearby, you understand fully why this mine just cannot reopen. Save our beautiful county and my beautiful neighborhood.
Melissa	Neville	95945	Grass Valley	12835 Rodriguez court	Please do not pollute our community with industrial mining. We strongly oppose this operation.
Sally	Patrick	95949	Grass Valley	11101 Oak Drive	Please do not put short term profits for a very few ahead of sane, researched environmental recommendations
Erin	Vaught	95945	Grass Valley	653 Le Duc Street	Please do not re open the mine. Our health would be in jeopardy.
Kelly	Beach	95713	Colfax	21 sunset ave	Please do not re start the mine!
TIMMONS	Dyan	95945	Grass Valley	11970 Crecent dr	Please do not reopen that mine. The noise and water contamination and the loss in property values is not worth it
Florence	Themelis	95959	Nevada City	11022 Banner Mine Way	Please do not re-open the Idaho-Maryland Mine. Do not let them dig under my property 24/7 so I never get to sleep again. Do not let them exploit my property I paid for so they can destroy my quality of life. Do not let them waste trillions of gallons of water in the middle of mega droughts which will keep getting worse. Do not let them pollute our rivers which thousands of people enjoy swimming in every year. Do not let them destroy our environment, we will never be able to undo their pollution and destruction. Do not let a shady company threaten our beautiful community. Thank you.
Kathleen	Van Wagner	95959	Nevada City	19832 Rector Rd.	Please do not re-open the Idaho-Maryland mine. I care about this county and believe it will be a detriment to our people and land here
Paula	Hood	95945	Grass Valley, CA	21358 Oak Ridge Drive	Please do not re-open the mine. It will cause an environmental disaster in our community. Also, there is not enough rental housing here currently for local people let alone for mine employees that will be coming into the community.
Jonathan	Peck	95945	Grass Valley	11159 Alpine Lane	Please do not ruin our community with this mine's pollution, noise, dust, excessive water use, and profits for a rip-off Canadian company.
Judy	Klopfer	95949	Grass Valley	17155 Oscar Dr	Please do not ruin our health, steal our water and ruin our beautiful community with this disgusting mine!
Susan	Greenawald	95945	Grass Valley	19111 Louis Rd	Please do not support this enterprise that is not healthy for the future economic and environmental futures of our county.
Patti	Mahaffey	95959	NEVADA CITY	104 Gold Nugget Court	Please do reopen the Idaho Maryland Mine. Please protect our community.
Martha	Turner	95945	Grass Valley	10860 Dolores Drive	Please do the right thing and NOT allow this mine to re-open. It is my hope that we can learn from the past and recognize the harm that mining did to the environment (and the indigenous people) and not be blinded by gold fever again! Please DO NOT let this industrial enterprise be allowed to damage the quality of life in our beloved community.
Theresa	Sullivan	95945	Grass valley	11699 Alta Vista avenue	Please do the right thing for our community and reject the re-opening of the Idaho-Maryland mine!! Potential wildfires are
Walter	Strojny	95945	Grass Valley	10877 Terrace Pine Ct	Please don not allow this mine to happen.
Katharine	Popenuk	95945	Grass Valley	10728 Footwall Dr	Please don't allow our beautiful, peaceful community be disrupted, polluted, and trashed in ways we may not even anticipate in the interests of and potential gains of entities who are not even apart of this community.
Kathleen	Fraga	95945	Grass Valley	171 Ryans Lane	Please don't allow the reopening of the Idaho Maryland mine!
Deb	Foxen	95945	Grass Valley	16081 Rattlesnake Rd	Please don't allow them to open the mine. Besides pollution the noise and vibration 24/7 is unheard of. Please say no. Save our

2121

Attachment 24

Matthew	Gottschalk	95949	Grass Valley	12645 la Barr Meadows rd	Please don't allow this mine to reopen. We already are gambling the future for our children so why this? Please listen to the science of what clear and present consequences will be if this happens. DON'T listen to corporate raiders driven by greed and profit lust. Rise gold has a proven history of selling snake oil and destroying communities.
Beth	Divecchio	95945	Grass Valley	12231 Sunset Ave.	Please don't allow this mine.
Vicki	Anastasion	95945	Grass Valley	624 Kate Hayes St	Please don't bring this added burden to our already fragile infrastructure and community.
Brett	McWilliams	95959	Nevada City	11677 Marjon dr.	Please don't destroy our beautiful towns of Nevada City and Grass Valley with this mining. It's an archaic practice. We all know better. This is a practice of our past, not our future. We know better than to do this!I Please dont ruin our beautiful community!
Carlymae	Plourde	95949	Grass valley	15591 clover valley rd	Please don't do it. Keep our town beautiful and not ruined.
Sierra	Lesiow webb	95959	Nevada city	11175 lone lobo trail	Please don't do this.
Jeffrey	Rassier	95945	Grass valley	14078 greenhorn rd	Please don't let the mine ruin the quality of life for me and my neighbors. You know it's a bad idea, you know it will destroy the lives of people living near the mine. Do not let this happen.
Grace	Christal	95945	Grass Valley	637 Kate Hayes St	Please don't let this go through!!!
Audrey	Trauntvein	95959	Nevada City	13016 Morro Drive	PLEASE DON'T LET THIS HAPPEN!!!
Denise	Martin	95945	Grass valley	113 lidster ave	Please don't re open the mine!
Jay	Worden	95602	Auburn	11150 Bobolink Way	Please don't reopen the mine.
Rhonda	Gaffney	95959	Nevada City	13144 Idaho Maryland Rd	Please don't sell our beautiful town to a corporation that will destroy it. This mine is only about money, not the people that live in this town. I'm a property owner on a well and strongly opposes this mine.
Tyler	Olive	95945	Grass valley	11383 slate creek rd	Please don't sell our soul to the devil...our sweet foothills town is worth preserving. Please vote against money over health and happiness
Elisabeth	Laraia	95747	Roseville	1032 Oakbriar Cir	Please don't take us back to the past. This region is such a gem and it deserves to remain intact.
Julian	Crouch	95949	Grass Valley	15450 S Ponderosa Way	Please done ruin our water!
Patricia	Lolli	95946	Penn Valley	PO Box 1046	Please don't destroy our future for profits!
William	Geiger	95959	Nevada City	11665 Northview Drive	Please don't do this to our beautiful neighborhood. You should be serving your community, not helping a company make a profit that will not benefit us.
William	Waddup	95949	Grass Valley	101 W McKnight Way, STE B, 179	Please don't drain what little water we have. I want my children to grow up here
Chelsea	Waddup	95949	Grass Valley	101 West McKnight Way	Please don't let this happen to our water and town, there's so many better options for 50m a year for our economy
Emily	Phillips	95945	GRASS VALLEY	10519 C ST	Please don't let this toxic mine be a part of our community!
Anna	Touchstone	95959	Nevada City	11568 Rocker Rd	Please invest in green jobs instead.
Norema	Strongin	95959	Nevada City	12567 Echo Dr	Please investigate this application thoroughly and you will see that it would be very detrimental to our area. Make an independent investigation. Don't trust Rise Gold's representations. This Company is not to be trusted. We don't have any unemployed miners or mine managers! The jobs created will not give local people jobs! It will be detrimental to our clean air, water usage, noise pollution, road safety etc, etc. Deny this request.
Rebecca	Vandegrift	95949	Grass Valley	16249 Thornberry Way	Please keep our community safe for constituents and for our future generations. Our land is our biggest investment and keeping it healthy will insure its recurring value.
Osher	Levi	95959	Nevada City	12559 Sneath Clay Rd	Please let's move forward with clean energy and being good stewards of our land. As oppose to moving backwards.
Amber	Shook	95945	Grass Valley	300 Glenbrook Drive	Please listen to the community- we do not want the mine to open. Their promises are empty and their past destruction other places have proved that they cannot uphold not polluting our water, air and unknown other destruction. I say no to the mine!! Hope you will speak for us.

2122

Attachment 24

Kathleen	Tuttle	95946-9684	PENN VALLEY	13387 DRIFTWOOD CT	Please listen to the people. The damage to our environment will be irreversible.
April	Anderson	95959	Nevada City	14289 North Bloomfield rd	Please listen to your community and stop this mine. Our water alone should be a reason to not move forward with this. We are in the worst drought in decades and you cannot tell me that this won't effect the residents. Let's all of the environmental nonprofits have a deep dive into the plan and see if they come out of it in support, let them weigh in publicly. Let the people choose if they want this mine. It's our community and it doesn't belong to a non local entity that just wants to profit at any expense.
Cristiana	Kelly	95959	Nevada City	11658 Northview Drive	Please LISTEN to your community! Please DO NOT approve the Mine. Don't choose money over our way of life.
Kymber	Forslund	95945	Grass Valley	265 Sutton Way Apt 821	Please listen to your residents and businesses. We do NOT want the mine, no matter how much Rise Gold tries to pretend we do. It will not help our community. It will lessen the quality of life in our community, not to mention all the environmental damage that could occur. I certainly do not want trucks running day and night, adding to our air and noise pollution. Please reject this destructive proposal and instead protect our community.
Patricia	Murphy-Hupp	95949	Grass valley	12831 Allison ranch rd	Please no mine in Nevada co
Gail	Begany	95945	Grass Valley	210 Sutton Way	Please no mine! Especially with a drought in sight. Again. Please no mine in Nevada Co!
Trinie	Dalton	95945	Grass Valley	235 Harper St	Please NO mine! We relocated here to build and raise a family thinking that mining history was over. We bought a house, and love our community which is totally nature based. Mining will destroy with pollution regardless of the mining interests' corrupt report. It will destroy real estate values and residents will flee to live elsewhere. It may create a few new jobs, but there are so many other ways to make new jobs that are not self-destructive. United States has a long history of industry laying waste to small towns, and we are working hard here to find new paths so this can be a part of California that is rich in culture and wilderness advocacy. This will wipe that cultural collateral completely off the table and once again ruin land that residents are working hard to reform and rehab. NO mine!! No mine! Absolutely horrible idea in every way.
Pamela	Halloran	95946	Penn Valley	13700 Falling Leaf Ln	Please no mine, protect our water and community
Patricia	Hill	89511	Reno	302 E Jeffrey Pine Rd	Please pay closer attention to water quality, air pollution, and increased traffic rather than short-term gain from a "dirty" business.
Sheila	Vreeburg	95945	Grass Valley	11173 Cedar Ridge Drive	Please please please DO NOT allow this toxic threat to our community to go forward.
Janette	Carpenter	95949	Grass Valley	14406 Falling Star Lane Ln	Please please please vote against this As a physician and Nevada County resident for 10 years, I am vehemently opposed to this mine. I urge you to oppose the mine. There are multiple reasons. The following doesn't cover them all. Noise; stress inducing noise which is scientifically documented. Terrible light pollution, water pollution, wells drying up, traffic, road wear (who pays for repairs?) poor air quality-Our air already is bad many days of the year due to ozone, pollens and smoke. I have many patients in Nevada County with asthma, sinus , allergy symptoms which WILL GET WORSE. We already have enough power outage days and power grid strains. Will we end up having many, many more because the mine sucks up 12% of our power? YES we will. This is NOT fair at all to US. We pay for power and often don't even have it during hot dangerous, heat wave times. This can be deadly. Please don't vote to destroy the peace, quiet and beauty of our delightful town. This is the best place I have ever loved and worked. If this mine opens I will move and you'll have one less doctor here. I do Otolaryngology Head &Neck Surgery
Chris	Harbour	95959	Nevada city	11045 Tyler foote rd	Please please please! Don't let this mine come to our town. It would ruin it for so many reasons.
Miladie	Thompson	95959	Nevada City	11874, Willow Valley Rd	Please please stop the Rise Gold mine!
Jessica	L'Esperance	95959	Nevada city	116 Nevada st	Please preserve the quality of our nature and do not grant permission to re-open the mine
Jon	Nelson	95946	Penn Valley	13306 Country Heights Drive	Please protect and preserve our environment by stopping the mine.

2123

Attachment 24

Carol	Lynn	95949	Grass Valley	17837 Autumn Way	Please protect Grass Valley from the negative impacts of reopening the mine. Thank you for your consideration and effort in this matter.
Lara	Levin	95616	Grass valley	13059 lower colfax	Please protect or community from this destructive proposal.
Yolanda	Saenz	95960	Nevada city	17255 Wyatt Ear. Rd	Please protect our businesses, home owners and conservationists from re-opening the Idaho- Maryland mine.
Cheryl	Borad	95959	NEVADA CITY	23587 STATE HIGHWAY 20	Please protect our community and do not allow Rise Gold to re-open the Idaho-Maryland Mine. Prevent us from having water pollution, air pollution, noise pollution and road damage to our lovely county.
Louise	Jackson	95959	Nevada City	603 W Broad St	Please protect our community from the pollution, destruction, and economic loss that the Rise Gold mine would bring. The loss in environmental quality will harm us and the wild plants and animals in our ecosystems.
Wolfgang	Perner	95959	Nevada City	15400 Rudd Rd	Please protect our community from this company and it's history of leaving environmental problems in its wake of deception for profit.
Jill	Ragan	95975	Rough and ready	15515 E. Digger Hill way	PLEASE protect our community!
Becky	Smith	95959	Nevada city	13017 pine tree place	Please protect our county from this mining company. It is to detrimental to out fragile eco system.
Vivian	Hodges	95949	Grass Valley	11307 Sunset Way	Please protect our environment for our future generations. Thank you
Jennifer	Miller	95959	Nevada City	14749 Nicolle Dr	Please protect our groundwater and natural environment. No mine!
Christine	Hamrick	95602	Auburn	23085 Broadmoor Ct.	Please protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. Please reject it and support the community that you represent.
MARY	PETERSON	95959-2615	NEVADA CITY	311 PARK AVE	Please protect our quality of life from the proposed re-opening of the Idaho-Maryland Mine by Rise Gold. This destructive project does not belong in beautiful and serene western Nevada County.
Christopher	Maher	95945	Grass Valley	550 Penstock Drive	Please protect our quality of life, land and water by rejecting the application to reopen the mine.
Derek	Rushin	95959	Nevada city	14891 banner lava cap road	Please protect our sacred land from capitalistic interests and profit. The land and indigenous peoples from here originally have suffered enough at the hands of greedy companies. Please do not go thru with this mine. As a local resident, i hope to see this not go thru.
Kirstin	Brown	95945	Grass Valley	14147 Manion Canyon Rd	Please protect our way of life and don't build the mine. I came here for it's natural beauty and the mine would ruin it.
Mason	McGuire	95959	Nevada City	12945 Wings of Morning Dr	Please protect the community. There are ways to help the community, Rise Gold is not one of them.
Susan	Kirk	95602	Auburn	13400 LAKE VALLEY DRIVE	Please protect the neighbors of the Idaho-Maryland Mine area. The re-opening of the mine would devastate the locals. The water use and pollution is the biggest concern of mine - and should be yours too. We don't have enough water to use on mining even with all the rain we got in December. We have to care about our environment. The amount of jobs that would come from re-opening the mine is not worth the negative impacts produced from opening it. Please Please do not hurt us by letting it open. Thank you.
Rachael	Dawson-Mewes	95628	Fair Oaks	4046 New York Ave, Apt. 1601	Please protect this land. Please protect this water. It is sacred. From the ocean to the mountain tops of the mauna- please leave this river alone as it should flow in peace. You cannot control what is in this water nor can the government or anyone else. It is nature. Stop tampering with it and leave it alone. If there is a contamination please let the natives do their part at restoring the water to it's natural state.
Nicki	Hansen-dix	95945	Grass Valley	115 Union Jack St #38	Please put a healthy community above a business with a history of pollution without mitigation. This should be disallowed for the water issues alone! But with all the other environmental impacts, it is a no-brainer decision to keep this operation out of our county! In the extreme drought we are experiencing approving this operation would be insane!
Jeff	Santos	96161	TRUCKEE	10501 HEATHER RD	Please reconsider your decision to allow this mine to open and operate in Nevada County. This operation and business will negatively impact the local community in a way that takes away from the beauty and rural construct that Nevada County is known for. Thank you.

2124

Attachment 24

Elise	Zink	95949	Grass Valley	13365 Twin Star Lane	Please reject Rise Gold's proposal to re-open the Idaho-Maryland Mine. The damages of the LAST time we were actively mining in this area are still coming to the surface. We rely on you to protect us and the health of our community and our children. I thank you for your reconsideration.
Joelle	Soch	95945	Grass Valley	11889 Slow Poke Lane	Please reject Rise Gold's proposal to re-open the Idaho-Maryland mine. We should have already learned from history that the human and environmental costs of ventures such as these far outweigh the gain. Humans have proven time and time again when seeking to extract and exploit natural resources of nature that we do not adequately understand the potential impacts of our actions nor the delicate balance that keeps ecosystems (including the one we are all a part of) in balance. Please protect our clean, quiet forest community. Please protect Wolf Creek. Please protect our deeply special home. Do not allow the mine to re-open.
Carol	Lee	95959	Nevada City	12026 Crystal Wells Road	Please reject the proposal of Rise Gold to re-open the Idaho-Maryland Mine. The added noise, air pollution, traffic, and water & power use represent the opposite direction from which we want to progress. Please recognize that preserving and improving our environment and quality of life is supremely important, and we cannot afford to make mistakes that compromise these values. Thank you for your consideration of my input. - Carol Lee, 36-year Nevada County resident
Jacquelyn	Wilson	95959	Neada City	12593 Red Dog Rd.	Please REJECT the proposal to reopen the mine. It will destroy the character of our communities. Trucks and noise, threats to water availability. Why would you choose to invite a destructive entity to our community? Deny Rise Gold's proposal.
Ellie	MCCutcheon	95959	Nevada City	12274 Sesame Street	Please reject the re-opening of the mine. The massive electricity usage is enough of a reason. It's as if we'd be cutting 42gwh of annual residential electricity usage simply to power the mine, as opposed to reduce our impact on climate change.
Lance	Somers	96161	Truckee	15250 Donnington Ln.	Please reject the reopening of this gold mine for the sake of everyone that lives in the immediate surrounding area, as well as, the county. There is no way to extract gold without disturbing water resources, air quality, noise levels and other pollution from all of the equipment used. All mining operations say they're going to be perfect in every way to not pollute, but history has taught us that is total BS.
Christina	Sabin	95945-6016	Grass Valley	11147 Squirrel Creek Rd	Please reject the Rise Gold mine proposal. It's such a bad idea in so many different ways.
Darlene	Kemens	95945	Grass Valley	2297 Nevada City Hwy	Please reject the Rise Gold proposal to re-open the Idaho-Maryland Mine. This is NOT a good thing for Nevada County
Peggy	Gill	95959	Nevada City	20532 New Rome Rd	Please reject the Rise Gold proposal. Gold mining is a rich part of the history of Nevada County, however we are no longer an industrial town. It is wrong to bring heavy industry back to Nevada County, especially so close to so many residences, who live here in part for the quiet neighborhoods. Please protect our community! Thank you.
Nancy	McKitrick	95945	Grass Valley	14934 Greenhorn Rd.	Please reject the Rise Mine Project. Protect our neighbors and quality of life . Rise Mine has a history of destroying the environment and leaving in its pathway destruction that can never be repaired . They also have legal action against them in Canada for their illegal operations. Leave the history of Nevada county gold country as history.
Lisa	Chipkin	95960-9511	North San Juan	13319 Crescent St	Please reject this catastrophic plan that will harshly impact the quality of life in Grass Valley and Nevada County.
Janice	Kurtz	95762	El Dorado Hills	2647 Tam O Shanter Dr	Please reject this destructive proposal and protect Nevada County!
Kay	Maston	95949	Grass Valley	11197 Lime Kiln Road	Please reject this destructive proposal. Save our quality of life in Grass Valley!
Amy	Kull	95959	Nevada City	444 Monroe Street	Please reject this horrendous proposal and protect our community!!
Donna	Martin	95949	Grass Valley	12538 McCourtney Rd	Please reject this proposal.

2125

Attachment 24

Angela	Burger	95949	Grass Valley	16573 Sharon Way	Please reject this proposal. This is going to have environmental impacts that will undercut the value of our homes. The potential of destroying the appeal of our local area is too high of a risk for our local homeowners. Keep Nevada County a safe place to live.
Lisa	Stine	95959	Nevada City	601 Redbud Way	Please represent your constituents responsibly. Our most precious natural resource, water, is in great danger. With climate change and accelerating fire season, we can not afford to allow the Rise Gold Mine to contaminate and waste our water. Please use your powerful votes for the good of the people. Thanks.
Rodan	Tekle	11205	Brooklyn	12 St James Pl	Please respect our lives our voices and our care for a better future!!
Trinity	Cross	95959	Nevada City	13969 n ponderosa way	Please robot cause further harm to this already damaged ecosystem by placing greed over health
Nora	Nausbaum	95945	Grass Valley	15631 Lower Colfax Road	Please save our beautiful county from destructive proposal to open the mine.
Cynthia	Borkenhagen	95945	Grass Valley	411 Kate Hayes St	Please save our community from environmental and financial disaster by saying "no" to Rise Gold. The consequences of allowing such an assault on our quality of life would be felt for many generations, if not forever. Greed is motivating this filthy idea of economic development, not the common good.
Bonnie	McKeegan	95949	Grass Valley	17076 Jody Ct, undefined	Please say NO to the Rise Gold mine! It's just wrong on every level.
Sherrie	Fico	95949	Grass Valley	12580 Lodestar Drive	Please show up to reject the mine for all obvious reasons you've heard over and over! How important is our water especially when we have wells and beautiful wildlife relying on it!
Frances	Loop	95949	Grass Valley	11135 Norager Way	Please spare our community the detrimental health hazards which come with the reopening of the Idaho-Maryland mine. No financial commitment justifies the decades of health hazards YOU will bestow upon your community. The community which is counting on you to act upon their demands. Thank you.
Riki	Mitzel	95949	Grass Valley	15155 Pammy Way	Please stop mining from happening in Nevada County. We already have so many jobs that can't be filled as it is. The pros of adding jobs to the community is not necessary and the environmental impacts are something that we can never undo. Please protect the people who live here. Stop mining from happening in our beautiful community.
Bob	Goar	95945	Grass Valley	14676 Highland Dr	Please stop the DAM
L	Blum	95945	Grass valley	Lidster ave	Please stop the mine
D	Martin	95945	Grass valley	Lidster ave	Please stop the mine from opening!
Tom	Banwell	95975	Rough and Ready	16424 Gleko Road	Please stop the mine! Protect our water and our land values. Reopening the mine would be a huge mistake.
Glenna	Rogers	95945	Grass Valley	12100 Dogwood Road	Please stop the mine. It will ruin our beautiful neighborhood. I live less than 2 miles from the mine and most likely my well will run dry. The noise, pollution and traffic will be awful. No one will want to live within miles of the mine - yet we won't be able to sell our homes - as who would want to buy them. This is BAD for Grass Valley and Nevada City. STOP THE MINE I am very opposed to the reopening of the mine. I live on Dogwood which is off of Greenhorn. To get to my house I will have to pass the mine every time. The noise and traffic will be unbearable, our wells will dry up, property values will go down. And for what? A few lousy jobs. It's insanity to reopen this mine.
JoAnne	Younger	95945	Grass Valley	200 Dorsey Drive, Apartment 33, Apartment 33	Please stop this and save our community!
James	McMaster	95945	Grass Valley	10845 Bartlett Dr	Please stop this environmental and neighborhood disaster

2126

Attachment 24

Victoria	Oliver	95945	Grass Valley	268 Cornwall Ave	Please stop this mine from coming into our area and degrading our air, water, and land. I have lived in the City of GV since 2001, (Nevada County since 1989) and the noise from the highway has increased and I imagine the mines truckers running 24/7 will cause a major increase in the noise. Maybe we should insure that all residences get insulation and window upgrades. Please just keep the mine closed. For the citizens health and welfare.
Gillian	Williams	95960	North San Juan	Po Box 88	Please stop this Mine!!! Protect our community!
Jeff	Pleadwell	95949	Grass Valley	16423 Clover Valley Rd	Please stop this non/sense
Desiree	McClain	96028	Fall River Mills	25111b Old Reynolds	Please stop this!
Wendy	Rybicki	95949	Grass valley	12568 hallwod	Please take action.
Jennifer	Fortin	95945	Grass Valley	19700 Mockingbird Way	Please think of our children, and out beautiful land and our wildlife.
Laurel	Marks	95945	Grass Valley	13974 Glenn Pines Rd	Please think of the community and our health and well-being, and the future of our children.
Oliah	Fall	95959	Nevada City	15187 Tyler Foote Rd.	Please understand that re-opening the Mine would be a tremendous disruption to our community and we strongly disapprove and urge you to prevent this.
Nancy	Piette	95945	Grass Valley	10679 Bragg Ave	Please vote against Rise Gold's proposal to re-open the Idaho-Maryland Mine. Rise Gold does not have a good record for following safe practices. The mitigations set out in the DEIR are too numerous for any public agency to monitor, enforce, and afford. Please vote "no" on the mine. Thank you.
Angela	Nowlin	95945	Grass Valley	720 Morgan Ranch Drive	Please vote against this proposal.
Janet	Soto	95949	Grass Valley	19713 Fairview Dr	Please vote for healthly living for today and future. Shutdown the gold proposal..shutdown Idaho Maryland mine. We ask you to protect our community.
Sherree	Hill	95959	Nevada City	17315 Lightfoot Way	Please Vote NO on the Mine
Jim	Heck	95959	Nevada City	14455 Sanctum Place	Please weigh your decision toward the safety of our little community and not to maximize profits.
Kat	Galindo	95959	Nevada City	12627 Sleepy Hollow Wy	Please you to not allow this mine to open and has terrible consequences to our community and our beautiful county. THIS IS A TERRIBLE IDEA!! More pollution , BIG TRUCK TRAFFIC,NOISE NO NO NO NO!!!!!!!
Stephen	Anderson-Toth	95949	Grass valley ca	15591 clover valley rd	Please Don't ruin our town!
Beverly	Kahn	95945	Grass Valley	529 Linden Ave.	Please! For the sake of our children especially! Don't allow this to happen!
Robin	Curtis	95945	Grass Valley	14708 La Noria Ct	Please! Protect your constituents, our children, our environment. Not a foreign corrupt company.
wisdom	yerger	95959	nevada city	16474 cornflower court	Please!! No mine!! Protect the beautiful nature!!
Mark	Johnson	95949	Grass Valley	11130 Orion Way	PLEASE!!! PROTECT MY PROPERTY!!! NO MINE!!!
Darcy	Lincoln	94605	Oakland	7859 Crest Ave	Please, Nevada County Supervisors, We ask for your support in representing the people of Nevada County on this matter. Businesses, homeowners, and conservationists are looking to you to protect the neighborhoods, local economy, and quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
Sarah	Cuevas	95945	GRASS VALLEY	13955 Greenhorn Rd.	Please, NO MINE Re Openings!

2127

Attachment 24

Amie	Ferrier	95924	Cedar Ridge	PO Box 1322	Please, please listen to your community. We are loving and engaged constituents who unequivocally do not want Rise Gold's proposal passed now or at any time in the future. Please use this as an opportunity to steward our town into our economic future with wisdom and courage, prioritizing the health of the land, water, and people who live here. I implore you to strongly condemn the reopening of the mine. with gratitude,, local teacher.
Kim	Zwick	95945	Grass Valley	260 Colfax Ave	Please, Please PLEASE, don't allow this mine to re-open!!! If it does, it will damage our water, air quality - by polluting our air, and using too much power from our grid.
Theresa	Sullivan	95945	Grass Valley	PO Box 676	Please, please reject the Rise Gold proposal to re-open the Idaho-Maryland Mine. A mine like this should never be open so close to Grass Valley. There are too many people who would be impacted by noise pollution, their wells running dry, unsafe roads with huge truck carrying heavy loads, etc. It is unthinkable that this would be allowed in our community. It's becoming hard enough to live here with the wildfires, please don't add to the list of reasons not to live in this beautiful area. Please do the right thing for this community and reject this proposal and protect our environment and the people and animals that live here. Thank you.
Thaddeus	Stoenner	95945	Grass Valley	15308 Green Way Place	Please, please, please don't allow this to proceed. It would do irreparable damage to the environment and their are much better ways to bring capital into the community.
Monika	Rose	95959	Nevada City	498 Jordan St	Please, this decision will have negative impact for the next two generations on the environment, the quality of life of our community and increase health risks for neighboring families
Karen	Callahan	95945	Grass Valley	12977 Somerset Drive	Pleases stop the mining. Save our town and it's beauty. Our children need a fresh clean environment to live.
Grace	Shields	95945	Grass Valley	14440 Tim Burr Lane	Pollutes our air with fugitive dust from rock crushing, loading, and truck hauling Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years Devours our power using 12% of Nevada County's consumption annually and putting our power grid under further strain Completely erases our County's plan to cut greenhouse gas emissions Drains our water using South Fork Wolf Creek as a storm drain Threatens 300+ private wells Reduces property values and property tax revenue

2128

Attachment 24

Eli	Duber	95949	Grass Valley	11459 Ball Rd	Pollutes our air with fugitive dust from rock crushing, loading, and truck hauling Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years Devours our power using 12% of Nevada County's consumption annually and putting our power grid under further strain Completely erases our County's plan to cut greenhouse gas emissions Drains our water using South Fork Wolf Creek as a storm drain Threatens 300+ private wells Reduces property values and property tax revenue
Robert	Trent	95959	Nevada City	512 Jordan Street	Pollutes our air with fugitive dust from rock crushing, loading, and truck hauling Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years Devours our power using 12% of Nevada County's consumption annually and putting our power grid under further strain Completely erases our County's plan to cut greenhouse gas emissions Drains our water using South Fork Wolf Creek as a storm drain Threatens 300+ private wells Reduces property values and property tax revenue
Jake	Noebels	95553	Miranda	Po box 534	Pollution is bad, keep the yuba wild!
Leslie	Lambeth	95977-9603	BIG OAK VALLEY	14271 Mooney Flat Rd	Pollution of every kind - including noise - is possible if this mine reopens!
David	Porter	95959	Nevada City	14153 Misty Meadwo Ln	Private wells must be protected. Truck traffic is also a concern.
WILLIAM B	MILLER	95959	Nevada City	14522 LAVA DOME WAY	Property values decline, poorly predictable water table impacts, noise, air pollution, energy waste with negative climate warming impacts, all brought to us by a company with poor track record and questionable long term viability. No!
Valerie	Schlafke	95401	Santa Rosa	157 Sequoia Circle	Protect our environment
jeremy	gicker	95959	nevada city	14237 lily creek trail	Protect our water and our community from destructive development
Sharon	Kruse	95945	Grass Valley	1106 Amber Loop	Protect our water supply.
Ivana	Morris	85226	Chandler	6422 W Victoria Ln	Protect the Earth and it's creatures!
Has	Kid	90023	Los angeles	3401 Lee street	Protect!
Richard	Charnley	95945	Grass valley	14554 little hill lane	Protected our community and reject this proposal!
Rochelle	Mahar	95959	Nevada City	14128 hydraulic ridge close	Protecting our land, water, air, and community must be the priority. Please do not reopen the mine.
Dr. Jacob	Pasner	95946	Penn Valley	P.O. Box 731	Putting an industrial eyesore in the middle of a community that won't benefit from it doesn't make fiscal or societal sense.

2129

Attachment 24

Deborah Kay	Bliss	95946	Penn Valley	14207 Chestnut Court	Quit destroying Nevada County in the vulturesque monetary and deceptive safety narratives BOS pushes. Banner-Lava Cap Mine is still part of a $32 million superfund for arsenic cleanup, bankrupting its owners, although disclosures were mysteriously absent during the transfer of title. Calling the reopening of Idaho-Maryland Mine 'safe and responsible' is as huge a lie as the corrupt 'science' touting the safety/effectiveness of the Con-Vid 19 vaccines are. This BOS has proven multiple times that they do not represent We The People. Do not allow this project to proceed where it imperils the rights and safety of these good people in the area.
Ryan	Beck	95959	Nevada City	514 Nursery Street	Really unnecessary, no mine in Nevada cnty! The mine is bad m'kay! As a long time Nevada county resident, Nursery Street resident, tax payer & father I ask you please say no to the mine
Anne	Bomberg	95945	Grass Valley	13967 Glenn Pines Rd.	Recent history of mining interests in Nevada County (e.g. the Newmont mine) is one of companies whose only vested interest in operations is monetary. They are not part of the community, do not contribute to it's longterm well-being; or indeed care about the toxic legacy they leave and string of law suits against them for damages incurred. We are in different times, with the "new gold" being water, air and land, the safeguarding of which will contribute to the health, growth, and prosperity of our community, not empty promises from con men which will drive negative changes to its character, from the degradation of its resources to a change in its population.
Ellisha	Wiles	95959	Nevada City	11438 Birchville Road	Regardless of any environmental impact reports stating there will be no and/or minimal negative impacts on our area or lives, we all know different. Re-opening a gold mine in this day and age is not only out dated but unbelievable. Humans that live here understand how the county's history of mining has lead to heavy metals in our groundwater, rivers, streams and ultimately in ourselves. It's imbedded in our soil, our crops, our food and our children from just living our lives in this beautiful area. And to start churning up the earth beneath our feet in the crusade of gold of all things will result in further destruction of the quality of life of not only humans but the many creatures that reside along side us. Do not allow this to happen for the sake of the people who live here and the future generations.
Clay	Olson	95945	Grass Valley	214 Lloyd St	Reject the Rise Gold proposal
Kim	LaValley	95959	Nevada City	Forest Knolls	Remind the county they'll be a defendant in the inevitable litigation if approved
John	Paul	CA 95959	Nevada City	14071 Mount Auburn Circle	Re-opening a long closed gold mine will not create the economic boom that Rise Gold Corporation proposes. A Canadian corporation that has no understanding of our local economy (or available skilled job force) can't predict that impact. Rise has used political campaign-style marketing to shore up its position although the facts show that it has a dubious track record of actually operating a mining facility. Let's move forward, not backward. Say no to re-opening the Idaho-Maryland Mine.
Tara	Sullivan	95945	Grass Valley	328 S. Church St	Reopening a mine would not be in line with our community values, would not benefit the people effected, and would hurt the industries that do sustain us.
Nadine	Light	95949	Grass Valley	14824 Stoddard Estate Lane	Reopening a very old mine has tremendous risks both immediate and long term. What's more important ~ maintaining quality of life or the potential of future unknown revenue?
John	Lorance	95959	Nevada City	10811 Morning Star Lane	Re-opening mines in Nevada County will do little economically for our region and is a regressive way to spark the economy. The environmental impact, which there will be for sure, there always is, will be the lasting legacy of any decision to allow this mine to open. Please protect our quality of life, our property values, and our precious environment by ensuring this mine does not open.
Dana	Nadeau	95959	nevada city	11086 Golden Way	Re-opening of the mine will have a significant negative impact the Grass Valley and Nevada City communities for years to come that far outweighs the addition of jobs. RiseGold has no business disrupting a current residential community, taxing our infrastructure, and threatening our air and water supply. I wonder if they would undertake such detrimental commercialism in their own country and towns? This must not pass.

Jeffrey	Brownwood	95959	Nevada City	16400 LAKE VERA PURDON RD	Reopening the Idaho Maryland Mine is a bad idea for the health and long term vitality of our community, and a good idea for Rise Gold. When all the factors are weighed, your decision will reflect whether you stand for our community and our love of our home, or the short sighted profiteering of a foreign company to our detriment. I, the undersigned, urge the Board of Supervisors to reject this destructive proposal and protect our community.
Diane	Durkin	95945	Grass Valley	187 Hughes Rd.	Re-opening the Idaho Maryland mine would be a huge mistake. Please do the right thing in order to protect this community that we love and vote against the re-opening the mine.
Joan	Clappier	95949	Grass Valley	15987 John Way	Reopening the Idaho-Maryland is such a bad idea for soooo many reasons that I don't understand why it is even being considered by Nevada County. There are far, far too many reasons that opening this mine would be bad for our community. Why is Nevada County spending so much time and money on it?
Daniel	Ziebron	95959	Nevada City	PO 185	Re-opening the Idaho-Maryland mind is not what this community needs. Being a forester in the county, I have personally seen the destruction of the environment from mining activities that litter our landscape and have transformed otherwise pristine areas. Yes, jobs will be created and the community as a whole will benefit from higher paying jobs but what happens when the well runs dry? These jobs will disappear and we will be left with the mess to clean up. We need to concentrate on adding sustainable green businesses and jobs to our community, not ones that harm the environment and only add short term stimulus to our economy.
Ellie	Wiebelhaus	95834	Redding	3301 arena blvd	Reopening the Idaho-Maryland Mine would destroy local ecosystems, endangering native plants and animals and creating an unhealthy environment for the people of Nevada County. This is an outdated and dangerous proposition which would negatively impact the land and water of this beautiful place.
Michael	Dockery	95949	Grass Valley	19132 Connie Dr.	Re-opening the mine is a bad idea. Allowing "Rise Grass Valley" to operate it is simply insane. Mossman's track record alone should suffice to kill this project.
Joseph	King	95945	Grass Valley	118 Murphy St	Reopening the mine is a net-negative for Grass Valley and Nevada County. The dust and unsightly engineered fill, truck traffic, high electricity demands, impacts to groundwater, and potential for toxic chemicals from mine tailings in our community are not worth the small number of jobs that may be created. I strongly urge the Nevada County Board of Supervisors to reject the reopening of the Idaho-Maryland Mine.
Tim	Edge	95959	Nevada City	12948 Woodstock Dr	Reopening the mine is a short sided idea that will benefit a few people and harm many while moving the county backwards not forwards. Vote for the future and reject the mine.
Loren	Swift	95959	NEVADA CITY	PO Box 1357	Reopening the mine is absolutely the worst possible idea. Who will benefit? Canadian greed? Our environment will be destroyed, our water contaminated and our air filled with noise and dirt. Preserve our quality of life, air and water by disallowing foreign greed to take our natural resources.
Thomas	Martella	95945	Grass Valley	16225 Orchard Springs Roa	Reopening the mine is not a sustainable action benefiting the community. Converting that space to a multi purpose facility serving the needs and desires of citizens and visitors within limits of environmental concerns makes much more sense.
Andrew	Miller	94609	Oakland	670 32nd st.	Re-opening the mine is terrible Idea and you know it. Don't endanger the wellbeing of all the residents of Nevada County in order to pad the wallets of a few.
Deanna	Lingenfelterr	95945	Grass Valley	373 Glenwood Pines Ct	Reopening the mine is the worse thing thing that could happen to our county. It would dwarf the impact of the drought and nearby fires. Please do not allow this to occur I believe it would be idiocy.
Denise	Alvarez	92562	Murrieta	39641 Calle Azucar	Reopening the mine will decimate the property values and ruin a beautiful area. Please reject the proposal and protect my family who lives there.
MARK	LAPLANTE	95946	Penn Valley	118 Lark St.	Re-opening the mine will expose all constituents to: Air and water pollution, lower property values, and an Extreme increase in local traffic. Re- opening the mine will have a Very negative long term impact on county residents!
Gaylie	Bell-Stewart	95949-7153	Grass Valley	17980 Remle Ln	Reopening the mine would be a disaster for our neighborhoods, our water supply, our property values and the environment.

Ellen	Howe	95949	Grass valley	17389 Norlene	Reopening this mine would be a disaster to the communities of Grass Valley and Nevada City, environmentally and economically. It will also have negative health impacts for residents of Western Nevada County. The benefits, as stated by Rise Corp., are negligible at best. Please DO NOT approve this project. Rise Gold has not proven it is up to this project. The amount of groundwater loss would be enormous. This is unthinkable during a sever drought, not to mention the dust, air pollution, and round the clock noise. This is not what I want to see happen in my community. Western Nevada County is a treasure - don't wreck it with a large scale, poorly planned mine operation. The benefits promised are overstated, and not worth the cost to Grass Valley and Nevada City. Since this mine was last open, a large and thriving city has grown up around it. The impact on the citizens and the environment of Western Nevada County should be your first and foremost consideration and responsibility. Please DO NOT approve the reopening of this mine.
Mary	Cooper	95959	Nevada City	11887 Brentwood Court	Reopening this mine would be a giant step backwards in the efforts to save our planet! We don't need to do this! It is irresponsible!
D	Buglino	95959	Nevada City	12202 Fallen Leaf Ln	Residents and active community members of Nevada County are very concerned about the proposed re-opening of Idaho-Maryland Mine. The potential for devastating effects to our air quality, water resources and peaceful habitats and the negative impacts to the quality of life for the people who live, work in and visit our community is extensive. As stewards of our natural resources and lands we are responsible for the best management of them for present and future generations for purposes, activities and enjoyments having value far beyond a temporary monetary gain. We urge you to refuse the encroachment of a foreign enterprise, Rise Gold, due to the long-range negative impacts it would have on our lives and territory.
Susan	Cutuli	95959	Nevada City	11939 Casci Ridge road	Respectfully consider the negative monetary impacts of this project. Decreased property values are not a one year loss, but continue into perpetuity as long as something as negative as a working mine is in the area. Also possible class action law suits due to unforeseen harm to so many stakeholders since the dust noise and many other toxic by products will affect a larger population than I believe is being considered . Also what about remediation? I have first hand knowledge of large corporations that have promised remediation at the completion of the term and opted to simply pay the fine- that is not acceptable. I believe it is a terrible mistake to think our community will benefit from this ill conceived project! This is wrong on so many levels. Please do not be fooled. I have experience with how mining companies operate. They saw they will restore and protect but they would rather pay a fine than remediate!!!!! We do not need or want them
Ann	Barbour	95959	Nevada City	16006 Airport Road	Resulting environmental degradation, pollution and decrease in quality of life FAR outweigh any economic benefits of the mine.
Gary	Emanuel	95945	Grass Valley	115 Ruby Ledge Ct.	Rise Gold does not have anywhere near enough funds to even ready the property for mining. This fact alone should be a non-starter for the project. In a previous email to you I mentioned to you that you should end this nonsense once and for all by enacting an ordinance stating that new hard rock mining is not permitted in Nevada County. Commercial mining no longer is appropriate for Nevada County chiefly due to environmental considerations. The Supervisors should draw up an ordinance that prohibits commercial mining in Nevada County.

Kurt	Lorenz	95959	Nevada City	18399 Foxfire Way	Rise Gold has a horrible record in Canada and allowing them to get further into Nevada County would be a disaster. This project is idiotic from beginning to end. They will never get any gold out of the flooded Idaho Maryland. All they are doing is causing chaos and ripping off their investors. This is the oldest game of the "Junior Miners" and everyone knows it. Stop this stupidity NOW! Rise Gold has a terrible track record up north and should be sent back to fix their mess at home. Reopening the Idaho Maryland is absurd on the face of it. The waste rock would build a new mountain in our midst and pumping the mine water into Wolf Creek is a stupid thing to even contemplate. It will blow out the creek and ruin the seasonal flow pattern as well as probably pollute Wolf Creek with heavy metals and hydrocarbons. Don't let this happen! Vote NO and show some spine for our community!
Jilline	Henderson	95959	Nevada City	10686 Red Dog Rd	Rise Gold has a terrible reputation!
Mark	Triolo	95959	Nevada City	15472 Shannon Way	Rise Gold has a terrible track record and any small benefits or having them in our town is NOT worth very high risk of having them here.
Raymond	Baldock	95949	Grass Valley	12597 Wolf Rd	Rise Gold has abandoned their responsibilities for clean up at a Canadian site. Such actions should automatically disqualify them from opening in another location. Too close to the urban area with risk to roads, home well water, noise pollution.
Gary	Nowak	95959-9675T	Nevada City	11668 Side Hill Circle	Rise Gold has never successfully opened and operate a gold mine. Rise Gold is severely under capitalized and lacks the necessary financial resources for the project they propose. It is a known fact that the Brunswick main shaft, which they plan to dewater was connected via a horizontal shaft to the Idaho-Maryland mine in 1938. Dewatering the Brunswick main shaft will also dewater portions, if not all, of the Idaho-Maryland mine which will drastically affect the wells of all the residents of Banner Mtn., especially those who live in close proximity of Idaho-Maryland Rd. This project can not go forward. Hundreds of homes will be negatively impacted by the dewatering of the main Brunswick shaft. Rest assured if this will happen, Nevada County will be bankrupted by the lawsuits that will follow. The Brunswick Mine and the Idaho-Maryland mines were joined together in 1938 by a horizontal shaft. Dewatering the Brunswick Mine will dewater the Idaho-Maryland Mine also affecting hundred of homes wells on Banner Mountain. Opening this mine will be a disaster to hundreds of families on Banner Mtn and have a extremely negative impact on our wells. Additionally, this company, Riose Gold, has never successfully operated a mine and at present they are extremely under capitalized. Check their financials.
Kristin	Otto	95946	Penn Valley	11444 Long Valley Road	Rise Gold has proven themselves to be poor neighbors in their other projects. We do not want or need them to damage the quality of life in Nevada County for their profit.
Maureen	Collins	95946-8928	PENN VALLEY	10470 BROKEN OAK CT	Rise Gold is a disreputable company, to put it mildly, and has only a big payday in mind. Our resources will be depleted, our ecology will be polluted/ destroyed, and the health issues to wildlife and humans will stretch far beyond the two years being proposed. That relatively short timeline speaks volumes. Enter the community, strip out as much as possible as quickly as possible, and leave a ruinous mess behind. The carrot of employment for locals is just that, a lure to tempt the county into agreeing. PLEASE, think long term. Protect out beautiful and fragile area. NO MINE!!
Emily	Stuesser	95945	Grass Valley	126 W. Empire St	Rise Gold is a shady company with a dark past, they do not have my permission to reopen the mine. We hardly have enough water as it is and the strain on the power grid would end badly for the residents of grass valley. Please reject this proposal and protect this precious community.

KURT	LORENZ	95959	NEVADA CITY	PO BOX 1564	Rise Gold is a typical so called "Junior Miner" company. These fly by night operations make heir money by mining their foolish investors, and almost never mine actual minerals. They always use the same playbook. Good jobs and all safe. The jobs are crazy dangerous and underpaid and the owners and CEO types make all the money available before pulling up stakes and leaving town with a huge mess to lean up. These companies are crooks. Don't be fooled! Send them packing.
Robert	Root	95975	Rough & Ready	10277 Rough & Ready Rd	Rise Gold is not a reputable or reliable company. We do not want this mine!
Michael	Albano	95945	Grass Valley	12179 Boreham Mine Rd.	Rise Gold mine at Idaho- Maryland site will be a disaster on all fronts! Please stop all progress on opening this project. Rise Gold is not a friend of nevada County and will ruin our lives forever!!!!
Ruth	Berliner	95959	Nevada City	12522 Mayflower Drive	Rise Gold rights of way for trucks will ruin roads at taxpayers expense. Even if Corporation maintains local roads, there will be continual disruption of citizen traffic. I've lived just off Brunswick Road 33 years and use it regularly. I would be terribly disappointed if our BOS granted to Rise Gold a 'Golden Ticket' to our water resources. This alone, would have consequence we cannot predict. Please Preserve our Community's qualities of life free from this annoyance and degradation of environment- the trade offs do not look beneficial.
Erica	Severns	95959	Nevada City	16125 Pasquale Rd.	Rise Gold's CEO, Ben Mossman failed at his last Gold Mine and Canada is having to clean up his mess. Erica Severns https://www.cbc.ca/news/canada/british-columbia/b-c-s-high-court-upholds-new-trial-for-two-managers-after-spill-at-mine-1.5784666
Dom	Lindars	95959	Nevada City	16979 Rabb Rd	Rise Grass Valley's slick PR campaign is a complete lie, like "clean coal." Their mine will destroy our wells, our air, our water, and our peace and quiet. It will bring nothing to our community except broken promises! Please look at the facts and reject their attempt to bribe our town. Don't let it rise! Thank you.
Bill	Douglass	95945	Grass valley	15631 lower colfax road	Rise will wreck our community despite their assurances to the contrary. They do not have a decent track record.
Brett	Simons	95945	Grass valley	402 Maryland drive	Save our community! This will ruin it in so many ways. I Will not raise my children in the community with the impacts the mine will bring
Lynn	Schweissinger	95945	Grass Valley	14230 Mill Creek Ln	Save our previous community and stop this mine!!
Rossana	Linn	95945	Grass Valley	12255 Hoppy Hollow Rd.	Save our Water
William	Phelan	95945	Grass Valley	12255 Hoppy Hollow Rd.	Save our Water
Larry	Rice	95960	N.SanJuan, CA.	10149 San Francisco st.	Save our water !!
Steven	Valdivieso	95959	Nevada City	12410 Silk Tassle Circle	Say No to opening the mine
Lynnel	Miller	95949	Grass Valley	15979 Auburn Road	Seems grossly irresponsible. One more example of big business vs. common man. We must stop this mine!
Bevan	Iredell	95945	Grass Valley	14613 Rollins Park Dr.	Short term gain with long term costs, diverted in the form of a depreciation to the community's value. (your property's value, leading to a over all reduction in the tax bass. The city is simply cutting off the reliable hand that feeds it.)
Joanna	Morrison	94590	Vallejo	919 El Dorado St.	Show you care about your community and its well-being.
Michael	Reuthet	95946	Penn Valley	11134 Pleasant Valley Road	Shut it down...not needed in town...bad for environment!
Joanne	Dailey	95945	Grass valley	141 Chester st	sinesses, homeowners, and conservationists in Nevada County are joining together to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.

Gale	Pylmane	95949	Grass Valley	12730 Hidden Valley Rd	Smithsonian magazine reports that: "Earthworks estimates that, to produce enough raw gold to make a single ring, 20 tons of rock and soil are dislodged and discarded. Much of this waste carries with it mercury and cyanide, which are used to extract the gold from the rock. The resulting erosion clogs streams and rivers and can eventually taint marine ecosystems far downstream of the mine site. Exposing the deep earth to air and water also causes chemical reactions that produce sulfuric acid, which can leak into drainage systems. Air quality is also compromised by gold mining, which releases hundreds of tons of airborne elemental mercury every year." We do not want this to happen to the residents of Nevada County! I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Pamela	Loupe	95945	Grass Valley	314 Mill St	So far Rise has not done a good job of showing they are responsible and doing the right thing with regard to the rules and regulations of Nevada County. Why take a chance with this kind of operation in our beautiful city.

Lawrence	Vieira	95945	Grass Valley	12917 west brookview dr	So many reasons to NOT to open mine!! Number 1 is traffic!! There is no way our roads can handle all the extra traffic!! That alone is enough to send a solid NO to opening if the mine!!!
Dakota	Kolton-Mitlyng	95949	Grass Valley	10126 Alta Sierra Drive #107	Sounds great but will destroy our town and turn it into an ugly oasis.
Gabe	Aronow	95959	Nevada City	11182 Daniels Drive	Standing back and looking at the big picture of the proposed mine project (I don't know the details), I see very little to no bennefit to the Nevada County community and potentially a lot of downsides. Traffic and groundwater impacts are two concerns. I know they down play these, but they have to lower groundwater to access tunnels and unless an extensive hydrogeological study of the greater surrounding area has been completed, I don't know how they can say there are no impacts. Traffic is selfexplanatory. As for jobs, we don't need any jobs - we can't get people to take the jobs we have here and there are lots of vacancies. Plus, who's to say these jobs will be filled locally. I know we need revenue, but I'd forgoe that money for a cleaner lower risk use of the land. Thank you.
Alexandra	Anton	2906	Prov	102 colonial rd	Stoooppppppppp it!
Pauli	Halstead	95959-2723	Nevada City	423 S Pine St	Stop the mine.
Matthew	Allen	95949	Grass valley	18468 Acorn pl	Stop any mines from opening ever
Melanie	Anderson	95960	North San Juan	P.O. Box 361	stop raping Mother Earth
Shelley	Candelario	95949	Grass Valley	16371 Indian Springs Ranch Rd.	Stop the Idaho Maryland mine!
Genevieve	Marsh	95603	Auburn	11899 Edgewood Rd. Unit M	stop the mine
Sheree	Bartol	95949	Grass Valley	18017 McCourtney Rd.	Stop the mine
Cindy	England	95949	Grass Valley	14355 Penn Rd	Stop the mine
Cheri	Martin	95949	Grass Valley	11414 Sean Way	Stop the mine
Sharon M	Mecartea	95945	Grass Valley	15195 Rattlesnake Rd	Stop the mine !! It's not safe for the environment !!
Morse	Domgaard	95945	Grass Valley	12991 Mulberry Lane	Stop the mine no matter what.
Rick	Nelson	95945	Grass valley	13743 sontag hill rd	Stop the mine!
Carole	Lloyd	95949	Grass Valley	17443 Aileen Way	Stop the mine!
Mary	Lee	95924	Cedar Ridge	Po Box 782	Stop the Mine! Rise Gold has proven itself to be irresponsible in the past and our wells are at risk!
Pinky	Zalkin	95959	Nevada City	220 Jordan St	STOP the mine! You CAN do this!!□□□
Joe	Nelson	95949	Nevada City	15863 Turtleback Hill Rd	STOP THE MINE!!
Michael	Bower	95949	Grass Valley	11525 Betty Way	Stop the Mine!!! It's 2021 not 1921.
Tricia	Burbank	95946	Penn Valley	19058 Lake Forest Dr	Stop the mine.
Kim	Reed-Jones	95959	Nevada City	18755 N. CANYON RD	STOP THE MINE. SAVE OUR AIR

Judi	Bannister	95959	Nevada City	519 Jordan St	STOP THE REOPENING OF THE MINE. WE RELY ON YOU TO TAKE THE INTERESTS OF THE COMMUNITY TO HEART.
Melissa	Seibold	95959	Nevada City	10655 James Lane	Stop this greedy, environmentally unfriendly effort! No mine! No shaft!
Mary	Cahill	95945	Grass Valley	422 Lamarque Ct	Stop this in our community or lose a vote.
Leonard	Chapman	95959	Nevada City	15691 Lewis Rd	STOP THIS INSANITY!
Megan	Enright	94702	Nevada city	10567 lost dog rd	Stop this mine and the pollution it will create for future generations.
Debbie	Marchi	95945	Grass Valley	10746 Bartlett Dr	Stop this operation from coming here. Your kidding yourself if you think this company will hire local people. Our county has changed, most people have moved or died that do that kind of work.
Kyrie	Burrus	95946	Penn Valley	11888 Elnora Dr	Stop! No mining! Don't pollute our environment. Don't go backwards.
JOAN	KEYES	95945	GRASS VALLEY	11159 ALPINE LN	STOP! This mine has no place in our beautiful community. Rise Gold has a horrible reputation and nothing in an impact report can be trusted. Trucks, traffic, water quality, noise, poisons, explosives, and more. No, no, no. Please stop this disaster before it happens. No matter what their impact reports say, these people are not to be trusted. One only has to look at their past record. There is no place in our region for a gold mine. It will destroy our beautiful town(s). Please stop them!
Lizbeth	Martin	95945	Grass Valley	13007 Iron Rock Rd	STOP!!!!!Please respect our human right to healthy living. NO MINING!!! This is 2022, not 1849. We need to learn from our past mistakes. PLEASE, please use common sense and good judgment and STOP THIS MINE. How could anyone even consider allowing this to happen? The re-opening of the Idaho-Maryland mine would be devastating to the ecology of Nevada county and directly damage thousands of Grass Valley residents and could permanently damage the county aquifer.
Masako	Ryerson	95945	Grass Valley	17314 Greenhorn Road	Strongly against the reopening of the mine.
David	Huls	95949	Alta Sierra	11822, Lodestar Drive	Such a bad idea. We've destroyed the land around us enough. It's now too populated around here for a mine.
Jean	Wang	95945	Grass Valley	19148 Louis Rd	Supervisors are supposed to represent their constituents. Do the right thing and do not approve this mine.
Kathy	Foley	95945	Grass Valley	12372 Beaver Dr.	Supervisors, please listen to your neighbors and community to protect the already fragile eco-system for our future and that of our children rather than let this corporation rob us of our water, clean air, quite life so they can reopen a dead and done environmental rape. Please vote NO to mining.
Joan	Buffington	95959	Nevada City	Po Box 73	Taking enormous amounts of our water during a serious drought, polluting our air, and taking the profits to a Canadian company in legal jeopardy for questionable, illegal practices - I say absolutely NO!
Darby	Palmer	95959	Nevada City	230 Main St	Terrible idea to reopen!
Jon	Shea	95959	Nevada city	11640 winter moon way	Terrible idea. No Mine! Construction traffic alone is reason enough not to allow the mine.
Brennan	Johnston	95946	Penn Valley	15516 Del Mar Way	thank you
Laura	Svoboda	95959	Nevada City	23810 Lovell Lane	Thank you for caring and do your job!

We have a responsibility to our children to protect our environment from disastrous management of our waterways.
Jan	Zimmerman	95959	Nevada City	11453 Snowline Road	Thank you.
Randi	Dickson	95959	NEVADA CITY	26585 Feather Ct.	Thanks for all your much needed work. I have lived here for 42 years and in NO WAY want to see to reopening of the Idaho Maryland mine. That would be a total disaster for our environmentally conscious and earth friendly community.
Kayla	Hutchin	95959	Nevada city	16154 bush road	Thanks so much' NO MINE! It's obviously not a healthy choice, there's got to be a better way!
Tammy	H	95945	Grass valley	PO Box 2254	That area would be great for a tiny house community, help with the homeless issue and the fact affordable housing doesn't exist here anymore. As a local, tired of the city folk destroying our community for their profit margins.
Nick	Smith	95949	Grass Valley	20689 Jaguar Court	The 165 foot building height allowance seems excessive. It opens the door for high rises throughout the county.

Dianne	Marshall	95945	Grass Valley	12816 Lost Lake Road	The air pollution, noise pollution and the traffic are three major concerns for me with this proposal. Truck traffic 24/7 will stress our local streets and traffic flow and change the sound levels all around. What will the dust from the mine carry for miles around? Superfund sites are known to generate Parkinson's Disease, an infliction I did not have before moving to Grass Valley into a house across the road from Lost Lake. The re-opening of this mine will completely alter what Grass Valley and Nevada City are today. Vote no on re-opening the mine. Thank you.
Mary Ann	Coleman	95945	Grass Valley	14063 Greenhorn Road	The amount of water removed, the air pollutants added to the air, the noise, additional traffic, electricity, and unmet safety concerns are a threat to our community.
Joan	Griffin	95959	Nevada City	14201 Idaho Maryland Road	The amount of water the Rise Grass Valley company is proposing to use will impact the ground water for our community incredibly. As a botanist and someone who has professional experience working for the mining industry, this project will have far reaching detrimental effects on our local environment. We have a huge drought situation on top of intense heat due to climate change. We cannot afford any more environmental issues or use of our resources to help a few get rich!
DANIEL	KETCHAM	95945	Grass Valley	11693 Brunswick Pines Rd	The applicant projects glorious employment opportunity afforded by the mine proposal, but fails to address just where all these new "hires" will live. Our current limited housing stock, coupled with average home prices exceeding the affordability of most, will clearly not support the proposed level of new employment. Furthermore, it will likely displace many of our low wage earners, just as been happening in South Lake Tahoe. Any economic study prepared for this proposal MUST address the projected housing shortage.
M Rynda	Norsell	95949	Grass Valley	12769 Friar Tuck Rd	The are many common sense reasons why reopening a mine here or anywhere is unhealthy and unwise. 1. Toxins/metals which poison the earth and residents. 2. Noise, air and water pollution. 3. Very few uses for gold except for jewelry and wealth for a few. 4. Lack of trust that the owners will protect our environment given past history of failure to clean up after they leave.
Chris	Vaughan	95959	Nevada City	121 Orchard Street	The bad effects out weigh the benefits proposed on this.
Paul	Jewel	95949	Grass Valley	15501 Fay Road	The benefits clearly do not outweigh the risks. Do not reopen the mine.
Thomas	Krauel	96101	Alturas	380 County Road 73	The benefits do not out weigh the risks
Connie	Harbert	95624	Elk Grove	8661 Elk Grove Blvd	The communities of Nevada City and Grass Valley will loose the charm with the destruction, noise and water degradation. The drought is real. Fire danger increased with the heavy machinery. The bucolic quiet and peace lost. The need for wealth gained from mining, the desire for terraforming by the few should not out-way the need for home and family in the affected communities. The water impact in this densely populated community should be enough to warrant a discontinuation of this proposed project.
Nathan	Shook	95959	Nevada City	12330 Conestoga Way	The company proposing this mine project has left an environmental mess behind when they went broke before. I do not trust that they won't do the same in our town. Keep these idiots out and protect our land, water, and people. The risks and downsides of the project far outweigh any slim potential benefit to the community. This is not something we need. Thank you for your time.
Victoria	Connolly	95603	Auburn	223 Dairy rd	The company..... Has a shoddy history and there are huge environmental concerns. No way this can be mitigated

Howie	Muir	95959	Nevada City	Stable Lane	The costly impact of treating the wastewater from a reopened Idaho Maryland Mine (expect that to be far more $$$ than anticipated), the chimerical temptation of new and plentiful jobs (of which most of the long-term opportunities will NOT find current Nevada County residents in them), the expensive, damaging effect on the road infrastructure under the weight of heavy trucks making constant ore-hauls (more out-going $$$), permitting to operate the mine just lone enough to possibly get a bit of an economic boom going so that we can enjoy the devastating bust that will follow the mine's inevitable closure (perhaps sooner than promised or imagined) -- none of this will deliver more benefit that the loss that the County will ultimately endure, whether financially, environmentally, or the character of where we all live. There are far better choices for promoting the growth, social and environmental welfare, and a brighter future for Nevada County than again watching someone suck wealth out of here, leaving us to hold a bag of rocks.
Gary	Parks	95945	Grass Valley	19320 Wymer Lane	The costs to the community will in the end be far greater than any modest benefit in tax revenues or wages. It's not worth subjecting Grass Valley and Nevada City to the inevitable pollution and other problems associated with mining.
Gregory	Chaloner	95959	Nevada City	12656 Banner Lava Cap Rd	The county won't benefit from this project!
Vic	Scott	95959	Nevada City	14963 Banner Lava Cap Road	The days for mining in and around these residential communities is long gone.
Rita	Jennings	95945	Grass Valley	20224 Red Dog Rd	The Days for mining in Nevada County are long gone. There are simply too many of us, too close together, particularly in this case. That is what various Boards have allowed to happen over the years, and now APPROVING THIS MINE WOULD BE A DISASTER as a result of that poor planning. I don't understand why you are even considering it, spending more time and money on a project which is meant to fail.
Hugh	Shelbourn	95945	Grass Valley	13253 North Meadow View Drive,	The DEIR paints a far rosier picture than several local experts conclude regarding the nine's impact on our quality of life. I live close to the mine and will be negatively impacted by traffic, noise and possibly a loss in production and quality of my well water. Then there's the reputation of the applicant himself. I wouldn't trust him to mow my lawn!
Jonathan	Toney	95959	Nevada City	10567 Lost Dog Rd	The destruction and damage from this mining operation will far outweigh the benefits. This ought not be a liberal or conservative debate, but base it on what is best for our community and our future.
Barbara	Graves	95945	Grass Valley	115 Fir Lane	THe downside far outweighs the upside to this Mine. I do not support the reopening of the Idaho-Maryland Mine.
Jessica	Filip	95677	Rocklin	3627 Amethyst Drive	The earth is already polluted, please don't make it worse. We'd like to live here a good long time, in fresh air, thank you!!
Anita	Pearson	95946	Penn Valley	18599 Majestic View Court	The effects and destruction from the previous mines, such as toxic pools, mineral degradation, sink holes, and decimation of ecological nutrients necessary to maintain a healthy, livable environment for all native species are examples. Who will benefit from this move? Greedy, corporate, environmental terrorists that live elsewhere and destroy beautiful environments for their personal and temporary gain at the expense of a fragile community with an economy that centers around the natural beauty that we must fight to preserve. This is the world we leave for our children and grandchildren. They can take their money and invest in sustainable ways to create wealth. Gold is outdated, try solar, wind, hemp, or modern means instead of going backwards. Stop reaping the benefits of this peaceful community. You destroy and run with our "gold" which is the water and land in which we raise our families. I am a: Home owner, Land owner, Tax payer, Born and raised in Nevada County, Native Medicine Person, Steward of the land
LESLIE	GRASSI	95959-9537	Nevada City	15531 Cascade Drive	The environment has suffered enough.
Adrienne	Perreault	95959	Nevada City	14539 Pello Court	The environment is a fragile thing. We don't get a second chance when things go wrong. We cannot and should not let $'s dictate our date. Do not allow gold mining, which impacts our land and water, a chance to create havoc on our fragile environment. NO MINE!
Arianna	Thorne	95959	Nevada City	16794 Bloomfield Court	The environment should be our top priority. Reopening this mine would be disastrous to an already heavily exploited land.

Richard	Wakelee	95765	Rocklin	4155 Tahoe Vista Drive	The environmental cost is too high for this project to proceed. Please stop it from .happening. Thank you. Stay Safe & Well
Donna	Jones	95946	Penn Valley	20622 John Born Road	The environmental damage this proposed mine would cause can't be reversed. The impact on the community from the traffic and noise is very damaging. The impact to the water table and existing wells can be permanent and irreversible, as residents in North San Juan learned when a mine there drained all their wells permanently. And we have yet to remedy the toxic legacy, including mercury and collapsing tunnels, from the historic mines. There are 99 hydraulic mine sites and hundreds of tunnel and drift mines in Nevada county, all dangerous. Please deny this project and protect our communities.
susan	wright	CA 95945	Grass valley	165 West Empire St	The environmental impact of mining is well proven. If we want to attract jobs to our community, let's focus our attention on other resources that add to this beautiful place, not something we have to mitigate . Thank you
Mika	Stickford	95945	Grass Valley	11543 W Brookview Drive	The environmental impact, the usage of water in an area already suffering from water challenges, and the impact on the earth herself is enough to make this an automatic 'NO' for me. This area has already suffered from mining in the past. Why would we want to magnify the issues?
Tim	Stokes	95945	Grass Valley	127 Northridge Dr.	The environmental impacts affecting the community would alter the quality of life so negatively that tourism and small businesses would suffer a blight from which it wouldn't not easy to recover.
Robert	Gulbis	95959	nevada city	10759 ivey land	the fact this is even being considered after the disasters of the last try is ludicrous. This company is clearly profit focused and will only protect the environment as much as regulations compel the to. The lion's share of any profit will be going to the owners of this company that is not even based in America. Add on top of that the draught conditions and extreme fire threat, this is a recipe for disaster. The brazen irony that there has been concern about the cannabis farming industry's use of water while the BOS is considering this proposal is mind-boggling. Regain your common sense! This is a wolf in sheep's clothing. Protect Nevada County and reject this and any proposal for re-opening those mines.
Carolyn	Niehaus	95949	Grass Valley	19501 McCourtney Rd.	The few jobs that will be created for the short-term, are not worth the negative impact to the environment and the community for the next seven generations. The original people made important decisions that included future impacts, seven generations hence. Please consider that and not the immediate gratification.
Louise	Chan	95602	Auburn	24098 Green Valley Road	The gold is not worth all the destruction involved. We do NOT want to live with the consequences left by this company's greed.
Maria	Gillespie	95946	Penn Valley	12972 Lake wildwood drive	The gold won't be shared with the community the way the pollution will. It's not worth it.
Lauren	Schlepp	73099	Yukon	10801 W US Hwy 66	The health and well-being of our planet should come first and foremost. The health of our planet is the health of our people.
Lindsay	Bellows	95959	Nevada City, CA	11339 Deer Creek Lane	The health of our community is in your hands. Please don't let us down. NO MORE MINES.
James	Richards	95959	Nevada City	11756 Red Dog Road	The Idaho mine should never be allowed to re open. There is too much pollution in that old mine. To REOPEN it will pollute our water, noise and air quality. This will also decrease the value of our homes.
Harley	Cross	95945	Grass Valley	10857 Vernon Way	The Idaho-Maryland Mine project is bad for the people, businesses and land in our community. I urge all county supervisors, and officials at all levels of government, to oppose this project. I can say without question, that I will never vote for or support anyone, for any office, at any level of government, if they facilitate the development of this mine. Bad for many, maybe good for a tiny few... that is not democracy.

Jesse	Mendez	95945	Grass Valley	461 Brighton St	The Idaho-Maryland mine project must be STOPPED. I find it suspect when I hear that letters of support are being sent in, when all of my neighbors and local businesses have strongly voiced their opposition to reopening this potential ecological disaster. If the RV park on McCourtney could somehow get approved despite vocal opposition, I remain concerned with the Board of Supervisors approving projects that are NOT for the betterment of our community. My vote will count and I encourage you to vote for safety. Mining is not the answer.
Katherine	Ivy	95945	Grass Valley	347 S Church St	The idea of a destructive mine with very little upside opening in the middle of our community is extremely upsetting. As someone who lives and works in our beautiful county, I ask that you make the only logical choice and vote to stop the mine. Please protect our community!
Kathleen	Sutphen	95959	Nevada City	19681 Purdon Rd.	The IM Mine will ruin property values, poison our water, destroy water source, destroy peaceful living in the greater area surround the Mine.
Aaron	Stout	95946	Penn Valley	12840 Lake Wildwood Dr	The impact of this mine and trucks on the highways have not been thoroughly vetted. Highway 49 and 174 can not handle the increased traffic from trucks. These highways are dangerous and clogged with traffic without the added burden of rise gold trucks.
Steve	Elias	95945	Grass valley	14412 rattlesnake rd	The impact on traffic, ground water, the environment, and the housing market is unacceptable
Colleen	McKinnon	95959-2937	Nevada City	11054 Gold Hill Dr, PO Box 2064	The impacts of this opening of the mine are yet not completely known. We can base information about mine workings on history in this area. This is readily available. economic problems for landowners around Grass Valley needs to be evaluated---increased fire danger because of water problems, sound and traffic problems from mining activity, disruption of tourism. The over-all damage to tourism, business, recreation, property values, quality of air, general safety, water concerns far outweighs the value of mining in this populated area which prides itself for quality of life and it is surprising that this is even considered. The proposed opening of this project is a degradation of the not only neighborhoods, but also the entire County, and the safety of the people who live here and visit here.
Diane	Cross	95959	Nevada City	14879 Brush Creek Ct.	The land around Grass Valley and Nevada City is only now showing signs of recovery from the devastation of mining practices over 150 years ago. Please do not condemn this place to the destruction that a re-opened Idaho-Maryland Mine would entail.
Michaelyn	Logue	95945	Grass Valley	718 W main st.	The land is our most precious resource. And not what's in it. But all of it. The trees, the water, the air (already injured from previous mining) are what draw people to this place. We make more money from tourism than any other industry. You think bespoiling it all for a pittance, a momentary glory of gold, is worth it? You will loose all that is precious in this area and all of your constituents. The contribution to global warming (which we are already experiencing with these heat "events") from the scheduled trucks alone! Please please please DO NOT let this mine reopen. For the love of all that is good, this good green earth, we must protect it so that future generations will have something left to enjoy.
Amy	Wagner	95945	Grass Valley	14180 Golden Meadow Lane	The limited jobs are not worth the environmental impact on our community!
Theresa	McLaughlin	95945	Grass Valley	14166 Loma Rica Drive	The list of negative consequences from re-opening the mine far outweigh any benefits to the community or the county. Please reject Rise Gold's proposal for all of the reasons listed on this petition. After speaking with several local realtors, it is evident that simply the possibility of the mine re-opening is ALREADY having a negative effect. Many potential homebuyers will not even look at a home in the immediate vicinity . . . .
Rebecca	Brewer	95959	Nevada City	14891 Banner Lava Cap Rd	The long term impact of this does not justify the short term gains. It is time for us to be a part of long term, earth realistic thinking. Keep our region in vitality. Honor our water. Honor yourselves.

Stella	Nowell	95959	Nevada City	14860 Uren Street	The majority of your constituents do not want this to happen due to the damage this would cause our community. Do your civil duty and represent the public you serve and reject this proposal.
Terri	Brodsky	95959	Nevada City	17798 Starduster Dr	The mess from past mining still haunts our landscape. It is too close to populous area; underground waterways would be jeopardized. I don't believe the future waste issues or long-term employment claims are valid. Will this help our crowded roadways? No.. don't think so.
Dave	Lawell	95945	Grass valley	14096 liquidambar	The mine is a ridiculous idea.
Sora	Oneiga	95949	Grass valley	13044 drummer way	The mine is a terrible idea all round. We already have severe drought issues in our county, insane fires and still there is toxic residue from other mines
Summer	Scanlan	95945	Grass Valley	379 Clark St	The mine is a terrible idea!!!
Sandra	Bruce	95945	Grass Valley	13997 Emerald Ct	The mine is a terrible idea, and nothing good would come of it. Reject Rise Gold! Protect the citizens of Grass Valley!
Carol	Turner	95959	Nevada city	10802 red dog road	The mine is a terrible idea. It will change the entire experience in our beautiful community. There are other ways to create jobs and bring more dollars to our community. Many organizations are working to do just that. The mine will have more of a negative impact. Please vote NO!!!
Scott	Jaffke	95945	Grass Valley	13917 Sontag Road	The mine is a terrible idea. It will not provide much in the way of income or jobs, and leave us with a toxic mess. The company interest behind it have a well documented trail of deceit, extraction, and then bailing out, leaving us with their environmental nightmare. The responsible thing to do for Nevada County is to deny their permit.
Rebekah	Aroin	95949	Grass Valley	17115 Cabrera rd	The mine is detrimental to the environment and our community. Do not allow it to open!!!
Deborah	Churchill	95945	Grass valley	12655 Gem Ln	The mine is literally in my backyard. I implore you to vote NO ON THE MINE.
Heather	Mandeville	95945	Grass Valley	210 Sutton Way, Apt 215	The mine is not going to bring enough money to Nevada County to cover the damage it does to the earth, the community and the people who live here!!! NO MINE IN NEVADA COUNTY!!!
Susan	Rogers	95945	Grass Valley	640 Charlene Ln	The mine is really NOT a good idea. Please vote No.
Caleb	Carpenter	95949	Grass valley	14406 falling star Ln	The mine is the absolute worst idea I have ever heard for this town. I'm 25 years old now , it was fun growing up in a place that has been so beautiful. I would hate to see the city full of equipment and huge semi trucks all day using our water and polluting such an amazing place.
Ananda	Borden	95945	Grass Valley	12115 Sunset Ave	The mine project is a clear and present danger to the health and well-being to the community, the water, the air. Rise Gold are documented gross polluters and irresponsibly leave their mess for others to clean up.
Christopher	Williams	95945	Grass Valley	718 W Main St	The mine reopening and the person/Company attempting to open it are unacceptable. A con man running a con.
Ray	Griswold	95945	Grass Valley	15143 Rattlesnake rd	The mine spokespeople have already been deceptive with their public statements. Water is the big issue. They will destroy wells for miles around the mine and every tunnel.
Dena	Nick	95949	Grass Valley	17777 Caruso Court	The mine will affect our community in negative ways for years to come. Let's not destroy this beautiful place we live in, at the hands of someone who is focused on greed and not what's good for the people who actually live here. The mine needs to be stopped immediately.

Sarah	Stone-Francisco	95945	Grass Valley	422 Lamarque Court	The mine will be bad for our community on so many levels. Please show that you care about your voters by rejecting any proposal to open the mine. As a public health and a real estate professional I urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Stacy	Patton	95945	Grass Valley	11626 Alta Vista Ave	The mine will bring water and air pollution, traffic, and diminish tourism and property values in the area. Let's not go backwards, let's move forward together with more sustainable community business proposals.
Angela	Bueno	95945	GRASS VALLEY	12877 Lost Lake Rd, 4	The mine will cause problems that money hungry people don't even think about. Our homes are doing just fine as is. Please eave well enough ALONE.
Michael	Mayer	95949	Grass valley	16372 Auburn Rd	The mine will effect the drinking water . Wells will be impacted. Wells will go dry As a corporation, the mine will not take responsibilty for this . Litigate the issue for years. Then your property will be worthless.
Terry	Hastings	95959	Nevada City	15112 Cedar View Rd.	The mine will not benefit our community. This company has only one goal: profit. Don't be fooled by hollow promises.
Michael	Eskew	95949	Grass Valley	15681 Allison Ranch Rd	The mine will only benefit the mining company and its investors. Meanwhile, the community and the environment will suffer greatly, for who knows how long.
Mary	Bartholomew	95949	Grass Valley	1090- Round Valley Rd	The mine would : - Pollute our air - Wreck our neighborhoods with drilling, blasting, and truck traffic - Devour our power, putting our power grid under further strain - Erase Nevada County's plan to cut greenhouse gas emissions - Drain our water - Threaten hundreds of private wells - Reduces property values and property tax revenue
Mark	Douglas	95959	Nevada city	Po1793	The mine would be tragic for Well water. The company that would be opening the mine has a horrible reputation around the world. The gold would be shipped to Canada and China. This would Not lift our economy. This is Nevada county is Gold, why share it with two communist countries.?
Dolly	Lewis	95945	Grass Valley	11910 Lower Colfax Rd	The mine's supporters point to jobs and local spending as the main reason to open the mine, but those gains will come at a high cost to local property values and disruption of existing businesses. And since the County won't get revenue from gold mining profits, only Rise Gold's investors will get rich.
Nathan	Coyle	95945	Grass Valley	560 Partridge Road	The mine's benefits are short term with minor lasting benefit to the community. Nevada County has delt with fallout from centuries of mining and associated environmental damage. Do not sell the present at the expense of this counties future. Please reject this proposal.
Mary	Acorne	95946	Penn Valley	11312 cottontail way	The mining days must stay in history. Don't pollute our water!!
Peter	Arpin	95959	Nevada City	15352 Stonehill Dr.	The mining industry has a long history of being walking away from there messes after the profits are gone and the environment is beyond repair. Don't let it happen here, AGAIN!
Janet	Sibley	95945	Grass Valley	12854 Chatsworth Lane	The mining operation would be too disruptive to those of us that live in the area.

Darkin	Tanner	95945	Grass valley	350 pleasant street apt 17	The minuscule amount of jobs created and the environmental impact is not worth it.
Gail	Johnson Vaughan	1E+09	GRASS VALLEY	11793 LOWER COLFAX RD	The negative impacts are so many and the benefits so few. Please reject this destructive proposal and protect our way of life. Thank you
Tamara	Luckinbill	95945	Grass Valley	10788 Bartlett Drv	The Nevada County community needs to protect our neighborhoods, our local economy, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine. I am a sixth generation native to Grass Valley and know even my gold rush, drunken, sleezy ancestors would have likely regretted what the opening proposal of this mine would realistically do to the natural resources and local culture of this region. At this time, the cleanliness of our most necessary resources, such as our water shed, is of the most vital importance. Among other concerns, our community needs yo focus on building infrastructure which is both sustainable and provides a leconomic benefit to us who are already living here. I urge the Board of Supervisors to reject this destructive proposal and instead protect our community from the horrendous consequences which would otherwise arise.
Mark	Cowart	95949	Grass Valley	18915 Connie Dr	The obvious problems far outweigh any and all possible benefits! Really a no brainer. It's difficult to imagine why anyone could think working to reopen this mine would be a good idea.
laurel	davis	95946	Penn Valley	15289 Pleasant Valley Rd	The positives do not outweigh the negatives. Just addressing the pulmonary problems alone are too risky, not to mention all the other negatives: pollution, water, traffic,etc.
Mary	Zeigler	95945	Grass Valley	13021 Somerset Dr	The possibility of the mine re-opening is already having a negative impact on property values. Potential buyers have backed out of home purchases.
Laila	Murfin	95945	Grass valley	12029 pine cone cir	The potential environmental and social impact of this project is unacceptable. Let's move forward not backwards. People and nature over profits! Nevada County, you can do better!
Robert	Hanna	95959	Nevada City	11171 Banner Mine Way	The potential for this mine reopening and going the wrong way, is too high a risk. Big money coming in here is just to make more big money. The well being of this community is not even on their mind. NO ON THE REOPENING OF THE MINE.
Amanda	Ganong	95959	Nevada City	10626 Banner Lava Cap RD	The potential hazards are many. Will my neighbors' wells be drained during a severe water shortage? When everyone else is to cut back their water usage by 20% what will be the consequences of adding this new industry? Can wolf creek support the drainage of off-flow from this project? How stable is the ground? Remember the sink hole that opened up 7 stories deep in 2017?
Daniel	Chase	95945	Grass Valley	19646 SIVERS LN	The potential negative impacts of this project clearly outweigh the benefits for few local residents. This doesn't make sense for our community.
Kalita	Todd	95945-7956	Grass Valley	14494 Lower Colfax Rd	The potential water use & toxicity is not doable in these times.
Ronald	Antaki	95959	Nevada City	13651 Jones Bar Road	The promise of jobs never lives up to the hype. The damage and ruin to our environment and quality of life will far exceed the Rise Gold claims. C'mon, we're humans, everything we do turns out far from the perfect vision presented to us by those who are motivated by greed. It's a bargain with a ruthless devil that would only lead to massive regret.
karyn	gladstone	95945	Grass valley	17033 Jones Ridge Road	The proposed mine site is very nearby to my home. I worry about the impacts to the water table -- we're already so dry up here -- and the overall quality of life - air quality, traffic, contaminants... I also wonder how much value this will add to the community? There are a few jobs, but how many will be filled by locals? How much of that money will come out of the ground, and directly to corporate executives and investors who've only seen Grass Valley via drone?
Dale	Merrill	95945	Grass Valley	11241 Vista Ave	The quality of rural life in Nevada County will be severely compromised by the increased noise levels from the mining operations. Also NID does not have enough water for its customers as it is and the mine will siphon off more and will potentially pollute or drain the local aquafers .

	Niles	95959	NEVADA CITY	10437 Mackinac Ct	The reasons outlined above speak for themselves. I value the potency of the vibrant community and it's integrity and well being above any economic gain for some corporate entity that has no allegiance to the value of a flourishing community that offers it example of abundant right livelihood and compassionate nurturing of future generations to the world. We are not slaves to a model of economy the supports suppression and usuary but sovereign independent beings of incredible worth.
Orion	Penniman	95959	Nevada City	17527 old mill rd	The reopening of a gold mine in our county is as absurd as denying global climate change. Please stop this, our environment is way too precious to heed way to the monteriary gain of only a few.
Heather	McCormack	95945	Grass Valley	207 Joerschke Dr apt 8	The reopening of the Idaho Maryland Mine is an absolutely careless self-seeking destructive proposal. I've lived here my entire life and I understand that this is what we were built on that this is how this town came to be but we're also more knowledgeable about the hazards of mining now not only on humans but on the land as well. Not only that but we're going to have some company that isn't even locally based and doesn't have to live with the ramifications of this project.
Elizabeth	Volz	95946-9448	PENN VALLEY	20755 CHAPARRAL CIR	The re-opening of the Idaho-Maryland mine--by an outsider who has been proven to be unreliable--threatens our water, air, and the natural beauty that lures tourists. It will destroy the overall quality of life.
Michael	Mecartea	95945	Grass Valley	15195 Rattlesnake Rd	The reopening of this mine will cause nothing but problems environmentally for our area ! It's a BAD idea and must be stopped !!
Ashton	Cates	95959	Nevada City	12642 Valley View Road	The residents have spoken, the mine is inappropriate for a tranquil residential area.
Kimberly	Shureen	95959	Nevada City Ca	10699 Pittsburg Rd	The residents of our country do not want this mine. It is wasteful in view of the limits of our precious natural resources. It would significantly impact our quality of life.
Melissa	Thompson	95960	North San Juan	P.O. Box 391	The resources needed to open & operate the mine are already a huge concern for local families & businesses, along side with the air quality. The waste from the mine will be very very toxic to our wildlife & families
Jo	Garst (Jo Garst Design)	95945	Grass Valley	159 S Auburn Street	The Rise Gold Idaho-Maryland mine would be bad for the environment, bad for our residents, and bad for business. AS a business owner in Grass Valley I stand firmly in opposition of this mine. There are better more sustainable and lasting ways of creating jobs and growth in this community, bringing in outside dirty business isn't it.
Teresa	Freeman	95945	Grass Valley	334 S School St, Apt B	The Rise Gold company is already in litigation for failure to comply with ecological issues. This project is of no value to this community. Only shareholders and politicians profit from this. Do the right thing and stop this project.
James	Selby	95946	Penn Valley	12720 Golden Trout Way	The Rise Gold plan to reopen the Idaho Maryland Mine is a terrible idea. Transporting 1.6 million tons of rock from the mine will destroy Whispering Pines Rd and severely negatively impact the surrounding neighborhoods. This is a beautiful, quiet community, and the last thing we need is a heavy-duty industrial mine, with hundreds of thousands of truckloads exiting the community along Brunswick Rd. Please, Supervisors, VOTE THIS DOWN!
Eric	Hellebust	95945	Grass Valley	13503 Manion Canyon Road	The Rise Gold proposal for reopening of the Idaho-Maryland Mine provides potential benefit to a small group of your constituents and potential harm to the larger community. While economic development is among the Boards primary objectives this must be balanced with public health and safety. The history of mining in Nevada County has repeatedly diminished the quality of local land, water, air, human health and our natural environment. I urge each Supervisor to heed the majority opinion in Nevada County and reject proposal to reopen the Idaho-Maryland mine.
Daniel	Buckley	95713	Colfax	20390 Paoli Ln.	The Rise Gold proposal is a threat to water supply & water quality & is devastating to energy supplies & efforts to confront global warming.
Amy	Umpleby	95959	Nevada City	14118 Beitler Road	The Rise Gold proposal to re-open the Idaho-Maryland Mine is a dangerous environmental gamble, that will benefit a foreign corporation and irrevocably hurt local residents. Contrary to their biased and bogus studies, wells will be polluted and drained, and downstream pollution will occur as a result of mining. Unbiased, scientific environmental analysis shows the harm this project will do.

leslie	stager	95949	Grass Valley	10100 Hidden Springs Dr	The Rise Gold proposal to re-open the Idaho-Maryland Mine is not desired or appreciated in this community. We, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead want to protect our community of all creatures who live here with very limited water supplies, and already historically ravaged landscapes from mining.
Jacquie	Bellon	95959	Nevada City	13800 Miller Rd	The Rise Gold proposal to re-open the Idaho-Maryland Mine would devastate our neighborhoods and quality of life. We have seen it before and still live with the devastation incurred by the gold rush of the past century. Our land is still recovering. We cannot afford to let the pollution and toxicity that gold mining entails take hold again, especially in these years of drought and climate uncertainty. I remain hopeful that you will protect what makes this place so precious. Thank you for your attention.
Lanette	Howard	95945	Grass Valley	200 Rockwood Dr.	The Rise Gold survey went to all 5 districts. District 3 is impacted the most. How about asking only us.
Inge	Ivens	95959	Nevada City	10863 WILLOW VALLEY RD	The Rise Golds project is flawed in many ways and does not belong in this century. The draft environmental impact report flags many serious impacts on environment, water quality, and more; but it misses to indicate that those findings should shut down the project. I urge the Board of Supervisors to reject the destructive proposal and protect our communities.
Richard	Pechon	95949-6703	Grass Valley	10995 Thornicroft Way	The RiseGold mine proposal is more destructive than productive. It does not belong in our community. The residents of Nevada County will bear the brunt of long term damage, well after the Rise Gold mine owners have left. I urge the Board of Supervisors reject this destructive proposal. Protect our community from Rise Gold.
David	Putnam	95949T	Grass Valley	16318 Footehold Dr	The risk vs reward in reopening the Idaho-Maryland mine is too great. The potential to pollute wells that nearby residents depend on for their household water should be enough reason to not go forward. The increased air pollution from heavy equipment operating on site and road damage resulting from truck traffic in the surrounding area is not something that should take place in a populated area. I feel that the leadership of Rise Gold is currently busy making inflated promises of good paying local jobs but they have very little stake in our county. Their company headquarters is located almost 1,500 miles away in Vancouver, British Columbia. when you view their past record, of environmental violations so far, both here and in Canada, that should give everyone pause enough to not approve this endeavor. You need to look at the long term effects of what will be left over for future generations to deal with when Rise Gold is long gone and the potential new Idaho Maryland operations have ceased.
Peter	Crane	95959	Grass valley	19819 saddle road	The risks far outweigh the benefits. Our community does not want to bear the costs for an international mining companies profit.
Derek	Olsen	95959-9331	Nevada City	16992 Shoshoni Trail Ct	The risks of this mine reopening far outweigh any possible benefit for the community.
Geoff	Pollard	95949	Grass Valley	800 FREEMAN LN APT 301	The risks of this project far outweigh any potential benefits. Please stop this project asap.
Mark	Lyon	95959	Nevada City	12364 Summit Ridge Drive	The small number of jobs the mine might ;provide is too small when compared to the possible long-term environmental damage tp our community. Homeowner in District 1
Marina	Bokelman	95945	Grass Valley	609 Butler St	The soil and water table of this community has not yet recovered from the gold rush days. The Diggins are still barren, the water table is still poisoned. I lived on the Ridge where there were an inordinate number of cancer deaths in the neighborhoods at the end of the Fire Access Road which goes through the Diggins, which remain a barren moonscape. Please, please do not allow this terrible thing to happen. It will destroy the peace and health of this community. The last thing we need is a mine which will ruin the last bit of quality of life we have here in Grass Valley. We have not yet recovered from the poisoning of water table and soil from the original gold rush. Please, please, please do not let this mine go forward.

Shawn	Prescott	95945	Grass Valley	14242 Peaceful Pines Ct	The toxic legacy of past gold mining operations should be more than enough to warrant opposing any future gold mining. We are still cleaning up the pollution and suffering the effects of past mining. Our water, our soil, our food, our air, our roads and infrastructure, absolutely everything required for a healthy life and ecosystem have been severely negatively impacted. To contemplate more of the same is unconscionable. We residents and taxpayers have born the financial and existential burdens of attemptnig to clean up the environment after gold mining. Reopening a mine will not only affect us as individual landowners but as communities. It will impact not only our physical environment but also our business environment and disrupt our communities possibly beyond repair. Tourisn to our beautiful area with it's beautiful rivers and streams, rich history, and artisitic towns is the new "gold" of Nevada County. And it's sustainable. We KNOW the toxic legacy of gold mining, we KNOW it's all but impossible to monitor these companies and enforce protections. They would rather ask forgiveness than permission. Once a thing is done it's difficult, if not impossible, to undo it. It's too late. Rise Gold isn't even an American company. They have no loyalty to us, to this community, and they have a history of disregarding laws and policies to safeguard the environment. "When the last tree has been cut down, the last fish caught, the last river poisoned, only then will we realize that we cannot eat money". We, here in Nevada County, have been living with the horrific toxic effects of mining in this community since it began. Our environment has suffered tremendously from gold mining, and we are STILL cleaning up many sites at great cost with tax-payer dollars. I myself live near, and have been affected by, the EPA Super Fund site Banner Lava Cap Mine. With the continuing toxic legacy of gold mining, drought, unprecedented heat and wildfires that appear to be our "new normal", do we really need to add more to that pile? How could anyone even consider approving a new mine at this time? It would be the death knell for our community, the last nails in the coffin, the straw that breaks the environmental back of our camel. We need to be doing MORE to clean up our environment not pouring more gas on the fire! Supervisors, please consider future generations of humans and wildlife, and REJECT this proposal! "Only when the last tree has died and the last river poisoned and the last fish been caught will we realize we cannot eat money".
Susan	Gunn	1E+09	PENN VALLEY	14904 INDIAN SPRINGS RD	The track record for this company and it's leader should be all the evidence you need to know this is dangerous for out community!
Carol	Laurie Dickson	95959	Nevada City	26585 Feather Court	The value of our homes and our businesses tourism, etc. will be majorly impacted. We already have water concerns. We already have pge black outs. No - we do not approve of having Rise Gold re-open the mine. We already are dealing with traffic issues due to the State demand of more housing and roads not able to comfortably handle this traffic.
Isaiah	Sunrae	95959	Nevada city	17555 old mill rd	The vast majority of community members wholeheartedly reject Rise gold's proposal to reopen the mine. There has not been sufficient environmental impact reports and our local water table will undoubtedly be effected. As a local business owner I can say with certainty that the mine does not have community support. Thank you for hearing the needs of your constituents and acting accordingly.
Barbara	Brown	95959	Nevada City	251 Willow Valley Road #14	The vote of just three people could ruin the future of our beautiful towns. Please hear us who want this stopped. Protect our area. Stop this mining operation.

Monica	Senter	95959	Nevada City	13579 Idaho Maryland Road	the water alone should be enough to stop this project. we no longer live in the age of resource extraction. sustainable industries are the future, gold mining is abject resource extraction, it makes no sense. plus where will all the houses come for nearly half of the out towner jobs being created come from? it's foolish to approve this project, no good can come. cannabis can bring 300 jobs without any of the harms of a gold mine. This project is outrageous on every level. The water issue alone should inspire you to reject this as having zero public benefit. It is abject resource extraction for foreign investors, hardly comparable to historic 49ers efforts. Approval by the BOS will be political suicide, that's a promise.
Tom	Larsen	95945	Grass Valley	327 Vistamont Dr	There ae many reasons to avoid this project at many levels. A basic cost/benefit will provide some very clear awareness that Rise is seeking to literally take one-time profits from underneath Nevada County. That is the benefit to them, for which they will employ some number of people while the economics last. However, properly looking at not the direct costs as well as the risk costs will paint a very different picture. In simple terms, Rise has no investors committed, has no reserve capital for any damage that may occur (e.g. the filters fail and flood the river with polluted water), has numerous new, unproven practices or technology assumptions, and should it fail economically, saddle the County, it's neighbors or downstream victims with a long term burden and lawsuits. Mining is a resource extraction for which the only winners are the businesses. Mining did build this community, at a time when the downsides of resource extraction, nor what it might do to the planet over decades, was unknown. It is not now. We know the toll that resource extraction takes. You have the opportunity to say "not on my watch" to avoid associating your name with the small group of people who put the greed of a few ahead of the community at large. Your legacy can be we avoided the calamity of cancers, environmental accidents or long term environmental degradation, let alone any accident on site or connected with the activity of the site. I urge you stop this effort at your earliest opportunity. Thank you. B.S. Conseration of Natural Resources, UC Berkeley '81
Selene	Mitlyng	95959	Nevada City	16346 Red Dog Rd	There are ways to increase the economic base of Nevada County that do not involve the incredible destruction of natural resources for which our county is known and loved. I, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community. We do not need this in our community. It will destroy our wonderful quality of life. There are other ways to bring jobs to the community. Please reject this proposal.
Mara	Moon	92277	29 Palms	6620 Ivanpah Ave	There are alternatives to depleting the earth .
Ariella	Stafanson	94611	Oakland	249 Mather Street	There are many better projects that are more evidence informed, and better long term for the community than this one. Join us in moving forward not backwards towards a history that based on all the evidence has proven to be a failure.
Mekdela	Maskal	95945	Grass Valley	12967 Hoppy Hollow Rd	There are many other ways of creating jobs that are generative and build a healthy community. We don't need to go backward, we're still cleaning up the ponds and streams around us from what the mine did in the past!
Darlene	Ward	95949	Grass Valley	15306 Stinson Dr.	There are other ways to provide jobs for our citizens, such as providing high speed Internet to connect with the rest of the country. We don't need more traffic from large trucks, destruction of local habitat, or more pollution. Our foothill community is a lovely tourist destination, but I fail to see how re-opening the mine will enhance the appeal, and I am concerned that it will have long-term detrimental consequences. Please reject the proposal.
Maureen	Besancon	95959	Nevada City	11731 Stillwater Creek Rd	There are so many reasons not to approve this mine. The amount of water that will be used during the worst drought in 1200 years, noise pollution from the operation and the trucks running constantly to and from the mine, air pollution, the cost in reduced value of the homes near by, the chance their wells will run dry. Please stop and think about our community. The few full time jobs does not equal the cost to our community.

Kathleen	Nicks	95949	Grass Valley	16211 Dry Creek Lane	There are too many negative reasons why we do not need to reopen the Idaho-Maryland Mine. It jeopardizes the health and safety of our community, and we can't trust that a Canadian corporation will be capable of ensuring that environmental disasters will not happen.
Linda	Gemignani	95959	Nevada City	12145 Pasquale	There are way better uses for the land around here then to threaten it with ecodamaging mining operations. True Gold is of the HEART. Have some Heart people. This would be a huge mistake. You can't reverse the damage a mine can cause. Please reject this mine proposal.
Marston	Schultz	95945	Grass Valley	319 Columbia Ave	There is no benefit to our community to allow this project to go forward.
John	Tomasello	95945	Grass Valley	18958 Louis Road	There is NO benefit to our community. Please do not mention jobs. That's BS and we all know it.
Lisa	Boulton	95946	Penn Valley	10162 Donna Way	There is no gain for Nevada County to allow Rise Gold to proceed. We have already seen that they lie to us and we know their history. Stop the mine!
Russell	Stabler	95959	Nevada City	11464 Bedrock Dr	There is no good reason to have this heavy industry so close to our urban area. Gold is not a necessary industrial material for our society. This operation is risking the local environment for not much more than wealth acquisition.
JOAN	KEYES	95945	GRASS VALLEY	11159 ALPINE LN	There is no place for this dirty, polluting activity in our mountain community. The gold rush is over. Please vote NO.
Lauren	Tackbary	95945	Grass Valley	11030 Sundown Place	There is no reason to open the mine! Please protect our air ans water. Our planet is suffering enough from all of the pollution, please do not do any more harm to it than we already have. Let's preserve what we have left for ourselves and our future generations. Polluting our water and our environment is not worth the jobs that the mine will provide the community. Look at everything happening around us, these fires, the drought, all of this is climate change! We can not add to the problem, we need to fix it. Reopening the mine would be horrible for our community, please protect this land and the people who live here!
Ruth	Ghio	95945	Grass Valley	124 Success Mine Loop	There is no way the mine will impact this area in a positive way. The Earth is too fragile and weakened by human behavior. The Mine is an other example of the earth being misused by humans. Another time where greed and self serving behavior is likely to cause untold damage to the planet.
Cecilie	Hooper	95945	Grass Valley	14618 Highland Dr.	There is nothing about this mine that is good for our county, city or state. The owners of this mine are not acting in good faith. Pollution of our air, water and habitat is at stake. Please say no to this mine project!
Dallas	Cruickshank	95959	Nevada City	576 E. Broad St.	There is so much going on in the world ((and our community)) today with covid and wildfires etc. etc. etc.,, it pains me to see our small community that we all work so tirelessly to keep loving && caring being taken over by big money and big corporations trying to get a slice of our assets. Please help to keep our town the gem that it is. I've lived here my entire life,, and I'm tired of seeing the charm I used to know dwindle away.
Mark	Schlesinger	95959	Nevada City	13431 Yuba Close	There was minimal impact to neighbors in the 1800 when gold was king...no so today.
Christine	Bosley	95945	Grass Valley	10530 Walker Dr., Spc 19	There would simply be too much damage to the area with pollution, noise and water waste for too few jobs. Please reject the proposal and protect your constituents rather than one business.
Kathryn	Hamilton	95946	Penn Valley	13248 Ore Court	There's no point in opening something that's been closed for so long. While surely risking the health of this county by polluting it for unnecessary reasons.
Dean	Wilkerson	95670	Rancho Cordova	3105 Flagler Way	There's plenty of evidence from the past that makes it clear why this shouldn't be allowed.
Bruce	Dewing	95949	Grass Valley	17154 Franchi Pl	There's a great number of concerns with the DEIR. If Rise Gold doesn't address them all, then the proposal should be denied.
Dawn	Areson	95959	Nevada City	12306 Starwood Lane	These big rich corporations don't care what a horrible impact this will have on Nevada City and its residents. please rejects this proposal.
Danner	Conn	95945	Grass valley	11150 squirrel creek road	They only are mining for investors,not gold.no mine for grass valley.
Ashley	Gaughan	95945	Grass Valley	13139 Greenhorn Rd,	This absolutely cannot happen

Mary	Padua	95959	Nevada city	Po box 2013	This act of allowing the mine to reopen will have devastating results for our community.. please stop this act of corruption..
Patricia	Williams	95945	Grass Valley	13044 Somerset Dr	This activity would be devistating to our community.
Jason	Reynolds	95959	Nevada City	12689 Sneath-Clay Road	This area is a historic part of Nevada City. We have a creek right next to our house please do not destroy our fragile ecosystem. Thank You!
Tessie	Moore	95722	Meadow Vista	846 Acorn Way	This community must be protected. It will create pollution and destruction to our environment.
Mary Jo	Wainwright	95949	Grass Valley	15604 Carrie Drive	This company cannot be trusted and the county doesn't have the resources to properly oversee this project. Protect our county from this outside company who only cares about itself. Gold Mining should stay in the past.
Rachel	Salerno	95959	Nevada City	202 Prospect Street	This company cares nothing for our community or our British surroundings and the wildlife that we have a duty to protect. If you haven't yet, please watch the documentary Rise Beyond Gold. The owner of Rise Gold is interviewed and asked what he enjoys about our community, and he completely flounders on his response. Because he doesn't enjoy our community or care even the slightest, tiniest bit about our community! All he sees when he looks at us are dollar signs, dollar signs with no care whatsoever of the devastating hazards that ripping into and poisoning our land will create. I'm shocked and saddened that this is even being considered. We can't allow this, we can't afford to.
Karen	Greenhaw	95949	Grass valley	21974 cottage hill drive	This company has a long and terrible reputation let's not let them lay or city to waste
Lisa	Mueller	95959	Nevada City	175 Bost Ave	This company thinks Nevada County is a pushover community. Please show them we are not. We are a community that supports each other and the environment. Please watch this video of Mossman if you haven't seen it. https://www.youtube.com/watch?v=ZIxO06c_Igo
Lana	Fredrickson	95959	Nevada City	16908 Banner Quaker Hill Rd	This company's performance history, glitzy advertising of too-good-to-be-true promises coupled with what we know of destructive mining effects should be enough to make it clear that this should never be approved in our community!!
Michael	Bradley	95959	Nevada City	11472 Rocker Rd	This does not benefit the community in any way , only harms it. The amount of jobs provided for current locals when you exclude the non local workers they will bring in just isn't worth the harm. New jobs that harm the greater community is not the jobs we need created.
Gerasimos	Christoforatos	95959	Nevada City	12820 Woolman Ln	This does not sound like a good idea.
Louis	Quaintance	95959	Nevada City	10777 Banner mine Way	This gold mine will undoubtedly create an environment which will make it unlivable!
Judy	Houle	95602	Auburn	10556 Combie Rd. #6403	This is a bad idea on every level. It will not benefit this community, it will only damage it.
Joann	Girdler	95947	Grass Valley	112 Buckingham Ct	This is a decision which will negatively impact our environment for years. The earth will suffer, local citizens will suffer and wildlife. What does money matter if one's habitat is harmed along with their health. You were elected by the community to do the right thing for your constituents now please do it. NO MINE. Rise Gold is weak financially and trades in the Pink Sheets and Mossman appears to lack integrity There are always problems big and small and Rise Gold does not, based on past history, have the resources or integrity to be trusted. The history of Rise Gold is very checkered and lacks integrity. Look at how they have handled things in the past. If we destroy our earth and community we will have nothing and if this continues and the damage is done we will not be able to easily or quickly reverse the situation, if at all.
Miriam and Joe	Limov	95946	Penn Valley	14235 Indian Springs Road	This is a hideous proposal that is not considering our children's future for a healthy life here in Nevada County destroying the air, water quality not to mention noise issues and traffic.

Olivia	Terhorst-Steele	95959	Nevada City	PO Box 747	This is a massive step backwards in any progress made by Nevada County to preserve ecological well-being and climate responsibility. Beyond the anticipated effects to water quality and several species, both plant and wildlife, this project further sets us back on any efforts to provide housing for residents of Nevada County. Furthermore, the EIR seems to blatantly ignore the fact that all the land in Nevada County is culturally significant to both tribal members and otherwise. All this land is sacred, not just the places where artifacts have been uncovered. Please stop this project and protect all residents of Nevada County as well as the land we occupy.
Lucy	Brank	95945	Grass Valley	13191 Foster Rd	This is a no-brainer. Please do the right thing for our beautiful community. The risk is not worth any potential reward - and there isn't even much promise of a reward by this shady mining operation. Please reject this proposal and protect our community!
Sandy	Berliner	95959	Nevada city	12586 Mayflower Dr	This is a really bad idea to allow mining in the middle of residential areas and so close to medical facilities. Also we can't afford the amount of water it would take to run this operation and the toxic waste disposal it would create. There is not enough gain for Nevada county and so much gain for a company that could (really) care less about all of us. So, please DO NOT ALLOW THIS TO PASS
Laura	Goldschneider	95602	Auburn	12160 Lakeshore N	This is a short sighted, bad idea. Mining is our past not our future. The environmental concerns should stop this now.
Linda	Frey	95949	Grass Valley	21460 Duckabush Ct #2	This is a terrible idea and I oppose it vehementlyl Please, we do not need the mine to re-open, it would be a disaster for the county and the community.
Jon	Dorfman	95945	Grass valley	13346 grass valley ave.	This is a terrible proposal and should not be passed. Please protect our local environment and shut down this proposal!
Gerry	Smith	94541	Hayward	1476 Clay Street	This is a very bad idea -- for the environment, and for Grass Valley itself. What will the water pumping do to the wells that people depend on? Is Grass Valley prepared for huge trucks carrying rock 24 hours a day on their roads? I've seen first-hand what constant use by heavy trucks does to roads: they're destroyed. Not to mention the noise and dust you're going to have to put up with. Plus, the company that's offering to open this mine has a VERY bad reputation for making all sorts of promises and not delivering.
Cassandra	Wahlstrom	95959	Nevada City	475 Spring St. 2D	This is an issue of primary importance:: Skillfully negotiate & legally block the reopening of the Idaho Maryland Mine! A corporate proposal of greed with a large-scale destructive impact on the local community and environment. The involvement of the Board of Supervisors & the local community is essential in preventing this disaster.
Ruby	Entler	95945	Grass Valley	11803 pine cone circle	This is awful.
Melanie	Bright	95945	Grass Valley	19759 woodpecker ravine road	This is completely hazardous to the entire area. Your job is to protect the people in your care and under your supervision. Everyone is watching and everyone will see who votes for the wellbeing of the population or their own pocketbook.
Syndi	Martin	95959	Nevada city	15907 banner Quaker hill rd	This is corrupt. What recourse would residents have if their wells dry up? Please do not allow this Canadian company to reopen the mine.
Dr Sean P	Avera	95949	Grass Valley	20789 McCourtney Rd, Cocosa Ranch	This is entirely driven by money and not community enhancement. Let's move on with better health and environment.
Dawnell	Blaylock	95602-8875	Auburn	6290 Ralph Ct	This is going backwards. Mines should not be reopened at this day and age.
Robert	Gunn	95945	Grass Valley	13229 Side Bet Dr	This is just a terrible idea. I've met nobody who supports this in any way. It would be a crime to allow this. And an 80 year term?! Insanity.
Joel	Gonzales	95945	Grass Valley	115 union jack st, #41	This is not 1850 any longer. It's going to take a thousand years to fix the damage already done. No more please. I live on Bennett and this affects me directly as well as many, many others.

Annie	Costa	95946	Penn Valley	10581 Live Oak Ln	This is NOT a great idea in any way ... this mine will not bring enuf financial advantage to the WHOLE community that it WILL impact!!! STOP the Mine. Do Not Allow it to open for the benefit of so few!
erin	coppin	95945	Grass Valley	363 Alta Street	This is not the right direction for our town(s) and our County. Please stop this greed and environmental destruction. We have greater opportunities and challenges to face in our county without inviting in this disreputable company and its toxic practices. Please act in the best interest of our community.
Alice	Root	95975	Rough & Ready	10277 Rough & Ready Rd	This is not the time or place to re-open the mine.
Katherine	Benedict	95959	Nevada City	12275 Scotts Valley Road	This is not the way to bring jobs into our county; there are ways to bring jobs to this county without further destructing the ecological functions of this area (flood flow, forest health, noise pollution, air pollution). Bring a sawmill: Help ignite an industry that can bring economic livelihood to the community and facilitate the need to have industrial options to prevent wildfire. The entities involved in this mine are not from here, do not have vested interest in the people or environment that we live and love. They are only interested in profit at our community's expense.
Larry	Lefmann	95959	Nevada City	11900 SIERRA PINES RD	This is not what Nevada County needs. more traffic. pollution and lower property values.
Jessica	Parker	95949	Grass Valley	15781 Auburn Rd	This is so unnecessary
Janet	Goodban	95949	Grass Valley	15113 Beeman Ln	This is the absolute worst thing that could happen to our community.
Heather	Rose	95977	Smartsville	10860 Mooney Flat Road	This is the exact opposite direction our community should be moving in. First we have an unprecedented drought happening and our water resources are not enough for the residents of this County. We have not even begun to address and clean up the mine waste and harmful pollutants such as mercury and arsenic that are still very present from the mining over 100 years ago. We do not need the jobs as all the local businesses owners are struggling to fill positions across many different types of business. This mine will create irreparable damage as we can see from the still very active and present pollution of the last mining event. The heavy equipment, traffic from large trucks, constant drilling, and depletion of the water table is not beneficial to anyone in this county. Many people's wells have gone dry this past summer. We've had an unprecedented amount of fires threatening the lives and homes of our residents. The fire personnel is stretched to find the water resources necessary to fight fires. The price the residents will pay is their livelihoods and possibly lives for this company to make money!
Chad	Harper	95959	Nevada City	530 Nevada Street	This is the last thing Nevada County needs and anyone in support does not have the County's true interests at heart.
Richard	Baron	95959	Nevada city	108 Park side pl	This is the most irresponsible propersitii ever put forth. We have no water. Our are quality is already one of the worst. Wake up do you have children in your family?
Garrett	Stuessy	95945	GRASS VALLEY	13126 pine cone circle	this is too close to our homes!!!
Alison	Ramos	95945	Grass Valley	346 Rhode Island St	This isn't the 1800s we don't need a mine.
Lauren	Hayes	95945	Grass Valley	17791 Jones Ridge Road	This ISN'T what we need in Grass Valley.
Julie	wagner/ schuetz	95959	Nevada City	170 Grove Street	This mine reopening is a really really bad idea. These Canadian scoundrels have done it before- made a mess for others to clean up. Do not let them do this here!
Cara	Wasilewski	95959	Nevada City	10895 Pine View Heights Rd	This mine feels like a step backwards for our community. It puts our water supply and land at risk, unnecessarily. There is enough evidence on the company wanting to commence operations. And this evidence is solid enough for us to know that approving their proposal will destroy our neighborhoods, economy and quality of life. Let's move forward instead of backwards. NO on the Idaho-Maryland Mine is the right direction.
Gina M.	Herbert	95959	Nevada City	15873 Bitney Springs Rd.	This mine is a catastrophic venture, putting our town in danger and lowering property values across the board. I absolutely oppose the Rise Gold reopening the mine, for my childrens sake.
Esther	Collins	95949	Grass Valley	17505 Drumheller court	This mine is a dangerous idea for our community. We are severely threatened with drought and this would just make it worse. This company has a track record of environmental harm. I am asking you to reject this proposal and protect our beautiful county and our quality of life.

Christie	Brockett	95946	Penn Valley	12702, Roadrunner Drive	This mine is a horrific mistake! Starting this mine up will ruin this community along with the rivers around it. No amount of gold is worth the destruction it will cause. We are in the worst drought in 1200 years in our state. We need to be preserving our land not destroying it!!
Colone Blundo	Shianne	95959	Nevada City	16016 Indian Flat Rd.	This mine is a literally inviting our town burning down. It will drain are aquifers and starve out the trees. Please don't let this happen
Kali	Feiereisel	95959	Nevada City	13359 Quaker Hill Cross Road	This mine is a terrible idea for our community. The long-term, sustainable (economically and environmentally) solution is to avoid reopening this mine and bolster other areas of our community. Additionally, there are serious concerns about water contamination and downstream farms using contaminated water to irrigate crops. Contaminating our local foodshed must be avoided.
Allison	Rapp	95949	Grass Valley	13748 Marin Place	This mine is a terrible idea for so many reasons. There are hundreds of miles of tunnels riddling our area, and already it's impossible to buy subsidence insurance. That tells you something important about what the insurance companies know about why the Idaho-Maryland Mine should NEVER be reopened. Please act for the people and not for the money.
Nancy	August	95949	Grass Valley	20427 Buck Ridge Rd.	This mine is a terrible idea. Right in the middle of Grass Valley? And the company wanting to do it has a horrible track record. Please, please don't let it happen.
Maggie	Crane	95946	Penn Valley	15318 INDIAN SPRINGS RD	This mine is about money = not about the long term effects it will leave on our county in terms of water pollution, etc. Do not approve this destructive proposal!!
Misty	Fairbanks	95959	Nevada city	14293 Dorcelline ct	This mine is an atrocity to this beautiful county, the nature that is resides in and is a blatant disregard for the wildlife and the welfare of the people who live here.
Linda	Nowak Carlson	95959	Nevada City	16604 Astral Trl	This mine is bad for our psyche, our air, our water and our property values.
Alene	Sidle	95945	Grass valley	19588 you bet rd	This mine is going to cause more harm than good to our community, wildlife, and water sheds. Please think about the future generations. There has already been so much damage in our county from mining.
Linda	Lansky	95949	Grass Valley	20590 Big Spring Dr	This mine is not the right industry for this community. We are faced with huge water issues and climate change problems, let's do something useful for our citizens and planet.
Julie	Mills	95124	San Jose	1741 Lorenzen Drive	This mine is unnecessary and this company has a proven record of environmental irresponsibility
PATTY	MATHENY	95945	Grass Valley	407 Washington St	This mine makes no sense. It provides no value to current residents and only creates multiple severe problems to our environment and quality of life. Please Please do not let this mining business invade our wonderful community!!!!!
SCOTT	FAIRCLOUGH	95959	NEVADA CITY	13359 GRACIE RD.	This mine must be stopped at all cost. The money and jobs they claim that will happen Are not worth all the damage they will cause. The damage will last for centuries.. We must start a class action law suit to stop these greedy scumbags From wrecking our land for our children and our grandchildren sake. We must act now!!!!
Annika	Broughton	95608	Grass Valley	2036 Nevada city highway 538	This mine opening would destroy Our town.
Pamela	Jung	95949	Grass valley	800 Freeman Lane #205	This mine proposal is nothing less than a travesty, on many fronts: air, noise, environmental degradation, traffic and the list goes on. Plus, I would not trust Rising Gold because they've proved untrustworthy in the past.
Beverly	Martling	95949	Grass Valley	16726 Alexandra Way	This mine should never happen. It will reduce the water table in the area. This is a horrible thing to even consider in our current drought and fire situation. I am extremely opposed to the opening of this mine. Mr. Mossman and his company have no regard for our way of life here. Look what he did in Canada. NO MINE!
Lexi	Spaulding	94610	Oakland, Ca	184 Santa Rosa Ave, Apt 1	This mine should not be opened if the long term health of this place and people are valued.

Jude	Bischoff	CA	Cedar Ridge	11010 Brunswick Dr	This mine will be a disaster for our quiet country life style and the environment.
Richard	Callan	95959	Nevada City	11153 Cement Hill Rd	This mine will be the death of this area and community. Real estate will plummet and the environment will be ruined. Anyone who votes for this has been bribed. The mine will be the death of this area and community.
Connor	Ryan	95722	Meadow Vista	16860 Lays Lake Estates Lane	This mine will cause significant environmental harm and is not worth the few jobs it will create. There is much greater potential to create jobs in areas like forest restoration or wildfire recovery and those jobs will benefit both people and the environment.
Bonnie	Stewart	95949	Grass Valley	12964 La Barr Meadows Rd	This mine will destroy property values and lower the quality of life for our whole community. Please do not allow this nuisance to export our wealth!
Hunter	Noble	95959	Nevada City	12131 Blazing Star Rd N	This mine will destroy the health of our already fragile ecosystem.
Emma	Westrope	95945	Grass valley	126 s school st	This mine will greatly effect the livability of my home and community. Please for the sake of the communities wellbeing NO MINE
Debra	Christenson	95959	Nevada City	12742 Butterfly Dr	This mine will negatively affect my safety & well being. Plus it will negatively affect our property values all for the purpose of making money for a company from a foreign country.
Lynn	Ely	95959	nevada city	po box 2274	This mine will not benefit our community and there are so many ways it will destroy for many years to come. You have it in your power to so no for the people, for our beautiful community and I urge you to do so.
Toni	Spencer	95949	Grass Valley	139 Buckingham Ct	This mine will put the health of the environment, wildlife and people at risk. All to profit a disreputable company. Opening this mine is inexcusable in this day and age. Destroying our air quality and misuse of limited water resources does not offer anything back to the residents.
Beth	Moorehead	95945	Grass Valley	118 Jan Rd	This mine will spoil the environment, deplete wells, and create pollution and noise issues. No way do we need that and the company is not being straightforward. The telephone poll was ridiculously skewed and lacked integrity. If that's how they're running their marketing, I have no faith in their ability to run a mine.
Lynn	Lumiere	95945	Grass Valley	16791 Greenhorn Rd	This mine would be a disaster for our community. It must be stopped!
Susan	Weills	95959	Nevada city	215 NIHELL	This mine would be a serious disaster for our small community, This is not the 1800's Move on. Value the earth without raping it
Terri	Michel	95945	grass valley	115 independence ct	This mine would be an environmental and economic disaster. Please do your part and vote no mine.
Jim	Perkins	95949	GRASS VALLEY	19000 COVEY CT	This mine would be so destructive of the community that it is hard to believe that you would consider approving it. Please stop the mine!
Nancy	Hill	95949	Grass Valley CA	800 Freeman Ln.	This mine would change the culture of our beautiful area. It is not to our benefit at all to have this company here.
Joan	Ramsey	95959	Nevada City	123 Grove St.	This mine would create an environmental disaster for 80 years!
Nanci	Mason	95945	Grass Valley	12893 Chatsworth Lane	This mine would spell disaster for our air, water, property values and quality of life. Jobs? Pathetic. We can beat this with the right environmental law expertise. We did it in Lincoln in the late 90s.

Tom	Fisher	91801	Alhambra	999 E Valley Blvd 111	This movement should be stopped at all costs. There are several risks and dangers imposed by allowing "Rise Gold" to come in here, and carry out their plans which, in my opinion are not fully disclosed by them, and absolutely not fully understand by the members and leaders of this community. I believe, the members and leaders of this community may not grasp the full impact of allowing this group to proceed. Do these local folks even know "who exactly is behind Rise Gold?" and "who exactly is funding Rise Gold?" i.e. who exactly the company "answers too?" I would like a chance to describe / present my thinking to you, so that you become much more fully informed regarding the risks and dangers both short-term and long-term posed by the groups behind this company. If this is fully understood, then all local people here will become galvanized against this company's plans.
david	king	95959	Nevada City	10863 Willow Valley Rd	This needs to stop!! They are not being truthful on the "high paying" jobs. Most mine jobs pay $30-40K/year. More importantly, the environmental degradation in not acceptable.
Charles	Brown	95945	Grass Valley	13011 Admiral Lane	This petition is about protecting the health, welfare, water (related to health), and environment — to include wildlife from the detrimental affect that a mining operation would surely have on your beloved community. It's difficult for me to see how the effort to reopen the Idaho-Maryland mine has anything positive about it. Oh right — money for the mining company.
Ricky	Desoiza	95949	Grass Valley	15322 Lorie dr	This pollutes water.
Maniko	Dadigan	95959	NEVADA CITY	16486 COOPER RD	This project is a DISASTER in the waiting. It must not go forward.
daniel	medan	18954	richboro	151 carol lane	this project is DISGUSTING!
Steve	Nicola	95959	Nevada City	267 Bourbon Hill Road	This project is totally out of place in our community. Its size, location and planned operation will negatively impinge on virtually everyone who lives, works or plays here. Who will want to move here and be exposed to the kind of noise, traffic and pollution this mine will create? And how many residents now here will want to leave to when their neighborhoods and quality of life are so inevitably degraded? And those who want to leave will have quite a shock when they find the value of their property has fallen through the floor! Please don't let this proposed mining operation gain a foothold in our community. This is the 21st Century, not the 1800's. We are not a frontier town anymore. We have long moved on from from an extractive economy here. Please do not approve the Rise Gold Mine! Thank you.
Reed	Hamilton	95949	Grass Valley	13310 Nannas Way	This project threatens the health and economic wellbeing of our community. Noise pollution, water pollution, air pollution are all inherent the mine's operation. Large amounts of supposedly treated water will be discharged into Wolf Creek, hundreds of large diesel trucks will be going past residential neighborhoods spewing exhaust and raising dust. Long hours of mine operation will disrupt the peace of our roads and adjacent residences. Residential wells may go dry due to water removal from the mine. And what are the economic benefits to our county? Tax proceeds and the promise of jobs that will likely be filled by out-of-area skilled miners. Will the tax revenues pay for the damage to our roads, our tourist industry, our real estate values? We've been down this road several times in the last 40 years and every time the mines fizzled and the mining companies have walked away and left the costs to us taxpayers. Rise Gold has little experience and it's limited track record is not good. Do not see our county for a phantom benefit.
David	Whitehead	95945	Grass Valley	100 Bawden Ave.	This proposal for development of the Idaho Maryland site by Rise Gold shocks me. The project is inconsistent with the residential lifestyle of our community. The project directly increases greenhouse gas emissions, truck traffic, and water quality impacts, all problems we residents have been working to reduce from existing sources. We cannot tolerate this project increasing problems we already have. Do not approve it.

Wade	Laughter	95959	Nevada City	13579 Idaho Maryland road	This proposal to reopen the Idaho Maryland is wrong for this community in so many ways it is hard to know where to start. Please, when the time comes for you to vote on this matter, vote for the children and future generations of this community. Vote NO on Rise Gold's application to reopen this mine.
Louisa	Suta	95959	Nevada City	10406 North Bloomfield Road	This proposed mine would be a very destructive influence in our community by poisoning our water and land. No mine!
Heather	Doyle	95945	Grass Valley	2036 Nevada City Hwy # 433	This Rise Gold proposal of re-opening of the Idaho Maryland mine is a direct threat to the well being and safety to our beloved community, environment, local economy and quality of life. I have lived here for over 10 years, this place being a "destination" travel place for many which not Only boosts local economy but creates and air of magick, a true gem of the Sierra foothills. It is with greatest Ferver and goodwill that many of us come together to speak to protecting the people and sacred land from this devastating and destructive proposal. Please, I implore you to not go through with this and protect the people! It simply cannot be stressed enough that the mining plans must be stopped! I implore you, beyond measure to keep Nevada county- this treasure, safe from such harms and protect our community.
Gordon	Shaw	95959	Nevada City	14101 Lee Lane	This should be a obvious. We are building another new sub division right down the street. By approving new homes, you have made a decision that this is not a heavy industry area. The new jobs promised by Rise will not be going to our homeless population. The good paying jobs are already going to out of area current Rise employees. We'll get the truck driving jobs of which the bulk of those will go to Yuba city people. I'm on a well. Can you promise my well won't run dry? At a minimum there should be millions put aside upfront for this inevitable problem. Don't tell yourself it won't happen and we did a study. Did the study take into account drought?
Shannon	Reilly	95945	Grass Valley	236 Bennett Street	This should NOT be a decision solely left to the NCBOS. The residents effected by this mine opening should be the ones to decide. I have not been contacted regarding my opinion. I AM 100% AGAINST THIS BUSINESS, like some many other concerned citizens. A yes vote is a disservice to this community.
Emily	Carr	95945	Grass Valley	11323 Reid Place	This will cause terrible pollution and ruin our town!
Matty	Behr	95945	Grass Valley	17044 Pine Peak Rd	This will destroy our town, no amount of money is worth clean air and water! Stop this craziness of money greed! Clean air & water is much more important.
Mya	Russell	95945	Grass Valley	14729 Rattlesnake Rd	This will ruin our property values, quality of life, damage our ecosystem and dry up our wells.
Dennis	Lear	95949	Grass Valley	16110 John Way	This will wreck our town. I believe reopening this mine will degrade the liveable of everyone residing in Nevada County. The destruction created is not worth the possible short term value which will not be shared.
Kathleen	Galbo	95946	Penn Valley, CA	11360 Buckeye Circle	This would be a grave injustice to our present and future generations. Besides affecting our water supply (a nonrenewable resource), it dictates that the existing communities that will never again provide the atmosphere that families chose when they moved to the area. If we let this company have it's way, it is an injustice to all surrounding communities. Don't think for a moment that the impact of everything that goes on in building and then running a mine will allow life to go on as it has. It is not right for us to allow the communities to be at the mercy of the Rice Gold's self-serving proposal.

Dana	Romuk	95746	Roseville	4937 Forest Creek Way	This would be a huge slap in the face to the residents of Grass Valley who would have to endure the noise, air pollution, excess energy consumption, water pollution, destruction of environment supporting deer and other critters, and disruption of the small-town life they sought when deciding to live there. Did I mention this could go on for 80 years!? We cannot afford to take the risk. I say we, because this scale of potential environmental and economic damage affects all of us. Such damage can rarely be adequately mitigated after the fact. And Rise Gold's CEO Ben Mossman, has already abandoned one mine in Canada, leaving the mess for others to clean up. Not a good track record. What would prevent him from doing the same thing here? Please stop the Idaho Maryland Mine! For me it all boils down to this: Why should Nevada County and the lovely town of Grass Valley undergo this upheaval, disruption and destruction (for up to 80 years), for others to make money? I can't see any reason for it. Surely we have learned from the past that money isn't everything! PLEASE Save our environment & quality of life in beautiful Nevada County!! Thank you for reading, hearing my (& many others) voice & reasoning considering this Very critical issue! I am grateful to have the opportunity to voice what I believe in, the facts as I understand them, be heard and respectfully considered. I believe In your ability to have an open mind & make a logical decision which protects our environment, residents interests, and our family quality of life.
Tammy	McCune	95945	Grass Valley	16313 Lower Colfax Rd	This would be devastating to this community.
Brian	Rey	95959	Nevada city	14200 Idahomaryland rd	This would bring unnecessary traffic more pollution and put my drinkin water at risk. I say no mine!
Tommie	Conlen	95945	Grass Valley	14787 Sontag Rd.	This would irrevocably change the quality of life in Nevada County for the worst. We don't want it, we don't support it, it's a journey back to the battle days of extraction industry. It would damage our tourist base economy, and ruin the lives of many many people through noise, and truck traffic, and pollution of our rivers. No no no!
Roger	Vancouwenberghe	95959	Nevada City	13146 Hoot Owl Road	Times have changed. We are now a residential community, not an industrial area. Vote no on the mine. A large industrial operation like this is inappropriate for our area, and this particular one is also dangerous for the members of our community. Vote no on the mine.
brandon	lawrence	95959	Nevada City	20262 Scotts flat road	To all concerned people please consider moving your feet from the past and gold mining to the future and a healthy and viable world less cluttered by man's negative impact and shortsighted vision of profit at any environmental cost. Thank you for your consideration
Jamie	Legon	95975	Rough and Ready	10568 N. Ponderosa Way	To even think that creating 600 jobs is justification for polluting our air, destroying our water table is sheer lunsncy based in greed. Ask yourselves this: what would those 600 families do when water disappears, jobs disappear and the land has been left desiccated and ruined?
Eugene	Berson	95945	Grass Valley	14385 Dalmatian Drive	To judge by the slick, expensive ads put out by proponents of re-opening the Empire Mine there would be no threat to wells or to the environment generally. How can you trust these corporations anymore? Better living through chemistry? Prostrate cancer causing Roundup? DDT killing pelicans? Bees? The fancier, the more slick, the more money behind it the less I trust it. Let the earth recover.
Aaron	Crowell	95949	Grass Valley	11563 lower circle drive	To our hardworking supervisors, thank you for your attention to this matter and the concerns of the community. I know you are barrage with requests to fight the mine. I add my voice to those. What do you need to help us stop this mine? We want to know. What can we do for you?

Mark	Seufert	95959	Nevada City	529 Jordan Street	To reopen this mine would lead to destruction of existing wildlife habitat as well as polluting all creeks and wetlands in the area. After 80 years of more mining there may not be any comeback from the devastation this can and will cause .
Mark	Dyal	95945	Grass Valley	124 Sierra Blanca Court	To those now serving and those to be elected, in short I would like to say to you that the more I learn about the proposed re-opening of the Idaho-Maryland gold mine by the current applicants is something I can only see as risky and destructive to the county I moved to as a young man 48 years ago I strongly urge you to reject this project in total. As things progress I will write to you again with more explanation as to why I believe that if there is ever a time when further mining of gold makes sense here, it should be in the future when technology will it to be done with far less disturbance and much more efficiently by those who can do it with proven experience.
Dylan	Kuenzi	95949	Grass Valley	10911 Wolf Road	To whoever is considering approval of this proposed mining operation. I live on wolf creek. I swim in the creek, fish in the creek, watch birds, turtles, otters, and beavers on the creek. So do my children, and so will my children's children. Every time I enter the waters or catch a fish from those waters I way the risk of being exposed to pollution caused by the gold industry so long ago. And now, the potential for that pollution to begin anew is rearing it's greedy head. In response to the argument that precautions will be taken to reduce the likelihood of pollution and efforts will be made to clean up the pollution that was left behind from many years ago, I say this. Precaution is not a guarantee, and I will never believe a guarantee that is being backed by a money driven industry that has no connection to our community. Furthermore, both my family and I regularly travel the 49 to visit and support our community and business's in Grass Valley and Nevada City. This is already a treacherous, unsafe road with the current amount of traffic. I guarantee that I will avoid going to town more often because of the increase of truck traffics this mine will bring. If you don't see the negative economic toll an endless string of large trucks rolling up and down our only road in and out of town will have on our businesses and those people that live along that corridor, you have truly lost your way. Do not make this mistake, Board of Supervisors. I guarantee you will live to regret it. And if you say it is out of your hands, then please, retire and allow someone that is willing to stand up for this community take action to stop this fiasco.
Jeanette	Stringham	95602	Auburn	11582 Quartz Dr #4	Too close to homes!!
Art	Derby	95841	Sacramento	5134 Greenberry Drive	Too many environmental problems to mitigate. Water is more valuable than gold as is our tourist industry. Rise Gold has not proven to be either responsible or credible in past mining endeavors (Canada) and abandoned sites leaving local counties to do the cleanup.
Diana	Runnels	95945	Grass Valley	13797 Sontag Hill Road	Too many risks for unknown contamination to water sources, also unknown depletion impacts to wells. Rise Gold has a questionable reputation to adequately manage mining activities. Too many risks for our community.
Doug	Caldwell	95959	Nevada City	12263 Slate Creek Road	Too much risk and no benefit to our area.
Noel todd	Gilson	95945	Grass Valley	15017 greenhorn rd	Totally OPPOSED. Irresponsible. Wells are going dry everywhere is this area NC, GV & Penn Valley. Finances & Historical history of mining company IRRESPONSIBLE. Traffic,noise,air quality will be negatively affected. Real estate values will decrease. DANGEROUS gamble for municipalities for a NEGATIVE outcome conversely affecting our town's economy. 200 MILLION dollar bond should be posted PERPETUALLY IF passed.
Melody	Gilson	95945	Grass valley	15017 greenhorn rd	Toxic,dirty pollution. Negative traffic & economic impact on GV & NC. Company can NOT b trusted due to its historical past of walking away from pollution & financial affairs seem to b inadequate for guarantee against negative impacts of extraction of mining.
Peter	Edwards	95959	Nevada City	12393 Madrona Way	Truck traffic is bad and possible well water depletion is an unkown risk
Miriam	Benert	95959	Nevada City	11167 Daniels Drive	Truly there must be less counterproductive, and more reliable, ways to give the local economy a boost and NOT bring this serpent into our midst. I am appalled at the short-sightedness, naivete or sickly distorted view of the area's "rich gold mining past" that allows anyone to support this idea.

Kurt	Niederhaus	95959	Nevada City	12698 Slate Creek Rd	Unacceptable danger of negative impact on water, air ,traffic , noise level.
Jacob	Zaller	95959	Nevada City	16154 Indian Flat Rd, Grass Valley, CA	Us residents of Nevada County are standing in solidarity with eachother to protect our neighborhoods, and our quality of life from the Rise Gold proposal to re-open the Idaho-Maryland Mine.
Jack	Willard	95945	Grass Valley	16995 Lawton Way	VERY BAD idea! Do NOT let this mine happen!
Jana	Gooden	95959	Nevada City	10747 Red Dog Road	Vote NO!
Dorislee	Rafferty	90631	La Habra	2250 Lake Terrace Lane	Water is a very important necessity of life. The mine could lower our water levels and contaminate our group. Most people who live in this area moved here for not only it's beauty, but for it's peace and quiet and the lack of traffic. We also must be aware of fire danger and the need to conserve our water and other resources.
Richard	Lowry	95959	Ashland	10406 N BLOOMFIELD RD	Water is life.
Connie	Weil	95959	Nevada City	11988 Red Dog Road	Water is life. Air quality is important to us all. We cannot afford this mine! The profits of the few do not outweigh the health of the many. We, the undersigned, urge the Board of Supervisors to reject this destructive proposal. Please protect our community.
Jennifer	Bauer	95603	Auburn	2280 Grass Valley Hwy, 336	water is life. it does not belong to us. this is the Sacramento River Watershed. Salmon runs, Steelhead Trout runs.. We the people have already stood up in enough numbers, that any motion supporting the mine is corporate and those people do not live here. They do not care if we starve to death or die from lack of clean water.. mercury poisoning etc.. You politicians belong to we the people. you are allowed to do OUR WILL! WE ARE SCREAMING! NO! MINE! NO! MINE! NO! MINE!
Nancy	Messier	95949	Grass Valley	18297 Honey Bear Rd.	Water is Life. We can't drink gold. We need water to drink and fight the increasing fires, among a host of other necessities. Gold? Will gold jewelry make our community stronger? Gold plated toilets? Once their done mining, GV would never be the same. Rise Gold should not be trusted. That is based on their track record, not opinion! I vote for water. Thank you.
Marci	Brown	97224	Tigard	10727 SW Tualatin Dr	Water is more important than gold!
jenny	hale	95949	Grass Valley	12303 Polaris Drvie	Water is one of our most precious resources and any plan that involves putting toxic by-products into Wolf Creek is unacceptable.
Connie	Luce	95945	Grass Valley	18039 Knoll Top Dr	Water is our biggest concern, the taking of it the contamination of it, depleting our water table forcing surrounding (already low) wells to run dry!
David	Herbst	95959	Nevada City	10696 Cement Hill Road	Water quality, habitat quality of streams, and potential toxic waste cleanup are all at risk with this project. We don't need that in Nevada county.
Judith	Van Herik	95949	Grass Valley	800 Freeman Lane,302	Water?? Noise?? Air pollution?
Amanny	Ahmad	87571	Ranchos De Taos	7178 State Hwy 518	waterways and local ecologies should be protected above any profits. Reject this project NOW!
Steve	Mendoza	95945	Grass Valley	10781 Banner View Dr	We all know that mining has a rich history in Grass Valley, and at one time it was the bedrock of the local economy. Over fifty years ago, decisions were made to close the mines. These were conscious, thoughtful decisions. Since then, our landscape has drastically changed to rural-residential, with tourism at the core of our economy. To believe that you can now reopen a hard rock mine just a couple of miles from downtown Grass Valley, and in the heart of rural-residential neighborhoods without any negative impact or consequences is rationalization at its best. We locals, and tourists who visit Nevada County should visit Empire Mine State Park, the Northstar Mining Museum and Malakoff Diggins to get a taste of what mining was really like. In this way, we can celebrate our mining history without having to relive it daily for the next fifty years. Please, for the sake of our town, the Rise Gold proposal should be rejected by the Board of Supervisors.
Trisha	Neel	95946	Penn Valley	12838 Long Valley Rd	We all urge the Board of Supervisors to reject this destructive proposal and instead protect our community. Please think of the large and lasting effects this mine would have on our community.

Joyce	Wilson	95945	Grass Valley	108 Fiddick Lane	We already have climate change, drought, fires, smoke, lack of affordable housing and politically fueled fighting and unrest in our county. Plus, we are trying to recover from a pandemic. Why on earth would we want to add another potential threat and difficulty to our already-stressed county? This proposed project does not offer our county anything but more strain on our already stressed environment. It will surely decrease our quality of life just as we urgently need to improve it. We already have grave concerns about our congestion, noise, air quality and water quality. Please do not bring more strain on our community and resources!
Barbara Carole	O'Gara	95945	Grass Valley	10489 Robin Ave	We already suffer from the effects of mining here in Nevada County: our water is not safe to drink, our parks and streams and other open areas like Empire Mine are riddled with mining poisons. DO NOT OPEN another mine to assault the people who live here just to make some RICH MEN richer at our expense. We do not have the water for mining and it is a waste of all resources to claim this land for the a capitalist's venture.
Susanna	Wilson	95945	Grass Valley	135 Carpenter ST	WE already suffer from too much traffic and a good bit of pollution, too. With increased housing plans throughout the City of Grass Valley, additional truck traffic and their pollution adds up to an uncomfortable and unhealthy combo for our growing little town.
Dave	Gordon	95945	Grass Valley	13847 toby trail	We are a residential community We don't need a mine with the potential to ruin the community's water supply
Janet	Weaver	95945	Grass Valley	10818 Gunsmoke Road	We Are An EPA Superfund Site and always will be I would like to add our experience with one of the existing mines in our area, the Lava Cap Mine in Nevada City. We bought our property off of Greenhorn Road, Grass Valley, in 1983. During a major storm in January of 1997, approximately 20,000 cubic yards of tailings broke loose from a 60-foot-high old log containment dam and arsenic tailings floated three miles down the Little Clipper into Lost Lake with possible over-spill into Rollins Lake. Lost Lake is a man-made lake that was developed during the mining days for tailings. There are now several residential homes that surround the lake and use it for swimming and boating. The Lava Cap Mine operated from 1861-1943. The mine closed in 1940, but the cyanide plant was built on the site in 1940 and operated from 1941 – 1943. The mine had been owned by Keystone Cooper, a Canadian based company, that is no longer in business. The sand-like arsenic was discovered either in February or March of that year by one of the homeowners. It was found to have 392 to 552 ppm of arsenic, which is more than 25 times the average level and was therefore designated for clean-up. In April of 1997, we received a Public Notice from the County advising us of the situation and advising us NOT to use the lake or streams and to rinse off any animal that may have enter the water. 80,000 to 100,000 cubic yards of tailings remained and needed to be cleaned up and secured before the winter of 1998 arrived. In September of 1997, the County did not have the funds to clean it up, therefore EPA designated this area as an EPA Superfund Site. During a period of 45 days, they had workers and trucks running seven days a week from dusk to dawn to secure the original site. In 2006, EPA conducted the major portion of the clean-up at the mine. They installed a containment system over a large area of the arsenic-contaminated tailings, installed drainage channels, replaced the log dam with buttress, decontaminated mine buildings and excavated contaminated soil from along the areas of Little Clipper Creek.

Lisa	Scott-kemph	95959	Nevada City	Box 1275	We are in a extended drought and every home in the community will be negatively affected. There already has been a house lost to a sink hole connected to this mine. You ready for law suits?
Evelyn	Silvey	95949	Grass Valley	19197, Lucas Hill Ct.	We are in a historic drought, Mr. Mossman does not have the proper finances, will reduce property values, make our county a dirty and noisy place. Ruin our tranquility and beautiful home.
Marji	Beach	95945	Grass Valley	117 King Court	We are in the middle of a severe drought. The Rise Gold proposal would waste millions of gallons of water that may contaminate or damage hundreds of local wells. It would increase the county's energy burden during a time when energy conservation is vital. We do not NEED a mine. It will not improve Grass Valley or the county in any meaningful way. Please reject the Rise Gold proposal, and support and protect our community. We deserve that much.
Scott	Murray	95975	Rough and Ready	10190 Shady Oak Place	We are in the midst of an historic drought. Water is more valuable than gold. Rise Gold is also a Canadian company and only cares about exploiting our area for their profits. Companies like Telestream and AJA and others support local charities. Please, please, please, reject the mine.
Edward	Cepeda	95945	Grass Valley	13663 Greenhorn Rd	We are joining in with other homeowners, conservationists and neighbors to protect the surrounding areas where Rise Gold proposes to open the Idaho-Maryland Mine. We live one mile from the mine and have major concerns that this will affect our well. We are also concerned with the noise and traffic it will add to our roads and the area in general. We urge the board of supervisors to reject this destructive proposal and instead protect our community and our environment. Thank you for your attention to this matter.
Susan	Solinsky	95959	Nevada City	15335 Lewis Rd	We are joining with other homeowners, businesses and neighborhoods in our community to ask the Board of Supervisors to reject the Rise Gold proposal to re-open the Idaho-Maryland Mine. Please consider the long term effect on our land, water and air. Thank you.
Kelsey	Ewing	95945	Grass Valley	12681 Leaf Ln	We are neighbors to the mine and are strongly opposed to its reopening. We are concerned for our water. When Rise drains the existing shafts, will that cause our wells to run dry? How can Wolf Creek possibly take the run-off from draining the mine? Wolf Creek has already been tragically impacted by mining and development and we want to see this valuable and beautiful water resource restored not destroyed by Rise Gold. Nevada County has a shortage of housing and a surplus of jobs. We need more housing before we need a project like Rise. Rise Gold seeks to profit from our town while degrading our quality of life, health and well-being. We urge you to reject this destructive proposal and protect Grass Valley and Nevada County from Rise Gold.
Barbara	Schiestel	95949	Grass Valley	13146 Hidden Valley Rd	We are not owners of the earth beneath where we have chosen to live, rather we have the responsibility as caretakers and protectors. Allowing the irreversible and destructive impacts on the earth and water system for financial gain of some is not within in our authority. I, the undersigned, strongly urge the Board of Supervisors to reject the proposal to re-open the Idado-Maryland Mine and vote for the quality of life in our community for all generations that will live here after us.
Jane	Garcia	95946	Penn Valley	18956 Sanctuary Road	We are still struggling to repair the damage done by the last gold-rush that devastated this area !!
Michael	Joss	95959	NEVADA CITY	605 Redbud Way	We are still trying to repair the damage from 1850's. Stop doing that again to the next 10 generations .

Mark	Lloyd	95949	Grass Valley	17443 Aileen Way	We are very concerned about the waste water pollution going into Wolf Creek from the mining company. Many of our pets drink from the creek on daily walks and by dumping the treated waste water in the creek it will also destroy the natural habitat. Please stop this project until the community has an opportunity to meet with the mine owners and bring it a vote. Thank you!
Henry	Shires	95959-9654	Nevada City	12213 Koswyn Ct.	We can do so much better than this. If we're going to develop the land then housing and small business park would be an infinitely better and less destructive use of the land. As a Nevada County homeowner and and an employer, I urge you to reject this proposal. It would be a terrible scourge on our environment and quality of life.
Jason	Elfert	95959	Nevada City	18514 Round Mountain Ranch Road	We can make a more sensible decision to make money for the county than one that offends neighbors!
Natalia	Beverage	95602	Auburn	1260 Winchester Way	We can not drink money. The first for greed must stop. We need to put Mother Earth first. Our children can no longer play outside due to smoky skies. We must take action for all of our children. Our children will inherit our errors, that is unfair and wrong.
Eli	Marienthal	95949	Grass Valley	12238 McCourtney Rd	We cannot continue to mortgage our children's future, the health of the land and water, over the dangled carrot of a few new jobs. It's been amply demonstrated again and again that the kinds of claims mining companies make about jobs are inflated. We would be fools to believe them this time. Stop this monstrosity once and for all.
Disne	Stangeland	95945	Grass valley	13801 Marie lane	We cannot let this exist in our community, Water huge concern. Air quality Property values Fragile earth, uncertain climate conditions
Jesse	Edwards	95945	Grass Valley	12503 loma rica dr #19	We do not need a Canadian corporation profiting off of our neighborhood. The last thing we need is more trucks clogging up our roads. We do not want the pollution that comes with mining either. This is a terrible idea! These big corporations root themselves in a community and them your never able to get them out. They are notorious for breaking the rules at the expense of the people living around this thing. Stop the mine!
Stephen	Luna	95945	Grass Valley	14327 Little Hill Lane	We do not need a foreign company in our community spoiling our noise, air or water. Any city council member that approves this will regret being greedy and going against our community! There will be no jobs for the community and we do not want their jobs or that type of business in this community. NO MINE!!!
Caroline	Groux	95945	Grass Valley	10845 Bartlett Dr	We do not need a mine in Grass Valley. The consequences of such en enterprises would be a catastrophe for the environement. All over the world mines have been declared environmental disaster. (the air pollution, the noise, the water pollution, every aspect of this enterprises will impact our community negatively) Let's bring businesses to our area that will support our community as well as respect the environement. The amount of work and income promised is just a lure and it is clear when we see the studies that have been done on the subject. Lets not fall into the lure.
Sandra	Helmuth	95959	Nevada City	North Bloomfield rd	We do not need an environmental disaster here. This needs to be put to a vote by the residents of this county.
Diana	Ryberg	95945	Grass Valley	12127 Crescent Dr.	WE do not need more traffic.Pollution,lost of water as it is already way to low,Noise,effects are whole way of life.I have lived here 75 years.We do not need it,do not want it.
Susan	Haga	95946	Penn Valley	10991 Ringtail Rd.	We do not need nor want this environmental disaster here.
Deborah	Cabrera	95949	Grass Valley	11262 Lower Circle Drive	We do not need to go back in time. We do not need to pollute our rivers and streams. Vote NO on the mine!
Brenda	Stanley	95949	Grass Valley	10546 Little Deer Drive	We do not want the mine restarted. It will put our water in danger and cause more pollution and added traffic. More noise pollution

Ginger	Okada smyth	95945	Grass valley	15522 Lakeview drive	We do not want this mine. It will impact all of Grass Valley for generations to come. please do not let it pass
Megan	McGeary	95945	Grass Valley	10741 Footwall Drive	We do not want this mine. The jobs that it promises to create are mostly low paying and they will cause more problems and damage to our community that any "benefit" that they are promising. We don't want to go back in time. This mine would waste resources such as water and energy, endanger sensitive habitats (trout streams), and potentially poison residents including children and senior citizens. None of the possible benefits outweigh the potential hazards, harm, and headaches. Rise Gold is not a trustworthy company and they do not have a trust-inspiring history. WE DON'T WANT THIS MINE.
Joanne	Harris	95945	Grass Valley	305 W Main ST.	We do not want to have to drink Number 2 water, which will be the usual water, experience shows. Eighty years of dirt, noise polluted air and water. Grass Valley, as we know it will be gone and we will have the mess left over. Remember, this is about their making money and that is their only goal.
Vicki	Azevedo	95946	Penn Valley, CA	16875 Southridge Road	We do not want to lose our well water
Jason	Privett	95945	Grass Valley	307 Miners trl	We don't need or want this mine!!!!
nathan	parsley	95959	Nevada city	11781 banner mountain trail	We don't need this mine in our community. The economic benefit pales in comparison to the negative impacts to our citizens and environment
Donna	Gulsvig	95946	Penn Valley	18941 Hummingbird Dr.	We don't support the mine opening.
Diane	O'Shea	95946	Penn Valley	20116 Lakeside Lane	We don't want the mind reopened!
Julie	Romano	95945	Grass Valley	Sontag road	We don't want the mining here! Protect grass valley!
Carrie	Criss-Harvey	95959	Nevada City	10679 Banner Mine Way	We don't want the noise pollution, air pollution or water pollution associated with mining in our community!
sarah	gates	95945	grass valley	10650 honeysuckle ln	we don't need a mine here ! this is primarily a tourist area now this will bring a ton of traffic noise and pollution plus having huge trucks costantantly driving back and forth is a safety issue, as a long time Nevada County resident I am totally against this mine.
Frederick	Workmon	95949	grass valley, ca 95949	11413 Tammy Way, grass valley ca 95949	we don't need a mine... no $$ override the quality of life we have here in GV
Michael	Conlen	95945	Grass Valley	14787 Sontag Rd.	We don't need it. We don't want it. It's not consistent with the environment of Nevada county. It would irreversibly damage our community.
Gabriel	McDonald	95949	Grass Valley	Wolf Rd.	We don't need more pollution and extraction
PATTI	FELTON	95959	Nevada City	336 Bridge Way	We don't need more traffic & more pollution up here !!!
Judith	ROBERTS	95945	Grass Valley	124 Berryman Street	We don't need this extractive mine in our midst.
Harry	Yang	95945	Grass Valley	PO Box 314	We don't want bad air quality, We don't want noisy mine business operations. We don't want them to drain out our underground's water. We don't want them to dump the dirty mine waste. We want to keep our house value up. We want to live in a clean environment.
Dayana	Stockdale	CA/95959	Nevada City	15461 Shannon Way	We don't want the mine here. Please protect our community.
Justin	Landry	04743-1642	Fort Kent, Maine	62 N. Perley Brook Rd.	We had a similar issue in my state, where a power company wanted to cut through acres of protected Maine woodlands just to erect a power line that only benefited Massachusetts. It would ruin our unspoiled woodlands, and would not benefit us at all.
Kristen	Krauel	95945	Grass Valley	307 Miners Trail	We have a baby girl and her pediatrician told us how devastating the mine would be to her health. Please don't open the mine. We really do not want to experience impaired air and water and due to financial reasons it would be difficult for us to move.
Roger	Lewis	95949	Grass Valley	13169 Twin Star Lane	We have a beautiful community and would like to keep it that way. I guess this must be how third world countries must feel when the U.S. comes in to exploit their resources without a concern for their environment. We cannot let this happen! Opening the mine would be disastrous for our community. We must not let this happen.
Mary	Wernette	95959	Nevada City	14581 Lava Dome Way	We have a thriving local economy and more jobs than can currently be filled.

Richard	Church	95949	Grass Valley	15120 Sunnyvale Lane	We have all experienced the long-term pollution consequences of previous mining operations in this county. Why would anyone in their right mind even consider allowing a new mining operation to pollute our air and water?
Deborah	Woodard	95945	Grass Valley	11321 Beauview Rd.	We have come a long way from the old mining days. Our ever-increasing population does not need a mine that will diminish our quality of life here in many ways and be of benefit mainly to a few big business pockets. I live near this proposed mine and my well will surely be affected by draining the groundwater. How can the draining of groundwater with repeated droughts in California even be considered? There are many other factors of concern such as noise pollution and air pollution. Please do not let this go through! This is not why we live in Nevada county.
Colleen	Carson	95945	Grass Valley	15143 Rattlesnake Road	We have great concern about the ground water in our community. We are already in a drought. At our home, we are losing trees to the drought and we've been experiencing less pressure in our well which we think is due to the drought and the level of groundwater which is not being replenished. A Mine, which is going to use TREMENDOUS amounts of water is not going to help anyone here. Please, we urge you to reject the Mine proposal to protect our community.
Merry	Miller	95959	NevadaCity	12403 Dobbins Drive	We have lived here for almost 40 years and have seen proposals for mining come and go - thankfully always denied. Since when do we need this type of industry in our county? One which can damage our environment, affect our water sources, and damage our roads and highways. Please refuse to let this happen and deny permission for this mine to operate. Attempts at opening mines have been attempted before and have failed. Water/well issues, heavy trucks 24/7 on our roads, noise, pollution, and more have been the reasons. Those are the same problems that that we face with this mine. These are the same reasons that we should prohibit the opening of the old Idaho Maryland mine by Rise Gold.
ANNIKA	HAYES	95959	Nevada City	464 searls ave	We have lived in Nevada County for soon 22 years and have enjoyed the lifestyle out environment has offered to our family. We have had 4 different businesses we have been able to start and successfully run in the area and in evaluating, especially the quality of the "jobs" that will be "created" we do not see any strong reason to jeopardize our environment now, and for generations to come. We have had discussions with friends and neighbors, and no one seems to comprehend WHY this type of a project is even being considered!! This is an outrage. We are not great believers in conspiracies, but even we now do believe someone in decision making capacity in the county, or their families members, are receiving some type of benefits/compensations now, or in the future. Why else would this destructive~ non reversible~ project even be considered? We have heard /seen some not smart decisions being made by the Board of Supervisors (different people) in 22 years but this one takes the price. Some of the new residential developments seems to benefit but a few. We urge the Board of Supervisors to reject this destructive proposal and instead protect our community. Clean(er) AIR and protect our water~ this is how we sustain life~ not by destroying our natural resources.
Tim and Sandra	Scott	95945	Grass Valley	13722 Crawford Lane	We have personally experienced the ravages of reopening a mine in Nevada County. Promises of jobs do not compare to the devastation to our water, our roads and the environment. When this goes belly up, and it will, the investors will be left in the dark, we will be left with the responsibility of repairing the damage. Nevada County cannot afford this, nor do we want it!

Loren	Merritt	95959	Nevada City	PO BOX 1357	We have serious water and air quality issues here in Nevada County. We DO NOT have the LUXURY to WASTE OUR RESOURCES, particularly our PRECIOUS WATER, to benefit a privately held foreign company who cares not one iota for our well being nor for the EARTH they extract minerals from. WE CANNOT AFFORD THE BLATANT MISUSE OF RESOURCES that reopening the Idaho-Maryland Mine would incur. Extraction is not the answer. How is it that money reigns over health and well-being of people and the planet?? This is insanity at it's most blatant. WE NEED OUR WATER TO LIVE--AND FIGHT FIRES. WE NEED OUR AIR TO LIVE AND BREATHE, WE NEED OUR SIMPLICITY FOR OUR SANITY. HONOR OUR NEEDS.
John	Sorensen	96161	Truckee	13759 Donner Pass Road	We in Eastern Nevada County stand with our neighbors in Grass Valley and Nevada City that will bear the pollution costs of this mine. It is not good use of our power not helpful in any way to reducing our county's green house gas emissions. Please vote to reject this project.
David	Serwitz	93449	Nevada city	13267 Woodstock drive	We just moved to town in order to live a peaceful, healthy, and enjoyable lifestyle. I am not 100% educated, but the drawbacks seem to far outweigh the benefits of this project, please do not allow the mine, thank you!
melissa	kriegler	95945	grass valley	15011 little greenhorn rd	We just recently purchased a house in grass Valley on Little Green Horn Road and we had no idea this was in the works. This mine will destroy everything we spent years looking for. the beauty and peace and community that we finally found will be destroyed. we have worked so hard and we were so excited about finding the perfect home to buy. Please don't let this mine destroy our dream.
Beatrice	Arbaiza	95945	Grass Valley	11032 Grass Valley Ranch Rd	We know how destructive mining is to the environment. And our environment will n!ot be improved with this mine. Enough is enough. Protect our endangered land. Do no harm.
George	Marks	95945	Grass Valley	13974 Glenn Pines	We live close to proposed mine. All our neighbors and our family are very upset about the mine. Will affect property value, noise pollution and all other negative affects written about. It cannot happen!
Jared	Dozal	95945	Grass valley	11388 cedar ridge drive	We live in Cedar Ridge right on top of the proposed mine. If this atrocity goes through, we'll be selling as well and taking our incomes with us to another town as we work remotely. Count that as two jobs leaving the area in your calculations. -$200,000 per year
Carolyn	Weisswasser	95945	Grass Valley	10938 Bubbling Wells Rd	We live in the neighborhood of the mine and have a well. We are concerned about groundwater depletion and contamination. We are also concerned about negative affects on the local environment (water and air) and heavy trucks on the road. We definitely do not want to see this mine reopened for many reasons.
Jim	Abbott	96162	Truckee	12345 Bennett Flat/PO 8687	We live in Truckee, are in Nevada County. We frequently visit Grass Valley and would hate to see this mine reopening.
Susan	Jaffe	95945	Grass Valley	13974 Glenn Pines	We live less than a mile away from proposed mine. We are vehemently opposed to start up. For reasons of air pollution, noise from trucks, devouring our power, threatens wells. At a time when our community has been through so much with COVID, smoke and fire danger, adding this would be unacceptable. Everyone I know is against this mine reopening
Gloria	Molin	95975	Rough And Ready	Po Box 26	We mived t Nevada County to get away from the noise and pollution. This area is known for its beauty and its artistic creativity. This project is not moving us forward, it's moving us back into the dark ages.
Aldo	Bendana	95949	Grass Valley	11949 Hanley Dr	We moved here for the natural beauty, peace and quite that this beautiful area provides. Why ruin what makes this place great.
Melissa E	Rugge	95945	Grass Valley	1526 Mulberry Drive	We moved here to enjoy the slower pace of life, clean water, and beautiful scenery. There are too many environmental reasons against the Rise Gold proposal to re-open the Idaho-Maryland Mine. We don't need the traffic and the noise, either.

Mary	Margaretich	95945	Grass Valley	2428 Nevada City Highway	We moved here to Nevada County in 2001. We researched area for our forever home for 3 years. We chose this beautiful area because of the abundance of wolking, hiking, and riding trails and the clear mountain lakes for water sports. We love this place because we do not have noise pollution or an abundance of traffic. Rise Gold proposal will change all that. The mining easements cover our beautiful county. Our citizens do not realize the drastic effects of opening up the Idaho Mine. The noise alone from blasting and trucking the rock would be devastating to our community. Please do not allow this project to move forward.
Tara	Moran	95959	Nevada City	345 Nile St	We must move forward without the mine - there is so much opportunity for good here!
John	Hillebrandt	95827	Sacramento	9404 Butterfield Way	We must plan for what's best for the health and quality of life for PEOPLE, not greedy developers!
Barbara	Moore	95959	nevada city	340 Gracie Road	We need clean, natural water. Stop paying the rich by using our natural resources!
Linda	Culbertson	95959	Nevada City	14553 Echo Ridge Dr.	WE NEED TO HAVE YOU STOP THIS INSANITY NOW. There are houses going in to the effected area for lower income people and many residential care facilities for our elderly, not to mention our hospital. That is so disrespectful of our most vulnerable citizens. The EIR should be done by our government so that it is impartial....not by RiseGold. It was due a year ago. Guess they haven't found the one they like yet!! We cannot keep this going. As a 40 year resident of the county, a mine in the middle of our town is a really bad idea. I urge you all to make a decision ASAP!!!
Anne	Knox	95949	Grass Valley	13440 Countryside Ranch Rd	We need to protect local water quality! Plus, highway 49 is already a dangerous and crowded road - the mine would make it worse.
Claire	Palmgren	95945	Grass Valley	13062 Blue Jay Hill Rd.	We need to protect our county's irreplaceable assets -- the environment, the wildlife and our natural resources such as air quality and water quality and quantity. We also need to protect the health and well-being of our residents -- protection from health impacts from noise, vibration and pollution.
Anne	Harrell Stockdon	95959	Nevada City	12814 Banner Lava Cap Rd	We need to protect our water and our local environment. This mine is not wanted or needed.
Mindy	Oberne	95949	Grass Valley	13169 Twin Star Lane	We need to protect this wonderful community of the foothills from greedy corporations that don't care about our environment or other negative impacts that opening the mine will create.
Marilyn	Talley	95946	Penn Valley	11986 Warbler Way	We need to stop modern mining
Deeanne	Purchase	95945	Grass Valley	10412 Mercury Dr	We now have high quality pure water , This will not be the case Is this toxic mine is allowed to reopen
Ari	Brouillette	95945	Grass Valley	135 Winchester Street	We recently relocated to Grass Valley for the peaceful atmosphere. We oppose the mine and would consider it to be a threat to the primary factors which led us to select this community as our home.
Vickie	Fromm	95945	CA - Grass Valley	14006 LIQUIDAMBAR LN	We respectfully request that you do not approve the reopening of the Idaho Maryland Mine. Look at what happened in San Juan, they lost their wells, and many are sick from other things caused by the reopening of that mine. If you have any love for Nevada County or care about your constituents, you will not approve this. We have children and young families, this could potentially turn into a love canal situation, please think about what you are willing to do to us and our community.
Megan	Weeden	95959	Nevada City	792 Nevada Street Ext # A	We say no! I'm a born and raised local and I can see no benefit to this destructive plan. This is not 1849. We need to invest in industry that is forward looking and protects our environment and community. Please do not proceed with this plan.
Alec	Shoelson	95945	Grass Valley	321 N School St	We seen the destruction mines have already. Do your jobs and protect our land and our people. We seen the destruction mines have already. Do your jobs and protect our land and our people.
Jeff	Dekay-Bemis	95945	Grass Valley, Ca	14843 Sontag Rd	We should choose environmental wellness over corporate greed.
Angie	Holm	95945	Grass valley	14254 Judy lane	We should have learned our lesson about the destructive practice of gold mining years ago. This would cause damage to our air, water, property values, and quality of life. Please protect our community!
Benjamin	Landis	95946	Penn valley	17799 Silver Pine dr	We stopped mining for many reasons. To repeat history and start something that will cause multiple negative outcomes does not make sense.

Erik	Keethe	95959	Nevada City	11089 Will O Wisp Ct	We urge the Board of Supervisors to reject this destructive proposal and instead protect our community.
Julie	Bogaczyk	95949	Grass Valley	12673 Francis Drive	We vehemently oppose the mine.
Cynthia	Kapin	95945	Grass Valley	12255 Hoppy Hollow Road	We want to have our family thrive in Grass Valley, where we have chosen to build our home. It's our right to protect our home, our family against any kinds and any forms of pollution!
Andres	Amador	95959	Nevada City	20682 new Rome rd	We will not stand for exploiting our natural heritage for short term profit, particularly for the interests that care nothing for our long term benefit. We will not stand for exploiting our natural heritage for short term profit, particularly for the interests that care nothing for our long term benefit.
Cathy	Gerstung	95949	Grass Valley	11898 Auburn rd	We will sue the board of supervisors if they pass this.
Adam	Thomas	95631	Foresthill	5167 Cold Springs Dr	We, the undersigned, urge the Board of Supervisors to reject this destructive proposal and instead protect our community, our valuable water and power resources, protect the environment and avoid the inevitable cost of cleaning up after a company with a track record of polluting, neglect and willful violation of established laws and requirements.
Jaclyn	Sayklay	95945	Grass Valley	13815 Franciscan Way	We, the undersigned, urge the I ask that the Board of Supervisors please listen to the true voices of their constituents, especially those who live near the proposed mine like myself. Please reject this destructive proposal and instead protect my family and the rest of our community.
Diane	Miessler	95959	Nevada City	160 Redbud Way	We're against the mine, and we vote. Don't let this travesty happen. Please do the right thing.
Donna	Tully	95945	Grass Valley	13558 Capitol Drive	Weighing the benefits with the risks/ detriments and what is clear that the long term negative impacts will be felt by many local citizens for decades to come. The touted benefits, jobs, are relatively few . Please consider your entire community and vote No!
Joshua	Orman	95945	grass valley	12681 leaf lane	Well water concerns and decreased property values. Stop the mine.
Cameron	Brown	95959	Nevada City	14161 Marigold Way	We've owned our retirement home in NC for 11 years now but will probably change our long term plans if this project is approved. Given Rise Gold's past performance, there's little reason to think their work in NC would be different. A schemer is a schemer and after the inevitable bankruptcy filing, when the market price of gold drops, they'll surely leave wealthier but our county will end up with the costly clean up, environmental degradation, ruined homes & lives of the neighbors and shafted employees. Please don't approve this.
Lynn	Forbes	95949	Grass Valley	12288 Thoroughbred Loop	We've paid our dues in mining in Nevada County, No more. This proposal is an environmental and disaster on many levels. No, no, no!
Ann	Crouse	95959	Nevada City	13651 Jones Bar Rd	What a way to permanently damage this area for the sake of some greedy Canadian ft cats! I'm sure local fat cats are involved behind the scenes. If the promise of money is more important than the well-being and joie de vivre of us residents, it is time to move on and let someone who cares take control.
Denise	Della santina	95949	Grass Valley	14385 Clear Creek Pl	What are you guys thinking??? This mine will impact our community with water, air and noise pollution? Did you look into or care about the past violations and destruction Rise Gold has caused elsewhere, and then they leave town with the money? How dare you sell our rights to clean water and air. How dare you make a decision that will ruin our home values, our wells, and our community. Why are you allowing this? You are a disgrace.
James	Walters	95949	Grass Valley	12288 Thoroughbred Loop	What If???? The water gets contaminated They go bankrupt We have to pay for cleanup We required a 150 million dollar bond to back up their BS

peter	Von Zboray	95602	Auburn	2500 Gayle Ln	what is good for the people that live near and the county and surrounding counties. All those in charge of making the final decision. should do a simple pro and con compare. the decision is easy, your all fiduciaries.
Joaquin	DiDomenico	95959	Nevada City	219 Gethsemane Street	What the mining company's assurances amount to are only speculations without any guarantee. There is little if anything that can stop them from a coming in, making a profit, making a terrible environmental catastrophe and getting out of town after claiming bankruptcy.
Craig	Hall	95945	Grass Valley	737 Morgan Ranch Drive	What toxins are in the water to be pumped out of the mine? What is in the airborne dust created by rock crushing? What are alternative opportunities to create jobs here?
Mark	Sheward	95949	Grass Valley	24150 Restive Way	Whatever guarantees Rise Gold give you about how their environmental protection systems & protocols will prevent any problems, remember that BP gave the same assurances about Deepwater Horizon! I have been responsible for the environmental health and safety of a manufacturing facility and can tell you from personal experience that sooner or later something will fail and there will be an issue. Do you really want to be answering to the community for such a disaster on your watch?
Nancy	Moore	95945	Grass valley	10120 Alta Vista drive	When considering all the above, also consider how many people who would move here, bringing all their money with them, are going to choose to go somewhere else when they find out there is a Mine starting back up. Please don't wreck our beautiful town for financial gain.
KATHLEEN	COMERATE-THOMAS	95959	NEVADA CITY	12099 SNOWBOURNE DR	when they tried to open up a mine here on banner back in 1980's. we took it to a vote and we won by 7 votes to stop them from opening the mine
Kathleen	Kerrigan	95977	Smartsville	10136 Mooney Flat Road	When will you people learn to put people before profit. The lessons of the past keep repeating themselves. The CEO of Rise Gold is a grifter and a huckster. It is your responsibility and duty to protect Nevada County environment for ALL. Thank you
Georgia	Morrow	94401	San Mateo	218 Tilton Avenue #102	While I don't live in Nevada County, I am a citizen of California and the World. What is the matter with RiseGold? Are they so greedy that they've lost their sense of responsibility to their planet and the people who live on it? They should not be allowed to destroy our land, rivers, and air for their benefit. No, no, no.
Laura	LeBleu	95959	Nevada City	10653 Douglas Lane	While I'm not inherently anti-mine, based on the history and leadership of Rise Gold I believe it would be a devastating mistake to sign over the health and safety of our community to a company with a track record of environmental destruction. To do so would be to sell out the community of people you are sworn to protect. Please say no to Rise Gold.
Janine	Martin	95945	Grass Valley	140 Northridge Dr.	Who could possibly support this mine unless there was a personal financial benefit for them. Please reread Dr. Jeff Kane's researched article that outlines the negative outcomes of reopening this mine. It only benefits a few. Will NOT employ 600 people (and even if it did)to risk the air, noise, water quality of our community is not worth it. I am shocked and extremely disappointed that any of our community leaders would consider this proposal due to the fact that this company has a horrible track record and our community would be dealing with people in charge tho care nothing about our quality of life here. If you are a responsible citizen of Nevada County you must vote NO!
Deborah	Patterson	95959	Nevada City	14018 Idaho Maryland RD	Who wants to listen to or experience 24/7 blasting or worry about the quality of their well water. not to mention traffic increase. And what promise do we have that the proposed 300 jobs created would go to Nevada County residents. I've seen this before on the coast. Proposed jobs that all went to those already with the company. Stop this mine.
Larry	Offenbach	95959	Nevada City	16914 Selby Lane	Why even consider having the mine ??!!! Stop this madness!!

John	Thorne	95945	Grass valley	13905 clover leaf ct	Why on God's green earth would these folks take us back in time to what we now know brings destruction to the land, to the place we call home? Stay out! We don't need your pollution nor your greed.
Maureen	Boyle	95949	Grass Valley	13496 La Barr Meadows Rd	Why should we risk our environment or even allow an operation that serves only to put money in company owners' pockets. It doesn't provide houses to live in, products to use, or anything to entertain or provide art or beauty. The gold will sit in a vault. The world does not need and will not utilize more mined gold. This county should be investing in more affordable housing instead. That would provide jobs and allow existing jobs that can't be filled to be filled.
John	Torres	95959	Nevada City	12965 Daisy Blue Mine Road	Why would this mine reopening even be a consideration! The environmental damage, noise, pollution, etc would be devastating to the area. Please watch the video about the Siskon Mine on the Ridge. We are not isolated in this county, the waste and pollution will enter Wolf Creek and "travel down the hill".
kent	Gallagher	95945	grass valley	10182 old oak trail	Why would we even consider having a mine in our city.The environmental effects are staggering. We aren't stupid are we. This is the 21st century in Ca. isn't it. Anyone voting for this project would lose the next election and forever be a disgrace in this community. Sorry for the invective. I'm just astonished that rational people would even consider this project. Disasterous multiple impacts on the community. Does any other intelligent urban area allow a mine in their midst?? The BOS shouldn't even consider this.
Donna	Chapman	95949	Grass Valley	12210 Larkspur Ln	Why would you do anything to compromise the beauty and the overall health of nature, resources, living beings with this mine? When will natural resources, which are priceless, win over making a buck for either a corporation or company. This is not a win but a huge loss if this occurs here. It's quite ridiculous-greed is an evil thing.
Joanne	Ellena	95945	Grass Valley	17876 oak way	Why would you even consider this? Company has bad track record. We are still dealing with the environmental problems from mines of pastl Traffic issues. Water issues.
Gail	De Bellis	94402	San Mateo	149 15th Avenue	Why would you reopen a mine under drought conditions and risking environmental degradation. Unthinkable!!!
Kristy	Bennett	95945	Grass Valley	426 So. Auburn St.	Will you drop off the sign or do I pick it? and where would that be?
Anita	Wald-Tuttle	95945-5607	Grass Valley	6 Rockwood Drive	With our recent years of reduced snow fall and rainfall and water levels in our lakes and rivers at the lowet levels ever, it is sheer lunacy to consider diverting 3,000,000 gallons of our water every day to flush out the accumulation of asbestos and other poisonous substances in the mine, using Wolf Creek as an enlarged drain from here to the Pacific Ocean. There is not a single reason why we should open a mine in the heart of Grass Valley. We rejected the Emgold proposal and we are rejecting this one also.
Joe	Fernandez	95946	Penn Valley,	11360 Buckeye Circle	With thousands of water discharged every day by the mine, why do we have water rationing by NID? No impact on quality of life in area-- Big trucks operating around the clock is no impact. Rise Gold to pay top wages--$90,000/year. Some body sure drinking dreaming stuff.
tim	green	95949	Grass Valley	13205 McCarter Way	With water becoming a more and more precious commodity, we can't afford to risk contaminating our groundwater. Most of Nevada County is on private wells. This mining project is a direct threat to these wells.
Sarah	Sparks	95959	Nevada City	22000 Lost River Rd	With water issues more serious every year it's difficult to believe that this mine would even be considered.
Carol	Brady	95949	Grass Valley	20191 Wolf Creek Road	Working mines have no place near populated areas. Rise Gold can offer no benefits that would ever offset harm their operation will do to our children's water and air. Please look beyond Rise Gold's disingenuous propaganda. Rise Gold is NOT Rise Grass Valley.
Jim	Ferris	95603	Auburn	670 Dorothy Way	Would be insane from an environmental viewpoint.

Louise	Taylor	95945-9513	GRASS VALLEY	14121 Loma Rica Dr.	Wrecks our neighborhoods with drilling, blasting, and truck traffic for 80 years. Brunswick is not wide enough or structurally solid enough to handle all those trucks & many trips. Will make it impossible to get out of Loma Rica on to Brunswick in any emergency. Destroys the air quality, such as it is, with dust, and poisons. Hauling dynamite to the mine is a risk for major disaster.
Evan	DC	95949	Grass Valley	11444 Ball Road	Yes mining WAS a very important part of our history. Lets leave it at history and not disturb our beautiful area for the profit of the very few at the expense of the many. And don't feed us the bull shit of it will bring jobs. Maybe a couple but we all know damn well most of the jobs will be out sourced.
Julie	Phelan	95975	Rough and Ready	10568 North Ponderosa Way	Yesterday I received the most horrible piece of propaganda stating that the Mine is SAFE!!! Please let me know how I can help!!\ NO MINES IN NEVADA COUNTY!
Dana	McMurtry	95959	Nevada City	10966 Banner Mine Way	You all are doing an incredible job! At the end of the day, it's just shocking that a questionable company would be allowed to come in and destroy the health, environment and socio-economic fabric of an entire community. And for what? Not only are remote workplaces now more feasible but surely we can create the same number of jobs through tourism, small business, etc. that Rise Gold claims it will bring. It is just appalling that a private mining operation can come into our amazing and beautiful community and be allowed to ruin the quality of life for everyone who has chosen to live here. If you don't stop this destruction, shame of you. Many of the more affluent will simply choose to move to another alpine locale while those stuck here will be forced to endure a deteriorating quality of life for no other reason than someone with power needed to make a buck.
Robin	Ehlers	95959	Nevada City	12938 Woodpecker Way	You are on the BOS to represent your constituents. Too many questions are being revealed in the environmental impact report. MORE investigation on the environmental impact. I also sincerely doubt the 800 jobs as an inflated number....the initial number being quoted was 100 jobs being provided and that is more probable in y mind...prove me wrong
Shannon	Ross	95945	Grass Valley	12202 Nuthatch Ct.	You cannot allow this type of pollution in our beautiful community. It is unhealthy. We cannot go back to the 19050s and to allow a large corporation to use up our resources and contaminate the water. The noise would be horrific. The pollution will be horrific and it is not time to start looking for gold in CA. There are better ways to make a living. This is just going to make a few people money and tear up our beautiful area.
Jim	Stratigakes	95945	Grass Valley	211 Nothridge Dr	You have the data as to why the re-opening of the Idaho-Maryland Mine is a dangerous idea. Please read this information with your best discernment, using all levels of your consciousness. Then go inside of yourselves and listen to the response of your heart and your inner wisdom. Ask: "Is this project truly beneficial for the highest good of ALL." Thank you for considering my request. Psychologist, Nevada City
Elizabeth	Rose	95975	Rough and Ready	10389 no ponderosa way	You in the morning company will be held responsible for the damage to our community. Don't do this. There are lots of other ways to generate income in our community. We need to protect the health and well-being of our community for generations to come.
Vic	Niemi	95945	Grass Valley	21321 Oak Meadows Rd.	You know what they say about not remembering history!
Roger	Schutt	95945	Grass Valley	13943 Greenhorn Road	You live here, right?? Then c'mon... let's stop this Rise Gold charade. Now!!!! You really don't need to think twice about this...

Kristin	Liljequist	95945	Grass Valley	13126 Pine Cone Circle	You must be aware of the shoddy past of Rise Gold. They have left really bad situations for other areas they have operated in. Please please do not seriously consider allowing this company to maraud our community.
Lynn	Campbell	95959	Nevada City	11387 Newtown Rd	You must listen to the people and scientists within our community. We don't want this disaster in our watershed. Rise is just another out of town company trying to make money for their investors and will leave behind a shocking problem for us- the County- to deal with for generations into the future. Sound familiar?
Kathleen	Madeira	95945	Grass Valley	149 Park Ave.	Your constituents that sent you to office deserve your support for a good quality of life and protection of our beautiful natural resources. We are a community that wants to keep our area from becoming an industrial wasteland perpetuated by a Canadian company that has proven it does not care about our area.
Ashli	Franck	95959	Nevada City	13312 N Bloomfield Rd	Your obligation as stewards of this town and community is to protect the natural resources and way of life that we all live here for. Please listen to the people you represent, not the folks seeking profits.

FULL LIST OF PETITION SIGNERS

July 12, 2022
Dear Nevada County Supervisors,

In the following pages, you will see a list of **5,574 names** of people who signed paper and online petitions expressing their opposition to the reopening of the Idaho-Maryland Mine through June 22, 2022.

In order to make your job just a little easier, we sorted these entries into four groupings: Nevada County residents (4,714 entries), Regional residents within roughly 70 miles (283), Tourist/Other (310), and Unclear (267). The latter group is made up of people who signed and provided email or phone, but no mailing address.

This list also includes the names of over 100 Nevada County businesses/ business owners opposed to the mine that were not included in the list of almost 150 business owners who signed a dedicated letter that was submitted to the Nevada County Supervisors this May.

Transcribing handwritten information is no small task. A concerted effort was put forth to de-duplicate, verify business ownership, and otherwise clean up this information to minimize errors. Our working files also include a great many email addresses and phone numbers, but that data has been omitted from this list to simplify presentation and protect privacy. If the County has questions about any of these entries or would like to audit our source files, we would be happy to provide that information. Please feel free to contact: mineconcerns@cea-nc.org.

Sincerely,
The CEA Foundation/MineWatch team
