> Enforcement is carried out through civil lawsuits against Proposition 65 violators. These lawsuits may be brought by the California Attorney General, any district attorney, or certain city attorneys (those in cities with a population exceeding 750,000). Lawsuits may also be brought by private parties "acting in the public interest," but only after providing notice of the alleged violation to the Attorney General, the appropriate district attorney and city attorney, and the business accused of the violation. A business found to be in violation of Proposition 65 is subject to civil penalties of up to $2,500 per day for each violation. In addition, the business may be ordered by a court of law to stop committing the violation.[10] Other penalties may apply, including unfair business practices violations as limited under California Proposition 64 (2004). [see footnote cites therein, including fn the OEHHA list of safe harbor levels which includes one at "0.001 (inhalation)" for air pollution, but does not include one for hexavalent chromium water pollution]

If the EIR is approved, this will become a factor in law reform and political campaigns, since willingness effectively to police the mine's legal compliance will likely determine the results of local officials' selection.

III. CalEPA (OEHHA), EPA, And Other Regulations.

It is indisputable that hexavalent chromium is listed on the OEHHA website for "Chromium-hexavalent" regulated chemical both as causing cancer (since 1987) and reproductive toxicity (since 2008). See https://oehha.ca.gov/chemicals/chromium-hexavalent. My general discussion of CalEPA, EPA, and other regulatory matters follows below. I separately addressed Prop 65 above, because I dispute that CEQA would tolerate a lesser warning to the County decision makers and public now in approving an disputed EIR for such use of hexavalent chromium in the mine shoring dewatered 24/7/365 for 80 years into the Wolf Creek to downstream NID customers than the Prop 65 requirement as soon as the mine begins to operate. While there is much more to be said about such CR6 risks, threats, and harms than is in this Exhibit C, the absence of sufficient data and substantiation by the deficient and disputed EIR/DEIR make a science briefing here unnecessary, because there has not been sufficient compliance with CEQA to require such a detailed rebuttal at this stage. Nevertheless, please begin the rebuttal as to such by considering the following.

Focus on the "California Water Boards" website for the State Water Resources Control Board, which links to many relevant pages and studies. For example, in the

"Upcoming Drinking Water Regulations" section there are pages for "SBDW=21-003 Hexavalent Chromium MCL stating "This rulemaking is in process," and "Chromium-6 Water MCL: Hexavalent Chromium Rulemaking Page" link. See also the California Water Boards report, "Communities That Rely On A Contaminated Ground Water Source For Drinking Water" January 2013, including at 3.2 "Findings: Constituents of Concern: Hexavalent Chromium" detected in 1378 sampled wells in 3124 sampled community water systems and a map at p.78.

Some general data from that opening OEHHA website summary notes that hexavalent chromium has several synonyms (any or all of which I sometimes herein call "CR6"): Chromium-hexavalent, Chromium VI or 6, Cr6, or soluble hexavalent chromium compounds. Besides soil screening references to another cite (for humans, animals, and plants), and Prop 65 references to other sites, this CR6 website provides useful links and a summary of some key data, such as for: (i) WATER: (a) CALIFORNIA PHG (PUBLIC HEALTH GOALS) COMMENTS: "THE HEXAVALENT CHROMIUM MCL OF 0.01 MG/L (ESTABLISHED JULY 1, 2014), BY COURT ORDER, IS NO LONGER IN EFFECT AS OF SEPTEMBER 11, 2017. THE PREVIOUS MCL OF 0.05 MG'L FOR TOTAL CHROMIUM REMAINS IN PLACE WHILE SWRCB DEVELOPS A NEW MCL FOR HEXAVALENT CHROMIUM." (emphasis added) However, pending a successful amendment to make the standard stricter and more protective of people, animals, and plants (as distinct from industry, which is following the same doomed path industry used when defending asbestos, cigarettes, and other carcinogens and toxins), civil liability suits and refusals to insure may gradually drove the resisting industry into bankruptcy despite the timidity of regulator as with asbestos, but nevertheless, (b) the "Public Health Goal (mg/L) is 0.00002" and the "Cancer Risk at PHG is 0.000001;" for: (ii) AIR: "Chronic inhalation REL (ug/m3): "0.2 (inhalation); 20 ug/kg BW-day (oral); and for (iii) SOIL SCREENING cancer potency information as stated. See data and studied linked to such data. Also, the seminal CA study/report on this topic remains the CALEPA's comprehensive (155 page) "Public Health Goals For Chemicals In Drinking Water: Hexavalent Chromium" July 2011.

IV. Some Illustrative EPA Data And Studies on Hexavalent Chromium.

As already incorporated into my DEIR Objection 254, which continues to apply, the EPA website contains many studies and reports for the carcinogenic and other toxic impacts of hexavalent chromium from water, air, and soil pollution. As to water hazards, the Safe Drinking Water Act (SDWA) requires the EPA to determine both (i) non-enforceable health goals based on possible health risks from exposure over a lifetime (MCLG's) and (ii) enforceable standards for drinking water contamination based on the best available scient to prevent potential health problems, like the cancers and reproductive health impacts of hexavalent chromium. As the EPA website "Chromium in Drinking Water" (www.epa.gov.sdwa/chromium-drinking-water) states: "EPA has a drinking water standard of 0.1 milligrams per liter (mg/L) or 100 parts per billion (ppb) for total chromium."

Note also that ample studies have shown that: "Hexavalent chromium exposure occurs through breathing it in, ingesting it in food or water, or direct contract with skin."

National Institute of Environmental Health Sciences, "Hexavalent Chromium" (NIH) website listing CR6 as a dangerous carcinogen, discussing lung cancer when inhaled, as well as other cancers from other types of exposures. As it explains the US EPA has set a maximum contaminant level of 100 parts per billion for total chromium in drinking water versus many states using a 50 parts, and some like California using a 10 parts, per billion standard (with California focused on that 10 parts for hexavalent chromium, as distinct from total chromium, see the California Dept of Public Health Memorandum dated June 20, 2014), many (like this NIH analysis) citing the Hinkley, Ca, pollution made notorious in the "Erin Brockovich" movie. See also State Water Resources Control Board staff report on website: "Proposed Hexavalent Chromium MCL updating Health & Safety Code #'s 116365(a) and (b), 115370 regarding testing and treatment. Besides direct harm to humans and animals, hexavalent chromium also harms plants (e.g., delayed seed germination, root growth reductions, reduced biomass, plant height, photosynthetic impairment, membrane damage, leaf chlorosis, necrosis, and ultimate death; in other words, hexavalent chromium will combine with mine dewatering to threaten and further weaken our already climate damaged forests, resulting in increased fire and fire smoke threats. See P Sharma, SP Singh, SK Parakh, & YW Ting, "Health hazards of hexavalent chromium (CRVI) and its microbial reduction," Bioengineered 2/14/2022.

Consider the following excerpts with links to illustrate some of the many causes for concern, not just in water, air, and soil, but on examples of those types of victims who are impacted: "All hexavalent chromium compounds are toxic (due to their oxidizing power) as well as carcinogenic (IARC Group 1), especially if airborne and inhaled where they cause lung cancer. Positive associations have also been observed between exposure to chromium (VI) compounds and cancer of the nose and nasal sinuses.[5] Workers in many occupations are exposed to hexavalent chromium. Problematic exposure is known to occur among workers who handle chromate-containing products and those who grind and/ or weld stainless steel.[6] Workers who are exposed to hexavalent chromium are at increased risk of developing lung cancer, asthma, or damage to the nasal epithelia and skin.[2] In the U.S., the OSHA PEL for airborne exposures to hexavalent chromium is 5 $\mu g/m^3$ (0.0050 mg/m^3).[12][13] The U.S. National Institute for Occupational Safety and Health proposed a REL of 0.2 $\mu g/m^3$ for airborne exposures to hexavalent chromium.[14]Within the European Union, the use of hexavalent chromium in electronic equipment is largely prohibited by the Restriction of Hazardous Substances Directive and the European Union regulation on Registration, Evaluation, Authorization and Restriction of Chemicals.[7]"

In any event, the DEIR/EIR admits that it will be acquiring cement, and that cement may contain hexavalent chromium when it is unbagged and mixed on mine site into the cement paste to be delivered into the mine for its shoring functions. See DEIR 4.8. As a result, there will be fugitive dust exposure. See the NSAQMD objections Agency 12 (at 12) and 11, where they discuss the fugitive dust risk from other toxins at the mine like asbestos. One example case study of why this matters follows. Consider Monterey Bay Unified Air Pollution Control District example of monitoring airborne levels of hexavalent chromium at an elementary school and fire department, as well as the point-source. They concluded that there were high levels of hexavalent chromium in the air, originating from a local cement plant, called Cemex.[52] The levels of hexavalent chromium were 8 to 10 times higher than the air district's acceptable level at Pacific Elementary School and the Davenport Fire Department.[52] The County of Santa Cruz sought

help of the Health Services Agency (HSA) to investigate the findings of the Air District's report. Cemex voluntarily ceased operations due to the growing concern within the community, while additional air samples were analyzed.[52] The HSA worked with Cemex to implement engineering controls, such as dust scavenging systems and other dust mitigation procedures. Cemex also made a change in the materials they used, trying to replace current materials with materials lower in chromium.[52] The HSA also monitored the surrounding schools to determine if there were any health risks. Most schools came back with low levels, but in the case of higher levels a contractor was hired to clean up the chromium deposits.[52] This case highlights the previously unrecognized possibility that hexavalent chromium can be released from cement-making. Incidentally, the Itasca (Appendix Q) and EMKO studies for Rise that were obscured in EIR Appendices can be found in isolation (i.e., separated from any EIR/DEIR) in a Google search for "hexavalent chromium in mine cement paste." Why is it that someone is now promoting this technique (e.g., cementing mine rock waste into shoring with hexavalent chromium so as to save money in not having to remove the waste rock or import other shoring) and attributing it to "Rise," but the EIR/DEIR itself (as distinct from the buried and obscured Appendices) contain much less useful data?

Remediation of hexavalent chromium in ground water and drinking water is complex, but there has been no "good faith reasoned analysis" with "common sense" (see my attached Objection citations to key court decisions applying CEQA) of the hexavalent chromium threats, much less how best to remediate them.

V. The Hinkley, Cal. Case Study (the Erin Brockovich Saga).

The Hinkley, Ca, Case Study of Hexavalent Chromium (see https://hinkleygroundwater.com) continues, and I commend it to the attention of industry resisters like such EIR miners, because that history illustrates the critical difference between theory and practice and between the legal rights of us surface owners above and around the 2585-acre underground mine here and timid or wishful thinking governmental regulators or decision-makers mistakenly allowing miners to shift dangerous risks and harms to their neighbors. In particular, the difficulties in remediation of hexavalent chromium deserve special attention.

Focus on the "California Water Boards" website for the State Water Resources Control Board, which links to many relevant pages and studies. See the California Water Boards report, "Communities That Rely On A Contaminated Ground Water Source For Drinking Water" January 2013, including at 3.2 "Findings: Constituents of Concern: Hexavalent Chromium" detected in 1378 sampled wells in 3124 sampled community water systems and a map at p.78.

Consider the following excerpt from that Hinkley website:

Cleanup and Abatement Order:

- 2015/11/04 – Final Cleanup and Abatement Order No. R6V-2015-0068 Requiring Pacific Gas & Electric Company to Clean Up and Abate Waste Discharges of Total and Hexavalent Chromium to the Groundwaters of the Mojave Hydrologic Unit
- 2015/09/30 – IRP Manager's Comments on the Draft Cleanup and Abatement Order No.R6V-2015-Draft from the California Regional Water Quality Control Board Lahontan Region dated September 1, 2015
- 2015/07/08 – Final Cleanup and Abatement Order No. R6V-2015-0068 Requiring Pacific Gas & Electric Company to Clean Up and Abate Waste Discharges of Total and Hexavalent Chromium to the Groundwaters of the Mojave Hydrologic Unit

Vi. Some More Specific Integration of this Exhibit With My Objections.

A. Introduction To My Objections to Hexavalent Chromium Air And Water Pollution

Throughout my attached Objection (e.g., my rebuttals there to disputed EIR Response To Comment Ind. 254-1) and my DEIR Objection 254 #'s e.g., 3.A, B, C, D, E, F, G, H, J, L, and N, 4, 5, 7, 10, and 14, I exposed both the failure of the disputed DEIR to provide any "good faith reasoned analysis" with "common sense" to the hexavalent chromium menace and the disputed EIR evasion of that reality by citing to EPA, California EPA, and other scientific and case studies and EU and other regulations, which provide reasons to doubt (as with asbestos) there is any safe amount. Now, I illustrate in this Exhibit C some additional technical data in case it is useful in rebutting the disputed Appendices that the EIR attached at its end without sufficient integration into its substantive content purporting (and failing) to comply with CEQA. **I consider these various disputed EIR statements regarding hexavalent chromium among the worst examples of affirmative misleading or worse statements in the disputed EIR (such as at the third, fourth, and fifth paragraphs of EIR Response to Comment Ind. 254-1 at 2-6003-6004), where the EIR incorrectly asserts that it had already responsively addressed my hexavalent chromium objections in my Objection 254,when it did not do so. Even worse, those disputed EIR objectionable water pollution additions are in conflict with the EIR's own new hexavalent chromium air pollution additions in Vol IX, Appendices Q ,O, and R. Such EIR's flawed Responses admit for the first time (i.e., barely, and obscurely mentioned, and never analyzed adequately as merits that kind of hazard in the DEIR/EIR) hexavalent chromium toxic issues for air pollution purposes (at Vol. IX, Appendix R), although (also as here) wrongly claiming without sufficient credible evidence that the threshold for such toxic danger will be met in the case of this mine. Why do my Objections not appear in an amendment to the EIR/DEIR's main "Hazards and Hazardous Materials" discussion in 4.7, where CEQA required it to be disclosed? (Hexavalent chromium was never properly mentioned there, or even in adequate warnings elsewhere, such as in the obscure and seemingly innocuous brief DEIR descriptions of that toxin's use in cement paste for shoring up the underground mine. Also, the deficient and disputed Appendices are not integrated with appropriate cross-references that would alert those interested in this dispute to the existence at the end of the massive EIR.) [Compare what is stated in the disputed EIR to what is stated in the wrong section of the DEIR (at 4.8-47—48, instead of**

at 4.7) and treated not as the dangerous toxin they knew or should have known it to be, but instead just treated it as if it were an innocuous or "benign" ingredient in the cement, even though that doesn't match the applicable science or its own Appendices Q, O, and R.]

In other words, the DEIR failed so to comply with its CEQA disclosure obligations in the DEIR regarding hexavalent chromium. Therefore, now the EIR is improperly trying to add that essential missing (and still disputed) significant new data for the first time by the EIR, again in the wrong and noncompliant place here (e.g., buried back on page 2-6003-04), instead of properly debating on the merits this toxin threat that is warned against in many EPA and California EPA website studies and that killed the town of Hinkley, CA, and many of its residents as illustrated in the movie, "Erin Brockovich." Why gamble on being caught in this evasion? Apparently, it seems as if the EIR preparers preferred to avoid debating such DEIR objections by continuing to evade the hexavalent chromium hazard risks, threats, and harms (as my Objection 254 demonstrated they had done previously in the DEIR), but they nevertheless could not bring themselves to admit that they had knowingly omitted the threat discussion in the DEIR, since that would be admitting "new information" of "significance" being added to the EIR, which meant CEQA would require more analysis and recirculation of the EIR. To avoid so complying with CEQA and other applicable law, the EIR attempts to provide some insufficient, disputed, and incomplete information in obscure places, ignoring many important parts of my objections and others, and even the EIR's own added and inconsistent air pollution admissions obscured in Vol. IX, Appendix R (and Appendices Q and O as to water pollution) at the end of this very long EIR record. For example, besides the buried and disconnected Appendices Q, O, and R at the end of the EIR, why it the hexavalent chromium data obscured in the EIR Response To Comment Ind. 254-1 where no one will even know it's there, instead of in a prominent place where readers might find it in an amendment to DEIR 4.7 for "Hazards And Hazardous Materials"? See my discussion in the attached Objection about how CEQA and its Guidelines forbid such "hide the ball" tactics and evasions.

Now that the disputed EIR finally begins to prevent to address the hexavalent chromium threats, I note that EIR comments in the main text are unsupported by any competent authority or evidence (i.e., they are disconnected from those obscure, deficient, and disputed EIR Appendices), and there is no legal or factual foundation for the EIR having a competent evidentiary basis for those disputed EIR opinions. Also, I cited EPA, California EPA, and other water pollution threat studies that the EIR/DEIR has ignored, even though the EIR adding its disputed CR+3 air pollution theory for the first time (i.e., it was never mentioned before in the DEIR hazards and hazardous materials discussions.) Those EIR failings should be lethal to the disputed EIR under these circumstances, where the DEIR's noncompliance with CEQA on these issues now perhaps seems more than an innocent mistake, because what was evaded in the DEIR seems to be a practice continued in the EIR. If, as the disputed EIR now seems to claim in its rewrite of history, these theoretical EIR excuse claims had any merit and were intended to be exposed, why were they not properly disclosed in the DEIR (or even properly and less obscurely now in the EIR), so that all objectors and the public could have received more detail to make their decisions, rather than the EIR responding now in the EIR Response to Ind. 254-1 no one who matters to me will probably find or have an adequate chance fully to read and consider, unless and until this is all litigated and a more rigorous court process is enforced.

For example, because of all those objectionable errors, omission, and noncompliance the EIR/DEIR compounded those errors, omissions, and flaws as to related topics, such as the EIR/DEIR's purported water cleaning system (aka "treatment") that is supposed to remove all water pollutants in the water flushed into the Wolf Creek. [The EIR at 2-6003 argues without evidence or support that there is nothing to worry about, because the EIR/DEIR's future and compliant dewatering treatment (so they say) will flush these toxins out of the mine to be cleaned and dumped into the Wolf Creek, apparently to become the risk and problem for NID and others downstream. (The EIR/DEIR seem to imagine that ends their responsibility and any cause for concern by us locals, because they claim such dewatering moves the threat of the groundwater quality from underneath the surface where we live above and around the 2582-acre underground mine away downstream in the Wolf Creek flowing by a half mile below my property. But those consequences still affect my community, which affects all of us and our property values and the taxes supporting our government services. But what happens when the mining and dewatering stops, and our local groundwater stays there with the hexavalent chromium mine shoring? See my CR6 remediation data below.]

As explained in the attached EIR Objection 254, the disputed EIR tries to obscure those fatal omissions and evasions in the DEIR by the EIR adding some disputed and unsubstantiated opinions (e.g., Response To Comment Ind. 254-1, Appendix Q, O, and R), but the EIR is caught between the horns of this dilemma. If the EIR too obviously attempts to correct the DEIR's noncompliance and worse with significant new information, CEA and the Guidelines require revision and recirculation of the DEIR. But if the EIR did nothing to correct its fatal omissions, then it would fail on the merits as deficient in failing to report on and analyze the hexavalent chromium threats. Thankfully for us objectors, the disputed EIR tried to have it both ways and made its wrongs both worse and more obvious, by adding too little data (incorrect and disputed) and still obscuring its placement, while pretending that erroneous and insufficient and unsubstantiated EIR data was already in the DEIR, correct, sufficient, and substantiated, so that its EIR additions were not "significant new information" requiring revisions and recirculation, but merely just "clarifications" or "embellishments" that purport to respond to my many objections, but fail to do so.

Stated another way, whether or not the threshold amount/level of hexavalent chromium is legally permissible or not in the cement paste being added to the mine for shoring support for the existing mine and new mining or in the toxic dust involved in making that paste on site (i.e., new pollution, as distinguished from all the other existing air and water pollution supposedly to be reduced to legally tolerable levels, i.e., another dispute), my attached EIR Objection 254 proves there was no "good faith reasoned analysis" with ""common sense" in the EIR/DEIR of this serious hexavalent chromium menace. Rather than restate such preceding objections, this Exhibit performs a different and more basic function. My DEIR Objection 254 provided ample cause concerns about that menace threatening our community, as hexavalent chromium infamously did, for example, in Hinkley, CA, a case study made worthy by the movie, *Erin Brockovich*. This Exhibit adds some data for that comparison, noting that www.hinkleygroundwater.com shows that, all these decades later, they are still struggling to remediate that groundwater. What this Exhibit does is provide more serious data supporting not

only why the EIR/DEIR is wrong on the merits of this topic, but also why the EIR/DEIR lacks the CEQA required common sense, good faith, and reasoned analysis.

Exhibit D: Some Illustrations Of Issues of Concern To Be Incorporated Into My Objections From Other Objections.

It is not practical to attempt to integrate scores of other party objections to the EIR/DEIR into my four Objections, and I will not attempt to explain every reason for such incorporations. However, some highlights may be useful to illustrate some of the many reasons why I made such incorporations. See my Table of Incorporated Objections attached to my EIR Objection 254.

As a general matter I note that various governmental agencies have stated that they will require permits from the mine operator under various regulatory and other laws. My EIR Objection 254 contains legal briefing for the proposition that such EIR/DEIR deferral of CEQA disclosure and mitigation compliance is not proper. It is not sufficient or proper, for example, for the EIR/DEIR to state that it will comply with whatever is needed to obtain such future permits or approvals without the EIR/DEIR providing the required information that such regulators will need to do their evaluations. Too often, as I demonstrate in my EIR Objection 254, the disputed EIR improperly defers disclosure and analysis for such future permitting or approval process, thereby evading or defeating the spirit and terms of CEQA. By such disputed logic, if this EIR could get away with such improper evasions and omissions, compliance with CEQA could be accomplished by a meaningless comment that whatever water, toxic, or other environmental impacts may result from the EIR mining will be addressed by the EIR miner in that future regulatory permitting or approval process, thus defeating the whole purpose of CEQA. Thus, when regulators describing the laws and regulations they administer or their process in the EIR Agency Comment Letters, I assert that as a basis for proving that there was more to be stated in the EIR on those topics now about why the applicable conditions, circumstances, or facts would entitle the EIR miner to such permits or approvals.

Also, as a general matter, many of these objections identified errors, omissions, and deficiencies in the DEIR/EIR to which the EIR responded by making changes to the DEIR which I and applicable law consider to be material revisions requiring recirculation. Invariably, the disputed EIR incorrectly claims those changes are merely clarifications or embellishments that do not require recirculation. Therefore, all such EIR changes to the DEIR in response to such objections or comments I incorporate are not only disputed on the merits as I have indicated, but also disputed on that question of whether that new information requires recirculation. See my EIR Objection 254 citing authorities in support of my positions on such matters.

I. Some Examples of Some Illustrations of My Intended Uses of Governmental Agency Letters I Incorporated Into My Objections.

H. State Dept. Parks And Recreation Agency Letter 1.

Not only does that State objection share and reflect my own incorporated concerns about the EIR's lack of adequate maps, "water quantity and quality, air quality, noise and vibration, hazardous materials, and wildfire dangers," as well as deficient mitigation, but it also spares me from having had to say more about the many biological issues. It states (at 1-2): "Water quantity and quality, air quality, noise and vibration, hazardous materials, and wildfire dangers are all crucial issues for CSP, and we find the DEIR to be inadequate in mitigations … cumulatively and individually there [are] potential significant issues [that] could negatively affect the natural resources, recreation values, health, and safety of Park visitors and employees and the general

well-being of Empire State Historic Park (SHP)." That letter also notes matters contrary to California Water Code #13050(f) for failure to protect "beneficial uses," and to plans of the Central Valley Regional Water Quality Board and the Nevada County General Plan, none of which are adequately discussed in the disputed DEIR/EIR.

Like me and others, the State also suffered from the EIR/DEIR "hide the ball" and other objectionable tactics; e.g., just as the EIR/DEIR largely ignores the impacts on the thousands of us objectors owning property on the surface above and around the 2585-underground mine, the State reports suffering the same problems with the EIR/DEIR ignoring its proximity to the Empire Mine Park and other State property. Basically, the State and I share many of the same concerns, although they sometimes focus on different details and legal issues than I do, but that cumulative data improves the force of each of our respective presentations, plus demonstrating similar EIR/DEIR patterns and practices of evading compliance with CEQA and other applicable laws. Just to take one example, the EIR/DEIR dismissed without adequate "good faith reasoned analysis" and "common sense" my concerns about dewatering 25/7/365 not only drying up wells and similar impacts, but also about the impact on our surface forest and vegetation creating a massive wildfire risk. The State not only agreed with me, but added useful details and perspectives. See Agency Letter 1 at pp. 27 to 29. See, e.g., at p. 29: "CSP also notes that the information on groundwater depletion in relation to the health of plant communities and tree survival was left out of Chapter 4.8 Hydrology And Water Quality"… [despite being] of high concern for the Park." I look forward to the State's reaction when they realize the hexavalent chromium threats obscured or worse by the EIR/DEIR, which like many others they seem to have not yet discovered.

I. **State Dept Transportation Agency Letter 2**.

As I stated in my objections, but the State is in a better position to prove, the massive heavy truck use on the impacted roads will break them down causing not just massive cost, but also massive traffic disruption, none of which is adequately reported, mitigated, or addressed in the EIR/DEIR. See Agency Letter 2 at p. 2: "The 200 heavy truck trips per day for transporting mining material [see page 4.10-58 of the draft EIR] were not analyzed for impact to Hwy 49 or local roads for the lifespan of the road structure. The roads used by these trucks could potentially decrease the lifespan of the roadways."

J. **State Dept. Fish And Wildlife Agency Letter 3.**

While all the State's noticed errors, omissions, and deficiencies are incorporated and appreciated by me, I especially appreciate this Department's supplement to my concern addressed in my comment "A" above about Agency Letter 1 concerning the impact of groundwater depletion on our surface forest and vegetation where thousands of us live above or around the 2585-acre mine. This Agency Letter 3 adds important data, including for wildfire threat increases, and notes at p. 6: "DEIR does not include a discussion of the potential impacts of lowering the groundwater table on environmental users of groundwater, such as groundwater dependent ecosystems or environmental users of interconnected surface waters."

D. Central Valley Regional Water Quality Control Board Agency Letters 4 and 5.

Agency Letter 4 describes the relevant regulatory setting and the permits and approvals that will be required for the EIR mine. As noted above and in my EIR Objection 254 this proves there was more that was required to be described in the disputed EIR than was there, and any changes in response to the Agency Letter 4 or 5 was significant new information requiring recirculation (as well as better EIR disclosure and commentary.) For example, more is required in response to the "Dewatering Permit" discussion at p. 4 in Agency Letter 4, especially regarding the use of hexavalent chromium paste to shore up the mine that could leach into the ground water being dewatered and present a challenge to the purported treatment of the mine water being flushed into the Wolf Creek. As Agency Letter 5 warned at p. 2: "The Central Valley Water Board may require modifications to the water treatment system, surface impoundment and mining operations as well as to ensure the protection of water quality. All permitting requirements are expressly noted in the Draft EIR as mitigation measures. Under Water Code #13263.1, the Central Valley Water Board must determine that the proposed mining waste discharge is consistent with a waste management strategy that prevents the pollution or contamination of the waters of the state, particularly after closure of any waste management unit for mining waste, before issuing any permits." My EIR Objection 254 demonstrated how, for example, the disputed EIR both improperly obscured or worse the hexavalent chromium threat in the mine shoring cement (a "hide the ball" tactic dispute), and improperly addressed what happens when they shut down or abandon the mine for any of many likely reasons and it again floods and exposes us to that hexavalent chromium leaching into the ground water or, since the miner seems unable to afford to keep cleaning the water indefinitely (see Exhibit B and DEIR Objection 254 #2), passing untreated or inadequately treated into the Wolf Creek.

As far as I can see, the EIR not only failed to address these matters adequately with the County and the public, but also with this agency, whose commentary might have been more helpful to our objections if the agency had known about those obscured or worse threats. See also the Agency Letter 5 comment at 2 on "Ongoing Waste Characterizations" that would have been impacted by adequate disclosure of the ending remediation risks and hexavalent chromium use, which will add more force to the need for the "Water Quality Specific Financial Assurances" that will be required as stated at p.4 in the Agency Letter 5, especially since that commentary correctly observed: "Staff could not locate a discussion in the Draft EIR on how the applicant intends to address/mitigate/or take responsibility for any post-mining water quality issues. The Draft EIR should be revised to address anticipated post-mining water quality issues and whether the mine will require oversight to ensure water quality conditions comply with applicable regulatory requirements." As the commentary also notes that same concern exists even with respect to "Temporary Or Short-Term Shutdowns" at p.4. [Note EIR Response To Comment Agency 5-10 and -11evades the problems and worse, because the EIR obscured or worse the hexavalent chromium problems (see my Exhibit C) and makes the following misleading statement about the future end-game on mine shut downs: "The water that would seep from the underground workings is anticipated to have similar water quality to the water that currently discharges from the existing drains. Specifically, it may contain elevated levels of iron and manganese." But note, the EIR does not reveal that such future mine water will be impacted by the added hexavalent chromium paste in the shoring that did not previously exist in that water.

E. **State Dept. of Toxic Substance Control Agency Letter 7.**

This State Agency Letter 7 describes various legal and regulatory limitations that apply to the dispute EIR/DEIR plan to dump EIR mining waste from the Idaho-Maryland Mine onto the Centennial mine site where there is already a "voluntary cleanup agreement" and "remedial action plan" "currently under review." The letter alludes to various things subject to review and approval, adding (at p.2): "DTSC is providing this letter to ensure the County is aware of these general requirements as they do not appear to be discussed in the DEIR." Again, this is an example of "hide the ball" omissions that appear to be tactical, since there is a dispute over whether or not the Centennial site work is a separate CEQA project as the EIR/DEIR incorrectly claims. The more such discussion occurs as required, the more clear it is (as my Objections assert) that the Centennial work is part of one consolidated project with the rest of the DEIR/EIR project.

F. Grass Valley Agency Letter 8 (GV Community Development Dept.)

The City exposes many errors, omissions, and deficiencies in the DEIR/EIR, cumulating in a powerful case demonstrating that the EIR had to add much significant new information (much still disputed) to require recirculation. It concluded (at Agcy 8-45, see also 8-31) that: "Collectively, the inadequacies identified in our review support our conclusion that rather than simply responding to comments, the County needs to substantially revise these analyses to repair the deficiencies, and prepare a Recirculated Draft EIR pursuant to CEQA Guidelines #15088.5…." I agree for those many city stated reasons for objections (e.g., massive traffic and noise issues and concerns) and my additional objections. Among such city illustrations of failed mitigation are that (at 8-24 to 26):

> Mitigation Measure 4.10-4 [noise and vibration] lacks specific timing requirements for implementation, and the Ground Vibration Monitoring Program is required "to be developed prior to operation of the mine …in accordance with the recommendations of the Blasting Report … (i.e, different requirements for different blasting depths.) Furthermore, the results of the Ground Vibration Monitoring Program should be required to be submitted to the Nevada County Planning Department for review in a timely manner, reasonable to the County and applicant, to allow for adjustments in project conditions of approval, if warranted by the monitoring data.
>
> A Recirculated DEIR needs to acknowledge that the hauling operations will including loading and dumping of trucks and the spreading and compacting of this material [because they] would occur well beyond standard construction operational hours in most communities and be in violation with the City's noise ordinance that prohibits construction activities between the hours of 7pm and 7am, or on Sundays with 500 feet of a residential zone… [as well as being] in conflict withj the County's General Plan Safety And Noise Element adopted in October 2014 and the City's Nose Ordinance…. The DEIR needs to fully disclose that the Centennial site operations an site preparation will occur well beyond any typical construction operation and likewise the long-term noise impacts. A five or more years-long operation that is active seven days a week and 16+ hours a day cannot reasonably be dismissed as a "temporary noise impact" as it is in section 4.10-1 and on page 4.10-32." Especially, the City notes (at 8-2) for the "extraordinary" and objectionable 80 year period required by the EIR/DEIR. Even more

serious issues are raised about storm water drainage (at 8-22), energy and air quality issues (at 8-16 to 21) [noting twice that "The DEIR lacks mitigation measures for project operations." as well as the failure to disclose "the scale of the Project's usage of petroleum fuel sources" as required by *Ukiah Citizens for Safety First v. City of Ukiah* (2016), 248 Cal. App. 4th 256.]"

G. NID Agency Letter 10 (Nevada Irrigation Dist.)

While the NID's objections and concerns often do not go as far or a broadly as mine, they do share my concern about economics, feasibility, lack of financing, and the lack of Rise creditworthiness as well as some of the many DEIR/EIR water related errors, omissions, and deficiencies. The NID concerns about the mine's disputed Water Supply Assessment (WSA) are correct as far as they go, but as my Objections demonstrate the errors, omissions, and deficiencies are much more extensive and dangerous. (However, a useful start is NID's $14 Million estimate at 8-9 of the infrastructure cost ignored by the DEIR/EIR, which my Objections prove from Rise's SEC filing admissions that it could not afford.) For example, NID correctly explains (at 10-3 to 10) how and why "NID's Board of Directors expressed serious concerns that the number of impacted wells could far exceed the 30 estimated by the DEIR," causing NID to propose "a more extensive and robust well and ground water monitoring effort prior to and during any dewatering" extending also to "wells located in Woodrose, Greenhorn, and Beaver Lane areas," although much more is required. See, e.g., my discussion of *Gray v. County of Madera, which supports the NID demand (at 10-9) that "the Applicant should guarantee and include in its proposal mitigation potable water for each well that is impacted," and expand and improve monitoring.*

H. Northern Sierra Air Quality Management District (NSAQMD) Agency Letters 11 and 12.

These brief letters contain more and better "good faith reasoned analysis" and "common sense" regarding asbestos and other issues than anything in the disputed, incorrect, and deficient EIR/DEIR. Note also, for example, how the DEIR/EIR again "hides the ball" with respect to asbestos threat assessment (Agency 11 at p. 1): "CARB staff concluded that 'it is not appropriate to determine risk from rock samples' … and noted that the PCM conversion factor was developed for air monitoring samples, not rocks…. Since there is no approved method for calculating risk from rock samples, comparison with the NSAQMD's AB2588 toxic significance threshold based on rock composition carries some uncertainty."

Similarly, Agency Letter 12 (at pp. 11-12) states:

> The Water Supply Assessment (WSA) is important because an abundant supply of water is necessary for control of dust and toxics such as silica and asbestos. [I would add hexavalent chromium, since the DEIR obscured its use contrary to CEQA and the Guidelines, so the NSAQMD may not have seen that additional threat.] Unfortunately, it does not include enough detail to evaluate its accuracy. There should be an itemized list, or inventory, of water usage features so that reviewers can check to see if key elements are being overlooked or mischaracterized. [I would add like hexavalent chromium.]

***

> **The** ASUR Plan proposes that unpaved areas will be watered for dust suppression every 2 hours, which should be considered carefully in the WSA. The NSAQMD is concerned that the water budgeted for the project might not be adequate to meet the dust control requirements. Since the dust contains asbestos, silica, and numerous other toxic substances, adequate dust control is necessary. There should never be a situation where dust control is compromised because of water use restrictions, particularly n the summer months when the potential for dust generation is greatest.

In effect, during the next 80 years of increasingly severe climate change and drought when water is precious and rationed, this no net benefit mine (e.g., my DEIR Objection 254 #4) will claim priority water use during rationing in order to save us from the mine's toxic dust so that the shareholders of this Canadian miner can profit. That is absurd and worse.

II. Incorporation of the Comprehensive Group Letters 6, 7, 8, 9, And 21 From the Community Environmental Associates (CEA) Or Its Counsel And Center for Science In Public Participation (Collectively called the "CEA Objections").

These CEA Objections require no summary by me to highlight their obvious merits. They are incorporated as is and add important scope and details for my own comments. My concept of such collaboration is that my four Objections add details and extra scope and focus to these fully sufficient CEA Objections. As noted about this is about combining the environmental science, engineering, and other such expertise and experiences to support my different experience and focus in order to present the best, collective, reasoned analysis in maximum depth and scope. Some may ask why I did not simply sit back and defer to the CEA Objections, which are more than sufficient by themselves to defeat the EIR/DEIR. The answers are many, but some are grounded on the fact that I have a unique set of experiences and qualifications that supplement those excellent but standard environmental defense group capabilities. Since my family's health, welfare, home, environment, and retirement circumstances have been impacted by these objectionable EIR/DEIR maneuvers, it is essential that I do what I can to support that defense.

However, it deserves repeating to protest again what Group Letter 6 quoted from false and misleading letters from mine advocates, such as (at 6-1) "Nevada Cunty has just completed the most thorough environmental study in its history" as well as other unresolved claims about the project; (at 6-2) "The County has determined that no domestic water wlls will be drained by the mine;" and (at 6-2) "The County has determined that there is no threat to water quality to domestic water wells from the Idaho Maryland Mine Project." My Objections and others demonstrate how false and misleading those comments are, and why any pro-mine cards or comments must be disregarded as the result of the "alternate realities" and worse crafted by the EIR/DEIR.

The CEA counsel's Group Letter 21 is excellent and covers many of the important issues. But every objector seems to add something extra and useful, and the collective weight and scope of all such objections should bring the County decisionmakers closer to the truths about this EIR/DEIR mine. They won't yet find the required "good faith

reasoned analysis" with "common sense" in the EIR/DEIR, which requires extensive revisions and recirculation to deserve any serious consideration.

III. Some Examples of Some Illustrations of My Intended Uses of Group Letters I Incorporated Into My Objections.

V. Group Letters Addressed Above, Including the CEA Objections (Group Letters 6-9 and 21).

Please see my incorporation discussion in the previous section.

W. Bear Yuba Land Trust Group Letter 2.

This long-established land trust is not only a critical voice for the reality of the massive violations, evasions, and worse of CEQA and other applicable law by the disputed EIR/DEIR, but they provide witness testimony that the EIR/DEIR will be unable to evade in any court challenges that become necessary if the disputed EIR/DEIR is mistakenly approved. Begin your read at its analysis of the similar "Martis Valley Case" at 2-10, which the Trust demonstrates to apply with particular force to our situation, especially with respect to the Bennett Street Conservation Easement and threats to Wolf Creek water quantity and quality. In particular, this witness demonstrates the many failures to comply with Guidelines (e.g., 15125 as to describing the environmental conditions in the vicinity of the project, such as at Grp 2-3 and 2-7) and with the General Plan (e.g., Objective 11.5, Directive Policies Policy 11.10 [regarding cooperation with other agencies and groups like the trust], and Policy 6.10 requiring that the "County shall support the activities of the Nevada County Land Trust" [now BYKT] ignored in violation of Guideline 15125. Likewise, as demonstrated in my Objections and others, this details how the disputed EIR/DEIR improperly delegates and defers water issues and mitigation to the Central Valley Regional Water Quality Control Boards in insufficiently described ways based on speculation and unsubstantiated opinions (all wrong on the merits). See Guideline 15124.

As to the chronic "bait and switch" tactic of the EIR/DEIR note the statement (at Grp 2-4) that, besides ignoring this conservation easement and not establishing any required baseline data for the water issues, "The preparers of the DEIR seem to believe that the Easement is currently disturbed similar to Centennial and Brunswick Industrial sites. Nothing could be further from the truth. The condition of South Wolf Creek on the Easement has been protected for at least 24 years by BYLT. *** To say that the proposed Project would not result in temporary or permanent impacts because encroachment would not occur within 100 feet of the waterway does not account for direct impacts just downstream to water quality, quantity, and wildlife." For example, among many DEIR/EIR omissions besides the riparian/migration/movement corridors are the consequences of increasing the current base flow of the South Fork of Wolf Creek (2cfs) to over 7 cfs for 80 years.

X. Briar Patch Food Coop Group Letter 3 (mislabeled 15 at the top).

This commentary deserves special attention, among other things, because of how it shows the futility of our sacrifices made to reduce climate change and improve the environment by worthy and beneficial businesses, if exploitive, no net benefit miners can overwhelm in their environmental abuses the benefit of those civic minded sacrifices. For example, at Grp 3-2: "The

project is expected to use 12% of Nevada County's electrical supply, more than all the rest of the County's businesses combined. We have worked hard as an organization toward a net zero energy goal … [but] This would erase all gains made toward that end. Additionally, with [PG&E] PSPS and catastrophic weather events, we question the judgment of one single business using so much energy, thus compromising the grid." Likewise, the "Co-op has implemented strategies that have saved an average of 150,000 gallon [of water] each month. Rise Gold plans on pumping more than a million gallons a day for decades. Further, we are very concerned about arsenic, ammonia, and other contaminants [I would add hexavalent chromium as explained in my Objections] from treated mine wastewater polluting downstream … Self-monitoring of water quality is not a high enough var for Rise Gold…"

D. California Native Plant Society Redbud Chapter CNPS Group Letter 5.

As addressed in my attached EIR Objection 254 this letter adds a comprehensive demonstration not only of why Centennial cannot be treated as a separate project, but also why there good cause to contest the good faith of the EIR/DEIR in attempting to manufacture that disputed evasion of CEQA and other applicable law. Moreover, this letter provides an excellent analysis of how the DEIR/EIR also both fails to establish the required environmental baselines and to comply with the CEQA standards for botanical and wetland surveys and management plans. A close reading of this objection is also critical in demonstrating important examples of bait and switch and other objectionable tactics in the EIR/DEIR and applicants related conduct that present a basis for challenging the "good faith" required by CEQA.

E. First Church of Christ Scientist, Grass Valley Group Letter 10.

I support the concerns and defense of this church as a useful illustration of the noise problems we all face to one degree or another, depending on our proximity to the causes of such adverse impacts. I note that when the members of this church study my objections, the CEA Objections, and others, they will discover many more threats to the health, welfare, and environment to add to their objections.

F. **Friends of Banner Mountain Group Letters 11 and 12.**

This Letter 12 provides wise and useful objections, information, and insights on a variety of subjects on which I rely. I recommend in particular their comments on (1) mitigation, monitoring, and permitting, (2) security and bonds, (3) project scheduling and sequencing, (4) hydrology and water quality and supplies, and wells, (5) hazards and hazardous materials, including stored mine and onsite waste, (5) wildfire risks, (6) noise and vibration, including traffic issues, and (7) many kinds of biological resources.

G. Gold Country Avian Studies Group Letter 13.

This Letter 13 provides wise and useful objections, information, and insights on a variety of subjects on which I rely. I recommend in particular their comments on (1) a wide variety of

biological resources, (2) hydrology and water quality, (3) noise and vibration, and (4) rezoning and the Centennial property line adjustment and the many other Centennial issues of concern.

H. Nevada County Association of Realtors Group Letter 15.

The brief Group Letter 15 echoes many of my objections and comments regarding water, traffic, habitat and contaminants, noise, and electricity/alternate power. What matters even more that what they say is that they know how it affects property values that will be at issue, at least in any court challenges, regardless of the inappropriate EIR/DEIR attempts to exclude them as I explain in my attached EIR Objection 254 Exhibit A, my DEIR Objection 254 #4, and my DEIR and EIR Objections 255.

I. Nevada County Chapter of Citizens Climate Lobby/Education (CCL) Group Letter 16.

This Letter 16 adds useful and important information and rebuttals to counter climate change and air quality issues, among others, that I appreciate and will incorporate into some of my own arguments. Also, this objection has important positions that we all should advance on the analysis of cumulative impacts and concerns, including about air quality.

J. Nevada County Climate Action Now Group Letter 17.

This Letter 17 also adds useful and important information and rebuttals to counter climate change and air quality issues, among others, that I appreciate and will incorporate into some of my own arguments. In particular, their data on emergency generators supplements my broader and deeper analysis on that subject, which I recommend to their attention. Likewise their useful data on cement issues fits well with my analysis of the hexavalent chromium menace in the mine cement paste for shoring, Also, this objection has important positions that we all should advance on the analysis of cumulative impacts and concerns, including about air quality and the Nevada County Energy Action Plan.

K. Nevada County Food Policy Council Community Alliance with Family Farmers Group Letter 19.

We all benefit from their unique perspective on our common problems with this EIR mining. This illustrates the benefit of objector collaboration, since my primary focus has been on the risks and impacts on us surface owners above and around the 2585-acre underground mine, including our groundwater, while this group addresses the impact of that groundwater downstream. We can each learn from the other because we both care about water quality and supplies, and we each see part of what is a massive threat and risk for our whole area.

L. Rudder Law Group LLP Group Letter 20.

Our concerns and objections overlap and supplement each other in many ways, and I am happy to incorporate and support their approach where this excellent Letter advances beyond mine.

M. Shute Mihaly Law Firm/CEA Foundation Group Letter 21 (see CEA Objections Above Where Consolidated).

Our concerns and objections overlap and supplement each other in many ways, and I am happy to incorporate and support their approach where this excellent Letter advances beyond mine.

N. South Yuba River Citizens League Group Letter 25.

I cheer, incorporate, and support the SYRCL analysis and objections with which I agree. As a member, I find their insights and knowledge to be beneficial in exposing errors, omissions, and noncompliance as we all work to counter the risks, harms, and noncompliance posed by the EIR. I am particularly supportive of their water supply and quality positions.

O. The Sierra Fund Group Letter 26.

I also cheer, incorporate, and support the Sierra Fund's analysis and objections with which I agree so thoroughly that I not only incorporated them generally but integrated some of their data with my related objections because I find their insights and knowledge to be beneficial in exposing errors, omissions, and noncompliance as we all work to counter the risks, harms, and noncompliance posed by the EIR. I am particularly supportive of their water supply and quality positions.

P. The Wells Coalition Group Letter 27/28.

I also cheer, incorporate, and support the Wells Coalition's analysis and objections with which I agree so thoroughly that I not only incorporated them generally but integrated some of their data with my related objections because I find their insights and knowledge to be beneficial in combatting the EIR's major threats not only to the undercounted wells in our area but also the future wells we will all be drilling as climate change progresses and, if the EIR is mistakenly somehow approved, 24/7/365 depletion of our groundwater.

Q. Wolf Creek Community Alliance Group Letters 29, 30, 31, and 32.

I also cheer, incorporate, and support the Wolf Creek Community Alliance Group's analysis and objections with which I agree so thoroughly that I not only incorporated them generally but integrated some of their data with my related objections.

Other Incorporations May Be Addressed Directly In My Objections Or in Other Supplemental Objections. My ideas for a more extensive commentary for such incorporations have not been realized by my lack of time that remained after the larger than expected effort required to finish my attached objection. I thought about dropping the exhibit, but, for tactical reasons I can share with any like-minded objector who needs to know, I decided to keep this brief form. For those I mention but lacked the time to do appropriate justice to your good work, I hope you find somethings in my objection that help you and make up for my deficient recognition of that work here.

Dear Planning Commissioners

My name is *Dawna Johnson*. I live in District 4 on Orion Way in Grass Valley,

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

In addition to asking you NOT to recommend the "80 year" permit be issued for this project, I ask you to NOT accept the Final Environmental Impact Report. Deficiencies remain that were pointed out to the county during the review of the draft that were either ignored or inadequately addressed. An approval gives the appearance that those inadequacies don't exist and/or don't matter which is just not true. I am under the impression the proposed mitigations listed, in the final report, have been deemed inadequate by professionals who have written you. Some mitigations seem to be missing all together. What happened to the $14million bond NID stated they would need, at the very least, to cover possible water supply issues? I had a long career in construction, owner and CFO for several decades, and know the importance of bonding. In my opinion, and in lieu of the principles history, there is no bond large enough for this project. Damaging the environment and diminishing the quality of life of the citizens of this county should be avoided at all costs.

Additionally, it not only seems to be in conflict with the general plan, it appears to undo any environmental progress we are striving for and as mandated by the state.

Personally, as a disabled and fixed income senior, with health issues that are exacerbated by bad air quality and noise, I am concerned about my quality of life, as well as that of others, the many issues regarding water and property values. Our home is, as it is for many, our biggest asset and a major part of our retirement planning. With family and financial constraints, we cannot just move away.

Please, do not recommend the approval of the permit AND, MORE IMPORTANTLY, the FEIR.

Thank you for taking the time to consider my concerns,
Dawna Johnson
District 4

RE: Rise Gold Proposals: Take No Action

Honorable Members of the Planning Commission:

It has been reported (KNCO 4-26-23) that County Planning staff recommends "Take No Action" on the Idaho-Maryland Mine application for an 80 year use permit. I agree with that, and also submit that the Final EIR should not be certified at this time.

In my view, the Commission should SUSPEND processing Rise Gold pending the finalization of court proceedings in British Columbia (see "Other Voices" in the The Union by Lou Douros, 4/25-26). Those court proceedings involve civil and criminal accusations against the principals of Rise Gold. It is a legal cloud casting doubt on the trustworthiness of the applicants. If they are not in good standing with Canadian law, it would be reckless to vest them with an 80 year use permit. You have the inherent power to exercise discretion to suspend processing. You should seek legal advice about this in advance of your May 10 meeting. Further, you should ask legal counsel to summarize for you the Canadian court proceedings to date, and give you periodic updates on the finalization of the charges.

To be clear, the Final EIR should not be certified at this time, and should be suspended pending finalization of the Canadian court proceedings, which involve serious accusations about willful violations of Canadian environmental laws and regulations.

In addition, I submit that the Final EIR is deficient for myriad reasons. My particular reason has to do with noise. I submitted "Individual Letter 689" to contend that the noise monitoring is inadequate. It involves limited monitoring proximate to the mine, but not general monitoring as to noise that will be heard throughout Greater Grass Valley. My concern about general noise was deemed to be not a significant impact. Under this logic, the rumbling, grinding, braking noises from large trucks going to and from Rise Gold would be not significant, even though audible and disturbing. It is my view that increased background noise in Grass Valley would significantly and negatively impact tourism, businesses and residents.

Thank you for consideration of my comments.

TO: Nevada County Planning Commission
Reactions to the FEIR Responses to my comment letter to the DEIR (individual letter 163):

I realize that your decisions as planners for the county depend on specific and accurate information and that is what I aim to provide in this follow-up letter. As a research scientist with the University of California I have many years of experience in peer-review of journal articles and technical scientific issues. One of my areas of expertise is on the effects of dissolved toxic metals and acid mine drainage on stream ecosystems. The EIR presents a huge amount of technical information and I approached review of what was presented just as I would any manuscript submitted to a science journal – looking for rigor and clear answers to issues raised by a review.

I found some of the responses to the questions and concerns I raised in my review/comment letter to be evasive and even dismissive. The data and information presented in the DEIR was not improved upon in the FEIR and does not address real concerns about several issues related to how dewatering of the mine could impact aquatic life in the South Fork of Wolf Creek. This report did not meet peer-review standards, nor what is needed for public policy decisions. RiseGold makes **unsubstantiated assertions of being able to mitigate risks related to the concerns outlined below and fail to consider impacts on aquatic invertebrate life forms**.

Response 163-2 concerning erosion and suspended sediment/turbidity:

This remains a concern for me as a stream ecologist. Here is what Balance Hydrologics concluded in-part from their analysis (Appendix K1): "We therefore conclude that discharges during baseflow periods will not result in substantial erosion or siltation on site in South Fork Wolf Creek." A stated, this pertains to bedload sediment mobility which means larger particles, not the turbid muddy flows shown in the photo of Figure 5-5 that are mobilized at lower discharge and are the real concern as a persistent source of disturbance in the stream. The photo is at a discharge of 11 cfs which falls within the reported range that added pumping from mine drainwater would produce: 5.8 to 15 cfs. It is these fine sediments that are suspended in the water, often becoming deposited on the surfaces of stream bottom habitat that are the real concern and the report misses that point. Again, NOT bedload erosion, but turbidity that is the potential problem here. The response to my concern cited lots of data, measurements and calculations and those are fine but they do not address the issue that these augmented flows create poor water quality and habitat conditions for aquatic life. Even though NID

does discharge periodically and create similar disturbances, these are short-lived phenomena compared to the estimated 6 months of flows that would add 5.6 cfs at all times to a hydrograph that has natural variations between about 0.2 and 6.5 cfs. The report doesn't bother to consider how sedimentation impacts aquatic life in streams and that remains the concern here. The report indicates that continuous monitoring of suspended sediment and flow has been set up for S Fk Wolf Creek so it is pertinent to be sharing this data as well to evaluate how these are related. **Conclude: Evidence of risk exists.**

Response 163-3 regarding the need for monitoring of benthic macroinvertebrates indicators

This is the most common and easy way to evaluate impact to aquatic life and the COLD beneficial use designation. While it may not be required it would most certainly be informative. In fact, the Sierra Streams Institute this past summer, in coordination with the Wolf Creek Alliance, DID sample BMIs in the S Fk Wolf Creek, so data is now available to evaluate further changes should any mining disturbances occur. It would be a simple matter for the project proponents to provide this kind of information in order to evaluate and protect aquatic life uses as a goal of the Basin Plan of the Regional Water Board but they simply say they are not required to do so. I stated that knowing how altered hydrology might also affect algae and organic matter because this is the base of the stream food web. They didn't seem to get that this is how stream ecosystems work. **Conclude: data gathering inadequate**.

Response 16-4 primary concern relating to the potential toxicity of dissolved metals in mine drainwater

Whatever the requirements are for technology-based or more stringent requirements to meet safe water quality for discharge, the toxic metals concentrations should not exceed cumulative concentrations above levels that have been shown to harm the BMIs indicators of stream health. My letter cited published scientific work on which I am an author that specify these levels. My greatest concern about the plan to dewater the mine and pump that water in a creek is that many of the metals of concern were not reported in the data presented and that is still the case. Instead RiseGold responds to this concern by stating that they will treat the water coming from the drowned mine shafts to remove any contaminants so the metals present are not a concern. What then would these levels of potential contaminants be in the treated water? Evidence of this is necessary to have a realistic assessment of iron (Fe), manganese (Mn), and ALL toxic metals after treatment and this must be based on whether the large volume of water that must be

treated can achieve non-toxic levels. Table 4.8-2 (DEIR) concentrations report “after-treatment” values but the amounts shown for Fe (“<300”) may still be at levels toxic to aquatic life. Even if possible, chronic testing (not the simple and inaccurate acute tests) should be done on water that represents the "treated" condition. They also state that Fe and Mn do not have levels identified for protecting aquatic life but that is not true - Fe and Mn DO HAVE specified levels for protecting aquatic life (see references in the Clements et al paper cited in my comment letter). Many of the metals that are of greatest concern are not even reported in the relevant tables (4.8-2, Appendix K2 Tables 3-6, 3-7), suggesting that the analysis used may not have been sensitive enough (Cu, Zn, Al, Co) and aquatic life use criteria are what should apply as standards (not municipal effluent limits). There are analytic procedures available to detect levels much lower than given. They further claim that lots of data was provided on water chemistry, but none of that is pertinent to the metals of concern or to the mine shaft water that would be drained into Wolf Creek (i.e. Table 3-8 they cite is from Wolf Creek, not the mine water, and Figures 3.12 to 3-19 report only major common cations and anions, not the toxic metals of concern such as dissolved forms of copper, zinc, and aluminum). The reported levels of Fe and Mn are of concern and already exceed levels of chronic toxicity in mine shaft water, and possibly treated water. Removal of these contaminants from the large volumes that would be involved in dewatering (5.6 cfs) has not been proven, based only on bench-scale tests. **Conclude: contamination risk exists but inadequate data to evaluate.**

Response 16-5 relates mainly to my concern with high overall levels of dissolved minerals (conductivity)

Chemical analysis of mine shaft water shows high levels of mineral content (dissolved mineral ions like sodium, calcium, and carbonates, sulfate) – the concentration of total ionic solutes (conductivity) is reported at ~400 µS in the existing shaft and no values given for after treatment. This often cannot be controlled by treatment and represents what may be a very high value compared to the background natural level of specific conductance in S. Fk. Wolf Creek which is typically in the range of 50-100 µS EC (Table 3-8 of Appendix K2). Conductivity of 400 µS is quite high for Sierra streams and EPA standards under development show impact levels at 150-200 µS across western mountain regions. The response from RiseGold suggest using a standard based on agricultural drain water. This standard is irrelevant to that found in mountain streams which are much lower in conductivity and carry separate risk of impacts to aquatic life. Water softener treatment proposed to remove these constituents again needs to show that the scale of treatment can achieve adequate control of dissolved minerals and toxic metals to protect aquatic life. **Conclude: contamination risk exists but inadequate data to evaluate.**

Review of Planning Department Staff Report on Idaho Maryland Mine and FEIR
by
Community Environmental Advocates Foundation
4/30/23

The purpose of the Planning Commission hearing on May 10-11 is to provide a recommendation to the Board of Supervisors on whether or not to Certify the Final EIR for the mine project, and whether or not to approve the required Use Permit, Zoning Change and Variance needed to operate the 80-year mining project.

WHAT DOES THE STAFF REPORT SAY?

The staff report for the hearing is out, but it is a lot of material and is challenging to understand. The key information is in the first listed document, "0 - IMM_PC Staff Report_4_21_23_Final.pdf."

The report provides two options (Recommendations"A" and "B") for the Planning Commission to choose. They are summarized on pages 5-8.

– Recommendation A is to Certify the Final EIR, but to deny the rezoning for the Brunswick site, to deny the height variance for the tall structures, and to **"take no action" regarding approval of the Use Permit**. **Taking "no action" effectively kills the project, but leaves us with a Certified Final EIR.**

– Recommendation B is to Certify the Final EIR, approve the rezoning, approve the variance, **and approve the Use Permit**. Following that are listed related approvals for "Project Actions" such as approve the management plans for habitat, riparian areas, boundary line modifications, and other actions that are part of the project approval.

The reason those additional Project Actions are not also listed in Recommendation A is because once the zoning change is denied, everything else about the project becomes a moot point.

It is really good news that staff has provided both options. Also, it is great that **staff also recommends denying the project**. This is evident on page 115 at the end of the Summary "Discussion of Recommendation A" in which it states:
"*...Planning Department staff recommend that the Planning Commission...take the project actions described below in Recommendation A, ...*" It also uses the word deny in two critical places in the Recommnedation A Actions II and the III: II. "Recommend that the Board of Supervisors deny the Rezone…" and III. "Recommend that the Board of Supervisors deny the Variance..,"

WHAT DOES IT REALLY MEAN?

The Planning Commission can choose either A or B, or can make motions that include or exclude other options. However, staff's recommendation to deny the project is a significant fact which has great influence on how the Commission will vote. This is a plus.

Unfortunately, the fact that both options include a Certification of the EIR is a very bad idea.

The County should not certify the EIR.
Such an action will not only lend credence to a document that violates numerous requirements of state law**, the certified EIR could be relied on in the future to support the approval of another mining proposal.** This result would constrain the County's discretion and leave it vulnerable to a claim that it is required to approve a proposal without the analysis and mitigation necessary to address the significant impacts of a future mining project. **If the County denies the project, as recommended by staff, there is no reason why the County should open itself up to this risk.**

The arguments for not certifying the EIR are overwhelming:

The EIR is legally deficient.
It fails to adequately disclose and evaluate the mine proposal's significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine. A small sampling of these deficiencies include:

- The improper reliance on groundwater data that is over 15 years old as the baseline for determining whether the mining project will have significant impacts on water quality and water supply.

- The failure to mitigate the mining project's air quality impacts, even though the EIR acknowledges they will be significant.

- The dismissal of significant greenhouse gas emissions and their contribution to climate change.

If there is no project, there is absolutely no need for an EIR.
It is common sense. And, case law is clear on this topic. If the County denies the Project, the County is under no obligation to certify the EIR. *Las Lomas Land Co., LLC v. City of Los Angeles* (2009) 177 Cal.App.4th 83 (upheld a decision to stop preparation of an EIR and specific plan where the city determined that the project was not consistent with its land use policies); and, Pub. Res. Code § 21080 (a) (CEQA applies only to projects that public agencies carry out or approve.)

Finally, only denying the project AND the FEIR defeats the Mine for good.
It will haunt us otherwise. In a way, having the EIR certified, but having the project denied is almost worse than having the project approved.

Why? Because the certified EIR cannot be legally challenged at this time if the project is denied. That means that we would have a County sanctioned EIR out there available for Rise Gold or a new applicant to use on a revised project in the near future, or later, and start the whole process again.

Hi there I am sincerely opposed to this boondoggle mine idea. Can you imagine big semi trucks competing for space on the limited roads around there? Much less 174 going by peoples houses? That will change the quality of this County we all love. We need tech jobs and low impact enviromentally friendly businesses. They shut down the chipping program there because of noise so I know the impact of a functioning mine will be hundreds of times that. This county is against this project so I would ask you to respect and honor citizens opinions and desires on this important matter.
Thanks for your time,
David Ward

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Blair. I live at 13041 Wood Rose Way, Grass Valley, CA 95945. We have called this community home for 22 years and plan to stay the rest of our lives.
As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Your decision is so important, proposed is an 80 year project taking us to 2103, wow! This decision does not only affect you, your family, the community now, but for generations to come. We will all be dead and gone but your decision and your legacy will have impact far into the future.

The misleading adds about average $145,000 total compensation means the executives will make fortunes and the mine workers, local people, will make much less. Go on Indeed, do a google search, entry level mine jobs are 30-45K (15-22/hr). There will be engineers and a few others but these guys are playing us and our community will suffer. We can do better to find industries that will enhance rather than destroy. No external monitoring and penalties are spelled out in the EIR which should scare us all and can not be accepted or approved.

Please protect our community, think long term. I could not find any stories of mining coming to a community and making a positive impact, all the stories I found are ones of tragic environmental and health disasters. You know we can grow our community and find other ways to attract jobs. High speed internet allows digital remote workers to live in a beautiful foothill community. The Bay Area is rough and expensive to live in, many would move here or visit more if we developed recreation, bike trails, amenities that make this lovely area even better.

Thank you for your thoughtful consideration,
Richard Blair and family

Hello,

I am writing to express my desire that the mine be blocked from reopening in Nevada County. I do not think it is worth the risk to our environment and quality of life. I specifically voted for candidates in the election that were against the mine. As you can see from the NO MINE yard signs around town, the majority of the residents here do not want the mine.

Do the right thing. No Mine.

Thank you,

Please vote NO on the mine project. We live in a beautiful area. I was born and raised here as was my mother, Grandparents and Great Grandmother. I do not want to see the land here polluted more than it already is. We do not need our precious water drained away and more fire hazard created nor do we need more traffic congestion and dust from the mine. The mine is the wrong way to promote our wonderful land.
Again please vote NO!
Thank you,
Helen Martini

Please do not approve this Mine: it will adversely affect our community....how could it not?
Yes, Mining is part of our towns' heritage but things have changed a lot since those days. Our community has expanded to include many more people who will feel the affects of this: Traffic, noise, unsightly buildings... 165' tall!!
Let's not forget about the possible well water contamination or the drying up of wells (and there are a lot!).
The other thing is that this company, Rise Gold, does not have a good record.... being taken to court how many times? Do you really want this for the community that you represent?
Thank you for listening

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kim James. I live in Nevada City, CA.

I urge you **NOT to certify the FEIR** and firmly **deny the request to re-open the Idaho-Maryland Mine** for all of the common sense reasons concerned citizens have been repeatedly bringing to your attention. It's time to put this issue clearly to bed while there is still time.

I will be present on May 10th.

Thank you for doing the right thing.

Please vote NO on the re-opening of the mine. I have spent a great deal of time reading the DEIR and the FEIR, listening to the Economic Report and learning about mining standards, CEQA and groundwater. Additionally I live over mineral property and use a well which is in jeopardy should the mine open.
What I understand is that Rise's approach is "trust me" and all things will turn out good. There won't be any damage, environmental disruption, pollution, noise, and the ground water and creeks/rivers will be just fine for the next 80 years. Therefore there is no need for 3 years of quality data collection that is part of CEQA normal requirements, there is no need for the extensive monitoring that was proposed by EMGOLD, there isn't any need for a 3rd party to monitor the monitoring systems because people are always forthright and honest about the data, people will be able to sell their houses in the mine area without a loss of value and water, and no bonds are necessary to insure that promises can be kept should something not go as promised.
I've spoken in front of the supervisors and written several letters. I would like this to be my last letter to you about this issue because you are hearing what the community is saying - over and over. "We were once a mining community but that was then and this is now. Now the focus is on quality of life, tourism, enhancing the environment and building community for all."

Please vote no on reopening the mine. Choose Option A to not approve ANY part of the proposal.

Respectfully,
Mary Ann Coleman

Dear Planning commission,
I am writing this comment to discourage the granting of a permit to the gold mine company the Idaho Maryland project. I have talked to a geologist in the area that has worked with mining companies for decades. He is of conservative bent and even being so he is dead set against the mine. According to his experience, they almost never clean up their mess despite mountains of promises to do so. Usually, the tax payer is stuck with the bill as company goes bankrupt, forms shell companies, etc. to avoid paying the costs of the mess they have created.

The economy is strong in this area and we do not need the jobs. The residents of this town create enough pollution by themselves without having heavy industrial equipment rollicking thorough the area.

It is for these reasons that I wholly discourage the granting of a permit to the Idaho Maryland Gold Mine company.

Thank you.

> On August 10, 2020, I commented through your office on the Rise Gold Draft EIR that I was concerned about potential environmental impacts regarding the stability of the "engineered fill" for mill tailings. In the Final EIR these concerns were not adequately addressed.
>
> In my opinion the rest of the Rise EIR does an excellent job in its presentation which closely followed my geologic, economic, engineering, and environmental research and on the Idaho-Maryland Mine over the past 50 years. In the mid 1990's, with the help of my excellent team, I received a positive EIR and the necessary Idaho-Maryland Mine permits to dewater to explore and develop the mine via the New Brunswick shaft. This was done with a phased EIR and the next phase would have included tailings disposal. The project became adequately financed at that point, but the company directors passed on the project wanting a better deal which they did not get. Later I did provide a widely acceptable method to handle the tailings by making ceramic building products, including tile. This could all be done entirely on the New Brunswick property with no surface tailings disposal while not using the Centennial or other properties.
>
> Although Rise has done significant additional drilling for ore grades and mill recovery, no tests by Rise on tailings stability for this material has been presented. "Engineered fill" is best defined as fill that has been tested or a very similar fill that has been tested.

I have made numerous tests of both Idaho-Maryland historical tailings and tailings of finely ground material from freshly drilled Idaho-Maryland drill core. Even 500-ton presses over a half inch thick square foot with optimal moisture content failed to make a stable fill material. Adding larger fragments made the fill material even less stable. (Many of these tests were made to stabilize the tailings prior to heating them to form ceramic products.) Adding a small amount of water to these “compacted tailings” can make the tailings extremely fluid.

In 2020 I met with Kimberly Morrison in Phoenix, AZ where she presided over several thousand attendees at the annual meeting for the Society for Mining, Metallurgy & Exploration. Kim is the Senior Director of Global Tailings Management for Newmont. She subsequently edited and wrote much of the thousand page “Tailings Management Handbook, A Life Cycle Approach” which was published in 2022. This book is presently the most comprehensive resource on new fundamentals for tailings management. Kim asked me to write a case study included in the book titled “Repurposing Tailings and Other Earth Material Waste into Ceramics”, which is attached.

Tailings engineers are only advocating stacking tailings, with or without larger dump rock, on a trial basis in dry remote areas. I do not believe the tailings “engineered fill” suggested by Rise would survive a moderate rainfall, let alone the atmospheric rivers we recently had.

In recent years there have been many failures of tailings facilities in Canada, USA, Brazil, and many other countries with “engineered fill” that have caused disasters costing hundreds of lives, buried towns, and caused billions of dollars in damages. “Expert engineers” had signed off on these failures.

Matt, thanks for your efforts in handling this complex project.

CASE STUDY 26

Repurposing Tailings and Other Earth Material Waste into Ceramics

Ross Guenther
Ceramext, LLC

Over the past 20 years, innovative technologies have been developed to repurpose tailings and mine waste into many products. Developers, working with scientists and engineers, have created the technology to produce high-quality, low-cost ceramic tile and other building products from raw materials including mine tailings, quarry fines, biomass ash, coal fly ash, and other waste materials. Most mining companies are only interested in mining and not in producing ceramics, although this may be changing. Often, mineral prospects are in areas without suitable topography for tailings facilities or in areas of high land costs. And many mines require fine grinding (to –100 mesh) to recover an economic product while paying for the costs of environmentally safe tailings management.

HOT VACUUM EXTRUSION OF CERAMICS

Although ceramic engineers were taught it was impossible, while studying the progression of heating tailings in 5°C increments, Ceramext engineers noticed that because certain minerals melted first, if compressed at an appropriate temperature, then a coherent, strong, impermeable ceramic could be produced. Analyzing hundreds of thin sections with a scanning electron microprobe, the engineers found that fractures within the grains of the tailings extended the supporting glass from the outer glassy matrix into the mineral grains, which greatly strengthens the ceramic while still allowing it to be pressed and shaped, or even cooled and later reformed. Some of the minerals to create more favorable stronger glassy components include Na and K feldspars and mica found in most copper mine tailings and some gold mine tailings.

The first 10,000 hours on this project were spent building and patenting an apparatus for hot vacuum extrusion of ceramics. Tailings were heated within a kiln at various temperatures, generally within a 5-cm pipe, then pushed out with a 10-ton press. Later, for most purposes, the vacuum was not required. Tailings and fly ash from more than 50 locations were tested.

Ceramext continued operations in 2003 at the Idaho-Maryland mine site in Grass Valley, California, historically one of the largest gold mines in the United States. Using the gold tailings, other sources of tailings, and the aggregate fines from Granite Rock Company's quarry, which is the largest aggregate quarry in California, several tons of high-quality tile were produced.

Successful testing was completed for producing tile from several Arizona copper mine tailings. And working with the Pacific Northwest National Laboratory, a partially melted basalt from local basalt quarry waste fines was used to produce building materials that can be extruded into large rectangular and cylindrical shapes. This method is particularly applicable for extruding cylindrical log-shape ceramics to encapsulate radioactive waste. In addition, the National Aeronautics and Space Administration (NASA) has been studying the use of building materials using regolith on the moon and Mars.

The hot forging process was refined: heating and partially melting tailings materials to approximately 1,000°C, applying 6,900–13,800 kPa compression, and cooling. The strength of the material can be increased by using pressure while the material is hot, but at temperatures lower than the complete melting point. This process is shown in Figure 1.

Generally, a cold steel die is used, and as the die slightly expands from the heat of the ceramic, it facilitates the ejection of the hot-forged tile. With minor modifications, conventional green ceramic presses and

Courtesy of Ceramext, LLC

FIGURE 1 Hot forging technology

Courtesy of Ceramext, LLC

FIGURE 2 Tile finishes made from mine tailings and coal fly ash

electric or gas roller kilns can be used for hot forging. Porcelain-quality tiles can be made by only screening raw materials without the expensive grinding and spray-drying steps. No binders are required, and up to 100% of the waste material can be used. New advanced ceramic compositions using this hot forging technology have been patented.

By repurposing 100% mine tailings from gold mines, copper mines, aggregate quarries, and other waste materials, ceramics have been produced in several successful pilot plants. These pilot plants have produced tile as well as other ceramic products including floor tile, roof tile, wall cladding, pavers, bricks, and countertops. As shown in Figure 2, the tiles can also have the appearance of a wide variety of natural rock surfaces and can be polished or glazed if desired. Approximately 50 different types of recycled feed materials have been tested. Floor, wall, and roofing tile, and porcelain-grade countertops have been produced with a range of attractive earth-tone colors. The tiles shown in Figure 2 were made with a strong impermeable porcelain quality, with no additional additives. Tile colors possible without additives include white, black, beige, and subtle greens. Mineral additives can also produce many combinations of natural stone appearances and textures. Glazes in multiple colors can be applied, if desired. Relief designs can also be made.

Composition patents consist of partly melted rock fragments (clasts), glass melted from the clasts, and crystallites formed in the new glass. Tests on tiles from the Idaho-Maryland mine have a modulus of rupture of 69,000 kPa, much higher than typical Italian porcelain. The tiles are impermeable to water, even without glazing. These tiles are scratch resistant with a Mohs hardness of about 8, harder than quartz. The unmelted clasts act much like the aggregate in concrete with the newly formed glass as the cement binder holding the clasts together and with the crystallites further reinforcing the glass itself. The contaminants, if any, are generally rendered inert to leaching or other means by locking them within a stable glassy matrix in the tile (see the thin section in Figure 3). The initial composition patent had to also include anhydrite ($CaSO_4$), which makes the sulfur stable as water cannot reach it, creating gypsum. Similar, if not the same, anhydrite is now used on the remote sensors (for sulfur) on the NASA Mars rovers. ■

Dear Nevada County Planning Commission and Board of Supervisors:
A foreign company proposes to come into our community to open and operate an industrial drill and blast mine under existing residential neighborhoods. The mine's footprint will project into four square miles of residential and commercial properties. They will pump-out millions of gallons of high quality ground water every day (that we rely on for residential use) and discard the water into a nearby creek. They will operate the mine's head works and a truck loading hub in the middle of a residential area. They will send these mining transport trucks into our residential traffic flow. They say none of this will be a problem, no real impacts. As a community, do we really believe that there is no risk to our ground water and home prices. Are we willing to risk the damage that a commercial mine can create for the sake of a Canadian Company's profits?
How will we remedy the drop in housing values over the mine footprint? I mean, do we really think that a piece of property sitting on top of an drill and blast mine will have the same value as a comparable piece of property not sitting on a mine?
What will happen when wells start to go dry in and around the mine footprint? Do we really believe that with Rise pumping out millions of gallons of groundwater every day for the next 80 years coupled with our frequent droughts (which also effect ground water levels), that groundwater will not be negatively affected? Do we really believe Rise will step up and provide new water systems to remedy this when it happens? What is more likely is that these property owners will be on their own to fight it out with Rise in the legal arena. Causing a further drop in property values because no one wants a risky water supply.
I've lived for 35 years in Nevada County and this is, hands down, the worst proposal I can recall. It's truly amazing to me that this proposal has survived long enough to be heard by the Planning Commission/Board of Supervisors. This project should be denied in no uncertain terms.

As a long time resident in Chicago Park, I have been voicing my opposition to my County Supervisors in regards to allowing Rise Gold to open mining at the Idaho Maryland Mine site on Highway 174. My concerns have been about the pollution, both toxins in the air and noise levels, that will tax and cause harm to many residents' nervous systems. And my deep concern about contamination of our well water.

I am writing today to urge you, the Planning Committee to NOT accept the mining proposal or the final EIR which has so many defects in it. Without accuracy and honesty, there can never be a wise decision in any case.

Please help this County close this battle forever: let us NOT open this mine.

Many Regards,
Margaret Florence

Attention:

Brian Foss, Planning Director
Tyler Barrington, Principal Planner

Dear Supervisors, Planning Commissioners, and Planning Department:

The Sierrans for Responsible Resource Development (the "Sierrans") is a social welfare organization formed exclusively for educating residents, businesses, government agencies, and community about the benefits of responsible and sustainable resource industries in the Sierra Nevada Mountains. Our members currently work, or have worked, in the resource industries, including mining.

We have reviewed the Final Environmental Impact Report (EIR) for the Idaho-Maryland Project (the "Project") proposed by Rise Gold Corporation ("RISE") and recommend that the Planning Commission and Board of Supervisors recommend and approve (respectively) to certify the EIR, approve the project entitlements, and issue a Use Permit for the Project as per Recommendation B outlined in the recent Nevada County Planning Commission Staff Report. We recommend that the Project be approved "as proposed" including the variance for the height of the headframe and buildings. The Project includes substantial economic and environmental benefits for the County and its residents, and the "no project alternative" or other alternatives proposed in the EIR should not be entertained.

The EIR is a very comprehensive document that covers potential impacts of the Project. The EIR includes mitigations to reduce environmental impacts of the Project and a Mitigation Monitoring and Reporting Plan. RISE will need to complete a Reclamation Plan and provide a Financial Assurance Bond. RISE will also have to obtain approximately 25 other accessory permits and approvals, as outlined in the EIR, prior to being able to operate. The mining industry is highly regulated and numerous federal, state, and local agencies will provide oversight of the Project from start to finish. Mining can be done in an environmentally and socially responsible manner and checks are in place to ensure compliance by operating companies.

Significant Environmental Issues Identified in the EIR

Only three environmental issues were identified in the EIR that were deemed to be significant impacts from the Project. They include:

- Temporary construction noise from the installation of a water pipeline.
- Addition of traffic to an intersection already operating at an unacceptable level of service.
- Aesthetics due to noticeable changes to the existing visual character of the project sites.

Note that the current Project sites are both zoned as industrial by the County and should the mine not be developed, it is likely alternative industrial uses would be developed on these properties in the future. This could include uses such as warehousing or fabrication, and development of these sites for alternative uses will result in the same impacts as those listed above. Therefore, in our opinion, the significant impacts associated with the Project do not justify denying moving forward the Project and the benefits of the Project far outweigh the potential impacts.

Benefits of the Project

The many benefits of the Project also outweigh the "No Project Alternative" or consideration of the other alternatives outlined in the EIR. Some of the benefits are contained in Exhibit 2, CEQA Findings of Fact and Statement of Overriding Considerations in the County Staff Report. We believe the main benefits of the Project that should be considered include:

- General employment opportunities for Nevada County and its residents;
- Youth employment opportunities;
- Trades employment opportunities;
- Support of local and regional businesses;
- Diversification of industry;
- Increased tax generation;
- Reversal of the gentrification occurring in Nevada County;
- Re-development of historic mine sites that have sat idle for almost 65 years;
- Closure of historic mine workings;
- Treatment of existing mine water discharge;
- Provision of NID water to potentially impacted residents; and
- Potential for future use of the mine sites.

These numerous benefits are discussed in more detail below.

General Employment opportunities for Nevada County and its Residents

The report, Economic Impact of the Proposed Idaho-Maryland Mine Project prepared for the County of Nevada by Robert D. Niehaus Inc. dated November 15, 2022 (the "Economic Impact Report"), indicates the Project will produce 475 new jobs once it achieves full operation. These include:

- 312 direct jobs – Direct jobs are those new jobs created by the Project through the operation of its business RISE estimates it will create 312 direct jobs including 213 local hires and 99 non-local hires. The majority of employees will be hired and trained locally; however, a number of professional and skilled workers will have to be hired from outside of the area. These jobs include managers, supervisors, miners, underground equipment operators, underground laborers, mill workers, mill equipment operators, mill laborers, surface equipment operators, surface laborers, accounting staff, human resources staff, safety and training staff, security staff, engineers (mining, metallurgical, civil, mechanical, electrical, environmental, etc.), geologists, IT staff, etc.
- 53 indirect jobs – Indirect jobs are those new jobs created by the Project as a result of supplying goods and services to the Project. These could include construction services, surveying services, engineering services (civil, mechanical, electrical, geotechnical, environmental etc.), environmental services, janitorial services, safety supply services, hardware supply services, fabrication services, payroll services, legal services, accounting services, tax services, hotel services, restaurant services, fuel supply services, vehicle rentals services, transportation services, etc.

- 110 induced jobs – Induced jobs are those new jobs created by the Project as a result of direct or indirect employees spending money for goods and services. This could include restaurant services, healthcare services, real estate services, banking service, legal services, tax services, construction services, retail purchases, vehicle purchases, gas station purchase, housing related construction, art and entertainment purchases, etc.

The direct jobs at the mine will be high paying jobs that come with benefits such as medical, dental, vision, and retirement plans. These benefits typically apply to not just the workers themselves, but their family. The average compensation of the 312 direct employees on the Project, including wages and benefits, is estimated to be $122,000 per year. This is well above the average wages and benefits of workers in Nevada County.

Note the total direct annual payroll expenditure by RISE is estimated to be $38.1 million at full operation. In addition, annual employment labor income for indirect and induced jobs is estimated to be $2.2 million and $5.1 million. Ongoing operations at full production for the 475 jobs above would therefore be $45.4 million in total.

Youth Employment Opportunities

The Northern Rural Training and Employment Consortium (NORTEC) produced a report on the Nevada County Labor Market Profile and Industry Sector Analysis dated July 2019 (the "NORTEC Report"). It shows Nevada County has a mix of educational levels including 20.8% of the individuals in Nevada County (for the year 2018) had a high school education, 28.3% with some college, 10.5% with an associate degree, 22.4% with a bachelor's degree, and 11.0% with a graduate degree or higher. The type of employment RISE will offer includes opportunities for each of these education levels.

Specifically for youth, there will be opportunities for training and starting in entry level positions such as underground laborer, mill laborer, and surface laborer positions. Opportunities will exist to obtain on-the-job and other types of training and certifications. Younger workers will have the opportunity to work with experienced personnel to become experienced miners, mill workers, surface workers, equipment operators, etc. themselves. Post closure, these workers can find jobs at other mines, in other industries (such as forestry), for construction-related companies, or other suitable opportunities.

Trades Employment Opportunities

Typically mines will have apprentice programs for positions such as electricians, mechanics, welders, pipefitters, or other trades persons where employees can gain certifications and job experience. Post closure, these workers can find jobs at other mines or in other industries such as forestry, construction, or other suitable opportunities. The mine will help create a skilled workforce in Nevada County.

Support of Local and Regional Businesses

As discussed above under employment, the Project will result in direct, indirect, and induced jobs. Similarly, the Project will result in direct, indirect, and induced economic opportunities for local and regional businesses. Direct economic impact will come from businesses that the mine purchases goods

and services from. Indirect economic impacts will come from businesses that purchase goods and services as part of their business in supplying goods and services to the mine. Induced economic impacts will come from businesses supplying goods and services to employees of direct and indirect businesses.

The Economic Impact Study estimated the Project will have an annual output of $202.8 million from direct, indirect, and induced economic activity. It is estimated that $5.0 million of this economic activity would be from direct procurement of local goods and services. It is also estimated that $6.1 million in indirect economic activity would be generated by local companies supplying goods and services to the mine. Induced economic activity of $16.9 million would be generated due to household spending by RISE employees and the indirect businesses supporting the Project. This totals $23.0 million. Added together with the $38.1 million in direct payroll from the Project, total annual community impact at full operation of the Project is estimated to be $61.1 million.

The Project will help support existing local businesses, and in some cases help them expand. There may also be opportunities to create new businesses that supply goods and services to the mine that don't currently exist in the community. For example, mines often see construction related companies form that specialize in underground construction. Service companies form that supply items such as safety supplies and safety equipment services that are specifically geared to the mine. Companies may form that supply ground support material specific to the mine. Local jewelers or artists could purchase specimen gold from the mine and make finished products for sale.

There is no doubt the mine will have a positive economic impact on Nevada County and provide opportunities for existing and new businesses.

Diversification of Industry

Historically, industries that have succeeded in Nevada County are those that match the geography of the region. For example, the logging industry was very successful due to the abundance of timber. Mining was successful because of the existence of many mineral deposits in the Mother Lode region. Agriculture has been successful because of adequate precipitation, climate, and rich soil. Tourism has been successful because of scenic locations and the legacy of gold mining in the area.

In comparison, some industries are not well suited for this area because of the geography. Large-scale warehousing and large-scale manufacturing, for example, are not a good fit because of the lack of large tracts of flat ground. Our rural setting, with many miles of roads, has caused difficulty in getting high speed internet access for companies and their workers. This has made it difficult to attract high-tech businesses.

Nevada County, for the majority of its existence (1850 to 1970) had an economy based primarily on the resource industries including mining, agriculture, and forestry. Mining declined in the mid-1950's due to the gold mines being shut down during World War II, the Nevada County Narrow Gauge Railroad being removed during World War II, and due to the fixed price of gold post World War II. These events forced the closure of most gold mines in California either during the war or shortly afterward. Major world-class gold mines like the Empire Mine and Idaho-Maryland Mine closed at that time. Forestry continues to

operate in Nevada County but has declined significantly over the years due to environmental regulation and rising costs. Similarly, agriculture has declined due to land development for alternative uses and rising costs.

In the 1970's, tourism became a more significant industry, which in turn supported the leisure and hospitality industry. Residential construction also became a more significant industry as the population grew in the County. Government became the major employer in the County. Educational and medical services grew as the population increased, as well as retail.

In Grass Valley and Nevada City, an effort was made to attract high tech business with arguably limited success. Technology companies often end up outsourcing manufacturing to cheaper labor markets overseas. Some technologies were fleeting and replaced by other newer technologies. Companies elected to locate in other locations where the skilled workforce and educational institutions existed, like Silicon Valley. The Grass Valley Business Park, for example, developed under the premise of being a high-tech business park, struggles with a high vacancy rate and houses few companies that can be considered technology companies.

The 2020-2021 Nevada County, California Executive Report, prepared by the Nevada County Executive Office, shows a breakdown of employment in Nevada County by industry (see table below). Over the years the economy of the County has transformed into a service economy and revenue generating industries such as Natural Resources, Mining, and Construction and Manufacturing have become a smaller part of the economy. The Project would create 475 new jobs, with 312 direct jobs in the Natural Resources, Mining, and Construction sectors, and the remaining 163 jobs in other sectors.

Breakdown of Employment in Nevada County

Industry	# Employed	% Employed
Government	5,980	19.2%
Education and Health Services	5,510	17.7%
Retail Trade	3,980	12.8%
Natural Resources, Mining, and Construction	2,920	14.5%
Professional and Business Services	2,220	9.4%
Manufacturing	1,420	7.1%
Financial Activities	1,310	4.5%
Other Services	2,130	4.2%
Transportation, Warehousing, and Utilities	480	1.5%%
Wholesale Trade	390	1.2%
Information	290	0.9%
Farming	60	0.2%
Total	**31,210**	**100%**

The County has struggled to provide economic opportunity in the County over the decades through up and down cycles and it is clear that economic diversity is a desirable goal to manage these up and down cycles. The Project would provide an opportunity for the County to bring back gold mining in Nevada County, in a safe and responsible manner, providing economic opportunity while at the same time minimizing impacts to the environment.

Increased Tax Generation

The majority of taxes raised in the County are through property and sales taxes, although other taxes also generate revenue. The Economic Impact Report shows the Project will generate $483,000 per year in property taxes, $318,000 million per year in sales taxes, and $80,000 per year in other taxes at full production. Total Tax Revenue is estimated to be $881,000 per year. These payments would go to local agencies and districts, including local fire protection, school, and other special districts. A portion of these funds, $147,000 per year, would go to the County's General Fund.

Note this benefits all the residents of Nevada County and especially the cities of Grass Valley and Nevada City. The County has tried as recently as 2022 to ask resident to vote in favor of Measure V, the "Wildlife

Prevention, Emergency Services, and Disaster Readiness Measure" which would have imposed a ½% countywide general sales tax. This was voted down. The County has to plan for revenue sources to generate funds and the public has little appetite for increased sales taxes. As we are entering into what appears to be an inflationary period of higher interest rates and increased costs, the County needs to take into account the tax revenue that this project will generate.

The mine will go through a construction period, ramp up to full production, and continue for a number of years until mineral reserves are exhausted and the mine shuts down and is reclaimed. During the life of the mine, RISE will complete additional exploration to generate new mineral reserves replacing the ones that have been mined. Given the Idaho-Maryland Mine operated for over 100 years, it is not unrealistic to expect that the Project could operate for as many as 80 years, as RISE has indicated. The Project could generate significant tax revenue for the County for many years.

Reversal of Gentrification that is Occurring in Nevada County

The NORTEC Report shows that the population of Nevada County increased by 2% from 98,205 to 100,028, a difference of 1,823 people. During the same period, California's population grew by 9% and the nation's population grew by 8%. However, the statistics show that the population of Nevada County over age 65 increased from 18,275 in 2008 to 27,297 in 2018, a difference of 9,022 or a 49% increase from 2008. At the same time, the population in the age range of 35-54 decreased from 27,707 to 22,525 between 2008 and 2018, a decrease of 19% from 2008. In addition, the population in the age range of 5-19 decreased from 17,625 to 14,583 between 2008 and 2018, a decrease of 17% from 2008. In summary, the population over age 65 grew by 9,022 and the population in the age ranges of 35-54 and 5-19 decreased by 8,174. In 2008, the population over 65 made up 18.6% of the county population. In 2018, the population over 65 made up 27.3% of the population.

It appears that the increase in people over 65 is the result of retirees moving to the area. At the same time, many of the people in the age range of 35-54 have left the County, and potentially with them have left their children in the age range of 5-19. What is the reason for their leaving? Lack of economic local economic opportunities? The high price of housing as retirees move to Nevada County and have driven up housing costs? There is insufficient information to draw conclusions here but should be a concern to the County.

Local people who were born and raised in Nevada County complain about the influx of people who have moved to the area since the 1970's, which increased the population from around 26,000 to around 100,000 today. Gentrification is defined whereby the character of a poor urban area is changed by wealthier people moving in, improving housing, and attracting new businesses, typically displacing current inhabitants in the process. Many locally born residents argue this has been occurring in Nevada County for many years and appears to have accelerated between 2008 and 2018.

The County has a responsibility to generate economic opportunity that is diversified and provides opportunity to the local community so long-time residents are not forced out of the area for economic reasons and due to economic injustice.

Re-Development of Historic Mine Sites that have Sat Idle for Over 65 Years

Both the properties being proposed by RISE for development as part of the Project have effectively sat idle for up to 65 years. They have not generated significant tax dollars for the County. The represent historic mine sites or lumber mill sites (e.g., the SPI property), with historic environmental issues – many of which have been reclaimed by past owners of the properties but some requiring further clean up to meet today's environmental standards. The Project, which will redevelop these sites and ultimately reclaim them, will come at no cost to local government and represents a positive environmental impact from the Project that will benefit Nevada County. Redevelopment of these sites will also start to generate tax dollars.

The importance of mining in Nevada County was spelled out by the State of California Division of Mines and Geology in 1992 when they classified all types of mineral deposits and developed zoning for those deposits. This zoning was to be used as a guideline for future land use planning by the local jurisdictions. The Idaho-Maryland Mine area was zoned MRZ-2, meaning that gold resources were known to exist and might be extracted someday. Nevada City and Grass Valley have a legislative duty to incorporate mine development of these important mineral deposits into their land use planning and arguably have a duty to support and approve the re-opening of the mine as part of its zoning requirements. While there has arguably been a gap in mining at the Idaho-Maryland Project, the importance of the mineral resources of the Idaho-Maryland Mine to the State and local governments is well known and historically recognized and does not diminish its future importance and need to protect.

In addition, the past owners of the Idaho-Maryland Mine always intended for the mine to operate. Surface rights were sold to various individuals and corporations over the years and deed restrictions placed in those deeds that retained the right of the subsurface mineral rights holder to operate the mine. RISE, as the current owner of those mineral rights, has the right to operate the Idaho-Maryland Mine, subject to obtaining the necessary permits from federal, state, and local agencies. If the County does not approve the reopening of the mine, the decision may be considered as a "takings" of RISE's mineral rights (private property). Under the Fifth Amendment of the Constitution, the County might have to provide just compensation.

Closure of Historic Mine Workings

Many historic mine workings exist in California. This is, in part, due to mines being shut down by the U.S. government post World War II. The government controlled the price of gold and refused to raise the price of gold after World War II. Many mines that tried to reopen after World War II but could not survive economically due to rising labor and supply costs and the fixed price of gold. There were limited environmental laws at that time and reclamation plans and financial assurances to close mines were not required. It is a different story today, as mine have to have reclamation plans for closure and financial assurance bonds in place to ensure closure by a third party if they are financially unable to complete closure themselves. Note also, in a separate process with the DTSC, RISE will clean up historic mine tailings on the Centennial site through a Voluntary Clean Up Agreement, as opposed to it becoming a California Superfund site requiring the taxpayers to foot the bill for cleanup.

There are a variety of underground workings that still exist related to mining activities that were part of the historic Idaho-Maryland Mine operations. As part of the Project, RISE will be responsible for proper closure of historic and new workings. This is a positive environmental impact of the Project.

Treatment of Mine Water Discharge

While opponents of the mine raise concerns about mine water discharge, the fact is that mine water has been discharging into Wolf Creek for many years (since the mine closed in the 1950's). As part of the Project, RISE will construct a water treatment plant and become responsible for treatment of current discharge from the mine and ultimately be responsible for future discharge it in perpetuity. This is a positive environmental impact of the Project.

At the end of the mine life, the mine will effectively be a reservoir for storage of water. It will have a pumping system in place as well as a water treatment system. The opportunity would exist for the County or NID to take over operation of this system and utilize the water. For example, water from the mine could be treated, discharged into Wolf Creek, and used for agricultural purposes downstream. If the County or NID is forward thinking, the mine represents an opportunity for future water supply.

Provision of NID Water to Potentially Affected Residents

The mine is located beneath residences that have wells for domestic water supply. The residents of these homes should have been aware that the owners of the mineral rights might want to mine the gold resources someday. While opponents of the mine raise the issue of water quality being affected by the Project, the reality of it is that their wells are located in a mining area that may contain minerals and potentially their wells have already been impacted by over 100 years of historic mining of the Idaho-Maryland Mine. For example, these wells may be high in iron and manganese, which are naturally occurring elements (e.g., they may have hard water).

The Project requires RISE to provide Nevada Irrigation District water (NID water) to properties that may be directly affected by the mine dewatering. Given their wells are in a mining area and will be replaced with a superior source of domestic water, this is a positive environmental impact of the Project. Note RISE will be responsible for mitigating any other well owners that may be impacted by dewatering the mine and will have a mitigation plan in place to ensure no property owners have significant impacts to water supply.

Potential for Future Use of the Mine Sites

While opposition to the mine raises fears that local tourism could be impacted by the mine, nothing could be farther from the truth. An operating mine can provide opportunities for tourism including mine and mill tours, viewing gold pours, and other activities that many people are excited to see. At closure, some mines are transformed into museums and underground mine workings are utilized for mine tours (e.g., Strataca Underground Salt Museum in Kansas City). Some mines become laboratories for scientific research, like Homestake Mine in South Dakota, where the National Science Foundation has located their Deep Underground Science and Engineering Laboratory. There is no doubt, a forward-looking Board of

Supervisors could work with RISE and other local groups to utilize the facilities created by the mine for economic opportunity, including tourism. Could the California Mining Museum, often proposed for closure by California State Parks during economic downturns be relocated to Grass Valley?

Proposed Project Over Alternatives

The Project, as proposed, contemplates a 1,000 ton per day underground mining operation, which would be considered to be a small underground mine by today's standards. The EIR considered a no project alternative, which means the mine is not built and the properties are not developed. However, if the mine is not built, it is likely the Project sites, which are currently zoned as industrial by the County, would be developed for alternative industrial uses (e.g., warehousing, manufacturing, etc.) in the future. Hence, the reality is that impacts such as construction noise, aesthetics, and traffic will occur, unless the County elects to never develop the properties. That is not realistic, and the project as proposed may actually have less environmental impact than alternative uses (e.g., 24 hour per day warehousing and/or manufacturing with trucks driving on and off the property).

With regard to use of sites for mine waste disposal, it is recommended that both the Centennial and Brunswick sites be used. Note that reclamation plans can be implemented that allow alternative uses for these properties at closure. For example, these waste areas can be covered with topsoil, revegetated, and used as parks if reclamation is done properly.

With regard to a smaller project, the benefits of the jobs and tax dollars created decrease. Also, the economics of a smaller mining operating result in higher operating costs per ton or ounce of gold produced. If the County is concerned about the viability of the mine, the greater throughput improves the economics of the mine and will help attract investors to the project.

One of the things the County can work with RISE on is finding alternative uses for waste rock and other fill materials produced by the mine. These materials may be suitable for road building, construction fill, and may be suitable for the production of concrete. If alternative uses of these products can be found, the requirements for depositing fill in the New Brunswick and Centennial sites would be lessened.

Issues To Be Considered in Final Permitting

While addressed adequately in the EIR, there are two areas of concern that the Sierrans feel should be considered as final permits for the Project are obtained, as they would be for any similar mining operation. These concerns relate to potential impacts to groundwater from mine dewatering and mine waste discharge management.

In past years the County Planning Department has been involved in mining projects and has required mine operators to perform tasks over and above what might otherwise be required. Two examples are from the San Juan Ridge Mine and Red Ledge Mine. The issue at San Juan Ridge Mine was groundwater, while the issue of concern at Red Ledge Mine was stability of the mine waste dumps deposited on the ground surface.

Groundwater

As part of the final permits for the Project, the Sierrans suggest that the County review the remedial water supply plan that was developed for the San Juan Ridge Mine Project and see if a similar plan would be appropriate for the Idaho-Maryland Project. That plan included financial bonding for well impacts. It also required the project operator and a member of the local community association to meet with a County planner on a monthly basis once the mine excavating and dewatering began. The purpose of the plan was to keep the community and the County informed of the operation progress, especially with regard to mine dewatering. When the San Juan Ridge Mine ended up dewatering local wells, the plan was in place to mitigate was supply impacts to local wells and that plan worked. However, an issue of concern developed as to whether water quality in wells after the dewatering event was the same as the quality prior to the dewatering event. Hence, it is important to do quarterly pre-mine level and quality water monitoring (e.g., four quarters of monitoring), quarterly well level and quality monitoring during mine operations, and quarterly post-mine well level and quality monitoring for a suitable period after closure to understand the impacts of the mine on local wells over time, if any. Impacted well owners can be hooked up to Nevada Irrigation District water supply as part of a mitigation plan. We recognize that mitigation and monitoring requirements are included in the EIR analysis, but the experience from the San Juan Ridge Mine Project can be applied to the Idaho-Maryland Project.

Mine Waste Management

We understand the mine waste plan for the Project involved the placement of engineered fill at the New Brunswick and Centennial sites. At Red Ledge Mine, in Nevada County, the operator was required compact the mine waste dumps as the waste was deposited on the ground surface. To verify that the soil was compacted, the operator hired an independent consulting engineering firm to perform compaction tests after each lift. We suggest that the County Planning Department be tasked with ensuring that the repositories for engineered fill be properly designed, constructed, and ultimately reclaimed to prevent failure and erosion. Design and construction could include use of retaining walls, use of independent storage cells, and use of cement mixed with engineered fill to hydrate out water and provide stability. The Planning Department and Environmental Health Department should be involved in the final permitting process for the waste discharge permits for the Project and ensuring design, construction, reclamation, and monitoring of the engineered fill repositories be done to the best available standards.

General Plan Conflicts

The Staff Report listed several conflicts the Project application has with the Nevada County General Plan. One key issue identified is the variance requested by RISE for a 165-foot headframe, 80-foot headframe, and process plant building which is 64-feet high. The Staff sites the General Plan having a 45-foot height limitations in a Light Industrial Zoning District. Note that the Staff Report suggested that the headframe and building heights are inconsistent with the rural character and quality of life of the surrounding areas, which they describe as semi-rural. Staff, however, failed to disclose that there is currently an 80-foot-high concrete silo on the Brunswick Site from historic mining and the site is already aesthetically impacted. This hasn't stopped land development in the area, and we are not aware of any complaint by the public

about the existing silos. In fact, mining headframes are considered by many to be tourist attractions and a number of historical mine displays in Nevada, Placer, and other counties in the Motherlode District are headframes. One good example is the headframe built off I-80 as you enter Auburn.

In fact, the design criteria for all buildings in Nevada County under Policy 1.7.4 places a maximum building height of 3 stories or 45 feet for any land use. The land use designations in table 1.4 do not list things like headframes, communications towers, or other structures that require variances. Policy 1.7.5 provides flexibility in the General Plan land use provisions so that variations in land use patterns and activities are permitted within the land use framework established for community Regions and Rural Regions.

The Staff Report also says the Project conflicts with the Rural use designation. Part of the issue here is both Nevada County and the City of Grass Valley have failed to enforce the Mineral Management Elements of their General Plans for decades. Policy 17.5 says the County adopts the State Classification Reports, which set aside the Idaho-Maryland Project area as an MRZ-2 area in 1992. The 1992 State of California MRZ Mineral Resource maps and guidelines for Nevada County stated the importance of allowing zoning to include mineral development. The study, done by the California Division of Mines and Geology was done at the time with the futuristic purpose of trying to make sure zoning conflict did not occur and protected mineral resource areas. Unfortunately, the City and County did not do its job historically here.

Under Policy 17.6, the County is to encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development. The Idaho-Maryland mineral claims are patented mining claims. Previous mine owners sold off surface rights over the years and kept specific land as "windows" to the underground mineral rights. They retained the underground mineral rights below the areas of land they sold off, and in the title deeds retained the right to mine. Hence, lands in question have not been converted to intensified urbanization or other incompatible land uses, as the mine owners retained their mineral rights under the 1872 Mining Act and the land use is included in the title documents. Policy 17.9 says the County is to encourage the mining of previously mine land, if such land still contains economically mineable minerals, so the land can be reclaimed for alternative use.

Mining is part of rural life. Rural communities in the Motherlode District, including Grass Valley and Nevada City, grew up around mines that operated from the 1850's to the 1950's. Mines operated 24 hours per day, 7 days per week. Impacts like truck traffic were part of the rural quality of life. To say that the redevelopment of the Idaho-Maryland Mine, a small underground mine, does not meet the definition of a rural land use designation is not consistent with history. Under that time of general disqualification, we would not have hospitals, gas stations, hotels, and other businesses that operate 24 hours per day, 7 days per week, and have, in many cases, more traffic than the mine.

The Planning Commission and Board of Supervisors has to understand the slippery slope. The arguments used here to potentially say the mine does not meet the General Plan requirements will be used in the future to stop other non-mining projects. If the Project is not approved, the Centennial and Brunswick sites will ultimately be developed and also have impacts such as aesthetics, noise, and traffic.

Summary

The Idaho-Maryland Mine was one of the richest gold mines in the world, and it can be re-developed in an environmentally and socially acceptable manner. The benefits of the Project are many, including high-paying jobs and generation of tax revenue for the community. However, the Project also has environmental benefits including cleanup of historic industrial properties and treatment of mine discharge water currently going into Wolf Creek. The Planning Commission and Board of Supervisors should accept the Project as Proposed, certify the Final EIR as complete, and approve the entitlements for the Project including the Use Permit. It should adopt Recommendation B. It is time to look forward and provide leadership.

The Project provides significant economic opportunities for the County, as well as environmental benefits, which far outweigh the three significant and unavoidable environmental impacts that may occur from its development. These three environmental impacts are not related to mining activities per se but are impacts that would occur for any industrial development for which the property is zoned (aesthetics, noise during construction, and traffic at certain intersection). We raise the issues of impacts from mine dewatering and construction of the engineered fill repositories, as they can be designed, monitored, and mitigated to minimize or eliminate impacts.

The Project has been designed and permitted to minimize environmental impacts, including generation of greenhouse gases. It is clear that mining is an essential part of the world economy and an absolute requirement to shift to an electric economy and eliminate greenhouse gas emissions from fossil fuels. The movement to electric vehicles, solar power, wind power, and battery storage for the grid all require metals such as gold.

The Sierrans for Responsible Development has members who have worked as mine managers, mine supervisors, mining engineers, geologists, mine operators, and others who have worked in underground mines similar to the Idaho-Maryland Mine. Our group is focused on educating the community about mining, and we would welcome the opportunity to provide our expertise and experience to members of the Planning Commission Board of Supervisors, or local agency staff. This could include presentations on mining methods, mining equipment, mine economics, acid rock generation from mines, metal leaching from mines, or other topics that might be of interest to those not familiar with mines or mine operations. There are a considerable number of people that work in the mining industry locally or regionally and that expertise is available for educational purposes.

Sincerely,

David Watkinson
President, Sierrans for Responsible Resource Development

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Aaron Baker. I live at 542 Jordan st, Nevada City, Ca 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Aaron Baker

Dear Nevada County Supervisors and Planning Commissioners,

My name is Amy Wilmot. I live at Po Box 485, NORTH SAN JUAN, CA 95960.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Nevada City at 11711 Bystander Road. I’m opposed to the reopening of this mine. Our environment cannot risk the harms which this mine will cause. This area has still not cleaned up all the harm past mining has caused here. Let’s learn from the past. Please vote no on this mine application. I may live in district 4.

Sincerely,

Amy Wilmot

Dear Nevada County Supervisors and Planning Commissioners,

My name is April Anderson. I live at 14289 North Bloomfield rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I own a home in district 1. My family and I come here to enjoy the beautiful nature and welcoming community. The mine is overwhelmingly opposed by the community so I find it really troubling that the county is putting its citizens through this long drawn out process. Re- Opening a mine in a place where that industry has been closed for decades is not a private matter. There are environmental impacts, health concerns in an already poorly scoring air quality place, among many other downsides that deserves the right of the public to decide. This is a big for profit company opening the mine, with a bad track record, that is not going to be spending its profits locally. Nevada county is full of wonderful local business and community that really prioritizes supporting local. This mine goes so far against what the people want in so many ways. Please deny this mine.

Sincerely,

April Anderson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barbara Schakel. I live at 15011 Little Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live just a few miles from the planned for mine site in District 3. My family and I have been here for a year and a half. Since we first arrived, we have been following the information regarding the mine and its projected affect on our area. We are NOT in favor of this mine and fear it would have nothing but negative impact on our property. The impact of its opening will affect all of us in so many ways, both personally and community wide. There must be another solution than one that will change our lives negatively for the future.Ba

Sincerely,

Barbara Schakel

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Brian Dykes. I live at 20835 Casa Loma Dr., Grass Valley, California 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Rise Gold CEO Ben Mossman's previous venture, Banks Island Gold Ltd., owned the Yellow Giant Mine in British Columbia, Canada which polluted tribal waters, went bankrupt, and left Canadians with a mess to clean up. Mossman is currently on trial in Canada on charges related to spills at the mine. Are we willing to trust the long-term wellbeing of Grass Valley's future to an individual which such a track record who's promises of future economic benefits and lack of environmental impacts of his prior failed venture mirror those given to Grass Valley today? I'm certainly am not and neither ore the majority of Grass Valley constituents.

Respectfully,

Brian Dykes

Sincerely,

Brian Dykes

Dear Nevada County Supervisors and Planning Commissioners,

My name is Caulen Lauria. I live at 13784 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The arguments for Not certifying the EIR are overwhelming.Please stop this madness now. This county will suffer losses never before seen. Home values diminished drastically. Wells run dry or contaminated. Air contaminated. Health degraded. Businesses gone. Can you think of anyone that wants to live in a mining town? Tourism gone. Citizens moving out. County tax revenue gone. Jobs for the mine will Not be filled by locals. The single most destructive industry that would bring this county to it's knees. Do Not allow rezoning to heavy industrial wasteland. Do Not certify the EIR. It will only leave this process open for other companies to do the same thing, again and again. The people are suffering Now, from this attack. Impacts are already affecting your constituents!

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of David Whitehead at djw359@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Whitehead. I live at 100 Bawden Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My spouse and I live in District 3 in the Washington Hill neighborhood, for seven years now. We invested in the community by buying an older home that was in disrepair, and then hiring local contractors to bring it back to life. We volunteer here in several local nonprofit organizations. We feel that this community has given us so much, and we give back. This mine project threatens all that we have done and what we dream to do.
I already provided the Board my technical comments on the FEIR. The staff response did not recognize the importance of this mine project impacts and continued contributions to degradation of our environment. They cast aside real impacts because of outdated standards. They ignored recent case law. They defended the ridiculous estimates of carbon emissions provided by the applicant. This project would violate many of the most recent scientific realities of climate change. Staff is

highly motivated to provide a recommendation to approve this flawed FEIR, because they want you to approve of the job they have done. But make no mistake: this FEIR does not adequately advise the Board about the actual impacts this project would make against our community.

Please do not approve the FEIR. The Board must know more than what has been given in order to make a reasonable decision. The Board would have to accept a horrific set of Overriding Conditions in order to go ahead with the project. The impact on our lives, our children, our seniors would be devastating. Grass Valley and Nevada City would be culturally and environmentally decimated.

Realize that these communities have invested heavily over the past six decades in creating a place that rejects the devastation of the legacy of the mining industry. Approval of the FEIR and this project would be an awful rejection of all that investment, and a complete denial of the threats of climate change on our world. Our beloved Nevada County would be saying to the world “We don’t want to be part of any climate change solutions. No. We want money!”

Don’t participate in this denialism. Help us reclaim our world from corrupt extraction corporations who care not one whit about us and our world. All they care about is wealth, for themselves. Why would we want such a destructive force in our community?

Thank you.

Sincerely,

David Whitehead

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Dean Olson at deanolson44@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dean Olson. I live at 13075 Woolman Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My wife, Karen Davidson and her three daughters, has been active in this area for over 20 years. She came here to be the director of the preschool at Peace Lutheran Church, has served as preschool teacher at the Chicago Park preschool. This has been home for them for many years. I became part of her beautiful family over 15 years ago when we were married and new members of Grass Valley Friends Monthly Meeting, Quaker. We have lived most of this time as volunteers on the Sierra Friends Center campus.

There are many reasons we oppose the re-opening of this mine, from water, to pollution, to noise, to turning this beautiful area once again into a mining community. Just taking the tour at Empire Mine gives you a feel of what a mining operation does to an area.But, the major reason we strongly appose the re-opening of this mine is it

adds insult to injury to the remaining Nisenan Tribal members who live in this area. The original rush to find gold destroyed their homeland, their food sources (especially the black oak trees from which they gathered acorns), to the displacement from their homes (Nevada City sits right on top of their main village area). And, it was a genocide of all ages of their loved ones, so those rushing in could take over their land. and try to find gold. Visit the Nisenan public gallery on Broad Street in Nevada City, where they share their story, or read the helpful book, History of Us, compiled by Tribal chairman, Richard B. Johnson. Many of us who live here do not know this happened.

There are many reasons we are not in favor of letting this mine reopen, but for us, the main reason is that
the motivation to find gold destroyed their life and their beloved land. Now, once again, we are being confronted, along with them, with outsiders coming in with grand plans to reopen the whole process below ground and above ground of mining, moving ore and processing it for gold on a massive scale. It's not worth the jobs, the income to allow this practice to once again to rear it's head in this area, while we are still healing from the last time gold seekers came here. And once that door is opened to them, according to what I read,
they have 80 years to do this. 80 years, 24/7, impacting our area under ground and on our roads and in their
processing. 80 years, once again a "mining community."

No, no. We definitely say a resounding "NO!"

Sincerely,

Dean Olson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Smith. I live at 582 Morgan Ranch Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 and have lived in Nevada County since 1971. I moved here to raise my family in a safe environment with fresh air and great tasting water. There were other factors as well. The beauty, charm and people.
Operating a gold mine in a residential area practically in town will distroy the beauty, air, water and it's supply as well as noise and create traffic congestion.
Nevada County has everything to lose and nothing to gain from allowing the mine to open. I could go on, but I am sure you already know the irreversible damage it will bring. You were elected to take care of our county for us, not a mining company! I beg you to vote NO!

Sincerely,

Dee Smith

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elizabeth Rose. I live at 10389 North Ponderosa Way, Rough and Ready, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 4 and have been a resident of Nevada County since 2006. I came here for a quieter, rural and healthier community to raise my kids and enjoy a healthy outdoor life.

It's clear to me from all the reports that the mind will not bring good jobs to the locals, it will bring more noise. More truck traffic and severely impact are air and water to where it will not be a desirable place to be. This will impact our economy and our real estate and our ability to enjoy the outdoors.
Please say no to this mine.

Sincerely,

Elizabeth Rose

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen BAXTER. I live at 11458 Northview Dr, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have resided in District 1 for over twenty years and I am a business owner in this area. I moved to Nevada City to enjoy the quiet, beauty and natural habitat that we have. Restoring the mine would significantly alter this environment. I am greatly concerned that the effects of the mine would endanger our water tables and bring unwanted industrial noise and pollution to the area destroying the quality of life that we appreciate.
Tourists that come to this area would likely be impacted as well as the residents of the community.
Also alarming is the history of Rise Gold and the problems they have created in other endeavors.

Please DO NOT APPROVE the reopening of the Idaho Maryland Mine.

Sincerely,

Ellen BAXTER

Dear Nevada County Supervisors and Planning Commissioners,

My name is Gail Begany. I live at 210 Sutton Way apt 207, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on Sutton Way in district 3. I’ve been a resident since 1976 with lots of family in the area. I don’t know anyone that wants this mine. And many people plan to move if the mine comes in.

Sincerely,

Gail Begany

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jaleila King. I live at 12293 Robinson Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The company has a history of not following environmental guidelines and laws. This poses a hazard to our community and possibly those further away. We are in the midst of climate change and our water is a precious resource that should be reserved for private residents and local farms. How can the Nevada County Board of Supervisors and the Planning Department even consider approving a mine that will rob the community of its water security. Is anyone talking about the increase of local traffic!? THIS IS NOT GOOD FOR OUR COMMUNITY; I am asking you to vote NO and keep Grass Valley and Nevada City GREEN.

Sincerely,

Jaleila King

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jamie Legon. I live at 10568 N. Ponderosa Way, Rough and Ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

This is a horrible idea that disregards any semblance of understanding the public interest. Just the amount of water ALONE makes this insane. Not to mention that the overall environmental impact would be gigantic, affecting thousands of people and families and make minuscule the few hundred jobs that the mine would provide. Thumbs down!!!

Sincerely,

Jamie Legon

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Janet Jensen at 2janetcj@gamil.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Jensen. I live at 327 Clay St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Janet Jensen and currently live in Nevada City. Our family has lived in Nevada County for 37 years. Reopening the mine will ruin our area. The noise will carry for miles of the heavy trucks going back and forth each and everyday. The pollution it will cause would be devastating. Anyone living in Nevada county knows that Brunswick Rd is the most dangerous and first to be closed in bad weather. But yet the mines trucks will be using this 24/7.

Most of all is this company that wants to open the mine is not reputable! They leave a mess in their wake and are currently being sued. Why would we give this type of company our precious county to destroy? They could easily do the same year and then leave the country.

Please stop the mine. This will destroy our way or life and our tourism.

Janet Jensen
Nevada City, Ca

Sincerely,

Janet Jensen

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jeffrey Russell at fatherwolf22@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jeffrey Russell. I live at 10728 Footwall Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Jeffrey Russell. I live on Footwall Dr. in District 3. I have been a Nevada County resident since 1991.

This is the third time we as a county have been through this “open up the Gold Mine” fiasco in the last 30+ years. It is a ridiculous waste of our community resources and time to continue to consider this opening.
It is of limited real benefit to Nevada County; it is benefiting only a few outside investors. There is little upside for the people who actually live here.

Opening Idaho Maryland Mine would forever change the character and quality of life of our community which we all love. Further, The noise, traffic, pollution would diminish and endanger our health and quality of life.

Modern gold mining elsewhere has shown to be a serious threat to air, wells, and area groundwater. Our water is a precious resource. This opening would only exacerbate our issues with drought. Nevada County already gets an F rating when it comes to air quality and has 2 times the national average in lung disease. Reopening the mine would likely make it worse.

A few jobs and uncertain tax revenues just aren't worth the risk. There are many local experts who show how adversely it would impact our property vales.

Perhaps most important in the long run, a yes vote for the mine is a no vote for climate change.

Please vote no on reopening the Mine!

After we stop the mine this time, please consider a local resolution/ law that prohibits anyone else from starting up another review of yet another proposal to open the mine. I believe a majority of Nevada County will support putting this issue to bed once and for all. Let's put it on the ballot and find out!

Yours truly,
Jeffrey S Russell

Sincerely,

Jeffrey Russell

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kate Shuster. I live at 265 Playa del Rey, San Rafael, CA 94901.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I are strongly AGAINST re-opening the Idaho-Maryland Mine. We know many others who are very much against it although they may not get around to writing any letters !!

As owners of land, upon which we plan to build our home, we are very disappointed to learn that this previous gold mine may be reopened, subjecting people in all walks of life to many negative factors. If we had known about this prior to our purchase we probably would have chosen a good spot further away from this threat.

Re-opening this mine will cause PROPERTY VALUES to go DOWN for many reasons, including debris, noise, decreasing water supply and health hazards. Persons and businesses who consider moving to the GV & NC areas will decide against it, thereby

reducing beneficial businesses, good citizens and tax support for the area.

Please do not allow it !!
Katie Shuster

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Katherine Wallace. I live at 116 Lone Jack Pl, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hi! I live in district three, specifically in the Timberwood neighborhood. We bought our house one year ago, and it was never disclosed that there might be an active mine beneath our home.

Aside from the environmental impacts, which concern me greatly, I am concerned about quality of life issues, increased traffic on Brunswick (we already need a stoplight here even without the mine traffic) potential for sinkholes, property value, etc. We are a family with young children- not retirees who will never need to sell their house. This is our starter home that we worked hard for. We never thought we would be able to own a home. No one will want to purchase a home above a working mine- what happens when our family expands and we need to sell? Of course, declining property value is always a risk one assumes, but if I can prevent it, I will. Selfish,

perhaps, but I'll say "yes in my backyard" all day to housing and development that provides value to the community. The mine does not. Our community deserves clean water, clean creeks, good health, and high quality of life.

Furthermore the Loma Rica development is in full swing. From the map, it appears that this will also be located on top of the mine. Is it worth it to the city to compromise that development, which will provide much needed homes and businesses, over an unnecessary mining operation?

The high paying jobs the mine will provide are mining engineer jobs. This is no longer an area of expertise for our locals- mining engineers will come from outside the county to work the mine, so it's dishonest to say the mine will pay locals over 100k annually.

I urge the board of supervisors to think critically about the full impact of the mine vs. the benefits of allowing a mining company to operate in our community. There isn't a gold supply shortage, and if there were, it should be mined it in a place where people do NOT live. Rise Gold is historically untrustworthy and a poor partner for Nevada county.

Please consider the long term effects on the community and do not permit Rise Gold to open the mine.

Thank you for your consideration,

Katherine Wallace and Trevor Murphy

Sincerely,

Katherine Wallace

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived here all my life, born at old Community Hospital (1953) downtown Grass Valley. I love our beautiful town, it is rich in the history of gold mining but that was another time. The mine will help destroy our precious environment and the amazing community we have become. I am also against bringing in a company that is not trustworthy and is still being sued for harmful effects left behind. This mine will bring most of its own workers, not hire many locally. They will mess up our community and leave us with all the damage done too our ecosystem. NO TO THE MINE!

Sincerely,

Kathy Thibodeau

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laurean Bell. I live at P.O. Box 654, Chicago Park, CA 95712.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in the Chicago Park area of District 3 for 23 years. I am a unrelenting protector of the earth and recycle everything possible. A simple teabag when used goes to 3 places. The actual teabag goes into my compost bin, the paper tag goes into recycle and the string goes into a net pouch for birds to build their nests!
With that said I am greatly disturbed that our county is even thinking about allowing such an atrocity as the Idaho/Maryland Mine to reopen!

Sincerely,

Laurean Bell

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lee Pope. I live at 17762 Oak Way, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live right off highway 174 in Nevada County, about five miles south of the site of the proposed mine. I have lived at my current address in the Chicago Park area for twenty three years. I love this community and the natural rural beauty of the fields and forests that characterize this area. I am hoping that, in making this decision, you will listen to the many voices that place human health and well-being as the importance of respecting and protecting nature ahead of profit.

Thank you for your consideration in this matter.

Sincerely, Lee Pope

Sincerely,

Lee Pope

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lina Restrepo. I live at 12191 Boreham Mine Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Grass Valley off Brunswick near Horseman’s club -district 3. We are in HUGE opposition to this Mine mainly because it will take away the from the natural beauty of this county. We grew up here and came back two years again because we wanted to be back in this beautiful community surrounded by water, mountains, trees and green air. This mine would take that all away and also devalue the property value of all our homes. I’m addition the amount of tragic that will increase on Brunswick all day along with the noise will destroy the joy of living in a mountain town. NO to the MINE!!!

Sincerely,

Lina Restrepo

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lori Van Laanen. I live at 10768 Walker Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I like be like n Grass Valley and have been a county resident for 37 years. I love living in the foothills for its scenic beauty and small town community. I have concerns about the Idaho Maryland Mine reopening. My biggest worry is the environmental impact of this operation being so close to town. It seems to me the new neighborhood being built just down the hill off of Brunswick Road is sorely located now. I hope and trust our county supervisors take a serious look at all the negative implications of this proposal.

Sincerely,

Lori Van Laanen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lyn Coring. I live at 14131 Torrey Pines Dr, Auburn, CA 95602.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The list of reasons why the proposed reopening of this mine would be thoughtless and irresponsible is almost too numerous to itemize. Suffice it to say that this community's continued physical health, air quality, water supplies, wellbeing, real estate, financial security and quality of life is being seriously threatened. The continued existence of Grass Valley and its environs as we know it, as a sought after place to live and vacation, will be severely compromised.

Sincerely,

Lyn Coring

My name is Marguerite Vulfs. I live at 541 1/2 N.Pinr St., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 and my family has lived here since 1969. My Grandfather, Hamilton Stone, began with his friend Gay Pryor, the SNMH Hospital Foundation. He believed in people and the goodness they bring to a community with all of their gifts.

The Gold of Nevada County is it's people. Our history with gold is in the past. We have built neighbor hoods and homes around our history here with the intention of a thriving community of people in a modern time. As a community we have come together before to say NO to gold mining, even with this proposed mine that has changed hands. It remains amazing to me that we have to go through this process again so soon. A NO should just be a NO.

Sincerely,

Marguerite Vulfs

Dear Nevada County Supervisors and Planning Commissioners,

My name is Maureen Collins. I live at 19470 Broken Oak Ct, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a self-employed home owner in Penn Valley (District 4) since 2016. Beyond that, I've been more loosely affiliated with Nevada County for my entire life. The proposed mine strikes deep fear in my heart. If you allow the mine to go forward, the damage that will be done will be impossible reverse.
The tantalizing prospect of jobs and increased revenues will most likely never materialize. One only has to look at the track record of the company behind this proposal to see what is in store for Nevada County if this is allowed to go forward.
Please, please, PLEASE, just say NO.
Thank you.

Sincerely,

Maureen Collins

Dear Nevada County Supervisors and Planning Commissioners,

My name is Niladri Bora. I live at 14708 You Bet Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Mining jobs are low-paying jobs and will not elevate the local economy. The Grass Valley and Nevada City area has a lot of good things, and in the past three years, quite a few upscale establishments have opened shop e.g., the National Hotel and Holbrooke Hotel. The Mill Street Plaza has the potential to invigorate the downtown economy further. The Mine will be a big step in the opposite direction. It will tank the local real estate market.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Penelope Whitney. I live at 15566 lewis road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live near downtown Nevada City on Lewis road, and we rent our home out occasionally to visitors from out of town. My husband is semi-retired and we count on the income - and pay the county thousands of dollars each year in occupancy taxes. We are just one of many businesses who rely on clean air and clean water and our beautiful natural environment to draw guests to Nevada City.

The gold mine is a short sighted get-rich-quick scheme by a Canadian businessman who has already been shown to lie and cheat to get his profits. Rise Gold should not be welcome in our community.

Sincerely,

Penelope Whitney

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Benigno. I live at 14677 You Bet Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,
I am a homeowner in the Sonntag Hill area of You Bet Rd. My wife and I purchased a beautiful home on a wonderful 5 acre property and moved to Grass Valley in November 2021. We have visited Grass Valley many times over the last 15 years to share this wonderful area with our friends who live in Alta Sierra. We love the natural beauty of the area and love to be outdoors whenever possible. We often kayak, mountain bike, hike the many trails in the area. When hiking at Empire Mines, one just has to look at the environmental damage the mining industry caused in that area. Please, please DO NOT approve this Idaho-Maryland mining project. IF you want your kids to be able to enjoy this unique community, you will vote your conscience. There is vastly more at stake here than the creation of a few jobs. Is it worth the destruction of our environment? Do the right thing and vote NO on both

the project and the EIR. Do not be a corporate pawn. Your community is watching you.

Sincerely,

Richard Benigno

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Robert Coring. I live at 14131 Torrey Pines Dr, Auburn, CA 95602.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

And please just say NO to certifying the EIR.

Sincerely,

Robert Coring

Dear Nevada County Supervisors and Planning Commissioners,

My name is Seth Harris. I live at 12742 Red Dog Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We are in the Deer Creek Park neighborhood and value our quality of of Nevada City and our family and children value clean water, clean air and the quiet environment we live in and do not want Nevada County to revert to an industrialized era. Any temporary value created by an extractive mining operation will be far less than the economic damage from decreased tourism, diminished home values, health impacts and lower quality of life of residents.

Sincerely,

Seth Harris

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sharon Davisson. I live at 17889 Douglas Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I was born in Grass Valley 81years ago. My father, Bruce Russell, was a miner. He spoke about the hardships he and his fellow miners experienced.
What I am frightened by is much more than the hardships the mine workers might experience, but the hardships the citizens of our county will experience if you allow the mine to open whether you do it now or 80 years from now.
Please do NOT allow this mine to be opened. Our future health and safety depend on you saying NO.

Sincerely,

Sharon Davisson

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a resident of Lake of the Pines for 12 years. The idea of reopening the mine is just crazy. After reading the information regarding the company involved and their past dealings with other mines, it doesn't appear to be a reasonable situation. Please just say no to this type of business.

Sincerely,

Sharron Eastman

My name is sora oneiga. I live at 13044 drummer way, grass valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I absolutely say NO to the mine. This is a ridiculous exploitation of the town and county resources. There is a huge amount of historical evidence to show that mine companies-especially Canadian owned- leave devastation, abuse resources and landscapes, drain aquifers, leave poison, disturb neighborhoods with noise and heavy machinery and vehicles, abusing the precious land. There are so many jobs available in town and many businesses are closing at this time as they cannot get workers. we do not need this. There are scams all over facebook from this company, faking names to promote their pursuit. NOT one single person I hear of wants the mine. EVERYONE is against it and wants to protect out precious town from being exploited. Looking at history it is really really time we learn from our mistakes of exploiting the precious land and being greedy. Money will not buy us fresh air and water. NO TO THE MINE 1000%. Please listen to your people.

Sincerely,

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Stan & Erin Thomas-Rose. I live at 16118 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, I am a 36 year resident of Greenhorn Rd., living with my family on the property which my 65 yrs old husband, Stan, was born and raised. Greenhorn Rd. has become a rather densely packed suburban residential community. It is "landlocked," with no easy egress for the thousands of homes packed onto this road. For years I have feared the outcome of an emergency exodus as the road can poorly sustain that which has already been developed. If the county was considering reopening mining operations, it should have never allowed for the current residential development. Although there is a certain historical charm to the idea of resumed gold mining the toxic legacy of past decades of mining is undeniable. I fear for the added traffic burden of trucks removing gravel, the threat of dewatered mining tunnels to local

wells, the toxic effects of chemicals and the lights and noise pollution associated with an industrial operation so close to our homes. Most of us cherish the rural quality of Nevada county living. Please do not threaten us further by allowing this development.

Sincerely,

Stan & Erin Thomas-Rose

Dear Nevada County Supervisors and Planning Commissioners,

My name is Suzanne Hall. I live at 15169 Lewis Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 and have lived here since 2009. My husband and his family have grown roots here since 1978 and have seen many changes since then. While change is somewhat inevitable we never imagined that this town would even consider regressing. We have enough dangers facing our children and our community without adding toxins to our water and air. Not to mention the fact that humans are not the only ones who will be affected by this proposed project. Animals and ecosystems will no doubt be poisoned, lose drinking water and freedom of movement. Dr. Kane reported that his grandchildren will be breathing poorer air quality for decades to come if this passes. Please don't pass this mine!

Sincerely,

Suzanne Hall

Dear Nevada County Supervisors and Planning Commissioners,

My name is Theresa Finn. I live at 620 Kate Hayes St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in District 3 next to several mines. I'm writing because suddenly I'm being inundated with advertisements for the Idaho-Maryland Mine. Expensive. Glossy. Tempting.

You are being asked by a corporation, that like so many other corporations, doesn't care about the impact its operations will have upon a community. This one is offering high wages. But, how many locals will benefit and at what cost to our community? Actually, most of the money will not come to our county, but go into the pockets of CEOs and shareholders.

I think it's time that we NOT be tempted by money, but plan for the future, the health of the environment and the overall welfare of our communities. We need to ask

ourselves, will the arrival of this corporation lower housing costs? Will it ultimately degrade the local eco systems? Will it cause more pollution? Will it bring even more people and exasperate the already out of control housing costs and shortage? Just remember, the corporation DOES NOT care about our county, it only cares about its self and it's stock holders!

Please vote NO and plan for the health of our county. Let's plan for the future of the health of our land, not line the pockets of a few.

Sincerely,
Theresa Finn

Dear Nevada County Supervisors and Planning Commissioners,

My name is Tim and Sandra Scott. I live at 17077 Cruzon Grade Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have lived in Nevada County for the past 40 years, 35 in our current home on the San Juan Ridge. We own two homes and our adult children and their families also live here and have businesses in this county. We are adamantly opposed to the opening of this mine for several reasons, all based on experience. Siskon Gold tried to reopen an existing mine in our community 20+ years ago. The hype around it at the time was much the same as Rise puts out. It was a disaster for the investors and the community. Wells were dewatered, the local elementary school well system was destroyed, families were forced to move for health reasons, and the attorneys spent years trying to hold the mining company responsible. There is no mine, no jobs, no water on some parcels and the investors lost all of their money.
This will happen again if Rise is allowed to reopen the Idaho Maryland mine but on a

much larger scale. Please do not allow this disaster in the making to proceed any further. The past is about to repeat itself if you vote to approve this.

Sincerely,

Tim and Sandra Scott

To: Nevada County Planning Commission and L. Swarthout

Re: Idaho Maryland Mine FEIR Rise Grass Valley

RECEIVED
MAY 01 2023
NEVADA COUNTY
BOARD OF SUPERVISORS

From: Elaine Westfall

The proposed project to reinitiate underground mining and gold mineralization processing for the Idaho Maryland Mine is a serious concern for all of Nevada County. The Centennial and Brunswick Industrial Sites are both in range of housing and major roadways within the county.

I have been a citizen of Nevada County and the city of Grass Valley for 45+ years. My concern for the population in and around the proposed area of impact is grave. The quality of life for neighbors concerned about air pollution, water wells, noise, and impact of roads and traffic is also a concern for the entire county. Approving a 80 year use permit for the exploration and operation of mining 24/7 is too wide range of appropriate usage of our county land, air, water and properties.

The track record of Rise Gold operations in the past appears to be less than stellar. The promises of mitigation for any and all problems cited in the FEIR are not reliable. The prospect of jobs is always a positive, but again, the time it may take for those positions to be realized is not something that should sway any decisions that are made regarding the physical and environmental operations of the mining proposal.

I feel it is imperative that the Planning Commission not recommend the approval of the FEIR to the County Board of Supervisors.

Elaine Westfall

NEVADA COUNTY
BOARD OF SUPERVISORS

April 28, 2023

Nevada County Board of Supervisors

Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

To the Nevada County Board of Supervisors:

My name is Frank Williford and I have lived in District 1 of Nevada County since mid-2021. My wife and I moved here seeking a better quality of life, and the area has largely lived up to our expectations. However, to maintain the high quality of life we have come to expect in this area, I urge you to vote "No" to the proposed re-opening of the Idaho-Maryland mine.

Plainly stated, it is my opinion that the Economic Impact Report regarding the mine significantly overstates the positive economic benefits while understating the potential negative financial consequences and costs of re-opening the mine. It is also my opinion that the Environmental Impact Report is deficient and must be rejected because it either ignores outright, or significantly understates, numerous potentially devastating environmental impacts on our community from re-opening the mine.

Further, and possibly even worse, Rise Gold – the owner and proposed operator of the mine – is badly undercapitalized for the scale and cost of this project, and thus will likely be unable to mitigate the cost of large-scale environmental impacts should they occur. (I believe I am qualified to opine on the financial condition of Rise Gold given that I retired following a 30-year career as a finance professional (Assistant Treasurer) at a Fortune 500 corporation.) In addition, Rise Gold's Chief Executive has proven himself untrustworthy as a community partner, leaving the local community to pay the cost of cleaning up an environmental catastrophe resulting from his last project.

Gold mining provides a rich historical backdrop to our community. But that was the past. We need to look to the future by encouraging clean new industry such as technology, clean energy solutions and eco-tourism, not by returning to the environmentally devastating industry of the last century.

Please vote "No" on re-opening the Idaho-Maryland mine.

Respectfully,

Frank Williford

BRIDGEPORT

Built in 1862, the Bridgeport Covered Bridge spans the South Yuba River in Nevada County, California. With a length of 229 ft. (70 m.), it is the world's longest single span wood truss covered bridge.

Dear Nevada County Supervisors and Planning Commissioners,

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

More than that - our health will be at risk from water pollution and air pollution. It will impact our children and they will not return here.

It will impact the value of our community negatively - people will move - real estate will decrease. The county will end up being responsible for all the toxic cleanup and be left with the cost Millions!!

Tourism will vanish - business will close!

Reasons to Say No

- Negative environmental impact
- more sink holes
- Noise + thumping vibrations - 24/7
- Air pollution
- Crook owner - already ruined another town in Canada
- Won't bring jobs - will bring in commuters who drive home & spend money there - No skilled labor here

Comment for
Proposed Idaho Maryland Mine - Rise Grass Valley Project
Public Hearing Scheduled for May 10, 2023

On August 10, 2020, I commented on the Rise Gold Draft EIR that I was concerned about potential environmental impacts regarding the stability of the "engineered fill" for mill tailings. In the Final EIR these concerns were not adequately addressed.

In my opinion most of the Rise EIR does an excellent job in its presentation which closely followed my geologic, economic, engineering, and environmental research and on the Idaho-Maryland Mine over the past 50 years. In the mid 1990's, with the help of my excellent team, I received a positive EIR and the necessary Idaho-Maryland Mine permits to dewater, explore and develop the mine via the New Brunswick shaft. This was done with a phased EIR and the next phase would have included tailings disposal. The project became adequately financed at that point, but the company directors passed on the project wanting a better deal which they did not get. Later I did provide patented Ceramext™ methods to handle the tailings by making fire-safe ceramic carbon neutral products, including high quality floor tile, roof tile, exterior wall cladding, and countertops. Most of these ceramic products are imported from abroad at a high environmental cost. And yes, gold would still be a viable byproduct. This project can all be done entirely on the New Brunswick property with no surface tailings disposal while not using the Centennial or other properties.

Although Rise has done significant additional drilling for ore grades and mill recovery, no tests by Rise on tailings stability for this material have been presented. "Engineered fill" is best defined as fill that has been tested or a very similar fill that has been tested.

I have made numerous compaction tests on both Idaho-Maryland historical tailings and tailings of finely ground material from freshly drilled Idaho-Maryland drill core. Even 500-ton presses over a half inch thick square foot with optimal moisture content failed to make a stable fill material. Adding larger fragments made the fill material even less stable. (Many of these tests were made to stabilize the tailings prior to heating them to form ceramic products.) Adding even a small amount of water to these "compacted tailings" will make the tailings extremely fluid.

In 2020 I met with Kimberly Morrison in Phoenix, AZ where she presided over several thousand attendees at the annual meeting for the Society for Mining, Metallurgy & Exploration. Kim is the Senior Director of Global Tailings Management for Newmont. She subsequently edited and wrote much of the thousand page "Tailings Management Handbook, A Life Cycle Approach" which was published in 2022. This book is presently the most comprehensive resource on new fundamentals for tailings management. At Kim's request I wrote a case study included in the book titled "Repurposing Tailings and Other Earth Material Waste into Ceramics".

Tailings engineers are only advocating tailings outside of dam facilities, with or without larger dump rock, on a trial basis in dry remote areas. I do not believe the tailings “engineered fill” suggested by Rise would survive a moderate rainfall, let alone the atmospheric rivers we recently had.

In recent years there have been many failures of tailings facilities in Canada, USA, Brazil, and many other countries with “engineered fill” that have caused disasters costing hundreds of lives, buried towns, and caused billions of dollars in damages. “Expert engineers” had signed off on these failures.

Re: Proposed Idaho-Maryland Mine (IMM) project

Date: May 3, 2023

Dear Nevada County Planning Commission:

I've lived in Nevada County 40 years and raised my children here. I love this county and know you do too. I'm writing to urge you to deny certification of the Final Environmental Impact Report (FEIR) for the proposed Idaho-Maryland Mine (IMM). I also urge the county to deny the proposed IMM project entirely. Here are some of the reasons I hope you'll do that.

Obsolete Threshold used: The FEIR's conclusions on Greenhouse Gas (GHG) emissions are based upon an obsolete threshold (for significant) measure of 10,000 Metric Tons (MT). Our county should acknowledge current climate studies, our state goals, and CA SB-32 by using a net-zero threshold. Newer projects (the analogous Sargent Ranch Quarry project in the Bay Area) have used a net-zero significance threshold for GHG emissions. The IMM FEIR should be using a net-zero threshold as well. Our county should be using the data from CA SB-32 and state goals in this FEIR.

GHG "mitigation" during construction phase only: How reasonable is it that the FEIR would allow Rise Gold to "mitigate" GHG emissions with carbon offsets only during the construction phase? For an 80 year project? GHG mitigation is important right now, and only becomes more significant in the future.

Incomplete Emission projection: The FEIR doesn't add in the emissions (over 4,000 MT annually) that cement manufacturers would generate in making cemented paste backfill of mine tailings. Those 4,000 MT, when added to the 9,000 MT, exceeds even the old obsolete threshold measure of 10,000 MT of GHG annual emissions as having a significant impact.

Electricity Usage: The proposed mine's electricity usage would obliterate the goals for residential electricity reduction that are proposed in the Energy Action Plan for Nevada County. Our county shouldn't handcuff our

future development by allowing one project to use so much electric energy.

Inadequate FEIR plan for mine waste: Our air quality, which is already compromised in summer months, would be at more risk if the FEIR is approved. Only 3 core samples were used to study Asbestos concentration, and nearly half of the sample material exceeded the 0.01% threshold. This test data is too sparse…no statistician would approve of the sample size. Managing asbestos emissions isn't easy, and there isn't enough evidence that Rise Gold would be able to stay under the 0.01% threshold limits.

Groundwater and Wells: The FEIR didn't adequately address deficiencies found by expert reviewers. A computer model used sparse bits of well monitoring data from over 15 years ago, out of compliance with the CEQA (California Environmental Quality Act). Experts say that the 10% drop level for "significant impact" determination is an invalid choice. Also, there's no requirement in the FEIR for 3rd party liaison to negotiate issues if problems arise for homeowners with wells.

Rise Gold CEO's poor track record: We know that Ben Mossman's most recent Canadian business failure has resulted in criminal trials for alleged environmental misconduct and economic practices that ended in bankruptcy. Knowledge of the details of this are important reasons to disapprove Rise Gold's project here. Even if the FEIR was adequate, I would urge denial of the Rise Gold project. The quality of life in this community is too valuable for it to be risked with a company run by this CEO and this company.

Be careful of certifying this flawed FEIR then denying Rise Gold project: …because in the future another applicant could buy the property, overcome objections, and get approval to mine. Then our community is still left with all the potential risks to air quality, water quality, noise, decline of tourism and property values.

Best Regards for the vitality of our community,

Nancy Piette

Joy Waite
12504 Old Stagecoach Rd
Grass Valley CA 95945

May 1, 2023

Matt Kelley
Senior Planner
Nevada County CA

Matt Kelley - It is essential that the proposed mining permit submitted by Rise Gold, a corporation headquartered in Canada, be DENIED. It is equally essential that the "Final EIR" be DENIED as well and the whole subject of hardrock mining in Nevada County be DENIED in perpetuity. Expert responses to the NOP and DEIR submitted by Emgold and now Rise Gold have provided substantial documentation of all of the reasons our community must not be subjected to the reopening of the Idaho Maryland Mine. We have already suffered enough from the local legacy of toxic mining activity in Nevada County and beyond. The documentation of this truth has been provided to Nevada County officials many times and in great detail.

The unacceptable negative impacts of hardrock mining, the negligible economic benefits to the community, and the potential economic benefits of ALTERNATIVE uses of the properties involved all prove the necessity of putting the issue of future mineral extraction to rest once and for all.

Directives from the State extremely prioritize housing. The housing crisis makes the Idaho Maryland property extremely valuable. Real Estate provides substantial economic benefit to communities. What a shame to locate housing on virgin land when impacted land languishes.

Once hardrock mining is denied in perpetuity, Rise Gold can fulfill its legal responsibility to deal with the toxicity of the sites they claim ownership of and deal with water quality issues in the "reservoir" being held in the miles of mine shafts they claim mineral rights to. The property owners who have been paying property tax on the land effected by these mineral rights deserve protection from toxicity of land and water created since the 1800's that they have been subjected to.

I also suggest the multiple benefits of creating a research facility on the property, an educational facility charged with developing modern water and soil detoxification methodologies so needed throughout the world.

The joint economic boon possible with real estate and research have the potential to create priceless benefit to our local fiscal and environmental health. It is time our decision making be an example to our future generations. Will they be able to stop asking "What have you done..!!" "Why do you keep leaving messes for us…"

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dillon Rice. I live at 12606 Towle Ct, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley and bought a home off of wood rose, across from where the potential mine site is. I am greatly concerned about the noise generated by continuous 24 hour operation of the mine - especially between the hours of 10:00 PM and 7:00 am. I believe this will violate existing noise ordinances for residential areas and I am not in favor of making exceptions to rules for large companies. Im also concerned about the state of the road. Myself and several others own motorcycles - which are susceptible to loose gravel in the road. Is Rise going to be paying to repair the road every year after they drive extremely heavy trucks over it day after day? This is a main road for the area, will their operations cause unnecessary traffic?

Probably my biggest concern is 24 hour operations will do to my property value. Is

the tax assessor going to immediately drop our values to reflect the fact that this mine will make our area more undesirable? I will hold the county directly responsible for any loss of property value.

The best option to prevent any issues is to reject the project.

Sincerely,

Dillon Rice

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Heidi Belforte Breuer. I live at 18354 Raccoon Trail, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The current EIR is drastically deficient. Please do not approve it as it is not sufficient for use now or in the future.

Re-opening the Idaho-Maryland Mine is a terrible idea, as it will create pollution this county, state and indeed planet cannot manage by way of noise and air. There are too many questions as to how the planned water displacement (millions and millions of gallons!) from the mine will effect local and non local potable water sources. How ever can we justify such a rape of the earth in the name of gold? Greed and money are never ever a fair tradeoff for our natural resources. Additionally, Ben Mossman cannot be trusted due to his horrifying record of leading the abuse of the Canadian mining site he was recently in charge of. This Mine must

absolutely not be approved and I'm trusting you to know this without this, my third letter to you. I am really concerned.

Sincerely,

Heidi Belforte Breuer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Sutter. I live at 318 Drummond St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The arguments for not certifying the EIR are overwhelming. The EIR is legally deficient. It fails to adequately disclose and evaluate the mine proposal’s significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine.

Thank you for your time and consideration concerning such a vital matter.

Warmly,

Sincerely,

Linda Sutter

Dear Nevada County Supervisors and Planning Commissioners,

My name is Loraine Webb. I live at 11110 White Oak Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a long-time District 1 resident, I urge a strong denial of the specious Rise Gold mine project, as well as the faulty EIR that our current Planning Commission has erroneously approved. The EIR is indefensible legally, economically, environmentally, and morally... and, if approved, the County will be pressed to allocate monies to defend the faulty EIR against ongoing and expensive legal challenges, at the very least. A vast majority of caring citizens are united, and will not let this stand.

Sincerely,

Loraine Webb

Dear Nevada County Supervisors and Planning Commissioners,

My name is Madeleine Dowd. I live at 14023 Live Oak Lane, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I reside in District 3, in the Live Oak Estates area. Several of our neighbors rely on their wells for water. Their homes are over the outstretched area of the mine. We live next to Hwy 174. I am appalled that the county is even considering this mine, given the immense amount of truck traffic, noise, pollution, and polluted water that will be pumped out of the mine. Highway 174's traffic has grown over the years and is almost unsustainable now.

We know Rise's history of pillaging and leaving the area an environmental nightmare for the residents to clean up. How can we think that they are a changed group? The jobs are not a for-sure thing for our residents. Let's invite clean manufacturing and technology businesses here. Let's create a business climate that makes us desirable, builds a tax base, and doesn't pollute and ruin our quality of lives.

Please do the right thing. The mine simply cannot be allowed.

Sincerely,

Madeleine Dowd

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Maria Nelson. I live at 13306 Country Heights Dr., Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Wildwood Heights across from Lake Wildwood in District 4 since 2006 and I am alarmed about the possibility of reopening the Idaho-Maryland mine. I am particularly concerned about the past business practices of the CEO of Rise Gold, Ben Mossman. His prior company polluted tribal waters, went bankrupt and Canadians were left with the bill. In 2020 he was on trial in Canada on federal and provincial charges related to spills at the mine. This indicates a disregard for regulations and poor management practices.

People have not moved and will not continue to move here to live with the uncertainty and risk of a business and CEO so out of step with the General Plan and policies.

I strongly urge the decision makers to deny the mine project and to say NO to certifying the EIR.

Sincerely,

Maria Nelson

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Pamela Whitman at pamwhitman@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Pamela Whitman. I live at 14311 Cahill Ln, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for 25 years and strongly urge you to reject both the Rise Gold Mine proposal and the FEIR.

Our county is at risk. A Canadian-based company wants to reopen a gold mine under Grass Valley’s feet, changing the character of the community we love and impacting our air, water, and quality of life.

The mine has significant and unavoidable environmental impacts that are inconsistent with the County’s General Plan and endanger this community's health and quality of life – including aesthetics, traffic, and noise. There are also serious deficiencies in the Final EIR that put the County and its citizens at further risk, including air and water.

Community experts recently reviewed the report and found that even the low-end economic numbers were overly optimistic, that real estate estimates were a big miss, and that the possible economic benefits to the community would be overshadowed by a lot of downside risk.

Gold mining is a serious threat to wells and area groundwater. Water is a precious resource—more precious than gold for those of us who live here—all the more so because of continuing concerns about drought.

Nevada County already gets an F rating when it comes to air quality and has 2 times the average in lung disease. Reopening the mine will make it worse.¬

Nearby residents will see reduced quality of life and lower property values. One can reasonably assume that the presence of the mine would lower property values throughout the surrounding area, as it would affect the whole quality of our environment and community.

A yes vote for the mine is a no vote for climate change. This is not the time to be bargaining away our future.

Mining is a toxic business that requires compliance monitoring we're not set up to handle.

The company that wants to open the mine has shown it can't be trusted.

Even people who generally support mining are against this project. The project is too close to an established community which creates a much higher level of risk if bad things happen. Gold is not a high priority mineral to support the growth of green technology or medical science.

Please stand up for Nevada County, all of us whom you represent—and those not even born yet who will be subject to the results of your decision for the next 80 years —and say no to this project. Mining is our past, not our future.

Sincerely,

Pamela Whitman

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Randi Pratini. I live at 10222 Elliott Way, 10222, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

This is either my 3rd or 4th letter to let you, the Nevada County Supervisors and Planning Commissioners, that as a tax paying, Nevada County resident since 1995, I DO NOT want you to pass this mine project,

There is no way to account for pending damages to our already taxed water supply, to all of nature, to the air, to the roads and to all residents of the county (as well as other counties that heavily loaded trucks and increased traffic will pass through).

There are many other reasons not to let this mine happen; such as, Rise's questionable reputation accrued via other projects.

Then the matter of the EIR. DO NOT approve the EIR. Even if this project is denied,

certifying the EIR would only lend credence to a document that fails to adequately disclose and evaluate significant environmental impacts and violates numerous requirements of state law. Worse still, the certified EIR could be relied on in the future to fast-track the approval of another mining proposal!

Sincerely,

Randi Pratini

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shannon Ross Winters. I live at 12202 Nuthatch Ct., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The County has no obligation to approve the Mine.
The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley’s and the County’s land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be “significant” and does not comply with CEQA (California Environmental Quality Act).
THESE PEOPLE FROM CANADA (WHO HAVE ALREADY DESTROYED THE ENVIRONMENT AND ARE INVOLVED IN LAWSUITS SHOULD NOT BE ALLOWED TO DESTROY OUR WELLS AND COUNTY!!! PLEASE DENY THIS HORRIFIC PROJECT. I

have asthma and would have to move. This is a beautiful area that would do well with tourist income and keep our environment beautiful and clean.

Sincerely,

Shannon Ross Winters

To Planners and Supervisors -

Please think back to the impact of the Gold Rush on the environment in Nevada County. Let's be better Ancestors now to protect our land, rivers, and forests for future inhabitants - maybe your grandchildren!! And their offspring.

Back then, the land was ravaged, streams polluted and the Yuba River silted which affected not only the farmlands in the valley but waterways all the way to the Bay. Been out to Malakoff Diggins? Looks a bit like my idea of Mars.

Our forests were also ravaged. We are lucky there were some trees left to grow up.

Who made money back then? The workers? Maybe a few. And how many workers suffered in the noxious air and conditions? And died?

Is creating these dangers the legacy you, as County officials responsible for the well-being of our community and its people, want to leave?

Please be good ancestors NOW to consider the long term effects of a potential new mine on our now much more populous cities and county.

Think about it. Look at the long term reality and ramifications. Are the unknowns really worth the chance to ruin a good thing ? For all of us?

Thank you for choosing to say NO to this Mine proposal. Leave a positive legacy.

Dear Members of the Planning Commission,

Please, do not certify the flawed EIR. This report does not answer the bigger questions that I have about the mine in my hometown: The idea that the oversight for the mine is in the hands of the mining company itself is laughable. It is the proverbial fox guarding the hen house; The added noise and traffic that this project will create in our community will negatively affect our quality of life, adding truck traffic to an already hazardous Hwy 49 and Hwy 174; The soiled reputation of Mr Mossman with his past history in BC and the legal charges he is facing, makes him a disreputable person to be in charge of this operation in our town; The impact on Wolf Creek is staggering, it is naive to think that adding the expected large amount of water flow will not negatively impact a very fragile ecosystem; And there is are so many other concerns.

I am not a scientist, but I have been reading and studying this issue over these past many months. I have lived and worked in Grass Valley for 33 years, and I love this community. I have seen many changes, but this is one that I do not want to see happen. I believe that the negative impacts far outweigh the benefits. Please do not certify this flawed EIR and open the door to a future possibility for this mining operation to ever occur in our downtown.

Respectfully,
Gwen Eymann and Walter Holtan

To Whom It May Concern:

I am attaching a recent submission by Ms. Pat Nelson to the Union, which states her argument FOR the mine. She is articulate and extremely knowledgeable about the history of this project and has such a background in mining engineering to understand the technology behind the project's improved environmental standards. This is NOT the razed earth mining of the past. Unfortunately, I feel that local environmental groups have a knee-jerk reaction to the Rise Grass Valley mine proposal, without consideration of the abundant upside of the project. My husband and I both support the re-opening of the Idaho-Maryland mine as envisioned by Rise Grass Valley. We also appreciate the historic significance of mining in Nevada County and applaud its resurrection, given the the project's vastly improved environmental upgrades.

Sincerely,

Sherri and Brent Oakley
18211 Indian Springs Rd
Penn Valley, CA 95946

Rise to the Occasion

We are fortunate that during the unstable economic period that a viable project to reopen the Idaho-Maryland Mine has been proposed by Rise Gold. The project will diversify and reinvigorate our local economy that has become stagnant as a result of COVID-19, reliance on an unreliable economic engine, tourism, that is dependent on availability and abundance of disposable income for travel.

For those that are unaware, the project has been studied three times in the last 30 years, by Emperor Gold (1993), Emgold (2005-2009), and Rise Gold (2022-2023). The Idaho-Maryland Mine, its history, potential impacts, and mitigation measures to reduce potential impacts to less than significant impacts are well known. Also well know are the tactics of Not in My Back Yard (NIMBY) groups that now are affiliated with Community Environmental Advocates (CEA), one of which is the former Citizens Looking at Impacts of Mining (CLAIM-GV) for whom a co-founder was Ms. Heidi Hall, a County Supervisor. Ms. Hall went on record during the Emgold DEIR public meeting as being against the proposed re-opening of the Idaho-Maryland Mine Project.

There are two other well-known NIMBY groups that have openly opposed the project, South Yuba River Citizens League (SYRCL) and the Sierra Fund formerly led, respectively, by Caleb Dardick, currently the County Interim CEO, and Elizabeth Martin. Is there any question as to why The Union has had and published so many letters and articles opposing the proposed project!

It is curious that individuals and representatives of organizations that opposed the Emgold 2005-2009 project to have become embedded with local government agencies. Could that be the reason the County staff report has proposed two paths for the Planning Commission to consider on May 10, 2023, one denying the project and the other approving it?

In accordance with the 1975 California Surface Mining and Reclamation Act (SMARA) that Significant Mineral Deposits (i.e., those associated with the project) the County has the obligation to comply General Plan Goal 17.1 which states: "Recognize and protect valuable mineral resources for current and future generations in a manner that does not create land use conflicts."

Could it be that the County recognizes that since it has allowed land use - residential developments adjacent to the Brunswick project sites that have

created land use conflicts associated with the reopening of the Idaho-Maryland mine?

The County Plan Objective 17.1 states: **"**Protect valuable mineral deposits from intrusion by incompatible land uses that will impede or preclude mineral extraction or processing. Promote the proper management of all mineral resource activities in the County and minimize the impact of extraction and processing on neighboring activities and the environment in general."

Could it be that the City of Grass Valley recognizes that it has allowed residential and mixed-use developments proximate to the historic Idaho- Maryland mine (i.e., the Loma Rica and Whispering Pines business park) that have created land use conflicts associated with reopening the Idaho-Maryland mine?

The City of Grass Valley Mineral Management Element (ratified by the State Mining and Geology Board states its goals are to:

"1. To protect where feasible valuable mineral deposits from intrusion by incompatible land uses that will impede or preclude mineral extraction or processing.
2. To promote the proper management of all mineral resource activities in the city and to minimize the impact of extrac-tion and processing on neighboring activities and the environ-ment.
3. To work cooperatively with Nevada County and other agencies to coordinate mining and reclamation activities that affect or impact the city within and near the city planning area."

To facilitate the implementation of the goals cited above, the City establishes a Mining and Reclamation Combining Zone (MRCZ) that allows for mineral development for the project's Brunswick and Idaho Maryland sites. It is curious that the City has documented opposition to the project.

It is important to acknowledge that reviving and stabilizing the County's economy will be linked to reestablishing the mining industry with the reopening of the Idaho-Maryland Mine. Recognizing the project is consistent with the County and City General Plan policies and that the potential significant impacts (i.e., construction noise, traffic, aesthetics) are mitigable, the time is right to rise to the occasion and say "Yes – Mine."

Dear Nevada County Supervisors and Planning Commissioners,

I have already written about my opposition to the re-opening of the Idaho-Maryland Mine. You already have a long list of reasons to not allow this project to proceed. Please take them to heart.

At the same time, please do NOT certify the final EIR. I am concerned about the environmental effects that are not sufficiently considered or mitigated.

Yes, there would be benefits for some from the mine, but there are too many liabilities for too many of county residents.

Thank you for being wise decision makers on behalf of our earth, air, water, and living creatures.

Dear Matt Kelley,
My comment is here in the body of the email and also attached as a Word document. Thank you.

Dear Planning Commissioners and Board of Supervisors,

I am a 17 year resident of Grass Valley and in the interest of protecting the air we breathe, water we drink, our economy, small town culture and values, physical and mental health, socio-economic health, and overall safety and livability, do the right thing. That is, deny the IMM project and do not certify the FEIR.
Brilliant minded, informed, community invested constituents with keen foresight have provided solid evidence that the FEIR is seriously flawed and the IMM project clearly violates Nevada County's General Plan. You have all the research, comments, and supporting evidence of these brilliant minded, community caring folks who care for the right reasons. I respectfully ask you to review this evidence and exercise your due diligence and consideration.
Again, please deny the IMM project and do not certify the FEIR.
In appreciation of your service,
Kathy Ogburn

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Katz. I live at 13094 Daisy Blue Mine Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live on land in the Cement Hill area that is still healing from the impacts of 19th century mining. The EIR is short-sighted and deserves to be rejected, as well as this project. We need to think seven generations ahead. Will our descendants have to live with the destruction caused by a wrong decision motivated by greed for short-term gain? And based on the criminal activities of the management of Rise Gold in Canada, can we trust anything they say? (NO!)

Sincerely,

Richard Katz

I do not support the opening of the mine, I believe it will bring many more problems into our community than benefits. The known and unknown risks are too great. Please preserve our community.

Dear Supervisors,

Most of the discussion about Rise Gold and the reopening surrounds environmental impact or economic benefit, i.e., will it help the economy, bring jobs, etc.. I need to point out that there is perhaps an equally important reason to stop this mad short term money grab by a few.

Some background… I am a recently retired professional electrical engineer. After college I worked with a major utility, an instrumentation company, a large multinational consulting engineering firm and then, in 1994, I started my own company and built it into a leading system integration firm. Before starting my own company I worked in significant positions at a range of corporations and gained extremely valuable, in fact, completely necessary experience. I established a great reputation within the community of companies in our industry. In other words, I built a strong resume. Without that resume and experience I would never have been able to get contracts with Santa Clara County, Alameda County, The State of California, Federal Contracts, many fortune 100 companies, etc, etc, etc… In fact, in some cases if I could not demonstrate that a contract would not constitute more than 10% of my business revenue, I would NOT get the contract. They cared, and rightly so, about hiring a business without the resources to absorb some bumps in the road. I believe this was a sound practice because I've witnessed well meaning companies and their employees get hammered (kicked off projects, sued, bankruptcy) due to a single mistake on a large project. I believe you, as our elected reps and stewards of our great county, should care at least as much.

My point and I don't want this to be personal but unfortunately, we have no choice. This is not Rio Tinto, Newmont or Barrick (huge mining corps).. There is one person running the show. Rise's web page has a listing of management who appear to be elsewhere doing other things which makes sense when this not ever going to be a full time gig for them. They are there for window dressing, a common theme in stock speculation. Why are we, for such a high risk project, even considering a company that has NO resume of successful projects. Your own purchasing department would not hire them to wash windows without demonstrating some experience. You would never allow a major construction project to be engineered by unlicensed persons or constructed by a company having only one failed project to their name. Yes, I know you aren't contracting with Rise Gold but you CANNOT close your eyes to the facts. If you compare just about any successful business persons LinkedIn page to Rise Gold's CEO, you'd understand what I'm saying. ZERO - He lists Rise Gold and a university with no endorsements or previous experience (and apparently we know why)… When you invest in a company you are investing in people (or a person). Unfortunately, it appears Rise Gold's investors have not done their homework (or perhaps they are looking for losses to

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dee Smith. I live at 582 Morgan Ranch Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 and have lived in Nevada County since 1971. I moved here to raise my family in a safe environment with fresh air and great tasting water. There were other factors as well. The beauty, charm and people.
Operating a gold mine in a residential area practically in town will distroy the beauty, air, water and it's supply as well as noise and create traffic congestion.
Nevada County has everything to lose and nothing to gain from allowing the mine to open. I could go on, but I am sure you already know the irreversible damage it will bring. You were elected to take care of our county for us, not a mining company! I beg you to vote NO!

Sincerely,

Dee Smith

Dear Nevada County Supervisors and Planning Commissioners,

My name is Theresa Finn. I live at 620 Kate Hayes St, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 next to several mines. I’m writing because suddenly I’m being inundated with advertisements for the Idaho-Maryland Mine. Expensive. Glossy. Tempting.

You are being asked by a corporation, that like so many other corporations, doesn’t care about the impact its operations will have upon a community. This one is offering high wages. But, how many locals will benefit and at what cost to our community? Actually, most of the money will not come to our county, but go into the pockets of CEOs and shareholders.

I think it’s time that we NOT be tempted by money, but plan for the future, the health of the environment and the overall welfare of our communities. We need to ask

ourselves, will the arrival of this corporation lower housing costs? Will it ultimately degrade the local eco systems? Will it cause more pollution? Will it bring even more people and exasperate the already out of control housing costs and shortage? Just remember, the corporation DOES NOT care about our county, it only cares about its self and it's stock holders!

Please vote NO and plan for the health of our county. Let's plan for the future of the health of our land, not line the pockets of a few.

Sincerely,
Theresa Finn

Dear Nevada County Supervisors and Planning Commissioners,

My name is Maureen Collins. I live at 19470 Broken Oak Ct, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a self-employed home owner in Penn Valley (District 4) since 2016. Beyond that, I've been more loosely affiliated with Nevada County for my entire life.
The proposed mine strikes deep fear in my heart. If you allow the mine to go forward, the damage that will be done will be impossible reverse.
The tantalizing prospect of jobs and increased revenues will most likely never materialize. One only has to look at the track record of the company behind this proposal to see what is in store for Nevada County if this is allowed to go forward.
Please, please, PLEASE, just say NO.
Thank you.

Sincerely,

Maureen Collins

I absolutely say NO to the mine. This is a ridiculous exploitation of the town and county resources. There is a huge amount of historical evidence to show that mine companies-especially Canadian owned- leave devastation, abuse resources and landscapes, drain aquifers, leave poison, disturb neighborhoods with noise and heavy machinery and vehicles, abusing the precious land. There are so many jobs available in town and many businesses are closing at this time as they cannot get workers. we do not need this. There are scams all over facebook from this company, faking names to promote their pursuit. NOT one single person I hear of wants the mine. EVERYONE is against it and wants to protect out precious town from being exploited. Looking at history it is really really time we learn from our mistakes of exploiting the precious land and being greedy. Money will not buy us fresh air and water. NO TO THE MINE 1000%. Please listen to your people.

Sincerely,

sora oneiga

Dear Nevada County Supervisors and Planning Commissioners,

My name is Suzanne Hall. I live at 15169 Lewis Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 and have lived here since 2009. My husband and his family have grown roots here since 1978 and have seen many changes since then. While change is somewhat inevitable we never imagined that this town would even consider regressing. We have enough dangers facing our children and our community without adding toxins to our water and air. Not to mention the fact that humans are not the only ones who will be affected by this proposed project. Animals and ecosystems will no doubt be poisoned, lose drinking water and freedom of movement. Dr. Kane reported that his grandchildren will be breathing poorer air quality for decades to come if this passes. Please don't pass this mine!

Dear Nevada County Supervisors and Planning Commissioners,

My name is Stephanie Harper. I live at 3460 Cold Springs Rd, Huntingdon, PA 16652.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

Stephanie Harper

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jamie Legon. I live at 10568 N. Ponderosa Way, Rough and Ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

This is a horrible idea that disregards any semblance of understanding the public interest. Just the amount of water ALONE makes this insane. Not to mention that the overall environmental impact would be gigantic, affecting thousands of people and families and make minuscule the few hundred jobs that the mine would provide. Thumbs down!!!

Sincerely,

Jamie Legon

Dear Nevada County Supervisors and Planning Commissioners,

My name is Caulen Lauria. I live at 13784 Greenhorn Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The arguments for Not certifying the EIR are overwhelming.Please stop this madness now. This county will suffer losses never before seen. Home values diminished drastically. Wells run dry or contaminated. Air contaminated. Health degraded. Businesses gone. Can you think of anyone that wants to live in a mining town? Tourism gone. Citizens moving out. County tax revenue gone. Jobs for the mine will Not be filled by locals. The single most destructive industry that would bring this county to it's knees. Do Not allow rezoning to heavy industrial wasteland. Do Not certify the EIR. It will only leave this process open for other companies to do the same thing, again and again. The people are suffering Now, from this attack. Impacts are already affecting your constituents!

Sincerely,

Caulen Lauria

Dear Nevada County Supervisors and Planning Commissioners,

My name is Lina Restrepo. I live at 12191 Boreham Mine Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in Grass Valley off Brunswick near Horseman’s club -district 3. We are in HUGE opposition to this Mine mainly because it will take away the from the natural beauty of this county. We grew up here and came back two years again because we wanted to be back in this beautiful community surrounded by water, mountains, trees and green air. This mine would take that all away and also devalue the property value of all our homes. I’m addition the amount of tragic that will increase on Brunswick all day along with the noise will destroy the joy of living in a mountain town. NO to the MINE!!!

Sincerely,

Lina Restrepo

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We are in the Deer Creek Park neighborhood and value our quality of of Nevada City and our family and children value clean water, clean air and the quiet environment we live in and do not want Nevada County to revert to an industrialized era. Any temporary value created by an extractive mining operation will be far less than the economic damage from decreased tourism, diminished home values, health impacts and lower quality of life of residents.

Sincerely,

Seth Harris

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donna Peizer. I live at 347 Horizon Circle, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am also strongly opposed to the certification of the Final Environmental Impact Report based on the analysis of its deficiencies as set forth by Mine Watch Nevada City, particularly if the commission decides against reopening the mine. To certify the report under such circumstances in light of its deficiencies would create a legal inconsistency that could be used to reopen the debate over local mining in the future.

Sincerely,

Dear Nevada County Supervisors and Planning Commissioners,

My name is Micque Li. I live at 14593 Highland Dr., Apt. B, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Do any of the individuals with the final say live anywhere near this proposed mine?! Even if not, air, noise, water all travel, and would horribly impact everyone in western Nevada County to no end. This is a no-brainer. But if you have more of a brain than that, this possibility is beyond reason. Let's be real, this is a potentially devastating situation, and the destructive implications for our county would be irreversible. We and our loved ones, friends, neighbors, are living not just for the moment, but for every day ahead. Foresight is essential. Irrevocably NO!

Sincerely,

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Benigno. I live at 14677 You Bet Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello,
I am a homeowner in the Sonntag Hill area of You Bet Rd. My wife and I purchased a beautiful home on a wonderful 5 acre property and moved to Grass Valley in November 2021. We have visited Grass Valley many times over the last 15 years to share this wonderful area with our friends who live in Alta Sierra. We love the natural beauty of the area and love to be outdoors whenever possible. We often kayak, mountain bike, hike the many trails in the area. When hiking at Empire Mines, one just has to look at the environmental damage the mining industry caused in that area. Please, please DO NOT approve this Idaho-Maryland mining project. IF you want your kids to be able to enjoy this unique community, you will vote your conscience. There is vastly more at stake here than the creation of a few jobs. Is it worth the destruction of our environment? Do the right thing and vote NO on both

the project and the EIR. Do not be a corporate pawn. Your community is watching you.

Sincerely,

Richard Benigno

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of David Whitehead at djw359@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Whitehead. I live at 100 Bawden Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My spouse and I live in District 3 in the Washington Hill neighborhood, for seven years now. We invested in the community by buying an older home that was in disrepair, and then hiring local contractors to bring it back to life. We volunteer here in several local nonprofit organizations. We feel that this community has given us so much, and we give back. This mine project threatens all that we have done and what we dream to do.

I already provided the Board my technical comments on the FEIR. The staff response did not recognize the importance of this mine project impacts and continued contributions to degradation of our environment. They cast aside real impacts because of outdated standards. They ignored recent case law. They defended the ridiculous estimates of carbon emissions provided by the applicant. This project would violate many of the most recent scientific realities of climate

change. Staff is highly motivated to provide a recommendation to approve this flawed FEIR, because they want you to approve of the job they have done. But make no mistake: this FEIR does not adequately advise the Board about the actual impacts this project would make against our community.

Please do not approve the FEIR. The Board must know more than what has been given in order to make a reasonable decision. The Board would have to accept a horrific set of Overriding Conditions in order to go ahead with the project. The impact on our lives, our children, our seniors would be devastating. Grass Valley and Nevada City would be culturally and environmentally decimated.

Realize that these communities have invested heavily over the past six decades in creating a place that rejects the devastation of the legacy of the mining industry. Approval of the FEIR and this project would be an awful rejection of all that investment, and a complete denial of the threats of climate change on our world. Our beloved Nevada County would be saying to the world “We don’t want to be part of any climate change solutions. No. We want money!”

Don’t participate in this denialism. Help us reclaim our world from corrupt extraction corporations who care not one whit about us and our world. All they care about is wealth, for themselves. Why would we want such a destructive force in our community?

Thank you.

Sincerely,

David Whitehead

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen BAXTER. I live at 11458 Northview Dr, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have resided in District 1 for over twenty years and I am a business owner in this area. I moved to Nevada City to enjoy the quiet, beauty and natural habitat that we have. Restoring the mine would significantly alter this environment. I am greatly concerned that the effects of the mine would endanger our water tables and bring unwanted industrial noise and pollution to the area destroying the quality of life that we appreciate.
Tourists that come to this area would likely be impacted as well as the residents of the community.
Also alarming is the history of Rise Gold and the problems they have created in other endeavors.

Please DO NOT APPROVE the reopening of the Idaho Maryland Mine.

Sincerely,

Ellen BAXTER

Dear Nevada County Supervisors and Planning Commissioners,

My name is April Anderson. I live at 14289 North Bloomfield rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I own a home in district 1. My family and I come here to enjoy the beautiful nature and welcoming community. The mine is overwhelmingly opposed by the community so I find it really troubling that the county is putting its citizens through this long drawn out process. Re- Opening a mine in a place where that industry has been closed for decades is not a private matter. There are environmental impacts, health concerns in an already poorly scoring air quality place, among many other downsides that deserves the right of the public to decide. This is a big for profit company opening the mine, with a bad track record, that is not going to be spending its profits locally. Nevada county is full of wonderful local business and community that really prioritizes supporting local. This mine goes so far against what the people want in so many ways. Please deny this mine.

Sincerely,

April Anderson

To: Nevada County Planning Commission and Board of Supervisors

From: Nancy Piette, 10679 Bragg Ave, GV, 95945

Re: Proposed Idaho-Maryland Mine (IMM) project

Date: May 3, 2023

Dear Nevada County Planning Commission:

I've lived in Nevada County 40 years and raised my children here. I love this county and know you do too. I'm writing to urge you to deny certification of the Final Environmental Impact Report (FEIR) for the proposed Idaho-Maryland Mine (IMM). I also urge the county to deny the proposed IMM project entirely. Here are some of the reasons I hope you'll do that.

Obsolete Threshold used: The FEIR's conclusions on Greenhouse Gas (GHG) emissions are based upon an obsolete threshold (for significant) measure of 10,000 Metric Tons (MT). Our county should acknowledge current climate studies, our state goals, and CA SB-32 by using a net-zero threshold. Newer projects (the analogous Sargent Ranch Quarry project in the Bay Area) have used a net-zero significance threshold for GHG emissions. The IMM FEIR should be using a net-zero threshold as well. Our county should be using the data from CA SB-32 and state goals in this FEIR.

GHG "mitigation" during construction phase only: How reasonable is it that the FEIR would allow Rise Gold to "mitigate" GHG emissions with carbon offsets only during the construction phase? For an 80 year project? GHG mitigation is important right now, and only becomes more significant in the future.

Incomplete Emission projection: The FEIR doesn't add in the emissions (over 4,000 MT annually) that cement manufacturers would generate in making cemented paste backfill of mine tailings. Those 4,000 MT, when added to the 9,000 MT, exceeds even the old obsolete threshold measure of 10,000 MT of GHG annual emissions as having a significant impact.

Electricity Usage: The proposed mine's electricity usage would obliterate the goals for residential electricity reduction that are proposed in the Energy Action Plan for Nevada County. Our county shouldn't handcuff our

future development by allowing one project to use so much electric energy.

Inadequate FEIR plan for mine waste: Our air quality, which is already compromised in summer months, would be at more risk if the FEIR is approved. Only 3 core samples were used to study Asbestos concentration, and nearly half of the sample material exceeded the 0.01% threshold. This test data is too sparse…no statistician would approve of the sample size. Managing asbestos emissions isn't easy, and there isn't enough evidence that Rise Gold would be able to stay under the 0.01% threshold limits.

Groundwater and Wells: The FEIR didn't adequately address deficiencies found by expert reviewers. A computer model used sparse bits of well monitoring data from over 15 years ago, out of compliance with the CEQA (California Environmental Quality Act). Experts say that the 10% drop level for "significant impact" determination is an invalid choice. Also, there's no requirement in the FEIR for 3rd party liaison to negotiate issues if problems arise for homeowners with wells.

Rise Gold CEO's poor track record: We know that Ben Mossman's most recent Canadian business failure has resulted in criminal trials for alleged environmental misconduct and economic practices that ended in bankruptcy. Knowledge of the details of this are important reasons to disapprove Rise Gold's project here. Even if the FEIR was adequate, I would urge denial of the Rise Gold project. The quality of life in this community is too valuable for it to be risked with a company run by this CEO and this company.

Be careful of certifying this flawed FEIR then denying Rise Gold project: …because in the future another applicant could buy the property, overcome objections, and get approval to mine. Then our community is still left with all the potential risks to air quality, water quality, noise, decline of tourism and property values.

Best Regards for the vitality of our community,

Nancy Piette

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Pamela Whitman at pamwhitman@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Pamela Whitman. I live at 14311 Cahill Ln, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for 25 years and strongly urge you to reject both the Rise Gold Mine proposal and the FEIR.

Our county is at risk. A Canadian-based company wants to reopen a gold mine under Grass Valley’s feet, changing the character of the community we love and impacting our air, water, and quality of life.

The mine has significant and unavoidable environmental impacts that are inconsistent with the County’s General Plan and endanger this community's health and quality of life – including aesthetics, traffic, and noise. There are also serious deficiencies in the Final EIR that put the County and its citizens at further risk, including air and water.

Community experts recently reviewed the report and found that even the low-end economic numbers were overly optimistic, that real estate estimates were a big miss, and that the possible economic benefits to the community would be overshadowed by a lot of downside risk.

Gold mining is a serious threat to wells and area groundwater. Water is a precious resource—more precious than gold for those of us who live here—all the more so because of continuing concerns about drought.

Nevada County already gets an F rating when it comes to air quality and has 2 times the average in lung disease. Reopening the mine will make it worse.¬

Nearby residents will see reduced quality of life and lower property values. One can reasonably assume that the presence of the mine would lower property values throughout the surrounding area, as it would affect the whole quality of our environment and community.

A yes vote for the mine is a no vote for climate change. This is not the time to be bargaining away our future.

Mining is a toxic business that requires compliance monitoring we're not set up to handle.

The company that wants to open the mine has shown it can't be trusted.

Even people who generally support mining are against this project. The project is too close to an established community which creates a much higher level of risk if bad things happen. Gold is not a high priority mineral to support the growth of green technology or medical science.

Please stand up for Nevada County, all of us whom you represent—and those not even born yet who will be subject to the results of your decision for the next 80 years—and say no to this project. Mining is our past, not our future.

Sincerely,

Pamela Whitman

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Madeleine Dowd. I live at 14023 Live Oak Lane, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I reside in District 3, in the Live Oak Estates area. Several of our neighbors rely on their wells for water. Their homes are over the outstretched area of the mine. We live next to Hwy 174. I am appalled that the county is even considering this mine, given the immense amount of truck traffic, noise, pollution, and polluted water that will be pumped out of the mine. Highway 174's traffic has grown over the years and is almost unsustainable now.

We know Rise's history of pillaging and leaving the area an environmental nightmare for the residents to clean up. How can we think that they are a changed group? The jobs are not a for-sure thing for our residents. Let's invite clean manufacturing and technology businesses here. Let's create a business climate that makes us

desirable, builds a tax base, and doesn't pollute and ruin our quality of lives.

Please do the right thing. The mine simply cannot be allowed.

Sincerely,

Madeleine Dowd

Dear Nevada County Supervisors and Planning Commissioners,

My name is Oscar Barba. I live at 17790 Jones Ridge Ridge Rd, Grass VAlley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have been a resident of Nevada County since 1973. I've witnessed the development and growth
within our beautiful and unique county. Some development and growth was ill conceived, most has been
well thought out and the desires of residents considered and balanced with business and economic goals.
This mine project is not good for the county, detrimental to the environment, and poses undue factors that affect our quality of life. Please say NO to the EIR and to the re-opening of the mine.

Sincerely,

Oscar Barba

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dawn Areson. I live at 12306 Starwood Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 Two miles from the proposal to open the mine on Idaho Maryland .I have lived in Nevada City area for 5 years. I moved up here from the bay area to retire in a beautiful quiet peaceful area. I call it God's country. Our roads are quiet country roads with no traffic. Please vote no to the mine. This will destroy what little we have left of our beautiful county. We don't need that kind of business that is going to work 24 hrs a day to destroy our water, our wells, our land, our roads, our wildlife. No matter how much money they throw at our cities and county, it will never make up for the destruction they will cause to us and our beautiful area. Once the gold is gone.They will be gone! Please Please vote no.

Sincerely,

Dawn Areson

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dillon Rice. I live at 12606 Towle Ct, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I recently moved to Grass Valley and bought a home off of wood rose, across from where the potential mine site is. I am greatly concerned about the noise generated by continuous 24 hour operation of the mine - especially between the hours of 10:00 PM and 7:00 am. I believe this will violate existing noise ordinances for residential areas and I am not in favor of making exceptions to rules for large companies. Im also concerned about the state of the road. Myself and several others own motorcycles - which are susceptible to loose gravel in the road. Is Rise going to be paying to repair the road every year after they drive extremely heavy trucks over it day after day? This is a main road for the area, will their operations cause unnecessary traffic?

Probably my biggest concern is 24 hour operations will do to my property value. Is

the tax assessor going to immediately drop our values to reflect the fact that this mine will make our area more undesirable? I will hold the county directly responsible for any loss of property value.

The best option to prevent any issues is to reject the project.

Sincerely,

Dillon Rice

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Loraine Webb. I live at 11110 White Oak Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a long-time District 1 resident, I urge a strong denial of the specious Rise Gold mine project, as well as the faulty EIR that our current Planning Commission has erroneously approved. The EIR is indefensible legally, economically, environmentally, and morally... and, if approved, the County will be pressed to allocate monies to defend the faulty EIR against ongoing and expensive legal challenges, at the very least. A vast majority of caring citizens are united, and will not let this stand.

Sincerely,

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Janet Cinquegrana. I live at 140 Buckingham Ct, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a home owner in District 3 in Grass Valley. My husband and I moved to Grass Valley 7 years ago because of its natural beauty. I am so afraid that beauty and natural environment would be ruined if a gold mine should be permitted to reopen here. Do not approve the EIR or the reopening of the Idaho Maryland mine. Please don't destroy this community and its environment.

Sincerely,

Janet Cinquegrana

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Maria Nelson at marienmail@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Maria Nelson. I live at 13306 Country Heights Dr., Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Wildwood Heights across from Lake Wildwood in District 4 since 2006 and I am alarmed about the possibility of reopening the Idaho-Maryland mine. I am particularly concerned about the past business practices of the CEO of Rise Gold, Ben Mossman. His prior company polluted tribal waters, went bankrupt and Canadians were left with the bill. In 2020 he was on trial in Canada on federal and provincial charges related to spills at the mine. This indicates a disregard for regulations and poor management practices.

People have not moved and will not continue to move here to live with the uncertainty and risk of a business and CEO so out of step with the General Plan and policies.

I strongly urge the decision makers to deny the mine project and to say NO to certifying the EIR.

Sincerely,

Maria Nelson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dave Wellhausen. I live at 140 Buckingham CT, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a home owner in District 3 in Grass Valley. I am writing this letter to plead with you to vote No on the reopening of the mine and to not accept the EIR. The mine would be a disaster for this community and the EIR is legally deficient and It fails to adequately disclose and evaluate the mine proposal’s significant environmental negative effects.

Sincerely,

Dave Wellhausen

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Shannon Ross Winters. I live at 12202 Nuthatch Ct., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The County has no obligation to approve the Mine.
The many environmental impacts associated with the mine, as well as its inconsistency with Grass Valley’s and the County’s land use plans provide ample justification for denying the mine project. The Final EIR (FEIR) also has serious deficiencies and should not be certified. It fails to substantiate several claims that impacts would not be “significant” and does not comply with CEQA (California Environmental Quality Act).
THESE PEOPLE FROM CANADA (WHO HAVE ALREADY DESTROYED THE ENVIRONMENT AND ARE INVOLVED IN LAWSUITS SHOULD NOT BE ALLOWED TO DESTROY OUR WELLS AND COUNTY!!! PLEASE DENY THIS

HORRIFIC PROJECT. I have asthma and would have to move. This is a beautiful area that would do well with tourist income and keep our environment beautiful and clean.

Sincerely,

Shannon Ross Winters

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Heidi Belforte Breuer. I live at 18354 Raccoon Trail, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The current EIR is drastically deficient. Please do not approve it as it is not sufficient for use now or in the future.

Re-opening the Idaho-Maryland Mine is a terrible idea, as it will create pollution this county, state and indeed planet cannot manage by way of noise and air. There are too many questions as to how the planned water displacement (millions and millions of gallons!) from the mine will effect local and non local potable water sources. How ever can we justify such a rape of the earth in the name of gold? Greed and money are never ever a fair tradeoff for our natural resources. Additionally, Ben Mossman cannot be trusted due to his horrifying record of leading the abuse of the Canadian mining site he was recently in charge of. This Mine must absolutely not be approved

and I'm trusting you to know this without this, my third letter to you. I am really concerned.

Sincerely,

Heidi Belforte Breuer

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Linda Sutter at lindasutter@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Sutter. I live at 318 Drummond St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The arguments for not certifying the EIR are overwhelming. The EIR is legally deficient. It fails to adequately disclose and evaluate the mine proposal’s significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine.

Thank you for your time and consideration concerning such a vital matter.

Warmly,

Sincerely,

Linda Sutter

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Randi Pratini. I live at 10222 Elliott Way, 10222, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

This is either my 3rd or 4th letter to let you, the Nevada County Supervisors and Planning Commissioners, that as a tax paying, Nevada County resident since 1995, I DO NOT want you to pass this mine project,

There is no way to account for pending damages to our already taxed water supply, to all of nature, to the air, to the roads and to all residents of the county (as well as other counties that heavily loaded trucks and increased traffic will pass through).

There are many other reasons not to let this mine happen; such as, Rise's questionable reputation accrued via other projects.

Then the matter of the EIR. DO NOT approve the EIR. Even if this project is denied, certifying the EIR would only lend credence to a document that fails to adequately disclose and evaluate significant environmental impacts and violates numerous requirements of state law. Worse still, the certified EIR could be relied on in the future to fast-track the approval of another mining proposal!

Sincerely,

Randi Pratini

My name is Richard Katz. I live at 13094 Daisy Blue Mine Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live on land in the Cement Hill area that is still healing from the impacts of 19th century mining. The EIR is short-sighted and deserves to be rejected, as well as this project. We need to think seven generations ahead. Will our descendants have to live with the destruction caused by a wrong decision motivated by greed for short-term gain? And based on the criminal activities of the management of Rise Gold in Canada, can we trust anything they say? (NO!)

Sincerely,

Richard Katz

Dear Nevada County Supervisors and Planning Commissioners.

Our names are Nathan Cotten and Janet Peake. We live at 12074 Dogwood Road, Grass Valley, CA 95945.

As citizens of Nevada County, we are asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk. Beyond the risks, there are definite unavoidable consequences for those of us who live near the mine site if this project is approved. Please don’t let this happen.

Sincerely,
Nathan Cotten and Janet Peake

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kim James. I live in Nevada City, CA.

I urge you **NOT to certify the FEIR** and firmly **deny the request to re-open the Idaho-Maryland Mine** for all of the common sense reasons concerned citizens have been repeatedly bringing to your attention. It's time to put this issue clearly to bed while there is still time.

I will be present on May 10th.

Thank you for doing the right thing.

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My family lives on Anchor Lane in District 3, about a quarter mile from the proposed Idaho-Maryland Mine and within the mineral rights boundary. We implore you to protect our health and quality of life by voting NO on reopening the mine, as well as voting against certifying the Final EIR.

Having read the FEIR, we do not think that the risks to our well and groundwater have been properly assessed. Spotty baseline data from 15 years ago does not provide a good foundation for a real monitoring system for those of us facing mining and blasting under our homes for the next 80 years. Our family depends on our well for drinking water and are terrified that the proposed mining activities in fractured geology will dewater or contaminate our only source of clean water. Furthermore Rise Gold has not offered any kind of mitigation, monitoring, or guarantee that we would be offered a swift resolution should their mining activities result in loss of our well. Our property, along with those of all our neighbors, would become nearly worthless without a functional water source.

We are raising two children in Nevada County and worry that their future health and safety will be placed at risk by this mine; including diesel exhaust and asbestos in the air, constant noise and traffic from mine operations, and increased risks of climate change. It is a risky project, made even worse by the fact that Rise Gold does not have a solid track record of mining or of compliance with relevant environmental regulations. Rather, their executives have a record of bankruptcy and failing to meet environmental and workplace safety

standards.

Previous generations in Nevada County learned the hard way that mining leaves a toxic legacy for us, their children and grandchildren, to clean up. It would be highly irresponsible for us to repeat that mistake. Please vote NO on the IMM project and the FEIR to protect us from these deadly risks.

Your constituents,

Laina and Matt Levy

Dear Planning Commissioners

My name is *Dawna Johnson*. I live in District 4 on Orion Way in Grass Valley,

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

In addition to asking you NOT to recommend the "80 year" permit be issued for this project, I ask you to NOT accept the Final Environmental Impact Report. Deficiencies remain that were pointed out to the county during the review of the draft that were either ignored or inadequately addressed. An approval gives the appearance that those inadequacies don't exist and/or don't matter which is just not true. I am under the impression the proposed mitigations listed, in the final report, have been deemed inadequate by professionals who have written you. Some mitigations seem to be missing all together. What happened to the $14million bond NID stated they would need, at the very least, to cover possible water supply issues? I had a long career in construction, owner and CFO for several decades, and know the importance of bonding. In my opinion, and in lieu of the principles history, there is no bond large enough for this project. Damaging the environment and diminishing the quality of life of the citizens of this county should be avoided at all costs.

Additionally, it not only seems to be in conflict with the general plan, it appears to undo any environmental progress we are striving for and as mandated by the state.

Personally, as a disabled and fixed income senior, with health issues that are exacerbated by bad air quality and noise, I am concerned about my quality of life, as well as that of others, the many issues regarding water and property values. Our home is, as it is for many, our biggest asset and a major part of our retirement planning. With family and financial constraints, we cannot just move away.

Please, do not recommend the approval of the permit AND, MORE IMPORTANTLY, the FEIR.

Thank you for taking the time to consider my concerns,
Dawna Johnson
District 4

May 4, 2023

Nevada County Board of Supervisors
950 Maidu Avenue
Suite 200
Nevada City, CA 95959

cc. Julie Patterson-Hunter
Clerk of the Board

Dear Nevada County Board of Supervisors and Nevada County Planning Commission,

We are writing to express our implacable objection to the proposed Gold Rise mining operation that is being considered by Nevada County in our neighborhood. We have read both versions of the EIR in addition to the Nevada County Planning Department's Staff Report. Not only is this project likely to negatively effect our property investment, disrupt our environment and the high quality of living in the region, I do not like what I have read about the company making the proposal and its long history of leaving communities like ours holding the environmental clean-up bag, both physically and financially. In addition, Gold Rise's proposals for dealing with the millions of tons of waste, toxic or not, are not economically feasible and their conclusions about toxicity were based on inadequate sampling as noted by SYRCL and the Air and Water Quality Boards:

"For a conclusion to be meaningful, the sample size must be appropriately representative. Of the core samples Rise Gold acquired from Emgold Mining, and the additional 67,500 linear feet of exploratory drilling Rise Gold conducted, they chose to test only 11 feet for potentially hazardous chemicals. Those 11 feet are supposed to accurately characterize more than 25 million tons of waste rock to be produced over the life of the mine. The testing for asbestos represents less than 2/10,000 of the total rock to be mined over the project lifespan. The Air Quality Board and Water Quality Board both state that the samples analyzed are inadequate to accurately characterize the potentially hazardous chemicals which could leach into our ground water, surface water, or be released into the

air."

Given that the scars from the devastation of the mining from the not-so-distant past are still with us, we do not understand why the County is even considering this project or partnering with a company of this reputation.

This project will likely create a super-fund site in the middle of our beautiful town, not to mention the unavoidable day-to-day degradation of having a huge amounts of industrial waste impacting our air, roads and streams. I don't see any proven and practical plan for toxic clean up in the long term, I don't even see a mitigation plan (or who will foot the bill) for the day-to-day impacts on roads, air-quality and noise from the trucking required alone. I shudder to think about the impact on Wolf Creek and our watershed.

There is little demand for gold technologically, therefore the sole beneficiaries of this project are investors and jewelers, not the citizens of Nevada County. As for jobs, there are many other ways to invest in the local job market that will support our way of life, our property values and our environment. Forest restoration and climate transition projects leap to mind. Those are projects that will help the entire community into a better future.

Mining is the past. Grass Valley is no longer an industrial town. Let's not be the laughing stock that was duped into re-opening a site generating a massive amount of waste, both toxic and non, in the middle of our beautiful, bedroom community full of children and retirees. Our community doesn't need this project. It deserves much, much better.

Sincerely,

Michael and Heather Llewellyn

To the BOS:
Please vote NO to re-open the Idaho Maryland Mine.
Please do not destroy the lives of all of us residents who live near the mine.
My home is within 1 mile of the site and I am scared to death that it and my property will become worthless.
I have lived here for over 29 years and cannot believe I have to stress over my well going dry, the air I breathe becoming toxic, the quiet atmosphere becoming "littered" with the noise from blasting, drilling and endless gigantic trucks hauling the debris and my home, in general, becoming more of a liability than an investment.
Also, please do NOT certify the final EIR because it is just plain wrong. There are 2 major points that the MineWatch group has put forth that on their own should lead you towards a no vote:

- The improper reliance on groundwater data that is over 15 years old as the baseline for determining whether the mining project will have significant impacts on water quality and water supply.
- The failure to mitigate the mining project's air quality impacts, [such as asbestos] even though the EIR acknowledges they will be significant

How on earth can you vote yes knowing full well that the environmental report is full of holes? How can you vote yes knowing you will destroy lives and you will also change/destroy Grass Valley and Nevada County as we know them?

Please! the residents of Greater Greenhorn, Bennet St and the Brunswick and Cedar Ridge neighborhoods need to live our lives peacefully in our homes and not be threatened by all the adverse affects of an old gold mine that should remain closed, as it has been for over 70 years. We are not a mining town anymore and no amount of gold will make up for ruined lives.

Thank you for your time,
Linda Lanzoni

Dear Supervisors,

Most of the discussion about Rise Gold and the reopening surrounds environmental impact or economic benefit, i.e., will it help the economy, bring jobs, etc.. I need to point out that there is perhaps an equally important reason to stop this mad short term money grab by a few.

Some background… I am a recently retired professional electrical engineer. After college I worked with a major utility, an instrumentation company, a large multinational consulting engineering firm and then, in 1994, I started my own company and built it into a leading system integration firm. Before starting my own company I worked in significant positions at a range of corporations and gained extremely valuable, in fact, completely necessary experience. I established a great reputation within the community of companies in our industry. In other words, I built a strong resume. Without that resume and experience I would never have been able to get contracts with Santa Clara County, Alameda County, The State of California, Federal Contracts, many fortune 100 companies, etc, etc, etc… In fact, in some cases if I could not demonstrate that a contract would not constitute more than 10% of my business revenue, I would NOT get the contract. They cared, and rightly so, about hiring a business without the resources to absorb some bumps in the road. I believe this was a sound practice because I've witnessed well meaning companies and their employees get hammered (kicked off projects, sued, bankruptcy) due to a single mistake on a large project. I believe you, as our elected reps and stewards of our great county, should care at least as much.

My point and I don't want this to be personal but unfortunately, we have no choice. This is not Rio Tinto, Newmont or Barrick (huge mining corps).. There is one person running the show. Rise's web page has a listing of management who appear to be elsewhere doing other things which makes sense when this not ever going to be a full time gig for them. They are there for window dressing, a common theme in stock speculation. Why are we, for such a high risk project, even considering a company that has NO resume of successful projects. Your own purchasing department would not hire them to wash windows without demonstrating some experience. You would never allow a major construction project to be engineered by unlicensed persons or constructed by a company having only one failed project to their name. Yes, I know you aren't contracting with Rise Gold but you CANNOT close your eyes to the facts. If you compare just about any successful business persons LinkedIn page to Rise Gold's CEO, you'd understand what I'm saying. ZERO - He lists Rise Gold and a university with no endorsements or previous experience (and apparently we know why)… When you invest in a company you are investing in people (or a person). Unfortunately, it appears Rise Gold's investors have not done their homework (or perhaps they are looking for losses to offset their

successful investments). I don’t know about them but your decisions are more than rubber stamps. Endorsing this scheme is using our future as capital for some outsiders penny stock speculation. The citizens of this county expect you to invest wisely.

RECEIVED

MAY 0 4 2023

NEVADA COUNTY
BOARD OF SUPERVISORS

Board of Supervisors
Attn: Ed Scofield - District 2
950 Maidu Avenue, Suite 200
Nevada City, CA 95959

April 29, 2023

RE: Planning Commission recommendations to Board of Supervisors for the proposed Idaho-Maryland Mine

Supervisor Ed Scofield
We are submitting this letter rather than attending the public hearing because we will be out of the country on the day of the hearing.

We would like to make this simple and ask you to reject the project proposed by Rise Grass Valley to reinitiate underground mining and gold mineralization processing for the Idaho-Maryland Mine. However, this isn't a simple project and therefore,
it requires further comment on our part.

We can't trust Rise Gold and neither should you.
Rise Grass Valley is a subsidiary of Rise Gold.
Rise Gold's CEO Ben Mossman's previous company polluted tribal waters, went bankrupt, and left Canadians with a mess to clean up. Ben Mossman is currently facing trial again in British Columbia Canada to face personal charges related to the Banks Island disaster.

Rise Gold has changed it's name several times. They were originally incorporated in Nevada (which allowed them pursue mining interests legally in the US), but their headquarters have always been in Canada.

Financial
Based on Rise Gold's latest quarterly SEC filing in June 2021 and the status of their outstanding loan, former U.S. Bankruptcy judge Randall J. Newsome believes it is unlikely the company will be able to follow through with reopening the mine.

Our Environment
Environmental impacts unavoidable - The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also serious deficiencies in the FEIR that put the County and its citizens at even greater risk.

General Plan

There are Inconsistencies with the General Plan and multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns.

Legal Considerations - Both the Brunswick and Centennial properties are currently zoned" Light Industrial", which provide a reasonable use of the properties. Rise would need to secure approval of rezoning the Brunswick site to M1-M1 (Light Industrial with Mineral Extraction) in order to proceed with the project.

This is taken from the "background" filed by the law firm Shute, Mihaly, and Weinberger legal representatives to CEA.

"The County should deny the Project and should not certify the EIR. The many environmental impacts associated with the Project, as well as its inconsistency with Grass Valley's and the County's land use plans provide ample justification for denying the Project. If it denies the Project, the County is under no obligation to certify the EIR. Las Lomas Land Co., LLC v. City of Los Angeles (2009) 177 Cal.App.4th 83 (upholding decision to stop preparation of an EIR and specific plan where city determined the project was not consistent with its land use policies); Pub. Res. Code § 21080 (a) (CEQA applies only to projects that public agencies carry out or approve.)"

The following comments are my husband's and mine. We are concerned citizens, tax payers, property owners, voters. We ask that the Board of Supervisors deny both the finalization of the flawed FEIR and the entire reopening of the Idaho Maryland Mine project, because they are NOT in the best interest of our Grass Valley and Nevada City communities and what we need going forward.

Respectfully Submitted

As decision-makers I am asking you to pull back a moment from the mountain of information and disinformation you've received on the proposed re-opening of the Idaho-Maryland mine. I am hopeful you have waded through the weeds and understand the specific planning and environmental issues involved. I am asking you to pause and visualize the mine in full operation: what does that look like? Will you be proud of your decision?

There's no debate about certain facts: there will be negative consequences in water quality and quantity, changes in air quality, in traffic, roadway wear and tear, noise levels and amount of toxic waste. These will go on 24/7 for 80 years.

Mitigation is a trade-off: we'll do 'this' good thing to offset 'that' - a bad thing. The bad thing doesn't go away. Mitigation is a pipe-dream on paper: rarely 100% effective or even doable, too expensive, not guaranteed, rarely inspected, rarely enforced. On top of that, Rise Gold has a spectacularly poor record in the mining industry - one of the most dangerous industries in the world. Why would you trust them? The one thing you can count on with 100% certainty is sooner or later there will be human error. We can only hope no lives will be lost, Grass Valley won't suffer horrendous damage.

Do you really believe the mine will benefit our community? That the meager benefits (dangerous jobs working hundreds of feet underground, more gold mostly stashed away unused in vaults, maybe more money for some stockholders somewhere) outweigh the known risks? It's not just any one impact, mitigated or unmitigated, it's the number of impacts and the accumulated risk factor. This is not an unknown risk, it is a known, documented risk throughout the history of mining. We're promised new technology will protect us, yet we still have mining accidents, oil spills, tanker leaks, toxic drinking water. The environmental risk is unacceptable. The economic risk of signing on for 80 years with a financially weak and unethical company is unacceptable. Please Vote NO on the FEIR, Vote NO on the Mine. Be a hero for protecting our community, be honored and remembered for doing the right thing.

May 7, 2023

Dear Sirs,

We wish to convey our objection of the proposed Idaho Maryland Mine project for the following reasons.

1. The owners of the mine have had many opportunities to contest to zoning changes on the surface of their mineral rights that were incompatible with a future reopening.
2. The EIR that was submitted is deficient in identifying mitigations for air quality regarding asbestos.
3. That the EIR failed to address the significant gas emissions that contribute to greenhouse induced climate change.
4. The EIR 'cherry picked' the data using a 15-year-old baseline to determine whether there was a negative impact to the ground water.
5. Both the Nevada County and Grass Valley City governments have failed in the past to adequately address impacts on traffic from previous projects. This can be observed by daily traffic backup in the Brunswick Basin area and along HWY 49. This project will only amplify those infrastructure shortfalls to the detriment and inconvenience of those currently living in the area.
6. We believe that there will be more jobs and money spent in the area by retaining the quality of the environment that promotes rural living with gradual expansion and growth. This project just replicates the mistakes made in the past.

In addition, we wish to add that we are not against mine development. We feel that the Empire could be safely and sanely reopened. This is because the owners have adequate property (the North Star) to extract and process the ore without interfering with the day to day lives of the citizens who live here. That is as long as the areas involved are properly zoned for those purposes. I feel that the Idaho Maryland Mine has long passed that threshold.

In conclusion, we are against this project and against certifying the EIR.

Respectfully,

Clifford R. Ramos Jr

To the members of the Planning Commission:

My name is Mike French and I am a resident of Alta Sierra. I am opposed to both the proposed re-opening of the Idaho-Maryland Mine and the associated EIR. I strongly urge you not to approve either for the benefit of our community and its residents.

I have attached my comments for your consideration.

Thank you.
MF

The ground is level at the foot of the Cross.

Comments in Opposition to Re-opening Idaho-Maryland Mine

My name is Mike French and I am a resident of Grass Valley (Alta Sierra) and a concerned citizen offering my comments on the proposed re-opening of the Idaho-Maryland Mine by Rise Gold.

I am concerned about the history of Rise Gold and its CEO:

- Apparently no history of ever successfully re-opening a mine or making a profit
- A significant history of major failures in the Banks Island project in Canada
- Demonstrated disregard for rules and regulations by disregarding orders to stop operations after a toxic spill at Banks Island and apparently other violations

Allegations of misrepresentation in the Grass Valley project:

- Submitting bogus and duplicate comments to the County, some supposedly from people known to be against the project and using false data to exaggerate local support

The EIR report:

- Apparently based on old, limited data and contains unsupported claims of minimal impact of homeowner wells and water quality.
- It does not apparently clearly define the safe handling of toxic mine waste or its safe disposal
- Huge amounts of contaminated water will be pumped out of the mine every day and dumped into Wolf Creek; other areas in California where such major pumping activities were allowed resulted in significant sinking of surrounding land
- Minimizes impact of contaminating ground water as happened in similar operations elsewhere in California
- Minimizes air pollution with asbestos resulting from mining activities; unsupported claims based on inadequate test data on an inadequate sample size
- Apparently no complete environmental assessment of the current conditions of the proposed project site have been made to establish a real baseline
- It appears that a robust testing program to assess compliance with toxic limits and the toxicity of waste being released from this project with clearly defined remedial actions and accountability does not exist
- Overall, it appears that inadequate investigation and research have been done to properly assess claims made by Rise Gold
- Approving such a flawed EIR report would set a dangerous precedent for other proposals that may follow in the future

Economic claims made by Rise Gold do not appear to be supported by actual facts

- Job projections, economic benefits including local spending and County revenues are apparently all based on assumptions made by Rise Gold
- It would appear that the only real economic winners would be Canadian-based Rise Gold and its investors who do not live here.

In summation, it would seem that we here in Grass Valley may be viewed by Rise Gold as naïve and unable to defend against being taken in by smooth talk and unsupported claims. We love our rural community and do not welcome an entity with such a poor track record attempting to take advantage of us and do such great damage to our community and local environment for its own gain. I urge you to deny both the proposal to re-open the mine by Rise Gold and the EIR.

EIR Comments dated May 8, 2023

Submitted to:
Matt Kelley
959 Maidu Avenue
Suite 170
Nevada City, CA 95959-79012

Concern #1

CEQA calls for cumulative impacts analysis. Activities proposed build on one another and must be examined as to the total impact.

CEQA requires the presentation of alternatives to the permit requested by Rise Grass Valley.

(a) Rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives which were eliminated from detailed study, briefly discuss the reasons for there having been eliminated.

(b) Devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits.

(c) Include reasonable alternatives not within the jurisdiction of the lead agency.
(d) Include the alternative of no action.
(e) Identify the agency's preferred alternative or alternatives, if one or more exists, in the draft statement and identify such alternative in the final statement unless another law prohibits the expression of such a preference.
(f) The no actions alternative required: An obvious alternative when considering zoning changes is that Include appropriate mitigation measures not already included in the proposed action or alternatives. denial of those requests, plus other requests resulting in forbearance puts the project in jeopardy and opens other uses such as purchase of the properties and dedicating them for public enjoyment, education, other development that do not risk severe disruption and damage to quality of life for the people of Grass Valley, and the whole of Nevada County.

Concern#2

The EIR lists numerous mitigations to offset potential environmental impacts. How can the County monitor such mitigations and deal with the costs and repairs that would result from mitigation failures? A permit request for 80 years is inter-generational, live times away, and must account for uncertainty of climate, economic and social changes ahead. Insurance and performance bonds need to be included in the EIR analysis.

Concern #3

The project as proposed (EIR) fails to comply with the general plan designations for these properties and mineral extraction elements.

Policy 17.3 All exploratory operations shall require a reclamation plan

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.7 Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses. Each project shall have a periodic review for compliance with the use permit by the Planning Agency. In no case shall such review time period exceed five years. Said review shall be funded by the applicant.

Policy 17.8 A reclamation plan, consistent with the State Surface Mining and Reclamation Act standards, is required for all mining operations. Reclamation shall:

1. Prevent, mitigate, or minimize adverse effects on the environment.
2. Encourage the production and conservation of minerals.
3. Provide for the protection and subsequent beneficial use of mined and reclaimed land.
4. Eliminate residual hazards to the public health and safety.
5. Ensure that mined lands are reclaimed on a timely basis to a usable condition that is readily adaptable for alternative land uses.
6. Avoid the environmental and legal problems created by improperly abandoned mines.

Policy 17.10 Consider the socio-economic impacts associated with proposed mining operations.

17.13 The County shall require satisfactory forms of accessible security, including irrevocable letters of credit, cash deposits, escrowed negotiable securities, or performance bonds, from all mining projects to cover all such damages which may stem from the projects.

17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Concern #4 Evidence is available that shows other subsurface mining in Nevada County has failed and resulted in huge environmental damage. This history can be a part of the Cumulative Impacts Analysis required by CEQA. A glaring example is the fact that the stream that flows through Memorial Park in Grass Valley is posted as dangerous, fenced off, and indicates toxics continue to be present even after 66 years of the Empire Mine's closure and incomplete clean up promised by impacted public agencies.

To Who it may concern:

I am unable to attend the public hearing regarding the Idaho-Maryland mine on Wednesday, May 10th, so I am submitting my concerns via email.

1. My main concern is the fact that the gentleman who owns Rise Grass Valley did the exact same thing (opened up a mine) in Idaho and made a mess of things and then proceeded to leave town. If the project in Grass Valley turns into the same debacle he'll leave again and then our town suffers for it.

2. The owner has a bias in promoting and presenting this project in a positive light because he has a lot of money invested in the property.

3. To the best of my knowledge there are more people against the re-opening than there are who support the re-opening. Since we live in the community, shouldn't our voices count?

4. There is talk about how our community will profit but what guarantees are there that the money will stay in Nevada County?

5. What about water safety? Even if they do monitor the water it may be too late by the time an issue is detected. What about people with wells in the surrounding area? Their water may be impacted for years.

6. What about the possibility of all the activity of re-opening the mine having an impact on our ground and then creates major sink holes?

7. What about the impact on the community with the noise and traffic with the mining activity going on 24/7 ?

8. If Rise Grass Valley is given the go ahead, will more mines be re-opening in the future and then impacting our little town even more?

As you can see I am not in favor of the Idaho-Maryland mine (or any other mine for that matter) re-opening and I hope that the Planning Commission does right by our community and denies the re-opening of the mine.

Thank you for allowing me to voice my opinion and concerns.

Sincerely,
Diane French

I oppose the mine as it will foul ground water and air in the area. The EIR reflects the corporation that pays for it.

I am knowledgeable about the EIR and proposed mitigations. I served as a City Clerk for many years. Mitigations proposed are not correct and damage will occur.

If the Supervisors want an accurate reflection of what their constituents want, the matter should be placed on a County-wide ballot.

This mine would be a disaster for the Grass Valley area and as a long term resident, and on behalf of my extended family who live here, We are opposed to any mine being placed in Grass Valley.

Concern #1

CEQA calls for cumulative impacts analysis. Activities proposed build on one another and must be examined as to the total impact.

CEQA requires the presentation of alternatives to the permit requested by Rise Grass Valley.

(a) Rigorously explore and objectively evaluate all reasonable alternatives, and for alternatives which were eliminated from detailed study, briefly discuss the reasons for there having been eliminated.

(b) Devote substantial treatment to each alternative considered in detail including the proposed action so that reviewers may evaluate their comparative merits.

(c) Include reasonable alternatives not within the jurisdiction of the lead agency.
(d) Include the alternative of no action.
(e) Identify the agency's preferred alternative or alternatives, if one or more exists, in the draft statement and identify such alternative in the final statement unless another law prohibits the expression of such a preference.
(f) The no actions alternative required: An obvious alternative when considering zoning changes is that Include appropriate mitigation measures not already included in the proposed action or alternatives. denial of those requests, plus other requests resulting in forbearance puts the project in jeopardy and opens other uses such as purchase of the properties and dedicating them for public enjoyment, education, other development that do not risk severe disruption and damage to quality of life for the people of Grass Valley, and the whole of Nevada County.

Concern#2

The EIR lists numerous mitigations to offset potential environmental impacts. How can the County monitor such mitigations and deal with the costs and repairs that would result from mitigation failures? A permit request for 80 years is inter-generational, live times away, and must account for uncertainty of

climate, economic and social changes ahead. Insurance and performance bonds need to be included in the EIR analysis.

Concern #3

The project as proposed (EIR) fails to comply with the general plan designations for these properties and mineral extraction elements.

Policy 17.3 All exploratory operations shall require a reclamation plan

Policy 17.6 Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy 17.7 Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses. Each project shall have a periodic review for compliance with the use permit by the Planning Agency. In no case shall such review time period exceed five years. Said review shall be funded by the applicant.

Policy 17.8 A reclamation plan, consistent with the State Surface Mining and Reclamation Act standards, is required for all mining operations. Reclamation shall:

1. Prevent, mitigate, or minimize adverse effects on the environment.
2. Encourage the production and conservation of minerals.
3. Provide for the protection and subsequent beneficial use of mined and reclaimed land.
4. Eliminate residual hazards to the public health and safety.
5. Ensure that mined lands are reclaimed on a timely basis to a usable condition that is readily adaptable for alternative land uses.
6. Avoid the environmental and legal problems created by improperly abandoned mines.

Policy 17.10 Consider the socio-economic impacts associated with proposed mining operations.

17.13 The County shall require satisfactory forms of accessible security, including irrevocable letters of credit, cash deposits, escrowed negotiable securities, or performance bonds, from all mining projects to cover all such damages which may stem from the projects.

17.14 Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

Concern #4 Evidence is available that shows other subsurface mining in Nevada County has failed and resulted in huge environmental damage. This history can be a part of the Cumulative Impacts Analysis required by CEQA. A glaring example is the fact that the stream that flows through Memorial Park in Grass Valley is posted as dangerous, fenced off, and indicates toxics continue to be present even after 66 years of the Empire Mine's closure and incomplete clean up promised by impacted public agencies.

Respectfully addressed to
Nevada County Planning Department

Thank you for your role -
with care from a Meliorist.

As a comparatively new homeowner
(purchasing in January 2019 …)
in the Nevada City Historical District 1,
I was shaken, appalled, upon first learning of such a consideration of this threat
of destroying quality of our environment.

The air, water, noise, traffic pollution would alter our quality of Life.

Please say “No” to this project.

Please - continue to promote decisions which shall prepare for a healthy Future,
the Best for our environment.

Sincerely,
Cathy Melior Benoit

to the boards of supervisors for nevada county,

we are writing once again to express our concern of the proposal to reopen the idaho-maryland mine. concern is a mild word, better stated is profound disappointment and disgust that this proposal has even gotten this far. this proposal is morally and environmentally wrong in more ways than can be addressed here. many of my fellow citizens of nevada county can plainly see through this con-job veiled as an economic opportunity. i implore you to reject the idaho-maryland mine proposal once and for all, and reject the final environmental impact report, which is littered with junk as evidence, serious deficiencies, and unknowns disguised as truth. our water and air are at considerable risk of being polluted for centuries, not only from the damage to well water, surface water, and air quality contributed directly from mining itself, but also from the toxic material that will be dumped unceremoniously at the centennial site. there no viable plan to adequately address mine waste. we mean ALL mine waste. whatever economic benefits, that have already been proven to be gross exaggerations and falsehoods, do NOT offset the environmental disaster that will take place if you approve the mine and accept the findings of the final environmental impact report. if you do approve those, there will be blood on your hands.

seriously,

jim and erika haynes

Subject: Idaho-Maryland Mine Project - FEIR & Use Permit
Date: May 7, 2023 at 7:02:53 PM PDT
To: bill@gasservice.com, Idhorses@sbbmail.com, danny.milman@sbbmail.com, mike@ministoragepennvalley.com, tmcateer@inyocoe.org

Dear Planning Commissioners,

Thank you for your service to our County including your careful consideration of the Idaho-Maryland mine project. As the former Chairman of the South Lake Tahoe Planning Commission, I understand the difficulties reviewing such a complex project.

I have lived in Nevada County for 13 years and I've grown to love and appreciate its uniqueness on so many levels. My involvement in the community includes previous board member of both KVMR and the Nevada County Arts Council. I am also a founding member of the Concerned Citizens Roundtable which for the past seven years has developed and implemented creative solutions for a number of Nevada County based political, environmental, and social issues.

Among the many issues associated with the IMM Project I offer two for your consideration.
Attached are my comments and support documents regarding my two issues. These documents are the basis of my request for your denial of the FEIR certification, and denial of the Use Permit for the IMM project.

First issue is the tremendous amount of potentially devastating financial exposure to Nevada County because of the mine. $131+ million in fact! The analysis, bonding requirements, and supporting documentation for these financial assurance requirements are attached.

Second issue which appears to only have been lightly discussed, is the safety and

quality of life of underground miners. My source is also attached.

Listed here are just some of the health and safety issues and exposures for underground miners:

- Silica
- Diesel Particulate Matter
- Noise
- Manual Material Handling
- Whole-Body and Hand-Arm Vibration, including Raynaud's Syndrome and White Finger
- Fall of Ground (rock cave in)
- Rock bursts
- Secondary Blasting
- Crush hazards
- Gases such as ammonia, carbon monoxide, methane, and nitrogen dioxide
- Working with explosives
- Pain or injury from physical overexertion, repetitive manual tasks, or working in awkward positions
- Heat stress
- Air quality, including oxygen deficient environment, molds
- Asbestos exposure

I believe these two issues beg the question; Do we want to tempt financial chaos for Nevada County and do we want to possibly create dangerous jobs for our community?

In summary, I respectfully request for the well-being, health and future of Nevada County that you recommend to the Board of Supervisors denial of the FEIR and also denial of the Use Permit for the IMM project.

Respectfully,

Tim Ogburn

IDAHO MARYLAND MINE SPECIAL USE PERMIT

PROPOSED FINANCIAL ASSURANCES

AND

CONDITIONS OF APPROVAL

By

Tim Ogburn

There is a tremendous amount of financial exposure for Nevada County because of the mine.

$131,000,000 in fact!

My pertinent background:

- Chairman of the South Lake Tahoe Planning Commission
- Supervising senior scientist for 20 years with DTSC
- As General Services Manager for San Joaquin County I was responsible for overseeing the agenda packages for the BOS

My findings are supported by reference links and citations included in my documentation.

Specifically:

- **Nevada County General Plan**
- ***IMM Land Use Technical Study March 2020***
- **FEIR**

My **findings are:**

1. **To Protect the County and its constituents Nevada County is required to secure surety bonds and a cash reserve of $131,000,000 from the permit applicant.**

2. Rise Gold does not meet the requirements to obtain these bonds. In fact they don't even come close. (more later)

The easiest way to avoid

1. this financial exposure for the County,

2. the potential lengthy court battles

3. and all the work required to protect the county and oversee all the bonded activities….. is simple.

4. Vote no on the special use permit.

Here are my findings

The following ***County General Plan*** citations are provided for reference: **1 goal 6 policy statements**

- **Goal HM-10.5** - Protect public health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.
- **Policy HM-10.5.5** - The **County will actively promote prompt clean-up or remediation of properties contaminated by mine waste** or other hazardous materials and shall not grant any discretionary or ministerial land use approvals to develop or change boundaries or reconfigure parcels believed to be contaminated, unless and until the nature, extent, type and

location of the contamination is determined and satisfactory arrangements are made for clean-up or remediation, in accordance with Nevada County standards or State regulations.

- **Policy 17.11** - Recognize the importance o**f** water conservation and quality for the present and future needs of the County by: 1. Requiring the conservation of on-site water during mining operations. 2. Requiring that off-site water discharge complies with State water quality standards. 3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

- **Policy 17.13** - The **County shall (not may!) require satisfactory forms of accessible security, including irrevocable letters of credit, cash deposits, escrowed negotiable securities, or performance bonds, from all mining projects to cover all such damages which may stem from the projects.**

- **Policy 17.24** - **Regardless of the General Plan designation, subsurface mining shall be conditionally permitted throughout the County.** Said mining shall be allowed only after impacts on the environment and affected surface land uses have been adequately reviewed and found to be in compliance with CEQA. Of particular importance shall be the **impact of the operation on surface land uses, water quantity and quality, noise and vibration, land subsidence, and traffic associated** with surface access. **All other related impacts shall also be addressed.**

- **Policy 17.7** [not addressed by Land Use Technical Study] Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses. Each project shall have a periodic review for compliance with the use permit by the Planning Agency. In no case shall such review time period exceed five years. Said review shall be funded by the applicant.

- **Policy 17.14** - Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

The following citation from the ***IMM Land Use Technical Study March 2020*** provided for reference:

- **The project would include provision of a financial assurance mechanism consistent with the requirements of the SMARA** [SMARA - California Surface Mining and Reclamation Act of 1975; SMARA, Public Resources Code, Sections 2710-2796]

The following citation from the ***Final Environmental Impact Report***, December 2022, is provided for reference:

- Mitigation Measure 4.8-2(a) **requires a groundwater monitoring plan.** The project applicant shall implement the Groundwater Monitoring Plan (GMP) **prepared** by Itasca Denver, Inc. (February 2021), as approved by the County.

PROPOSED FINANCIAL ASSURANCES

My **Proposed Financial Assurances** apply to the **first 10 years of mine operation.**

The financial assurance instruments should be **revisited every 10** years to determine the annual amounts for the next successive 10-year period, for the full duration of the mine operation.

General Liability and Environmental Mitigation bond. Ten-Year Period Amount. $80,000,000.

General Environmental Clean Up Bond $15,000,000 (Jamestown Mine)

Cash Account $5,000,000

Domestic Well Water Monitoring Bond (Not clean up!) $2,000,000

NID $14,000,000

Air Quality Monitoring and Dust Mitigation Bond 2,000,000

Water Discharge Quality Monitoring Bond $2,000,000

Seismic Monitoring Bond $3,500,000

Centennial Site Clean-up Performance Bond $7,600,000

Surety Bond

General Liability bond. Ten-Year Period Amount. $80,000,000.

General Environmental Clean Up Bond $15,000,000

The Mine Operator shall provide a **General Liability Bond** from a reputable bonding company experienced in bonding mining extraction projects, in the amount of $80 million, to guarantee compliance with all conditions of the issued Use Permit. This bond shall be i**n addition to** other bonds required by State or regional jurisdictional agencies such as NID.

The Mine Operator shall provide a **General Environmental Clean Up Bond** in the amount of $15,000,000.

Jamestown Mine in Tuolumne County

Closed in 1994 because of ground water contamination issues.

It had to be cleaned up!

County required a $25 mil **general liability insurance policy (which the appellate court found had pollution liability exclusions)** in todays $ is $68,622,000

They also required a $3 mil clean up bond which is $8,234,000 in todays $.

$5.3 mil to clean up the ground water contamination **(176 wells)** in 1994. $10,162,000 today.

$3,000,000 clean up bone bond **$2.2mil cost** to the county is $4mil today.

https://www.recordnet.com/story/news/1999/09/16/mine-fouling-water/50805003007/

https://www.in2013dollars.com/us/inflation/1986?amount=25000000

Siskon Mine

B**ond for the Siskon Gold Mine project back in the 1990s; the one on the Ridge that flooded out and got shut down. The County only required a $400,000 surety bond for "mine closure",** and a portion of the bond was released and untapped by the County despite Siskon not completing all of the permit requirements for reclamation.

https://www.sjrtaxpayers.org/history/

Cash Account RGV

Ten-Year Period Amount: $5,000,000

Per General Plan Policy 17.13 and the FEIR

Mine Operator shall provide a cash reserve account to pay for all County staff expenses and oversight of monitoring programs associated with IMM for full duration of the project.

The anticipated estimated cost for **County oversight is $169,200 time three shifts $507,000 per year,** based on staff expenses and a contract with an independent consulting firm to provide a full-time Senior Environmental Engineer for **continuous on-site inspection and reporting to the County to assure compliance with the permit conditions.**

The anticipated costs are to include: [but not limited to Staff Expenses]

- Staff Expenses: **the FEIR Summary Ground Monitoring Plan continuous on-site monitoring of operation is required** to comply with all conditions and technical measures, having an on-site inspector, independent and reportable to the County and paid for by the project owner.

- The average Senior Environmental Engineer salary in California is $117500 (DTSC) as of January 26, 2023 including benefits is $169,200 per year.

- $169,000 per year for 10 years plus annual labor cost inflation of 2%.

- [See: Calculation link https://whaleapp.io/compound-interest-calculator/?gclid=EAIaIQobChMIyvWckObW_QIVnjKtBh3fqQ9WEAAYAiAAEgJ8FPD_BwE]

Domestic Well Water Monitoring Bond (Not clean up!)

Ten-Year Period Amount: $2,000,000 (see Jamestown Mine)

Per the FEIR (Mitigation Measure 4.8-2(a)), 4.8-2(b) and the FEIRSummary Ground Monitoring Plan.

The Mine Operator shall conduct a well water monitoring as follows.

- Prior to mining operation: test all private domestic wells within a one-mile radius from the outer boundary of the 2,500-acre potential underground tunneled "mining area"; such testing to be conducted by an independent testing company selected by the County, to establish 'base line 'data for water quality and quantity of wells during both peak summer and winter time period.

- During mining operation: test all private domestic wells [selected in the 'prior-operation test' on an annual basis [or more frequently if there is a detectable change in well performance by the private land owner].

- If there is a depletion of water quality or quantity in a well, the Mine Operator shall provide a comparable source of water to the private property owner; such comparable 'source 'shall be from the City of Grass Valley water system, or from NID piped water system, or a newly drilled well.

NID

Ten-year Period Amount: $14,000,000

Per https://www.theunion.com/news/environment/hung-out-to-dry-well-owners-contend-with-idaho-maryland-mine-report-s-findings/article_9723e46d-925b-50ff-b9e9-388b6ab63669.html April 6, 2022

NID General manager recommends Rise Gold post a $14 million bond to cover all potential costs regarding an NID groundwater monitoring program, including potential impacts to NID water storage, and conveyance systems.

Water Discharge Quality Monitoring Bond

Ten-Year Period Amount: $2,000,000

The FEIR requires a

Groundwater Monitoring Plan (GMP) under **FEIR Mitigation Measure** 4.8-2(a). Discharge quality monitoring program cost: $200,000/year.

Air Quality Monitoring and Dust Mitigation Bond

Ten-Year Period Amount: $2,000,000

Per General Plan 17.13 and FEIR 4.3

Require air quality monitoring and dust mitigation on frequent basis both on-site and off-site; and sound/noise level monitoring program, estimated cost: $200,000 annually.

Seismic Monitoring Bond

Ten-Year Period Amount: $3,500,000

There is an earthquake fault that runs through the middle of the mine.

The capital cost of an average mine wide seismic system is in the range of $200,000 to $500,000, with typical yearly operating and maintenance costs in the neighborhood of 20-40% of the capital cost. Seismic monitoring from explosives activity will be **$350,000 annually**. [See: https://onepetro.org/ARMACUSRMS/proceedings-abstract/ARMA07/All-ARMA07/ARMA-07-174/116336]

Centennial Site Clean-up Performance Bond

Ten-Year Period Amount: $7,600,000

Stated in the Mine's Technical Report.

Centennial Site is an **essential component** of the day-to-day operations of the Idaho Maryland mine.

This is supported by **the Centennial site APNs** and the **Idaho Maryland Mine site APNs are cited together** in the property description in both the **Technical Report of the Idaho Maryland Projec**t and **DTSC's Voluntary Cleanup Agreement**.

State law requires that the responsible party post a performance bond to guarantee completion of the cleanup.

The Voluntary Agreement with DTSC has **not been finalized** thus the required Financial Assurance bond has **not been secured**.

Rise Gold states that they will clean up the site once the permit is approved. If Rise Gold does not clean up the Centennial site and if a bond is not secured before it becomes an **orphaned** site **the County could be obligated** for a minimum of **$3.5 M + $200,000 a year for DTSC oversight.**

Bond Calculation: DTSC clean-up estimates are historically low. Double the estimated clean-up cost of $3.5 million plus $200,000 per year for DTSC oversight for three years is $3.5 M times two plus $200,000/year for three years = $7,600,000]

Summary

The County is **required** to secure from the applicant over **$131,000,000** in **financial assurances** to **protect** the county if the special use permit is approved.

Rise Gold does not meet the bonding requirements to obtain these bonds. In fact they don't even come close.

According to the "go to" national environmental project bonding agency (Surety Bonding Authority for Environmental Project Bonding) the underwriter's first step is to review the applicant's assets to be put up for collateral, as well as credit, cash flow and character.

https://suretybondauthority.com/environmental-surety-bond/

Rise Grass Valley fails on all four categories of these initial screening criteria!

It cannot get a bond(s).

This alone should be enough to vote no.

Bond Amounts

General Liability and Environmental Mitigation bond. Ten-Year Period Amount. $80,000,000.

General Environmental Clean Up Bond $15,000,000 (Jamestown Mine)

Cash Account $5,000,000

Domestic Well Water Monitoring Bond (Not clean up!) $2,000,000

NID $14,000,000

Air Quality Monitoring and Dust Mitigation Bond 2,000,000

Water Discharge Quality Monitoring Bond $2,000,000

Seismic Monitoring Bond $3,500,000

Centennial Site Clean-up Performance Bond $7,600,000

The easiest way to avoid

- **this financial exposure for the County,**
- **the potential lengthy court battles**
- **and all the work required to protect the county and oversee all the bonded activities is simple.**
- **another Siskon Mine and JamesTown Mine fiasco is to**
- **Vote NO on the special use permit.**

What are some health and safety issues for working underground in a mine?

https://www.ccohs.ca/oshanswers/occup_workplace/underground_mining.html

There are many risks within the mining industry. These include, but are not limited to:

- Silica
- Diesel Particulate Matter
- Noise
- Manual Material Handling
- Whole-Body and Hand-Arm Vibration, including Raynaud's Syndrome and White Finger
- Fall of Ground (rock cave in)
- Rock bursts
- Secondary Blasting
- Crush hazards
- Gases such as ammonia, carbon monoxide, methane, and nitrogen dioxide
- Working with explosives
- Pain or injury from physical overexertion, repetitive manual tasks, or working in awkward positions
- Heat stress
- Air quality, including oxygen deficient environment, molds
- Asbestos exposure

Is this the kind of jobs we want to create for a community?

Nevada County Board of Supervisors &
Nevada County Planning Commissioners
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

May 6, 2023

Dear Nevada County Supervisors and Planning Commissioners.

We are writing to request that you do not approve (nor recommend approval for) Rise Gold's proposed re-opening of the Idaho Maryland Mine and that you also do not certify the project's currently unacceptable FEIR. As you have already read in numerous other submissions, community organizations have thoroughly reviewed the FEIR and found its conclusions deficient. The report fails to accurately address groundwater and air quality impacts, as well as mine waste management. Certifying an inadequate and misleading FEIR leaves our county vulnerable to future exploitation by enabling other companies to propose similar projects without the need to accurately address the project's full environmental impact.

We are aware that Rise Gold's proposal contains inflated predictions of economic benefits in the form of jobs and tax revenues. Such imagined benefits, we believe, will be more than offset by the economic losses our county would incur should this project, or similar future projects, advance. The threat of contaminated air and water, as well as the noise pollution and traffic congestion, precipitated by mining operations in such close proximity to our homes will not only discourage prospective businesses and residents from choosing Nevada County, but will motivate current residents to relocate to healthier communities.

When we chose Nevada County, over 30 years ago, mining was part of our community's history, not an active enterprise. We raised our family on property that relies on a residential well, confident in the knowledge that community leadership was committed to maintaining and improving upon the quality of the water and air we all share. We ask now that you honor the legacy of that commitment and do not allow Rise Gold's proposal or the project's inadequate FEIR to jeopardize the land we love. Please do not approve re-opening the Idaho Maryland Mine and do not certify the FEIR.

With thanks,

Carol and William Brady

TO SUPERVISORS AND PLANNING:

Regarding the approval of the Idaho Maryland Mine….to all staff overviewing this process, please realize what you do impacts this community, well beyond just this mine. Should you approve to re-zoning of a now light industrial/residential area for mining, consider what this promotes for our future.

How many of Grass Valley and Nevada City residents live on top of old mines and shafts? Once rezoning is approved, what keeps any number of mines to be opened?
It is not one single mine you are approving. This opens up a very destructive environment for our town, business owners and residents.

Ask…. do any of us really want to be living on top of an active mine? I know I do not.

PLEASE DO NOT APPROVE THE EIR AND THE REZONING.

(I want to be present, but will be working out of town next week.)

I vehemently OPPOSE the reopening of the Idaho-Maryland Mine.

My family & I moved to Nevada County more than 23 years ago to enjoy a cleaner, quieter, more comfortable life. We own a home (and have owned 3 others), work, eat, shop, recreate, and plan to retire in Nevada County. The Mine is detrimental to our quality of life, detrimental to our environment (water-, air-, soil-, noise-, and light-pollution just to name a few), and will cause many of your constituents (voters, tax payers, business owners, tourists, Festivals & Events, etc.) to leave the County and not return.

The Idado-Maryland Mne is already a Superfund Site, along with other abandoned mines in the County, because people didn't think *ahead*. Don't make an existing problem worse. Would you want this in your backyard? Or that of your children?

Reopening the Idaho-Maryland is a really bad idea!

Thank you for your time.

RE: Supplemental Objection to the Final Environmental Impact Report SCH # 2020070378 December 2022 (the "EIR") for the Idaho-Maryland Mine Project (the "Project") Pursuant to the Notice from the Nevada County Planning Commission for the May 10, 2023, Special Meeting, Also Objecting To the New County Staff Report.

Ladies And Gentlemen:

I appreciate your Notice of this opportunity to continue my objections to the Idaho-Maryland Mine Project. I preciously filed a lengthy "EIR Objection 254" on April 25, addressing many issues, including my rebuttals defending my prior "DEIR Objection 254" designated by the EIR for its disputed Responses therein as my Individual Comment Letter Ind. 254. The EIR also contained disputed Reponses to my supplemental other prior objection designated by the EIR as Individual Comment Letter Ind. 255. The attached new, supplemental objection that I call my "EIR Objection 255" rebuts both those disputed EIR Responses and the parts of the new County Staff Report supporting much of the disputed EIR/DEIR. Because of the lack of response time regarding the new County Staff Report, most of my specific comments thereon are found in Exhibit A to the "EIR Objection 255" I have attached to this letter. To clarify, I previously filed with you two objections to the DEIR, and then two recent objections to the EIR, including this one. My goal in my four Objections is to be comprehensive.

Thank you for considering my views.

Sincerely,
G. Larry Engel

Supplemental Brief Objections to the Idaho-Maryland Mine Project Final Environmental Impact Report/SCH #2020070378 (12/2022) (the "EIR") And My Disputes Against EIR Responses To Comments Ind. 255-1 through 50, And Brief Comments on the Commission Staff Report.

I. Introductory Comments And Coordination Among My Filed Objections To The EIR/DEIR.

A. Some Context For The Focus Of This "EIR Objection 255" And Its Relationship To My Other "Objections" To the EIR/DEIR.

1. How This Objection Supplements My Three Other Objections To The EIR/DEIR And Related Guidance For The Reader.

This is the fourth of my objections to the EIR (collectively all incorporated and called my "Objections"), which I distinguish from the other three by calling this "EIR Objection 255," because it replies with my rebuttals to the EIR's disputed "Responses" to my "DEIR Objection 255" (beginning at EIR page 2-6028). I also recently filed my extensive, companion "EIR Objection 254" to reply to the EIR, and to the EIR's disputed "Master Responses" and "Responses" to my previous 150-page main and comprehensive objection to the disputed initial "DEIR" that I call my "DEIR Objection 254." (For clarity I note that the disputed EIR designated my such previous "DEIR Objections 255 and 254" filings as (i) this "Individual Letter 255" with the EIR calling its "Responses" as "Response to Comment Ind 255-1 to Ind 255-50," and (ii) my other DEIR Objection 254 (beginning at EIR page 5843) as "Individual Letter 254" with the EIR calling its "Responses" as "Responses to Comment Ind 254-1 to Ind 254-101.") My companion EIR Objection 254 also addresses the EIR's main contents and the EIR's "Master Responses" that apply generally. The reason for this introduction before I respond item-by-item below to rebut each of the EIR "Responses" to my DEIR Objection 255 is to provide the reader with the convenience of seeing in this one objection some of the core law and data on which my such objections rely, as a starting point for the more comprehensive and in-depth analysis, proof, and legal authorities provided in my extensive companion EIR Objection 254.

While some seem surprised that my main such EIR Objection 254 is so extensive, I note that it is proportional to (one-fourteenth of) the more than 7000 pages of the disputed EIR containing many errors, omissions, evasions, and noncompliance with CEQA and other applicable law. For convenience I often refer to my EIR Objection 254 as "Ind 254" because I reference it so often herein (and I incorporate Ind 254 all herein, as if the EIR Objections 255 and 254 were one consolidated Objection.) The main reason for the initial separation of my DEIR Objections between 255 and 254 had to do with their separate timing and my need to supplement my earlier filed DEIR Objection 254 when I realized the County staff had adopted some erroneous legal and other positions asserted by the DEIR team that needed to be corrected. The EIR Objection 254 now continues most of that reform and correction quest, but I cannot allow any of the erroneous or worse "Responses" by the disputed EIR to my DEIR Objection to go unrebutted, which is the goal of this Objection. However, because the substantial EIR Objection 254 objections are so comprehensive, I have made a significant effort to reduce redundancy in this Objection by relying on that incorporation to my EIR Objection 254. The main reason that I do what little extra commentary I do herein is defensive. As demonstrated in

my EIR Objection 254, especially my objections to the EIR Master Responses and EIR "Responses" Ind 254-1 to 101, the hypocritical EIR tends improperly to ignore or evade my incorporations by reference and even my internal cross-references. To avoid the chores of dealing with that repeated tactic again in this document, I sometime make specific cross references or incorporations to each rebuttal over such disputed EIR tactics, if this EIR challenge needs to be litigated.

Nothing in the disputed EIR has overcome any of my four Objections, and, as noted, the County decisionmakers should consider each EIR tactical omission, evasion, and noncompliance as another ground for rejecting the EIR. Indeed, even when the EIR purports to address an objection on the merits (as distinct from asserting an excuse for refusing to argue the merits or from ignoring or otherwise evading the dispute at issue), too often the EIR's complaints about my Objections are properly blamed on the EIR/DEIR for itself creating the problems about which it complains. For example, as explained many times in my Ind 254, the disputed EIR incorrectly complains that my Objections are too speculative, too unsubstantiated, or too unclear or unexplained to merit any response. However, as so demonstrated therein, the EIR and/or DEIR provision, omission, or noncompliance contested in my Objection was usually itself either (i) too speculative, too unsubstantiated, too unclear or unexplained (e.g., based on mere implausible [or worse] opinions), (ii) based on false or unstated and incorrect or worse assumptions or guesses, (iii) the result of improperly ignoring my express cross-references or incorporations in my objections (or just willfully ignoring whatever other parts the EIR/DEIR wished to evade), (iv) the result of the disputed EIR arbitrarily fragmenting and improperly addressing only in isolation what was my unified and integrated comment in a larger designated section of my Objection, or (v) other improper evasive tactics. If the reader has the patience and endurance to compare in detail my Objections to the EIR/DEIR (and such disputed EIR responses to my corresponding objections) that pattern and practice of improper evasion, avoidance, and worse become unmistakable and irreconcilable with the CEQA requirements I explained at length in my EIR Objection 254 with cited authorities applied to specific violations in the EIR/DEIR.

2. Any CEQA Analysis Of the EIR/DEIR Must Apply A "Good Faith Reasoned Analysis" With "Common Sense," And The EIR/DEIR Often Fails To Do So.

Whether or not the reader finds any merit to the EIR's such asserted excuses for its frequent noncompliance and nonresponsiveness, the disputed EIR consistently fails to provide a "good faith reasoned analysis" with "common sense" on such disputed issues and objections, either as required by CEQA or other applicable law, or because I am always permitted by applicable law (as a matter of evidence. See Ind. 254 #'s I.C and D explaining the rules and #'s I.E and F applying them to examples, using cases like *Gray, Banning, Vineyard, and Costa Mesa.* What the EIR, and so far, the County, ignore is the law of evidence, to which CEQA must defer and does not pretend to override, like the EIR tries to do. Id. For example, my rebuttal or impeachment of EIR/DEIR errors, omissions, or noncompliance is always allowed, especially where I am using Rise or DEIR/EIR admissions to dispute their inconsistent or contradictory claims. See my Ind 254 discussion of *Richmond v. Chevron (#'s I.C and D), and* somewhat illustrated below, where objectors defeated the eir by using SEC admissions against the applicants, just as I am correctly trying to do in these Objections (see Ind 254 Exhibit B) with

SEC filing admissions proving that Rise lacks the financial resources not only to accomplish the EIR project goals, but even to make the disputed EIR's proposed mitigations feasible even at their current deficient levels before more compliant mitigations and safety requirements are imposed in response to reality based objections, where the EIR can say whatever it wants with respect to matters inside or outside its disputed CEQA boundaries, but the EIR refuses to address objectors' rebuttals or counters that the EIR calls irrelevant for being outside its fantasy CEQA boundaries, such as such economic feasibility issues the EIR constantly evades and ignores in the "alternative reality" it seeks to construct for its project. No court will ever tolerate what EIR/DEIR incorrectly contends to be such limited boundaries of CEQA, because whole truth (and nothing but the truth) still matters, at least in court. Stated another way, when the EIR/DEIR evades an objection or makes one of its many false or misleading statements (or statements based on false assumptions underlying incorrect or worse EIR information), that "opens the door" for my rebuttal or impeachment thereof, without any limitation by the scope of CEQA. Never can CEQA be so misused to shield the EIR/DEIR from any truth required to counter such false or misleading information, evasions, or omissions.

As *Vineyard* explained (at 443), "Ultimately, [t]he question is … not whether the project's significant environmental effects can be clearly explained, but whether they were" in a proper manner. That standard is informed by this principle: "The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR's function is to ensure that government officials who decide to build consequences and, equally important, that the public is assured those consequences have been taken into account." (at 449). The data in an EIR must not only be sufficient in quantity, it also must be presented in a manner calculated to adequately inform the public and decisionmakers, who may not be previously familiar with the details of the project. "[i]nformation 'scattered here and there" in EIR appendices or a report "buried in an appendix" is not a substitute for "a good faith reasoned analysis.'" (at 442). Moreover, "[c]onclusions are not the reasoned explanation CEQA requires." See, e.g., Laurel Heights Improvement Assn v. Regents of University of California (1988), 47 Cal.3d 376, 404; North Coast Rivers Alliance v. Marin Municipal Water Dist. Bd. Of Directors (2013), 216 Cal. App.4th 614, 639-640. This EIR/DEIR fails to meet any of these requirements, as I demonstrate in my four Objections.

In Communities for a Better Environment v. City of Richmond (2010), 184 Cal.App.4th 70, 82-90 ("Richmond v. Chevron"), there was a critical dispute over the issue of whether the project included any equipment changes that would facilitate the future processing of heavier crudes [oil] at the refinery. The court stated that "there was conflicting information developed during the EIR process [**including SEC filing admissions**] that cast serious doubt on these assertions [by Chevron's EIR "in conclusory terms that the proposed Project will not result in an increased capacity to process lower quality, heavier crude, and that Chevron seeks only the ability to refine crude with higher sulfur content." The appellate court agreed with the trial court that "***the EIR is inadequate as a matter of law*** because it does not adequately address the issue of whether there are any equipment changes that would facilitate the future processing of heavier crudes…" (emphasis added) **The key to that was the court's discussion of conflicting or contrary admissions "in Chevron's SEC form 10K," and (as here with Rise SEC filings Exhibit B) the EIR applicant told its investors a different story in the SEC filings than it told the public in its EIR. And such admissions then led to more from questioning at a public meeting.**

As that court noted from such impeachment admissions and data: "'By giving such conflicting signals to decision makers and the public about the nature and scope of the activity being proposed, the Project description was fundamentally inadequate and misleading.' (*San Joaquin Raptor Rescue Center v. County of Merced* (2007), 149 Cal.App.3d 663, 655-656 …)" The court then stated (what also applies here): "Far from being an informative document, the EIR's conclusions call for blind faith in vague subjective characterizations. (*See Berkeley Keep Jets Over the Bay Com. V. Board of Port Cmrs.* (2001) 91 Cal. App. 4th 1344, 1371… ["[t]he conclusory and evasive nature of the response to comments is pervasive, with the EIR failing to support its many conclusory statements by scientific or objective data"); *San Joaquin Raptor,* supra, 149 Cal. App. 4th at 659 ["decision makers and general public should not be forced to … ferret out the fundamental baseline assumptions that are being used for purposes of the environmental analysis"].)

I begin with such principles because the primary purpose of my initial DEIR Objection 255 was to rebut and counter the incorrect exclusion by the EIR/DEIR of any of my evidence of various important things, for example, like admissions of risks in Rise SEC filings contrary to or in conflict with the DEIR/EIR) that the DEIR (and Planning Department) erroneously deemed outside the scope of CEQA (e.g., involving issues with the mine that go beyond so-called "environmental impacts," even though they are relevant and necessary so to rebut, correct, expose, or counter disputed such errors, omissions, and noncompliance in the DEIR or EIR, even when revealed in such admissions.) This Objection continues parts of that quest by rebutting and countering some of such errors, omissions, and deficiencies in the disputed EIR, although the core for all objections is now in my EIR Objection 254. Since these disputes are questions of law (or mixed questions of law and fact), approval of the disputed EIR by the County would simply require the County to correct such errors and reverse such approval, as was done in the many cases that I cite in my Objections on these issues, such as *Richmond v. Chevron* in Ind 254 at #I.C and D. Reader decisionmakers should remember that these disputes are not simply about the interpretation of CEQA, but also about other applicable laws and their application to these particular facts and circumstances.

If this EIR is mistakenly approved in this administrative process, the courts (and objectors' parallel political and law reform efforts) will require comprehensive truth from the EIR/DEIR even if the County does not, since any such EIR/DEIR error, omission, and noncompliance must be exposed and corrected by the truth, regardless of these disputes about the scope of CEQA. **For example, Rise cannot disclose mining risks and problems in its SEC filings and then have the DEIR/EIR present an "alternative reality" contrary to or in conflict with those admissions, especially when exposing the infeasibility of EIR/DEIR safety and mitigation "aspirations."** See, e.g., my DEIR and EIR Objections 254 and Exhibit B to my concurrent EIR Objection 254. (I use the term **"aspirations"** because the Rise admissions demonstrate that, even if it made meaningful promises in the EIR/DEIR [which it does not often do, as distinguished from announcing mere project goals or plans for future and deferred arrangements with regulators contrary to the CEQA court decisions I cite therein and below, prohibiting that EIR deferral tactic], they would be little more than wishful thinking at best and likely worse.) The County decisionmakers should be wary of tolerating such EIR tactics in any mistaken approval because **the essence of the Rise SEC filings is warning admissions that this EIR proposed mining is too risky for any but the most high-risk speculators. Why then would anyone in government approve such an EIR to impose on us thousands of resisting**

homeowners living above or around the 2585-acre underground mine based on far less revealing risk data in the disputed EIR?

3. The Similar Mining Case Of Gray v. County of Madera Rejected A Similar EIR Well Mitigation Proposal For Lack of Such "Common Sense," Among Other Noncompliance.

This subsection reaffirms as an important illustration how my Objections combine to defeat the EIR beyond question for many reasons, but ***Gray v. County of Madera*** by itself is sufficient to defeat the EIR, as I explained earlier in my DEIR Objection 255 #3 and more recently in my EIR Objection 254, and as I applied that CEQA authority on deficiently analyzed and identified mining impacts on neighboring wells and infeasible and insufficient mitigations in my concurrent EIR Objection 254. What the reader should do is read this Objection in conjunction with those others, since that should confirm beyond doubt that the EIR/DEIR must be rejected, because they fail AS A MATTER OF LAW to satisfy the "good faith reasoned analysis" with "common sense" requirement for: (i) groundwater depletion that significantly impacts relevant wells, both (a) those wells that exist and are only somewhat addressed (at most, deficiently) in the EIR/DEIR and those that are ignored or evaded in the EIR/DEIR (even some ignored in the EIR/DEIR but identified in the County Economic Report discussed in Ind 254 Exhibit A, but ignored in the DEIR/EIR), and (b) the future wells that us surface owners above and around the 2585-acre mine have the right to drill to access our own groundwater as a property right (e.g., *Keystone* and *Varjabedian* as discussed in Ind 254), and (ii) mitigation of wells so impacted by the EIR mining and dewatering as demonstrated throughout my companion EIR Objection 254. **Accord, Town of Atherton v. California High Speed Rail Authority (2014), 228 Cal. App.4th 314, 349 (when the eir conclusion is "clearly inadequate or unsupported" it is entitled to no deference.)** (emphasis added) **See also *Communities for a Better Environment v. City of Richmond*, 184 Cal.App.4th 70, 95, rejecting a "no net increase" energy standard, despite use of such short cuts in some streamlined approval statutes for particular special projects, as explained in Mission Bay Alliance v. Office of Community Investment & Infrastructure (2016), 6 Cal. App.5th 160, 198 n.26.** See, e.g., POET, LLC v. State Air Resources Board (2013), 218 Cal. App. 4th 736, 739-40; Golden Door Properties, LLC v. County of San Diego (2020), 50 Cal. App.5th 467, 520; King & Gardiner Farms LLC v. County of Kern (2020), 45 Cal. App.5th 814, 858.

As further discussed in my earlier DEIR Objection 255 #3 and quoted below, consider my "good faith reasoned analysis" based on the similar, leading case of ***Gray v. County of Madera,*** applying CEQA and its Guidelines and other applicable law to reject a similar mining eir and rejected well mitigation proposal on a basis that must defeat this EIR/DEIR. Among the many flaws addressed by *Gray* (at 1116-1118) for this EIR/DEIR situation, was to reject disputed mitigations and opinions that defy **"common sense":**

> **We agree with …[objectors] that there is no substantial evidence that the mitigation measures are feasible or effective in remedying the potentially significant problems of decline in water levels of neighboring wells. In order to mitigate this problem … [the miner] must present a viable solution that can effectively replace the decline in the water available to the neighboring residents. … We decline to … [defer to the Board's findings because they] are not supported by substantial**

evidence or defy common sense. LAW REQUIRED TO ABANDON COMMON SENSE. HERE, OUR COMMON SENSE INFORMS US THAT THE MITIGATION MEASURES WILL NOT EFFECTIVELY REPLACE THE WATER THAT COULD BE LOST BY THE NEIGHBORING LANDOWNERS. IT IS TRUE THAT THE MITIGATION MEASURES WILL PROVIDE A REPLACEMENT FOR THE LOST AMOUNT OF WATER. HOWEVER, NEITHER MITIGATION MEASURE … WILL PROVIDE NEIGHBORING RESIDENTS WITH THE ABILITY TO USE WATER IN SUBSTANTIALLY THE SAME MANNER THAT THEY WERE ACCUSTOMED TO DOING IF THE PROBJECT HAD NOT EXISTED AND CAUSED A DECLINE IN THE WATER LEVELS OF THEIR WELLS. (EMPHASIS ADDED).

****

We agree with RWQCB that providing replacement water through bottled water not a viable or effective mitigation measure. It defies common sense for the County to conclude that the providing of bottled water is an effective mitigation measure. As presented … [it] does not explain how and in what amount the bottled water will be delivered to the neighboring landowners. The measure requires replacement at least equal to the lost amount of water production from the landowners' wells. … [discussing variable uses, calculation, timing, and other problems that also doom this EIR/DEIR's proposed mitigation] …

Stated another way, no EIR can survive a challenge to its CEQA compliance under the "substantial evidence test" when the EIR defies "common sense" as so defined, again with the burden of proof on the EIR applicant. See Ind 254 #I.A.1.b and I.C and D. This controlling legal principle has many applications in rejecting the EIR/DEIR on the basis of my many objections, especially considering the Rise and DEIR/EIR admissions that the miner lacks the resources to afford not just its project objectives, but even any of the proposed mitigation or safety measures. See, e.g., my EIR Objection 254 Exhibit B and A, and my DEIR Objection 254 #2, 4, and 14. Also, in assessing the "cumulative impacts" of the EIR/DEIR (see Guideline #15355), I note that the EIR/DEIR not only defies "common sense" when it asserts infeasible or worse opinions without the required "good faith reasoned analysis" and any relevant and credible substantiation and other compliance with the CEQA and its Guidelines and other applicable law, as I demonstrate in my four Objections, especially in Ind 254 # I.C and D, and as illustrated by applications in #'s I.E and F therein. For example, when the EIR/DEIR failure to so appropriately respond to my objections by asserting one of their bogus excuses (e.g., incorrect and worse claims that my objections lacked sufficient explanation or detail, or were too speculative or unsubstantiated, etc.), my defeat of those excuses for such ERI/DEIR nonresponse means that the EIR/DEIR must fail by default, especially when those excuses either lack the required "good faith reasoned analysis" with "common sense," or reflect worse noncompliance or objectionable conduct by the EIR/DEIR.

B. Planning Commission Staff Report: Some Brief Comments And Explaining Exhibit A.

1. Introductory Comments Explaining Problems With the Comm Staff Report.

After I filed my EIR Objection 255 and was about to file this Objection, I learned about the "Nevada County Planning Commission Staff Report" (the "Comm Staff Report") that was added to the EIR official file on or about April 26, 2023. For various distracting personal reasons during the short time remaining before the May 10 hearing, I will not be able to do the kind of analysis and rebuttal of that Report that I would have liked to have done, such as I have previously done with respect to the DEIR and EIR in preparing my four Objections. Therefore, I will add as illustrations of many objectionable Report provisions what specific comments may be feasible in this limited time for comments in Exhibit A hereto. Fortunately, most of my objections to the EIR/DEIR equally apply to the Comm Staff Report, as generally explained in these comments and illustrated in Exhibit A. While I will do a more sufficient review of the Report before the Board of Supervisors meeting on the EIR, nothing so far in my review of the Comm Staff Report inspires me to attempt any last-minute changes of anything in my four Objections. To the contrary, the Comm Staff Report too often simply repackages the already disputed content of the EIR. Therefore, I object to the Comm Staff Report on the same basis as my four Objections disputed the same errors, omissions, evasions, and noncompliance in the EIR/DEIR, including as to what I have incorporated by reference in my Table of Incorporations by Reference Objections attached to my companion EIR Objection 254. Stated another way, all my Objections remain in effect against all contrary content in the Comm Staff Report, which (perhaps with some minor exceptions) adopts and supports the EIR/DEIR.

To the extent that the Comm Staff Report supports to any extent anything in my Objections, I thank the Staff for that part of their work. To the extent that the Comm Staff Report disagrees with anything in any of my four Objections or other objections I incorporate from my Table of Incorporations by Reference Objections attached to my companion EIR Objection 254, I invite them to discuss our differences. Unfortunately, the Comm Staff Report did not have time to consider EIR objections by me or others. Nevertheless, the Comm Staff Report seems to have generally followed the DEIR and ignored all my and others' objections to the DEIR. Thus, all my and others' DEIR objections continue to apply to the EIR, which rarely, if ever, cured any of the DEIR's errors, omissions, evasions, or noncompliance, as proven in this Objection and my companion EIR Objection 254 rebutting the EIR, and, therefore, the Comm Staff Report. Likewise, to the extent that the Comm Staff Report supports anything in the EIR/DEIR to which I have objected, I also object to that support as incorrect or worse, and I invite the staff to discuss what I think they are missing and why I think they should reconsider their position once they read my two EIR objections, among others. The only "good news" for everyone is that by the Comm Staff Report mistakenly following the EIR/DEIR so closely, it should be relatively easy for the staff to track my such objections, since all they have to do is compare the disputed EIR/DEIR to my corresponding objections of me and others.

I also offer this observation, which is supported by many of my analyses in my four Objections: the EIR/DEIR does not satisfy the legal requirements for approval either (i) on the merits of what it claims, or (ii) on account of its noncompliance with CEQA and other applicable law and reality. So far, the staff's EIR/DEIR process has shown excessive and objectionable tolerance to, and support for, what many meritorious objections have cited as noncompliance, evasions, and omissions by the DEIR which the EIR has not cured, but instead has made worse by the EIR adding more such noncompliance, evasions, and

omissions. See both (i) my incorporated Table of Incorporated by Reference Objections at the end of my EIR Objection 254, and (ii) what I included in my analyses therein from such incorporated objections of others. For example, so far, this process has applied the legally incorrect theory of the EIR/DEIR that (as so incorrectly interpreted) CEQA limits objections, even in rebuttal or impeachment, against what is stated in the EIR/DEIR, even when based on based Rise and EIR/DEIR admissions. See, for example, on economic feasibility, my DEIR Objection 255 that this Objection supports and defends against such noncompliance, errors, omissions, and evasion in the DEIR/EIR, which my companion EIR Objection 254 also exposed on an item-by-item rebuttal basis.

Indeed, this EIR dispute is not the usual, fact-based battle of experts over approving a new project with many current and known facts as to which the dispute is not so much with the facts and realities, but rather more often about how the law reacts to those facts and realities, i.e., whether an impact is "significant" or not and whether the mitigation is adequate. However, in this case of reopening a mine closed and flooded since 1956 and integrating the incontrovertibly toxic Centennial site into the project (while incorrectly denying that it is a part of the CEQA project), there has been insufficient investigation and current, reliable, and meritorious "good faith reasoned analysis" with "common sense" to create any common foundation of facts. Indeed, because of the massive, "fact-based reality" information gaps in the disputed EIR/DEIR, which the Comm Staff Report chooses to overlook in ignoring the meritorious objections, we are not just disputing over what is tolerable under generally agreed facts for government to impose on the thousands of us objectors living above or around the 2585-acre underground EIR mine. Instead, these are also disputes over what the law requires under these circumstances and what are the relevant facts and circumstances in so many profound ways that this seems a dispute between (i) what objectors know and believe to be reality (and in many cases what their witness testimony will be in any court process that may be required), versus (ii) the "alternative reality" created by the DEIR/DEIR.

Stated another way, so far, the disputed EIR/DEIR has not been held accountable for its many demonstrated errors, omissions, evasions, and other noncompliance with CEQA and other applicable laws, such as evidenced by the lack of "good faith reasoned analysis" with "common sense" proven by my lengthy Objections and those of others. See my Table of Incorporated by Reference Objections attached to my companion EIR Objection 254 and incorporated herein. It is regrettable that, while the disputed Comm Staff Report added some data missing in the EIR (e.g., about regulatory and other agency approvals and permits that will be required and related issues overlooked by the DEIR/DEIR, which I object to the Comm Staff Report trying to correct for the EIR/DEIR), that Report also fails to provide the "good faith reasoned analysis" and "common sense" lacking as a foundation for any such claim by the EIR/DEIR or advanced by the Comm Staff Report.

2. Three Examples Of Comm Staff Report Errors Among Many Explained in Exhibit A (Besides Its General Support of the EIR/DEIR And Disregard of the Many Meritorious Objections).

Among the scores of errors, omissions, evasions, and noncompliance by the disputed EIR/DEIR that are tolerated or worse in the Comm Staff Report, that Report adds its own

mistakes. Here are three of the more obvious ones among what are addressed in Exhibit A below:

a. **Regardless of the Alternatives and recommendations asserted by the Comm Staff Report, which should be rejected for the reasons stated in my and others' objections (see, e.g., my objections in section I.D above and my companion EIR Objection 254 #I.E.10), the Board decisionmakers must not certify the disputed EIR, especially if they correctly reject the mine applications. That disputed strategy would compel objectors to fight in the abstract to defeat the EIR in court so that we never have to endure a replay of this tragedy. Why would the County wish to waste public funds to defend such an intolerable EIR just so that some miner can try this again with the advantage of a certified EIR? Why make it easier for any future miner to exploit the mistakes and worse in this disputed EIR/DEIR?**
b. **The Comm Staff Report at 51-53 would use the Development Agreement to lock in a for 20 years (with two 10-year extension options) allowing the mining to proceed "consistent with the …General Plan …[and other laws] without disruption caused by material future changes in County planning and development policies and requirements over the [80 year?] life of the Idaho Maryland Mine Quarry Use Permit." Stated another way, the disputed Development Agreement would purport to "lock in" the disputed EIR for up to 40 years, without any chance for reforms by the County (and by any other government?) when it realizes our many objections were correct. The Comm Staff Report reveals its inappropriate pro-mine partisanship by trying to "spin" that self-defense correction opportunity for us mine victims as a "disruption." How can any responsible government perceive a public benefit in forbidding cures of mistakes in allowing such a disputed miner to so dangerously operate to the harm of us thousand objectors living above or around the 2585-acre underground mine?**
c. **The Comm Staff Report aids and abets the noncompliant approach by the disputed EIR/DEIR in deferring to the future the required analysis of impacts and mitigations, after approval/certification of the EIR, thereby defeating the whole purpose of CEQA with such an open and notorious violation to which I and many others have objected based on our correct interpretations of CEQA and other laws as confirmed by the applicable court precedents. See #I.C above and my companion EIR Objection 254 #'s I.C and D (discussing the applicable CEQA and Guideline rules prohibiting such deferrals and CEQA evasions, plus some cases like *Richmond v. Chevron)* and I.E1-4 (illustrating those correct rules against deferrals, especially in I.E3 and 4.)**

1. **The Comm Staff Report Cannot Cure Noncompliance By the EIR/DEIR.**

The EIR/DEIR has failed to comply with its CEQA and other investigation, analysis, and disclosure obligations, of which the staff process so far has been too tolerant (and which the Comm Staff Report cannot now cure), despite massive and meritorious objections. The question is what to do about such many essential to know, but not yet proven, material facts and

circumstances. As my EIR Objection 254 proves and as stated above, the burden of proof and compliance is on the EIR/DEIR (#I.C above), and my Objections and others demonstrate that the EIR/DEIR both fails to satisfy that burden of proof and used disputed tactics to try and evade their duties and, worse, try to shift those burdens to the objectors. That is intolerable, except it seems to the Comm Staff Report, which is one more reason to object to it. To the extent that the Comm Staff Report fails to insist on such compliance by the EIR/DEIR, I ask them to reconsider and at least to hold the EIR/DEIR to the same standards the EIR/DEIR ties to impose on us, if not to the greater standard to which the EIR/DEIR will ultimately be held by the courts correctly applying the law, if this EIR is mistakenly approved.

For example, where there is no substantial evidence presented on an issue by the EIR/DEIR, they often try to cover the gaps they leave with unsubstantiated opinions, speculations, and false assumptions that my and other the objections have rebutted and countered. (Again, while it may try, the Comm Staff Report cannot correct that noncompliance, and it should not be regarded as having done so. See the controlling precedents below.) For example, this EIR not only improperly defended such DEIR noncompliance, but the disputed EIR attacked our objections with bogus claims that it was somehow our objections that are unsubstantiated, speculative, and otherwise deficient. I repeat that here to remind the staff that the Comm Staff Report cannot use that incorrect and worse excuse for evading our meritorious objections. We urge the County to hold the EIR/DEIR to that higher standard that the law requires of them, as explained herein and in many meritorious objections.

Please note the most important legal rule that applies to this Comm Staff Report: it cannot cure any of the errors, omissions, or other noncompliance in the disputed EIR/DEIR. None of us has had a fair opportunity to rebut the Comm Staff Report (or for the Report to address our many EIR objections), consistent with law and due process. The court precedents are clear that the lead agency cannot, as the County incorrectly may hear from the EIR/DEIR, "make up for the lack of analysis in the EIR through post-EIR analysis," especially because the lead agency has the critical "burden to investigate" such potential environmental impacts. E.g., *League to Save Lake Tahoe Mountain v. County of Placer* (2022), 75 Cal. App.5th 63, 107. Here, any investigation should have confirmed both the merit of our objections (sufficient even at our DEIR level objections) and the massive noncompliance by the EIR/DEIR.

C. Some Additional Legal Guidance In Considering These Objections.

1. Such *Gray* "Common Sense" Requirement Links To the EIR's Burden of Proof That Also Requires "Good Faith Reasoned Analysis" As Illustrated Here.

a) Among the Fundamental Ways In Which the Disputed EIR/DEIR Fails To Comply with Court Interpretations of CEQA Are the Following.

I begin this EIR Objection 255 (as I did my other Objections) by providing further context needed to expose as erroneous or worse the EIR "Responses" to my Objections 255, as well as providing some substantive objection content as preview guidance for some "coming attractions" in the rest of this Objection. Without repeating myself, since nothing material in my

four Objections 255 or 254 has been defeated by anything in the EIR/DEIR, I submitted the initial DEIR Objection 255 as a supplemental brief to explain why the County was incorrect in excluding certain economic feasibility and related objections presented in my initial DEIR Objection 254. For example, I begin now by explaining that my evidence on such subjects was not only necessary for relevant truths and rebuttal and impeachment of many errors, omissions, and deficiencies in the EIR/DEIR, including Rise or DEIR admissions that are contrary to or inconsistent with disputed DEIR/EIR claims. I also contend my such evidence is required by applicable law for "common sense" and "good faith," as I explained by illustrations in CEQA mining cases like, for example, ***Gray v. County of Madera (2008), 167 Cal.App.4th 1099 ("Gray")*** **discussed in the prior subsection and thoroughly explained in my prior DEIR Objection 255. As *Vineyard* explained (at 443) "Ultimately, [t]he question is … not whether the project's significant environmental effects can be clearly explained, but whether they were" in a proper manner. That standard is informed by this principle: "The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. The EIR's function is to ensure that government officials who decide to build consequences and, equally important, that the public is assured those consequences have been taken into account." (at 449).**

The data in an EIR must not only be sufficient in quantity, but it must also be presented in a manner calculated to adequately inform the public and decision makers, who may not be previously familiar with the details of the project. [i]nformation 'scattered here and there in EIR appendices or a report "buried in an appendix" is not a substitute for "a good faith reasoned analysis.'" (at 442). Moreover, "[c]onclusions are not the reasoned explanation CEQA requires." See, e.g., Laurel Heights Improvement Assn v. Regents of University of California (1988), 47 Cal.3d 376, 404; North Coast Rivers Alliance v. Marin Municipal Water Dist. Bd. Of Directors (2013), 216 Cal. App.4th 614, 639-640. This EIR/DEIR fails to meet any of these requirements, as I demonstrate in my four Objections. See, e.g., *Laurel Heights I*, 47 Cal.3d at 404 (requiring a "reasonable range" of alternatives, because courts will not "countenance a result [on alternatives] that would require blind trust by the public, especially in light of CEQA's fundamental goal that the public be fully informed as to the consequences of action by their public officials."); *Citizens for Quality Growth v. City of Mount Shasta* (1988), 198 Cal. App.3d 433, 443-45. In any case, "a mitigation measure cannot be used as a device to avoid disclosing project impacts." E.g., *San Joaquin Raptor* Rescue, Ctr. at 149 Cal. App. 4th at 663-664; *Richmond v. Chevron*. Even where the EIR/DEIR acknowledges significant impacts that would be unavoidable after mitigation, that does not end the need for a more detailed analysis of the magnitude of the adverse impacts. E.g., *Galante Vineyards v. Monterey Peninsula Water Management Dist.* (1997), 60 Cal. App. 4th 1109, 1123. See also Town of *Atherton v. California High Speed Rail Authority* (2014), 228 Cal. App.4th 314, 349 (when the EIR conclusion is "clearly inadequate or unsupported" it is entitled to no deference.)

As the *Richmond v. Chevron* court held from such impeachment data: "'By giving such conflicting signals to decision makers and the public about the nature and scope of the activity being proposed, the Project description was fundamentally inadequate and misleading.' (*San Joaquin Raptor Rescue Center v. County of Merced* (2007), 149 Cal.App.3d 663, 655-656 …)" The court then stated (what also applies here): "Far from being an informative document, the EIR's conclusions call for blind faith in vague subjective characterizations. (*See Berkeley Keep Jets Over the Bay Com. V. Board of Port*

***Cmrs.* (2001) 91 Cal. App. 4th 1344, 1371… ["[t]he conclusory and evasive nature of the response to comments is pervasive, with the EIR failing to support its many conclusory statements by scientific or objective data"); *San Joaquin Raptor,* supra, 149 Cal. App. 4th at 659 ["decision makers and general public should not be forced to … ferret out the fundamental baseline assumptions that are being used for purposes of the environmental analysis"].)**

After a considerable review of noncompliance in the EIR process and admissions and rebuttals not addressed in the EIR, the *Richmond v. Chevron* court ruled: **"'[T]he ultimate decision of whether to approve a project, be that decision right or wrong, is a nullity if based upon an EIR that does not provide the decision-makers, and the public, with the information about the project that is required by CEQA.' (Santiago Water Dist. v. County of Orange (1981), 40 Cal.4th at 443**…["That a party's briefs to the court may explain or supplement matters that are obscure or incomplete in the EIR … is irrelevant, because the public and decision makers did not have the briefs available at the time the project was reviewed and approved."]) (emphasis added) **The court also rejected the late "battle of experts" as "too little and certainly too late, to satisfy CEQA's requirements. (See Save Our Peninsula, supra, 87 Cal. App. 4th at 124 [information about baseline "occurred at the very end of the environmental review process, thus avoiding public scrutiny and precluding meaningful comparison of preproject and postproject conditions required by CEQA'].)" (emphasis added)**

Also, in *Communities for a Better Environment v. City of Richmond (2010), 184 Cal.App.4th 70, 89-96,* there was a critical dispute over the issue of whether (as the trial court ruled) the project improperly deferred greenhouse gas mitigation measures to a future, post-EIR process, creating both a failure to proceed as required by law and an abuse of discretion in approving the EIR and project, citing CEQA #21168.5 and fn6. "Instead [of addressing the significance of the project's "contribution to climate change"], the Final EIR stated that making a significance determination for greenhouse gas impacts of the project would be too "**speculative."** However, even back then, there were too many governmental confirmations of climate change to ignore them, such as the court citation of a 2010 CEQA "white paper" and the California Global Warming Solutions Act (Health & Saf. Code 38500 et seq. and later cited new Guidelines #15064.4, 15183.5). See current Guideline 15155,15064.4,15183.5; CEQA 21083, as interpreted in the 2018 Guideline Amendment Explanation addressed below.

My meritorious objections/replies to the key questions of law (or mixed questions of law and fact) at issue are unrebutted by the EIR/DEIR, and my "good faith reasoned analysis" presenting reality, "common sense," and truth stand in contrast to the opposite in the EIR/DEIR that we objectors politely describe as "alternative reality," but which is something less tolerable. To see what I mean, please read above, for example, where *Gray* explained why its draft eir in that case lacked "common sense," when the court rejected the miner's mitigation plan to replace the neighbors' losing well water because that eir did not put the impacted neighbors in the same position such neighbors were in before the mining. (Note here the EIR did not do so and ignored many existing wells and all future wells entirely.) Notice that my such commentary is not to be ignored as merely introductory nothing, but rather is a part of a substantive legal objection that the EIR is trying to evade, rather than debate. The EIR cannot prevail by omission or evasion as it often attempts to do in noncompliance with CEQA and other applicable law. As I demonstrated at length in my companion EIR Objection 254, **the project's proponent has the burden and responsibility for that achieving that required result. *Sierra Club*, 6 Cal.5th at**

513-14. As I keep protesting against the constant effort by the disputed EIR/DEIR to shift the burden of proof to objectors, and to demand more explanations and substantiation from me and other objectors, the CEQA burdens for analysis and reporting must fall on the EIR applicant, not on the objectors. E.g., Kings County Farm Bureau v. City of Hanford (1990), 221 Cal. App. 5th 814, placing the burden of producing the relevant environmental data on the agency, not the public.

Also, under **CEQA the EIR/DEIR has the "duty to undertake all reasonable investigation" of environmental impacts and mitigation**, especially as to mitigations, which are almost always deficient or worse therein. Indeed, as provided in **Guideline #15145**, **an EIR cannot (as this disputed EIR/DEIR does scores of times, especially in its disputed "Responses" to my DEIR Objections 255 and 254 that I rebut below) simply label an issue "speculative" and then "decline to address it." E.g., Napa *Citizens for Honest Gov't v. Napa County Bd. Of Supervisors* (2001), 91 Cal. App. 4th 342, 373. To the contrary, the EIR applicant must undertake a "thorough investigation" of these potential impacts before concluding that they were too "speculative," which the EIR/DEIR continuously refuses to do. E.g., *Citizens to Preserve the Ojai v. County of Ventura (*1985), 176 Cal. App. 3d 421, 430 (requiring the county to "set forth and explain" the basis for its conclusions that analysis of cumulative emissions impacts was "speculative."); San Joaquin *Raptor/Wildlife Rescue Ctr. V. County of Stanislaus* (1994), 27 Cal. App.4th 713, 728 (rejecting the EIR's analysis of the "project setting" because the EIR "did not reflect even minimal investigation" into the disputed raptor issues.) Even worse, Guideline #15145 requires that the DEIR/EIR must "note in its conclusion" that a "particular impact is too speculative for evaluation," but the EIR/DEIR rarely admits any grounds for doubting their unannounced speculations. However, throughout the disputed DEIR/EIR most of its references to speculations (including false assumptions and unsubstantiated opinions) are just complaints about my rebuttals or counters, rather than admissions of the truth, which is that many of the DEIR/EIR errors, omissions, and deficiencies are the unadmitted result of their own speculations, including false assumptions, unsubstantiated opinions, and guesswork. That failure of the DEIR/EIR to expose their own such speculations should be fatal noncompliance with CEQA as well as a basis for rejecting their complaints about my objections.**

Again, among the most common deficiencies and worse in the disputed EIR/DEIR are that they "ignore or assume a solution" to a problem or claims that the missing information "will be provided in the future." *Vineyard* at 40 Cal.4th at 429, 431, prohibiting such deferred analysis or mitigation. See my CEQA discussions and authorities below, such as at my companion EIR Objection 254 I.A.1.d.(v), I.C, I.D, and I.E.4. For example, the disputed EIR ignores the requirement in Guideline #15144 that "an agency must use its best efforts to find out and disclose all that it reasonable can." That rarely happens in the EIR/DEIR on the issues disputed in my Objections. Likewise, my such introductory comments include not just a review of applicable law (e.g., CEQA and its Guidelines), but also the application of such laws and authorities to relevant challenges to the DEIR/EIR. For example, because the disputed DEIR/EIR tries improperly to evade meritorious objections as too "speculative," or insufficiently explained or substantiated to be worthy of any response (a criticism that more often applies to the EIR/DEIR than to my objections), I demonstrated in my companion EIR Objection 254 the reasons that is incorrect and will cause the EIR/DEIR to fail any court test. That is especially true because us objectors are entitled by applicable law to rebut

and impeach any error, omission, or deficiency in the EIR/DEIR (e.g., CEQA does not ever prevent use of truth evidence to rebut nontruths stated in the EIR/DEIR), especially where the DEIR/EIR itself "opens the door" to the subjects it considers outside the CEQA boundary it tries improperly to shield itself from disputes about its errors, omissions, and other deficiencies. Note, for example, that the disputed DEIR (at #4.3-103-104) has a disputed section entitled "Non-CEQA Related Analysis" that I rebut. Moreover, the disputed DEIR admits (at 6-14) that its whole project is economically unfeasible if the EIR mine is not allowed to operate 24/7/365 for 80 years as it demands in its disputed EIR/DEIR (which contrary limitations us objectors will be proposing among other law reforms).

As provided in **Guideline #15145**, **an EIR cannot (as this disputed EIR/DEIR does scores of times) simply label an objection as "speculative" and then "decline to address it." E.g., Napa *Citizens for Honest Gov't v. Napa County Bd. Of Supervisors* (2001), 91 Cal. App. 4th 342, 373. To the contrary, the EIR applicant must undertake a "thorough investigation" of these potential impacts before concluding that they were too "speculative," which the EIR/DEIR continuously refuses to do. E.g., *Citizens to Preserve the Ojai v. County of Ventura (*1985), 176 Cal. App. 3d 421, 430 (requiring the county to "set forth and explain" the basis for its conclusions that analysis of cumulative emissions impacts was "speculative."); San Joaquin *Raptor/Wildlife Rescue Ctr. V. County of Stanislaus* (1994), 27 Cal. App.4th 713, 728 (rejecting the EIR's analysis of the project setting because the EIR "did not reflect even minimal investigation" into the disputed raptor issues.) Again, Guideline #15145 requires that the DEIR/EIR must "note in its conclusion" that a "particular impact is too speculative for evaluation," but the EIR/DEIR rarely admits any grounds for doubting their unannounced speculations.**

Again, none of these important issues can be evaded or ignored in an EIR/DEIR that is supposed to provide such a "good faith reasoned analysis." E.g*., Banning Ranch Conservancy v. City of Newport Beach* (2017), 2 Cal.5th 918, 940-41 ("***Banning***"); *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007), 40 Cal. 4th 412, 442 ("***Vineyard*"**); and *Concerned Citizens of Costa Mesa, Inc. v. 32d Dist. Ag. Ass'n* (1986), 42 Cal.3d 929 ("***Costa Mesa***"), **each insisting on "a good faith reasoned analysis," rather than referencing scattered or buried data (aka objectors cannot be required to hunt through disputed masses of exhibits looking for unspecified data or the assumptions that would be necessary to resolve whether disputed cited studies could be relevant and probative or irrelevant and inapplicable on the merits as, for example, being too dissimilar to this the conditions and circumstances of this mine). More importantly, my prior DEIR Objection 255 presented from the opening throughout not just my correct good faith reasoned analysis of the applicable law, but also the application the CEQA and its Guidelines, as well as other laws and judicial decisions to the relevant facts and circumstances. See, e.g., my detailed application of *Gray v. County of Madera,* supra, not just to explain, but also to illustrate the effect on this mining EIR/DEIR, of the controlling rules for "good faith reasoned analysis" and "common sense," constantly lacking in the DEIR/EIR's disputed, "alternative reality." See generally my companion EIR Objection 254.**

In addition, when there are inconsistent or contrary comments in a disputed EIR/DEIR, the EIR cannot be approved without reconciling revisions and recirculation. For example, in ***Communities for a Better Environment v. City of Richmond (2010), 184 Cal.App.4th 70, 82-90 ("Richmond v. Chevron"),*** there was a critical dispute over the issue of whether the project includes any equipment changes that would facilitate the future processing of

heavier crudes [oil] at the refinery. The court stated that "there was conflicting information developed during the EIR process [**including SEC filing admissions**] that cast serious doubt on these assertions [by Chevron's EIR "in conclusory terms that the proposed Project will not result in an increased capacity to process lower quality, heavier crude, and that Chevron seeks only the ability to refine crude with higher sulfur content." The appellate court agreed with the trial court that "the EIR is inadequate as a matter of law because it does not adequately address the issue of whether there are any equipment changes that would facilitate the future processing of heavier crudes…" **The key to that was the court's discussion of conflicting or contrary admissions "in Chevron's SEC form 10K," and (as here with Rise SEC filings Exhibit B) the EIR applicant told its investors a different story in the SEC filings than it told the public in its EIR. And such admissions then led to more from questioning at a public meeting.**

As the court noted from such impeachment data: "'By giving such conflicting signals to decision makers and the public about the nature and scope of the activity being proposed, the Project description was fundamentally inadequate and misleading.' (*San Joaquin Raptor Rescue Center v. County of Merced* (2007), 149 Cal.App.3d 663, 655-656 …)" The court then stated (what also applies here): "Far from being an informative document, the EIR's conclusions call for blind faith in vague subjective characterizations. (*See Berkeley Keep Jets Over the Bay Com. V. Board of Port Cmrs.* (2001) 91 Cal. App. 4th 1344, 1371… ["[t]he conclusory and evasive nature of the response to comments is pervasive, with the EIR failing to support its many conclusory statements by scientific or objective data"); *San Joaquin Raptor,* supra, 149 Cal. App. 4th at 659 ["decision makers and general public should not be forced to … ferret out the fundamental baseline assumptions that are being used for purposes of the environmental analysis"].)

Furthermore, environmental effects may be significant impacts despite compliance with regulatory requirements, as shown in *Gray* and *Protect the Historic Amador Waterways v. Amador Water Agency* (2004), 116 Cal,App.4th1099, 1108-09. As explained in my EIR and DERI Objections 254, the presence of asbestos was bankrupting asbestos defendants and defeating eir's long before it was officially banned, not because any responsible person or science imagined it to be safe at any threshold level but because of concerns about the economic impacts of such a ban. (In effect, the cynical governmental strategy seemed to be to focus on preventing new additions to the menace and allowing the legacy menaces to slowly work themselves out gradually over time in massive, slow moving civil litigations followed by many slow-moving Chapter 11 cases thereafter, while business adjusted, especially legacy insurers who often also failed in slow insurance insolvency proceedings.

b) The Courts Have Also Forbidden The Kinds of Deferred Analysis of Impacts And Future Mitigations That The Noncompliant EIR/DEIR Frequently Use To Evade Reality By Such Disputed Tactics.

This disputed EIR/DEIR repeatedly evades its obligations by stating its nonresponsive, infeasible, and worse "aspirations" for future developed permits or compliance with laws and regulations as a means to pretend its hazard and other related impacts will be less than "significant." This also is not compliance with CEQA. E.g., *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, 92 (even "if the study is subject to administrative approval, it is analogous to the sort of post-

hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA"). Furthermore, the EIR/DEIR may not defer mitigation to an existing regulatory scheme to avoid fully analyzing environmental impacts. E.g., *Communities for a Better Environment v. City of Richmond (2010), 184 Cal.App.4th 70, 82-90 ("Richmond v. Chevron" or "CBE"); Californians for Alternatives to Toxics v. Dept. of Food & Ag.* (2005), 136 Cal. App. 4th 1 (an agency's sole reliance on another agency's pesticide registration program for mitigation is inadequate without its own evaluation of the impacts of its proposed pesticide use.) My four Objections cite many of those improperly deferred mitigation measures. For example, e.g., such *Communities for a Better Environment v. City of Richmond* case), relying, among other things on the CEQA principle that: "Abuse of discretion is established "if the agency has not proceeded in a manner required by law or if the determination is not supported by substantial evidence. (#21168.5) Substantial evidence in this context means 'enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached.' (Guidelines #15384, subd. (a).)" (emphasis added) **Here there is a lack of sufficient such evidence and much of what is provided is not relevant (e.g., claiming incorrectly, and without a "good faith reasoned analysis" consistent with "common sense," erroneous things, such as that some other mining situation is "similar" or applicable when its different and irrelevant.) Moreover, such EIR/DEIR "inferences" are not "reasonable," and the related "argument" is not "fair" in supporting a conclusion that is usually speculative, unsubstantiated, or otherwise deficient.**

As explained in **Mission Bay Alliance v. Office of Community Investment & Infrastructure** (2016), 6 Cal. App.5th 160, 198 n.26, that *CBE* case rejected the sponsor's proposal to submit to the City Council within a year a plan for achieving a complete reduction of GHG emissions up to the estimated emissions over the baseline. Among other things, that *CBE* court found (at 93) **that improperly deferred formation of mitigation to be merely a "generalized goal" with a "handful of cursorily described mitigation measures for future consideration," all (at 95) without offering any "assurances that the plan…was feasible and efficacious" and without any "objective criteria for measuring success."** (emphasis added) Accord *POET, LLC v. State Air Resources Board (2013), 218 Cal. App. 4th 736, 739-40; Golden Door Properties, LLC v. County of San Diego (2020), 50 Cal. App.5th 467, 520; King & Gardiner Farms LLC v. County of Kern (2020), 45 Cal. App.5th 814, 858.*

The EIR/DEIR rarely considers actual significant impacts to be "significant," because as I have demonstrated in my four Objections, the EIR/DEIR apply an excessive standard for what is "significant," thus tolerating more than the law allows the EIR/DEIR to impose on us potential victims. See my Objection 254 #I.C and D stating rules applied in sections I.E and F and in section II against EIR Master Responses and section III against "Responses." Whenever the EIR/DEIR does acknowledge the need to address a significant impact, it often repeatedly and improperly attempts (a) to evade its duty to apply "common sense" and "good faith reasoned analysis" and to report such environmental impacts, by (b) simply proposing disputed mitigation measures, even if they were (as they usually are here) deficient and infeasible by their own (and Rise's SEC admissions) and especially because they are often improperly deferred. See *Richmond v. Chevron*; *San Joaquin Raptor Center v. County of Merced* (2007), 149 Cal. App. 4th 645. 663-664, explaining how "a mitigation measure cannot be used as a device to avoid disclosing project impacts." As I have demonstrated and as illustrated herein (as with *Richmond v. Chevron* above and section I.C.2 discussing how the 2018 Guidelines Amendments

Explanation tighten the rules against such problematic deferrals of analysis and mitigation), the EIR/DEIR cannot defer mitigation of impacts until after project approval, especially without committing to a specific performance standard. That means specific, not generalized, standards.

Also, by deferring the mitigation details until after the CEQA process has concluded, the disputed EIR/DEIR precludes the essential, informed public participation and fact checking needed to improve decision-making, which is essential especially in this case because of the massive errors, omissions, and deficiencies in this EIR/DEIR can be expected to continue into deferred future processes where they may hope for even less future scrutiny (or where they may seek future forgiveness for noncompliance instead of initial permission.) See *Cleveland Nat'l Forest Foundation v. San Diego Assn. of Governments* (2017), 17 Cal. App.5th 413, 443; *Richmond v. Chevron*. The disputed theory of the EIR/DEIR deferrals can by illustrated by the logical conclusion of its disputed reasoning: if the EIR/DEIR can get away with its disputed approach, CEQA could just be evaded or defeated by a project applicant simply claiming that the project involved no significant environmental impact, but, if there were any such impacts, applicant would do timely do in the future whatever the regulators might require in the future regulatory permit process as mitigation. However, that would not be compliance with CEQA, the Guidelines, or applicable law. **Moreover, "a mitigation measure cannot be used as a device to avoid disclosing project impacts." E.g., *San Joaquin Raptor Rescue,* Ctr. at 149 Cal. App. 4th at 663-664. That should eliminate many of the disputed EIR/DEIR excuses and evasions and leave the resulting EIR/DEIR noncompliant and full of "gaps" lacking any pretense of required disclosure of impacts. That should also defeat the EIR's Master Responses and Responses to my Ind. 255 and 254 objections.**

Most of the EIR/DEIR mitigation claims violate the prohibition in Guidelines #15126.4(a)(1)(B), which prohibits "formulation of mitigation measures" until some "future time." See, e.g., *Richmond v. Chevron*. An EIR is inadequate if '[t]he success or failure of mitigation efforts … may largely depend upon management plans that have not yet been formulated and have not been subject to analysis and review within the EIR.' (*San Joaquin Raptor*, supra, 149 Cal. App.4th at 670.)" (emphasis added) **The only circumstances where CEQA allows specific mitigation details to be developed after project approval is when it is impractical or infeasible to include such details in the EIR and only if the lead agency commits itself to the mitigation, adopts "specific performance standards that must be achieved, and identifies potential actions that can feasibly achieve compliance with that standard. Id. As the courts have confirmed that lead agency cannot simply require the project applicant to obtain a report and then comply with any of its recommendations. E.g., League to Save Lake Tahoe Mountain Area Preservation Foundation v. County of Placer (2022), 75 Cal. App. 5th 63; *Endangered Habitats League, Inc. v. County of Orange* (2005), 131 Cal.App.4th 777, 793. ALSO, THE DEFERRAL IS ONLY PERMISSIBLE WHERE MITIGATION IS KNOWN TO BE FEASIBLE AND THE AGENCY COMMITS ITSELF TO MEASURES THAT WILL SATISFY SPECIFIC PERFORMANCE CRITERIA STATED AT THE TIME OF PROJECT APPROVAL. E.g., *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, 94 (a list of potential methods of mitigation for later selection without "specific and mandatory performance standards" are improper.) Accord *Endangered Habitats League, Inc. v. County of Orange Habitats* (2005), 131 Cal. App. 4th 777, 794 (requiring a report without "specific and mandatory performance standards" is improper deferral); Defend the Bay v. City of Irvine (2004), 119**

Cal. App.4th 1261, 1275 (requiring biological report and compliance with any recommendations is an impermissible mitigation).

My four Objections cite many of those improperly deferred mitigation measures and refute the EIR's Responses and Master Responses. For example, DEIR Objection 254 #2, 3.E, 8, and 9, as well as EIR Objection 254 to EIR Response Ind. 254-12, fail under that standard to mitigate feasibly and effectively the breaking of our two lane road by 100 daily heavy trucks use 24/7/365 for 80 year where there will be constant repairs to our main roads (e.g., limiting traffic usage to one lane and with illusory aspirations for a mutual agreement with the County for reimbursement of the mine's share of expenses). SEE, E.G., GUIDELINES #15126.4(A) REQUIRING THAT THE EIR MUST IDENTIFY AND DESCRIBE GOOD FAITH, "FEASIBLE" MITIGATION MEASURES THAT MUST BE LEGALLY ENFORCEABLE AND AT LEAST PARTIALLY EFFECTIVE TO BE DEEMED FEASIBLE. E.G., *SIERRA CLUB* AT 6 CAL.5TH 524-525. ALSO, THE PROJECT CAN FAIL TO MEET THAT STANDARD WHEN THE PROJECT REQUIRES APPROVALS FROM OTHER AGENCIES OUTSIDE OF THE LEAD AGENCY'S CONTROL. E.G., *CITY OF MAYWOOD V. LA UNIFIED SCHOOL DIST.* (2012), 208 CAL. APP. 4TH 362, 371-72, 376-395. As discussed in other places, for example, objecting to EIR energy policy harms (e.g., I.E.8) , climate change denials (e.g., I.C.2.b) , and other misuses of deferrals to evade admitting significant impacts, see also *League To Save Lake Tahoe Mountain Area Preservation Foundation v. County of Placer* (2022), 75 Ca. App. 5th 63, where the court prohibited the EIR's determination of greenhouse gas mitigation measures and the significance of impacts until some unknown future date if the project conflicted with a relevant future emission target adopted by the state under performance standards that do not exist (and may never exist) and without any sufficient commitment by the county and the applicant to mitigating the impacts.

In any event, any circumstances where deferred mitigation might be tolerated are few, narrow, and not relevant to our disputed EIR/DEIR for the foregoing and other reasons. In any case, as *Banning* explained 2 Cal. 5th at 937) "Evaluation of project alternatives and mitigation measure is '[t]he core of an EIR.'" As described in the CEA Objections, particularly Grp. Letter 21 at 21-32 to 36 and the Baseline expert report, the disputed DEIR Mitigation Measures 4.8-2(a), 4.8-2(b), and 4.8-2(c) are fundamentally flawed, noncompliant, and invalid. See, e.g., my Gray and other Objection cites, including *Cleveland Nat. Forest Foundation v. San Diego Assn. of Govs* (2017), 17 Cal.App.5th 413, 442-43. For example, *Sundstrom v. County of Mendocino* (1988), 202 Cal.App. 3d 296, 307 (the court rejected or distinguished the various city arguments and cites, adding: "In our opinion, the novelty of greenhouse gas mitigation measures is one of the most important reasons 'that mitigation measures timely be set forth, that environmental information be complete, and that environmental decisions be made in an accountable forum," with citations including *Oro Fino Mining Corp. v. County of El Dorado* (1990), 225 Cal. App. 3d 872, 885. (emphasis added)

While the EIR/DEIR misinterprets or misapplies Guidelines to suit its evasion tactics, as demonstrated in the next subsection, the "2018 Guideline Amendment Explanation" adds helpful support for my rebuttals (see analysis below and in my companion EIR Objection 254 at section I.C.2), such as from countering **Master Response D.15 at 89-91, and insisting on the feasibility of mitigation even If deferred.** After discussing such court decisions limiting deferral of mitigation details, that commentary [what I quoted before requiring that the agency

commits and adopts specifics and identifies] explains the *Rialto* decision and the updated Guidelines:

> "In sum, 'it is sufficient to articulated specific performance criteria and make further [project] approvals on finding a way to meet them.' [citation] **Essentially, the rule prohibiting deferred mitigation prohibits loose or open-ended performance criteria. Deferred mitigation measures must ensure that the applicant will be required to find some way to reduce impacts to less than significant levels. If the measures are loose or open-ended, such that they afford the application a means of avoiding mitigation during project implementation, it would be unreasonable to conclude that implementing the measures will reduce impacts to less than significant levels." (emphasis added)**

Furthermore, that court further explains that **(1) "the agency [must] commit to implementing the measure," [which is "essential to support a finding that project impacts have, if fact, been mitigated," (2) the agency [must] identify performance standards" consistent with the rigorous requirements of the court decisions I have specified, without which there can be no "substantial evidence that impacts will in fact be reduced to less than significant level," and (3) "the measures must be feasible," which requires in turn that there must be identification of the types of measures that could achieve the standard," citing to follow the rulings in *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, rejecting a general "net zero standard" for eliminating greenhouse gas emissions because "there was no discussion of what measures could feasibly attain that net-zero standard." (emphasis added)**

c) A Brief Comment Regarding Project Setting And Description Disputes, And Illustrations of the 2018 Guideline Amendments Explanation Correcting Erroneous EIR/DEIR Interpretations of Even the Guidelines The EIR/DEIR Dares To Assert.

My companion EIR Objection 254 and others explain in more detail the errors, omissions, evasions, and other noncompliance of the EIR/DEIR with respect to the CEQA/Guideline requirements (as properly interpreted) for describing the project and its setting. Rather than repeat such many and wide-ranging objections, I will simply mention some of the applicable law of general application as illustrated in those disputes with the EIR/DEIR. I do this, in part, because the EIR/DEIR both ignores, evades, or misconstrues/misinterprets many precedents and Guidelines as part of their disputed tactics. Even when the EIR/DEIR cite to one of the Guidelines, they often also ignore the contrary reform commentaries of the Guidelines authors in what I call for comprehensive analysis in my companion EIR Objection 254 (#'s I.C and D) as the "2018 Guidelines Amendments Explanations" discussed below. Also, the Comm Staff Report appears to continue to follow such mistaken EIR/DEIR claims about the law and Guidelines, as I illustrate in Exhibit A herein, following the mistaken approach of the County Economic Report revealed in my Exhibit A to my Companion EIR Objection 254.

For example, the Guidelines in **#15125** are often intended to accomplish or implement what the courts have also required, but which this EIR/DEIR insists on evading: to clarify that the purpose of defining the **"environmental setting"** is to give decisionmakers and the public an

"accurate picture of the project's likely **impacts, both near-term and long-term**." (emphasis added) "Cal. Nat. Resources Agency Final Statement of Reasons For Regulatory Action Amendments To the State CEQA Guidelines" Nov. 2018 ***("2018 Guidelines Amendments Explanations"***) at 34-36. That commentary follows *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013), 57 Cal. 4th 439, 455 (requiring "the most accurate information on the project impacts practically possible, and the choice of a baseline must reflect that goal.") Accord *Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010), 48 Cal. 4th 310. The EIR/DEIR often flunks that test, for example, when it sets the disputed groundwater recharge baseline rate based on average "current" rainfall from 1967 to 2017, ignoring the more current and dry years after 2017 (a noncompliant "baseline" example addressed in the next paragraph) as well as emerging climate change impacts that are beginning the new normal. Even worse, **although the EIR/DEIR demands that it be permitted to operate as it proposed 24/7/365 for 80 years, they consistently fail to deal with the "long term" as so required by CEQA and its Guidelines (as so properly interpreted and contrary to the disputed EIR/DEIR interpretations), such as in that case by only purporting to rely on NID data until 2040 (not applicable for the EIR/DEIR purposes), not for the entire 80 years. That error is especially damning since the noncompliant EIR/DEIR incorrectly dismissed any climate change impacts as too speculative to merit analysis or mitigation. See, e.g., my companion EIR Objection 254 at # I.C.2, citing case law and the 2018 Guidelines Amendments Explanations.**

As such 2018 Guidelines Amendments Explanations said, "When in doubt, lead agencies should choose the baseline that most meaningfully informs decision-makers and the public of the project's possible impacts." And subject thereto, the new 15125 subdivision (a)(1) declares that the normal rule is that "normally, conditions existing at the time of the environmental review should be considered the baseline" and "the lead agency must expressly justify its decision not to use existing conditions as the baseline for environmental analysis…[supported by] substantial evidence in the record." Id. and see the example of violating that rule in the prior paragraph by setting the groundwater recharge baseline at the average rainfall between 1967 and 2107, which is not "current" or compliant. [That discussion reminds us that substantial evidence does not include 'speculation…or… evidence that is clearly inaccurate or erroneous," as the disputed EIR/DEIR often does.] The disputed EIR/DEIR does the opposite of both such normal and special rules in an obnoxious effort to avoid "significance" and reality about our drier, climate change future and the "common sense" harms from 24/7/365 dewatering for 80 years of groundwater owned by those of us on the surface above and around the 2585-acre underground mine. **Note also, that, consistent with the *Neighbors'* decision and the concerned that predictive modeling may not be readily understood by the public (at 455-456 and CEQA 21003(b)) documents must "be organized and written in a manner that will be meaningful and useful to decision-makers and the public."**

The EIR/DEIR also violates Guideline (a)(3), prohibiting using "hypothetical conditions as a baseline…" such as that disputed and incorrect theory above that such average rainfall between 1967 and 2017 predicts the groundwater recharge here for the next 80 years of 24/7/365 dewatering. As the Supreme Court explained in its CBE decision: '[a]n approach using hypothetical allowable conditions as the baseline results in 'illusory' comparisons that 'can only mislead the public as to the reality of the impacts and subvert full consideration of the actual environmental impacts,' a result at direct odds with

CEQA's intent." Communities for a Better Environment, supra, 48 Cal. 4th 322 (quoting Environmental Planning & Information Council v. County of El Dorado (1982), 131 Cal.App. 3d 350, 358).)"

Also, that 2018 amendment commentary (at 38-42) implements the Supreme Court's holding in the CBIA case, 62 Cal. 4th at 377 ('when a proposed project risks exacerbating those environmental hazards or conditions that already exist, an agency must analyze the potential impact of such hazards on future residents or users') ["similar to an 'indirect' effect" in Guidelines #15064(d)(2).]" Also, the amendments clarify that a project's direct and indirect and cumulative effects may affect the hazardous condition," requiring CEQA evaluation. That is illustrated by a coastline example, but it also applies here, where it's appropriate to regard this ancient mine, closed and flooded since 1956, to be such a hazard, although the disputed EIR/DEIR inappropriately avoided that analysis to evade dealing with inconvenient truths that might be discovered.

MOST IMPORTANTLY, THE GUIDELINE'S "FINAL ADDITION CLARIFIES THAT A LEAD AGENCY SHOULD CONSIDER NOT JUST EXISTING HAZARDS, BUT THE POTENTIAL FOR INCREASING SEVERITY OF HAZARDS OVER TIME. THIS CHANGE IS NECESSARY BECAUSE CERTAIN TYPES OF HAZARDS [CITING "MORE INTENSE WILDFIRES" AND "INCREASED FLOODING"] ARE EXPECTED TO BE MORE SEVERE IN THE FUTURE DUE TO OUR CHANGING CLIMATE" [WHICH THE EIR/DEIR INCORRECTLY AND WORSE REFUSED TO DO ON THE INCORRECT THEORY THAT IT WAS TOO "SPECULATIVE" TO WORRY THAT, FOR EXAMPLE, 24/7/365 DEWATERING OF OUR GROUNDWATER FOR 80 YEARS WOULD BE MADE WORSE BY CLIMATE CHANGE'S INCREASING DRYNESS.] THESE TYPES OF CLIMATE CHANGE IMPACTS MAY WORSEN A PROPOSED PROJECT'S DIRECT, INDIRECT, OR CUMULATIVE ENVIRONMENTAL EFFECTS IN THE FUTURE…. FOCUS ON BOTH SHORT-TERM AND LONG-TERM EFFECTS IS ALSO NECESSARY TO IMPLEMENT EXPRESS LEGISLATIVE POLICY," CITING CEQA 21001(D) AND (G) AND 21083(B)(1.).

As to the Guideline amendments for mitigation measures, note (at 43-44) that when there is a "potentially significant environmental impact," the EIR must propose feasible mitigation measures," citing CEQA #'s 21002, 21080(c)(2), 21100(b)(3). **"The formulation of mitigation measures cannot be deferred until after project approval [as our dispute EIR/DEIR often does*]. Communities for a Better Environment v. City of Richmond (*2010), 184 Cal. App. 4th 70, 92 ('reliance on tentative plans for future mitigation after completion of the CEQA process significantly undermines CEQA's goals of full disclosure and informed decision making; and consequently, these mitigation plans have been overturned on judicial review as constituting improper deferral of environmental assessment.')" Because of many cases on this subject, the Guidelines amended 15126.4.**

The EIR/DEIR generally fails to provide an adequate and accurate baseline and **environmental setting** especially by deficiently addressing the 2585-acre underground mine and its impact on us surface owners above and around the mine. See Exhibit A, showing how the Comm Staff Report adopts the disputed EIR/DEIR's noncompliant description. To accomplish the fundamental goal of any eir, it must inform decision makers and the public of any significant adverse effects a project is likely to have on the physical environment. To make that assessment the EIR must delineate the environmental conditions prevailing absent the project, defining a baseline against which predicted effects can be described and quantified. E.g., *Neighbors for*

Smart Rail v. Exposition Metro Line Construction Authority (2013), 57 Cal. 4th 439, 447. This includes providing a description of the physical environmental conditions in the vicinity of the project at the time the notice of preparation is published or … the analysis is commenced…" Id. at 448; Guidelines #15125(a). **"Without accurate and complete information pertaining to the setting of the project and surrounding uses, it cannot be found that the FEIR adequately investigated and discussed the environmental impacts of the development project." E.g., *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994), 27 Cal. App. 4th 713, 729. Indeed, "[w]ithout accurate and complete information pertaining to the setting of the project and surrounding uses, it cannot be found that the FEIR adequately investigated and discussed the environmental impacts of the …project." Id. at 729. Stated another way, there is no harmless error excuse that will save a deficient eir on this criterion. Assuming (especially incorrectly as it does) that the conditions for the limited areas described in the DEIR/EIR are the same for the rest of the mining area and surrounding areas is insufficient and worse and requires the rejection of the EIR/DEIR. (There is no area "surrounding" the mine more in need of honest, common sense, good faith reasoned analysis than the surface and at least 200 feet below it and our shared groundwater above and around the 2585-acre underground mine.) *Banning* at 942.**

Here, many fear, Rise has not adequately evaluated either the 2585-acre underground mine (closed and flooded since 1956) because it seems not want to have to deal with inconvenient truths and realities or litigation exposures (and it may not be able to afford the required analysis, see Exhibit B SEC filing admissions by Rise). Also, the EIR/DEIR ignore threatened wells that exist now or are likely to exist in the future, as well as the competition between us surface owners and the underground mine. See my companion EIR Objection 254 on that issue. Furthermore, such disputed EIR/DEIR omissions and evasions tend to be tactical, such as the refusal of the EIR/DEIR to map the underground mine against the surface properties in a reasonably identifiable way for us objectors to find our homes above and around the underground mine locations, apparently to avoid awakening opposition by surface owners mistakenly imagining from the disputed and vague maps that they are beyond the impact zone of the mine or the bigger stigma zone for impacting property values and possibly groundwater sources. Instead, **the disputed EIR/DEIR offer their unsubstantiated opinions, assumptions, and speculations about those mine conditions, which means there is no meaningful baseline as required. Therefore, the EIR/DEIR cannot comply with CEQA, since "the description of the environmental setting of the project site and surrounding area is inaccurate, incomplete, or misleading." E.g., *Cadiz Land Co. v. Rail Cycle* (2000), 83 Cal. App. 4th 74, 87. As Guideline #15125 explains: Knowledge of the regional setting is critical to the assessment of environmental impacts," which requires enough detail to allow analysis of a project's potential impacts, since the primary purpose of CEQA is to inform government decision-makers and the public about significant environmental effects of proposed projects before approving or denying them. *Citizens of Goleta Valley v. Board of Supervisors* (1990), 52 Cal.3d 553, 564; *San Joaquin Raptor*, 27 Cal. App.4th at 729; *Cadiz,* 83 Cal. App. 4th at *87; Galante Vineyards v. Monterey Peninsula Water Management Dist.* (1997), 60 Cal. App.4th 1109, 1122. A stable and accurate description of the surrounding area is not less crucial than a correct description of the project. E.g., City of Irvine v. County of Orange (2015), 238 Cal. App. 4th 526, 542 fn. 8 (A "stable and accurate description of a project is the 'sine qua non' of an EIR").**

For example, in *Richmond v. Chevron* the EIR proposed mitigation that the project "shall result in no net increase in GHG emissions over the baseline," and a requirement within one year after approval to submit for city approval a plan for achieving complete reduction of GHG emissions up to the maximum estimated increase over the baseline, validated by an independent expert and listing "a menu" of various possible mitigation measures. However, the court (like the trial court) found: **"Formulation of mitigation measures should not be deferred until some future time. (Guidelines #15126.4(a)(1)(B).) An EIR is inadequate if '[t]he success or failure of mitigation efforts … may largely depend upon management plans that have not yet been formulated and have not been subject to analysis and review within the EIR.'** (*San Joaquin Raptor*, supra, 149 Cal. App.4th at 670.)" (emphasis added) **The court also objected to such future studies even subject to administrative approval as "analogous to the sort of post hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA" citing many cases including *Sundstrom v. County of Mendocino* (1988), 202 Cal.App. 3d 296, 307 (all incorporated herein and rejected or distinguished the various city arguments and cites. The court added: "In our opinion, the novelty of greenhouse gas mitigation measures is one of the most important reasons 'that mitigation measures timely be set forth, that environmental information be complete, and that environmental decisions be made in an accountable forum," with citations including *Oro Fino Mining Corp. v. County of El Dorado* (1990), 225 Cal. App. 3d 872, 885. (emphasis added)**

While the EIR/DEIR misinterprets or misapplies Guidelines to suit its evasion tactics, the 2018 Guideline Amendment Explanation adds helpful support for my rebuttals (at my EIR Objection 254 section I.C.2), such as from countering **Master Response D.15 at 89-91, and insisting on the feasibility of mitigation even If deferred.** After discussing the court decisions limiting deferral of mitigation details, that commentary [what I quoted before requiring that the agency commits and adopts specifics and identifies] explains the *Rialto* decision and the updated Guidelines: "In sum, 'it is sufficient to articulated specific performance criteria and make further [project] approvals on finding a way to meet them.' [citation] **Essentially, the rule prohibiting deferred mitigation prohibits loose or open-ended performance criteria. Deferred mitigation measures must ensure that the applicant will be required to find some way to reduce impacts to less than significant levels. If the measures are loose or open-ended, such that they afford the application a means of avoiding mitigation during project implementation, it would be unreasonable to conclude that implementing the measures will reduce impacts to less than significant levels." (emphasis added)**

Furthermore, that court further explains that **(1) "the agency [must] commit to implementing the measure," [which is "essential to support a finding that project impacts have, if fact, been mitigated," (2) the agency [must] identify performance standards" consistent with the rigorous requirements of the court decisions I have specified, without which there can be no "substantial evidence that impacts will in fact be reduced to less than significant level," and (3) "the measures must be feasible," which requires in turn that there must be identification of the types of measures that could achieve the standard," citing to follow the rulings in *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, rejecting a general "net zero standard" for eliminating greenhouse gas emissions because "there was no discussion of what measures could feasibly attain that net-zero standard." (emphasis added) Among the worst noncompliance by the EIR/DEIR is any credible "reasoned analysis" with common sense on the feasibility of any**

of its proposed mitigations or, where they evade mitigation by incorrectly claiming impacts not to be "significant," any possible mitigations that could be feasible.

2. The Rise And DEIR/DEIR Admissions Must Prevail Because Truth Matters And the Rules of Evidence Apply Without Impairment by CEQA.

a) Some Illustrations From SEC Filing Admissions Revealing Lack of EIR Feasibility.

Throughout this EIR Objection 255 (and sometimes even more extensively than in my companion EIR Objection 254; e.g., #3.N, 4, and 14), I cite and quote applicable rules from CEQA and its Guidelines (e.g. #'s 15002 et seq.) and relevant judicial decisions that illustrate how the EIR/DEIR fails to comply, often by evasion and other disputed tactics that expose a chronic lack of the required "good faith reasoned analysis" with "common sense" and other such standards. If one were to read all my four Objections in comparison to the corresponding EIR/DEIR provisions that I dispute, disturbing patterns and practices become clear. Too often it seems that the EIR/DEIR is not attempting to make a convincing case on the merits, but rather (as if it realizes that it cannot prevail on the merits) just seeking to craft an alternative reality for some political appeal without merit. However, since the thousands of us objectors, especially those of us owning surface property above or around the 2585-acre mine, have no choice but to resist with our legal and political/law reform remedies to protect our families' health and welfare, our property values and rights, and our community way of life from this mining menace, I urge decisionmakers to consider why this "no net benefit mine" (see, e.g., my Objection 254 #2, 3.N, 4, and 14) ultimately cannot prevail.

If there is any doubt in the minds of you decisionmakers, consider what Rise has admitted to the SEC and its investors about the mine that Rise not only fails to address in its disputed EIR/DEIR, but which the EIR/DEIR is improperly evading as allegedly irrelevant, as I explain herein and in my EIR Objection 254 #'s I.C and D and Exhibit B, in which Rise admits risks and problems to the SEC and its speculator-investors that are not addressed adequately (or often not even at all) in the EIR/DEIR. See *Richmond v. Chevron*, where the objectors used such SEC admissions to defeat such an eir, and reminding decisionmakers that CEQA is subordinate to the rules of evidence and, at least in court, truth matters and will prevail. If I were a County decisionmaker, I would be concerned about a different mine risk story being told in those SEC filings than in the EIR/DEIR. Therefore, County decisionmakers need to consider not only the merits for disapproving the EIR mine at the start, but also the adverse consequences of the mine beginning its harmful and risky activities before it is stopped by objectors' legal and political/law reform remedies.

As the court noted in *Richmond v. Chevron* from similar impeachment data to what is at issue in my Objections: "'By giving such conflicting signals to decision makers and the public about the nature and scope of the activity being proposed, the Project description was fundamentally inadequate and misleading.' (*San Joaquin Raptor Rescue Center v. County of Merced* (2007), 149 Cal.App.3d 663, 655-656 …)" The court then stated (what also applies here): "Far from being an informative document, the EIR's conclusions call for blind faith in vague subjective characterizations. (*See Berkeley Keep Jets Over the Bay Com.*

V. Board of Port Cmrs. **(2001) 91 Cal. App. 4th 1344, 1371… ["[t]he conclusory and evasive nature of the response to comments is pervasive, with the EIR failing to support its many conclusory statements by scientific or objective data"); *San Joaquin Raptor,* supra, 149 Cal. App. 4th at 659 ["decision makers and general public should not be forced to … ferret out the fundamental baseline assumptions that are being used for purposes of the environmental analysis"].)** After a considerable review of the flaws in the EIR process and admissions and rebuttals not addressed in the EIR, the court said: **"'[T]he ultimate decision of whether to approve a project, be that decision right or wrong, is a nullity if based upon an EIR that does not provide the decision-makers, and the public, with the information about the project that is required by CEQA.' (Santiago Water Dist. v. County of Orange (1981), 40 Cal.4th at 443**…["That a party's briefs to the court may explain or supplement matters that are obscure or incomplete in the EIR … is irrelevant, because the public and decision makers did not have the briefs available at the time the project was reviewed and approved."]) (emphasis added) **The court also rejected the late "battle of experts" as "too little and certainly too late, to satisfy CEQA's requirements. (See Save Our Peninsula, supra, 87 Cal. App. 4th at 124 [information about baseline "occurred at the very end of the environmental review process, thus avoiding public scrutiny and precluding meaningful comparison of preproject and postproject conditions required by CEQA'].)" (emphasis added**

As described in my EIR Objection 254, whenever the EIR mining stops, for any of the many possible reasons (e.g., exhaustion of the miner's admittedly inadequate working capital, court reversal in any mistaken EIR approval, etc.) our community will be left in a worse position than it is now with a closed and flooded mine (since 1956) which coexists with its neighbors, including the thousands of us above and around the 2585-acre underground mine. One key example is the DEIR admission (at 6-14) that the whole mine is economically infeasible if it is denied the right to operate less than its 24/7/365 demand for 80 years, which objector law reforms and political remedies would prevent. See, e.g., Grass Valley's objections in its Agency Letter 8. While the disputed EIR incorrectly dismisses that concern as too speculative to require a response, it illustrates the fact that the EIR/DEIR has no contingency plan for, or good faith reasoned analysis about, what happens with environmental impacts when its proposed operating conditions are defeated or the mining otherwise stops for any reason after it starts. Since us objectors are defending our property and groundwater rights, wells, and values, our health and welfare, and our community environment and way of life, there is nothing speculative about our resolution to exhaust our legal and political remedies to resist the EIR and its mining.

b) What The Disputed DEIR Itasca Study And Other Disputed EIR Claims Illustrate By Incorrectly Insisting On Predicting The Future From the Past Or From Assuming False Equivalences And Ignoring the CEQA Prohibitions On Deferring the Analysis of Impacts And Mitigation For Future Compliance.

Consider, for example, the disputed DEIR's often sited Appendices, like the disputed "Itasca study." Note, as described in my companion EIR Objection 254 that such "modeling" is based on that author's and EIR/DEIR's disputed and unproven assumptions, disputed theories, and speculations, but not on sufficiently proven relevant, current facts. Also, in any event, allegedly "similar" conditions incorrectly selected

elsewhere have not been sufficiently so proven to be comparable and applicable to those in and around the 2585-acre underground mine, even before this EIR mine changes during 24/7/365 mining and dewatering during the next 80 years). See also my EIR Objection 254 exposure of unexpected data obscured in exhibits (e.g., the DEIR/EIR hiding of the hexavalent chromium menace by not addressing it properly or at all in the DEIR's "Hazards and Hazardous Materials" section 4.7, and, when caught in that evasion, the EIR's flawed cover story attempt), as well as the kind of EIR/DEIR tactics I protest herein and in my other Objections 254 and 255, such as "bait and switch," "hide the ball," false comparisons/equivalence, hidden and incorrect or worse assumptions, etc. See, e.g., EIR Objection 254 #'s I.A.1.d, I. F.5. and I.E. Stated another way, my EIR Objection 254 demonstrated (like this Objection and my prior DEIR Objection 255) that the EIR/DEIR too often fails to present the kind of "good faith reasoned analysis" with "common sense" required to comply with CEQA and other applicable law.

Besides also being wrong about applicable law and its applications to which I cite in my Objections to such facts, conditions, and circumstances of this EIR/DEIR blasting, tunneling, dewatering, and mining 24/7/365 for 80 years, the EIR approach will also cause public policy problems that us objectors living on our surface properties above and around the 2585 underground mine can be expected to counter with political and law reform remedies that the disputed EIR/DEIR incorrectly dismisses as speculative or irrelevant. As noted above a key example is the DEIR admission (at 6-14) that the whole mine is economically infeasible if it is denied the right to operate less than its 24/7/365 demand for 80 years, which objector law reforms and political remedies would prevent. See, e.g., Grass Valley's objections in its Agency Letter 8. As described above, the EIR/DEIR has no contingency plan for, or good faith reasoned analysis about, what happens with environmental impacts when its proposed operating conditions are defeated or the mining otherwise stops for any reason after it starts. Since us objectors are defending our property and groundwater rights, wells, and values, our health and welfare, and our community environment and way of life, there is nothing speculative about our resolution to exhaust our legal and political remedies to resist the EIR and its mining.

In ***Richmond v. Chevron*** court (like the trial court) found: **"Formulation of mitigation measures should not be deferred until some future time. (Guidelines #15126.4(a)(1)(B).) An EIR is inadequate if '[t]he success or failure of mitigation efforts … may largely depend upon management plans that have not yet been formulated and have not been subject to analysis and review within the EIR.'** (*San Joaquin Raptor*, supra, 149 Cal. App.4th at 670.)" (emphasis added) **The court also objected to such future studies even subject to administrative approval as "analogous to the sort of post hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA" citing many cases including *Sundstrom v. County of Mendocino* (1988), 202 Cal.App. 3d 296, 307 (all incorporated herein and rejected or distinguished the various city arguments and cites. The court added: "In our opinion, the novelty of greenhouse gas mitigation measures is one of the most important reasons 'that mitigation measures timely be set forth, that environmental information be complete, and that environmental decisions be made in an accountable forum," with citations including *Oro Fino Mining Corp. v. County of El Dorado* (1990), 225 Cal. App. 3d 872, 885. (emphasis added)**

While this EIR/DEIR ignores, misinterprets, or misapplies Guidelines to suit its evasion tactics, the 2018 Guideline Amendment Explanation adds helpful support for my rebuttals, such

as against EIR **Master Response D.15 at 89-91, by Guidelines insisting on the feasibility of mitigation even If deferred.** After discussing the court decisions limiting deferral of mitigation details, that 2018 Guideline Amendments Explanation commentary [what I quoted before requiring that the agency commits and adopts specifics and identifies] explains the ***Rialto*** decision and the updated Guidelines: "In sum, 'it is sufficient to articulated specific performance criteria and make further [project] approvals on finding a way to meet them.' [citation] **Essentially the rule prohibiting deferred mitigation prohibits loose or open-ended performance criteria. Deferred mitigation measures must ensure that the applicant will be required to find some way to reduce impacts to less than significant levels. If the measures are loose or open-ended, such that they afford the application a means of avoiding mitigation during project implementation, it would be unreasonable to conclude that implementing the measures will reduce impacts to less than significant levels." (emphasis added)**

Furthermore, that "2018 Guidelines Amendments Explanations" section further explains that **(1) "the agency [must] commit to implementing the measure," [which is "essential to support a finding that project impacts have, if fact, been mitigated," (2) the agency [must] identify performance standards" consistent with the rigorous requirements of the court decisions I have specified, without which there can be no "substantial evidence that impacts will in fact be reduced to less than significant level," and (3) "the measures must be feasible," which requires in turn that there must be identification of the types of measures that could achieve the standard," citing to follow the rulings in *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, rejecting a general "net zero standard" for eliminating greenhouse gas emissions because "there was no discussion of what measures could feasibly attain that net-zero standard." (emphasis added) None of the many deferrals by the EIR/DEIR in this case comply with the foregoing requirements and must be rejected on that basis.**

c) Whatever Else CEQA Requires It Demands Consistency by the EIR/DEIR, But The EIR/DEIR Is Often Internally Inconsistent About Its Claims And Even Ignores Regulator Objections Directly In Conflict With Its Unreconciled And Incorrect Claims, Such As Illustrated By Watering To Suppress Its Toxic Fugitive Dust.

Consider, for example, the NSAQMD Agency Letter 12-1 at 11-12, stating:

> "The NSAQMD is concerned that the water budgeted for the project might not be adequate to meet the dust control requirements [i.e., DEIR mitigation proposed frequent daily watering attempting to keep toxic dust out of the air, so that in water shortages NID and local voters will have to choose between breathing toxic air or suffering less water because of water wasted on this no net benefit mining]. Since the dust contains asbestos, silica, and numerous toxic substances [now adding hexavalent chromium] adequate dust control is necessary. There should never be a situation where dust control is compromised because of water use restrictions, particularly in the summer months when the potential for dust generation is greatest."

Again, we locals will be competing against a no net benefit mine for the water we need during droughts, which is one of many reasons why I keep focused on full protections for all existing and future wells, because, if we have to suffer the loss of precious water in the climate changed future for 80 years of 24/7/365 dewatering, the last thing we need is our NID water supply to be wasted on dust suppression to avoid lethal air pollution.

In another example of a DEIR/EIR misleading "bait and switch," the DEIR states (and EIR ratifies) that: "This project would be subject to any applicable water demand cutbacks during droughts, like other NID potable water customers who are served by NID." However, that ignores the NSAQMD's Agency Letter 12 (at 12) discussed below, where that regulator's demand *priority* for frequent daily NID watering of its toxic (asbestos and more) fugitive dust. Rather than breathe such toxic air, us locals may have to suffer with less than our fair share of drought rationed water. Whatever the result, that disputed EIR reassurance of shared suffering is false and misleading at best. The reality is that this is a "zero sum game," in which every gallon allocated to this no net benefit mine is one less gallon available to the far more deserving locals. I have yet to meet any locals here above or around the mine who are willing to sacrifice anything for the mine almost all informed locals oppose, creating (if the mine is approved) a massive political problem for the County and NID to add to the inevitable legal disputes that will surely catch them in the cross-fire. See DEIR Objection 255 and 254 (e.g., #4), *Varjabedian, Keystone.*

I note these tactics are not just about what is so omitted or obscured, but also what is confused by misleading data. A prime example is the NSAQMD objection in Agency 11 (at 1) referring to the shared concern of the California Air Resources Board (CARB) where it concluded that "it is not appropriate to determine risk from rock samples … the PCM conversion factor was developed for air monitoring samples, not rocks. … Since there is no approved method for calculating risk from rock samples comparison with the NSDQMD's AB 2588 toxic significance threshold based on rock composition carries some uncertainty." This is classic "bait and switch," also known as "false equivalence." Because the EIR fails to correct this indisputable error reported by the relevant regulator, the EIR cannot be approved and its entire credibility seems doubtful from this example.

D. The EIR's Purported Analysis of Alternatives Would be Funny If It Were Not So Sad.

Below I address various other common disputes over the EIR noncompliant "Responses" to my DEIR Objections 255, especially the EIR's improper practice of inadequately summarizing my objection and then incorrectly claiming that I failed to explain why the DEIR/EIR was inadequate or noncompliant (in effect incorrectly treating this "notice pleading" type Objection as if it instead had to be judged by the standards applicable to my trial brief detailing all my proof, a standard that the EIR/DEIR never even attempts to meet itself). But first, I illustrate here a fatal flaw in the DEIR/EIR with this sufficient detail from this part of my EIR Objection 255 #2.C (see Ind. 255-14 to 18 below). I stated in my DEIR Objection 255 #13 that the DEIR (and now the EIR) wrongly rejected the Alternative of using the Brunswick site not as a mine, but rather as an industrial (e.g., warehouse) site. Without any of the required "good faith reasoned analysis" and "common sense" and evading my other CEQA Guidelines and judicial decisions, the DEIR/EIR incorrectly rejects such industrial alternatives for the sole

disputed theory that it would somehow (unstated) be too "intense." This is an early example of what Gray means when it disqualifies an eir for defying "common sense." The obvious reality is that no use of the property could possibly be more "intense" than this reopening of a gold mine closed and flooded since 1956 with 72 miles of proposed new tunneling and adjacent mining (e.g., blasting, digging, material removal, processing, dewatering, etc.) so extensive that it requires 50 to 100 heavy trucks a day for material removal, and massive dewatering/purported water treatment and other objectionable activities 24/7/ 365 for 80 years. As is often the case with this noncompliant and deficient EIR/DEIR, it simply announces its disputed and unsubstantiated opinion without any sufficient foundation in "common sense" or "good faith reasoned analysis" (e.g., with the EIR often just citing back to the already disputed and rebutted DEIR as if it were somehow the prevailing authority, rather than the deficient, noncompliant, or worse source of the disqualifying errors, omissions, and flaws). [Although the DEIR cited no relevant authority for this outrageous claim, the disputed EIR makes a useless and unexplained reference to its "Response to Comment Ind. 388-6," which achieves nothing useful.)

I cannot believe any worthy official or court would ever accept this "too intense" theory for favoring the mining over such other Alternatives. That is especially true when one considers both the "cumulative impacts" and the many unevaluated or deficiently evaluated risks inherent in this mining gamble when these unknown conditions are just assumed (incorrectly) to be tolerable (as the EIR/DEIR claims on an insufficient basis as demonstrated in all these many objections). See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. Note that this is different from the usual CEQA dispute, because the 2585-acre mine is not just the common conflict between the mine and the adjacent community residents. This is also a conflict between the mine and those thousands of us objecting, competing surface owners above and around the underground mine, who have additional property rights (e.g., groundwater ownership and rights of lateral and subjacent support, such as to prevent subsidence, including with the support of our groundwater. See, e.g., *Keystone, Varjabedian*, EIR Objection 254 #'s I.F.8 and 9, and DEIR Objection 254.) Besides my judicial decisions cited herein, please also see my DEIR Objection 254 #'s 3.N, 4, and 14. Since that absurd "intensity" excuse invented by the disputed EIR/DEIR is unexplained and unprecedented, the usual EIR/DEIR attempts to exclude our objections as outside its disputed CEQA boundary limits cannot apply to this "intensity" debate. Therefore, this debate about alternatives must "open the door" for all of my concerns in these four Objections (and those of others) that prove why the mine is the worst and unacceptable alternative, none of which can properly be evaded or ignored by the EIR/DEIR.

Despite being prohibited by CEQA, which requires sufficiently broad project objectives to allow the evaluation of alternatives that are meaningly different, this noncompliant EIR eliminated the relevant and better alternatives, like the recent case involving Crystal Geyser reopening a water bottling plant involving wastewater discharge issues. *We Advocate Through Environmental Review v. County of Siskiyou* (2022), 78 Cal. App. 5th 683, explaining that, because the project objective mirrored the project proposal itself, that transformed the EIR's alternative section [the "core of the EIR"] "into an empty formality" and such impermissibly narrow project objective prevented the county for the same reasons for accepting the "no project alternative." See, e.g., *Laurel Heights I*, 47 Cal.3d at 404 (requiring a "reasonable range" of alternatives, because courts will not

"countenance a result [on alternatives] that would require blind trust by the public, especially in light of CEQA's fundamental goal that the public be fully informed as to the consequences of action by their public officials."); ***Kings County Farm Bureau*, 221 Cal.App.3d at 731; ***Citizens for Quality Growth v. City of Mount Shasta*** **(1988), 198 Cal. App.3d 433, 443-45.**

As to such "common sense" and "good faith" and the lack of "reasoned analysis," note that to decide correctly what is too "intense" any decisionmaker (especially a responsible government official) must ask what alternative the impacted neighbors and community would prefer, especially those of us objector/surface owners above the 2585-acre underground mine. Ask any such competing and most directly impacted surface owner whether they would prefer a warehouse or other industrial use to this mine, and they will all say "yes." Ask any real estate broker or appraiser whether the EIR mine would have a greater negative impact on real estate values and marketing than any such commercial alternative, and they'll all say "yes." Ask any qualified expert (willing to be honest) whether the EIR mine would have worse environmental and other impacts and risks on the environment, community, and neighbors, and the honest ones must say "yes." This EIR mining is without question the worst possible use of the property for everyone else in our community. And yet, as usual, the DEIR/EIR somehow just expects to prevail on its such disputed judgment question simply by stating its absurd opinion that only a Canadian gold miner shareholder would appreciate. See, e.g., my EIR Objection 254 Exhibit B in which Rise admits risks and problems to the SEC and its speculator-investors that are not addressed adequately or even at all in the EIR/DEIR.

E. Environmental Setting And CEQA Lessons from 2018 Guideline Amendments Explanations And Related Case Law Guidance Requiring Compliance As To The Whole 80 Years of 24/7/365 Dewatering And Mining.

The 2018 Guideline Amendments Explanations to Guideline #15125 are often intended to accomplish or implement what the courts have also required, but which this EIR/DEIR insists on evading: to clarify that the purpose of defining the "environmental setting" is to give decisionmakers and the public an "accurate picture of the project's likely **impacts, both near-term and long-term**." (emphasis added) "Cal. Nat. Resources Agency Final Statement of Reasons For Regulatory Action Amendments To the State CEQA Guidelines" Nov. 2018 ***("2018 Guidelines Amendments Explanations"***) at 34-36. That commentary follows *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013), 57 Cal. 4th 439, 455 (requiring "the most accurate information on the project impacts practically possible, and the choice of a baseline must reflect that goal.") Accord *Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010), 48 Cal. 4th 310. The EIR/DEIR often flunks that test, for example, when it sets the groundwater recharge baseline rate based on average "current" rainfall from 1967 to 2017, disputed and ignoring the more current and dry years after 2017 as well as emerging climate change impacts that are beginning the new normal. See the climate change Guideline recognition and applications at my section I.C.2.

As such 2018 Guidelines Amendments Explanations said, "When in doubt, lead agencies should choose the baseline that most meaningfully informs decision-makers and the public of the project's possible impacts." And subject thereto, the new 15125 subdivision (a)(1) declares that the normal rule is that "normally, conditions existing at the

time of the environmental review should be considered the baseline" and "the lead agency must expressly justify its decision not to use existing conditions as the baseline for environmental analysis…[supported by] substantial evidence in the record." Id. [That discussion reminds us that substantial evidence does not include 'speculation…or… evidence that is clearly inaccurate or erroneous," as the disputed EIR/DEIR often does.] The disputed EIR/DEIR does the opposite of both such normal and special rules in an obnoxious effort to avoid "significance" and reality about our drier, climate change future and the "common sense" harms from 24/7/365 dewatering for 80 years of groundwater owned by those of us on the surface above and around the 2585-acre underground mine. **Note also, that, consistent with the *Neighbors'* decision and the concerned that predictive modeling may not be readily understood by the public (at 455-456 and CEQA 21003(b)) documents must "be organized and written in a manner that will be meaningful and useful to decision-makers and the public."**

The EIR/DEIR also violates (a)(3), prohibiting using "hypothetical conditions as a baseline…As the Supreme Court explained in its CBE decision: '[a]n approach using hypothetical allowable conditions as the baseline results in 'illusory' comparisons that 'can only mislead the public as to the reality of the impacts and subvert full consideration of the actual environmental impacts,' a result at direct odds with CEQA's intent." Communities for a Better Environment, supra, 48 Cal. 4th 322 (quoting Environmental Planning & Information Council v. County of El Dorado (1982), 131 Cal.App. 3d 350, 358).)"

Also, that 2018 amendment commentary 9at 38-42) implements the Supreme Court's holding in the CBIA case, 62 Cal. 4th at 377 ('when a proposed project risks exacerbating those environmental hazards or conditions that already exist, an agency must analyze the potential impact of such hazards on future residents or users').)" ["similar to an 'indirect' effect" in Guidelines #15064(d)(2).] Also, the amendments clarify that a project's direct and indirect and cumulative effects may affect the hazardous condition," requiring CEQA evaluation. That is illustrated by a coastline example, but it also applies here where it's appropriate to regard this ancient mine, closed and flooded since 1956, to be such a hazard, although the disputed EIR/DEIR inappropriately avoided that analysis to evade dealing with inconvenient truths that might be discovered.

MOST IMPORTANTLY, the Guideline's "final addition clarifies that a lead agency should consider not just existing hazards, but the potential for increasing severity of hazards over time. This change is necessary because certain types of hazards [citing "more intense wildfires" and "increased flooding"] are expected to be more severe in the future due to our changing climate" [which the EIR/DEIR incorrectly and worse refused to do on the incorrect theory that it was too "speculative" to worry that, for example, 24/7/365 dewatering of our groundwater for 80 years would be made worse by climate change's increasing dryness.] These types of climate change impacts may worsen a proposed project's direct, indirect, or cumulative environmental effects in the future…. Focus on both short-term and long-term effects is also necessary to implement express legislative policy," citing CEQA 21001(d) and (g) and 21083(b)(1.).

As to the Guideline amendments for mitigation measures, note (at 43-44) that when there is a "potentially significant environmental impact," the EIR must propose feasible mitigation measures," citing CEQA #'s 21002, 21080(c)(2), 21100(b)(3). "The formulation of mitigation measures cannot be deferred until after project approval [as our dispute EIR/DEIR often does]. Communities for a Better Environment v. City of Richmond (2010), 184 Cal. App. 4th 70, 92 ('reliance on tentative plans for future mitigation after completion of the CEQA process

significantly undermines CEQA's goals of full disclosure and informed decision making; and consequently, these mitigation plans have been overturned on judicial review as constituting improper deferral of environmental assessment.')" Because of many cases on this subject, the Guidelines amended 15126.4.

The EIR/DEIR generally fails to provide an adequate and accurate baseline and environmental setting especially by deficiently addressing the 2585-acre underground mine and its impact on us surface owners above and around the mine. To accomplish the fundamental goal of any eir, it must inform decision makers and the public of any significant adverse effects a project is likely to have on the physical environment. To make that assessment the EIR must delineate the environmental conditions prevailing absent the project, defining a baseline against which predicted effects can be described and quantified. E.g., *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority* (2013), 57 Cal. 4th 439, 447. This includes providing a description of the physical environmental conditions in the vicinity of the project at the time the notice of preparation is published or … the analysis is commenced…" Id. at 448; Guidelines #15125(a). "Without accurate and complete information pertaining to the setting of the project and surrounding uses, it cannot be found that the FEIR adequately investigated and discussed the environmental impacts of the development project." E.g., *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994), 27 Cal. App. 4th 713, 729. Indeed, "[w]ithout accurate and complete information pertaining to the setting of the project and surrounding uses, it cannot be found that the FEIR adequately investigated and discussed the environmental impacts of the …project." Id. at 729. Stated another way, there is no harmless error excuse that will save a deficient eir on this criterion. Assuming (especially incorrectly as it does) that the conditions for the limited areas described in the DEIR/EIR are the same for the rest of the mining area and surrounding areas is insufficient and worse and requires the rejection of the EIR/DEIR. (There is no area "surrounding" the mine more in need of honest, common sense, good faith reasoned analysis than the surface and at least 200 feet below it and our shared groundwater above and around the 2585-acre underground mine.) *Banning* at 942.

Here, many fear, Rise has not adequately evaluated either the 2585-acre underground mine (closed and flooded since 1956) because it seems not want to have to deal with inconvenient truths and realities or litigation exposures (and it may not be able to afford the required analysis, see Exhibit B SEC filing admissions by Rise). While the County has so far excluded that evidence, the decisionmakers should be certain that no court will exclude such damning admissions in the contests that will follow any approval of the EIR. See, e.g., *Richmond v. Chevron*, where the objectors used such SEC filing admissions to defeat the eir. Also, the disputed EIR ignores threatened wells that exist now or are likely to exist in the future, as well as the competition between us surface owners and the underground mine. Furthermore, such disputed omissions tend to be tactical, such as the refusal of the EIR/DEIR to map the underground mine against the surface properties in a reasonably identifiable way, apparently to avoid awakening opposition by surface owners mistakenly imagining from the disputed and vague maps that they are beyond the impact zone of the mine. Instead, the disputed EIR/DEIR offers its unsubstantiated opinions, assumptions, and speculations about those mine conditions, which means there is no meaningful baseline as required. Therefore, the EIR/DEIR cannot comply with CEQA, since "the description of the environmental setting of the project site and surrounding area is inaccurate, incomplete, or misleading." E.g., *Cadiz Land Co. v. Rail Cycle* (2000), 83 Cal. App. 4th 74, 87. As Guideline #15125 explains: Knowledge of the regional setting is critical to the assessment of environmental impacts," which requires enough detail to

allow analysis of a project's potential impacts, since the primary purpose of CEQA is to inform government decision-makers and the public about significant environmental effects of proposed projects before approving or denying them. *Citizens of Goleta Valley v. Board of Supervisors* (1990), 52 Cal.3d 553, 564; *San Joaquin Raptor*, 27 Cal. App.4th at 729; *Cadiz,* 83 Cal. App. 4th at *87; Galante Vineyards v. Monterey Peninsula Water Management Dist.* (1997), 60 Cal. App.4th 1109, 1122. A stable and accurate description of the surrounding area is not less crucial than a correct description of the project. E.g., City of Irvine v. County of Orange (2015), 238 Cal. App. 4th 526, 542 fn. 8 (A "stable and accurate description of a project is the 'sine qua non' of an EIR").

F. Illustrations of 13 Ultimate Legal Questions The Courts Would Have Address If the EIR Were Approved In Response To Objectors' Continuing Resistance.

My EIR Objection 254 demonstrated how the EIR refused to answer my detailed questions in my DEIR Objection 254 (see my objection thereto in what the EIR labeled as Comments Ind. 254-95 to 101, my DEIR Objection 254 #15. See also my such #'s 1.G and H, and 3.L), and that companion objection asked many more unanswered questions about errors, omissions, evasions, and noncompliance in the EIR. I will try some different and more basic questions here, framed as they could be among the many challenges in future courts should a mistaken County approval occur and all based on a solid foundation in my four Objections:

1. Does anything in CEQA or other applicable law prevent an objector from countering or rebutting EIR errors, omissions, or other deficiencies (or worse) with truth, common sense, and a correct good faith reasoned analysis, including admissions in the DEIR/EIR or in the miner's SEC filings or other competent and relevant evidence, whether or not within either the incorrectly EIR/DEIR asserted or actual the scope of CEQA? (NO. See *Richmond v. Chevron* allowing SEC filing and other admissions.)
2. Does anything in CEQA or other applicable law excuse the EIR from having to respond to objections countering or rebutting EIR errors, omissions, or other deficiencies (or worse), especially those contrary to truth, "common sense," and a "correct good faith reasoned analysis," including admissions in the DEIR/EIR or in the miner's SEC filings or other competent and relevant evidence, whether or not within the scope of CEQA? (NO. Id. and Ind 254.)
3. Stated another way, is there any untrue, misleading, or inaccurate statement (or any material omission or evasion that makes any statement untrue, misleading, or inaccurate) in an EIR/DEIR that cannot be rebutted or countered by objectors or as to which the EIR is excused from responding? (NO. Id.)
4. When the disputed EIR fails to provide a "good faith reasoned analysis," to apply "common sense" in "good faith," or otherwise to respond as required by CEQA and other applicable law to objections of potential victim neighbors, especially us surface owners above or around the 2585-acre underground mine, does CEQA or other law prohibit or limit in any way the right of such objectors to expose that failure and to explain why that is not "harmless error," but a serious harm? (NO. Id.)
5. Even if the answer to any of those questions were "yes," would the answer still be "no" where the objections were from a surface owner above or around the 2585-acre

mine not only resisting the mine as a CEQA protester, but rather also as such a surface property owner protecting his or her competing property rights, such as to lateral or subjacent support or as to groundwater being depleted in violation of such legal property rights? (YES, the answer must be "no." Id.)

6. Does CEQA and other applicable law allow objectors (including such surface owners above or around the mine) to use the EIR miner's admissions in SEC filings and other public documents to rebut or impeach any false, misleading, or otherwise objectionable statement, information, or unstated or implied assumption in the EIR, including as to economic infeasibility of any aspiration or mitigation proposed in the EIR but admittedly not affordable? (YES. Id.)
7. If (as here, such as in DEIR at 6-14 or the "Non-CEQA Related Analysis" in DEIR at 4.3-103) EIR admissions or other express or implied allegations or information "opens the door" to the issue of economic feasibility as to any safety, mitigation, or other disputed issue in the EIR/DEIR, can us objectors rebut or impeach the EIR using any relevant and competent evidence, such that the EIR must respond with a good faith reasoned analysis thereto with common sense? (YES. Id.)
8. Is the EIR/DEIR correct when it contends that the County is approving the mine project, not the miner, such that objections proving the financial and other infeasibility of the miner accomplishing the EIR as stated are irrelevant and may be disregarded by the EIR, even where the local objectors are surface owners above and around the 2585-acre mine also defending their such competing property rights against the mine? (NO. Id.)
9. When there is competent proof of the lack of "good faith" (or worse) in the EIR evading or otherwise responding to a proper objection to the EIR/DEIR, is such proof (e.g., admissions by the EIR or miner contrary to or in conflict with the EIR/DEIR) always admissible evidence to which the EIR must respond with a "good faith reasoned analysis" and "common sense"? (YES. Id.)
10. When the EIR/DEIR states a disputed opinion that is either speculative, lacking in "common sense," or unsubstantiated (e.g., denying climate change in predicting the effect of 24/7/365 dewatering of groundwater below objecting surface owners above or around the 2585-acre underground mine, such as by insisting on assuming that the "current" base line of average rainfall between 1967 and 2017 [note, excluding the more current dry years after 2017] will continue "recharging" and "balancing" groundwater and wells for the next 80 years), can the EIR/DEIR disregard counters and rebuttals that are likewise alleged by the EIR to be "speculative?" (NO. Id.)
11. When the EIR/DEIR evades or ignores good faith and plausible objections that the EIR/DEIR lacks "common sense" (or "good faith" on any such basis), must the EIR/DEIR provide a "good faith reasoned analysis" with "common sense" as to the merits of the issue in dispute? (YES. Id.) For example, can the EIR/DEIR ignore an objection challenging the disputed EIR/DEIR theory that because most of the forests owned by objectors above or around the 2585-acre underground mine (like the 48 trees on my property between 50 and 100 feet tall) have shallow roots, the 24/7/365 dewatering of the surface owners' groundwater for 80 years will have no adverse environmental impact on those trees? (NO. Id.) Can the EIR/DEIR ignore an objection to such dewatering of objectors' groundwater on the disputed EIR/DEIR theory that the fractured rock conditions that they assume without investigation exist

along and around 72 miles of underground tunnels for new mining into unexplored areas will act like a dam and not leak away such groundwater? (NO. Id.)

12. When the DEIR failed to present any mention of the dangerous carcinogen, hexavalent chromium (e.g., long blasted in many EPA and California EPA website and my Ind. 254 Exhibit C studies and made infamous by the movie, *Erin Brockovich,* mourning the death of Hinkley, CA, and many of its residents from such groundwater pollution they are still trying to remediate decades later, as discussed in www.hinkleygroundwater.com and related sites) in its "Hazards and Hazardous Materials" discussion (where it belonged in DEIR 4.7), only mentioning it in passing in a later discussion about it being in the cement paste used in the underground mine shoring, is that concealment a lack of "good faith reasoned analysis" or "common sense"? When the EIR reacted to my objections (but not in a general way that would adequately alert everyone to the threat who stopped reading the EIR before page 5970 or Appendices Q, O, or R at the end thereafter) about such hexavalent chromium menace (e.g., water and air pollution) and the nonresponsive EIR made its brief, disputed, speculative, and unsubstantiated comments in its obscure EIR "Response To Comment Ind. 254-1, presumably to avoid having to revise and recirculate the DEIR, is that a "good faith reasoned analysis" and sufficient to avoid being "new information" requiring revision and recirculation of the DEIR? (NO. Id.)
13. When assessing the merits of competing alternative uses of the EIR mining property, is it legally possible for the mine to claim (as the EIR/DEIR does) that its impacts are less "intense" than industrial (e.g., warehouse etc.) "alternatives" rejected by the DEIR/EIR as too "intense" by comparison? (No. Id. and discussion above.)

G. Some Guidance In Avoiding the Objectionable Tactics And Practices In the Disputed EIR/DEIR.

The EIR "Responses" to my DEIR Objection 255 that I dispute below, like those to my DEIR Objection 254 (rebutted in my companion EIR Objection 254 that applies equally herein), attempt to evade and ignore my meritorious objections more often than they attempt to debate them on the merits. That is a fatal flaw in the EIR/DEIR, as I have demonstrated in detail in my incorporated EIR Objection 254. Those objectionable tactics and practices are also used by the disputed EIR against my DEIR Objection 255 as I address below. However, rather than invest the effort to detail all such instances here, I will just note such wrongs in passing as part of that objectionable pattern and practice that defeats the EIR responses to this EIR Objection 255, just as I defeated the similar EIR responses at issue in my EIR Objections 254.

For example, see the pattern and practice of evasions in the EIR/DEIR from such wrongful disaggregation (i.e., rebuttal evidence of falsehoods) in my EIR Objection 254 (e.g., #'s I.A.1.d, I.C and D, I.F.5 and my introductions to section II countering that tactic by EIR Master Responses, and in section III countering such EIR "Responses"). Please consider the way that I have responded in succession to the disputed EIR "Responses" in its disaggregated "cut up" segments labeled Comment Ind. 254 -1 et seq. As with my main EIR Objection 254, each such EIR labeled part in my DEIR Objection 254 had an integrated relationship to exposing collectively the errors, omissions, and noncompliance also in the disputed DEIR that the disputed EIR reaffirms and defends. As explained, the EIR often ignores my cross-references and incorporations in my Table of Contents-

integrated sections, and then fragments such sections into its own selected fragments to which it purports to respond as if the only things at issue were in that fragment without regard to anything else in my fully integrated objection. When you read all my rebuttals therein to those repeated artificial EIR fragment cuts of my integrated objections, the disputed EIR pattern of evasions and worse become clearer. That objectionable EIR "Response" practice and my rebuttals apply here as well in this EIR Objection 255 below.

That is why, among other things, at the outset of many of my such successive segment objections herein (starting with Ind. 255-3), I incorporate my full objections, following the pattern and justifications that I also used in my incorporated EIR Objection 254 (and explained in more detail there) in dealing with such objectionable EIR fragmentation tactics. For example, my DEIR Objection 255 #2.A (dealing with certain CEQA and other legal disputes) is cut up by the EIR Response into Ind. 255-3, -4,-5, and -6, and those isolated fragments (within my larger integrated comment section) seem less coherent in such isolation by themselves. So, each such fragment must be read together for coherence and completeness (i.e., reassembled to the original) as I wrote that integrated section that the disputed EIR so arbitrarily cut up, thereby exposing and defeating the disputed EIR's tactic of creating such a pretext for claiming that its isolated fragments fail adequately to explain or detail my objections. Although I try to use some of the EIR's terminology when I try to match the disputed EIR "Responses" to my objections both in my Objections 254 and 255, I must insist on maintaining herein my own references to my own integrated section labels in those Objections, because the disputed EIR has cut up and redesignated/relabeled my integrated section commentaries into such less coherent or persuasive fragments. I refer readers to my EIR Objection 254, because this was a major problem there in how the EIR fragmented my 150 page DEIR Objection 254 into fragmented Ind. 254-1 to 101, so that the disputed EIR could more easily object to each fragment by isolating it and ignoring the rest of my original sections and then complaining that each such fragment was deficient in its explanation or other content (by the disputed EIR improperly ignoring the whole rest of my original section and all my cross-references and incorporations.) My same objections in my companion EIR Objection 254 to that noncompliant EIR tactic apply here as well.

As I also discuss below in my initial rebuttal to EIR Ind. 255-2, I was reluctant to describe my opening remarks as an "introduction," because the disputed EIR keeps misusing that word as an excuse to ignore my substantive comments included in such introductions as well as my important context and guidance for the coming attractions to follow. Since the disputed EIR's nonresponsive "responses" to my DEIR Objection 255 repeat its objectionable practices at issue in my EIR Objection 254, I likewise refer to my separate comprehensive objections to each such disputed EIR Response To Comment Ind 255-2 et seq. Thus, the EIR "Response" to my DEIR Objection 255 began again (as it did with EIR's response to my main DEIR Objection 254) with both an error and noncompliance with how the courts interpreting CEQA require a "good faith reasoned analysis" with "common sense," by simply ignoring the substance of what it called Response to Comment Ind. 255-2 by incorrectly dismissing my substance as not worthy of response, because the EIR claims such section was merely "introductory in nature." To see how this obnoxious EIR tactic works out, please see my detailed illustration below in my objections to EIR Responses To Comment Ind. 255-2 et seq.

Also, please note that by failing to respond on the merits to my meritorious objections as I presented them, the EIR is not merely failing to comply with CEQA and other applicable law. That noncompliance should be treated as a default, just like a defendant refusing to answer an

allegation in a complaint, thereby resulting in a victory for the objection on that issue for the objector. More importantly, that disputed EIR tactical pattern and practice should defeat its entire EIR application, because such tactics left gaps in the EIR on the merits and CEQA does not allow such an EIR to be approved with major issues in dispute and the EIR "hiding the ball." See the authorities cited in my EIR Objection 254, especially in section I.A.1.b, I.C and D, and I.F.5, as well as my introduction in section II and III. If this EIR can so improperly evade objections on the merits and still be approved, then there would be less point in objecting in the County process and potential victims should just prepare their cases for trial court presentations where truth matters and compliance with applicable law is enforced.

H. The EIR/DEIR Creates An "Alternative Reality" Behind Disputed Interpretations of CEQA and Guidelines That It Claims Excuse It From Having To Respond To Many of My Objections. See, e.g., My EIR Objection 254 #'s I.A.1.d and I.F.5.

Throughout the disputed EIR/DEIR my four meritorious Objections are also improperly evaded, ignored, or rejected as irrelevant on the basis of their disputed interpretations of CEQA and its Guidelines, even though the EIR/DEIR itself ignores its incorrect CEQA boundaries and literally refuses to address the credibility challenges, contradictions, and inconsistencies EIR/DEIR and Rise admissions as well as my other competent and admissible evidence that rebut and impeach EIR/DEIR claims and allegations or that expose errors, omissions, and noncompliance in the DEIR/EIR in accordance with applicable law. Besides what is stated below (and in my DEIR Objection 255 and 254), also see, e.g., my companion EIR Objection 254 countering each of the EIR "Responses" to my DEIR Objection 254. While the EIR/DEIR cherry-picks some Guidelines and CEQA provisions as alleged support, they ignore others as well as the judicial precedents that I cite, as well as the other laws that apply to allow me to rebut or impeach the many falsehoods, erroneous assumptions, misleading statements, false equivalents, and other errors, omissions, and noncompliance in the EIR/DEIR. Rather than summarizing them all here, I refer the reader to the places where I apply them herein and in my other Objections.

However, what is most important, if us objectors are to avoid the hassles of having to use legal and political/law reform remedies to reverse any mistaken EIR approval, is that the decisionmakers either have all the best and required information or, because the EIR/DEIR too often refuses to provide what is so required, at least for such decisionmakers to know what they are missing and why it matters. I assume that the County wishes to do its duty: (i) "to respond to [such] comments from the public" (Guideline #15002(j), especially when the EIR/DEIR fails to do its duty; (ii) to respond to the information ..." in #15002(h); (iii) to make informed and correct finding in accordance with #15002(g); and (iv) to minimize environmental damage and balance competing public objectives in accordance with #15021, such as "not to approve a project as proposed if there are feasible alternative or mitigation measures available that would substantially lessen any significant effects that the project would have on the environment." See my discussion of the Sierra Club v. County of Fresno case in my prior DEIR Objection 255 and my related analysis in my companion EIR Objection 254. In balancing such "public objectives" the County may consider "SPECIFIC ECONOMIC, ENVIRONMENTAL, LEGAL, SOCIAL AND

TECHNICAL FACTORS" in accordance with #15021, but in order to do so it needs to read carefully my Objections and those of others, especially in my Table of Incorporated by Reference Objections, because the EIR/DEIR has improperly refused to provide such information by evading those requirements and our objections as irrelevant or outside the improperly limiting asserted boundaries of CEQA, even though such information is provided by objectors like me to counter, rebut, and impeach such errors, omissions, and worse from the EIR/DEIR, including DEIR/DEIR and Rise admissions. That is especially important here where there are massive cumulative impacts (#15355) and where proposed mitigation (#15370) by the disputed EIR/DEIR is so consistently infeasible, often to the point of becoming illusory.

II. My Specific Objections To Disputed EIR Individual Responses To My Prior Comment Ind. 255-2 et seq.

A. My Objection To EIR Response To My Prior Comment Ind. 255-2 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.A).

As explained above, I am almost reluctant to describe my opening remarks herein as an "introduction," because the disputed EIR keeps misusing that word as an excuse to ignore my substantive comments and important context for the coming attractions to follow, as it did here in this nonresponsive "Response" to my introduction to DEIR Objection 255. Thus, the EIR begins again (as it did with its disputed "Response" to my main DEIR Objection 254) with both an error and noncompliance about how the courts interpreting CEQA require a "good faith reasoned analysis" with "common sense," by simply ignoring the substance of such fragment it called Response to Comment Ind. 255-2 by incorrectly dismissing my substantive objection as not worthy of response, because as merely "introductory in nature." See, e.g., *Gray, Banning, Vineyards, and Costa Mesa* discussed above.

Among the criticisms that the disputed EIR asserts to evade my objections is by claiming that an objection is irrelevant as outside the limits that the disputed EIR/DEIR's incorrect interpretation attempts to impose as a CEQA (including its Guidelines) boundary. However, as noted above, under applicable law my objections can be (and include) to counter any DEIR/EIR statements, omissions, and other deficiencies, many of which DEIR/EIR claims are also beyond such alleged CEQA boundaries attempts to enforce against objectors. For example, much of my DEIR and EIR Objections 255 are about the economic infeasibility of the EIR/DEIR, especially using its or Rise SEC filing admissions to reveal how the miner cannot hope to afford even its "aspirational" safety and mitigation proposals, much less its announced project objectives. See EIR Objection 254's Exhibit B and DEIR Objection 254 #2. I also note in what this EIR Response ignores that the disputed DEIR (at #4.3-103-104) has a disputed section entitled **"Non-CEQA Related Analysis"** that I rebut, in effect claiming that somehow the DEIR/EIR themselves can seek approval based on things they assert outside their disputed CEQA boundary, but objectors cannot rebut or counter those erroneous or worse statements, even using the admissions Rise or in the DEIR or EIR. Moreover, the disputed **DEIR admits (at 6-14)** that its whole project is economically unfeasible if it is not allowed to operate 24/7/365 for 80 years in

the manner proposed in the disputed EIR/DEIR (which us objectors will be countering by proposing contrary law reforms).

B. My Objection To EIR Response To My Prior Comment Ind. 255-3 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.A).

I incorporate my similar, but more extensive, objections about the disputed EIR's such tactics addressed in my EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated objection comments in designated table of contents sections into the disputed EIR's less self-sufficient, fragmented divisions (if one were to ignore my cross-references and incorporations, as the EIR improperly does). As a result, my replies herein objecting to each EIR fragment "Response" are also both fragmented and less self-sufficient and (the disputed EIR seems to think) may be more vulnerable to its incorrect claims that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.A (dealing with certain CEQA and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-3, -4, -5, and -6, and those isolated fragments (within my larger, integrated, original comment section) are less self-sufficient. So, each of my objections herein to each such disputed EIR cut fragment must be incorporated into each other and read together again (as I originally presented them), thereby exposing and defeating that disputed EIR's tactic for creating an improper pretext for the disputed EIR incorrectly to claim that such isolated fragments fail adequately to explain or detail my objections.

Again, as with the disputed EIR's other deficient or worse "Responses" to my related DEIR Objection 255 objections herein, as well as in my EIR Objection 254 to similar, noncompliant "Responses" to my DEIR Objection 254, the EIR offers only a partial response as if it were comprehensive (when it's not). The EIR misstates, evades, or understates my objections, and its wrong and noncompliant on the merits to the extent it purports to address them. For example, the EIR pattern is to mention deficiently the **Guideline #15151** issue in dispute, but then the EIR ignores my quoted requirements that there must be (with the aforementioned "good faith reasoned analysis" and common sense"): (i) "a sufficient degree of analysis to provide decisionmakers with information …[for] a decision that intelligently takes account of the environmental consequences …" (ii) where "sufficiency … is viewed in the light of what is reasonably feasible, (iii) an EIR "summar[y] [of] the main points of disagreement among the experts [which on some issues includes me for my experience and expertise], and (iv) "adequacy, completeness, and a good faith effort at full disclosure." As I note in my DEIR Objection 255 at #2.A (included in this EIR as Response to Ind. 255-3), the EIR fails each of those tests against most of the issues in dispute, including this one. **Also, Guideline #15145 requires that the DEIR/EIR must "note in its conclusion" that a "particular impact is too speculative for evaluation," but the EIR/DEIR rarely admits any grounds for doubting their unannounced speculations. However, throughout the disputed DEIR/EIR most of its references to speculations (including false assumptions and unsubstantiated opinions) are just complaints about my rebuttals or counters, rather than admissions of the truth, which is that many of the DEIR/EIR errors, omissions, and deficiencies are the unadmitted result of their own speculations, including false assumptions, unsubstantiated opinions, and guesswork. That failure of the DEIR/EIR to expose their own such speculations should be**

fatal noncompliance with CEQA as well as a basis for rejecting their complaints about my objections.

Even worse, Guideline #15145 requires that the DEIR/EIR must "note in its conclusion" that a "particular impact is too speculative for evaluation," but the EIR/DEIR rarely admits any grounds for doubting their unannounced speculations. However, throughout the disputed DEIR/EIR most of its references to speculations (including false assumptions and unsubstantiated opinions) are just complaints about my rebuttals or counters, rather than admissions of the truth, which is that many of the DEIR/EIR errors, omissions, and deficiencies are the unadmitted result of their own speculations, including false assumptions, unsubstantiated opinions, and guesswork. That failure of the DEIR/EIR to expose their own such speculations should be fatal noncompliance with CEQA as well as a basis for rejecting their complaints about my objections.

Furthermore, my DEIR Objection 255 at #2.A (included in this EIR as Response to Ind. 255-3) also analyzed forecasting required in Guideline #15144, which the EIR totally ignored as an issue, especially as to my hexavalent concerns I addressed also in this objection to EIR's disputed "Response" to Ind. 255-3, as, well as extensively in my EIR and DEIR Objections 254. Consider, for example, what follows. The DEIR failed to present in its "Hazards and Hazardous Materials" discussion (where it belonged in that #4.7) any compliant mention of the dangerous carcinogen, hexavalent chromium (e.g., long blasted in many EPA and California EPA website studies and made infamous by the movie, *Erin Brockovich,* mourning the death of Hinkley, CA, and many of its residents from such groundwater pollution, as described in www.hinkleygroundwater.com and linked sites discussing the continuing struggle to remediate that poisoned groundwater). Instead, hexavalent chromium was only mentioned in passing (without any analysis) in a few later discussions about it being present in the cement paste added for underground mine shoring. See my EIR Objection 254 and Exhibit C thereto. That concealment of such air and water health hazards evidences a lack of "good faith reasoned analysis" and a defiance of "common sense," presumably because the disputed EIR/DEIR was hoping to avoid challenges (like mine) to that method of saving money by cementing into pillars mine waste that both purport to support the underground mine and reduce the expense of removing and disposing of such mine waste. See my companion EIR Objection 254 (e.g., #I.F.1 and 5 and my objection to EIR's obscure "Response" on that subject in Ind.254-1). My DEIR Objection 254 #'s 3.A, B, C, E, G, H, 7, and 12 (plus #'s 3.J and 10 as to air pollution by that carcinogen) address that menace in detail, as to my objections to the EIR's disputed "Responses" to my such DEIR objections in my companion EIR Objection 254.

For example, the disputed EIR reacted noncompliantly to my such objections (but not in a general way in the EIR/ main text where it might adequate alert everyone to that threat who stopped reading the EIR before page 5970 or failed to read the disconnected EIR Appendices Q, O, and R at the end thereafter, which are not a designated part of any EIR compliant "good faith reasoned analysis" with "common sense") about such hexavalent chromium menace (e.g., water and air pollution). Again, note that in this disputed the EIR relied on its nonresponsive EIR Response to Comment 254-1, where it made brief, disputed, speculative, and unsubstantiated comments that few would likely find or read, presumably a tactic to avoid having to revise and recirculate the DEIR, since the EIR pretends it is merely "clarifying" or "embellishing" compliant DEIR comments (but none exist). See discussion of that need for revision and recirculation in my companion EIR Objection 254 #'s I.A.1.c, I.C and D, and I.F.1, 8, and 9, applying that need for revisions to achieve "good faith reasoned analysis" with "common sense"

for required recirculation for such EIR "significant new information" compared to the incontrovertibly noncompliant DEIR. See my rebuttal EIR Objection 254 (including my Exhibit C) to EIR Responses Ind. 254-1, -3, -6 to -8, -11, -14, -15, -36, -37, -75, -85, -86 (plus 254-26 to -28, and -39 to -42 (and -79 as to air pollution).

As I explained in those objections, there is a massive amount of scary scientific data about hexavalent chromium (see the EPA and CA EPA websites and Exhibit C supporting the extensive commentary in my companion EIR Objection 254), which the EIR/DEIR proposes to use in the cement paste to shore up the 2585-acre underground mine above and around which thousands of us objectors live on the surface. That is our groundwater being dewatered 24/7/365 for 80 years past those toxic shoring. See Keystone and other authorities in my EIR Objection 254 (e.g., # I.F.1 and my objections to the EIR's Response Ind. 254-1.) The disputed and unproven EIR theory seems to be that the dewatering will drain the pollution away from us locals for purported "treatment" and then flushed away down the Wolf Creek to scare any downstream NID customers who discover the threat to which they have not so far been alerted in the EIR or DEIR, which downstream recipients may wonder why the EIR/DEIR went to such extremes to avoid CEQA compliant warnings (or at least "good faith reasoned analysis" with "common sense" on the merits in the "Hazards And Hazardous Materials" DEIR/EIR section 4.7 where it belongs.).

How are such potential victims supposed to evaluate this menace in such obscure other places? How can such potential victims judge any safety measures or mitigations or the effectiveness of the so-called water "treatment" for a carcinogen that the DEIR so failed to address and the disputed EIR addressed insufficiently, noncompliantly, and obscurely? Many impacted objectors, once adequately briefed on the threats evaded in the DEIR/EIR, may conclude (like me) that (like asbestos) there is not a safe level of exposure to hexavalent chromium in our water or air. In any case, there is no EIR/DEIR "good faith reasoned analysis" with "common sense" about this hexavalent chromium threat to both our water and our air, and many reasons not to trust what they do say. While the air pollution risks were even more omitted from the DEIR, they now illustrate in the disputed EIR how one core menace, here hexavalent chromium, can create both direct and indirect, as well as "cumulative," environmental impacts for which there must be comprehensive such disclosure, analysis, and mitigation, all of which are lacking. See my DEIR Objection 254 #'s 3.J and 10, my EIR Objection 254 objections to those disputed EIR "Responses" and "Master Responses" to my such DEIR Objection 254 sites (3.J and 10) and as well as to my EIR Objection 254 #'s I.E.7 and I.F.5. See also my Table of Incorporated by Reference Objections attached to my EIR Objection 254.The insufficiently described air menace begins at the mine when they make the hexavalent chromium and release toxic "fugitive dust." Although our air quality regulator may not yet realize this additional threat, the NSAQMD is already concerned about the asbestos and other toxins already polluting our air at the mine. See my incorporated NSAQMD Agency Letters 12 (especially at 12) and 11, describing how such toxic fugitive dust needs to be "suppressed" watered frequently each day 24/7/365, even during drought water rationing, to save from that air pollution menace. See quotes below. How some of those various impacts interact and cumulate is illustrated by one simple comment in the EIR Agency Letter 12 (at 12) of the Northern Sierra Air Quality Management District ("NSAQMD") (emphasis added):

> **The NSAQMD is concerned that the water budgeted for the project might not be adequate to meet the dust control requirements.** [i.e., my

translation for context: DEIR mitigation had proposed frequent daily watering attempting to suppress toxic fugitive dust from the air, so that in water shortages NID and local voters will have to choose between breathing toxic air or suffering less than their fair share of rationed water, contrary to the EIR/DEIR claims (quoted below) to bearing its share of the rationing, because of water wasted on this no net benefit mining.] **Since the dust contains asbestos, silica, and numerous toxic substances** [now, I note, adding hexavalent chromium] **adequate dust control is necessary. There should never be a situation where dust control is compromised because of water use restrictions, particularly in the summer months when the potential for dust generation is greatest.**

In another example of a DEIR/EIR misleading "bait and switch," the DEIR states (and EIR ratifies) that: "This project would be subject to any applicable water demand cutbacks during droughts, like other NID potable water customers who are served by NID." However, that ignores the NSAQMD's Agency Letter 12 (at 12) discussed above, including that quoted, regular demand *priority* for frequent daily NID watering of its toxic (asbestos and more) fugitive dust, "regardless of water use restrictions." This "pick your poison" dilemma should not be imposed on us objectors living on the surface above or around the mine, where our choices seem to be either breathing such toxic air or suffering with less than our fair share of drought rationed water, while we watch the EIR mine constantly watering such fugitive dust in the uncertain quest for speculator shareholder profits at our expense. Whatever the result, that disputed EIR reassurance of shared suffering is false and misleading at best.

The reality is that this is a "zero sum game," in which every gallon allocated to this "no net benefit mine" (see my DEIR Objection 254 #4 and Exhibit A to my EIR Objection 254 rebutting the County Economic Report benefit claim) is one less gallon available to us far more deserving locals. For example, (although the disputed DIER/EIR incorrectly denies and ignores climate change as too speculative to consider its impact, but see, for example, my CEQA discussion at section I.C.2 of how the "2018 Guidelines Amendments Explanations" requires recognition of climate change) there will be increasing dry years threatening our community. **I have yet to meet any locals here above or around the mine who are willing to sacrifice anything for the mine. Almost all informed locals will support resisting any EIR approval, creating (if the mine is approved) a massive political problem for the County and NID to add to the inevitable legal, law reform, and political disputes that will surely catch any mine supporting officials in such controversies. See DEIR Objection 255 and 254 (e.g., #4).** As the NSAQMD and others correctly foresee with progressive climate change impacts, there will be many and increasing future NID water rationing limitations imposed on our community. New or better wells will be the only practical option (during those 80 years of 24/7/365 EIR dewatering and mining) to save what we can our homes, our forests, and our environment, as we watch this no net benefit mine waste watering its toxic dust with more than any share of water it should be allowed, because controlling the toxic fugitive dust menace is now the EIR mine caused local health hazard.

C. My Objection To the EIR Response To My Prior Comment Ind. 255-4 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.A).

I incorporate again my similar, but more extensive, objections about the disputed EIR's such tactics addressed in my EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated, objection comments in designated Table of Contents sections into the disputed EIR's less self-sufficient divisions (if one were to ignore my cross-references and incorporations, as the EIR improperly does), so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (so the disputed EIR thinks) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.A (dealing with certain CEQA and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-3, -4, -5, and -6, and those isolated fragments (within my larger integrated comment section) are less self-sufficient by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together again (as I originally presented them), for the full coherence and completeness, as I originally wrote that integrated section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain or detail my objections.

Again, as with the disputed EIR's deficient or worse "Response" to my related DEIR Objection 254, the disputed EIR offers only a partial response incorrectly presented as if it were comprehensive (when it's not), and such EIR "Response" misstates, evades, or understates my objections, and its wrong on the merits as my Objections demonstrate. To mention one such example of the opposite of the required "good faith reasoned analysis" with "common sense" by **the EIR, it incorrectly states again: "CEQA review is limited to a project's impact to the physical environment and the DEIR is not required to analyze the financial condition of the Project Applicant."** That disputed theory is noncompliant, among other things, because that ignores the right under applicable law to rebut, impeach, and counter any such EIR/DEIR errors, false statements, assumptions, speculations, claims, omissions, evasions, and other noncompliance with the relevant truths, as demonstrated in my companion EIR Objection 254. Notice how that disputed EIR comment chooses to miss the point of many of my legal authorities and even my objections at issue, which I have been forced to make in dozens of such rebuttals or other counters, because the EIR/Deir persists in such objectionable and evasive tactics, such as to the infeasibility of the EIR/DEIR. See, e.g., my introductory rebuttal above, my companion EIR Objection 254 (e.g., Exhibits B and A and accompanying text), and my DEIR Objection 254 (e.g., 1.E and F, 2, and 15.C.) By the logic of the disputed EIR/DEIR in its "alternative reality" (see my EIR Objection 254 #'s I.A.1.d, I. E, and I.F), all the EIR claims it needs to say in order to prevail is that it will solve in the future any and all problems with deferred comprehensive mitigation and future compliance future regulatory approvals, even when its admissions, common sense, and reality should cause everyone to regard that as worse than noncompliant, false, and infeasible. See, e.g., the many proofs provided in my companion EIR Objections 254 (e.g., I.A.1.a, b, and d, I.C, I.D, I.E1-5, and I.F.6). My point is not that CEQA in isolation necessarily requires such analysis of Rise, it is that the applicable law requires truth, which under the law of evidence means the right to rebut, impeach, and counter such nontruths. Whatever the EIR/DEIR (or what Rise's SEC and other admissions, see, e.g., my EIR Objection 254 Exhibit B and A) incorrectly claims or states that is misleading, false, or not credible, that "opens the door" for my such rebuttals and counters. See Id. and my questions above in section 1.F.

Another disputed tactic and more subtle trick by the EIR are to state its incorrect interpretation of my legal interpretation of such "feasibility" in Guideline #15364, only to then dismiss it with its disputed and unsubstantiated opinion that: "There are no CEQA authorities to support this interpretation of section 15364." Notice that the EIR didn't cite any authorities for its such contrary interpretation either, and as I quoted that Guideline in the DEIR Objection 255: feasible means "capable of being accomplished in a successful manner within a reasonable period of time [i.e., not 80 years during increasing climate change] ... taking into account economic, environmental, legal, social and technical factors." (emphasis added) So, either the EIR is wrong (as I contend), or this issue is yet to be decided by sufficient courts to satisfy a good faith decisionmaker (which excludes Rise and its supporters in the EIR/DEIR, since they have not sufficiently analyzed any challenged objections to them with the required "good faith reasoned analysis." Moreover, the disputed EIR ignores the requirement in Guideline #15144 that "an agency must use its best efforts to find out and disclose all that it reasonable can." That rarely happens in the EIR/DEIR on the issues disputed in my Objections. Typically, the EIR just assumes away its problems does not accomplish anything useful, except that, as in most such these disputes, the EIR says whatever it is wishes to avoid conceding anything, apparently in hopes of some political bailout. Because the EIR generally just repeats its erroneous and already disputed "talking points," the EIR/DEIR is incapable of convincing any objector at risk of any of its disputed claims and contentions.

While the EIR/DEIR and I constantly exchange charges that the other side is the one creating any noncompliance, notice that, as cited earlier in this Objections (# I.C.1), the burden of proof and persuasion must be on the EIR at the start, which is appropriate, because Rise and the EIR/DEIR team have all the relevant information, only some of it disclosed. For example, only after my DEIR Objection 254 to the hexavalent chromium menace did the EIR add its Appendices Q, O, and R (all done for Rise long before the DEIR.) Consider that the quality of my objections depends in part on the quality of the EIR/DEIR presentations, which here are too often designed to evade or avoid compliance with CEQA, resulting in whatever my objections say being legally sufficient. **Even worse, Guideline #15145 requires that the DEIR/EIR must "note in its conclusion" that a "particular impact is too speculative for evaluation," but the EIR/DEIR rarely admits any grounds for doubting their unannounced speculations. However, throughout the disputed DEIR/EIR most of its references to speculations (including false assumptions and unsubstantiated opinions) are just complaints about my rebuttals or counters, rather than admissions of the truth, which is that many of the DEIR/EIR errors, omissions, and deficiencies are the unadmitted result of their own speculations, including false assumptions, unsubstantiated opinions, and guesswork. That failure of the DEIR/EIR to expose their own such speculations should be fatal noncompliance with CEQA as well as a basis for rejecting their complaints about my objections.**

D. My Objection To the EIR Response To My Prior Comment Ind. 255-5 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.A).

I incorporate my similar, but more extensive, objections about the disputed EIR's such "Responses" and tactics as addressed in my EIR Objection 254, in which the EIR also arbitrarily fragmented my integrated objection comments in designated sections into the

disputed EIR's less coherent divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation and always ignoring my cross-references and incorporations). For example, here my DEIR Objection 255 #2.A (dealing with certain CEQA and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-3, -4, -5, and -6, and those isolated fragments (within my larger integrated comment section) are less self-sufficient by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full coherence and completeness as I originally wrote that integrated section and framed it my Table of Contents, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments somehow fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and my companion EIR Objection 254, the EIR offers only a partial response, as if it were comprehensive (when it's not), and it misstates, evades, or understates my objections. The EIR is also wrong on the merits. **For example, the disputed EIR ignores the requirement in Guideline #15144 that "an agency must use its best efforts to find out and disclose all that it reasonable can." That rarely happens in the EIR/DEIR on the issues disputed in my Objections**. To mention one such example of not "good faith" by the disputed EIR, it incorrectly states as usual, "commenter does not explain how the DEIR is inadequate and relies on conclusory statements." As usual I reject that criticism and counter that the reverse is true of the DEIR/EIR, which does not explain why it is adequate (e.g., no "good faith reasoned analysis" with "common sense") and just relies on conclusory and unsubstantiated statements, speculation, false assumptions, and, worse. As usual, the EIR just repeats it previously rejected and rebutted "talking points" and already disputed DEIR claims, as if that were a compliant, "good faith reasoned analysis" with "common sense" when it's not. I defer to my previous objections, rebuttals, and counters to the disputed EIR comments in this nonresponsive Response and to its cited EIR Master Responses 14 and 16, DEIR Appendix K.3, and EIR Response to Comment Ind. 254-1. I also remind the decisionmakers that the EIR/DEIR ignored all of my cited cross-references in DEIR Objection 255, such as, for example, at #'s 2. 3.A, B, M and N and 4 and my incorporations, such as DEIR Objection 254.

While the EIR/DEIR and I constantly exchange charges that the other side is the one creating any noncompliance, notice that, as cited earlier in this Objections (# I.C.1), the burden of proof and persuasion must be on the EIR at the start, which is appropriate, because Rise and the EIR/DEIR team have all the relevant information, only some of it disclosed. For example, only after my DEIR Objection 254 to the hexavalent chromium menace did the EIR add its Appendices Q, O, and R (all done for Rise long before the DEIR.) Consider that the quality of my objections depends in part on the quality of the EIR/DEIR presentations, which here are too often designed to evade or avoid compliance with CEQA, resulting in whatever my objections say being legally sufficient. **Even worse, Guideline #15145 requires that the DEIR/EIR must "note in its conclusion" that a "particular impact is too speculative for evaluation," but the EIR/DEIR rarely admits any grounds for doubting their unannounced speculations. However, throughout the disputed DEIR/EIR most of its references to speculations (including false assumptions and unsubstantiated opinions) are just complaints about my**

rebuttals or counters, rather than admissions of the truth, which is that many of the DEIR/EIR errors, omissions, and deficiencies are the unadmitted result of their own speculations, including false assumptions, unsubstantiated opinions, and guesswork. That failure of the DEIR/EIR to expose their own such speculations should be fatal noncompliance with CEQA as well as a basis for rejecting their complaints about my objections.

E. My Objection To the EIR Response To My Prior Comment Ind. 255-6 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.A).

I incorporate my similar, but more extensive, objections about the disputed EIR's "Responses" and such tactics addressed in my EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated objection comments in designated sections into the disputed EIR's less self-sufficient divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks, because it also ignores my cross-references and incorporations) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.A (dealing with certain CEQA and other legal disputes) is cut up by the EIR Response into Ind. 255-3, -4, -5, and -6, and those isolated fragments (within my larger integrated comment section) are less self-sufficient by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full coherence and completeness as I originally wrote that integrated, Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim somehow that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and my companion EIR Objection 254, the EIR offers only a partial response as if it were comprehensive (when it's not), and it misstates, evades, or understates my objections. The EIR is also wrong on the merits. Note also that this disputed **Response ignores my cite to Guideline #15124 ("reasonably foreseeable indirect impacts") and also does not engage on my objection exposing even obvious errors, such as using the average rainfall between 1967 and 2017 as a "current" baseline for predicting groundwater recharge from rain (which it admits is the principal source of any recharge) during the next 80 years of 24/7/365 dewatering depletion, despite the fact that 2017 is not current and ignores those dry years since 2017 that are more consistent with the new normal of climate change the DEIR/EIR wrongful dismisses as too speculative. Also, for example, the disputed EIR ignores the requirement in Guideline #15144 that "an agency must use its best efforts to find out and disclose all that it reasonable can." That never happens in the EIR/DEIR on the issues disputed in my Objections.**

To mention one such example of not "good faith" by the disputed EIR, it incorrectly states as usual, "commenter does not explain how the DEIR is inadequate and relies on conclusory statements." As usual I reject that criticism and counter the reverse is true of the DEIR/EIR, which does not explain why it is adequate (e.g., no "good faith reasoned analysis" with "common sense") and relies on conclusory statements, speculation (e.g., unsubstantiated

opinions, false assumptions, etc.), and, worse. As usual the EIR just repeats it previously rejected and rebutted "talking points" and already disputed DEIR as if that were a compliant, good faith reasoned analysis with common sense when it's not. I refer to my previous objections, rebuttals, and counters to the disputed EIR comments in this nonresponsive Response and to its cited DEIR Appendix K.2 and K.3, and Response to Comment Ind. 254-1. I also remind the decisionmakers that the EIR/DEIR ignored all of my cited cross-references and incorporations in DEIR Objection 254, such as, for example, at DEIR Objection 254 #'s 2. 3.A, B, D, E, F, M and N, and 4, 5, and 14. This disputed Response also asserts an erroneous groundwater recharge from rain claim for "most wells," ignoring my repeated protests that the EIR/DEIR ignores both many relevant existing wells (even among the 300 noted, but still undercounted, in the deficient County Economic Report addressed in my EIR Objection 254 Exhibit A, as well as all future wells that I and others living above or around the 2585-acre underground mine will drill to tap our owned groundwater when the climate change (combines with such EIR/DEIR dewatering) forces us to do so to save our homes, forests, and environment.

F. My Objection To the EIR Response To My Prior Comment Ind. 255-7 (a cut by the disputed EIR from my DEIR Objection 255 #2.B).

.

I incorporate my similar, but more extensive, objections about the disputed EIR's "Responses" and such tactics addressed in my EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated, objection comments in designated sections into the disputed EIR's less self-sufficient divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-7, -8, -9, -10, -11, -12, and -13, and those isolated fragments (within my larger integrated comment section) are less coherent by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full self-sufficiently and completeness as I originally wrote that integrated section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim somehow that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Responses" to my related objections herein and EIR Objection 254, the EIR offers only a partial response as if it were comprehensive (when it's not), and it misstates, evades, or understates my objections. The EIR is wrong on the merits. Note also that this disputed Response ignores my cite to **Guideline #'s 15121, 15003, and 15002,** and also does not engage on my objection exposing even obvious errors, such as refusing sufficiently (or at all) to investigate the many unknown conditions in the existing mine flooded and closed since 1956 or the unknowns they will encounter in blasting, mining, and dewatering more than 72 miles of new tunnels and related new mine sites (or even to admit it's just speculations about such things), the DEIR/EIR wrongful dismisses as too speculative. Also, for example, the disputed EIR ignores the requirement in **Guideline #15144** that "an agency must use its best efforts to find out and disclose all that it reasonable can." That

never happens in the EIR/DEIR on the issues disputed in my Objections. To mention one such example of not "good faith" by the disputed EIR, it incorrectly states as usual, "commenter … does not specifically state how the DEIR violates these provisions." As usual, I reject that criticism and counter the reverse is true of the DEIR/EIR, which does not explain why it is adequate (e.g., no "good faith reasoned analysis" with "common sense") and relies on conclusory statements and speculation (e.g., unsubstantiated opinions, false assumptions, etc.), and, worse, as usual it just repeats it previously rejected and rebutted "talking points" as if that were a compliant, "good faith reasoned analysis" when it's not. I refer to my previous objections, rebuttals, and counters to the disputed EIR comments in this nonresponsive Response and to its cited DEIR Master Responses 14 and 7. I also remind the decisionmakers that the EIR/DEIR ignored all of my cited cross-references in DEIR Objection 254, such as, for example, at #'s 2 and 4.

G. My Objection To the EIR Response To My Prior Comment Ind. 255-8 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.B).

.

I incorporate my similar, but more extensive, objections about the disputed EIR's "Responses" and such tactics addressed in my companion EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated objection comments in designated sections into the disputed EIR's less self-sufficient divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-7, -8, -9, -10, -11, -12, and -13, and those isolated fragments (within my larger integrated comment section) are less coherent by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full self-sufficiency and completeness as I originally wrote that integrated section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

That flaw becomes obvious when the reader looks at the disputed EIR cut fragment at Ind. 255-8, where I cite to Guideline #'s 15120 and 15122 through 15131 and incorporated my DEIR Objection 254 #12 to rebut DEIR #5.1. More importantly, as explained herein, this small fragment (two sentences) was never intended by me to stand in isolation, but was part of my whole, integrated section #2.B as I originally wrote and identified it in my Table of Contents. Apparently, the disputed EIR was attempting to manufacture this bogus adequacy issue by its arbitrary isolation and its wrongful disregard of my adjacent and incorporated commentaries, cross-references, and incorporations that supplied ample data for the merits of my objections. Thus, when I generally referred to my "Objections," the disputed EIR misused its fragmentation as an excuse merely to refer generally to the EIR Responses to Individual Letter 254. That is not either "common sense," "good faith" or a "reasoned analysis."

H. My Objection To the EIR Response To My Prior Comment Ind. 255-9 (a cut by the disputed EIR from my DEIR Objection 255 #2.B).

I incorporate my similar, but more extensive, objections about the disputed EIR's "Responses" and such tactics addressed in my companion EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated objection comments in designated sections into the disputed EIR's less self-sufficient divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-7, -8, -9, -10, -11, -12, and -13, and those isolated fragments (within my larger integrated comment section) are less self-sufficient by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full self-sufficiency and completeness as I originally wrote that integrated section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and companion EIR Objection 254, the EIR offers only a partial response as if it were comprehensive (when it's not), and it misstates, evades, or understates my objections. The EIR is also wrong on the merits. The EIR's bogus excuse for frequent noncompliance here and many other places with my cited Guideline #15148 is that (citing a disputed quote from the distinguishable *Moro* case for an inapplicable principle) that section "does not mandate perfection." However, the constant evasions and omissions, general deficiencies, and willful noncompliance evidenced by the EIR/DEIR is not about an occasional honest lapse in "perfection," but rather a tactical choice for their chronic lack of "good faith reasoned analysis" with "common sense" (e.g., ***Gray, Banning, Vineyards, and Cost Mesa***) and worse as a practice and pattern to obscure the inconvenient truths and to obstruct my objections. Moreover, the EIR/DEIR pleads for forgiveness at the same time as it is constantly and improperly attacking my objections for such alleged deficiencies when my such objections are fully compliant with the applicable legal standards, which are lesser for me as the objector than for the EIR/DEIR applicant. Consider this context, such as described in my companion EIR Objecti0on 254 at #'s I.C and D and applied with illustrations in #'s I.E and F.

Citing me generally to an Appendix the way the EIR/DEIR does is like telling someone to read the dictionary definitions of all the words in an argument and then having to guess which of a dozen connotation for each word is the one that he or she should dispute. The disputed EIR contains thousands of pages of dense and often disputed text (with many disputed technical Appendix additions), most lacking any attempt at compliance with any reasonable standard for coherence as to the specific justification for speculations and unsubstantiated opinions and dubious or worse assumptions. The general effect is for the EIR/DEIR to state or imply some claim that objectors will dispute, often with no understandable citation to some disputed study on which the disputed EIR/DEIR plans to rely that objectors will frequently challenge not only on the merits, but also, for example, as lacking adequate evidentiary foundation, as inapplicable to

this mine disputes, or as obsolete or superseded by change (e.g., climate change impacts, 24/7/365 dewatering and mining, development, etc.), by time, by scientific advances, or otherwise. Again, none of these important issues can be evaded or ignored in an EIR/DEIR that is supposed to provide such a "good faith reasoned analysis." E.g*., Banning Ranch Conservancy v. City of Newport Beach* (2017), 2 Cal.5th 918, 940-41 ("***Banning***"); *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007), 40 Cal. 4th 412, 442 ("***Vineyard*"); and** *Concerned Citizens of Costa Mesa, Inc. v. 32d Dist. Ag. Ass'n* (1986), 42 Cal.3d 929 ("***Costa Mesa***"), **each insisting on "a good faith reasoned analysis," rather than referencing scattered or buried data (aka objectors cannot be required to hunt through disputed masses of exhibits looking for unspecified data or the assumptions that would be necessary to resolve whether disputed cited studies could be relevant and probative or irrelevant and inapplicable on the merits as, for example, being too dissimilar to this the conditions and circumstances of this mine).**

If the County mistakenly approves this disputed EIR/DEIR, us objectors will have to enforce our legal and political/law reform remedies. See, e.g., DEIR Objections 254 #'s 3.N, 4 and 14 and EIR Objection 254 #I.F.9. When we objectors do so, one thing is clear. The EIR/DEIR cannot set an easier standard for itself than it tries (incorrectly) to set for us objectors (whose legal hurdle is much lower than for the EIR/DEIR applicant with the burden of proof.) The court standard will result in massive noncompliance by the EIR/DEIR both for its noncompliance in what it states and also what it omits, as well as for its meritless refusals to respond as required to my objections and those of others.

I. My Objection To the EIR Response To My Prior Comment Ind. 255-10 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.B).

.

I incorporate my similar, but more extensive, objections about the disputed EIR "Responses" and such tactics addressed in my companion EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated objection comments in designated sections into the disputed EIR less self-sufficient divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations)) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is a fragment cut up by the EIR Response into Ind. 255-7, -8, -9, -10, -11, -12, and -13, and those isolated fragments (within my larger integrated comment section) are less self-sufficient by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full self-sufficiency and completeness as I originally wrote that integrated, Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

To mention again one common example of not "good faith" by the disputed EIR, it incorrectly states, as usual, "the comment lacks specificity as it does not identify which documents incorporated by reference are inadequate." As usual, I reject that criticism and counter that the reverse is true of the DEIR/EIR, which does not comply with Guideline #15159

or explain why their disputed claims are adequate (e.g., again, there no "good faith reasoned analysis" with "common sense" in the EIR/DEIR) and rely on noncompliant conclusory statements, speculation (e.g., unsubstantiated opinions, false assumptions, etc.), and, worse, as usual, the disputed EIR just repeats its previously rejected and rebutted "talking points" as if that were a compliant, "good faith reasoned analysis" when it's not, as my citations above (e.g., #I.C.1) demonstrate. I also refer to my previous objections, rebuttals, and counters to the disputed EIR comments in this nonresponsive Response and to its cited DEIR Master Responses. I also remind the decisionmakers that the EIR/DEIR ignored all of my cited cross-references and incorporations in DEIR Objections 254 and 255, such as, for example, at Ind. 254 #'s 2 as well as to the Rise SEC 10K and 10Q filing admission quotes and my cites therein. The decisionmakers and staff should require (as CEQA does) the disputed EIR/DEIR to explain why Rise is providing significantly different information to the SEC and its investors than in the EIR/DEIR to the County and its objector/potential victims.

J. My Objection To the EIR Response To My Prior Comment Ind. 255-11 (a cut by the disputed EIR from my DEIR Objection 255 #2.B).

I incorporate my similar, but more extensive, objections about the disputed EIR "Responses" and such tactics addressed in my companion EIR Objection 254 in which the EIR also arbitrarily fragmented my integrated objection comments in designated Table of Contents sections into the disputed EIR less self-sufficient divisions, so that my replies herein objecting to each fragment are also both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) may be more vulnerable to its incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-7, -8, -9, -10, -11, -12, and -13, and those isolated fragments (within my larger integrated comment section) are less self-sufficient by themselves. So, each of my objections herein to each such EIR cut fragment must be incorporated into each other and read together for the full coherence and completeness as I originally wrote that integrated section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its such isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and DEIR Objection 254, the EIR offers only a partial response as if it were comprehensive (when it's not), and it misstates, evades, or understates my objections. The EIR is wrong on the merits. Note that this disputed "Response" misapplies my cite to **Guideline #'s 15143,** and relies on conclusory statements (e.g., speculation, unsubstantiated opinions, and false assumption) and, worse, as usual, it just repeats it previously rejected and rebutted DEIR Objection 255 "talking points" as if that were a compliant, "good faith reasoned analysis" with "common sense" response to my such objections when it's not. For example, the disputed EIR/DEIR refers to DEIR pages 4.8-47-48, which only mentions the hexavalent chromium menace (i.e., the carcinogen in water and air pollution that killed Hinkley, CA, and many of its residents as mourned in the movie, *Erin Brockovich*, and blasted in many scientific studies I cited on EPA and California EPA websites (and in Exhibit C to my EIR Objection 254), with

merely a passing reference in a string cite with other toxins without including any discussion where required in the DEIR "Hazards And Hazardous Materials" section, none of which comply with that Guideline requiring emphasis for such a "serious" and "probable" threat. See, e.g., my DEIR Objection 254 #3.A., B, C, E, G, H, and J, 7, and 10, as well as my corresponding EIR Objection 254 objections to each of the EIR Responses to such sections (e.g., Ind. 254-1, -6 to 10, -11 to 13, -14 to 15, -20 to 33, -36, -37, -39 to 42, -75, and -79. I also refer to my previous objections, rebuttals, and counters to the disputed EIR comments in this nonresponsive Response and to its cited DEIR Master Responses 14 and 7 and Response to Ind. 254-1 and elsewhere in my EIR Objection 254 (including my Exhibit C thereto) where I explain how the disputed EIR tries to add material new (but still disputed and unsubstantiated) opinions/conclusory comments pretending to be facts.

Likewise, everyone who matters realizes that, among the most serious CEQA issues requiring emphasis and highly probable impacts, concern the 24/7/365 dewatering for 80 years depletion of groundwater owned by us competing surface owner objectors (as well as our existing and future wells) above and around the 2585-acre underground mine. While the disputed EIR/DEIR speculated without adequate basis against my objections, such as ignoring my climate change and other cited objection factors, reality and case precedents defeat the incorrect EIR/DEIR expectation that somehow the average so-called "current" rainfall baseline between 1967 and 2017 (willfully ignoring the most current dry years after 2017) will somehow recharge the depleted groundwater flushed away by dewatering down the Wolf Creek for 80 years. See my DEIR Objection 254 #'s 3.D, E, F, M, and N, 4, 5, and 6, as well as my objections to the EIR Responses thereto in my EIR Objection 254.

K. My Objection To the EIR Response To My Prior Comment Ind. 255-12 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.B).

I incorporate my similar, but more extensive, objections about such disputed EIR "Responses" and tactics addressed herein (and in my EIR Objection 254) in which the EIR has also arbitrarily fragmented my original, integrated objection comments in designated Table of Contents sections into the disputed EIR less self-sufficient subdivisions. That causes my replies herein objecting to each fragment to be both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) may be more vulnerable to the EIR's incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-7, -8, -9, -10, -11, -12, and -13 fragments, and those isolated fragments (within my original, larger, and integrated comment section) are less self-sufficient by themselves (and more redundant because of the need for cross-references across the fragments). So, each of my objections herein to each such disputed EIR cut fragment must be (and is) incorporated into each other and read together for the full coherence and completeness as I originally wrote for my whole integrated Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and DEIR Objection 254, the EIR offers only a partial response as if it were comprehensive (when it's not), and it misstates, evades, or understates my objections. The EIR is wrong on the merits. Note that this disputed Response misapplies my cite to **Guideline #'s 15154,** and relies on conclusory statements (e.g., speculations, unsubstantiated opinions, and false assumptions) and, worse, as usual, the EIR just repeats its previously rejected and rebutted "talking points" as if that were a compliant, "good faith reasoned analysis" with common sense response to my objections when it's not. For example, the disputed EIR/DEIR also misses the **underground** concerns that the airport and its users share with the rest of us above and around the 2585-acre mine with its focus on the above ground issues of concern to fliers, such as the fact that all surface owners and users above or around the 2585-acre underground mine have both competing property rights and values (e.g., rights to lateral and subjacent support, including by groundwater, as demonstrated in my DEIR Objection #'s 3.N, 4, and 14 and cases like the Supreme Court's Keystone precedent) as well as concerns about the environmental and other relevant impacts. See also my objections to EIR Master Response 7 and 14 on which the disputed EIR incorrectly tries to rely herein.

For example, in the EIR's nonresponsive "Responses" Ind. 255-7 to 13, the disputed EIR/DEIR ignores both specific objections plus the **cumulative effect** of my objections and those of others on the overall adverse effects and impacts of the mine and dewatering, which must include (applying all the foregoing and other relevant cited law and court decisions) all of the many issues which the evasive and noncompliant DEIR/EIR purports to address, but does so deficiently or not at all. Thus, I repeat both my original DEIR Objections 255 #2.B that this "Response" fails to defeat on the merits, as well as my objections to the following other/external/incorporated EIR cites in such EIR Ind. 255-7 to 13 evasions, i.e., disputed EIR Master Responses 7, 14, EIR Responses To Comments Ind. 254-1, and such referenced DEIR and other EIR cites. Stated another way, all of us neighboring surface owners above and around the 2585-acre underground mine will suffer from this mine and dewatering from scores of different problems with cumulative impacts that the EIR/DEIR underestimates, evades, or ignores, whether recklessly or worse, and none of the EIR/DEIR proposed mitigations will save us surface owners' property rights or values, or our forests or environment, or our health and welfare, or our community way of life.

My four Objections address most of those "interdisciplinary" EIR issues in extensive and sufficient detail as best can be done under the adverse circumstances created by the deficient and noncompliant EIR/DEIR. Thus, for example, it is simply wrong and worse for the disputed EIR here to claim that my objections are deficient when countering a deficient EIR/DEIR claim, evasion, or noncompliance, such as when the disputed EIR/DEIR just states a speculative or unsubstantiated opinion or false assumption which my objection exposes as such and explains why that is not "harmless error" or otherwise tolerable. Also, as to the whole of these fragmented EIR responses to my DEIR Objection 255 #2.B (i.e., Ind. 255-7-13), the disputed EIR also ignores the requirement in **Guideline #15144** that "an agency must use its best efforts to find out and disclose all that it reasonable can." That rarely, if ever, happens in the EIR/DEIR on the issues disputed in my Objections. The Comm Staff Report also does not satisfy that requirement.

L. My Objection To the EIR Response To My Prior Comment Ind. 255-13 (a fragment cut by the disputed EIR from my DEIR Objection 255 #2.B).

I incorporate my similar, but more extensive, objections about such disputed EIR "Responses" and tactics addressed herein (and in my EIR Objection 254) in which the EIR has also arbitrarily fragmented my integrated, original objection comments in designated sections into the disputed EIR's less coherent subdivisions. That causes my replies herein objecting to each fragment also to be both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) more vulnerable to the EIR's incorrect claim that my explanations are too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.B (dealing with certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-7, -8, -9, -10, -11, -12, and -13 fragments, and those isolated EIR fragments (within my original, larger, and integrated Table of Contents comment section) are less coherent by themselves (and more redundant because of the need for cross-references and incorporations across the fragments). So, each of my objections herein to each such disputed EIR cut fragment must be (and is) incorporated into each other and read together for the full coherence and completeness that I originally wrote for my whole, integrated Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and in DEIR Objection 254, the disputed EIR offers only a partial response as if it were comprehensive (when it's not), and such EIR both misstates, evades, or understates my objections. The EIR is wrong on the merits of its disputed claims. Worse, the EIR keeps choosing to miss or evade the obvious points of my objections by ignoring them, by incorrectly claiming that they were deficiently explained or detailed, or by otherwise asserting a bogus excuse for not addressing my objections on the merits as required. Note that this disputed Response also misapplies my cite to **Guideline #'s 15142,** and the EIR relies on conclusory statements (e.g., speculations, unsubstantiated opinions, false assumptions), and, worse, as usual, the EIR just repeats its previously rejected and rebutted "talking points" as if that were a compliant, "good faith reasoned analysis" with "common sense" response to my objections when it's not. **My such rebuttal (and others herein) includes the proper interpretation and application of CEQA and its Guidelines, such as #'s 15002, 15003, 15120, 15021, 15142, 15043, 15054, 15048, 15050, and 15370, as explained in 2018 Guidelines Amendments Explanations discussed in my EIR Objection 254 #'s I.C and D. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. However, the disputed EIR/DEIR entirely ignores some of those Guidelines in its "Response" and does not correctly apply or interpret any of them, as described in my EIR Objection 254 #'s I.C and D.**

For example, the disputed EIR/DEIR ignores the **cumulative effect** of my objections and those of others on the overall adverse effects and impacts of the mine and dewatering, which must include (applying all the foregoing and other relevant cited law and court decisions) all of the scores of issues which the noncompliant and evasive DEIR/EIR purports to address but does so deficiently or not at all. Stated another way, all of us neighboring surface owners above and around the 2585-acre underground mine will suffer from this mine and dewatering from scores of different impacts that the EIR/DEIR underestimates, evades, or ignores, whether recklessly or worse, and none of the proposed mitigations will save our property rights or values, or our

forests or environment, or our health and welfare, or our community way of life. My four Objections address most of those interdisciplinary issues in extensive and sufficient detail as best can be done under the adverse circumstances created by the deficient and noncompliant EIR/DEIR. It is simply wrong and worse for the disputed EIR here to claim that: "This comment does not address the adequacy of the DEIR and is somewhat unclear." Also, as to the whole of these fragmented responses to my DEIR Objection 255 #2.B (i.e., Ind. 255-7-13), the disputed EIR ignores the requirement in **Guideline #15144** that "an agency must use its best efforts to find out and disclose all that it reasonable can." That rarely, if ever, happens in the EIR/DEIR on the issues disputed in my Objections. The Comm Staff Report also does not satisfy that requirement.

M. My Objection To the EIR Response To My Prior Comment Ind. 255-14 to 18 (fragment cuts by the disputed EIR from my DEIR Objection 255 #2.C).

I incorporate my similar, but more extensive, objections about these disputed EIR tactics (common problems also addressed in my EIR Objection 254 counters to similar EIR noncompliant Responses in my DEIR Objection 254) in which the EIR arbitrarily fragmented my integrated objection comments in my designated Table of Contents document sections into the disputed EIR's less self-sufficient subdivisions. That causes my replies herein objecting to each fragment also to be both less persuasive and (the disputed EIR thinks because it also ignores my cross-references and incorporations) more vulnerable to the EIR's incorrect claims that my explanations are allegedly too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.C (dealing with my detailed application of *Sierra Club v. County of Fresno (2018), 6 Cal. 5th 502 ("Sierra Club")* to the EIR/DEIR, including as to certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-14, -15, -16, -17, and -18 fragments, and those EIR isolated fragments (within my original, larger, and integrated Table of Contents comment section) are less self-sufficient by themselves (and more redundant because of the need for cross-references and incorporations across the fragments). So, each of my objections herein to each such EIR cut fragment must be both incorporated into each other and read together for the full coherence and completeness as I originally wrote for my whole, integrated Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Nevertheless, now that the two prior examples (i.e., my #'s 2.A and B versus the EIR fragment cuts thereof) illustrate the problems with this disputed EIR Response's improper fragmentation tactic, I am going to consolidate my rebuttal reactions to those EIR fragments as if those nonresponsive EIR "Responses" were to my EIR Objection 255 #2.C as I originally wrote it. That means I offer this consolidated subsection as a demonstration of how one court decision (*Sierra Club v. County of Fresno*) exposed some of the many such errors, omissions, and flaws in this EIR, in this case by correct application of such controlling law to the relevant facts, instead of suffering the EIR mistakes and worse. My such rebuttal (and others herein) includes the proper interpretation and application of CEQA and its Guidelines, such as #'s 15002, 15003, 15120, 15021, 15142, 15043, 15054,

15048, 15050, and 15370, as explained in 2018 Guidelines Amendments Explanations discussed in my EIR Objection 254 #'s I.C and D. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. However, the disputed EIR/DEIR entirely ignores some of those Guidelines in its "Response" and does not correctly apply or interpret any of them, as described in my EIR Objection 254 #'s I.C and D...

Before addressing various common disputes over such EIR noncompliance, I begin with a clear example of EIR error and worse, especially considering the EIR's improper practice of inadequately summarizing my objections and then incorrectly claiming that I failed to explain why the DEIR/EIR was inadequate or noncompliant. (That is, in effect, like the EIR incorrectly insisting on treating this "notice pleading" Objection as if it instead had to be judged by the standards applicable to my future trial brief detailing all my later proof, a standard that the EIR/DEIR never justifies with any authority and never even attempts to meet itself and would never satisfy.) I am going to illustrate (first) a fatal flaw in the DEIR/EIR with this sufficient detail from this legitimate part of my fully integrated EIR Objection 255 #2.C. I stated in my DEIR Objection 255 #13 that the DEIR (and now the EIR) wrongly rejected the Alternative of using the Brunswick site not as a mine, but rather as an industrial (e.g., warehouse) site. Without any of the CEQA required "good faith reasoned analysis" and "common sense," the DEIR/EIR incorrectly rejected that industrial alternative for the sole reason that it would somehow (unstated) be too "intense." The obvious/common sense reality is to the contrary and that no use of the property use could be more "intense" (and worse) than this EIR reopening of this gold mine closed and flooded since 1956 with 72 miles of proposed new tunneling and adjacent mining (blasting, digging, material removal, dewatering, processing, etc.) so extensive that it requires 50 to 100 heavy trucks a day for material removal, massive dewatering/purported water treatment, and other objectionable activities 24/7/ 365 for 80 years. See my more extensive briefing on this "alternatives" issue in my companion EIR Objection 254 #I.E.10.

As is often the case with this noncompliant and deficient EIR/DEIR, it simply announces its disputed opinion about "intensity" in its usual, conclusory way, without any sufficient evidentiary foundation or even "common sense" or "good faith reasoned analysis" (with the disputed EIR often just citing back to the already rebutted DEIR as if the noncompliant DEIR were somehow the prevailing authority, rather than the disputed source of the disqualifying errors, omissions, and noncompliance). [Although the DEIR cited no relevant authority for this outrageous "intensity" claim, the disputed EIR makes a useless and unexplained reference to its "Response to Comment Ind. 388-6" (i.e., to someone else's objection), which achieves nothing useful and fails to overcome any objections by me or anyone else.) I cannot believe any worthy official or court would ever accept this "too intense" EIR theory for favoring the disputed EIR mining and dewatering 24/7/365 for 80 years over such better other Alternatives. That is especially true when one considers both the "cumulative impacts" and the many unevaluated or deficiently evaluated risks inherent in this EIR mining gamble, especially when these unknown conditions (many of which the EIR chose not to investigate, so that it could make its unrealistic or worse assumptions) are just assumed to be tolerable on an insufficient basis, as demonstrated in all these many objections. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355.

Note that to decide correctly what is too "intense" one must ask what the neighbors and community would prefer, especially those of us surface owners above the 2585-acre

underground mine whose objections are both (i) to the EIR's noncompliance with CEQA, and (ii) to the EIR miner's violations of our surface owner competing property and groundwater rights. See Keystone and EIR Objection 254 #'s I.F.8 and 9. Ask anyone who matters whether they would prefer a warehouse or other industrial alternative use to this mine, and they will almost all say yes. Ask any real estate broker or appraiser whether the mine would have a worse negative impact on real estate values and market appeal than the Alternatives, and they'll all say yes. Ask any objective, qualified expert whether then the mine would have worse environmental and other impacts on the community and neighbors than the Alternatives, and the honest ones must say yes. This EIR mining is without question the worst possible use of the property for everyone else in our community. And yet, as usual, the DEIR/EIR somehow just expects to prevail on such disputed judgment questions simply by stating its absurd opinions that only a Canadian gold miner shareholder would appreciate. See, e.g., my EIR Objection 254 Exhibit B in which Rise admits in its SEC filings many risks and problems to the SEC and its speculator-investors that are not addressed adequately (or even at all) in the EIR/DEIR. See *Richmond v. Chevron* and my EIR Objection 254 #'s I,C and D, which explain how wrong the disputed EIR/DEIR are in excluding such SEC filing admissions, which defeated the eir at issue in *Richmond v. Chevron*.

Because I quoted the disputed DEIR extensively and applied those quotes to this EIR dispute, the disputed EIR is worse than wrong when it claims that my such good faith reasoned analysis "does not explain how" the EIR violates that application of the *Sierra Club* precedent or provide any "additional" or "specific" "information on which to formulate a response." While I cited relevant and admissible admissions from Rise's SEC filings, the disputed EIR incorrectly claims those are "not relevant" and, therefore, can be ignored. See *Richmond v. Chevron* and my EIR Objection 254 #'s I,C and D, which explain how wrong the disputed EIR/DEIR are in excluding such SEC filing admissions, which defeated the eir at issue in *Richmond v. Chevron*. As usual, the EIR makes no effort with any good faith reasoned analysis or common sense to support that EIR/DEIR evasive nonsense. Therefore, I leave the County decisionmakers to compare my such Objection 255 #2.C to these disputed and unsubstantiated EIR claims. As with my *Gray* and other sites (*e.g., Gray, POET, Banning, Vineyards, Costa Mesa*, etc.), there are expressed (often quoted herein) legal principles that have obvious application to defeat the EIR/DEIR in the mind of anyone except EIR supporters who choose to blind themselves to even the most obvious applications.

Again, as with the disputed EIR's deficient or worse "Response" to my related objections herein and in my DEIR Objection 254, the EIR offers only a partial response as if it were a comprehensive response (when it's not). Such EIR again misstates, evades, or understates my objections, and the EIR is wrong both on the merits of its disputed claims and when the EIR keeps choosing to miss or evade the obvious points of my objections by ignoring or evading them, by incorrectly claiming that they were deficiently explained or detailed, or by otherwise asserting a noncompliant excuse for not addressing my objections on the merits as required. Note that this disputed EIR Response also misapplies my cite to **Guideline #'s 15142,** and relies on conclusory statements (e.g., speculation, unsubstantiated opinions, false assumptions, etc.) and, worse, as usual, the EIR just repeats its previously rejected and rebutted "talking points" as if that disputed response to my meritorious objections were a compliant, "good faith reasoned

analysis" with "common sense," when it's not. See, e.g., *Gray, Banning, Vineyards, and Costa Mesa*.

For example, in its nonresponsive "Responses" Ind. 255-14 to 18, the disputed EIR/DEIR ignores both specific objections plus the **cumulative effect** of my objections and those of others on the overall adverse effects of the mine and dewatering, which must include (applying all the foregoing and other relevant cited law and court decisions) all of the many issues which the evasive DEIR/EIR purports to address but does so deficiently or not at all. Thus, I repeat both my original DEIR Objections 255 #2.C that this "Response" fails to defeat on the merits, as well as my objections to the following other/external/incorporated EIR cites in such EIR Ind. 255-14 to 18 evasions, i.e., disputed EIR Master Responses 7, 14, EIR Responses To Comments Ind. 254-1, and such referenced DEIR and other EIR cites. Stated another way, all of us neighboring surface owners above and around the 2585-acre underground mine will suffer from this mine and dewatering from scores of different problems with cumulative impacts that the EIR/DEIR underestimates, evades, or ignores, whether recklessly or worse. None of the disputed EIR/DEIR proposed mitigations will save our property rights or values, or our forests or environment, or our health and welfare, or our community way of life. My four Objections address most of those "interdisciplinary" EIR issues in extensive and sufficient detail as best can be done under the adverse circumstances created by the deficient and noncompliant EIR/DEIR. Thus, for example, it is simply wrong and worse for the disputed EIR here to claim that my objections are deficient when I am countering a deficient EIR/DEIR claim, such as when the disputed EIR/DEIR just states a speculative or unsubstantiated opinion or false assumption which my objection exposes as such and explains why that is not "harmless error" or otherwise tolerable. Also, as to the whole of these fragmented responses to my DEIR Objection 255 #2.C (i.e., Ind. 255-14-18), the disputed EIR also ignores the requirement in **Guideline #15144** that "an agency must use its best efforts to find out and disclose all that it reasonable can." That rarely, if ever, happens in the EIR/DEIR on the issues disputed in my Objections. The Comm Staff Report also does not satisfy that requirement.

N. My Objection To the EIR Response To My Prior Comment Ind. 255-19 to 28 (cuts by the disputed EIR from my DEIR Objection 255 #3).

I incorporate my similar, but more extensive, objections about these disputed EIR "Responses" and tactics (common problems also addressed in my EIR Objection 254 counters to similar EIR noncompliant Responses in my DEIR Objection 254)) in which the EIR arbitrarily fragmented my integrated objection comments in my designated Table of Contents document sections into the disputed EIR's less coherent subdivisions. That causes my replies herein objecting to each fragment also to be both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) my such replies may be more vulnerable to the EIR's incorrect claims that my explanations are allegedly too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #2.C (dealing with my detailed application of *Gray v. County of Madera (2008), 167Cal. App. 4th 1099 ("Gray")* to the EIR, including as to certain CEQA principles and other legal disputes) is cut up by the EIR Response into Ind. 255-19 to 28 fragments, and those EIR isolated fragments (within my original, larger, and integrated Table of Contents comment section)

are less self-sufficient by themselves (and more redundant because of the need for cross-references across the fragments). So, each of my objections herein to each such EIR cut fragment must be both incorporated into each other and read together for the full coherence and completeness as I originally wrote for my whole, integrated Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Nevertheless, now that the two prior examples (my #'s 2.A and B versus the EIR fragment cuts thereof) illustrate the problems with this disputed EIR Response's improper fragmentation tactic, I am going to consolidate my rebuttal reactions to those EIR fragments as if those nonresponsive EIR "Responses" were to my EIR Objection 255 #3 as I originally wrote it, as a demonstration of how one court decision (*Gray v. County of Madera*) exposed some of the many such errors, omissions, and flaws in this noncompliant EIR, in this case by correct application of such controlling law to the relevant facts instead of suffering the EIR mistakes and worse. My such rebuttal (and others herein) includes the proper interpretation and application of CEQA and its Guidelines, such as #'s 15002, 15003, 15120, 15021, 15142, 15043, 15054, 15048, 15050, and 15370, as explained in 2018 Guidelines Amendments Explanations discussed in my EIR Objection 254 #'s I.C and D. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. However, the disputed EIR/DEIR entirely ignores some of those Guidelines in its "Response" and does not correctly apply or interpret any of them. See my EIR Objection 254 #'s I.C and D

Before addressing various common disputes over such EIR noncompliance, I am beginning with a clear example, especially considering the EIR's improper practice of inadequately summarizing my objections and then incorrectly claiming that I failed to explain why the DEIR/EIR was inadequate or noncompliant. (That is, in effect, like the EIR incorrectly insisting on treating this "notice pleading" Objection as if it instead had to be judged by the standards applicable to my future trial brief detailing all my later proof, a standard that the EIR/DEIR never even attempts to meet itself and would never satisfy.) I am going to illustrate (first) a fatal flaw in the DEIR/EIR with this sufficient detail from this legitimate part of my fully integrated DEIR Objection 255 #3. I stated in my DEIR Objection 255 that the similar *Gray mining case* disputes, exposes, and defeats the illusory, noncompliant, and deficient DEIR/EIR groundwater mitigation proposals, including both a future, "just approve the mining /dewatering now and we'll give you a Groundwater Monitoring Plan later," plus disputed future Mitigation Measure 4.8-2(b) requiring "the Project Applicant to supply a comparable water supply to any property impacted by mining operations." See my objections to the related EIR Responses 254-1, 17 and 83 and Master Responses 7, 14, and 15 and to the disputed Water Supply Assessment at Appendix N. Notice that the EIR miner cannot afford to perform any such mitigation or monitoring in the many places where required by CEQA and other law, because Rise lacks the necessary resources, as admitted with by Rise in its SEC filings exposed herein, as well as (together with other key facts supporting related objections) in my DEIR Objection 255 (#4-6 and 8), in my companion EIR Objection 254 (including Exhibit B and A thereto and in my objections to EIR Ind. 254-33, 1, 3, 5-11, 13, 16, 17-19, 20-22, 23-25, 30-31, 32-35, 47-48, 45-49, 66-70,71-73, 74,76, 80, and 90), and in my DEIR Objection 254 (#2, 3. D, E, F, L, M, and N, 4, 5, 6, 8, and 11).

More importantly, the DEIR/EIR is most about the 30 wells along East Bennett Road, ignoring many of the 300 wells mentioned in the County Economic Report (see my EIR Objection 254 Exhibit A) as well as the many other existing wells at risk for objecting surface owners above or around the 2585-acre mine, plus the many more future wells us surface owners will drill as the new normal of climate change makes that necessary to save our homes and forests. See my related EIR Objection 254 objections. (Such objections cannot be dismissed as the EIR/DEIR attempts to do as speculation, when the science is clear and other surface owners and I are competent witnesses testify as to our intent and other key facts, especially when our disputes include not just about CEQA compliance but also about protection, defense, and enforcement of our competing rights to our own groundwater the EIR/DEIR proposes to drain into the Wolf Creek to flush away downstream 24/7/365 for 80 years. The fact is that the EIR woefully underestimates the number and effect of competing wells now and in the future, and, worse, by limiting and mispositioning its monitoring for all existing and future wells, the EIR strategy seems to be setting up intentional ignorance to preserve its option to argue that something else besides the mine is causing the well problems (e.g., like the climate change the DEIR/EIR claims is too speculative for them to analyze?). While the EIR will lose that dispute over cause and effect, what it may do is buy the miner time (if it were to follow the industry pattern) after expensive litigation before or after any judgments against this financially nonviable miner (see Rise SEC filing admissions addressed in my Exhibit B to my EIR Objection 254 and *Varjabedian*) to consider the ways many other such miners have evaded such liabilities, as addressed in my DEIR Objection 254 (e.g., #1), such as by retreating to US or foreign bankruptcies (perhaps combined with a US Chapter 15), eventually adding to the more than 40,000 abandoned California mines on the EPA list.

While I urge the decisionmakers to read my DEIR Objection 255 (#3) analysis of how *Gray* by itself is sufficient to defeat this EIR (as it did in that similar mining operation), I will not repeat my intensive and extensive *Gray* previous discussion again here. But remember that *Gray* (at 1111) reminded everyone of the obvious reality ignored by the deficient and worse EIR/DEIR that "the County has the burden of showing that there is substantial evidence to support its decision" to approve the mine, which also needs to be in full compliance with CEQA and other applicable law, which standard this EIR/DEIR miserably fails to meet and often does not even try to satisfy, in favor of evasive and worse EIR/DEIR tactics and chronic failures to provide "good faith reasoned analysis" with "common sense" that fully respond to my meritorious objections and those of others. When the *Gray* court noted that (as here in massive EIR evasions and omissions) the CEQA disputes are often about what was omitted from the EIR (e.g., obscured and worse hexavalent chromium pollution, groundwater depletion risk, climate change effects, etc.), the court explained (at 1109) that: "[reversal of County approval is required] if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process." Even though I am a bankruptcy and insurance insolvency lawyer with long experience with failing mines (my DEIR Objection 254 #1), the disputed EIR fails to meet this standard as to me, and even my normal neighbors (with lesser experience and the ones for whom the standard exists) would never understand from the disputed EIR/DEIR how the EIR mine menace will harm our health, welfare, property rights and values, forests and environment, and our community way of life.

Indeed, while in my experience many risky mines fail the "good faith reasoned analysis" with "common sense" requirement in CEQA, this EIR/DEIR is among the worst in terms of inviting so many challenges to its blatant such noncompliance. See, e.g., my four Objections each illustrate ways that the DEIR/EIR tried to evade compliance and fashion an "alternative reality" in which, for example, without any "good faith reasoned analysis" or common sense: (i) they attempt to imagine recharge of groundwater depleted 24/7/365 for 80 years from the average "current" rain from 1967 to 2017 [ignoring the more current dry years after 2017] and ignoring climate change as speculative, (ii) they almost entirely concealed or obscured in the DEIR the mine's use of toxic hexavalent chromium (the carcinogen blasted by many studies on the EPA and California EPA websites and mourned in the movie "Erin Brockovich" about such pollution killing the town of Hinkley, Ca, and many of its residents; see www.hinkleygroundwater.com) and then tried to cover that up with unsubstantiated new, disputed, and erroneous or misleading data in the disputed EIR, while falsely claiming that the EIR was only "clarifying" the DEIR, and (iii) many other noncompliance and worse exposed in my four Objections rebutting many material claims in the EIR/DEIR and incorporating even more from my Table of Incorporations by Reference Objections attached to my companion EIR Objection 254.

Besides this objection, see my DEIR Objection 255, my EIR Objection 254, and my DEIR Objection 254. As *Gray* reminds the County (at p. 1110) from CEQA Guideline #15088, "Under CEQA, the County is required to evaluate comments to the DEIR and prepare written responses." The bulk of my objections in EIR Objection 254 and this EIR Objection 255 demonstrate how and why the EIR fails to comply with that duty with "good faith reasoned analysis" with "common sense" at the required CEQA standard, as properly interpreted above and in my other Objections. What is especially noteworthy is that instead of merely an EIR battle in a good faith debate on the merits in dispute, the disputed EIR/DEIR must also fail for process noncompliance, as demonstrated in each of my four Objections by EIR/DEIR (i) evasions, noncompliance, and improper tactics, and (ii) failing to address my objections on the merits as required with "good faith reasoned analysis" and "common sense."

Among the similarities with *Gray* is that it involved starting a rock quarry mine and related "hot mix asphalt plant" and related "accessories" needed for road repairs (i.e., one difference in my favor here because there was some useful local public benefits in *Gray,* unlike selfish gold mining in this EIR to profit shareholders of the Canadian miner with "no net local benefit," as demonstrated in my counter to the County Economic Report in Exhibit A to my EIR Objection 254 and my DEIR Objection 254 #4.) The *Gray* mine involved removing 900,000 tons of aggregate per year for 50 years with 320 round trips by truck per day and consuming 72,000 gallons of water per day. We could argue about which mine is a worse environmental impact burden from those factors, but the point is that the burdens are similar and comparable in such ways in these two cases. What also makes the Idaho-Maryland Mine far worse is that the Gray mine was in rural cattle grazing area zoned agricultural with only "dozens of residences and 55 domestic wells within one mile of the project." By contrast, for example (and contrary to the incorrect site descriptions in the disputed EIR/DEIR), this EIR mine is in a suburban area that includes a town, hospital, and airport in the impact zones and much more in the larger surrounding stigma zones. For example, where I live in a big tree suburban forest above and around just one part of the 2585-acre underground EIR on Banner Mountain (e.g., just above the Wolf Creek and

Idaho-Maryland Road) there are thousands of us surface resident mine objectors with not only existing and future wells at risk that are ignored by the disputed EIR/DEIR, but also directly competing property rights (e.g., for lateral and subjacent support, including by groundwater we own, to prevent subsidence and for our own water needs) and values at risk from the mine, as demonstrated below and detailed in my companion EIR Objection 254 (e.g., I.F. 8 and 9, and DEIR Objection 254 #3.N, 4, and 14.

The US Supreme Court has addressed in objectors' favor such surface owner versus underground miner disputes in cases I addressed in my DEIR Objection 254 #3.N (as well as in my #'s 4 and 14), such as ***Keystone Bituminous Coal Ass'n v. DeBeneditis,*** 480 U.S. 470 (1987) ("*Keystone")* (rejecting "taking" claims by miners as to laws protecting surface owners' property rights to lateral and subjacent support, including by groundwater, to prevent subsidence and loss of groundwater support), where surface owners were allowed to require underground miners to preserve their surface rights of subjacent and lateral support (and protect against subsidence, which includes leaving groundwater support) by leaving 50% of the coal unmined to support the surface. *Accord*, ***Smith v. County of LA*** (1986), 214 Cal. App. 3d 266 (essential county road repairs created landslide conditions destroying local homes, triggering nuisance, inverse condemnation, and other claims, both for damages for diminution in the value of real property and for annoyance, inconvenience, and discomfort, including mental distress as part of the loss of quiet enjoyment rights as a property owner.)

As I quoted (at 1119-1120) and demonstrated from applying ***Gray*** to this EIR water supply dispute, the EIR must fail for too often defying "common sense" and CEQA requirements as discussed above the same reasons as explained in the following ***Gray*** analysis:

> We are rejecting the County's conclusion on the water issues because we have concluded that the mitigation measures that were proposed to address the potentially significant adverse impacts on the water levels of private wells of neighboring landowners are not viable or effective. [Also true for this EIR.] The mitigation measures do not allow the landowners to use water in a manner substantially similar to how the landowners are currently using water because the mitigation measure (1) would allow Baker to replace potable water with nonportable water, (2) could expose the landowners to new regulatory oversight in the use of their water, (3) would create a water supply system that does not reliably provide water at the times and in the amounts needed by the neighboring landowners, and (4) could cause new and potentially significant impacts on the environment. The only mitigation option that would address many of these problems is the proposal to build a new water system, but there is no substantial evidence to conclude that this option is even feasible. Thus, the mitigation measures are inadequate under CEQA.

Again, the disputed EIR tries (and must fail) to evade this precedent (i.e., incorrectly claiming that *Gray* was only about the potable versus nonpotable water swap and the usual, disputed, incorrect, and unsubstantiated DEIR opinion that such mine "impacts are less than significant after mitigation." But, as in *Gray,* the EIR mitigation is not viable or feasible, and as explained the DEIR, and as Rise SEC filings admit: see EIR Objection 254 Exhibit B and DEIR Objection 254 #2) this miner does not have the financial resources to afford to accomplish the required mitigation in any event, especially because it must do so for all impacted wells now and in the

future and including as to new regulations that will apply as climate change makes the dewatering waste more dangerous.

More importantly, the key lesson from *Gray* that this EIR ignores is that the neighbors must receive the same water result after the mine as before the mine, and the "water truck" replacement scheme equivalence fails for disputed DEIR mitigation in Chapter 4.8 (even if the miner could afford it, which Rise's such SEC filings admissions so demonstrate it cannot). See my EIR Objection 254 to EIR's cited Master Response 15. Again, the County must also reject the bizarre and disputed idea that dewatering flushing of our surface owner groundwater away down the Wolf Creek as surface water is somehow a beneficial and safe impact for us locals (and as if NID could convince any informed person downstream to rely on Rise's purported "water treatment" and drink potentially hexavalent chromium polluted water at what the EIR incorrectly claims to be safe levels). But even if the County fails to do so, it then becomes responsible for triggering the massive liabilities for inverse condemnation, nuisance, trespass, and other wrongs against us surface owners above and around the 2585-acre underground mine. See, e.g., ***Varjabedian v. Madera*** (1977), 20 Cal. 3d 285 ("*Varjabedian*") (explaining inverse condemnation and nuisance rights of homeowners downwind of the new sewer treatment plant, because they cannot be required to suffer disproportionate harms for some imagined general public benefit project to those living at a safe distance).

While such new, local, victim legal protections would have impacts on the EIR mining, it is essential to remember that this is more than about how the miner uses the property it owns. This is also about us surface owners and users protecting our own property and groundwater rights we own at least down 200 feet above the 2585-acre underground mine that has been closed and flooded since 1956, as admitted by Rise in its SEC 10K. See, e.g., EIR Objection 254 and its Exhibit B and DEIR Objection 254 #2. If the County approves anything that harms our surface owners' property rights for the benefit of this disputed mine, **such as the EIR/DEIR's plan to deplete 10% of our owned well water before the (illusory/infeasible/*Gray* determined to be noncompliant) mitigation replacement kicks in on the small portion of the total existing and future wells so impacted and so far recognized by the EIR/DEIR for mitigation, with the courts available, if necessary, to require all existing and future wells to be mitigated), that is certain also to trigger law reforms and claims for Fifth Amendment and California Constitutional taking, inverse condemnation, nuisance, trespass, conversion, and other claims. See, e.g., *Vaquero Energy, Inc. v. County of Kern* (2019), 42 Cal. App, 5th 312, allowing surface owner legal protections against underground oil and gas miners; *Keystone; Varjabedian; Smith v County of LA.***

The EIR/DEIR constantly misuses in disputed ways the concept of mitigation to purport to cure objectionable environmental impacts, typically without any "good faith reasoned analysis" or "common sense" about the adequacy/sufficiency, feasibility, or likelihood of being able timely to accomplish such asserted mitigation. Not only do those disputed EIR/DEIR mitigation claims fail to comply with CEQA and other applicable law (see my EIR Objection 254 #'s I.A.1.d, I.C, D, E, and F), but those failures trigger a right by us victims to undertake our own mitigation to minimize our damages for our such nuisance, inverse condemnation, and other claims. **My such #4.A DEIR Objection 254 includes an example of our such local victim mitigation (see Comment to Ind. 254-58) that is ignored in the disputed EIR "Response," which involves us surface owners competing for our owned groundwater with deeper and new wells and watering systems and charging the mine and County for that mitigation cost, as allowed by many controlling court decisions**. E.g., ***Ahlers v. County of LA*** (1965), 62 Cl.2d

250 (road construction caused landslides, entitling the threatened property owners to recover, among other things, the mitigation costs of constructing 25 shear pin caissons to hold back the landslide); ***Shefft v. County of LA*** (1970)(3 Cal. App.3d 720, 741-42 (when water diversion from subdivision and road construction caused damages the victims were entitled to recover the costs of protecting their property with mitigation infrastructure.)

As to my Objection 254 #4.A (EIR labelled as Ind. 254-54 to 60), I note that I apply court precedents to the facts of this disputed EIR/DEIR in important ways that are totally ignored without any "good faith reasoned analysis" or "common sense" in those disputed EIR Response. While I suppose the EIR evaded my many #4.A issues to avoid drawing the County decisionmakers' attention to such important legal problems for the mine and for the County, if it approves the EIR, I urge those County decisionmakers to consider those legal objections and claims, because approval may mean challenges on those same bases among many others. Among the many flaws in the County Economic Report (see my Exhibit A and my DEIR Objection 254 rebuttals) the County should consider its own exposure for enabling this mine by approving this flawed EIR. E.g., ***Uniwill v. City of LA*** (2004), 124 Cal. App. 4th 537 (both the private party and the approving government can be jointly liable in inverse condemnation). See generally ***Varjabedian v. Madera*** (1977), 20 Cal. 3d 285 (explaining inverse condemnation and nuisance rights of homeowners downwind of the new sewer treatment plant). For example, please read my EIR ignored analysis of ***County of San Diego v Bressi*** (1986), 184 Cal. App. 3d 112, where an aviation easement was imposed on homes at the end of a runway with approved authority for hugely abusive (although unlikely) uses (e.g., not only jumbo jets but also "any other contrivance yet to be invented for flight in space"), the court rejected the defense claim to limit liability to the current use burden of small planes, ruling that "just compensation" for such taking is based on what the owner/victim has lost, rather than on what the taker gained, and that the jury must "once and for all fix the damages, present and prospective, [and the jury] must consider the most injurious us of the property reasonably possible … consider[ing] the entire range of used permitted…", which there included jumbo jets and space craft. See also ***Coachella Valley Water District v. Western Allied Properties*** (1987), 190 Cal. App. 3d 969 (refusing to limit the "before condition" valuation to the government' desired plan and allowing the jury to consider the value of the victim's property without being limited to the defendant's idea of solutions or consequences of doing things the defendant's way.) The more abusive rights we surface owners and users have to endure from the EIR on such a theoretical, "worst case" basis for 80 years (e.g., 24/7/365 dewatering, groundwater and [existing and future] well depletion, vegetation loss and fire risk from dryness, hexavalent chromium and other toxic water and air pollution, and all the other nuisances, risks, and harms to which I have objected (or incorporated from others' objections) that depress our victim property values (and inflict pain and suffering on us), the higher the victim compensation must be. In this case, many victims may seek to recover the pre mine value of their homes plus other damages.

Besides such hexavalent chromium and groundwater disputes to which *Gray* applies to support my Objections, Gray also supports my objections about the 100 EIR trucks a day abuse of our local roads objections that both require massive maintenance and repair and cause chromic traffic problems when the mine's heavy truck 24/7/365 abuse for 80 years reduces a two lane road not made for that use to one lane, because the other alternating lane will constantly need repair. See my EIR Objection 254 replies to what the EIR has marked as my Comment Ind. 254-33 and my objection to the disputed EIR Response on this topic. Again, the disputed EIR Response to Comment Ind. 255-25 states an aspiration to achieve some future undescribed

arrangement the miner admittedly cannot afford: "prior to commencement of engineered fill hauling … [to] enter into separate road maintenance agreements with Nevada County and the City of Grass Valley to provide the project's fair share of funding for maintenance of roadways commensurate with the project's impact to pavement conditions … including Brunswick Road between E. Bennett Road and SR 49 and E. Bennett Road between project highway and Brunswick Road (DEIR p. 4.12-91.)"

Notice the next misleading and worse statement in the disputed EIR Response to Comment Ind. 25-25: "Unlike *Gray* Mitigation Measure 4.12-6(b) indicated a clear commitment, and enforceable requirements within the DEIR, that the Project Applicant enter into road maintenance agreements. [See the CEQA and case law prohibitions discussed above on such future/deferred mitigation, as well as in my EIR Objection 254 #I.A1.d, I.C and D, I.E.1-5, and I.F.] Moreover, the project's DEIR found that certain traffic impacts to be significant and unavoidable due to the uncertainty of implementation, which is distinguishable from the situation in *Gray*…" ***First***, nothing in the DEIR/EIR forecast is a clear commitment or legally enforceable, since it is just an infeasible, aspirational plan to try to negotiate something about cost sharing, which ignores entirely the traffic problems from chronic road repairs, even if the DEIR/EIR applicant were willing and able to afford a fair chair of such costs (doubtful based in Rise's SEC admissions cited above). ***Second***, the EIR/DEIR evades entirely the problems of chronic repairs on those main road arteries that reduce two lanes to one lane for too much of the 80 years. ***Third,*** this problem is worse than the situation in *Gray*, not better, among other things, because this EIR mine is on a main road in the middle of a busy suburban community, rather than in cow pastureland in *Gray.*

Both that traffic/road cost problem and the disputed EIR noise problem in its disputed Response To Comment Ind. 255-26 also fail, like the great majority of the other disputed EIR/DEIR nonresponsive "Responses," because the EIR (like the DEIR) just announces its erroneous and worse opinions as if they were credible facts (which they are not) and that was required, continually ignoring the CEQA and other legal requirements for "good faith reasoned analysis," for "common sense," and for other standards I have addressed from the applicable law and Guidelines both herein and in my EIR Objection 254. Even more frustrating, as comprehensively addressed elsewhere is the false and constant EIR claim that: "commenter does not offer any additional information as to why the DEIR is similarly inadequate." For example, as to many "cumulative impacts" that I complain the DEIR/EIR evades (see #15355), the EIR incorrectly (and worse) claims that "no further response is possible," because the EIR chose to ignore the massive cumulative data and authorities contained or cross-referenced or incorporated in my four lengthy Objections, typically lacking good faith reasoned analysis and common sense as well as ignoring my incorporation of other objections in my Table of Incorporated by Reference Objections at the end of my EIR Objection 254. See, e.g., my many complaints above about how the EIR fragmented by Objections and ignored my other sections and my many cross-references and incorporations that contain the data the disputed EIR claims it could not find (because it refused to look beyond its chosen fragment or it failed as the initial matter to state its EIR/DEIR information at issue sufficiently for my more fulsome counter.) Since the EIR cited to its disputed Response to Comment Ind 254-83, I refer to my counter objection to that defective and worse "Response," as well as to my DEIR Objection 254 #'s 4, 8, 12 and 13 as to traffic Impacts and my # 9 as to noise.

O. My Objection To the EIR Response To My Prior Comment Ind. 255-29 to 32 (fragment cuts by the disputed EIR from my DEIR Objection 255 #4).

I incorporate my similar, but more extensive, objections about these disputed EIR "Responses" and tactics (also addressed in my EIR Objection 254) in which the EIR arbitrarily fragmented my integrated objection comments in my designated document Table of Contents sections into the disputed EIR's less self-sufficient fragment subdivisions. That causes my replies herein objecting to each fragment also to be both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) my such replies may be more vulnerable to the EIR's incorrect claims that my explanations are allegedly too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #4 (dealing with my detailed application of Rise and other DEIR/EIR admissions against the feasibility of its claims and its lack of resources and capacity to perform the safety, mitigation, and other achievements essential for any approval of the EIR, including as to certain CEQA principles and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-29 to 32, and those EIR isolated fragments (within my original, larger, and integrated comment Table of Contents section) are less self-sufficient by themselves (and more redundant because of the need for cross-references across the fragments). So, each of my objections herein to each such EIR cut fragment must be both incorporated into each other and read together for the full coherence and completeness as I originally wrote for my whole, integrated Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Nevertheless, now that the two prior examples (my #'s 2.A and B versus the EIR fragment cuts thereof) illustrate the problems with this disputed EIR Response's improper fragmentation tactic, I am going to consolidate my rebuttal reactions to those EIR fragments as if those nonresponsive EIR "Responses" were to my EIR Objection 255 #4 as I originally wrote it, as a demonstration of some of the many such errors, omissions, and flaws in this EIR/DEIR, in this case by correct application of such controlling law to the relevant facts instead of suffering the EIR's mistakes and worse. My such rebuttal (and others herein) includes the proper interpretation and application of CEQA and its Guidelines, such as #'s 15002, 15003, 15120, 15021, 15142, 15043, 15054, 15048, 15050, and 15370, as explained in 2018 Guidelines Amendments Explanations discussed in my EIR Objection 254 #'s I.C and D. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. However, the disputed EIR/DEIR entirely ignores some of those Guidelines in its "Responses" and does not correctly apply or interpret any of them with the required "common sense" and "good faith reasoned analysis." See my EIR Objection 254 #'s I.C and D.

I lament that the disputed EIR keeps attempting to evade my objections with mischaracterizations lacking the required "good faith reasoned analysis" and "common sense." For example, in its disputed Response To Comment Ind 255-29 and -30, the disputed EIR continues to evade my arguments by evading economic impacts and any economic feasibility issues, as well as my many authorities and good faith reasoned analysis bases for insisting on those matters being considered. For example, I am entitled to use *Gray, Sierra Club, Banning,*

Vineyard, Costa Mesa, and other court decisions to counter, rebut, and impeach the many errors, omissions, and noncompliance in the EIR/DEIR, since truth and compliance with applicable law are always requirements, and that is often lacking in the EIR/DEIR, especially when I am quoting admissions to defeat such errors, omissions, flaws, lack of "common sense" and "good faith reasoned analysis," and other noncompliance. See, e.g., **my EIR Objection 254 to EIR Master Response 2 and my various cites to counter, rebut, and impeach these disputed EIR Responses with my authorities in this DEIR Objection 255 #4, such as Public Resources Code 21061.2, CEQA Guidelines 15064 and 15131, which states that "[e]conomic effects of a project may be used to determine the significance of physical changes caused by the project."**

As I demonstrate throughout my four Objections, this disputed EIR "Response" wrongly evades that CEQA requirement without "good faith reasoned analysis" and defying "common sense" by incorrectly arguing that "there are no CEQA authorities that require an analysis of a Project Applicant's financial condition as part of an EIR." But see contrary authorities herein and in my other Objections. **First,** that disputed EIR claim again intentionally misses my point. I do not need to argue what CEQA requires in the abstract, because when (as many times in the EIR/DEIR) the miner "opens the door" to rebuttal and impeachment by stating errors, omissions, and worse in the EIR/DEIR, I am entitled to counter them with truths, impeachment, and rebuttals, especially as I have done by using Rise and EIR/DEIR admissions against them, especially those in the SEC filings that are more useful than the deficient EIR/DEIR. See Richmond v. Chevron discussed in my EIR Objection 254 #'s I.C and D, where such SEC and other admission defeated the eir. **Second,** I do explain how property values are directly connected to environmental impacts and vice versa, the EIR/DEIR just refuses to confront such inconvenient truths, such as the fact that us surface objectors above and around the 2585-acre underground mine have more than CEQA rights, but also property rights and claims. See Keystone, Varjabedian, and my EIR Objection 254 #'s I.F.8 and 9. As I have demonstrated above in the prior section N, in my four Objections, and as admitted in the Rise SEC filings (e.g., my EIR Objection 254 Exhibit B), us surface owner/objectors above and around the 2585-acre mine are entitled to mitigate the harms and wrongs done to us by the EIR/DEIR dewatering and other objectionable environmental impacts, such as by drilling deeper and new wells to preserve our homes, our forests, and our way of life from the mining menaces. We do that because no one can reasonably be expected to trust the EIR/DEIR mitigations or miner under these circumstances, thus making our self-defense a reasonable legal response. Property values are relevant in that debate because that is how we can justify that investment and afford our own mitigations while we are waiting for our judicial remedies to make us whole. E.g., ***Ahlers v. County of LA*** (1965), 62 Cl.2d 250 (road construction caused landslides, entitling the threatened property owners to recover, among other things, the mitigation costs of constructing 25 shear pin caissons to hold back the landslide); ***Shefft v. County of LA*** (1970)(3 Cal. App.3d 720, 741-42 (when water diversion from subdivision and road construction caused damages the victims were entitled to recover the costs of protecting their property with mitigation infrastructure.) **Third,** *Gray's* test of adequate water mitigation requires that we not suffer a loss of water rights as we enjoyed them before the mine harms (a requirement the EIR/DEIR fails at the start by claiming, for example, the right to convert the first 10% of our groundwater before starting mitigation), and property value loss from that inadequate mitigation is a means of proving the inadequacy of the disputed EIR/DEIR mitigation; i.e., if a buyer will insist on a huge discount on account of lack of trust or satisfaction with the proposed mitigation, that is proof that such water mitigation

is deficient. Also, as the EIR/DEIR refuses to address at all in any "good faith reasoned analysis" with "common sense," CEQA is not a limitation on the additional disputes that exist here between the surface owners and the underground miner over competing groundwater rights, and, in those disputes, property values are directly relevant for damages and remedies as my cited cases have demonstrated. **See *Gray* at 1120-1121 stating: "CEQA requires that the lead agency analyze any significant physical changes that may be caused by social or economic impacts that are the result of the Project."**

Consider, for example, the disputed EIR here argues that: "the commenter confuses cause and effect" and that claims of owner competition depleting groundwater is "speculative." **First,** when us surface owners testify in the court challenges (because the three minutes allowed in the County process is clearly insufficient for such proof), that is evidence—not speculation, and us witnesses will be allowed to prove why our mitigation efforts with our own new and existing wells will be necessary and appropriate. No one I know is going to abandon their home and allow their trees and vegetation to die as a willing sacrifice so that the EIR miner can dewater its mine for the profit of its distant speculator/shareholders. Clearly, since the disputed EIR/DEIR incorrectly claims climate change and future dryness can also be disregarded as "speculation" (that us surface owners can counter and prove CEQA requires, see, e.g., my companion EIR Objection 254 #I.C and D), we are willing have to litigate which is more speculative: climate science and the new normal, versus the EIR/DEIR's bogus speculation that the so-called average "current" baseline rain between 1967 and 2017 [ignoring the true, "current dry years after 2017] will continue to "recharge" our local groundwater, despite 24/7/365 dewatering for 80 years and flushing it away elsewhere down the Wolf Creek. As to the competition for groundwater having environmental impacts, I cited case studies and legislative concerns about the lessons from the Central Valley tree farmers draining their ground water and causing many impacts, including "subsidence" at a massive level (e.g., five or six feet differential drops in the surface level that damages surface infrastructure. See *Keystone.*

So, when the mine drains our groundwater, and we begin to compete using our property rights, "common sense" (i.e., the *Gray* requirement) requires some just resolution of that conflict, and the courts will decide if the County mistakenly approves the mine EIR. Which is more important: (i) preserving our residential suburban community above and around this no net benefit 2585-acre underground mine (see, e.g., my DEIR Objection 254 #'s 2, 3.N, 4, and 14 and my EIR Objection 254 Exhibit A and # I.F.8 and 9, and I.E.), versus (ii) flushing our precious groundwater away down the Wolf Creek 24/7/365 for 80 years so that the Canadian miner's speculating shareholders can profit? As for the EIR/DEIR's favorite quote to CEQA Guideline 15384 (disqualifying as "substantial evidence" "[a}rgument, speculation, unsubstantiated opinion or narrative, evidence which is clearly erroneous or inaccurate …) all apply more to the EIR/DEIR than to our objections to the EIR/DEIR. As to the part of 15384 that insists that "evidence of social or economic impacts" to count for such CEQA Guidelines must "contribute to or be caused by physical impacts on the environment," my four Objections do that and qualify as substantial evidence. But that is not true in the reverse as to the EIR/DEIR, which itself addresses social and economic impacts (e.g., exaggerated job and tax claims, etc.) that we must be allowed to rebut and impeach as we do to establish a net calculation of benefits and detriments. Moreover, because the EIR/DEIR states information beyond its argued CEQA limiting boundary, even with the DEIR/EIR admitting that reality by labeling its comment "Non-CEQA Related Analysis" [DEIR at 4.3-103+] (see my DEIR Objection 255 rebutting EIR Response To Comment Ind 255-30, my Objection 254 #'s 3.K and N, 12, 14.C, and 15.E and my

EIR Objection 254 to corresponding disputed EIR Responses To Comments Ind 43-45, 50-53, 92, and 101.) See again, like *Gray*, my previously cited Kostka & Zische, Practice Under the Cal. Environmental Quality Act, including #13.24 p.634

In its disputed EIR Response To Comment 255-32, the disputed EIR makes several critical mistakes that must defeat the EIR. **First,** the EIR there admits that "an EIR may exclude a project alternative that is economically infeasible," citing ***Center for Biological Diversity v. County of San Bernardino*** (2010), 185 Cal. 4th 866. However, the EIR then incorrectly claims "that issue is distinct from the financial condition of the Project Applicant." That is an outrageously misleading claim, i.e., effect claiming that this EIR miner's project can be (as it is) economically infeasible, but that same economic infeasibility standard disqualifies all competing alternatives. What about the alternative of no project—i.e., just saying "no" to the EIR? That is especially important to do, because, among many other things, Rise admits in its SEC filings (e.g., in my DEIR Objection 255, my DEIR Objection 254 #'s 2 and 4, and in my EIR Objection 254 Exhibits B and A) that the only material assets of Rise are this mine project that is more of a liability than an asset. Also, those admissions demonstrate that this miner cannot afford to perform or accomplish the EIR project objectives, especially (and even alone) its safety and mitigation "aspirations." Also, the DEIR at 6-14 admitted that the project would be infeasible if it were not allowed to operate 24/7/365 for 80 years, which reduction in hours of operation is among the goals of us objectors in the exercise of our legal, political, and law reform rights. See Grass Valley Agency Letter 8 in opposition to the EIR on this issue. In any event, as I explained in my DEIR Objection 255 #4, which overcomes any EIR/DEIR objections, my analysis is consistent with Guidelines #'s 15064, 15131, 15382, 15021, 15024, and 15030. See my EIR Objection 254 #'s I.C and D.

P. My Objection To the EIR Response To My Prior Comment Ind. 255-33 to 36 (fragment cuts by the disputed EIR from my DEIR Objection 255 #5).

I incorporate my similar, but more extensive, objections about these disputed EIR "Responses" and tactics (also addressed in my EIR Objection 254) in which the EIR arbitrarily fragmented my integrated objection comments in my designated Table of Contents document sections into the disputed EIR's less self-sufficient subdivisions. That causes my replies herein objecting to each EIR cut fragment also to be both fragmented and less self-sufficient and (the disputed EIR thinks because it also ignores my cross-references and incorporations) my such replies may be more vulnerable to the EIR's incorrect claims that my explanations are allegedly too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #5 (dealing with my detailed application of Rise and other DEIR/EIR admissions against the feasibility of its claims and its admitted lack of resources and capacity to perform the safety, mitigation, and other achievements essential for any approval of the EIR, including as to certain CEQA principles and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-33 to 36, and those EIR isolated fragments (within my original, larger, and integrated comment section) are less self-sufficient by themselves (and more redundant because of the need for cross-references across the fragments). So, each of my objections herein to each such EIR cut fragment must be both incorporated into each other and read together for the full coherence and completeness as I originally wrote for my whole, integrated Table of Contents section,

thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits.

Nevertheless, now that the two prior examples (my #'s 2.A and B versus the EIR fragment cuts thereof) illustrate the problems with this disputed EIR Response's improper fragmentation tactic, I am going to consolidate my rebuttal reactions to those EIR fragments as if those nonresponsive, EIR "Responses" were to my EIR Objection 255 #5 as I originally wrote it, as a demonstration of some of the many such errors, omissions, and noncompliance in this EIR/DEIR, in this case by correct application of such controlling law to the relevant facts, instead of suffering the EIR's mistakes and worse. My such rebuttal (and others herein) includes the proper interpretation and application of CEQA and its Guidelines, such as #'s 15002, 15003, 15120, 15021, 15142, 15043, 15054, 15048, 15050, and 15370, as explained in 2018 Guidelines Amendments Explanations discussed in my EIR Objection 254 #'s I.C and D. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. However, the disputed EIR/DEIR entirely ignores some of those Guidelines in its "Responses" and does not correctly apply or interpret any of them with the required "common sense" and "good faith reasoned analysis." My prior defenses of DEIR Objection 255 #4 and its objections to the DEIR/EIR still apply and overcome these disputed EIR Responses To Comment Ind 255-33-36 as well. Those disputed EIR "Responses" as to my reduced hours and Non-CEQA Related Analysis debates cite to the EIR Comments Ind 255-32, 33 which are already refuted. See my EIR Objection 254 #'s I.C and D.

As demonstrated in my prior sections 2, 4, 13 and 14 (and as to the groundwater disputes also #'s 3.D, E, F, M, and N, 4, 5, 8 and 13) of my DEIR Objection 254 and in the "good faith" and other tests of *Sierra Club* and the "common sense" and other tests of *Gray*, the EIR/DEIR cannot be a one-sided game where the EIR/DEIR can make any infeasible, false, misleading, or worse claim it wishes without us objectors being able to expose and rebut those bogus EIR/DEIR claims. As I noted in this part of my objection, if the EIR/DEIR is allowed to get away with this kind of deficient disclosure, then CEQA would become useless, pointless, and toothless, since all a financially and otherwise incapable miner would have to do is simply say the following untruth in its disputed "alternate reality": "I certify that I will do whatever is required to comply with CEQA and to mitigate any harms that I may do as the law may require." Fortunately, CEQA and my above cited precedents forbid that tactic and deferral. See also my companion EIR Objection 254 I.A.1.d, I.C, I.D, I.E.,1-5, and I.F.5 and 6, as well as Richmond v. Chevron. As I said by analogy to the old fable about the "emperor's new clothes," no naked emperor miner is allowed to pretend he or she is wearing some fancy suit when the reality is that he or she is not only naked but ugly. Fortunately, the applicable law does not allow such easy evasion by a miner. Id. If the County mistakenly accepts such a defective and dangerous EIR/DEIR, it is clear that the court will not tolerate such tactics, especially in the face of the Rise SEC admissions that the EIR incorrectly tries to prevent the County decisionmakers from even considering. See Richmond v. Chevron and my EIR Objection 254 Exhibit B and accompanying text and DEIR Objection 254 #2.

As so explained, the EIR/DEIR "opens the door" for my counter rebuttals, such as in its "Non-CEQA Related Analysis" (DEIR 4.3 at 103-104) and its admission (DEIR at 6-14) that the project is not economically feasible unless it can operate as it proposed 24/7/365 for 80 years. That is because, among other things, this dispute is not just about CEQA, but also the law of

evidence and other applicable laws that protect us surface owners above and around the 2585-acre underground mine from the EIR/DEIR miner. Note that here, as elsewhere in my Objections, I remind the reader of the definition of "Applicant" that creates an objection to Rise "fronting" for some real party in interest "behind the curtain" for a "flip" of the mine once the EIR is approved, since Rise admits in its SEC filings (as confirmed by its accountant's "going concern qualifications") that Rise lacks the resources to afford to accomplish anything material it proposes in the EIR/DEIR as project objectives or mitigations. See, e.g., my DEIR Objection 255 and 254, as well as my EIR Objection 254 Exhibits B and A. While the EIR does not seem to care about that issue, in my considerable experience the customary practice in the mining industry is to use shell mining entities to shield the (often foreign) parent companies from liability when the miner has accomplished what it can and retreats either back across the border or into a bankruptcy (or both using US Bankruptcy Code Chapter 15 to attempt to make US creditors defer to the foreign insolvency proceeding). See my DEIR Objection 254 #'s 1 and 2.

Q. My Objection To the EIR Response To My Prior Comment Ind. 255-37 (my DEIR Objection 255 #6).

Once again, the disputed EIR incorrectly claims that I do not sufficiently explain my climate change and groundwater objections, although that improper EIR tactic again ignores both what I said and what I incorporated by reference, among my other counters, such as the fact that my objections are sufficient on the merits, unlike the EIR/DEIR I am rebutting. As to climate change the EIR/DEIR tries to claim it's "speculative," see my ignored cites herein and in my EIR Objection 254 #'s I.C, I.D, I.E, and I.F, such as discussing to CEQA Guideline 15064.4, Cal. Health & Safety Code #38500 et seq, and Center for Biological Diversity v. Dept of Fish & Wildlife (2015), 62 Cal. 4th 204. See also my objections (also ignored by the EIR) to what the disputed EIR cites as its erroneous or worse EIR Master Responses 14, 16, and 17 and the disputed EIR's Response to Comment Ind. 254-17. Again, there is no "good faith reasoned analysis" or "common sense" to support the disputed "mitigation" that the EIR incorrectly claims reduces the groundwater impacts to being less than significant simply because that is the disputed and insufficiently proven opinion of the DEIR in its "alternative reality." See, e.g., my citations herein to my DEIR Objection 254 that the EIR/DEIR improperly ignores at #'s 3.M and N, 4, and 14, as well as my rebuttals in my companion EIR Objection 254.

Ask yourself why the EIR/DEIR keeps ignoring (as here) such data in my objections and merely offering disputed opinions against just parts of my objections, while ignoring or evading other of my objections. The apparent explanation is that the DEIR/EIR knows that it cannot prevail on the merits or convince its objectors to tolerate the DEIR/EIR errors, omissions, and worse, so in too many cases it doesn't even seem to try. Instead, the EIR/DEIR just so reduces its responses to deal with the parts it incorrectly imagines that it can dismiss as speculative, unsubstantiated, or somehow otherwise excluded by CEQA, while disregarding the rest, as if in hopes that the decisionmakers don't notice or care. Whatever else you decisionmakers may think about my four Objections to the DEIR/EIR, at least you should notice that, unlike such EIR/DEIR, I made a massive investment of my time in such Objections out of respect for you and your intelligence.

If I were a County decisionmaker I would be insulted by a DEIR/EIR that so ignores meritorious objections and instead defies *Gray* "common sense" with obvious tactics lacking in what *Sierra Club, Banning, Vineyards, and Costa Mesa* require as "good faith reasoned

analysis," such as by wrongly ignoring climate change as speculative and falsely claiming the average "current" rain baseline from 1967 to 2017 (ignoring the more "current" dry years after 2017) will recharge for 80 years the groundwater owned by us surface owners above and around the 2585-acre underground mine being dewatered 24/7/365 and flushed away somewhere else down the Wolf Creek. Because none of us objectors share in those selfish alternative reality illusions of the EIR/DEIR, it is not "speculative" to expect us (as witnesses will testify in any legal challenges that may be necessary if the County mistakenly approves the EIR) to dig deeper and new wells to compete for the groundwater we'll need to save our health and welfare, our homes and property values, our forests and environment, and our way of life from this EIR mine menace.

R. My Objection To the EIR Response To My Prior Comment Ind. 255-38 to 46 (fragments cuts by the disputed EIR from my DEIR Objection 255 #7.A).

I incorporate my similar, but more extensive, objections about these disputed EIR "Responses" and tactics (also addressed in my EIR Objection 254) in which the EIR arbitrarily fragmented my integrated objection comments in my designated Table of Contents document sections into the disputed EIR's less self-sufficient subdivisions. That causes my replies herein objecting to each fragment also to be both fragmented and less self-sufficient and (the disputed EIR thinks, because it also ignores my cross-references and incorporations)) my such replies may be more vulnerable to the EIR's incorrect claims that my explanations are allegedly too unclear or insufficient to merit a meaningful EIR response (after such EIR fragmentation). For example, here my DEIR Objection 255 #7 (dealing with my detailed application of Rise and other DEIR/EIR admissions against the feasibility of its claims and its lack of resources and capacity to perform the safety, mitigation, and other achievements essential for any approval of the EIR, including as to certain CEQA principles and other legal disputes) is cut up by the EIR Response into fragments Ind. 255-38 to 46, and those EIR isolated fragments (within my original, larger, and integrated comment section) are less self-sufficient by themselves (and more redundant because of the need for cross-references across the fragments). So, each of my objections herein to each such EIR cut fragment must be both incorporated into each other and read together for the full coherence and completeness as I originally wrote for my whole, integrated Table of Contents section, thereby exposing and defeating that disputed EIR's tactic for creating a pretext for the EIR incorrectly to claim that its isolated fragments fail adequately to explain my objections, thereby manufacturing a noncompliant excuse to avoid compliance on the merits..

Nevertheless, now that the two prior examples (my #'s 2.A and B versus the EIR fragment cuts thereof) illustrate the problems with this disputed EIR Response's improper fragmentation tactic, I am going to consolidate my rebuttal reactions to those EIR fragments as if those nonresponsive EIR "Responses" were to my EIR Objection 255 #7 as I originally wrote it, as a demonstration of some of the many such errors, omissions, and flaws in this EIR/DEIR, in this case by correct application of such controlling law to the relevant facts instead of the EIR mistakes and worse. My such rebuttal (and others herein) includes the proper interpretation and application of CEQA and its Guidelines, such as #'s 15124, 15125, 15002, 15355, and 15378. See also #'s 15002, 15003, 15120, 15021, 15142, 15043, 15054, 15048, 15050, and 15370, as explained in 2018 Guidelines Amendments

Explanations discussed in my EIR Objection 254 #'s I.C and D. See, e.g., my discussion of "cumulative impacts" based on Cal. Code Regs. Tit. 14 #15355. However, the disputed EIR/DEIR entirely ignores some of those Guidelines in its "Responses" and does not correctly apply or interpret any of them with the required "common sense" and "good faith reasoned analysis." My prior defenses of DEIR Objection 255 #4 and its objections to the DEIR/EIR still apply and overcome these disputed EIR Responses To Comment Ind 255-33-36 as well. Those disputed EIR "Responses" as to my reduced hours and Non-CEQA Related Analysis debates cite to the EIR Comments Ind 255-32, 33 which are already refuted. See my EIR Objection 254 #'s I.C and D.

I begin by the most obvious and a hugely important requirement that the DEIR/EIR consistently ignores in Guideline # 15124(a), where the EIR refused to correct my objection to the refusal of the DEIR/EIR to show the precise surface boundaries by local surface landmarks like streets and addresses, apparently preferring vague maps that they imagine to be less provocative to any surface owner who imagines he or she may escape this mining menace. But #15124(a) requires both a "detailed map" and "precise location and boundaries of the proposed project," which the DEIR/EIR fails to do. As I said before in my objections, imagine you are trying to sell your house in the mine's "stigma zone" and the potential buyer wants to know if he or she "only" has to worry about the mine depleting the groundwater needed by the home and forest, or if he or she also must worry about blasting, tunneling, mining, and shoring with carcinogenic hexavalent chromium underneath the property he or she is buying. Too many of us do not know how close we are to such menaces.

As debated elsewhere, the EIR/DEIR is wrong about the "project description" definition for purpose of CEQA # 15124. See also Cal. Pub. Resources Code **#21065, defining a "project" as "an activity which may cause either a direct change in the environment, or a reasonably foreseeable indirect physical change in the environment…" ;** and Guidelines #'s 15002(d), 15355, and 15378, which clarify that the "project does not mean each separate governmental approval" in the process. Centennial is not a separate project, which question of law will be resolved by the courts if the EIR is mistakenly approved. See, e.g**.,** ***Nelson v County of Kern*** (2010), 190 Cal. App. 4th 252 (mining and reclamation work were parts of a single project); ***River Watch v. Olivenham Muni. Water Dist.,*** 170 Cal. App. 4th 186 (trucks loading and unloading activities at the landfill are part of that project requiring CEQA approval).

As I demonstrate in my such objections the DEIR/EIR fails to comply with Guideline 15125(a), requiring a "description of the physical environmental conditions in the vicinity of the project," such as to set a "baseline" and "to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impact." See also #15125(c) (focusing on such "regional setting" for "assessment of environmental impacts … with special emphasis … on environmental resources that rare or unique to that region and would be affected by the project.") This requires, among other things, such as more factual and legal discussion of the hexavalent chromium menace the DEIR evaded and the EIR tries to (obscurely) to cover up, the DEIR/EIR's failure to address sufficiently the disputes, conflicts, and competition between the existing and future wells and rights of us surface owners above and around the 2585-acre underground mine. Since the DEIR/EIR ignores so many relevant existing and all future wells and its monitoring process is not even adequate for the wells it addresses (plus depleting 10% of the well water before it even starts the flawed mitigation effort)

My objections also note additional noncompliance by the DEIR/EIR, such as with Guideline #'s 15124(b) (failing to present a sufficient "statement of objectives," which is especially critical for such an intensive 24/7/365 operation for 80 years and DEIR p. 3-11-2 is deficient), 15124(c) (failing sufficiently to describe the project's "technical, **economic,** and environmental characteristics.") (Emphasis added since the EIR falsely claims that my objections do not explain how the DEIR/EIR is inadequate when my objections have devoted many pages to such technical, economic, and environmental rebuttals), 15124 (d) (massive fatal omissions addressed in my objections, as to permits both mentioned in DEIR at p. 3-46 to 48 and those not mentioned that should have been, including as to hexavalent chromium and the Rise/EIR/DEIR admissions that expose proposed mitigations as unaffordable, infeasible, and illusory, especially as to both (a) the many existing wells overlooked by the EIR/DEIR, and (b) all those new, competing wells that those of us above and around the 2585-acre underground mine will dig to protect our properties and value, our forests and environment, and our way of life.), 15125(a)(setting "existing conditions baseline" "shall not include hypothetical conditions …as the base line," which defeats the EIR/DEIR, because they have refused to evaluate satisfactorily the unknown conditions relating not only to the mine closed and flooded since 1956, but also to the 72 miles of new, proposed mine tunnels and dig sites, since the old records are not reliable, complete, or otherwise satisfactory and since extrapolations from other mines are not as similar or comparable as the EIR/DEIR claims, especially given the risk of subsidence and other nuisances and problems I address, such as DEIR Objection 254 #'s 2, 3.N, 4, and 14 and mining nuisances under Cal. Civil Code #3480, Penal Code #'s 372 and 372a and decisions like *People v. ConAgra Grocery Products Co* (2017), 17 Cal. App.5th 51 (lead paint promotion and sale as a nuisance, like hexavalent chromium), and #15125(d)(requiring EIR discussion of inconsistencies between the project and applicable general plans, specific plans, and regional plans, which the EIR often fails to do because it inappropriately evades or ignores many required discussions that would constitute such inconsistencies.). See my objections to EIR Master Response 29 and to subsidence and other such issues in my DEIR Objection 254 #'s 2, 4, 3.N, and 14 and *Keystone.*

S. My Objection To the EIR Response To My Comment Ind. 255-47 (my DEIR Objection 255 #7.B).

As discussed above and elsewhere in my Objections rebutting such disputed EIR Responses, both Rise's SEC filing admissions (e.g., in EIR Objection 254, including Exhibit B, and DEIR Objection 254 #'s 2, 3.N, 4, 14, and 15) and the EIR admissions (e.g., DEIR 6-14 confessing that the project is infeasible if it cannot operate as it proposes 24/7/365 for 80 years) demonstrate that Rise lacks the resources and especially the working capital needed to accomplish its EIR/DEIR project objective goals, much less its safety and mitigation "aspirations" and the cost of defending any approval against objectors long term enforcement of their legal, political, and law reform remedies to save their home values and functionality, forests and environment, and way of life from this mining menace. Therefore, those, like me (DEIR Objection 254 #1), with experience in dealing with such speculative mines assume this is a Rise set up for a "flip" to another shell subsidiary of another miner whose parent has more resources to dole out to that acquisition subsidiary as long as that seems to be a desirable gamble to them. As noted above in discussing CEQA Guideline #15351, the Applicant should be the real party in interest, requiring the EIR to reveal if one is now waiting "behind the curtain" to see if Rise can

win approval of its disputed EIR. In any case, the question the County decision makers should be asking is why would such a real mining company with such greater resources use Rise as a front for this admitted gamble? See my EIR Objection 254 Exhibit B describing the high risks that should discourage any investors who are not speculators. In my experience that may also be because that player behind the curtain could be even more "controversial" than Rise, and financial feasibility is not the only type of feasibility dispute. See, e.g., *Sierra Club* on "common sense," *Gray* on that and good faith, and *Banning, Vineyards, and Costa Mesa* on "good faith reasoned analysis."

T. My Objection To the EIR Response To My Comment Ind. 255-48 (my DEIR Objection 255 #8.A).

Again, the disputed EIR/DEIR incorrectly attempts to evade my disputes about its errors, omissions, and deficiencies by claiming my disputes are too vague and not identifiable to merit a response. All my rebuttals above to that EIR/DEIR common evasion tactic apply here as well to rebut that bogus claim. That is especially serious regarding the dispute regarding hexavalent chromium, which I rebutted not only in my objections to EIR Response To Comment Ind 254-1 (including my Exhibit C thereto and my objections also to EIR Response to Ind 254-3, 6-8, 11, 14-15, 36, 37, 75, 85, and 86, and as to air pollution 3.J and 10), but also in my undefeated objections in DEIR Objection 254 #'s 3.A, B, C, E, F, G, H, 7, 12, 14, and 15). When and if the disputed EIR is mistakenly approved by the County and the litigation and other challenges commence, the law of evidence and other applicable laws (including parts of CEQA and its Guidelines as properly interpreted by the courts), which I cited in my Objections but the EIR/DEIR incorrectly disputes, evades, or ignores, will enable objectors like me to eliminate such evasive EIR/DEIR excuses and tactics, such as with motions in limine.

U. My Objection To the EIR Response To My Comment Ind. 255-49 (my DEIR Objection 255 #8.B).

The disputed EIR/DEIR again incorrectly insists on disputed DEIR chapter 2's "Executive Summary " as satisfying CEQA Guideline 15123, which, as my objections thereto demonstrate, is wrong and worse. As my Objections repeatedly demonstrate, there is comprehensive noncompliance by the DEIR/EIR with Guideline #15123

However, note that such disputed EIR/DEIR's nonresponsive Response fails to address at all my citations to Guidelines #'s 15122 and 15129(a) and (b) (regarding the unsatisfactory and misleading table of contents or index, such as, for example, the DEIR's failure to even mention in its TOC section #4.7 called "Hazards And Hazardous Substances" what I identified in the EPA website cited studies as dangerous hexavalent chromium that killed the town of Hinkley, CA and many of its residents as illustrated in the movie, *Erin Brockovich*), as well as obscuring without sufficient connections the EIR's unheralded Appendices Q, O, and R that are not connected to the EIR false claims that its noncompliant words about hexavalent chromium were just clarifications of the DEIR instead of what they were (i.e., significant new information requiring revision and recirculation). See, e.g., my DEIR Objection 254 #'s 3.A, B, C, E, G, H, 7, 12, 14, and 15 (as well as #3.J and 10 as to air pollution).

As to the many well, water, and groundwater related issues in dispute and scattered around or ignored by the DEIR/EIR, see, for example, my other DEIR Objection 254 #'s 3. D, E,

F, L, M, and N, 5, 6, 8, 11, 14, and 15. See also my many objections to, and illustration of, the DEIR/EIR often "hiding the ball" and other objectionable tactics prohibited by applicable law and such Guidelines requiring from the EIR/DEIR "good faith," "common sense," "good faith reasoned analysis," and other noncompliance I note throughout my four Objections in sufficient detail (especially if the EIR/DEIR nonresponsive "Responses" bothered to consider my many cross-references and incorporations by reference that by themselves defeat such false EIR/DEIR excuses such as objections being too vague, speculative, unsubstantiated, or otherwise deficient, when the reverse is true and the fault usually lies with such standards being violated by the EIR/DEIR). See, e.g., my companion EIR Objection 254 #'s I.A.1.d, I.D, I.F.1-6; DEIR Objection 243 # 3.E.

V. My Objection To the EIR Response To My Comment Ind. 255-50 (my DEIR Objection 255 #9 Concluding Remarks).

This nonresponsive EIR's Response concludes with the preposterous repetition of the common EIR/DEIR outrages by falsely claiming that nothing in this Objection or in my three other cross-referenced Objections, in my cited CEQA and its Guidelines, or in my cited judicial authorities supports my objection to the County and EIR/DEIR exclusion of evidence and arguments regarding even the **admitted** deficient financial condition and limited resources of Rise. See, e.g., my cites to Richmond v. Chevron and accompanying text; my EIR Objection 254 Exhibits B and A, my DEIR Objection 254 #2, as well as all my many other places in my four Objections where I demonstrate that EIR claim to be error and worse. That is especially true as to issues on which the disputed EIR/DEIR has "opened the door" for my such rebuttals and impeachment of disputed EIR/DEIR claims that defy "common sense" (*Gray*) and fail to provide any "good faith reasoned analysis" (*Banning, Vineyard, and Costa Mesa*), or other compliance with the legal standards in the authorities that I cite on the merits and explain in detail, but that the EIR/DEIR chooses to ignore or otherwise evade.

Thank you for considering my comments.

Sincerely,

G. Larry Engel

Table of Exhibits

A. Illustrative Objections to The Planning Commission Staff Report Supporting the Disputed EIR/DEIR And Disregarding Meritorious Objections.

EXHIBIT A TO MY EIR OBJECTION 255: Illustrative Objections to The New Nevada County Planning Commission Staff Report Supporting the Disputed EIR/DEIR And Disregarding Meritorious Objections.

1. Introductory Comments Explaining And Illustrating Problems With the Comm Staff Report.

a. This Is A Last-Minute Addition To My Foregoing Objection Reacting To the EIR, Explaining How This Comment On the "Comm Staff Report Fits With My Four Objections.

The foregoing EIR Objection 255 rebuts the disputed EIR's incorrect, deficient, and noncompliant "Responses" to my previous DEIR Objection 255. For reasons explained in the next subsection "b," I have added this Exhibit to begin to respond to the recently filed "Comm Staff Report." While this Exhibit is part of that foregoing Objection, which is incorporated herein (and vice versa), I have not had time since that new staff filing to fully integrate my comments here into the main body of the Objection, and I merely introduced this Exhibit briefly by adding a short paragraph to the introduction to that main Objection. Thus, to more fully understand why I dispute much of the Comm Staff Report, one needs to read this Exhibit. For avoidance of doubt, this Exhibit A, which is an incorporated part of my foregoing EIR Objection 255 (and vice versa), includes everything that was incorporated by reference into that Objection, such as, for example, my three other "Objections" and third-party objections (see, e.g., my Table of Incorporated by Reference Objections at the end of my companion EIR Objection 254) and cited materials in any such objections from me or such others. In particular, the defined terms in my foregoing Objection apply equally herein, including for purposes of consistency definitions in such incorporated objections and materials.

b. The Comm Staff Report Suffers From Many of the Same Errors, Evasions, Omissions, And Noncompliance As The EIR that It Often Imitates.

After I filed my companion EIR Objection 254 and was about to file this EIR Objection 255, I learned about the "Nevada County Planning Commission Staff Report" (the "Comm Staff Report") that was added to the EIR official file on or about April 26, 2023. As explained in my introductory, general comments about the Comm Staff Report in the foregoing Objection (#1.B), I will not be able to do the kind of thorough analysis and rebuttal of that Report that I would have liked to have done if I had adequate time to respond, such as I have previously done with respect to the DEIR and EIR in preparing my four Objections. Therefore, I will just add here some general guidance and illustrations of the many objectionable Report provisions, describing herein

what specific comments may be feasible. Fortunately, most of my objections to the EIR/DEIR equally apply to the Comm Staff Report, as generally explained in these comments, and as illustrated in my cross-referenced Objections and those of others, like the CEA. While I expect to do a more sufficient review of the Report before the Board of Supervisors meeting on the EIR, nothing so far in my review of the Comm Staff Report inspires me to attempt any last-minute changes of anything in my four Objections. To the contrary, the Comm Staff Report too often simply repackages the already disputed and rebutted content of the noncompliant EIR/DEIR, which the County decisionmakers should never certify or otherwise approve or implement. Therefore, I object to the Comm Staff Report on the same basis as my four Objections disputed such errors, omissions, evasions, and noncompliance in the EIR/DEIR, including as to what I have incorporated by reference in my "Table of Incorporations by Reference Objections" attached to my companion EIR Objection 254. Stated another way, as with the EIR/DEIR, all my Objections remain in effect against all contrary content in the Comm Staff Report, which (with some often-problematic partial exceptions) generally adopts and supports the EIR/DEIR.

To the extent that the Comm Staff Report supports to any extent anything in my Objections, I thank the Staff for that part of their work and its occasional disagreements with the EIR, although neither Option A nor B is the proper choice, which is both: no certified/approved EIR, and no mine. To the extent that the Comm Staff Report disagrees with anything in any of my four Objections or other objections that I incorporate from my Table of Incorporations by Reference Objections attached to my companion EIR Objection 254, I invite them to discuss our differences. Unfortunately, the Comm Staff Report could not have had time to consider EIR objections by me or others. Nevertheless, the disputed Comm Staff Report seems to have generally followed the DEIR and ignored all my and others' meritorious objections to the DEIR, all of which still apply, although as clarified and supplemented in my two EIR Objections 254 and 255. The Report makes no serious effort to convince any objectors of most of what stated in the Report, which (like the disputed EIR/DEIR) overlooks, evades, or misunderstands many significant impacts, errors, omissions, and noncompliance by the EIR/DEIR. Like the EIR/DEIR, the Comm Staff Report generally does not provide what the CEQA case law calls "good faith reasoned analysis" with "common sense" (e.g., *Gray, Banning, Vineyard, and Costa Mesa*), but rather just announces its "opinions" based often on what I consider to be speculations or false assumptions (e.g., false equivalences, like assuming the conditions at the 2585-acre mine are the same or similar to those conditions at the Brunswick and Centennial sites subject to the EIR's predominate commentaries.

Thus, all my and others' DEIR objections continue to apply to the EIR, which rarely, if ever, cured (and often made worse) the DEIR's errors, omissions, evasions, or noncompliance, as proven in this Objection and my companion EIR Objection 254, each rebutting the EIR/DEIR, and, therefore, the incorrectly EIR/DEIR supportive parts of the Comm Staff Report. Likewise, to the extent that the Comm Staff Report supports anything in the EIR/DEIR to which I have objected, I also object to that support as incorrect or worse, and I invite the staff to discuss what I think they are missing and why I think they should reconsider their position once they read my two EIR Objections 254 and 255, among the many other objections. The only "good news" for everyone is that, by the disputed Comm Staff Report mistakenly following the EIR/DEIR so closely, it should be relatively easy for the staff to track my and other such objections.

I also offer this observation, which is supported by many of my analyses in my four Objections: the EIR/DEIR does not satisfy the legal requirements for approval either (i) on the merits of what it claims, or (ii) on account of its noncompliance with CEQA and other

applicable law and reality. So far, the staff's EIR/DEIR process has shown excessive and objectionable tolerance to, or support for, what many meritorious objections have cited as noncompliance, evasions, and omissions by the DEIR, which the EIR has not cured, but instead has made worse by the EIR adding more such noncompliance, evasions, and omissions. See also both (i) my incorporated Table of Incorporated by Reference Objections at the end of my companion EIR Objection 254, and (ii) what I included in my analyses therein from such incorporated objections of others. For example, so far, this EIR/DEIR process has applied the legally incorrect theory of the EIR/DEIR that (as so incorrectly interpreted) CEQA narrowly limits objections, even in rebuttal or impeachment and even with Rise or EIR/DEIR evidentiary admissions, against what is stated in the EIR/DEIR, even when based on based Rise and EIR/DEIR admissions. See, for example, on "economic feasibility," my DEIR Objection 255 that the forgoing EIR Objection 255 supports and defends against such noncompliance, errors, omissions, and evasion in the DEIR/EIR, which my companion EIR Objection 254 also exposed on an item-by-item rebuttal basis. That evasion of feasibility questions is sufficiently rebutted in my Objections, often supported by self-defeating Rise/EIR/DEIR admissions, but the County Staff Report reminded me to add this addition by its listing of the many related permits and approvals needed to (mistakenly) implement (and I contend, to certify) the EIR. For example, although its analysis is faulty, the Report notes that rezoning requires a different standard than CEQA about what is in the "public interest" and that broad standard also invites a debate about feasibility (somewhat like the CEQA discussion of "alternatives" where "feasibility" in a comprehensive sense is also relevant, but incorrectly disregarded by the EIR/DEIR and Report).

2. The Comm Staff Report Cannot Cure Noncompliance By the EIR/DEIR, Addressed Further in # 5.a Below.

The EIR/DEIR has failed to comply with its CEQA and other investigation, analysis, and disclosure obligations, of which noncompliance the staff process so far has been too tolerant (and which the Comm Staff Report cannot now legally or otherwise cure, although it seems to try), despite massive and meritorious objections. See, e.g., # 5.a below and my four Objections and the *League To Save Lake Tahoe* case cited below. The question is what to do about such many essential to know, but not yet proven, material facts and circumstances, especially those omitted, evaded, or misconstrued in the EIR/DEIR. As my EIR Objection 254 proves and as briefed in the foregoing Objection, the burden of proof and compliance is on the EIR/DEIR (#I.C above), and my Objections and others demonstrate that the EIR/DEIR both failed to satisfy that burden of proof and instead used disputed tactics to try and evade their duties and, worse, try to shift those burdens to the objectors. See, e.g., my companion EIR Objection 254 #'s I.A.1.d, I.E..1-5, and I.F.5 and 6, as well as my DEIR Objection 254 #3.E. (While I do not know who else besides the CEA is objecting to the last-minute County Staff Report, I support any such consistent objections, including those I read by the CEA.) That attempt to shift the EIR/DEIR burden of proof is intolerable, and it seems also to be the general approach of the Comm Staff Report, which is one more reason to object to it. To the extent that the Comm Staff Report fails to insist on such compliance by the EIR/DEIR, I ask the staff to reconsider and, at least, to hold the EIR/DEIR to the same standards the EIR/DEIR ties to impose on us objectors, if the staff is not

requiring the greater/stricter standards to which the EIR/DEIR will ultimately be held by the courts correctly applying the law, if this EIR were mistakenly approved/certified.

For example, where there is no substantial evidence presented on an issue by the EIR/DEIR, they often try to cover the gaps they leave with unsubstantiated opinions, speculations, and false assumptions/false equivalences that my and other the objections have rebutted and countered. (Again, while it may try, as I explain, the Comm Staff Report cannot now correct that EIR noncompliance, and it should not be regarded as having done so. See the controlling precedents here and in my Objections.) For example, this EIR not only improperly defended such DEIR noncompliance, but the disputed EIR attacked our objections with bogus claims that it was somehow our objections (not the EIR/DEIR) that were unsubstantiated, speculative, and otherwise deficient. I repeat that here to remind the staff that the Comm Staff Report cannot use that incorrect and worse excuse for evading our meritorious objections. We urge the County to hold the EIR/DEIR to that higher standard that the law requires of them, as explained herein and in many meritorious objections. ***See, e.g., Communities for a Better Environment v. City of Richmond (2010), 184 Cal.App.4th 70, 82-90 ("Richmond v. Chevron")***

Please note this most important legal rule that applies to this Comm Staff Report: it cannot now cure any of the errors, omissions, or other noncompliance in the disputed EIR/DEIR. See my EIR Objection 254 #I.C and D. None of us has had a fair opportunity to rebut the Comm Staff Report (or for the Report staff to consider and address our many EIR objections), consistent with law and due process. The court precedents are clear that the lead agency cannot, as the County incorrectly may hear from the EIR/DEIR, "make up for the lack of analysis in the EIR through post-EIR analysis," especially because the lead agency has the critical "burden to investigate" such potential environmental impacts. E.g., *League to Save Lake Tahoe Mountain v. County of Placer* (2022), 75 Cal. App.5th 63, 107. For example, as the ***Richmond v. Chevron*** court (like the trial court) found: **"Formulation of mitigation measures should not be deferred until some future time. (Guidelines #15126.4(a)(1)(B).) An EIR is inadequate if '[t]he success or failure of mitigation efforts … may largely depend upon management plans that have not yet been formulated and have not been subject to analysis and review within the EIR.'** (*San Joaquin Raptor*, supra, 149 Cal. App.4th at 670.)" (emphasis added) **The court also objected to such future studies even subject to administrative approval as "analogous to the sort of post hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA" citing many cases including *Sundstrom v. County of Mendocino* (1988), 202 Cal. App. 3d 296, 307 (all incorporated herein and rejected or distinguished the various city arguments and cites. The court added: "In our opinion, the novelty of greenhouse gas mitigation measures is one of the most important reasons 'that mitigation measures timely be set forth, that environmental information be complete, and that environmental decisions be made in an accountable forum," with citations including *Oro Fino Mining Corp. v. County of El Dorado* (1990), 225 Cal. App. 3d 872, 885. (emphasis added)**

Here, any staff investigation should have confirmed both the merit of our objections (sufficient even at our DEIR level objections) and the massive errors, omissions, evasions, and noncompliance by the EIR/DEIR. See also, my above Objection #1.F, G and H, which includes the hard questions that the disputed EIR/DEIR and County Staff Report both evade or ignore, but which the court will answer in our favor if the EIR were certified/approved. In addition, I note that when the courts judge what is "substantial evidence" in CEQA #21082(c), remember that there can be no judicial deference allowed

for a "clearly inadequate or unsupported study" (of the type on which the EIR/DEIR usually relied) as explained in *Town of Atherton v. Cal. High Speed Rail Authority* (2014), 228 Cal. App.4th 314, 349. That rule should be applied in the County Staff Report, but that rarely appears to be the case. I therefor ask the County decisionmakers, why would you decide on the basis of disputed EIR/DEIR exhibits, Appendices, and other cited material that will be disregarded by the courts?

3. **Three Examples Of Comm Staff Report Key Errors Or Omissions (Besides Its General Mistaken Support of the EIR/DEIR And Disregard of the Many Meritorious Objections), Plus Some Highlights of Some Additional CEQA Violations Addressed Later At The End of This Exhibit, Such As Regarding: (i) The HEXAVALENT CHROMIUM Menace (REMEMBER THE MOVIE ERIN BROCKOVICH—SEE WWW.HINKLEYGROUNDWATER.COM), and (ii) The Many "Significant" Groundwater Well, Supply, And Quality Impacts And Infeasible Mitigation Proposals, Etc.**

    a. **Identifying Three Examples of Key Threats To Our Community, Plus Repeating My Hexavalent Chromium Warning.**

Among the scores of errors, omissions, evasions, and noncompliance by the disputed EIR/DEIR that are tolerated or worse in the Comm Staff Report, that Report adds its own mistakes. See my companion EIR Objection 254, analyzing more than 50 such threats to our community. Here are three of the more obvious wrongs among what are addressed in more detail below:

(i). Regardless of the Alternatives and recommendations asserted by the Comm Staff Report, which should be rejected for the reasons stated in my and others' objections (see, e.g., my objections in section I.D above and my companion EIR Objection 254 #I.E.10), the Board decisionmakers must not certify the disputed EIR, especially if they correctly reject the mine applications. That disputed EIR "Alternative A" strategy would compel us objectors to litigate (in the abstract) to defeat the certified EIR in court, so that we never have to endure a replay of this tragedy with the next miner exploiting that noncompliant EIR. Why would the County wish to waste public funds to defend such an intolerable EIR just so that some miner can try this mistaken threat to our community again with the advantage of a certified EIR? Why make it easier for any future miner to exploit the mistakes and worse in this disputed EIR/DEIR? See below for some quick answers.

(ii). The Comm Staff Report at 51-53 would use the Development Agreement to lock in a for 20 years (with two 10-year extension options) allowing the mining to proceed "consistent with the …General Plan … [and other laws] without disruption caused by material future changes in County planning and development policies and requirements over the [80 year?] life of the Idaho Maryland Mine Quarry Use Permit." Stated another way, the disputed

Development Agreement would purport to "lock in" the disputed EIR for up to 40 years, without (they claim) any chance for reforms by the County (and by any other relevant government or regulator?) when victims realize our many objections and warnings were correct. The Comm Staff Report reveals its inappropriate, pro-mine partisanship by trying to "spin" that governmental, self-defense correction opportunity for us mine victims as a "disruption." How can any responsible government perceive a public benefit in forbidding cures of its mistakes in allowing such a disputed miner to so dangerously operate to the harm of us thousand objectors living above or around the 2585-acre underground mine? See below for some quick answers.

(iii). The Comm Staff Report incorrectly aids and abets the noncompliant approach by the disputed EIR/DEIR in deferring to the future (*after* EIR certification) the analysis of impacts and mitigations required now *before* approval/certification of the EIR. That forbidden deferral approach defeats the whole purpose of CEQA, with such an open and notorious violation to which I and many others have objected based on our correct interpretations of CEQA and other laws as confirmed by the applicable court precedents. See my foregoing main Objection #1.C above and my companion EIR Objection 254 #'s I.C and D (discussing the applicable CEQA and Guideline rules prohibiting such deferrals and CEQA evasions, plus some cases like *Richmond v. Chevron)* and I.E1-4 (illustrating those correct rules against deferrals, especially in I.E3 and 4.) Why would any responsible government trust this miner to do all the right things in the future under the problematic circumstances demonstrated by my Objections and those of many others? See below for some quick answers.

While I add some additional rebuttal data as to my examples of my favorite other objections at the end of this Exhibit (section 6.C), do not interpret that as any kind of subordination of their importance. I so add more detail and cross-references later for various other rebuttals to the County Staff Report not just for what it gets wrong, but also what it fails to address at all, like that known hexavalent chromium menace that has NOT been addressed at all by the County Staff Report (see here and section 6.C below) or subjected to "good faith reasoned analysis" with "common sense" by the EIR/DEIR or staff. Sometimes that omission apparently may be a conscious choice of the staff. But I suspect that sometimes that such objectionable staff acts and omissions are a consequence of the County staff failing to appreciate what the DEIR/EIR has obscured, evaded, or omitted in violation of CEQA, often by what my and other Objections warned about as improper "hide the ball," "bait and switch," or other evasive tactics, illustrated below and in my Objections. See, e.g., my foregoing Objection at #1.C. G and H, my companion EIR Objection 254 #'s I.A.1.b and d, I.E.1-5, and I.F.5 and 6, and my DEIR Objection 254 #3.E.

For example as to "hide the ball" tactics, my key additional concerns below address the understated/underappreciated toxic threats from the EIR mine, not just from the known asbestos and other lethal impacts the EIR/DEIR deficiently discussed, but also from what the disputed EIR/DEIR evaded/obscured contrary to their disclosure obligations, such as with respect to toxic HEXVALENT CHROMIUM water and air

pollution (see, e.g., Exhibit C to my companion EIR Objection 254 and related text citing that Exhibit C, and my DEIR Objection 254 #'s 3.A, B, C, E, G, H, 7, and 14). Another such example of CEQA and other noncompliance is the refusal of the DEIR/EIR to respond to (and the County Staff Report to analyze) my repeated Objections to the competing property rights dispute of us surface owners and users above and around the 2585-acre underground mine, especially since we own interests in the groundwater the EIR would dewater (e.g., *Keystone*) and flush away 24/7/365 for 80 years down the Wolf Creek, and since many of our existing surface wells there are not considered by the EIR/DEIR or County Staff Report for impacts and mitigation (e.g., *Varjabedian),* especially our FUTURE WELLS that be added by such surface owners as climate change droughts progress and NID drought rationing creates an even more significant impact (which the DEIR/EIR incorrectly claim to be too speculative to require any analysis). [The County missed point is that these disputed impacts are not just about what the EIR mining does with Rise property, but what the EIR miner does to our "surface" property (at least 200 feet deep), which includes our groundwater. E.g., my companion EIR Objection 254 at I.E.8 and 9.] See generally the attached Objection, my EIR Objection 254 #'s I.A.1.d, I.C.2, I.D, I.E.1-5, and I.F, as wells as my rebuttals therein and herein to disputed EIR Master Responses and Responses following up on my DEIR Objection 254 #'s 3.D, E, F, M, N, 4, 5, 6 and 14.

For one such example, my four Objections each blast the noncompliant and worse way that the disputed DEIR barely mentioned the HEXAVALENT CHROMIUM MENACE I addressed at length in my DEIR Objection 254 (e.g., #'s 3.A, B, C, E, G, H, 7, and 14 as to its water impacts, and 3.J and 10 as to air pollution impacts). The disputed EIR then added erroneous purported "clarifications" to the noncompliant DEIR that are really "significant new information" (also incorrect or misleading) about hexavalent chromium, all requiring revisions and recirculation. See my EIR Objection 254 Exhibit C and #'s I.A.1c, and I.C. That is a classic DEIR/EIR "hide the ball" tactic, which the EIR compounds, for example, by falsely "re-branding" the indisputably toxic hexavalent chromium menace as a nonsignificant "cemented paste backfills" issue without any "good faith reasoned analysis" with "common sense" of the hexavalent chromium in that cement paste that is being used to shore up the mine with mine waste. See the admissions in the pre-DEIR prepared Itasca Study in Appendix Q (see also Appendices O and R), which were ignored in the DEIR, but which unheralded Appendices are now attached at the end of the EIR, but not as an integrated or adequately linked part of the EIR/DEIR "Hazards and Hazardous Materials" discussion or other proper EIR analysis. That EIR evasion tactic is apparently to avoid weakening the disputed EIR defense that it was merely "clarifying" the noncompliant DEIR, so that the EIR did not need to so revise or recirculate anything. See my analysis of this "hide the ball" tactic (which is totally ignored by the County Staff Report) and not even flagged to the regulators. E.g., my above EIR Objection 255 #'s I.C.1 and 2, and my companion EIR Objection 254 Exhibit C and #'s I.A.1.d, I.E.1-4, and I.F1 and 5, and its rebuttal objections to EIR Response Ind.254-1.

"Common sense" and "good faith reasoned analysis" in the CEQA court interpretations that control here forbid that kind of EIR/DEIR evasion, especially since the EIR cannot "clarify" what was not correctly included in the DEIR, especially when the EIR/DEIR team already knew of the undisclosed hexavalent chromium menace from Rise's pre-DEIR studies that were not analyzed or disclosed in the DEIR and then were

noncompliantly obscured (at best) in the EIR. See my Exhibit C to my companion EIR Objection 254 and its rebuttal to the EIR Response Ind. 254-1 attempt to add more "significant new information" (i.e., what the disputed EIR incorrectly calls clarification) on this subject in that obscure place where no one, including it seem the County Staff Report team, would notice it. Why would the EIR team take that risk to avoid revision/recirculation by such obscure, unsubstantiated, incorrect, and noncompliant additions in the EIR and unheralded Appendices Q, O, and R attached at the end of the 7000 plus EIR pages? As noted, (and check the study dates of those Appendices Q, O, and R), THE DEIR/EIR TEAM AND COUNTY STAFF KNEW THE CR6+ PROBLEM LONG AGO. NOT ONLY DID SUCH RISE CONSULTANTS WARN ABOUT THIS CR6+ MENACE IN ADVANCE OF THE DEIR FILING, BUT I MADE THAT CR6+ MENACE A KEY PART OF MY DEIR OBJECTION 254 AND PERSONALLY DENOUNCED THAT THREAT AT THE MARCH 2022 PUBLIC MEETING, CITING THE HINKLEY, CA CASE STUDY MOURNED BY THE MOVIE *ERIN BROCKOVICH*. SEE WWW.HINKLEYGROUNDWATER.COM (which not only links to the history and science, but also explains why after all these years that town is still struggling to remediate that poisoned groundwater.) My such Exhibit C to my companion EIR Objection 254 and other cites above (Id.) explain that the disputed EIR is risking everything on this doomed (at least in court) tactic, because (I suspect) the EIR wants to keep as much mine waste in the mine as possible (i.e., cementing such waste in place into underground mine column braces, where its exposed to dewatering and, when that dewatering stops, our groundwater flooding the underground mine again, this time on an even larger scale beneath objectors' surface owned properties), all so that the EIR can save the cost of removing that waste and can minimize its also disputed plans for still having to dispose of suspect mine waste somewhere on the surface. Id.

While my many cited cases compete with those few cited by the EIR/DEIR or the County Staff Report as we dispute about what is required to comply with CEQA (and I contend other applicable laws that are ignored by the EIR/DEIR and Report, such as the law of evidence, allowing rebuttals and impeachment, especially by admissions), only I cited and applied the "2018 Guideline Amendments Explanations" (November 2018) in my EIR Objection 254 #I.C.2, where the CEQA Guideline authors explained the amended Guidelines in ways that defeat many of the EIR/DEIR and County Staff arguments when they cite CEQA or its Guidelines. The point of many of those amendments was to defeat the kinds of misinterpretations of the Guidelines as I demonstrated in my such rebuttals of the EIR/DEIR (and therefore the County Staff Report that follows those EIR/DEIR misinterpretations.) Thus, when I refer to CEQA interpretations I am citing to not only what is said in the statute and my cited court cases, but also the Guidelines and how those Guidelines amendments are explained by the authors. Id.

b. The Only Tolerable Alternative Is To Reject Both the EIR And Mine (Without Certifying The EIR), But If Some Such Possible Alternative Were Required, The Industrial (e.g., Warehouse) Is The Least Objectionable (And Far Less "Intense" Than The Mine, Which the EIR/DEIR And Comm Staff Report Absurdly Pronounced As the Least "Intense" Alternative). (That unsubstantiated "intensity"

opinion defies "common sense" as the similar *Gray* v. *County of Madera* mining case illustrates being required by CEQA.)

(i) Some Context For the Competing Alternative Disputes.

Regardless of the Alternatives and recommendations asserted by the Comm Staff Report, which should be rejected for the reasons stated in my and others' objections (see, e.g., my objections in section I.D above and in my companion EIR Objection 254 #I.E.10), the Board decisionmakers must not certify the disputed EIR, especially if they correctly reject the mine applications. That disputed strategy would compel objectors to fight in the abstract to defeat the certified EIR in court, so that we never have to endure a replay of this tragedy with another miner exploiting the noncompliant EIR. The Staff recommendation for EIR certification is inexplicable, noncompliant, and unsubstantiated. Why would the County wish to waste public funds to defend such an intolerable EIR, just so that some miner can try this again with the advantage of such a noncompliant, but certified, EIR? Why make it easier for any future miner to exploit such EIR mistakes and worse? Since there is no legal compulsion for the county to certify the EIR when they reject the mine, to do provides no benefit to our community, and exposes us all to the mistakes that the miner would claim are ratified when the next mining proposal comes along, leaving us with even more complex litigation. E.g., *Las Lomes Land Co. v. City of LA* (2009), 177 Cal.App.4th 83.

Indeed, this intolerable EIR certification strategy may have always been about a possible "flip" sale of the EIR, because the Rise SEC filings admit that Rise has never had sufficient financial resources to afford the project objectives or even the proposed mitigations, much less what more mitigations would ultimately be required by the courts if the EIR were approved and found somehow compliant with more sufficient mitigations (which would be still incorrect.) See my companion EIR Objection 254 Exhibit A and B and my DEIR Objection 254 #'s 2 and 4. Rezoning as discussed in the County Staff Report would be an even bigger mistake, because it would complicate County defenses against any ultimate miner in the future. Why would the County so increase its exposure to undeserving miners in the future, when it is clear that objectors will not accept the mine without exhausting all their legal, law reform, and political remedies? See General Plan 17.1 which is supposed to subordinate mining, so as to "not create land use conflicts" with existing residents (and voters), especially those of us living above and around the 2585-acre underground mine (whose interests and objections are mostly ignored by the EIR/DEIR and Comm Staff Report and (as explained in my EIR Objection 254 Exhibit A and #'s I.F.8 and 9) badly misjudged in the County Economic Report. In any case, this is a "no net benefit mine" (see my DEIR Objection 254 #'s4, 2, 14, and 15 and *Keystone* and *Varjabedian*), and those Rise SEC filings identify many more risks and adverse facts to its case than are included in the disputed EIR/DEIR. Id.at #2 and my companion EIR Objection 254 Exhibits B and A. Stated another way, the SEC required those Rise adverse admissions in disclosures to its high-risk speculator/investors on pain of serious, securities laws punishment that would have followed if Rise had only provided the deficient EIR/DEIR risk analysis. So, how can it be that the County should impose on this more harmful and higher-risk EIR/DEIR on its unsuspecting citizens and potential victims (impacted 24/7/365 for 80 years) without alerting us to at least the risks reported in the SEC filings? See my companion EIR Objection 254 Exhibits A and B and accompanying text and DEIR Objection 254 #2.

Because CEQA (e.g., Guideline #15126.6(b)) does not require such a competing alternative to meet all of the project's even legitimate objectives (which especially do not have to accommodate such Rise profit ambitions for this speculative gamble and other disputed EIR "objectives," none of which are disclosed for "common sense" and "good faith reasoned analysis" and other compliance purposes), DEIR admits (at 6-42) that Alternative 2 (eliminating Centennial and expansion of the Brunswick fill pile, for which expansion the EIR/DEIR is woefully deficient, speculative, and noncompliant) is superior and thereby defeats this EIR. **[NOTE THAT THE EIR MISTAKENLY, OR WORSE, BY INSISTING THAT ALL ALTERNATIVES MUST ASSUME THE REMEDIATION OF THE CENTENNIAL SITE, WHICH IS A PER SE ADMISSION THAT THE EIR WOULD HAVE TO CONSIDER THE CENTENNIAL CLEANUP PART OF THE MAIN PROJECT, WHICH WOULD BY ITSELF REQUIRE MASSIVE REVISIONS AND RECIRCULATION OF THE EIR/DEIR. IN ANY EVENT, THE DISPUTED EIR/DEIR CANNOT HAVE THIS BOTH WAYS, I.E., MAKING CENTENNIAL ESSENTIAL FOR SOME PURPOSES AND THEN CLAIMING IT'S NOT FOR OTHER PURPOSES. Moreover, the EIR and staff cannot so misuse that incorrect and improper Centennial assumption obligation as a way of pretending that the mining is less "intense;" i.e., only if every alternative requires Centennial does that "intensity" cancel out that additional flaw in the EIR's comparative intensity calculation.] The staff support for Alternative A fails to provide a correct, sufficient, or convincing analysis for certifying this this noncompliant EIR.**

Furthermore, besides my other objections stated in my EIR Objections 255 and 254 and elsewhere as to "alternatives," also consider the following, applying the CEQA requirements (e.g., #21002/Guideline #'s 15002(a), 15021(a)(2), and 15126(b),(d)) forbidding approval of such a disputed project if, as here, a feasible alternative exists that would meet the project's COMPLIANT objectives and diminish or avoid its environmental impacts. To evaluate what is a compliant alternative, **see, e.g., *Laurel Heights I*, 47 Cal.3d at 404 (requiring a "reasonable range" of alternatives, because courts will not "countenance a result [on alternatives] that would require blind trust by the public, especially in light of CEQA's fundamental goal that the public be fully informed as to the consequences of action by their public officials."); *Citizens for Quality Growth v. City of Mount Shasta* (1988), 198 Cal. App.3d 433, 443-45.** [Note that in order to comply with CEQA the project's "objectives" must be properly and more broadly defined (i) to exclude its extraordinary profit goals that are not such a CEQA project "objective" [such profits are undisclosed, but extrapolated from my profession experience with the returns expected by such speculators on such risky investments, such as DEIR admitting at 6-14 that the whole project is not economically feasible unless it can operate 24/7/365 for 80 years as it has proposed, which I interpret as a comment about the excessive profit expectations of Rise's high risk speculators' expected high reward returns, rather than a normal question of being able to cover operating costs], and (ii) to include what the disputed EIR/DEIR attempts to apply to achieve a self-fulfilling prophecy.] E.g., *Kings County Farm Bureau*, 221 Cal.App.3d at 731; *Citizens for Quality Gro*wth, 198 Cal. App.3d at 443-45.

For example, **despite being prohibited by CEQA, which requires sufficiently broad project objectives to allow the evaluation of alternatives that are meaningly different, this noncompliant EIR eliminated the relevant and better alternatives, like the recent case involving Crystal Geyser reopening a water bottling plant involving wastewater discharge issues. See *We Advocate Through Environmental Review v. County of Siskiyou* (2022), 78 Cal. App. 5th 683, explaining that, because the project objective mirrored the project**

proposal itself, that transformed the EIR's alternative section [the "core of the EIR"] "into an empty formality" and such impermissibly narrow project objective prevented the county for the same reasons for accepting the "no project alternative." See, e.g., the Grass Valley objections in Agency 8 at 41-44 (which exposes many examples of EIR/DEIR noncompliance but suggests some compromises not acceptable to most of us objecting homeowners living above or around the 2585-acre underground mine.)

(ii) The Claim That The EIR Mine Alternative Should Prevail As The Less "Intense" Use Would Be Funny If It Were Not So Sad (And Absurd, Therefore Defying What *Gray* Called "Common Sense").

As to the disputed Alternative choices pronounced by the EIR/DEIR (and incorrectly accepted by the Comm Staff Report) without the CEQA required "good faith reasoned analysis" with "common sense" announced in court precedents like *Gray, Banning, Vineyard, and Costa Mesa discussed in the Objection* above (#I.A and throughout all my four Objections, as explained herein), the Board decisionmakers cannot possibly justify calling the mine less **"intense"** than the other alternatives, such as industrial (e.g., warehouses). See my discussion in the previous subsection above of the EIR mistake (incorrectly tolerated by the staff) to require any non-mining alternative to assume the Centennial clean up obligation, which is irrelevant to such use of the Brunswick surface for such industrial uses. There are no such EIR/DEIR (or Comm Staff Report) analyses that prove that disputed theory that so defies "common sense." Also, the disputed EIR/DEIR and Comm Staff Report never explain why the current Light Industrial zoning (a less "intense" category) should be increased/rezoned to the more "intense" M1-M1 zoning (Light Industrial with Mineral Extraction), if mining were really the less "intense" activity. Consider, for example, property value impacts, not for CEQA disclosure for the present, but rather as a rebuttal to the bogus EIR/DEIR "intensity" claim. See, e.g., my EIR Objection 254 #I.E.10. In other words, when the staff and EIR//DEIR incorrectly evade property value issues as being excluded by CEQA limits to environmental impacts (which I dispute is legally correct), that ignores all the other ways that property value evidence is admissible, such as for debating "intensity" for alternatives."

Ask yourselves, how does a reasonable decisionmaker judge such "intensity" in comparing EIR alternatives objectively? The obvious answer (and the one the courts will apply consistent with our evidence) is to compare the public reactions from the perspective of potential buyers or mortgage lenders evaluating property values of us living on the surface above or around the 2585-acre underground mine. At trial real estate value and market experts can make an irrefutable case that there is no more offensive or intense possible alternative use of this land than this EIR gold mine, as evidenced among other things by the fact that such mine has the worst imaginable impact on our property values and market appeal. See, e.g., Nevada County Association of Realtors Agency Letter 15 (which the disputed County Economic Study mistakenly treated as realtors allegedly misperceiving the EIR environmental risks and errors on the merits, when the realtors were also expressing the indisputable reality that buyers and lenders would be unlikely to pay top dollar or anything when there were all the risks, meritorious or not, projected in the hundreds of locals objections to the EIR/DEIR); my Exhibit A rebuttal in my EIR Objection 254 to the County Economic Report. Indeed, because of all the unknowns and disputed data in the EIR and its lack of credibility demonstrated by all the many objections to the

DEIR/EIR, including my four Objections, all buyers and lenders will be confounded (just like us surface property owners living above and around the 2585-acre underground EIR mine) by trying to evaluate the risks no local homeowners (or buyers) should be forced by their government to take, especially where (as discussed herein) there has been such EIR/DEIR noncompliance with the CEQA and other legally required investigation and disclosure rules, as explained in such impacted community objections. Also, compare the many high risks that Rise admitted in its SEC filings (see my EIR Objection 254 Exhibits B and A and my DEIR Objection #2, as well as *Richmond v. Chevron*, where such SEC admissions defeated that eir, disproving the EIR/DEIR's bogus claim [incorrectly adopted by the staff and the Comm Staff Report] that somehow such rebuttals by such SEC filing admissions are irrelevant, e.g., in effect, claiming that Rise can scare its speculative investors with legally mandated securities law truths about risks that it does not have to share with the County and public in its EIR/DEIR to comply with CEQA.)

When the disputed EIR must be revised and recirculated, whether as required by the County or the courts, law reforms, or political changes, the County should eliminate (not certify) the often protested DEIR/EIR claim that other industrial alternatives are too "INTENSE," since "common sense" and any "good faith reasoned analysis" (e.g., *Gray, Banning, Vineyards, and Costa Mesa*) must consider this EIR mining the most intense possible alternative, especially since it operates 24/7/365 for 80 years with continuing opposition from almost all of its neighbors, especially those thousands of us living on the surface above or around the 2585-acre underground mine whose misery intensity impacts are proven, among other things, by the extent of our objections in this record and the EIR mine's depression of property values merely by its stigmas even before the physical impacts begin. See such Exhibit A and B, my DEIR Objection 254 #2, and the Nevada County Association of Realtors Group Letter #15. In any event, there is no EIR/DEIR good faith reasoned analysis of why industrial alternatives (e.g., the warehouse proposal) are more "intense," and that unsubstantiated and speculative EIR/DEIR claim about "intensity" defies "common sense" under the *Gray* standard. See, e.g., *Laurel Heights I*, 47 Cal.3d at 404 (requiring a "reasonable range" of alternatives, because courts will not "countenance a result [on alternatives] that would require blind trust by the public, especially in light of CEQA's fundamental goal that the public be fully informed as to the consequences of action by their public officials."); *Citizens for Quality Growth v. City of Mount Shasta* (1988), 198 Cal. App.3d 433, 443-45.

c. The County Should Never "Lock In" The EIR/DEIR Mistakes And Worse By The Development Agreement Prohibiting Law Reforms For Up To 40 Years To Avoid "Disrupting" The EIR Mining, For All The Reasons The County Should Also Avoid Certifying The EIR Plus Many More.

The Comm Staff Report at 51-53 would use the Development Agreement to lock in a for 20 years (with two 10-year extension options) allowing the mining to proceed "consistent with the …General Plan … [and other laws] without disruption caused by material future changes in County planning and development policies and requirements over the [80 year?] life of the Idaho Maryland Mine Quarry Use Permit." Stated another way, the disputed Development Agreement would purport to "lock in" the disputed EIR

for up to 40 years, without any chance for reforms by the County (and by any other government?) when it realizes our many objections were correct. The Comm Staff Report reveals its inappropriate pro-mine partisanship by trying to "spin" that self-defense correction opportunity for us mine victims as a "disruption." How can any responsible government perceive a public benefit in forbidding cures of mistakes in allowing such a disputed miner to so dangerously operate to the harm of us thousand objectors living above or around the 2585-acre underground mine? As further explained in my companion EIR Objection 254 and other objections (e.g. my DEIR Objection 254 #4) and my EIR Objections 254 and 255 disputing the EIR "Master Responses" and "Responses" thereto, if the EIR is certified and mining begins now or in the future and when the community begins to understand the miseries and risks that the EIR mining would impose on them, there will be law reform efforts to mitigate such harms and risks. This Development Agreement is a guarantee of endless litigation by the miner and counters, then by officials who appreciate the merits of these hundreds of objections to the EIR/DEIR. No one should want that, but what else can us local victims do to salvage what we can in this horrendous situation? In any event, the Development Agreement and other related documentation revealed in the County Staff Report must be substantially redone to make it consistent with applicable law and less harmful to our community.

d. The Noncompliant EIR/DEIR Improperly Defers To The Future Impacts And Mitigations That Need To Be Disputed Before The County Approves The EIR.

The Comm Staff Report aids and abets the noncompliant approach by the disputed EIR/DEIR in deferring to the future the required analysis of impacts and mitigations, after approval/certification of the EIR, thereby defeating the whole purpose of CEQA with such an open and notorious violation to which I and many others have objected based on our correct interpretations of CEQA and other laws as confirmed by the applicable court precedents. See #I.C above and my companion EIR Objection 254 #'s I.C and D (discussing the applicable CEQA and Guideline rules prohibiting such deferrals and CEQA evasions, plus some cases like *Richmond v. Chevron)* and I.E1-4 (illustrating those correct rules against deferrals, especially in I.E3 and 4.) Sadly, the County Staff Report follows that same disputed deferral pattern, especially as to deferring analysis of impacts in order to further defer analysis of mitigations which involve future regulatory actions.

Most of the EIR/DEIR mitigation claims violate the prohibition in Guidelines #15126.4(a)(1)(B), which prohibits "formulation of mitigation measures" until some "future time." See *Richmond v. Chevron* and my Objections discussing the proper interpretation of CEQA and its Guidelines. The disputed County Staff Report not only supports the EIR/DEIR deferral mistakes and noncompliance, but it seems to add to them with the deferral until after EIR certification of various EIR follow up disclosures and mitigations and relate governmental actions. The only circumstances where CEQA allows specific mitigation details to be developed after project approval is when it is impractical or infeasible to include such details in the EIR and only if the lead agency commits itself to the mitigation, adopts "specific performance standards that must be achieved, and identifies potential actions that can feasibly achieve compliance with that standard. Id. As the courts have confirmed that lead agency cannot simply require the project applicant to obtain a

report and then comply with any of its recommendations. E.g., League to Save Lake Tahoe Mountain Area Preservation Foundation v. County of Placer (2022), 75 Cal. App. 5th 63; *Endangered Habitats League, Inc. v. County of Orange* (2005), 131 Cal.App.4th 777, 793. Also, the deferral is only permissible where mitigation is known to be feasible and the agency commits itself to measures that will satisfy specific performance criteria stated at the time of project approval. E.g., *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, 94 (a list of potential methods of mitigation for later selection without "specific and mandatory performance standards" are improper.) Accord *Endangered Habitats League, Inc. v. County of Orange Habitats* (2005), 131 Cal. App. 4th 777, 794 (requiring a report without "specific and mandatory performance standards" is improper deferral); *Defend the Bay v. City of Irvine* (2004), 119 Cal. App.4th 1261, 1275 (requiring biological report and compliance with any recommendations is an impermissible mitigation). None of the EIR mitigations are feasible as proven in my Objections and others, including by using Rise SEC admissions and DEIR/DEIR admissions (e.g., DEIR at 6-14 admitting that the whole project would not be feasible unless it can operate as it proposes 24/7/365 for 80 years, which every objection is determined to oppose for good cause.) See *Richmond v. Chevron*, both prohibiting such deferrals and allowing such SEC filing admissions to defeat that EIR.

My four Objections cite many of those improperly deferred mitigation measures, which the County Staff Report not only tolerates but applies itself as to what it defers. For example, my DEIR Objection 254 #2, 3.E, 8, and 9, as well as EIR Objection 254 rebuttal to EIR Response Ind. 254-12, fail under that standard to mitigate feasibly and effectively the breaking of our two lane road by 100 daily heavy trucks use 24/7/365 for 80 years where there will be constant repairs to our main roads (e.g., limiting traffic usage to one lane and with illusory aspirations for a mutual agreement with the County for reimbursement of the mine's share of expenses). See, e.g., Guidelines #15126.4(a) requiring that the EIR must identify and describe good faith, "feasible" mitigation measures that must be legally enforceable and at least partially effective to be deemed feasible. E.g., *Sierra Club* at 6 Cal.5th 524-525. Also, the project can fail to meet that standard when the project requires approvals from other agencies outside of the lead agency's control. E.g., *City of Maywood v. LA Unified School Dist.* (2012), 208 Cal. App. 4th 362, 371-72, 376-395. See generally *We Advocate Through Environmental Review v. City of Mount Shasta* (2022), 76 Cal.App.5th 629, explaining what was required from a "responsible agency," an issue disregarded in the EIR/DEIR and insufficiently addressed in the County Staff Report. If the County tries to certify the EIR among my and others' continuing objections will be the lack of required findings by the "responsible agencies," which must do so in order to issue their own permits. What the EIR (and Report) improperly attempt here is to defer such approvals and findings by other responsible agencies who may (and should) disagree with the EIR. That deferral tactic is intolerable, especially when combined with all the other improper tactics in the EIR process, as demonstrated in my EIR Objection 254 at I.A.1.d and I.F.5 and 6, and DEIR Objection 254 #3.E.

For example, as the ***Richmond v. Chevron*** court (like the trial court) found:
"Formulation of mitigation measures should not be deferred until some future time. (Guidelines #15126.4(a)(1)(B).) An EIR is inadequate if '[t]he success or failure of mitigation efforts … may largely depend upon management plans that have not yet been formulated and have not been subject to analysis and review within the EIR.' (*San Joaquin*

Raptor, supra, 149 Cal. App.4th at 670.)" (emphasis added) **The court also objected to such future studies even subject to administrative approval as "analogous to the sort of post hoc rationalization of agency actions that has been repeatedly condemned in decisions construing CEQA" citing many cases including *Sundstrom v. County of Mendocino* (1988), 202 Cal. App. 3d 296, 307 (all incorporated herein and rejected or distinguished the various city arguments and cites. The court added: "In our opinion, the novelty of greenhouse gas mitigation measures is one of the most important reasons 'that mitigation measures timely be set forth, that environmental information be complete, and that environmental decisions be made in an accountable forum," with citations including *Oro Fino Mining Corp. v. County of El Dorado* (1990), 225 Cal. App. 3d 872, 885. (emphasis added)**

While the EIR/DEIR ignores, misinterprets, or misapplies Guidelines to suit its evasion tactics, apparently without objection by the County Staff Report, the "2018 Guideline Amendment Explanation" (see its role in the preceding Objection and in my companion EIR Objection 254 #I.C and D.) adds helpful support for my rebuttals, such as against EIR **Master Response D.15 at 89-91, by Guidelines insisting on the feasibility of mitigation even If deferred.** After discussing the court decisions limiting deferral of mitigation details, that 2018 Guideline Amendments Explanation commentary [what I quoted before requiring that the agency commits and adopts specifics and identifies] explains the ***Rialto*** decision and the updated Guidelines: "In sum, 'it is sufficient to articulated specific performance criteria and make further [project] approvals on finding a way to meet them.' [citation] **Essentially the rule prohibiting deferred mitigation prohibits loose or open-ended performance criteria. Deferred mitigation measures must ensure that the applicant will be required to find some way to reduce impacts to less than significant levels. If the measures are loose or open-ended, such that they afford the application a means of avoiding mitigation during project implementation, it would be unreasonable to conclude that implementing the measures will reduce impacts to less than significant levels." (emphasis added)**

Furthermore, that Explanations' section further explains that **(1) "the agency [must] commit to implementing the measure," [which is "essential to support a finding that project impacts have, if fact, been mitigated," (2) the agency [must] identify performance standards" consistent with the rigorous requirements of the court decisions I have specified, without which there can be no "substantial evidence that impacts will in fact be reduced to less than significant level," and (3) "the measures must be feasible," which requires in turn that there must be identification of the types of measures that could achieve the standard," citing to follow the rulings in *Communities for a Better Environment v. City of Richmond* (2010), 184 Cal. App. 4th 70, rejecting a general "net zero standard" for eliminating greenhouse gas emissions because "there was no discussion of what measures could feasibly attain that net-zero standard." (emphasis added) How does the County expect to justify backing a certified EIR under these circumstances?**

4. **The County Staff Report Errors By Incorrectly Accepting The Disputed EIR/DIER's Incorrect, Deficient, Evasive, And Noncompliant Claims And Alternate Reality Assertions As A Basis For Concluding That the EIR Could Ever Be Consistent with the General Plan, Zoning And Rezoning Requirements, And Other Applicable Laws And Regulations Addressed in That Report, Especially Without Adequate Consideration of the Massive Contrary Objections.**

The disputed County Staff Report (at 70-112) attempts to reconcile the disputed EIR/DEIR with the County General Plan, applicable zoning and rezoning requirements, the Use Permit, and other proposed governmental actions. Each of those is disputed to the extent they are interpreted to permit the EIR/DEIR or what it contemplates or requests. There is no indication that the staff considered my or many other objections that are applicable to such governmental rules, permits, entitlements, or actions, even those of other governmental authorities incorporated in my Table of Incorporated by Reference Objections in my EIR Objection 254. That is especially important because the disputed and incorrect EIR/DEIR and staff excuses (e.g., CEQA environmental limits) for excluding certain objections (e.g., economic infeasiblity and Rise admissions in SEC filings) do not apply to such zoning, rezoning, permit etc. issues. In any case, there is no adequate record or evidence for any such disputed governmental accommodations recommended by the staff for the EIR process since those impositions against the objecting public have not been justified. As noted earlier in this Exhibit at #2, the staff cannot fix the errors, omissions, and noncompliance by the EIR/DEIR or the mine. See generally *Richmond v. Chevron;* **Santiago Water Dist. v. County of Orange (1981), 40 Cal.4th at 443**; **Save Our Peninsula, supra, 87 Cal. App. 4th at 124.**

5. **Some Illustrative EIR/DEIR Errors, Omissions, Evasions, And Noncompliance that Are Common Throughout the EIR, the DEIR, and the Comm Staff Report.**

    a. **The County Staff Report Repeatedly Overlooks Various EIR/DEIR Disputed And Noncompliant Patterns And Practices That Commonly Occur Throughout the Disputed EIR/DEIR.**

This EIR (and therefore any support from the County Staff Report) dispute is not the usual, fact-based battle of experts over approving a new project with many current and known facts as to which the disputes are often not so much with the facts and realities themselves, but rather often about how the law reacts to those facts and realities, i.e., whether an impact is "significant" or not, whether the mitigation is adequate or feasible, and whether the EIR has complied with CEQA and its Guidelines, BUT CONSISTENT WITH APPLICABLE LAW (e.g., the law of evidence empowering objectors to rebut and impeach an EIR, including by applicant and EIR admissions and internal EIR inconsistencies.) To be fair the County Staff Report had no opportunity to consider my and others' EIR objections, but the DEIR objections correctly exposed the same errors, omissions, evasions, and noncompliance without appropriate responses in the County Staff Report. Nevertheless, in this case of reopening a mine closed and flooded since 1956 and integrating the incontrovertibly toxic Centennial site into the project (while incorrectly denying that it is a part of the CEQA project-see below), there has been insufficient investigation and current, reliable, and meritorious "good faith reasoned analysis" with "common sense" (see *Gray, Banning, Vineyard, and Costa Mesa)* to create any common foundation of facts. Even worse, the EIR/DEIR continuously misjudged (and the County Staff Report incorrectly accepted) what impacts were "significant" (if it even acknowledged them at all) and what mitigations were feasible and sufficient, incorrectly applying a self-serving interpretation standard that grossly understated the "significance"

of most impacts and grossly exaggerated (or worse) the feasibility and sufficiency of mitigations. See, e.g., Sierra Club v. County of Fresno (2018), 6 Cal.5th 502, and Guideline 15126.4(a). The County Staff Report often fails to correct such EIR/DEIR noncompliance and compounds the problems.

Indeed, because of the massive, "fact/science-based reality" information gaps in the disputed EIR/DEIR, which the Comm Staff Report also misperceives or chooses to overlook too often in ignoring the meritorious objections, we are not only disputing over what is tolerable under generally accepted facts for government "findings" to impose on the thousands of us objectors living above or around the 2585-acre underground EIR mine by a disputed certification of the EIR. Rather, these are also disputes over what the applicable laws require under these circumstances, and what are the relevant facts and circumstances in many profound ways. This now too often seems a dispute between (i) what objectors know and believe to be reality (and in many cases what their own witness testimony will be in any court process that may be required), versus (ii) the "alternative reality" created by the DEIR/DEIR and supported or tolerated in too many cases by the County Staff Report. Again, as explained in my and others' objections, facts and truth still matter. So too do the risks that remain under these circumstances (even if the EIR/DEIR or staff were correct about something in dispute), when such an EIR applicant (especially one with such credibility problems from its SEC admitted financial infeasibility, and DEIR's admission at 6-14 about the projects infeasibility if it does not get its way) pronounces things in its noncompliant EIR/DEIR without the required "good faith reasoned analysis" with "common sense" (Id.) and fails to use a proper legal standard for what is significant, relevant, admissible evidence, and adequate. Stated another way, so far, the disputed EIR/DEIR has not been held accountable by the County staff process for its many demonstrated errors, omissions, evasions, and other noncompliance with CEQA and other applicable laws, such as evidenced by the lack of "good faith reasoned analysis" with "common sense" (Id.) proven by my lengthy Objections and those of others. See my Table of Incorporated by Reference Objections attached to my companion EIR Objection 254 and incorporated herein.

It is regrettable that, while the disputed Comm Staff Report added some data missing in the EIR (e.g., about regulatory and other agency approvals and permits that will be required and related issues overlooked by the DEIR/DEIR, which to I object as the Comm Staff Report so incorrectly trying to repair the EIR/DEIR), that Report also fails to provide the "good faith reasoned analysis" and "common sense" needed, but lacking, as a foundation for any such claim by the EIR/DEIR or advanced by the Comm Staff Report. The law is clear that this "last minute" County Staff Report cannot cure anything in the noncompliant EIR/DEIR. See 1.B above authorities. See section 2 above. After a considerable review of the flaws in the EIR process and admissions and rebuttals not addressed in the EIR, the *Richmond v. Chevron* court said: **"'[T]he ultimate decision of whether to approve a project, be that decision right or wrong, is a nullity if based upon an EIR that does not provide the decision-makers, and the public, with the information about the project that is required by CEQA.' (Santiago Water Dist. v. County of Orange (1981), 40 Cal.4th at 443**…["That a party's briefs to the court may explain or supplement matters that are obscure or incomplete in the EIR … is irrelevant, because the public and decision makers did not have the briefs available at the time the project was reviewed and approved."]) (emphasis added) **The court also rejected the late "battle of experts" as "too little and certainly too late, to**

satisfy CEQA's requirements. (See Save Our Peninsula, supra, 87 Cal. App. 4th at 124 [information about baseline "occurred at the very end of the environmental review process, thus avoiding public scrutiny and precluding meaningful comparison of preproject and postproject conditions required by CEQA'].)" (emphasis added)

Moreover, just as the EIR/DEIR can be defeated by its many internal inconsistencies, the County Staff Report also cannot cure that problem. See section 2 above. For example, in ***Communities for a Better Environment v. City of Richmond (2010), 184 Cal.App.4th 70, 82-90 ("Richmond v. Chevron"),*** there was a critical dispute over the issue of whether the project includes any equipment changes that would facilitate the future processing of heavier crudes [oil] at the refinery. The court stated that "there was conflicting information developed during the EIR process [**including SEC filing admissions**] that cast serious doubt on these assertions [by Chevron's EIR "in conclusory terms that the proposed Project will not result in an increased capacity to process lower quality, heavier crude, and that Chevron seeks only the ability to refine crude with higher sulfur content." The appellate court agreed with the trial court that "the EIR is inadequate as a matter of law because it does not adequately address the issue of whether there are any equipment changes that would facilitate the future processing of heavier crudes…" **The key to that was the court's discussion of conflicting or contrary admissions "in Chevron's SEC form 10K," and (as here with Rise SEC filings addressed in my Exhibit B to my EIR Objection 254) the EIR applicant told its investors a different story in the SEC filings than it told the public and County in its EIR. And such admissions then led to more from questioning at a public meeting. As the court noted from such impeachment data: "'By giving such conflicting signals to decision makers and the public about the nature and scope of the activity being proposed, the Project description was fundamentally inadequate and misleading.' (*San Joaquin Raptor Rescue Center v. County of Merced* (2007), 149 Cal.App.3d 663, 655-656 …)" The court then stated (what also applies here): "Far from being an informative document, the EIR's conclusions call for blind faith in vague subjective characterizations. (*See Berkeley Keep Jets Over the Bay Com. V. Board of Port Cmrs.* (2001) 91 Cal. App. 4th 1344, 1371… ["[t]he conclusory and evasive nature of the response to comments is pervasive, with the EIR failing to support its many conclusory statements by scientific or objective data"); *San Joaquin Raptor,* supra, 149 Cal. App. 4th at 659 ["decision makers and general public should not be forced to … ferret out the fundamental baseline assumptions that are being used for purposes of the environmental analysis"].)**

As to the issue of EIR/DEIR inconsistency, one example irrefutable example addressed in more detail in the above/attached Objection and my companion EIR Objection 254 (e.g., I.E.7 and I.F.1) concerns the fact that the disputed EIR/DEIR's objectionable toxic (e.g., asbestos) fugitive dust mitigation proposal is by frequent daily watering 24/7/365, but, anticipating that NID will ration water during the frequent and progressively worsening droughts, the EIR assures everyone that it will bear its pro rata share of the rationing cut backs. However, the NSAQMD air pollution regulator insists that there can be no reduction in that watering to save us locals from that asbestos etc. fugitive dust menace, as it explains in its Agency Letter 12 (at 12). As my Objections note, this highly "significant" "pick your poison" impact choice is not subject to any "good faith reasoned analysis" with "common sense." Do we watch and suffer with even more unfair water rationing (contrary to the EIR's infeasible or worse "assurances") while our water is massively so wasted by the EIR mining, or do we breathe toxic mine air, because they

created a hazard wherein they cannot suppress their toxic dust as required by NSAQMD and applicable law? See *Varjabedian,* discussing legal remedies of homeowner downwind from the new sewer plant, and my DEIR Objection 254 #3.N, 4, and 14 and followed up in my EIR Objection 254 I.E and F.

That is just one of many such EIR/DEIR evaded "significant" impacts without required mitigation that the EIR/DEIR (and County Staff Report) fail to address at all, much less in a complaint manner. See my main attached Objection, my DEIR Objection 255, and my EIR Objection 254 #I.C and D. See also discussions of other inconsistencies with the County's General Plan and other applicable laws, such explained in key "responsible agency" and other governmental units and agencies in their Table of Incorporated by Reference Objections, such as from the California Dept. of Parks And Recreation (Agency 1), Grass Valley (Agency 8), NID (Agency 10), and NSAQMD (Agency 12 and 11), among many others cited throughout my four Objections. See, e.g., *We Advocate Through Environmental Review v. City of Mount Shasta* (2022), 76 Cal. App.5th 629. Also see the next subsection discussing the "inconsistencies" that should doom the incorrect and worse EIR/DEIR economic analysis.

b. The Disputed EIR/DEIR (And When It Supports Or Tolerates Such EIR/DEIR Errors, Omissions, Evasions, And Other Noncompliance, the County Economic Report, Or Now the County Staff Report) Incorrectly Provide Inadequate Economic Justifications Throughout Such Documents.

I have rebutted the County Economic Report above and in my DEIR Objection 255, as well as in my Exhibit A to my EIR Objection 254 (and where that Exhibit is used in that Objection), as well as where I demonstrate the no net benefit from the mine in my DEIR Objection 254 #4 and my rebuttals to the EIR's Master Responses and Responses on that topic. By contrast, remember that DEIR at 6-14 admitted that the whole project was not economically feasible unless it could operate as it proposed 24/7/365 for 80 years, a damning (and, as an admission, incontrovertible) fact the County Staff Report and County Economic Report both ignore. Those objections by me (or incorporated by me from my Table of Incorporated by Reference Objections used in my EIR Objection 254) prove the errors, omissions, evasions, and noncompliance on that topic in the EIR/DEIR and such other County documents that incorrectly accept that false, misleading or noncompliant data. One of the many reasons is that the Rise admissions in its SEC filings (which neither the EIR/DEIR nor the County staff can avoid as determinative evidence) prove that the estimates of gold revenue from the EIR mine are without any reliable basis in fact (e.g., not proven gold reserves) and are subject to material doubts admitted in those SEC filings. See, e.g., my Exhibit B to my companion EIR Objection 254 and my DEIR Objection 254 #2, which *Richmond v. Chevron* (discussed above) confirms and not only admissible evidence on the EIR approval issues, but also as powerful evidence both on the merits, but also (as explained above) as disqualifying the EIR/DEIR for inconsistencies.

c. **The Disputed Project And Environmental Description And Setting Analysis Contain Many Errors, Omissions, Evasions And Other Noncompliance With CEQA, Applicable Law, And Essential Truths**.

By following the disputed EIR/DEIR erroneous and worse project descriptions, the Comm Staff Report fails to comply with the correctly interpreted rules and Guidelines for describing the project and environmental setting, such as are specified in the court precedents and authorities my section I.C.1.c and I.E above, in my prior DEIR Objection 255 defended from the disputed EIR "Responses" below, and in my companion EIR Objections 254, such as, for example, #I.C.2(f), I.E.1, and I.F. For example, the environmental setting must also consider *"long term"* impacts (here from 24/7/365 mining as proposed for 80 years) as described in the "*2018 Guideline Amendments Explanations"* for Guideline #15125 and cited authorities in #I.C.1.c in my companion EIR Objection 254. In contrast, the baseline for judging any impact must be "current" (absent proof of special circumstances that does not exist in the disputed EIR/DEIR or the County Staff Report). For example, the disputed DEIR/EIR purported to address the groundwater recharge issue from 24/7/365 dewatering for 80 years based on the "current" dry years at that DEIR time (after the noncompliant attempt by the DEIR/EIR incorrectly to predict the next 80 years of rainfall from the average between 1967 and 2017 and then incorrectly to assume that groundwater recharge here is sufficiently correlated with such rainfall or surface water, which is never proven by the EIR/DEIR or County Staff Report, which among other things disregards climate change which CEQA and applicable law do not permit the EIR/DEIR to so ignore as "speculative." Id. Part of the chronic EIR/DEIR deficiency is the failure to provide (i) the same kind and detail of information they stated about the wholly owned mine property, about (ii) the thousands of surface homes, wells, and properties above and around the 2585-acre underground mine, which is where some of the worst environmental impacts occur, especially relating to our many groundwater and air pollution objections. See my attached Objection and my companion EIR and DEIR Objections 254, which, like others in my Table of Incorporated by Reference Objections in EIR Objection 254 include unrebutted evidence from witnesses about their own and other local properties (like me) who dispute the EIR/DEIR claims from their personal knowledge in our objections. There is no proper basis for the County Staff Report to ignore that evidence against the false equivalence and other disputed tactics of the noncompliant EIR/DEIR, such as falsely assuming that the situation at Brunswick and Centennial applies to us uphill locals living above or around that 2585-acre underground mine.

For example, as demonstrated in my four Objections (and others) even this County Staff Report's basic Brunswick and Centennial project descriptions are noncompliant and incorrect, among other things, because they follow the disputed EIR/DEIR. Therefore, if the EIR/DEIR's ambiguous project description even includes such areas at all (e.g., we cannot ever tell when the project references are intended to include the 2585-acre underground mine beneath us), it is worse than incorrect. The EIR/DEIR and Report evade the need to document our surface areas above and around the 2585-acre underground mine as normal suburban, not rural, area that is not the same as the described "project." Like the EIR/DEIR "project" description, the County Staff Report is almost entirely focused on the Brunswick (and to a lesser extent, Centennial) property. (e.g., Drive around the Banner Mountain neighborhoods where thousands of us live within

impact zones of the EIR mining and see what we are talking about). Banner Mountain, for example, is not as the Comm Staff Report incorrectly claims (at 12) to be "low- density rural residential developments." Indeed, such EIR/DEIR false equivalence claims (too often adopted by the County Staff Report) cannot possibly prevail in any court legal battle over such false assumptions and deficient analyses about the applicable CEQA impact areas above and around the 2585-acre underground mine. See above Objection section I.C.1c. and I.E, and my companion EIR Objection 254 #I.C.2(f).

Those errors, omissions, and evasions affect many other aspects of other environmental disputes and other rebuttals with the EIR/DEIR, such as the number of existing and future wells in dispute that must be mitigated as required by the similar mining case discussed above of ***Gray v. Madera County.*** Indeed, even the County Economic Report, which also undercounts the wells, admits more wells at risk than the EIR/DEIR and Report. See, e.g., my EIR Objection 254 Exhibit A and the incorporated NID Agency Letter 10. That is just one example of many that arise because the Comm Staff Report seems to have fallen for **the noncompliant EIR/DEIR "bait and switch" tactic** that I frequently dispute in the above objection and my other three Objections. See, e.g., my companion EIR Objection 254 #'s I.A.1.d.(viii) illustrated in I.E.,1-4 and I.F, as well as my DEIR Objection 254 #.#.E. That disputed tactic for this issue is to discuss the impacts by referring generally to the "project," but focusing only or primarily on the parts of the project wholly owned by Rise (by which I correctly include Centennial, which the EIR/DEIR and County Staff Report incorrectly claim is separate from the "project"), but evading the different and significant impacts on the part of the "project" on the surface areas above and around the 2595-acre underground mine owned by thousands of homeowners and others potential victims. The bait and switch involve much discussion and most purported "mitigations" about the wholly owned mine areas as the "project," when many of the worst "significant" impacts needing (but not getting "mitigation") are on us local owners or users on the surface above or around that 2585-acre underground mine. What may be true downhill at Brunswick or Centennial (although it is also disputed) cannot be correctly assumed to apply the same way to us surface owners above and around the 2585-acre underground mine, and nothing in the disputed EIR/DEIR proves that contrary case for alleged equivalence with "good faith reasoned analysis" with "common sense" and substantial evidence.

6. Some Other Illustrations of Errors, Omissions, Evasions, And Other Noncompliance by the Disputed County Staff Report Where It Mistakenly Supports the Disputed EIR/DEIR Regarding Impacts And Mitigations Proposed Or Needed And Not Provided In A Complete, Adequate, Or Compliant Manner.

a. Well Depletion And Water Supply Quality Issues Are Among The Worst Failings By The Disputed EIR/DEIR, And Yet The County Staff Report Fails To Notice Or Apply Our Meritorious Objections.

My four Objections and those many I incorporate all expose many different well and water supply and quality issues. See Table of Incorporated by Reference Objections attached to my EIR Objection 254. Since those topics are so often proven in such objections, I will not repeat them here. Besides the foregoing Objection, see also my EIR Objection 254 #'s I.A.1.d, I.C.2. I.D, I.E.1-5, and I.F.2-9, as well as its rebuttals to EIR Master Responses, such as #'s 1, 7,

13, 14, 15, 16, 17, 29, 32, 33, and 34-38, and my rebuttals in my EIR Objection 254 to EIR Responses to my DEIR Objection 254 #'s 3.D, E, F, M, N, 5, 6, 8, and 11. In addition to those meritorious objections, my Objections brief applicable court cases that will overrule not just major parts of the EIR/DEIR but also the County Staff Report. The mining precedent I discuss of *Gray v. Madera County* (Id.) defeats both the EIR/DEIR and that County Staff Report on numerous common grounds, especially by rejecting the kind of well mitigation proposed by them even for the existing wells they acknowledge. Moreover, the EIR/DEIR and Report must fail when I expose to a court those incorrect/deficient EIR/DEIR and Report limits to such undercounted existing wells, and when I prove the noncompliance as to the uncounted existing wells in unmonitored places and future wells (what the EIR/DEIR calls too "speculative" to require comment, ignoring my facts, property rights law, and witnesses. See, e.g., the CEA Foundation Group Letters 6-9 and 21, the Wells Coalition Group Letter 28/27, the San Juan Ride Taxpayers Association Group Letter and South Yuba River Citizens League Group Letter 25, the Sierra Fund Group Letter 26, the Bear Yuba Land Trust Group Letter 2, and the Wolf Creek Community Alliance Group Letters 29-32, as well as the applicable Agency Letters I have cited from my Table of Incorporations by Reference Objections, such as the California Dept of Parks And Recreation Agency Letter 1.

Again, as described in foregoing Objection and my companion EIR Objection 254 at I.F.8 and 9, this water dispute is not just about CEQA compliance, but about the violation of the property rights of us surface owners above and around the 2585-acre underground mine. See, e.g., *Keystone* (explaining how depletion of groundwater is "subsidence" and violations of our surface rights to lateral and subjacent support); *Varjabedian* (the disproportionate impact on us locals create liability for loss of property value and other damages for inverse condemnation, nuisance, and other claims); and other cited authorities. That EIR/DEIR plan to take the top 10% of our surface owner well water before considering the deficient and disputed mitigation rejected by *Gray* and other law, is wrongful and a "taking" of our property (i.e., our owned groundwater without compensation, leading us to ask the County if it is planning to compensate us for our dewatered groundwater. Id. [Note such deficient and noncompliant mitigation would only be applicable to CEQA, but, even if adequate for CEQA, such mitigation cannot excuse such violations of our surface owner property rights.] One of our property rights is to drill future wells for the groundwater we own, thereby invalidating, among other things, the EIR/DEIR water plan and purported analysis (which already fails the requirements for "good faith reasoned analysis" with "common sense" described in *Gray, Banning, Vineyard, and Costa Mesa*.) As proven above the EIR/DEIR water model is not only wrong but worse (e.g., ignoring climate change and assuming that NID surface water supply analysis applies to this groundwater being dewatered 24/7/365 for 80 years). Consider, for example, that the purported "current" baseline average rainfall between 1967 and 2017 is not NOT CURRENT (e.g., it ignores the dry current years after 2017) and is disputed on various other grounds stated in my and others' incorporated objections.

As to the EIR/DEIR water toxins and massively deficient and misplaced monitoring well systems, I add my hexavalent chromium to the long hazard list that apply as described in my Objections both as to water and air pollution. That issue gets more complicated because the EIR/DEIR plans to frequently water the fugitive surface dust every day 24/7/365, creating both water and air hazards. See NSAQMD Agency Letters 12 and 11, noting in 12 at page 12 that this watering must happen daily to suppress the asbestos and other air pollutants even when NID is rationing our community water supply, which makes a lie of the DEIR/EIR claim that it will

share the rationing burdens with us competing locals, and which proves why it is not speculative that us locals will be relying on new wells for our groundwater in such rationing situations. As others (e.g., the CEA have demonstrated as to mine waste errors, omissions, evasions, and noncompliance, consistent with my such Objections, the Water Board shares concerns about the lack of substantiation for the EIR/DEIR jumping to the Group C classification of the mining waste relying on insufficient drill core and other testing. Besides my cited objections above add my objections in my EIR Objection 254 to EIR Master Responses 8, 9, 11, and 12 (and my objections to EIR Responses above and in the EIR to my DEIR Objection 254 #'s as to mine waste and "engineered fill" (which as explained in my EIR Objection 254 I.A.1.a.(ii)) is just a market rebranding of mine waste of which objections should make everyone suspicious of that Group C assumption. In any case, as my objections explain the idea of the EIR miner selling the suspected toxic mine waste (even when rebranded as "engineered fill") as its disputed solution to disposing of such EIR mine waste is far more "speculative" than any of my objections the EIR dismissed on the bogus excuse. Unlike the gold buyers, those purchasing such mine waste in that market are going to be suspicious more concerned about their risk of liability for such toxins to assume such risks.

b. Air Quality Issues Are Also Among The Major Failings By The Disputed EIR/DEIR, And Yet The County Staff Report Fails To Notice Or Apply Our Meritorious Objections.

My four Objections and those many I incorporate all expose many different air quality issues. See Table of Incorporated by Reference Objections attached to my EIR Objection 254, as well as those discussed in the foregoing Objection (e.g., #'s . Since those topics are so often proven in such objections, I will not repeat them here. Besides the foregoing Objection (e.g., I.C.2), see also my EIR Objection 254 #'s I.A.1.d, I.D, I.E.1 and 7, and I.F, as wells as my objections therein to EIR Master Responses 1, 17, 18, 19, 20, 21, 22, and 29, and my objections therein to EIR's Responses Ind. 254-1 and others addressing my DEIR Objections 254 #'s 3.J and 10. No responsible person who reads the NSAQMD Agency Letters 12 (especially at page 12) and 11 could possibly want to live within the local air impact zone, since where such toxins will blow whenever the EIR miner for any reason stops frequently watering 24/7/365 for 80 years. As noted in my objections above and to EIR Master Response #22, the asbestos menace should be sufficient by itself to defeat the EIR. I am shocked the County Staff Report is not more concerned about such air quality issues, especially when I also pointed out in my objections above and in my companion EIR Objection 254 how the EIR has improperly obscured and evaded the hexavalent chromium menace, which it admits in a noncompliant and obscure way and place by rebranding it as "cemented paste backfill" in its unheralded Appendix R buried at the end of the EIR. See my dispute of that Appendix R and my rebuttal to the wrong and worse EIR Response Ind. 254-1.

c. The EIR/DEIR And County Staff Report (at 63+) Fail Properly To Evaluate, Analyze And Mitigate The Many Impacts of Hazardous Materials (e.g., Not Just Asbestos Etc., But Also The Obscured HEXAVALENT CHROMIUM).

I refer readers to my comments and authorities about unique HEXAVALENT CHROMIUM referenced above at the end of section I.3.a of this Exhibit discussing some of the most serious errors, omissions, and noncompliance. See my Exhibit C to my companion EIR Objection 254 and accompanying text referencing that Exhibit C. The County Staff Report never addressed my CR6+ specific concerns, despite my repeated objections, including at the public hearing and the fact that the EIR tried to add a purported clarification in an obscure place (its disputed, deficient, and noncompliant Response Ind. 254-1 to my DEIR Objection 254) and in the EIR's attached Appendices Q, O, and R even more obscurely at the end of the EIR as unintegrated and unreferenced additions, apparently to attempt to avoid the CEQA requirement described in my Objections that require EIR revisions and recirculation for this "significant new information" (which is still noncompliant, deficient, and wrong.) I addressed that menace at length in my DEIR Objection 254 (e.g., #'s 3.A, B, C, E, G, H, and 7 as to its water impacts and 3.J and 10 as to air pollution impacts, and I rebutted in my companion EIR Objection 254 (e.g., Exhibit C and #'s I.A.1.d and I.F.1) the EIR's obscure Response Ind. 254-1 to my such DEIR objections. Notice that, just as the DEIR wrongly expunged any reference to hexavalent chromium in its section 4.7 on "Hazards And Hazardous Materials," instead just giving it a passing reference in the later discussion of mine shoring techniques (and the EIR does the same and worse), the County Staff Report never mentions that admitted (although obscurely) hexavalent chromium menace in its Hazards And Hazardous Materials discussion (at 63-64). Instead, the County Staff Report (at 64+) imitates the wrongful dodge of the EIR by calling the issue "Cement Paste Backfill" instead of even identifying the hexavalent chromium that killed the town of Hinkley, CA, and many of its citizens as mourned in the movie, *Erin Brockovich,* which is a worthy case study because after all these years that toxic groundwater in Hinkley is still not remediated. See www.hinkleygroundwater.com and my Exhibit C. To be clear, the only toxic problem in the EIR Cement Paste Backfill is hexavalent chromium, so using that misleading "rebranding" label is even worse than calling the suspect or worse mine waste "engineered fill."

As to asbestos and the other toxins that the disputed and noncompliant EIR/DEIR addressed deficiently in their DEIR # 4.7 Hazards And Hazardous Materials and EIR counterpart (and the equally deficient County Staff Report imitated), I refer the readers to my foregoing Objection and to my companion EIR Objection 254 as to its objections to EIR Master Responses 1, 4, 8, 9, 10,11, 12, 13, 15, 17, 18, 19, 20, 21, 22 (asbestos), 35 and 36, as well as my objections to the specific EIR Responses to both my EIR Objections 254 and 255. As discussed in my four Objections from various perspectives, the disputed EIR's mining and related activities also may violate the property rights of us thousands living on the surface above and around the 2585-acre underground mine, creating potential claims discussed in *Varjabedian* (with the *Keystone* mining context as to subsidence that includes depletion of groundwater and lateral and subjacent support rights).

d. Centennial Is A Legal Part of This Disputed EIR/DEIR Project For CEQA Purposes, Regardless of the Incorrect Attempts by the EIR/DEIR and the County Staff Report To Keep Centennial Separate So As To Evade CEQA Analysis.

I refuted in my initial DEIR Objection 254 #'s I.B and 3.A (at 30-33) the DEIR's claim that Centennial was somehow separate from the CEQA "project" at issue. I did further rebuttals to that disputed DEIR separation of Centennial claim in my DEIR Objection 255 at #7. The EIR attempted to oppose my analysis there in its EIR Responses Ind 254-3, -6, and -8, and I disputed those EIR Responses in the corresponding objections in my companion EIR Objection 254, as well as in my #I.B and my objections therein to the EIR's Master Responses 4 and 9. I also disputed above in this Objection the EIR's counters in its Responses Ind. 255-38 to 46 to my such DEIR Objection 255 #7 insisting that Centennial was part of the CEQA project. The County Staff Report just imitates the disputed EIR/DEIR without adding anything that changes such disputes. The courts will resolve that Centennial as part of the CEQA project question de novo as a matter of law without regard to such EIR/DEIR and County Staff Report mistakes. When the courts agree with me and others, the EIR will cease to be approved or certified by that fact alone, since the Centennial impact and mitigation discussion was intended to evade the CEQA requirements and is not compliant as part of this project.

I mention this here because the disputed DEIR admits (at 6-42), without change in the EIR, that Alternative 2 (eliminating Centennial and expansion of the Brunswick fill pile, for which expansion the EIR/DEIR impact and mitigation analyses are woefully deficient, speculative, and noncompliant) is superior and thereby defeats this EIR. **HOWEVER, NOTE THAT THE EIR MISTAKENLY, OR WORSE, INSISTED THAT ALL ALTERNATIVES MUST ASSUME THE REMEDIATION OF THE CENTENNIAL SITE, WHICH IS A PER SE ADMISSION THAT THE EIR WOULD HAVE TO CONSIDER THE CENTENNIAL CLEANUP PART OF THE MAIN PROJECT. THAT WOULD BY ITSELF REQUIRE MASSIVE REVISIONS AND RECIRCULATION OF THE EIR/DEIR. IN ANY EVENT, THE DISPUTED EIR/DEIR CANNOT HAVE THIS BOTH WAYS, I.E., MAKING CENTENNIAL ESSENTIAL FOR SOME PURPOSES AND THEN CLAIMING IT'S NOT FOR OTHER PURPOSES. WHY WOULD ANY NON-MINING ALTERNATIVE EVER BE REQUIRED TO REMEDIATE CENTENNIAL WHEN THE GOVERNMENT TELLS THEM IS NOT PART OF THE PROJECT? THIS IS ANOTHER EXAMPLE OF THE IMPROPER EIR TACTIC I CALL THE "BAIT AND SWITCH." ACCORDING TO THE DISPUTED EIR/DEIR THE "PROJECT" ONLY REQUIRES CENTENNIAL WHEN IT IS IMPROPERLY TRYING TO ELIMINATE COMPETING ALTERNATIVES.**

7. Concluding Comments.

While I could go on with many more examples in my using the disputed, noncompliant, and worse EIR/DEIR to tee up my rebuttal of every place the County Staff Report supports or agrees with the EIR/DEIR, that should not be necessary in view of the comprehensiveness of my four Objections. The foregoing examples in this Exhibit should be a sufficient basis for the County decisionmakers to reject the mine and the EIR (without certification) notwithstanding anything in the County Staff Report in support of agreement with the disputed EIR/DEIR.

I am writing to add my name to the thousands of Nevada Countians who oppose this project.

There are a plethora of valid reasons which I support wholeheartedly.

Also the integrity of the company is totally questionable. After leaving a mess, they want to move on to harm our wonderful quality of life here.

Thank you for caring about our feelings

Please do not approve the Idaho Maryland Mine in Grass Valley

My family (husband, son and grandson) live on 36 acres in District 4 in Grass Valley. We raised our three children in Lake of the Pines and then moved to be closer to Grass Valley and live in a rural setting. We are native Californians and wish to keep our state healthy and viable for generations to come. Please do not approve this mine in Grass Valley. Our concern is for the community as a whole, the lifestyle and environment we live in is unique and should be protected. This mine will not enhance our community and is a risky business which will have a negative impact on the quality of life and property values of the residents and community. I am concerned about the groundwater depletion and the environmental consequences. In addition, I do not believe any mine or company should be operating in this location. Please do not approve this mine. Protect our community and lifestyle. Thank you for the opportunity to voice my concerns.

Dear Nevada County Supervisors and Planning Commissioners,

As a long time resident of Nevada County I have seen many changes, including both welcome and unwelcome development. I understood that there was some greater good in many of these projects, even in the ones I was not happy to see.

Frankly, I can not see any good coming from the proposed Idaho Maryland Mine project. The EIR does not address all impacts created by the clean up of the site, the development of the mine, and the multitude of short and long-term outcomes of this project going forward. Noise and traffic concerns are huge, but even more troubling are the environmental impacts including, of course, water resources. There is no effective mitigation for these issues.

The risk to our community, our environment, and our quality of life are too great.

I urge you not to certify the FEIR and to deny the request to develop the Idaho Maryland Mine for all of the common sense reasons that concerned citizens, business owners, local agencies, and experts have brought to your attention over and over again. It is time to bring this chapter to a close.

Thank you,
Angie Pereira

Dear Nevada County Planning Commission,

This community has a rich history of gold mining and we should celebrate that history. This community should by all means pursue responsible business growth that benefits the community and its future. The proposed gold mine, which would operate in the middle of populated areas of our community, and which if allowed to proceed would reduce the property values, safety, and quality of life for many in this community, is not a responsible business development pursuit for this community or its future.

I live in an area that would be close to proposed surface mine operations. I ask in the interests of not just myself, but for hundreds if not thousands of others in our community who would be similarly negatively affected, who would compensate us for the deleterious effects of this mine on our lives? Who would compensate us for reduced property values and quality of life that would result from noise, vibration, water table issues, worsened air quality from rock crushing and truck traffic activities and associated health consequences, increased traffic, and more? Who has the right to take these items of value from all of us, that are why we have chosen to live in and contribute to this community, in favor of benefiting a far fewer others?

My family has deep roots in this community. The Zellerbachs started in Moore's Flat near Nevada City in the 1850s. One married the daughter of Aaron Baruh, who also was an early Nevada City resident and whose home in Nevada City still stands and bears a historical marker. My family moved to San Francisco and started a paper company that grew quite large. I bring this up because I am speaking not only as a current resident with family roots in this community that go back to the original mining days, but also as someone who understands why businesses that rely on the exploitation of local natural resources should **not** have a place doing so **in the very middle of our community.**

We should pursue and foster business development and opportunities for our community. But these efforts should be looking towards a better future by pursuing opportinities that enhance property values and quality of life for all the residents of our community, rather than reaching backwards to a past industry that will reduce property values and quality of life for many so a few can benefit. We should honor but not repeat the past, and say no to a new mine in the

midst of our vibrant community.

Sincerely,

Scott Zellerbach

I have had the good fortune to visit every state in the continental U.S. Nowhere did I find a more beautiful place than the western Nevada County. The beauty of the land was one of many reasons why I chose to live here. If the Idaho Maryland Mine was to reopen, this treasure would be tragically destroyed.

The Idaho Maryland Mine last operated over 70 years ago, when Grass Valley was a tiny village with a small population. In the ensuing years, a large city has grown up around the old mine site. If approved, this project will disrupt the lives of tens of thousands of residents and business owners who now call this area home.

An operating mine would have so many negative impacts - where do I begin?

Up to 17% loss of property value (permanent).

An unprecedented project (no project of this size has been evaluated).

Lost 5-10% of tourism, loss of 20-40million/year, and lose 200-400 jobs.

The 56-acre Centennial site is the location of hazardous waste left over from past Idaho-Maryland Mine operations. The state's plan to clean this up is in draft form and has not been initiated.

Rookie operator with a shaky track record. In a couple of years, they were bankrupt and facing fines in Canada. The CEO of Rise Gold Corp is currently on trial in a Canadian court on accusations of discharging waste, effluent and other substances into the environment.

Air quality, hazardous waste, - Nevada County already gets an F rating when it comes to air quality and has 2 times the average in lung disease. Reopening the mine will make it worse. Even using today's best technology, fugitive dust from continuous rock crushing, hauling, and compacting risks release of asbestos and silica particles. The huge increase in diesel truck trips amplifies the problem.

Climate change impacts - Mining operations would generate a staggering amount of new greenhouse gas (GHG) emissions. Rise Gold would generate over 9000 metric tons annually from the Grass Valley site, plus another 4000 if you include the cement manufacturing that would be done elsewhere.

Water quality - With the amount of water Rise Gold would be sucking out of the local aquifers, nearby wells will go dry, decimating property values. Rise Gold plans to pump out 3.6 million gallons every day for 6 months and another 1.2 for up to 80 years. Mine dewatering risks depletion of our region's groundwater. It puts the health of wells and creeks at risk.

Quality of Life - Nearby residents will share the roads with large, loud, dusty trucks carrying mine waste, feel the effects of underground blasting, and hear the sounds of rock processing, loading, spreading, and compacting 24 hours a day. Over 75 acres of woodlands will also be replaced with industrial buildings and engineered fill.

Should any Elected Official support reopening the Mine prior to this, efforts to remove them from Office shall be a primary concern.

I urge you to deny this project.

Ellen Howe, Homeowner/local resident for 23 years

Dear Members of the Planning Commission,

I am a concerned resident, property owner, landlord, and small business owner in Grass Valley.

My husband and I bought our first home in Grass Valley in 2020, and we run a small lavender farm business there.

We chose to come to this region because of the unique combination of stunning and well-stewarded nature and kind, competent community members.

I am writing in strong opposition to the proposed Idaho Maryland Mine project.

Drawing on my educational background in Environmental Science and Sustainable Environmental Design (UC Berkeley), I am deeply concerned about the potential environmental impacts of this project. We already have severe water (drought and water quality) and air quality (especially during burn season) issues in this community.

Furthermore, though I recognize the need for good jobs in our region, I believe there are many other paths that would provide jobs without this level of risk. Given the Canadian ownership of the company and the fact that skilled workers would need to be brought in from elsewhere, I'm very skeptical that the gains in terms of job opportunities and economic development would outweigh the negative impacts of the project.

As a property owner and landlord, I am concerned that the proximity of the proposed project to our home will impact the value of our home, our rental income, and potentially the stability of our well.

Thank you for your consideration.

Sincerely,
Lila Frisher

Very effective reasoning and writing!!! Hopefully the supervisors and planning department still read their mail and the Union run it if you send it. Saw Mac's letter in the Union today, bravo to you both! The stakes are high for Grass Valley.

Subject: Better Off or Worse Off with the Mine?

As decision-makers I am asking you to pull back a moment from the mountain of information and disinformation you've received on the proposed re-opening of the Idaho-Maryland mine. I am hopeful you have waded through the weeds and understand the specific planning and environmental issues involved. I am asking you to pause and visualize the mine in full operation: what does that look like? Will you be proud of your decision?

There's no debate about certain facts: there will be negative consequences in water quality and quantity, changes in air quality, in traffic, roadway wear and tear, noise levels and amount of toxic waste. These will go on 24/7 for 80 years.

Mitigation is a trade-off: we'll do 'this' good thing to offset 'that' - a bad thing. The bad thing doesn't go away. Mitigation is a pipe-dream on paper: rarely 100% effective or even doable, too expensive, not guaranteed, rarely inspected, rarely enforced. On top of that, Rise Gold has a spectacularly poor record in the mining industry - one of the most dangerous industries in the world. Why would you trust them? The one thing you can count on with 100% certainty is sooner or later there will be human error. We can only hope no lives will be lost, Grass Valley won't suffer horrendous damage.

Do you really believe the mine will benefit our community? That the meager benefits (dangerous jobs working hundreds of feet underground, more gold mostly stashed away unused in vaults, maybe more money for some stockholders somewhere) outweigh the known risks? It's not just any one impact, mitigated or unmitigated, it's the number of impacts and the accumulated risk factor. This is not an unknown risk, it is a known, documented risk

throughout the history of mining. We're promised new technology will protect us, yet we still have mining accidents, oil spills, tanker leaks, toxic drinking water. The environmental risk is unacceptable. The economic risk of signing on for 80 years with a financially weak and unethical company is unacceptable. Please Vote NO on the FEIR, Vote NO on the Mine. Be a hero for protecting our community, be honored and remembered for doing the right thing.

To whom it May Concern,
I own the property located at 13376 Noel Lane, Grass Valley, CA.
I'm opposed to any mine operation on this location.
I purchased this property for my future retirement and plan on moving to Grass Valley in the near future. Our house is less than one half mine from this location.
Having a mine is not in this City's best interest when it comes to air quality, environment or lifestyle. Has the city not learned from Prior mining operations and the effects from the Empire mine around this area. No matter what some out of town owner with large pockets will tell you, if this goes through and goes belly up the town of Grass Valley will be responsible for years of future cleanup.
Do we not have enough mines across this country waiting to be clean-up up from prior years and in fact more recently? Too many to even count.
I do hope you consider your actions today in this matter and that of the future by not allowing this type of mining operation to move forward.
Oppose this for the betterment of Nevada County and make a stand for the residents that actually own property within your community.
Thank you
Mary and Stan Bennett

Grass Valley, CA 95945-9372
02-May 2023

Nevada County Supervisors and Planning Department
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

We are longtime (decades) residents of Grass Valley and rely on water from our well. The area where we live has been identified as at risk from the proposed re-opening of the Idaho-Maryland Mine, especially de-watering activities which could deplete the groundwater that feeds our well.

We are asking the Supervisors to fairly represent us in District 1, and the Planning Commissioners, by denying the project and also to NOT certify the EIR. The language of the Final EIR claims to provide protection to only the 30 properties on East Bennett Road; however, it denies the need to do any mitigation for the hundreds of well owners including ourselves that reside beyond that limited area but would be negatively affected. If the EIR is not rejected, it is possible that Rise Gold, or a new applicant, could use it to fast track a new mining proposal in the future. The EIR in many ways fails to protect our community from significant and unavoidable impacts that endanger our community's health and quality of life.

Thank you for representing our community with our best interests in mind,

Sincerely,

Larry Rieger

Dear Nevada Country Supervisors and Planning Department:

I am asking you to vote no on the reopening of the Idaho-Maryland Mine, and to not certify the flawed Environmental Impact Report. Do not be swayed by the promise of money in the county's coffers at the expense of its citizens. Instead protect and support your constituency.

While there a many reasons I am opposed to the Mine, my top three are as follows. My first reason is water pollution. Mining is notorious for releasing toxic chemicals and Rise Gold can't 100% ensure this won't happen. My second reason is noise pollution. While this won't be the Empire Mine stamp mill of old clanging every 60 seconds, there will be underground blasting, rocking processing, and constant truck traffic. This will create an enormous racket for the neighbors and will drive away animals and birds. My third reason is the destruction of another 75 acres of woodland to build an industrial complex. No one wants to live next to that and I don't want to see all the light pollution it will create. One of Nevada County's assets is its dark sky.

Please vote no on the mine and do not certify the EIR.

Sincerely,

Andrea L. Duncan

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Alan Barbour at alanbarbour@mac.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Alan Barbour. I live at 16006 Airport Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The home I own and live in is at 16006 Airport Road, Nevada City, 95959. As our elected officials you are responsible for ensuring your actions reflect the community you serve. Reopening the Idaho-Maryland Mine is definitely not in the best interests of the community. Please, vote NO on its reopening and do not certify the Environmental Impact Report which is flawed in so many ways.

Reopening the mine will permanently change the nature of our community. The quality of life here and the health and safety of our citizenry will be negatively impacted. Importantly, the impact to our environment which is poised by all who live here will be felt for generations. Our children, grandchildren and great-grandchild will suffer the consequences.

Nevada County has worked to reduce the amount of energy used. The Rise Mine would use as much energy as 5000 homes, and it would emit greenhouses gases that would increase climate change with all its disastrous results. The proposal for reopening did not fully consider the disposal or market for mine waste. The EIR did not fully assess the impact to the water table, the wells in the vicinity, the emissions and incursions into groundwater through cracks and fissures in the 70-some miles of existing tunnels, the release of toxic airborne chemicals.

Reopening the mine would decrease property values along with property tax revenue. It would likely diminish Nevada County as a tourist destination.

And as if this weren't enough, the integrity of the Rise Mine corporation and its CEO himself are in question. The CEO is on trial in British Columbia for breaching environmental regulations there.

I beg you to say NO to re-opening the mine and certifying the EIR.

Sincerely,

Alan Barbour

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Amy Umpleby. I live at 14118 Beitler Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Please, do not set a dangerous precedent by approving the flawed EIR. The EIR is legally deficient. It fails to adequately disclose and evaluate the mine proposal’s significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine. There WILL be water pollution from this mine. There WILL be unmitigated mine waste. There WILL be long term detrimental effects to our community. Do not approve this EIR, please!

If there is no project (which is our community's overwhelming choice) there is absolutely no need for an EIR that would fast track future mining projects.

Sincerely,

Amy Umpleby

The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a Nevada County resident and own a home at 16006 Airport Road . I strongly urge you to vote NO on re-opening of the Idaho-Maryland Mine. There would be many, many more negative consequences of the mine than there would be benefits to the county. The few jobs and uncertain tax revenues are hardly worth the risk of both short- and long-term detrimental environmental impacts (mine waste, asbestos, incursion into well water, water usage in current drought, hazardous emissions, etc.), quality of life for Grass Valley and Nevada City residents, and misalignment with the Master Plan. Many experts who have reviewed the EIR judge it to be faulty in its consideration of and assessment of environmental impacts. In addition, the CEO of Rise Gold is on trial in Canada for lack of environmental management. This fact alone speaks loud and clear to why his proposal for re-opening the mine here with its

myriad tunnels under home and businesses in Grass Valley should be denied. This is a plea for you to do so.

Sincerely,

Ann Barbour

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is BARBARA DOUGHERTY. I live at 16201 Brewer Rd., Grass Valley, Ca 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Barbara Dougherty and I am a business owner along with my husband, Tom. Our business is Pancro Mirrors Inc. which is located in the Loma Rica manufacturing area impacted by the activities of the Idaho-Maryland Mine. We own the building where our business resides. We oppose the reopening for many legitimate reasons that include safeguarding our water and the air we breath, reducing noise pollution, preventing road traffic and wear and tear, safeguarding our home and business values. We don't like the idea of tunneling under our community. We agree with many that this reactivation adversely impacts the environment and offers no real economic benefit to our community. We are concerned for our community's health and well-being, and compel the board and planning

commissioners to vote down this venture. The future of our community for years to come (eight years!) is now in your hands. We, the residents of GV do not get to vote on this. It is you that has the power to say "no" capital profiteers and "yes" to the residents of Grass Valley. We look to you to do the right thing for us all.

Respectfully submitted,

Sincerely,

BARBARA DOUGHERTY

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Barry Bailey. I live at 11911 Shelton ct, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, we recently moved to district 4 . 1/4 mile down Mccourtney from the fair grounds. After researching the company looking to restart the mine I’m at a loss to why anyone would want to turn a project with this much risk to a failed business. Their track record is horrendous. With a risk to our water tables, environmental damage, and decreased property values I see no reason an intelligent person would think this this is a good idea!
Make the right choice!!!

Sincerely,

Barry Bailey

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Bethany Celio at gocelio@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Bethany Celio. I live at 553 North Pine St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 and my parents live in District 3, and we are all adamantly against the mine reopening. I’m saying this as someone who has family history in the mining industry in Nevada City and Grass Valley. We need to be looking to the future, to what solutions will create a sustainable, livable environment for all of us. Our present economy and future success here in Nevada County will be found in fostering vibrant local businesses, tourism, regenerative farming, and environmental stewardship. Let’s not take a huge step backward.

Let’s look at what we want to be as a culture, and use policies and direction to encourage THAT vision. We don’t need to make decisions based on fear of scarcity. There are and will be enough jobs and prosperity in Nevada County without this

mine.

Sincerely,

Sincerely,

Bethany Celio

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Bradley Carson. I live at 15143 Rattlesnake Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Please do not approve the reopening of the Idaho Maryland Mine. The impact on our roads and neighborhoods by many heavy equipment vehicles will be severe. Mining jobs are usually far more numerous during construction of the operation then drop dramatically during normal operation.
If you feel you must approve the mine PLEASE give them a 5 year lease to readdress public and environmental impact.
Thank you.

Sincerely,

Bradley Carson

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Brenda Sapp at gloryawaken2love@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Brenda Sapp. I live at 12406 Gayle Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 on lower banner mountain. I have lived here since the late 1990s and moved here because of the community and the nature/beauty and quiet neighborhoods. I am a retired high school teacher. My home is located near Loma Rica ranch and I now have a view of Brunswick and Idaho Maryland Road. So this potential mine proposal has me concerned on many levels.

I am writing you now to ask that you please vote no to certifying the EIR. Several deficiencies in the EIR are as follows from the research I have read:

1) Greenhouse Gas Emission Impacts dismissed in FEIR - The only correct threshold given current climate studies, CA SB-32, and today’s state goals – is net zero. The

Mine's sizable energy footprint would be a serious setback.

2) Mine Waste Management Inadequacies Risk Water Quality - The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported and more testing needed.

3) Mine Waste Management Inadequacies Put Air Quality at Risk - The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

4) Well Owners Shafted in the Final EIR - The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed.

5) FEIR Fails to Assess Impacts of Centennial Site - The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

6) There is No Viable Plan for Disposing of Mine Waste - The FEIR does not provide adequate information regarding the viability of the plan to dispose of mine waste through off-site sales and does not have provisions for adequate on-site temporary storage or permanent disposal of mine waste, leading to potentially significant impacts.

Certifying the EIR would only lend credence to a document that fails to adequately disclose and evaluate significant environmental impacts and violates numerous requirements of state law. Worse still, the certified EIR could be relied on in the future to fast-track the approval of another mining proposal.

The arguments for not certifying the EIR are overwhelming. The EIR is legally deficient. It fails to adequately disclose and evaluate the mine proposal's significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine.

If there is no project, there is absolutely no need for an EIR. Again, I am please asking that you vote no to certifying the EIR. Thank you for your consideration!

Sincerely,

Brenda Sapp

Dear Nevada County Supervisors and Planning Commissioners,

My name is Carol Levow. I live at 317 Washington St., Grass Valley, CA 95954.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live near downtown Grass Valley and I have taken a tour of the proposed Mine site with the General Manager. I believe I have a very good understanding of Rise Gold's plans and mitigations for noise, etc. Knowing all this, I still vehemently object to reopening the Mine at Idaho Maryland. Just the noise and air pollution from the trucks required is enough to stop it. This is NOT the type of business we want to welcome in our rural and beautiful area. The EIR must NOT BE ACCEPTED; it is time to close the door finally on any talk of reopening the mine.
Thank you

Sincerely,

Carol Levow

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Cherylann Castanieto. I live at 17490 Lazy Dog Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I are in district 5 and have lived in Nevada county for over 40 years. We are appalled by the fact that the Nevada County Supervisors and the Planning Commissioners are considering approving this plan. This reopening will affect our air, our water, our climate, our roads, our businesses, our homeowners, our wildlife, our tourism and our way of life here in the Sierra foothills. After reading about Rise Gold's and Ben Mossman's bankruptcy and environmental debacle, there is a total lack of ethics and consciousness exhibited by both. It will take years, if ever for those towns to recover from damages that Rise Gold did. I do not want to see that happen here in our town. Actions my dear supervisors and not words speak louder than any promise of financial gain.

It is my opinion that the county officials should deny the Idaho Maryland Mine and should not certify the final EIR. This document does not adequately address some crucial environmental/community issues and also violates some of the CA state laws. IF we certify the EIR it becomes a precedent for future mining proposals and that is a vulnerable and precarious place to be for our beautiful county.

Sincerely,

Cherylann Castanieto

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Darryl Snow at darryl_snow@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Darryl Snow. I live at 14278 La Noria Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, my name is Darryl Snow and I live in District 3 about a mile from the mine entrance but my home is located over parts of the mine. I’m an environmental geologist. I’m also a Registered Environmental Property Assessor and I’m on the National Registry of Environmental Professionals. I have over 30 years of experience in consulting including overseeing environmental due diligence for commercial real estate acquisitions ranging in costs from a million to a billion dollars. I moved here almost 7 years ago after I had done my due diligence for this area. I never saw any indication that the this mine might re-open, but now we’re all facing this possible disaster. And what’s in it for us, the residents of Nevada County? Will we get a stipend from Rise Gold? No. Will those of us outside of Bennett Road get NID service to our homes when our wells go dry or become polluted? No. Will our tranquil

neighborhoods be enhanced by the increased trucks, noise, pollution and visual impacts of the mine? No.

Will our property values increase due to the mine? A recent survey of real estate agents projected property value losses of 15% or more if the mine gets approved, which means that property tax revenues would also drop accordingly. The mere stigma of a mine is enough to scare away home buyers as has already been observed and described to me by a seasoned local realtor, and I agree with others that perception is everything in the real estate market!

I mentioned that I oversee environmental due diligence for commercial property acquisitions. I am required to say the following in my due diligence summary before a deal can get approved… “It is my opinion that this project presents low environmental risk”. If I were conducting environmental due diligence for the mine, I would not be able to make that statement based on what I’ve seen and I would advise my client to exit the deal. If things go bad for Rise Gold environmentally, they could just file for bankruptcy or become insolvent to a point where some other party would need to step in, like the EPA which could take over and possibly make the mine a Superfund cleanup site which could take decades to clean up. This is not a new thing around here, the Lava Cap gold mine in Nevada City is now a Superfund Site for arsenic contamination. The Idaho-Maryland mine is not exceptional, it is unprecedented. We have enough problems with these new wildfires and snowstorms, we don’t need the added problems of a major mining operation.

I was hoping to retire in Grass Valley but now that’s up in the air. If the mine gets approved, then the long-term effects, collateral damage, and stigma will remain until a baby born today turns 80 years old. I don’t know how something like this made it this far, but now is the time to stop it. Since we the residents cannot vote on this colossal issue for some reason, then I strongly urge the decision makers to do the responsible thing and vote NO on this mine before it's too late for all of us. Thank you.

Sincerely,

Darryl Snow

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is David Wills. I live at 13550 lower anchor lane, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district one on lower anchor lane about a half mile from the proposed mine site & have lived in this county since 1959. I believe it would be irresponsible to re open the mine as the risks & the impacts out weigh the supposed benefits of the mine re opening. I believe there are 3 types of people that would want this mine re opened. The first would be people who are ignorant of the impacts this mine would have on our community. The second would be rise gold itself not being a local company, and the third would be people who just have an ideological belief that any industry is good regardless of the negative environmental impacts. So please say no to this project

Sincerely,

David Wills

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dawn Morris. I live at 18294 Chaparral Drive, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I reside in Lake Wildwood, District 4. I'm would imagine you've heard every reason for rejecting the request for re-opening the Idaho-Maryland mine. The thought of re-opening a business that is so detrimental to our community is unimaginable. There is no way to measure the mental, financial and health effect the re-opening of the mind would have on the community. Please say no to this disastrous idea. Additionally, please do not certify the EIR. Certification would mean future attempts to open the mine, could possible be pushed through with ease.

Thank you for your consideration.

Sincerely,

Dawn Morris

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Deborah Pinto at mspin13@comcast.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Deborah Pinto. I live at 319 Park Ave, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the historic District 1 close to downtown Nevada City. I have lived here since 1990 and in the Nevada County area since 1979. My children attended schools in both Nevada City district and in the Grass Valley School District where I taught for decades. Having studied the mining systems when there were plans to reopen the mine several years ago, I maintain a firm commitment to the idea that gold mining within the boundaries of a residential community is unsafe and dangerous. No environmental impact report can thoroughly predict the effects of exploring what lies underneath our community. Please DO NOT ALLOW THIS TO HAPPEN!

Sincerely,

Deborah Pinto

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Debra Baker. I live at 15921 Brewer Road, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I moved here over 40 years ago from Southern Ca. I felt that I truly had found my paradise…..and I had. My daughters were born here and subsequently their children as well. In February we were blessed with a great grandson who, God willing, will also be raised in Nevada County. I believe that by reopening the mine the quality of life for the residents residing near the mine and for all of the residents within Nevada county will be degraded. The mine represents heavy machinery traffic, noise, waste debris, rock dust, environmental pollution, and destruction of local habitats. Global Warning is not the only “earth frailty” that should garner our attention. Every Nevada County resident needs to be mindful of the devastation that a large mining operation can and will heap upon our cherished way of life. Those new residents to our county may see job possibilities and only focus on the financial bonus of the mine. History

has shown us the ugly reality that the money will come the money will go but the scarred landscape of Nevada County with remain for generations to come…..I wish more for my Great Grandson and all the generations to follow.

Sincerely,

Debra Baker

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Debra Engebretson. I live at 12920 GOODALL MINE RD, GRASS VALLEY, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live on the back side of Osborn Hill off of Rattlesnake Rd. on Goodall Mine Rd. I'm a second generation Nevada County. Growing up in Cedar Ridge and Peardale area. I've raised my children and grandchildren in this naturally beautiful county, never leaving. My parents taught me to do the best to care for natures plants, animals and humans. I'm 72, seen a lot of change, some good and not so much. We humans have not done a very good job caring for Mother Nature. A lot of mistakes we've made along the way and now we're struggling to correct the damage done to a planet we were to take care of.

I only see Rise Gold and the reopening of Idaho Maryland Mine as Bad for the

environment of the county and all the planet. This would be a mistake that my grandchildren and generations to come will pay the price to clean up. Reject the EIR. This in no way can possibly be good for the environment. We need to correct the damage to the planet not add to it. Please end this vote NO, we don't need this type of business in our beautiful County.
Thank You.

Sincerely,

Debra Engebretson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Denise Martin. I live at 113 Lidster Avenue, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We are BEGGING you not to open the mine!!

Last I checked this country is still a democracy, and there are far more opposed to the mine than in favor, so please please please DO NOT approve this project

Money is a horrible reason to open the mine, because how much will it cost the city to clean up after rise gold leaves?? Probably more than you’ll earn

Again we are begging you not to do this to the citizens of Nevada county!

Sincerely,

Denise Martin

My name is Dianne Range. I live at 17100 Sunset Mountain Place, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I have lived in Grass Valley for 25 years. We moved here because we love the natural pristine rivers and lakes and wildlife that have become so much a part of our lives. It is not just a place to live. It is a place that feeds life into our being as we connect with all the nature that surrounds us. We are very concerned we will lose all that we treasure here if the mine is allowed to operate. It will turn our beautiful County into an unsightly industrial complex.

This doesn"t have to be our legacy. We ask that you not approve this mining project. We want to leave something natural and beautiful for our grandkids to enjoy.

Sincerely,

Dianne Range

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elise Stupi. I live at 13068 Madrona Leaf Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in the Wawona Madrona neighborhood, which is in District 1, for over 6 years. I am a part-time/self-employed resident and work remotely at home. I moved here to enjoy the peace and beauty of the area. I rely on pure, clean well water for all my needs. The Final EIR is inadequate and does NOT consider the significantly detrimental impact on all domestic wells throughout the affected area. Its conclusions regarding air and water quality are unsupported and inaccurate. The 24/7 noise and traffic for 80 years along Brunswick will be intolerable. Our property values will decline, and residents, like me, will be forced to move to escape the constant noise, contaminated well, poor air quality, and traffic congestion. But who would want to buy my home under these circumstances?? No one. This is simply unacceptable on every level. PLEASE DO NOT CERTIFY the final Environmental

Impact Report and PLEASE reject the re-opening of the Idaho-Maryland mine.

Sincerely,

Elise Stupi

Dear Nevada County Supervisors and Planning Commissioners,

My name is Elise Zink. I live at 13365 Twin Star Lane, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a 12 year resident of Nevada County, currently residing in District 2. My husband was born here and it is his love of the area that drew me here. This is where we are raising our family. We oppose this mining project. Our primary concerns is the toll it will take on the water supply for the area. Despite this amazingly wet winter we have had, we still have neighbors who have failing wells. Our groundwater supply is critical and keeping it healthy and abundant is essential to the livelihood of this community. I fail to understand why we would go, essentially, back in time by reopening this mining site. There are more promising, less detrimental ways to bring income into this community. Digging into and poisoning the land we all live on does not seem a very informed decision.
Approving this project is a strike at the health and wellbeing of this community.

Thank you for your work and time on this. We put our health and future into your hands.

Sincerely,

Elise Zink

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Evelyn Silvey. I live at 19197, Lucas Hill Ct., Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have resided in Grass Valley got 8 yrs. I came up here for clean air, water and beauty of the area. A gold mine would be disastrous as trucks, dust, accidents. We are still trying to clean the prior miners toxic waste.
The owner of Rise Gold has a horrible attitude about the environment as he completely ignored his duties in Canada.
No Mine!

Sincerely,

Evelyn Silvey

Dear Nevada County Supervisors and Planning Commissioners,

My name is Florence LeFrancois. I live at 12391 Marys Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I've lived in Nevada County since 1991, first in Cascade Shores, and now in Grass Valley. I've been visiting this area since 1978. I now live in district 3
We love living in this quiet neighborhood and do not want a business that will cause noise and disruption of our community. I'm also concerned about what this could do to our ground water supply and underground systems. Please do not approve reopening the mine.

Sincerely,

Florence LeFrancois

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Fred & Nancy Rojo. I live at 17148 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We live in District 1 and have lived at our address since 2004. Our intention is to live on our 40 acre ranch until we expire unless a natural catastrophe causes us to move, OR the Mine Project is approved. We implore you to to VOTE NO on the mine and NO on certifying the FEIR report. Both NO votes would effectively kill the efforts to continue this fight in future. Our future as a retirement and tourism community depends on not allowing this highly pollutant dirty industry to ever happen again. We are still suffering and paying for the environmental effects of previous mining endeavors.

Sincerely,

Fred & Nancy Rojo

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Fred Zlotnick. I live at 752 Lindley Avenue, Nevada City, CA 95959.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I live in the Seven Hills District of Nevada City. My wife and I moved to Nevada County 11 years ago, first to rural South County where we got out water from a well, and four years ago relocating into town. The idea that you would approve a project that has even a remote chance of dewatering residents' wells is unacceptable. There is no reasonable remediation for such a change; it's a permanent lifestyle alteration.

Large scale Gold Mining in Nevada County ended about 70 years ago, but our landscape still bears the scars from about a century of mining. So does our environment: Rise Gold's own documentation describes high concentration of toxic elements (lead, mercury, arsenic) at the Centennial site. [Ref: https://www.envirostor.dtsc.ca.gov/getfile?filename=/public%2Fdeliverable_documents%2F5155960559%2F5279.04%20Draft%20Final%20RAP%2C%20Centennial%20M-1%20Property_1_25_2021.pdf]

The benefits of reopening this mine will be accrued by Rise Gold and, perhaps, a relative handful of Nevada County residents who can gain employment there. The costs will be borne by all of us. Economists talk about externalities - costs or consequences borne by other parties and not reflected in the pricing of the goods being sold; in this case, gold. This project is rife with externalities borne by everyone who lives in this area, and with the potential for more such externalities that we have not yet envisioned. Reopening of the mine might be a good deal for Rise Gold, but only because they are doing it on our backs. We residents will bear the costs. The reopening of this mine is such a terrible idea that it beggars belief that the project has not yet been killed. Please kill it now.

Sincerely,

Fred Zlotnick

Dear Nevada County Supervisors and Planning Commissioners,

My name is Greg Chapman. I live at 506 Main Street, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada City for over 30-years and have owned a home in the downtown for nearly this entire time (District 1). I am completely opposed to having the County approve Rise Gold's proposed mining operation as the potential problems it may cause are significant and jeopardize the quality and livelihood of our small community. I am a registered voter and vote in every election held in this county. Should the Board of Supervisors approve Rise Gold's plans then I will be joining a large and active group of community members to make sure our next Board of Supervisors represents the interest of this county rather than those of a small company with a bad track record.

Please stand with the vast majority of community members who oppose Rise Gold's

plans.

Respectfully,

Sincerely,

Greg Chapman

Dear Nevada County Supervisors and Planning Commissioners,

My name is Gudrun Zomerland. I live at 12720 Golden Trout Way, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Penn Valley but enjoy the character of Grass Valley, one of culture of various forms and increasing tourism which bring money into the county and therefore improves infrastructure. I believe I have a good understanding of Rise Gold's plans and mitigations for noise, etc. Knowing all this, I still vehemently object to reopening the Mine at Idaho Maryland. The noise and air pollution from the trucks are counter to what I see the future of Nevada County to be like. This is NOT the type of business this area needs. We can do better by enhancing the natural beauty and making that the attraction rather than creating money by subtracting from the bucolic feeling of our surrounding. The EIR must NOT BE ACCEPTED; it is time to close the door finally on any talk of reopening the mine.

Thank you

Sincerely,

Gudrun Zomerland

Dear Nevada County Supervisors and Planning Commissioners,

My name is Howard Kuhlmann. I live at 15895 Greenhorn Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We are a small agritourism business who attract people from all over the world to come visit Grass Valley/ Nevada City. We have people from SF Bay Area, and even as far away as Singapore come here specifically to visit us.
We and oppose the mine as our business will suffer, and our lifestyle that we moved to Nevada County to create, will suffer! We OPPOSE Rise Gold Ben Mossman who has proven to be unreliable and is out for his own financial interests, not for the people of Nevada County. Once he pollutes our lives in too many ways, he will file bankruptcy and walk away. Then WE are all left with the huge financial mess and environment to cleanup.
JUST SAY NO to both the Final EIR, and any considerations of re-opening the mine.

JUST SAY NO! Thank you.

Sincerely,

Howard Kuhlmann

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jack Hinman. I live at 17541 Shoshoni Trail Ct, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I've lived in Nevada County since 1976, owned 3 different homes, all in District 1, and have operated a small tech company along with a couple other businesses while living here. Both of my kids were born and raised here, and I have deep relationships with a handful of young families living here in the community, mainly because they might have a better chance of raising their kids in a decent living situation.

Without rambling on; an operating mine today, and the potential environmental and quality of life impacts that are likely, has no place today in our beautiful community. There are many, many other ways to bring revenue and jobs to the community that don't have the potential downsides. I believe it would be a huge mistake. Thanks for listening.

Sincerely,

Jack Hinman

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jennifer Burt at jenniferwburt@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jennifer Burt. I live at 13921 Loma Rica Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 where I have raised my two kids. The threat of this mine has caused significant distress and sleepness nights to all of us, knowing how much it would degrade the quality of life in this beautiful place if it were to go forward. Worse, we have all watched the County sponsor a terribly prepared, absolutely inadequate EIR which was supposed to objectively analyze the impacts and describe an adequate, enforceable monitoring and mitigation program for such a huge project that has so much potential to destroy our community. Yet, the County and the consultants preparing the EIR have failed to ensure the EIR does any of the above on any level for any topic, it is the worst EIR I've ever seen working in the field of environmental consulting for over 20 years. How can the County planning department then suggest certifying this EIR even if you go on to deny the project?

That is a ridiculous approach, this EIR should absolutely not be certified, certifying it just fast tracks the next poorly-thought-out mining operation to use it as their and ensures this community will continue to be traumatized by the threat of a huge gold mining operation happening underneath our very feet, in our community groundwater supply. Gold is clearly our past, and not a bright shiny past but a gritty, loud, environmentally degrading dystopian past. Gold mining is not our future. We need to address climate change, water reliability in the face of climate instability, wildfire threats -- these are more than enough difficult issues for one community to grapple with, don't add a massive industrial mining operation by a greedy corporation with no interest in our local community to our list of current traumas. If you do approve this EIR or this project, you are simply setting the community up for further anxiety, sidetracking us all from moving forward on much more pressing issues, and you are setting the County up for environmental lawsuits (if the EIR approved) and an unmitigated environmental disaster (if this project goes forward). Please don't do that to your community!

Sincerely,

Jennifer Burt

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Jill Shoemaker at shoey22@me.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Jill Shoemaker. I live at 13506 Barker Lane, Grass VAlley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Upper Lower Colfax neighborhood, District 3. Between my partner and I we have lived in Nevada County nearly 30 years. We are here for the lovely natural resources and lifestyle, and we support our community in protecting them - through SYRCL, Bear Yuba Land Trust, and more, and are very active members of our Firewise Community.I urge you to oppose the Rise Gold Mine, AND to not certify the FEIR, which is flawed, and would leave our community at continued risk, even if RGM is denied.

• I am a member of the Wells Coalition. I know that 1) my well is at risk, due to Rise's nearby mineral rights, with no viable plan for mitigation! and 2) as a result, my property value will decline, if not already - I've been told that if I were to try to sell my property today, I must disclose the possibility of the mine/well risk, making a sale

difficult or impossible!
• The EIR is flawed because it presents inadequate well monitoring, and excludes 100's of properties like mine, provides zero financial assurance, no viable mitigation plan, and provides no accountability for causing our losses.
• FEIR itself lists environmental impacts which are unavoidable. Our air, water and quality of life are at risk
• The economic justification is inadequate and HIGHLY UNCERTAIN - vs. the more clearly identified risks to the environment, our wells, and our property values
• My neighbors and I are already challenged with storm damage, increased wild fire risk, and home insurance non-renewals. We love it here and are up to it. But are you really going to add this unnecessary disaster to the list?
• YOUR community is overwhelmingly opposed to this project - continuing to entertain its possibility will be a huge and unnecessary drain and distraction of county resources as the community fights to prevent it. As we will. You, and we, have much more constructive ways to spend our time. I respectfully urge you, implore you, to deny the mine AND the EIR! THANK YOU!

Sincerely,

Jill Shoemaker

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Joe Murdock at cncrd.ca.63@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Joe Murdock. I live at 10481 Banner Mkne Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

No mine! It will severely and detrimentally affect our environment. Please vote no.
Joe Murdock. District 1

Sincerely,

Joe Murdock

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of John Bansemer at johnbansemer@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Bansemer. I live at 11975 Lower Colfax Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am the property owner of 3rd generation family in District 3 Nevada County since 1999. Back in 1948 my grandparents moved from Southern California to Lower Colfax Road to escape the bustle and hustle of City life.

Fast forward, look around here and you can see the hustle and bustle all around the streets of Nevada City and Grass Valley, this is a tourist destination city now and an escape for many others who have moved out of the larger cities and retirees who have settled here move to the foothills for just that reason. Fresh Air, plenty of hiking trails, outdoor activities, quality of life just to name a few.

I may ask, what brought you here?

In 2000 I built a new garage on the property with a studio above for office/flex space and could not receive my final permit until I had a safe water source for potable water.

The building department would not sign off on my plans final until I dug a well and had a clean source of water supply. That well resulted in yielding 3 gallons of water per minute which further required a storage tank and 2nd pump to have enough reserve to pressurize the system and not potentially run out of water.

There is no assurance that my well will NOT be affected if this project and FEIR is accepted, and there is no alternative water supply available should Rise be allowed to go forward for my parcel or others on our Lower Colfax Road. Either by NID or the County itself. NO protections, NO solutions for alternative potable water.

This could be seen as FRAUD, if this project is allowed to go forward by the Planning Dept in a positive recommendation. Where is the current protection of the laws that are enforce now?

My parcel is the furthest south on the Map and probably the lowest in elevation under this Idaho-Maryland Mine Subsurface Boundary demarcation. (Bottom Lower left Corner)

This is wrong to consider any recommendation to the BOS that would keep this project alive and by further acceptance of the FEIS. Industrial mining in thriving residential communities is just wrong. Not here, not now. VOTE NO.

Sincerely,

John Bansemer

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Vaughan. I live at 11793 Lower Colfax Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Rise Gold’s advertising makes various claims about how they care about the local community. In fact, they brag about buying a fire truck. But they seem to misunderstand what it means to be a good Corporate Citizen and to actually care about the local community.

Actions speak louder than words, so let’s talk about what it means to be a good Corporate Citizen.

A good Corporate Citizen would disclose that they must have the fire truck anyway because of their 165’ headframe vs. claiming the benefit of buying a fire truck for the

community.

A good Corporate Citizen would take the 2008 EmGold well mitigation plan as the minimum requirement and improve on that vs. claiming repeatedly in the FEIR that there will be no impact to wells.

A good Corporate Citizen would communicate with well owners, listen to their concerns and include all well owners who have concerns in the well mitigation plan vs. some last-minute monitoring plan that has no teeth.

A good Corporate Citizen would agree to NID's request for a $14 million bond vs. saying it's not needed and they can't afford it. They would listen to the City of Grass Valley (and others) about the benefits of a shorter permit term vs. 80 years.

A good Corporate Citizen would involve and listen to local concerns and local experts and modify their plans accordingly.

A good Corporate Citizen would follow the normal industry steps to open a mine by first requesting an Exploration permit vs. a Production permit, so they could prove their predictions and provide actual data to decision makers vs. promises that the data will all be good later.

Yes, all these things cost extra money, but a good Corporate Citizen who claims to make a 63% net profit every year would be willing to invest some profit to achieve goodwill in the community.

And speaking of numbers, a good Corporate Citizen would provide accurate information to the Economic Studies that are based on industry norms vs. wild claims they can produce gold for half the cost of industry averages.

But what we have is not a good Corporate Citizen but an entity that believes our decision makers are "naïve" and that everyone else but them is wrong.

It defies common sense and basic logic that no environmental issues and none of the negative economic impacts for families, individuals and local businesses will ever occur at any time for 80 years.

Sincerely,

John Vaughan

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Karen Meisenheimer. I live at 117 Huntington Court, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

The arguments for not certifying the EIR are overwhelming. The EIR is legally deficient. It fails to adequately disclose and evaluate the mine proposal's significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine.

If there is no project, there is absolutely no need for an EIR. It is common sense. The county is under no obligation to certify the EIR if the project is denied. Case law is clear on this topic e.g., Las Lomas Land Co., LLC v. City of Los Angeles (2009) 177 Cal.App.4th 83.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kate Kane. I live at 58 Rockwood Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Thank you for reading my letter. I am retired and I currently live in the Third District, but I have lived in numerous homes over the years since I moved to Nevada County in 1977.

I worked primarily as an early childhood/elementary school teacher, but as we all know, there were second, and even third part time jobs we would take to make ends meet. Sometimes we left the foothills to earn enough to come back.

I think Rise Gold is exaggerating their intentions to provide jobs with a liveable wage, and by reading socal media and talking to neighbors, this seems to be what the community is clamoring for! Based on their track record, when the mining company

leaves, our community will be the poorer for it and angry because they were fooled.

Sincerely,

Kate Kane

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kathy Jablonski. I live at 123 Boulder St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am writing again to urge No votes on the Environmental Impact Report and a No to re-opening the mine. The groundswell of public opinion, the groundswell of factual evidence that reopening the mine is not the right or smart thing to do should make your decision a very easy and clearcut one- No and No. At this point, so much time, energy, conflict and dissension surrounds this issue, end it here. Approving an EIR accomplishes nothing but to perpetuate the fracture over this issue. The public has weighed in. The experts who aren't developers have weighed in. Simply do your job and listen and vote accordingly.

Sincerely,

Kathy Jablonski

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We are in district 3. My husband and I are 100% against The Mine. We bought our home 10 months ago with no disclosures about this project so close to where we live.
I find it absurd that something like this is even being considered. We have been in a drought for several years with no promise of future rainfall with climate change here! We have a new housing development in the neighborhood as well. Traffic, noise,water and air pollution, along with road deterioration.
What a nightmare.

Sincerely,

Kelly Bailey

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kelly Itow. I live at 10126 Alta Sierra dr pmb 104, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Hello, We are currently residents of Alta Sierra and I have lived most of my 61 years in the beautiful and safe Nevada and Placer counties where I purposefully chose to move from my childhood home (Southern California) to escape the smog, traffic congestion, gang violence, school overcrowding to enable me to have and raise my own family in what I can only describe as “Mayberry”. At that time the lakes were pristine, the skies blue, you knew and cared for your neighbors and the police also knew your family. I am totally opposed to the Rise Gold mine reopening. For many years we lived off dogbar just above the bear river. We were warned not to consume fish on a regular basis due to potential mercury issues left over from mining days before. I also have watched the show Yukon gold and gold rush that depict mining in

Canada and Alaska showing the potential environmental issues and complications from mining. I've also read about Rise gold leaving behind devastation in the wake of past mining practices. I hope to stay in this great state and continue to watch my children's children raise their families here but worry about their future, my primary financial investment (home). Reduced property values (we're down stream), the Lisa if and poisoning of ground water in our area from the Rise Gold mining process, the traffic congestion, noise, and have no faith that Rise gold will do anything but line their pockets by destroying our ecosystem and quality of life. Tell them "NO". It's not worth losing our quality of life.

Sincerely,

Kelly Itow

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kimberly Clouse. I live at 10335 Mercury Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live near Memorial Park in Grass Valley. I've read through the studies and Environmental Impact Report and believe I have a very good understanding of Rise Gold's plans and mitigations for noise, etc. Knowing all this, I still vehemently object to reopening the Mine at Idaho Maryland. Just the noise and air pollution from the trucks required is enough to stop it. This is NOT the type of business we want to welcome in our rural and beautiful area. Rise Gold has a horrible track record as a company and cannot be trusted. In addition, the EIR must NOT BE ACCEPTED; it is time to close the door finally on any talk of reopening the mine.
Thank you

Sincerely,

Kimberly Clouse

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kristina Walker-Berry. I live at 12836 Nevada City Hwy., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a resident of District 1 and have lived here for more than 10 years.

Sincerely,

Kristina Walker-Berry

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Boatman. I live at 14209 Oak Ridge Road, Penn ValleyI, PENN VALLEY, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived on AG zoned property in District 4 since 1998 and love Nevada County for our rural lifestyle, our environment, and the wonderfully creative, artistic community we share. There is a distinctive spirit among residents here who genuinely care about honoring our county's history while moving forward into a future that preserves and protects our natural and cultural resources that make Nevada County what it is today. When I travel to other parts of the U.S, I am struck by how many people know about our small towns and react by saying how beautiful it is and how lucky we are to live here. It is unthinkable that we would seriously consider allowing a company to threaten the health and welfare of our environment and community for extraction industry short term profits that are not even

guaranteed in their own company prospectus. I strongly urge you to unequivocally REJECT Rise Gold's proposed speculative mine re-opening. The risk to our community severely outweighs any claims of potential, unsubstantiated benefits. Please listen to the majority of Nevada County residents who oppose this project.

Sincerely,

Laura Boatman

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Laura Brewer at lauraquicktext@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Brewer. I live at 11401 Winter Moon Way, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Laura Brewer, and I live on Banner Mountain. I have attended many seminars and fora talking about the advantages and disadvantages of Rise Gold’s proposed project to re-open the mine, including a presentation to an OLLI group by Ben Mossman.

I am writing to implore you to reject the application to re-open Idaho-Maryland Mine and to reject the Environmental Impact Report. Rise Gold has a criminal track record of causing environmental damage. Even the most modest estimated cleanup costs would dwarf any speculative prospective tax revenue and temporary job gains for our area — and all at the cost of what draws people to our area, degradation of our water, air, and way of life. Damage to roads from thousands of trips of large trucks

with tons of contaminated materials that are intended to be dumped near Wolf Creek will cost real money to fix and maintain. Vote NO on re-opening the mine and NO on the EIR. Please take us into the future, don't revisit an ugly past.

Sincerely,

Laura Brewer

Dear Nevada County Supervisors and Planning Commissioners,

My name is Laura Gagliasso. I live at 14035 Diamond Ct, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Just Say NO to the FEIR! The FEIR is completely flawed! I am done with the disruption to our lives over these last several years. I am done with people telling me they will do what they want with my well and land just because they can...for no other reason than to appease a carpet bag salesman.
There is nothing redeeming in that FEIR. It should not have gone this far. Just say NO to finalizing the EIR and to reopening the mine.

Sincerely,

Laura Gagliasso

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Linda Elston at lindaelstonprea@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Linda Elston. I live at 12406 Gayle Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1 on lower banner mountain. I have lived here since the late 1990s and moved here because of it beauty and quiet neighborhoods and love the community. I am a commercial real estate appraiser and own and operate my own company, working mostly out of my home. My home is located just above Loma Rica ranch and I now have a view of Brunswick and Idaho Maryland Road. So this potential mine proposal has me concerned on many levels due to the impact it will have on the environment to our greenhouse gas emission levels, air quality, noise/traffic, water, etc.

I am writing you now to ask that you please vote no to certifying the EIR.

Certifying the EIR would only lend credence to a document that fails to adequately disclose and evaluate significant environmental impacts and violates numerous requirements of state law. Worse still, the certified EIR could be relied on in the future to fast-track the approval of another mining proposal!

The arguments for not certifying the EIR are overwhelming. The EIR is legally deficient. It fails to adequately disclose and evaluate the mine proposal's significant environmental effects, it does not analyze a reasonable range of alternatives to the mine, and it fails to identify adequate mitigation for the mine.
Several deficiencies in the EIR are as follows from the research I have read:

A) Greenhouse Gas Emission Impacts dismissed in FEIR - The only correct threshold given current climate studies, CA SB-32, and today's state goals – is net zero. The Mine's sizable energy footprint would be a serious setback.

B) Mine Waste Management Inadequacies Risk Water Quality - The FEIR's conclusion that water quality impacts related to mine waste will not be significant is unsupported and more testing needed.

C) Mine Waste Management Inadequacies Put Air Quality at Risk - The FEIR's conclusion that air quality impacts related to mine waste will be effectively mitigated is unsupported. The FEIR's plan for managing concentration levels to ensure that mine waste meets safety requirements before being shipped out of the facility is inadequate.

D) Well Owners Shafted in the Final EIR - The FEIR's conclusion that groundwater impacts from the mine project will not be significant was not substantiated. Serious deficiencies identified by expert reviewers of the Draft EIR were not addressed.

E) FEIR Fails to Assess Impacts of Centennial Site - The FEIR excludes the Centennial Site from the full analysis of the impacts of the mine project. This prevents the County from understanding the full environmental impacts and is a clear violation of CEQA, which requires that impact assessments be based on current conditions, not a speculative future condition.

F) There is No Viable Plan for Disposing of Mine Waste - The FEIR does not provide adequate information regarding the viability of the plan to dispose of mine waste through off-site sales and does not have provisions for adequate on-site temporary

storage or permanent disposal of mine waste, leading to potentially significant impacts.

If there is no project, there is absolutely no need for an EIR. Again, I am please asking that you vote no to certifying the EIR. Thank you for this consideration!

Sincerely,

Linda Elston

Dear Nevada County Supervisors and Planning Commissioners,

My name is Louisa Suta. I live at 10406 N Bloomfield Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District One on the ancient ceremonial land of the Nisenan People and I am very opposed to industrial mining destroying this beautiful land and polluting the Yuba River. The historical documented mining encouraged a 99% genocide of the local Nisenan People who lived here since time immemorial in peace and harmony with nature. The damage that previous mining has done to the area's land, plants, animals and water has not been attended to and to further damage the delicate ecosystem is a crime against nature. We all share this Earth and have we learned nothing as a species about our mistakes of the past? Now is a time of restoration not of further destruction. Greedy intentions do not further and this idea of mining and raping the earth is over.
The Dancing Porcupine Woman

Sincerely,

Louisa Suta

Dear Nevada County Supervisors and Planning Commissioners,

My name is M Rynda Norsell. I live at 12769 Friar Tuck Rd, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 adjacent to the Northstar Mine. I understand that the old mining structures and flooded areas remain below this neighborhood. A concern of mine is how a new mine would effect the stability of old mining structures.
More important to me is the reportedly outrageous history of Rise Gold's CEO, Benjamin Mossman, who abandoned a mine in Vancouver BC after damaging the ecosystem and refusing to restore it. That could easily happen here. I'll end with a quote from Maya Angelou: "When someone shows you who they are believe them the first time."

Sincerely,

M Rynda Norsell

Dear Nevada County Supervisors and Planning Commissioners,

My name is Mark Dubois. I live at 17624 Country Cir, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My grandfather & great grandfathers plundered the Yuba watershed for gold long ago when that was the norm. The county and state, and we the people, are now smart enough to create solutions, jobs & economy that that don't need to steal form the future. We also get to invite and give permission only to companies that have demonstrated responsibility and deep integrity. None of us can afford companies that reflect values for our land and future generations.

Thanks for planning for & working for a future that serves all. And prohibiting this outdated business model.

gratitude

My name is Mark Hotsenpiller. I live at 17274 Oscar Drive, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Alta Sierra, District 2. I have lived here since early 2020, minutes before COVID shut down the world. I fear that the mine would cause irreparable harm to the area. The EIR does not adequately address the real issues involved – water (both the mine's waste and neighboring wells), noise, road damage from hundreds of heavy trucks every day, waste disposal. But my main concern is the business practice of Rise Gold. The lawsuit in Canada has not been resolved. It would be absolute folly to allow the mine to be run by scofflaws. Just say NO, and do NOT approve the EIR.

Thank you.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The risk of environmental issues heavily outweigh the small economic benefit. And in fact, may create economic issues as well - like housing. Add on top of this, Mossman's reputation in Canada, and the decision is clear - DENY THE REOPENING. This effort is clearly bad for Nevada county and should never have gotten this far.

Sincerely,

Mark Triolo

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I’ve lived in this county for 40 years. I’m in district 4. I have practiced as a chiropractor here for 20 years. I have two kids in school. I honestly can’t believe the county is considering allowing an active mine in the Brunswick area. We certainly can’t afford more challenges in our air quality or traffic but further demand on our water supply and it’s possible contamination is insane. Do not approve the mine and do not approve the EIR. Few things motivate me to get involved with local politics, but approval of this plan would send me on a quest to remove any officials from office who were involved with its approval.

Sincerely,

Matt Archer

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Michael Shea at mshea49@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Michael Shea. I live at 11069 Cedar Ridge Dr, Cedar Ridge, CA 95924.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

My wife and I live on Cedar Ridge Drive. Our backyard abuts the mine property. According to the EIR, the Brunswick Site engineered fill operation will take place 500' behind my house and mine mineral processing will take place 2,000' from my house.

My wife and I are both retired. We brought our house in 2009, moving from our house on Sunrise Lane in Grass Valley. We loved the Cedar Ridge house and put a lot of hard work and hard earned money into creating a wonderful place to live. But because of the possibility of a mine next door, the house is now a weight dragging us down. We never would have bought the house if a mine was operating next door and we thought it was outside the realm of possibility that a business operating 24 hours a day, 7 days a week, and processing 1,000 tons of rock a day would fit under

the Light Industrial classification of the property behind us.

We want to stay in the Grass Valley/Nevada City area because we love it here and are involved in the community. For several years we both have been weekly volunteers at Sammie's Friends, we have been members of the Center for the Arts for a good 15 years (currently Encore Members), I am the president of the Nevada County Camera Club. We support SYCRL, KVMR, the Bear River Land Trust, and Hospitality House. We don't have a Costco membership and shop locally.

We've been looking at houses for a solid year now, trying to find another house away from the mine site that we can afford. And even after accepting the many concessions we'll have to make if we move, not one of the numerous houses we looked at compares with ours.

I have been dealing with the mine situation for over three years now. In additional to the emotional turmoil it's caused, we've put repairs and upgrades to our house on hold because of the uncertainty of the situation. I've studied the draft EIR and economic report, written letters to the planning commission, commented on the draft EIR and economic report, spoken at a planning commission meeting, and written op-eds to The Union.

The responses given to my comments on the EIR and Economic Impact Report are jokes. My questions and concerns weren't even addressed. It was like the person reviewing and responding to my comments couldn't be bothered and chose to sidestep any questions that might require further study or asking the technical report writers about them. I'M SICK OF THIS!

Please, please, do not adopt a recommendation to certify the FEIR.

Thank you for working to better Nevada County.

Sincerely,

Michael Shea

Dear Nevada County Supervisors and Planning Commissioners,

My name is Nancy Morris. I live at 224 South Church St., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live near downtown Grass Valley and I have taken a tour of the proposed Mine site with the General Manager. I believe I have a very good understanding of Rise Gold's plans and mitigations for noise, etc. Knowing all this, I still vehemently object to reopening the Mine at Idaho Maryland. Just the noise and air pollution from the trucks required is enough to stop it. This is NOT the type of business we want to welcome in our rural and beautiful area. The EIR must NOT BE ACCEPTED; it is time to close the door finally on any talk of reopening the mine.
Thank you

Sincerely,

Nancy Morris

Dear Nevada County Supervisors and Planning Commissioners,

My name is Rachel Bigger. I live at 14566 Talking Pines Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

The mine will be a great black blot on the community. We don't need all the extra traffic of large trucks on our small roads, not to mention the horrid noise this will produce hauling gravel! Also, the noise of rock processing, loading, spreading, and compacting. This small picturesque, quiet community will be ruined by all this extra noise! Add to that all the environmental damage. The air and water quality, the scenery blighted with engineered fill! The EIR report is incorrect on the impact this mine would have on our community and the report should NOT be approved.

Why would we even consider such a proposal from Rise Gold when their CEO went bankrupt on his last project leaving the Canadian taxpayers the bill to pay for the cleanup? Is that what you'd like to happen to Nevada County? The

My name is Rebecca Vandegrift. I live at 16249 Thornberry Way, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in south county across from Alta Sierra in district 4.
I gave called Nevada County home for over 39 years. I moved here with my husband and children because we loved the community and the many outdoor activities presented here. This is a beautiful area we call home.
We already suffer with an air quality that leave much to be desired. The mine will add to that stress, please don’t allow it.
We (and our many tourists) enjoy the sounds and smells of nature here. The mine will intrude on that with machinery screaming at all hours and further polluting our air.
We are a drought state and gross mass amounts of water required for this project is

indefensible.
As a voting constituent: NO MINE

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Richard Blair. I live at 13041 Wood Rose Way, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have called this community home for 22 years and plan to stay the rest of our lives.
As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Your decision is so important, proposed is an 80 year project taking us to 2103, wow! This decision does not only affect you, your family, the community now, but for generations to come. We will all be dead and gone but your decision and your legacy will have impact far into the future.

The misleading ads about average $145,000 total compensation means the executives will make fortunes and the mine workers, local people, will make much less. Go on Indeed, do a google search, entry level mine jobs are 30-45K (15-22/hr). There will be engineers and a few others but these guys are playing us and our community will suffer. We can do better to find industries that will enhance rather than destroy. No external monitoring and penalties are spelled out in the EIR which should scare us all and can not be accepted or approved.

Please protect our community, think long term. I could not find any stories of mining coming to a community and making a positive impact, all the stories I found are ones of tragic environmental and health disasters. You know we can grow our community and find other ways to attract jobs. High speed internet allows digital remote workers to live in a beautiful foothill community. The Bay Area is rough and expensive to live in, many would move here or visit more if we developed recreation, bike trails, amenities that make this lovely area even better.

Thank you for your thoughtful consideration,
Richard Blair and family

Sincerely,

Richard Blair

Dear Nevada County Supervisors and Planning Commissioners,

My name is Riki Colby. I live at 139 Glenwood Ave, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Glenwood community be hind Fowler Shopping Center. This neighborhood is in District 3.

I have lived in Nevada County for 45 years almost 50 years it’s right in between there. I lived on the San Juan rich during the time of the Siskon gold mine mine was the third well they went dry, and the last one to be settled.
I have full knowledge and experience of having a gold mine in your neighborhood it is not at all a fun thing to have, they don’t care about you they don’t care how they damage you.
Just Say NO to the EIR!!! be smarter and wiser than the board and the planning department that allowed SYSCON Goldmine to devastate the ridge.

Thank you.

Sincerely,

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Stacey Wells at topped.00-pyloric@icloud.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Stacey Wells. I live at 12490 Redwood Ln, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district three and have lived here for eight years. I work and live here in Grass Valley and very much oppose the mine. We live in Allison Ranch Road across from the marshy area that is supposed to be “cleaning” the groundwater that goes to our well from the North Star Mine. Who knows what poisons we are drinking and giving to our animals from the local groundwater. We don’t want to see more mining pollution ruin another part of our beautiful town. Thank you for reading.

Sincerely,

Stacey Wells

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Steven Farrage at sfarrage@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Steven Farrage. I live at 211 Park Ave, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a current resident of Nevada City (District 1) and a resident of Nevada County for nearly 6 years, I am deeply concerned that re-opening a mine is even being considered a possibility by our Planning Department.
Undoubtably there are economic benefits for RISE Gold and probably Nevada County: but the environmental cost far outweighs those financial returns.
The County continues to bear the dangerous environmental impact of the last operating mines in our streams, lakes and soil. Mining destroys our environment; no matter what safeguards are promised in the FEIR there will be seen and unseen damage which the mining industry has little history of addressing without lengthy and expensive litigation.
I urge the Supervisors and Planning Department to focus on the their commitment to

meeting their climate change targets and to reject this high risk mining proposal,
Sincerely,

Sincerely,

Steven Farrage

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Stuart Beach. I live at 13506 Barker ln, Grass valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 3. I have lived in Nevada county since 1994. We moved here to raise our 2 girls. My daughters loved being raised here. They enjoyed the many swimming holes in our local clean rivers. They enjoyed the slow pace of life from the city. We all enjoyed how quite it was at night, except for the occasional loud motorcycle being driven by our place.
I believe the EIR is very flawed. It must not be accepted. We have a well and rise gold has the mineral rights under our property. What recourse will I have if our well is no longer any good? Will the county pay to get us water? When our property values plummet will the county make up the difference?

You must vote NO on the mine. It will destroy western Nevada county. The EIR can

not be adopted.
Thank you.

Sincerely,

Stuart Beach

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Susan Dunn. I live at 507 Neal Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Mining was a boon to the Mother Lode more than a hundred years ago. Folks were pioneers, looking for a quick way to make money. The population was a fraction of what it is today. Mining is no longer appropriate for our quiet, pleasant, small town community. Why add heavy truck traffic, threats to our wells and water systems, noise, dust pollution, etc. for a few jobs? Jobs can be found in Auburn, Roseville, or even on line. Reopening the Idaho-Maryland Mine is a bad, very bad, idea for our community.

Sincerely,

Susan Dunn

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in the Brunswick area, and have lived in Nevada County since 1973. I used to live in the San Juan Ridge and felt the impact of the gold mining there with the depletion of water in the wells.
PLEASE say NO to the Idaho Maryland Mine!!!
The impact of noise, traffic, water depletion, air pollution cannot be mitigated! The mine is too close to inhabited areas.
Thank you!!

Sincerely,

Tanya Rentz

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Teresa Poston. I live at 415 Neal Street, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Our family has lived in Grass Valley proper as well as the Peardale area since 1978. To date, we are a three generational family. My late husband was transferred by the US Soil Conservation Service as a mine land reclamation specialist to study the ongoing toxic runoff from Malakoff Diggings which has never been fully mitigated. If history can teach us anything about environmental damage from gold mining, look no further than Malakoff Diggings and Empire Mine which persists today. Throughout our residency in Nevada County, we have witnessed a transformation from a resource-based economy to a more diverse economy based on tourism, high tech, arts and quality of life. As a family, we made the decision to be part of that transformation and are fully vested in that vision and future direction of our community. This is not the first attempt by outside forces to try to convince us to

allow mining in our community with promises that will not and cannot be kept. It's time to let our mining legacy just be part of our history and recognize that our community is on a different trajectory that does NOT include mining.

Sincerely,

Teresa Poston

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Thomas Wolfe at tom.wolfe@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Thomas Wolfe. I live at PO Box 190, Rough and Ready, CA 95975.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Rough and Ready and have lived here over 36 years. I was previously the 1988-1989 foreman of the NC Grand Jury and have been active in the community ever since. I am also a water and waste expert on mines. I have worked at many South African gold mines which spend much money on water and mine wastes as well as at US mines. I also was involved with the EMGOLD debacle back in the early 2000's. My work for the State of California actually is part of the hazardous waste disposal codes and were applied to the EMGOLD "make floor tiles from mine waste" baloney. I have also researched Mr. Mossman of Rise Gold and Minewatch is exactly correct - he left a mess in Canada and will do the same here.

The environmental impacts of the Rise Gold mine re-opening are just not worth any

few jobs we may get from Rise Gold and certainly any claim that there will be high paying mine jobs for a long time are spurious at best.

How he has gotten this far is a mystery but it is clear - it is your duty to stop it now. Please remember Mark Twain's comment - "A gold mine is a hole in the ground with a liar at the top" (or bottom, or owned by a liar). And it is very true in this case.

Please say NO.

Sincerely,

Thomas Wolfe

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Toby Brock. I live at 617 Todd Ct., , false, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As the father of a 4 year old that is being raised in Nevada County, I would strongly hope you consider the potential long term impacts of mining on the future health of our children and population. Impacts need to be observed with the long term in mind and not just what the immediate repercussions. How will the health of our progeny look in 20 years? In 50? How about our children's children? I accept that these types of impacts cannot be known outright. However, we live in an age where we are well aware of how the choices of our predecessors have made major impacts on our collective health and quality of life. Why would this choice be any different? We have seen how mining in the past has prisoned both land and citizen many times, in many places. This project seems very shortsighted when looking at the bigger picture. There are plenty of other sustainable ways to bring wealth to our communities

without mortgaging our environment and the health of future generations. Please think of the future and vote NO across the board on this project. Thank you!

Sincerely,

Toby Brock

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of TOM BEHLMER at gogettom@hotmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is TOM BEHLMER. I live at 12448 Old Mine Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3 since 2011. If the FEIR is not rejected, the possibility of another attempt to open the mine may continue to put a chill on the properties around the mine that will be impacted. It could make selling a property problematic and may require a fire sale price to induce a buyer. Would you risk buying a home next to the mine? Even if you felt the risks are negligible, will the next buyer think the same when you want to sell? Approving the FEIR will perpetuate this. The analysis of real estate impacts from two other mine openings are dissimilar to our local area. Unlike the other two, we have a much higher population density near the mine with homes much closer than in the examples cited.

The mine will generate 18,000 one way vehicle trips either in or out per MONTH. We

have semi blind turns, no center dividers, many perpendicular feeder roads onto Bennett and Highway 174 that require crossing lanes of on coming traffic and can be icy in winter. What could go wrong? Don't put our safety at further risk. Over the last seven years there have been two fatal head on accidents on either Brunswick or Highway 174.

Here is the math on the 18,300
200 approximate employees projected by Rise to work at any one
time
+100 ore truck trips
+5 my projection or estimate of supply trucks to bring in supplies to the mine
---
=305 one way in bound
x2 to reflect out bond leg
---
610 in or outbound trips per day
x30 days. Rise said the mine will operate seven days a week.
=18,300 per month

Sincerely,

TOM BEHLMER

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Tom Elson at tomelson.9@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Tom Elson. I live at 12190 Cement Hill Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in County Supervisor District 1 in the Greater Cement Hill Neighborhood. I have concerns over the lack of clear understanding of how mine dewatering will or will not affect local groundwater resources; specifically, the effects on the overall water supply, not just for neighboring well owners, but for the greater community. If groundwater wells are rendered inoperable due to dewatering, the need to connect homeowners to alternate supplies affects overall local supplies, especially during multiple-year droughts. The DEIR acknowledges limitations in predicting the effects of mining in the Idahop-Maryland hard-rock environment but provides no historical monitoring on which to assure the community that mitigation measures, even if feasible, can be implemented in a targeted and effective way. The project risks the most important community resource for our health and welfare and I urge the Board

to reject the project.

Sincerely,

Tom Elson

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Tom Larsen. I live at 327 Vistamont Dr, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Currently, I live in Morgan Ranch. I owned a home in Wawona Madrona for many years and can not imagine how uncomfortable I would be were I still there and in the same general area as the project.
First, I see no reason to trust this Company. The track record of the CEO does not inspire trust. It's previous efforts in Canada are still in legal action based on exactly the area that is the most vulnerable, the environmental degradation of the area. There is no rationale to even debate all of the environmental risks that the County would be taking on behalf of all of the county population for the next 80 years. Hundreds of trucks a day. Hundreds of employee trips per day. Employees required to work 12-hour days. No local housing to provide. At any time Rise can sell or simply depart leaving back a possible SuperFund site not unlike the one's already

here and STILL CONTAMINATED.

Please do not approve the EIR. It is very short of thoughtfully covering all of the topics it should and misses the mark in many areas.

Then, deny the applicant entirely. It's the right thing to do for what is an area in very close proximity to all of the populations of Grass Valley and Nevada City, who will be the victims of whatever mistakes or indifference Rise, or a new owner, might inflict on our people.

That's not the legacy I would want to be remembered for.

JUST SAY NO!

BTW: My undergraduate degree is in Conservation of Natural Resources, with a focus on Environmental Impacts, from UC Berkeley.

Sincerely,

Tom Larsen

Dear Nevada County Supervisors and Planning Commissioners,

My name is Walter Helvin. I live at Stone Meadow lane, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in a rural neighborhood of western south county, located just inside District 2. I attend high school at Ghidotti as a Junior. I am very concerned about the future of our county and the terrible precedent allowing this mine to reopen sets.
First, there are environmental concerns; this mine will have a significant negative impact on our air and water quality as well as cause the destruction of many acres of native habitat which is not only detrimental to our local community but affects the world broadly as a contributor to climate change.
As a young person and a student, I am very passionate about this issue and it directly impacts my future. I want my county to take proactive steps to ensure our future and our county reduces its impact on the climate and environment.
Additionally, Rise Gold has a terrible reputation when it comes to the environmental

effects of mining, as well as running a business in general.
This brings me to the next point, the economics. Even if the environmental effect was negligible, (which it most certainly is not), this company has never made a profit nor is it projected to over the first several years of this new project. While the mine is operating this will displace and discourage other parts of our county's economy, mainly tourism and recreation, which has a much larger impact not only on the County's budget but also on the livelihoods and quality of life for everyone here in the county.
Clearly, reopening this mine makes no sense environmentally or economically. I believe the county could make much better use of its time and resources by assisting and providing resources to constituents who want to protect and restore their property with native plants and habitats, become more sustainable, and reduce fire risk.
Our beautiful, rural, and historic county is always in need of further outreach, education, and resources to address the trifecta of climate change, environmental justice, and reducing fire risk. I know neighbors who want to create conservation easements on their property and could use help from an entity such as our County government. This would also be a much better use of resources to help address climate change and fire risk concerns as well as benefit the local recreation/tourism economy.
Lastly, I would like to appeal to the mission of our county government and the goals the Board of Supervisors set. As you know, our government broadly works through representative democracy and here in the county, you elected officials have processes and responsibilities to serve your constituents effectively. This I understand, however, I do not understand this long, wasteful, drawn-out process of consideration for a project that the vast majority of our community clearly opposes. When you promised to center sustainability as a board objective, I did not conceptualize sustainability as reopening a toxic and dangerous mine.
I have grown up in Nevada County for all 17 years of my life so far. I have volunteered in this county and have been growing to become a more engaged and committed citizen of this county, soon I will be able to vote and truly add my voice to this local government. I have many friends who do not see this place as somewhere they want to live or return to. My time learning and serving the community has given me a different perspective. I really want to see this county continue to improve and foster positive change in our communities to better serve everyone today and well into the future.
I hope by considering my message, and the messages of many others, that you will decide to completely prevent the reopening of the Idaho-Maryland mine and do not

certify the EIR or allow this mine to reopen in any way.
Thank you.

Sincerely,

Walter Helvin

Dear Nevada County Supervisors and Planning Commissioners,

My name is Yvonne (Ronni) Navarro. I live at 529 Jordan St, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a Grass Valley native and I have several relatives in the area. We have seen many changes over the decades. Some positive and some negative. We feel blessed to be born, raised and live in this wonderful community and gorgeous area. The Idaho-Maryland Mine is NOT a business we want to welcome in our rural and beautiful area. The FEIR lists several significant and unavoidable environmental impacts that endanger this community's health and quality of life. These include aesthetics, traffic, and noise. There are also serious deficiencies in the FEIR that put the County and its citizens at even greater risk. We want our children and future generations to live healthy lives and enjoy the suirrounding beauty as we have been able to do. The Idaho-Maryland Mine is not a positive choice. The EIR must NOT BE ACCEPTED; it is time to close the door finally on any talk of reopening the mine.

Sincerely,

Yvonne (Ronni) Navarro

Re: Idaho-Maryland Mine

May 8, 2023

Dear Nevada County Supervisors

Please do not allow the Idaho-Maryland mine to re-open. It is too risky, the threat to our local ecology is immense. Ben Mossman has a horrible criminal background and should not be trusted. We and our children and grandchilden will be stuck with mine, the problem will be ongoing.

Over the coming decades the mine will require fewer and fewer employees as robotics will do the drilling, blasting and all the other tasks. The benefits to the county and citizens will be miniscule.

Sincerely,
Paul Sabin

ESP. Lisa Swarthout

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ellen Sommers. I live at 11082 Copper Drive, Grass Valley, CA, a very few miles from the proposed Idaho-Maryland Mine work sites and travel routes.

As a concerned citizen and as my representative, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

The noise and particulate pollution will impact my neighborhood significantly, even though there are promises of mitigating these issues from a company that already has a questionable history of unkept promises. I have written before, when is issue first came up, and I write again to ask that you reject this flawed project. Do we want to be a community that welcomes the tourists and outdoor enthusiasts that come now, or do we want to create more traffic catastrophes as these trucks move around the community, less potable water and a tradition of destroying open spaces for an unknown.

Nevada County has a housing problem and a lack of talented employees. Bringing in employable people from outside the county will add more pressure to a housing market that is already pushing fixed income seniors and first time homeowners into untenable financial strain. The promised jobs, even if they materialize, will be hard to fill without additional population and it is questionable if we have the infrastructure and support services to provide that, even if the promised revenue is realized.

The plan is flawed, the corporation is corrupt and the concept is not part of my vision for Nevada County. I am not sure how to end this but to say

JUST SAY NO

Mr. Ed Scofield
Nevada County Board of Supervisors
950 Maidu Avenue, Suite 200
Nevada City, CA 95959
ed.scofield@nevadacountyca.gov

Dear Mr. Scofield,

I am writing to plead that you vote AGAINST CERTIFICATION of the Idaho-Maryland Mine project Final EIR, and also that you vote against this project moving forward in any capacity.

My name is Jennifer Burt, and I live in District 1, where I have raised my two kids. My husband and I purchased our home and moved to this area many years ago because we were drawn to the natural beauty, open space, and ecology of the region, the ability to farm on our land, and the quiet ambiance of our neighborhood.

The threat of this project has caused significant distress for all of us, knowing how much it would degrade the quality of life and environment of this beautiful place if it goes forward. Worse, we have all watched the County sponsor a terribly prepared, absolutely inadequate EIR which was supposed to objectively analyze the impacts and describe a comprehensive, enforceable monitoring and mitigation program. Yet, despite the fact that this major project has so much potential to negatively impact our community and natural resources, the County and its consultants have failed to ensure the EIR does any of the above on any level for any topic. It is categorically the worst EIR for a large project that I've ever seen after working in the field of environmental consulting for over 20 years.

Certifying this EIR would just fast track the next poorly-thought-out mining operation to use it as their County-approved environmental document to build off of, and would ensure our community will continue to be unsettled by the threat of a huge gold mining operation happening underneath our very feet and homes, tampering with our groundwater supply. Gold is clearly an important part of Nevada County's past, but it is uninformed nostalgia to think it was a bright, shiny past. It was a gritty, loud, environmentally degrading and somewhat dystopian reality for the vast majority of the people living here and the natural environment when the Idaho-Maryland and Empire Mines were running here. Large-scale gold mining is not part of a sustainable and beneficial future for this County. We need to address climate change, water reliability in the face of climate instability, wildfire threats—more than enough difficult issues for one community to grapple with—let's not add a massive industrial mining operation by a greedy corporation with no interest in our local community to our list of current traumas. If you do approve this EIR or this project, you are setting the County up for a multitude of environmental lawsuits (if the EIR is approved) and an unmitigated environmental disaster (if this project or similar goes forward). Please do the right thing for your community and vote NO on certifying the project EIR and vote NO on allowing the project to move forward.

Sincerely,

Jennifer Burt

Nevada County Planning Commission and Supervisors,

Please see my attached comments on the Idaho-Maryland Mine FEIR.

Thank you,
Sara Greensfelder
District 4

May 8, 2023

Dear Nevada County Planning Commissioners and Supervisors,

I reside on the San Juan Ridge in supervisorial district 4**. I urge you not to certify the FEIR for the Idaho-Maryland Mine, and not to recommend or issue a use permit for the project**. The reasons why are numerous; here are a few:

-The project would introduce an unacceptable level of noise and heavy truck traffic 24 hours a day/7 days a week and nighttime light pollution and would disrupt the rural quality of life for hundreds of residents of the surrounding area. In this sense, it would violate the Goals and Policies of the Nevada County General Plan.

-According to many local realtors, the mine would significantly lower the value of surrounding properties. Home-owners would lose millions of dollars of equity in their homes. They could request their property tax be lowered, thus reducing property tax revenue to the County.

-Nevada County already has poor air quality many months of the year, and the mine would create constant release of diesel exhaust from trucks, dust from crushing and transporting rock that may be laced with asbestos and fumes from blasting and processing.

-The FEIR is inadequate in its assessment of Greenhouse Gas Emissions.

-The de-watering of the current mine workings and subsequent blasting and tunneling would remove billions of gallons of groundwater and jeopardizes hundreds of surrounding domestic wells. As a resident of the San Juan Ridge, I lived near Siskon Gold's mining operation in the North Columbia Diggings in the 1990's. Despite assurances in the FEIR that Siskon's underground tunneling could not jeopardize local wells, a bedrock fracture was breached that de-watered at least a dozen wells up to nearly two miles distant, including those of our local school and cultural center. When deeper wells were drilled, the water that returned was contaminated with minerals that in many cases still require filtering. The subsequent de-watering of millions of gallons of water from the mine scoured Spring Creek, a tributary of the South Yuba that was habitat for yellow-legged frogs, fish and other biological resources.

There is no way any hydrology study will be able to provide a real-life scenario of what will happen with all the dewatering the IMM project entails. It's simply not possible for a study to accurately predict the hydrological outcome of such a huge dewatering project, which includes not just the current underground workings, but a vast expansion of the workings through the use of explosives and drilling. There is no guarantee that such extensive underground blasting and drilling would not intercept water-bearing fractures. <u>This is an unacceptable risk</u>.

-The de-watering of the mine workings would dump millions of gallons of (potentially contaminated) water into the South Fork of Wolf Creek, causing environmental damage.

-Why would the County entrust such an impactful project to Rise Gold CEO Benjamin Mossman, who has already shown himself to be an irresponsible (and potentially criminally negligent) head of a gold mining company?

Mossman is currently facing criminal charges for the environmental damage sustained on Banks Island, British Columbia on ancestral Gitxaala Nation lands while acting as the CEO and Mine Manager of Banks Island Gold Ltd. The mine was shut down in 2015 after its ongoing polluting discharge into waterways was discovered. After the mine was shut down, the Ministry of Energy and Mines confiscated the company's $420,000 security deposit to clean the polluted site. But Gitxaala Nation Chief Clifford White estimated the total cost of the cleanup would be approximately $1.6 million. Mr. Mossman's Banks Island Gold, Ltd. filed for bankruptcy on January 7, 2016, and 90 people lost their jobs.

Nevada County should not allow someone with such an abysmal track record to open a mine with a proposal that already has so many environmental red flags attached to it.

-Mining jobs are dangerous; injuries and accidents are commonplace- long-term health problems are a serious job risk. Many of the jobs promised by the project require specialized skills and wouldn't be filled by local residents.

-The mining operation would necessitate a zoning change from M1-SP Light Industrial Site Performance Combining District to M1-ME Mineral Extraction Combining District, about which Nevada County says "This district shall be used only on those lands that are within any of the compatible Nevada County General Plan designations and which are not in a residential zone." The area surrounding the Brunswick Industrial Site is primarily in residential zones RA-3, RA-1.5, RA-3PD, RA-X and R-1. Therefore, such a zone change would be in violation of the Nevada County General Plan Goals and Policies for Community and Rural Regions.

Re: Idaho-Maryland Mine Project

Dear Mr. Kelley

The Friends of Banner Mountain (FBM) is a 501(c)(3) organization whose mission is to protect Banner Mountain and its natural and cultural resources for the benefit of residents, visitors, and future generations. Last year we provided comments on the Idaho-Maryland Mine Project Draft Environmental Impact Report. For reasons described in that letter we believe that construction and operation of the mine will adversely affect the quality of life for residents of Banner Mountain for generations.

We respectfully request that the Planning Commission recommend that the Board of Supervisors not certify the Final EIR and not approve the project.

Thank you for this opportunity to share our concerns about this project.

Sincerely,

Edward Sylvester, President
Friends of Banner Mountain

Dear Board of Supervisors,
My husband, Kenneth Boehle and I are unable to attend the meeting on Tuesday regarding the authorizing the opening of the mine. We are extremely opposed to the opening and urge you to not approve this endeavor. Nevada County is already one of the most polluted counties in California and this opening would only exacerbate an already dire situation for our community.
Please vote NO and ensure the continued safety of our beloved county and its residents.
Thank you for taking our comments and making the right decision for our community.

Subject: sample motion to deny certification of eir

Dear Commissioners:

As you know, the Community Environmental Advocates and the MineWatch Coalition are opposing both the approval of the Idaho Maryland Mine and the certification of the Final EIR.

However, the Staff Report lacks a motion denying certification of the EIR if the project is denied.

The Planning Department Staff Report does not include a motion in the Action to deny the Mine which would ensure that the FEIR is not certified. Our attorneys (Shute, Mihaly, and Weinberger) have supplied two possible motions which would both effectively deny certification of the EIR if the Mine is denied.

The current wording should be deleted:

"I. Environmental Action: Recommend the Board of Supervisors certify the Final Environmental Impact Report (EIR 19-001, SCH# 2020070378) as adequate for the Idaho-Maryland Mine Project, and that it has been completed in compliance with the California Environmental Quality Act, subject to the recommended Mitigation Measures found in the Mitigation Monitoring and Reporting Project (Attachment 1) and as have been modified by Erratum to the Idaho-Maryland Mine Project Final Environmental Impact Report, dated April 2023 (Attachment 3), and not adopting the California Environmental Quality Act Findings of Fact (Attachment 2), and not adopting a Statement of Overriding Considerations (Attachment 2)."

In order to decline to certify the EIR, we would recommend changing the motion above instead to say:

"I. Environmental Action: Recommend the Board of Supervisors find that the California Environmental Quality Act (CEQA) does not apply to the project pursuant to Public Resources Code section 21080(b)(5), as a project which will be rejected or disapproved by a public agency."

That is sufficient.

To be more specific, the following additional statement can be added:

"Recommend the Board of Supervisors decline to certify the Final Environmental Impact Report (EIR 19-001, SCH# 2020070378) as adequate for the Idaho-Maryland Mine Project, on the basis that it has not been completed in compliance with CEQA, and not adopt the CEQA Findings of Fact (Attachment 2), and not adopt a Statement of Overriding Considerations (Attachment 2)."

The legal effect would be the same regardless of whether this second sentence is included; the EIR would not be certified. Staff should not need to make any changes to the other portions of Recommendation A.

We hope our comments will be useful in your deliberations.

Sincerely,

The Board of the Community Environmental Advocates Foundation

---

Why Deny Certification of the EIR?

- An EIR is not required if the project is denied.
- The EIR is legally deficient, leaving many clearly significant impacts including impacts to groundwater and residential wells, air quality, and asbestos exposure unmitigated.
- If the EIR is certified, and the project denied, a future mine project could still rely on the County certified EIR

to support approval. The community could be forced to fight this same battle again in years to come. The legacy of today's Planning Commission could be denial of a mine that will not really be denied.

- Only denying the Mine AND the EIR defeats the Mine for good.

>
> My name is Caela Wynd. My address is 13139 Howald Ln., Grass Valley CA 95945, District 1, Peardale area.
> I'm a Realtor and have been working in Nevada County as such for 17 years. I'm one of the Realtors that was initially called and questioned for my opinion regarding real estate prices in Nevada County and how they may or may not be affected if the mine is approved. I responded by saying that, in my opinion, the value of homes and property without question would go down- that I see it happening now in homes near the proposed mine not selling, and that being in a very busy market; and my buyers saying to me they don't want to look anywhere close to the proposed mine area. I worked for Network Real Estate before it closed and I told him a realtor in my office lost an escrow that was well over $1 million because it was disclosed to her buyer there might be a mine. The representative from the FEIR asked me how much I thought the value would go down. I said it depends on how close to the mine. Within a few miles at least 50 percent or more assuming they still have water. No marketable value if no water.
> I encourage you to not accept the FEIR for a number of reasons.
> One: Realtors, and I know there are others who back my opinion, weren't taken seriously. We are the experts- it's our livelihood. We work it day after day after day.
> Two: I don't believe proper comparisons and studies were done regarding wells. I live close enough to the proposed mine that I was sent a "notice" by the county regarding the mine. Close neighbors are going to have their wells monitored for a short time. Nothing is proposed for my well. The FEIR does not address the fact that we, in this area, get our well water from the flow that comes through fractured rock. We do not get our water from an aquifer or a pool below the service. Our water source is not blocked by a gate or door from what shall be drawn for the mine. Many of us are in jeopardy- as the horrible example shows from the past of the approved mine on the North San Juan Ridge. No studies have been shown in the FEIR regarding our water source and fractured rock. Also, there is no accommodation for the rest of us if we lose our water or severely lessen the amount we receive or our water becomes tainted.
> Additionally, the mines in operation used for comparison are not in developed areas like ours. The FEIR does not compare apples to apples!
> Additionally all the noise and pollutants including asbestos, dust traffic etc., will change the beautiful and charming ambience and rural nature of our county into an industrial area. The acceptance of the FEIR would annihilate the reasons many of my buyers come here: to raise their children or to retire.
> Personally, I have had asthma. My health will be at risk (as that of many others). I will be forced to move. Who is going to buy my house? And at what price? If no adequate water, the value is zero! I will lose everything I've worked so hard for: my home, my job, all the love I've put into my community, into my neighborhood, into my clients.
> What is there to gain by approving the mine and/or accepting the FEIR?
> Do a few possible jobs balance out the jobs lost? The monies lost in property taxes? The monies lost in tourism? The possible costs of legal fees? Is it worth the destruction of our very special community that is genuinely True Gold? How can Ben Mossman be trusted when his track record is far from golden.
> If the mine is approved, if the FEIR is accepted, I believe all who make that decision will be negligent in doing their due diligence owed to all of us who reside in this county and especially to those of us closer to the proposed mine who are treated as collateral damage.
> Sincerely,
> Caela Wynd

To the Planning Commission,

I have written to the Commission before expressing my concerns about the air quality we can expect if the mine reopens. The EIR has failed to convince me that Rise Gold Corporation has a way to mitigate the huge amount of pollution that will be pumped into our air by eighteen+plus ton, diesel trucks running 16 hours/day, every day of the year. Or the effect of the diesel powered equipment located on the Centennial and Brunswick Industrial Sites.

Grass Valley is already known as the tail pipe for Central Valley and Sacramento air pollution. As we all know, in the summer this poor quality air is pushed east to the foothills of the Sierras where it settles in our town. When added to the smoke from fires a summer ago, I had mask whenever I went outside. Will I need to be masked from now on when I hike or walk to and from town? What about our residents who are already battling breathing problems such as asthma or COPD? What about our pets and livestock? An even greater concern is how will it affect are children, grandchildren and even great grandchildren with the mine's expected operation for 80 years? I want to continue to live in Grass Valley and be able to breathe safely. Please consider NOT allowing this toxic mine to reopen.

Thank you for your time and consideration,

Susan Merrill

Dear Nevada County Supervisors and Planning Commissioners,

My name is Debra Blaker. I live Rough and Ready.

I am writing to ask that you **oppose reopening the Idaho-Maryland Mine**. I believe reopening the mine invites significant environmental impacts that endanger this community's health and quality of life. The potential benefits simply are not worth the risk that the mine poses.

Nevada County is growing. The current housing projects and traffic on major roads are visible signs of our growing community. As such, resources such as water and the relatively clean air we breathe here are precious. Adding traffic congestion from mining activities will make living in Nevada County undesirable. Please, make it a priority to **protect our quality of life** in Nevada County.

The Rise Gold plan to pump water daily puts our ground water resources at risk. Please, do not accept that risk. I am counting on your support to protect our community over relatively small economic gains for a Canadian company.

Sincerely,

Debra Blaker

I'm Dr Pete Sabey. My doctorate is in Counseling Psychology and I have retired after 33 years as a California licensed Marriage and Family Therapist in Davis, Claremont and Grass Valley. I have lived the last 11 years of my life in Grass Valley by choice of any place in the country.

It seems clear to me that reopening the mine would damage Public Health both from a physical and mental health perspective; both physical and mental health are impacted by noise. To my knowledge the Final Environmental Impact Report does not adequately, or honestly, address this important issue. On the physical level any elevation of ambient noise impacts the health of that exquisitely complex part of our anatomy, the ear. Like anything, overuse accelerates wear and breakdown of this vital part of human thriving in family and community. And this destructive process becomes a mental health problem since any increase in isolation caused by hearing loss increases depression, anxiety and loneliness. A recent statement by the Surgeon General, and many studies, have shown that loneliness significantly shortens the human lifespan.

Regarding overall health, the arousal caused by excess intermittent noise from rock crushers and trucks rumbling on our roads causes release of cortisol by activating the hypothalamus-pituitary-adrenal system. Cortisols are inflammatory and it has become very clear to medical researchers that elevated inflammation is strongly implicated in cancer, heart disease and many other pathologies.

Thus, to open the mine would be counter to sound Public Health policy. Add this important factor to the many other reasons for rejecting the flawed FEIR.

Promises of "mitigation" coming from a CEO currently under indictment should be regarded with Keen skepticism.

The FEIR is a document that relies on assumptions that benefit Rise Gold/Rise GV's interests, presenting only the most favorable scenarios to persuade its readers. It does not aim to provide a clear and honest discussion of the likely outcomes. While the FEIR may meet the legal requirements, it fails to address the needs and wishes of our community. Our community requires a peaceful, clean, and secure living environment. I strongly oppose the proposed mining project by Rise Gold, which would bring constant noise, air and water pollution, traffic congestion, destruction of wildlife habitat, and a negative image to our town. I urge you not to certify the FEIR.

Dear Nevada County Supervisors and Planning Commissioners,

My name is Don Haislet, my wife and I live on Cedar Ridge Dr, Grass Valley (District 3). Our home is approximately 2000 ft. from the above ground portion of Idaho Maryland mine, the mine tunnels are directly below us.

I am writing to ask that you do not approve the re-opening of the mine and that you do not certify the FEIR. There is no obligation to certify the EIR. As we learned from the FEIR, the mine will have "significant and unavoidable impact" on our community. The main issues cited were traffic, aesthetics, and vibration. And that doesn't take into account the inaccuracies in the FEIR such as using incorrect data for air quality baseline. If you approve the the EIR, the risk is a future company will come in and traumatize the community again. It's time to put the subject to rest: no mine in the middle of quiet residential neighborhoods.

With the exception of the FEIR certification I agree with the staff report where it's recommended that option A be selected based on the fact that a mine in neighborhoods is incompatible with the County General Plan.

I was excited that an economic report was gong to be generated but disappointed in the final product. To start with, much of the data used was provided by Rise Gold with no vetting. The Economic Report had such wildly varying assumptions that it resulted in overly unrealistic and optimistic results. In addition, the assertions about property values not being impacted were based on analysis of properties located next to mines that are not representative of what Rise Gold has proposed. I think there's a reason why comparable properties can't be found: Because rational communities don't put hard rock mines in the middle of residential communities.

Mining may be part of our community's heritage, but that's our past and it has no place in the future of our County. Yes, it may provide a few jobs but most employees will be commuting from out of the area and economic and environmental impacts will far out weigh the benefits. The risks just aren't worth it.

If the mine is approved, my wife and I will need to move. I'm sure many others would do the same thing. We couldn't live in a community where our elected officials put us at risk and also want to lower our quality of life. Those of us that care about Nevada County contribute time and money to numerous community organizations. So consider what you would lose if you approve the FEIR and mine.

Please don’t let us down. Thank you for your consideration.

Sincerely,

Don Haislet

Hello,

I live in Nevada County. I've worked in finance and environmental health. I've read as much as I can about this, and every page of the Environmental Impact Report (EIR). I urge you to reject this EIR based on the following reasons, which are not exhaustive but certainly sufficient to reject:

- Mineral test sample size: Only 11 feet of the exploring drilling were tested for potentially hazardous chemicals of the 57,000 feet drilled. The Air Quality Board and Water Quality Board state that this testing is inadequate to accurately characterize the hazardous chemicals that will be released.
- Tailings market: the EIR claims that mine tailings will be sold as engineered fill locally but does not provide adequate proof to backup this claim. The cited evidence is the 2018 Aggregate Sustainability 50-year Demand map sheet which shows potential demand in the Sacramento area. However this report fails to discuss excess gravel in Placer County and Nevada County as well as potential production from Yuba Goldfields, an area ready to provide 685 million cubic yards of gravel that is owned by one of the oldest producers in the State; this omission of evidence is negligent and shows the poor quality of the report.
- Inconsistent with the County's General Plan: For example goal 17.1 calls for recognizing and protecting mineral resources in a manner that does not create land use conflicts. However, multiple conflicts exist with goals for not only land use, but also economic development, safety, climate change, noise, aesthetics, water, and coordination with cities and towns.
- Groundwater contamination: The EIR's conclusion that groundwater impacts from the mine project will not be significant is not supported by the evidence and doesn't comply with CEQA.
    - CEQA requires a current baseline to assess potential impacts and determine mitigations. The model used for the analysis did not use current monitoring data from any of the >300 domestic wells in the mineral rights area. It relied only on sparse data from over 15 years ago. The EIR acknowledges that data is needed, but the approach calls for drilling 15 new wells as a basis for verifying the computer model after the EIR is certified, which is ludicrous. The questionable computer model estimates well waterdrops at 1 to 10 feet for 152 wells, then avoids declaring the impact as “significant” by creating an arbitrary threshold of significance at 10%.
    - The EIR also adds an inadequate supplemental domestic monitoring plan for 378

newly-identified properties. Among the deficiencies, the new program only includes about half the wells in the mineral rights vicinity and provides neither additional NID infrastructure to speed water replacement nor a third-party liaison to negotiate issues if problems arise.

Frankly, this is enough to reject, but if you consider all the evidence, there's a lot more.

Austin W.

Respectfully,
I want to let all know that with each project in Nevada County there are side effects that make it extremely unpleasant and uncomfortable for those living in the area. The Idaho Maryland Mine falls into this category.

One example of these unplanned problems came when the Eric Rood Center was developed on the land along Hwy 49. EIRs were done but they did not include the excessive noise, yelling and smells that come from the jail and other buildings. Or the lights from the parking lots that blair all night into the homes above the county buildings. Or the noises at all hours from teen and others racing their cars, motorcycles in the parking lots, plus the 5 am trash truck squeaking and banging while picking up large garbage bins.
Arrested drunks yelling as they enter the jail facilities at unusual hours do disrupt neighbors sleep.
And most Unfortunately, the needed helicopter rescues also bring in noise that is unbelievable, scary and sad as we know those needing these services are in serious health conditions. I send my prayers to them all as the helicopter takes off for a needed special medical facility.
Sirens from emergency vehicle's do sound more here than at other locations.

All these sounds and light inconveniences were not realized or addressed in the planning stages of this county facility. Nor was the fact the a very large number of wildlife animals from squirrels and mice to foxes, coyote, mountain lion, deer and even bear used to drink from the water and spring area where the Supervisors offices now stand. This once forested area was a special place for more than just humans. I am sure that this was overlooked.

I have lived here in my home for over fifty years and have made many adjustments because I believe in the county facilities.
BUT the Idaho Maryland Mine Project will not benefit those living near or far from the site. It will not benefit the local economy.
I am also aware that this mine company and others from Canada have just walked away from many sites without fulfilling their obligations to clean up their messes. There is no benefit here. Gold mining is a fickle business.
Our county developed originally from gold mining; first from hand digging and panning, to shaft and underground mining and remember it ended when the excess of mud and debris found its way down to the Sacramento River. This created some of our first recycling laws, but it did not benefit us.

I say the county can develop in many other ways and mining should not be considered, especially so close to town, homes , schools and health facilities.
PLEASE do to reopen the Idaho Maryland Mine.
Thank you,
Susan A. Barry

Dear Planning Commission,

My name is David Myers. I live at 14915 Quail Pointe Lane, 95945.

As a concerned citizen, I am asking you to "just say no" to re-opening the Idaho-Maryland Mine. It has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren't worth the risk.

I am a resident of District 1; my family moved to the area 4 years ago.

I am deeply concerned by the prospect of the Idaho-Maryland mine reopening. The risk to the local economy and residents' quality of life is not worth the very uncertain (and inflated estimates of) county revenue.

The estimates of new revenue to the county are uncertain at best. Any county revenues that do materialize will be more than offset by lost revenue from the tourism industry, declining property values, and the very likely need for the county to pay for environmental mitigation measures in the future. Meanwhile, our local housing crisis will be exacerbated by transient mining workers who will contribute very little to sales tax revenues.

My family moved here because of the incredible quality of life, particularly the natural beauty. That beauty is about to be destroyed by large-scale mining operation. Everyone should expect noise and pollution to increase dramatically from the mine. Rise Gold has a well-documented history of leaving pollution and broken promises in the wake of its operations.

Do not enrich a foreign company at the expense of your constituents. I urge you to vote "No" on the mine reopening. And to be frank, I (and many others) will make it a mission to have any supervisor who votes "yes" lose their position in upcoming elections.

Regards,

David Myers

Re: Idaho-Maryland Mine Project Benefits To The County

Dear Chair and Members of the Nevada County Planning Commission:

This letter is provided by Rise Grass Valley Inc. ("Rise") in support of the requested approval of the Idaho-Maryland Mine Project (the "Project") located in Nevada County (the "County"). The Project proposes to reinitiate underground mining at the Idaho-Maryland Mine, and reclaim the Project site to open space for future development of industrial uses.[1] As outlined below, if approved, the Project would be a catalyst for economic growth for the County, directly increasing the quality of life for County residents by creating literally hundreds of local high-paying jobs, infusing local government with millions of dollars of much-needed tax revenue (up to an additional $6,000,000 per year), and be a driver of economic growth for the surrounding area.[2]

Rise's commitment to the community is further evidenced by its offer of a voluntary Development Agreement which, upon Project approval, would provide funding for a myriad of public benefits. These include direct funding for local emergency personnel and services, purchasing firefighting equipment for protection from natural disasters, construction of public infrastructure, and staffing for public agency positions, equaling a total direct value (not including property and sales taxes) of approximately $500,000 annually and $1.25 million in one-time payments for a new fire engine and traffic improvement fees.[3]

---

[1] Idaho Maryland Mine Draft Environmental Impact Report (IMM DEIR) at p. 1-2 available at: https://www.nevadacountyca.gov/DocumentCenter/View/41650/Idaho-Maryland-Mine-Project-Draft-EIR_Volume-I-Draft-EIR-Chapters-1-8).

[2] Economic Impact of the Proposed Idaho-Maryland Mine Project, Robert D. Niehaus, Inc. (RDN Report) (Nov. 15, 2022) at p. 59-60; Economic Impacts of the Idaho-Maryland Mine on Nevada County, Applied Economics LLC (Applied Economics Report) (Mar. 2021), at. pp. 3-4.

[3] Development Agreement by and between the County of Nevada and Rise Grass Valley Inc. (Development Agreement) (Draft Dec. 19, 2022) at § 3.1.4(a)-(p).

The Project's modern and environmentally responsible mining methods will ensure that these significant benefits to the County outweigh the minimal environmental costs of the Project. The Project's environmental impacts will be mitigated as provided in the Environmental Impact Report ("EIR"), and only aesthetic impacts, temporary noise impacts associated with construction of a new potable water pipeline, and traffic impacts for the SR 174/Brunswick Road and the Brunswick Road/ Sutton Way intersections, were considered significant after mitigation.[4] In reality, the Project will aesthetically improve the site from its current disturbed and battered condition, and new tree planting will improve the existing visual screen to obscure nearly all public views of the site. While the construction noise from the water pipeline construction will be a temporary annoyance, this is not different than any other routine public works project that occurs in the County on a regular basis. Further, Rise has committed to entering into a Traffic Mitigation Agreement and payment for the Project's fair-share contribution towards improvements necessary to ensure the intersection operates at an acceptable level. As stated above, Rise has committed to even greater mitigation measures than those required by law, and we are committed to creating a Project that is a significant benefit to the community.

Accordingly, Rise requests that the Commission approve the Project to provide the County all the benefits discussed herein that substantially outweigh the Project's anticipated environmental impacts.

A. Project Benefits

1. The Project is a Catalyst for Economic Growth

Grass Valley is currently designated as an "opportunity zone," a census tract classified as an "economically-distressed communit[y]" by both the Governor at the state level, and the Secretary of the U.S. Treasury at the federal level.[5] These areas are highlighted as regions that are especially in need of investment.[6] It is imperative to view the Project's benefits within this context, as the Project has the capacity to directly address many of the issues Grass Valley faces as a low-income community.[7]

---

[4] IMM DEIR at pp. 2-10 – 2-12 [aesthetic impacts], 2-91 – 2-92 [noise impacts], 2-102, 2-108 [traffic impacts].
[5] California Community & Place-Based Solutions and the U.S. Economic Development Administration (accessed May 2, 2023) (https://economicdevelopment.business.ca.gov/frequently-asked-questions/).
[6] *Ibid*.
[7] California Community & Place-Based Solutions and the Internal Revenue Service (IRS) define a low-income community as having either: (1) a poverty rate of at least 20%; (2) a median family income below 80% of the greater of the statewide or metropolitan area median family income if the community is located in a metropolitan area; or (3) a median family income below 80% of the median statewide family income if the community is located outside a metropolitan area. (*Ibid* (underline added).) Grass Valley meets this classification under the third prong as it has a median household income of $44,906 compared to the statewide annual median household income of $84,097,

The Project would create a total annual impact of $211.3 million on the County's local economy, with $50.8 million in annual labor income, raising the overall County gross domestic product ("GDP") by 4% by itself.[8] The economic benefits resulting from the Project include: the direct activity created by mining and processing operations; the indirect and induced impacts created by local supplier purchases and employee spending; and impacts created by new tax revenue. Each are discussed in turn below.

It is important to note at the outset that the analysis of the Project's economic impact for the Nevada County community was undertaken by **two (2)** separate consulting firms, the second of which was independently chosen and paid for by the County to remove any hint of bias in favor of Rise. The economic analyses of the two reports largely mirror each other.[9] The Project's economic data, therefore, has been duly vetted, and offers a window into the increased prosperity available to the local community and the County as a whole if the Project is approved.

i. Creation of Long-Term, High-Paying Jobs

The Project will directly employ an estimated 312 people in Nevada County at full operation including underground mine workers as well as mineral processing workers, trades, professional technical services, equipment operators, management and general administrative employees.[10] Of the 312 total workers, 213 will be hired locally.[11] This includes 162 local trainees or entry level workers, 51 experienced local hires, and 99 workers that are assumed to be hired from outside the County.[12] The total annual payroll including benefits is estimated at $45 million dollars. This includes an overall average wage per employee of $122,000 to $145,000, well above the all-industry average wage for Nevada County of approximately $60,000.[13] In addition, Rise would provide a substantial employee benefit package. On average, it is estimated that

---

falling well below the 80% median. (U.S. Census Bureau, Quick Facts (https://www.census.gov/quickfacts/grassvalleycitycalifornia); (https://www.census.gov/quickfacts/fact/table/CA/BZA210221).)

[8] Applied Economics Report at p. 8; See also RDN Report at p. 59 [providing that the Project would generate a total annual output of $202.8 million].

[9] See RDN Report at p. 59-60; Applied Economics Report at. pp. 3-4.

[10] Applied Economic Report at p. 5.

[11] *Ibid*.

[12] *Ibid*.

[13] RDN Report at p. 8; Applied Economics Report at p. 5 [stating that the overall average wage is projected at $93,700 per year];U.S. Bureau of Labor Statistics, (https://www.bls.gov/regions/west/news-release/countyemploymentandwages_california.htm) [providing that Nevada County's average weekly wages are $1,176 per week.]

employee benefits will add an additional 22 percent to total employee compensation.[14] or roughly $145,000 per year.[15]

The creation of consistent, career-path high-paying jobs is especially pertinent to the community in light of the employment opportunities currently available. In a 2017 survey by the Nevada County Executive Office, only 19% of County residents rated employment opportunities as "positive."[16] As of 2021, the median household income for Grass Valley was roughly $45,000—well below the national average.[17] Therefore, the creation of hundreds of jobs overpaying more than double the current median would provide a substantial economic benefit to the community.

ii. Indirect and Induced Economic Impact

In addition to the 312 direct employment created by mining and processing operations, the Project will act as a stimulus for the larger County economy.[18] Operation of the proposed project "would generate […] indirect jobs working for businesses supported by [Rise's] operational expenditures, and induced jobs working for businesses that supply goods and services to workers and their families."[19] The Project will induce an additional 163-300 local jobs and $7.3 million-$13.1 million in annual payroll in the County.[20]

Equipped with higher income, employees at the Project would be able to wield substantial purchasing power, generating significant economic activity by spending at local retail and service establishments throughout the County. Based on the Census Consumer Expenditure Survey, employees at this wage level spend approximately 80 percent of their pre-tax income on goods and services.[21] The employee payroll projected for the Project and the portion of employee spending on local businesses alone would induce an economic impact of $23.4 million per year.[22]

Recycling local spending, meaning the secondary or indirect and induced impacts representing the larger economic effect on the local economy, has the capacity to generate massive economic impact locally. Here, Project employee spending on local business would support 217 additional

---

[19] RDN Report at p. 13.
[20] Applied Economics Report at pp. 3, 6; RDN Report at p. 59.
[21] Applied Economics Report at p. 6.
[22] *Ibid*.

induced jobs and $9.1 million in annual payroll in Nevada County.[23] These induced impacts "include jobs and payroll at the establishments where employees shop, as well as additional jobs and payroll at the local suppliers to those establishments."[24] The induced effects of employee spending on local businesses would generate "an economic impact of $32.0 million per year in Nevada County including $23.4 million related to mine employee spending and $8.6 million from other indirect employee spending"[25] resulting in a "cascade of economic benefits to the region."[26]

In total, approximately 300 additional local jobs and $13.1 million in annual payroll would be generated at businesses throughout the County stemming from direct, indirect and induced impacts of the Project, and consumer demand created by employees.[27]

Another key component of the Project's economic impact is from local vendor purchases. As a resource-based industry, the Project requires sourcing of facility maintenance, operating supplies, transportation, equipment repair, lodging and professional services to operate the Project. The Project would source a sizeable portion of these services and supplies locally, comprising an approximate yearly value of $12.5 million.[28] Purchasing from local vendors in turn supports indirect jobs and payroll in Nevada County. Additionally, local vendors also engage in local spending in the course of their operations, which supports additional jobs and payroll. Local vendor purchases would generate an estimated annual economic impact of $19.9 million in Nevada County, with the capacity to support more than 80 local jobs and $4.0 million in payroll each year at vendor establishments and their suppliers in Nevada County.[29]

iii. Generation of Tax Revenue

Tax revenue from property, sales, and other taxes paid by Rise associated with the Project's local spending and related economic growth "would benefit local jurisdictions and special districts in the [C]ounty." [30] This revenue includes property taxes on land, improvements, and mineral property paid directly by Rise; sales and other taxes paid by Rise; and property, sales, and other taxes paid by local businesses and residents supported by Rise's local expenditures.[31]

Rise currently pays property taxes for the Brunswick and Centennial properties and would continue to pay them throughout their ownership of these properties.[32] The assessed values for 2022/2023 are $2.9 million for the Brunswick property and $1.3 million for the Centennial property.[33] The property tax for Rise's existing properties is $43,000, with $6,000 of this revenue going to the County.[34] After completing construction of any improvements and facilities on the properties, the Brunswick site would result in additional estimated property tax of $125,000, with $17,000 of this revenue going to the County.[35]

Rise would also pay property taxes on the assessed value of the proven reserves of gold, as mineral properties are taxable as real property.[36] "Proved reserves" are those minerals measured by volume and weight which geological and engineering data indicate with reasonable certainty to be recoverable in the future, taking into account reasonably projected physical and economic operating conditions.[37] The valuation of the proved reserves is based on present and reasonably projected economic conditions. The market value of such mineral rights is determined by valuing the estimated quantity of proved reserves that can reasonably be expected to be produced during mining operations. The County utilizes an income approach to assess mineral property values, which considers the aggregate present worth of the property's future net income when assessing the property's current value for tax purposes.[38] Here, the estimated assessed value is approximately $536.7 million, resulting in $5.4 million in Proposition 13 property taxes, with $0.7 million going to the County General Fund in the first year of full operation alone.[39]

The taxation of the proven mineral estate provides a unique opportunity for the County to strengthen and diversify its local tax base. The County would directly benefit from Rise's exploration success and the price of gold. Gold prices typically increase during times of recession when property values decrease, therefore the mine would act to bolster tax revenue during recessions.[40]

[39] RDN Report at p. 53.
[40] For example, prices of single-family homes in Nevada County fell by almost 50% during the great recession of 2008. (County of Nevada, Housing Element Rezone Implementation Program, at p. 4.12-2 (https://www.nevadacountyca.gov/DocumentCenter/View/12141/412-Population-and-Housing-PDF).) During the same period from 2007-2012, gold prices increased by 250%. (U.S. Bureau of Labor Statistics, PPI Commodity Data (https://data.bls.gov/pdq/SurveyOutputServlet); See also U.S. Bureau of Labor Statistics, Gold prices during

Rise's local spending on payroll and purchases of goods and services would also generate increased economic activity, which would increase local tax revenue.[41] Rise's payroll and local operational spending would support direct and indirect jobs in the area.[42] The employees that fill these jobs would spend a portion of their income on property, sales, and other taxes, some of which would be allocated to the County's General Fund. Additionally, Rise's local spending would generate sales tax revenue.[43] The proposed project's spending on payroll and operational expenses during full operation would generate an estimated $881,000 per year in additional tax revenue to local agencies and districts, including local governments and fire protection, schools, and other special districts.[44] The portion of these funds that would be allocated to the County's General Fund is approximately $147,000 per year.

In sum, the total estimated tax effect in the first year of full operation is $1.4 to $6.4 million to local agencies and districts, including local governments and fire protection, schools, and other special districts. The County General Fund would receive a portion of these tax receipts, amounting to $200,000 to $912,000.[45]

B. Public Services Provided Pursuant to the Development Agreement

Rise's commitment to the Project's role in having a positive impact on the community is evidenced by the voluntary Development Agreement Rise will enter into with the County upon approval of the Project. Going well above any of the mitigation measures required by law, the Project will guarantee funding for a myriad of public services.

Rise has agreed to provide $1 million dollars to the Ophir Hill Fire Protection District for a new fire truck and associated equipment, as well as $240,000 in direct funding to the fire district per year for three full-time personnel. [46] In addition, Rise will provide land and construct an emergency helicopter landing site, as well as public access to the Brunswick Site for emergency services during fires and natural disasters, and will train and pay for the provision of twenty (20) professional members of a mine rescue team and tradespeople to assist in emergency services during natural disasters.[47]

[47] Development Agreement (Draft Dec. 2022) at § 3.1.4(i)-(k).

Rise has also offered to provide increased fire protection to the local area through the installation of fire hydrants and dedicate them to the Nevada Irrigation District, as well as construct a potable water line to approximately thirty properties *in addition to* the seven (7) properties identified by the EIR. Rise has already paid for DTSC staff to analyze and help permit remediation of the Centennial site.

Rise has offered a cents per ton fee for trucks on Brunswick Road which at 1,000 tons per day would provide approximately $150,000 per year for local road improvements. This additional funding is over and above mitigation for any project impacts to the County for roadway maintenance cost on Brunswick Road from the project.

To aid in governmental oversight of the mine, Rise has also agreed to pay $100,000 of funding per year for full-time staffing of an air pollution control specialist for the Northern Sierra Air Quality Management District.[48] The AQMD directly oversees the mine and will provide the public with additional assurances that the mine is in strict compliance with all air quality standards.

The Project will also provide a local source of aggregate, which will lower construction costs and lessen the environmental impacts associated with importing aggregate as the County continues to grow and develop.[49]

C. Domestic Gold Production is Critical to US National Security

In addition to the beneficial economic impacts the Project will have on the County, the domestic mining of gold is central to the continued stability of the United States' economy and national security.[50] Gold is not only an essential reserve asset for United States' central banks, which is critical in times where economic and currency stability is in question,[51] but also plays an important role in the production of computers, communications equipment, and spacecraft, among many other types of technology.[52] Therefore, the Project is aligned with the nation's

interest in securing domestic gold production for both economic, currency, and supply chain stability.[53]

D. The Project is Designed to be a Model of Environmental Responsibility

Unlike gold mines of the Gold Rush era and even the 20th Century, the IMM Project is designed to specifically protect the environment and the local community from impacts, using state of the art technology and by directly responding to community comments and concerns. The Project does not use mercury, does not use cyanide, does not dump untreated waste into local waterways, and every aspect of the mine has been designed to protect the environment and ensure the health and safety of the community.

As an example, the Project uses electric machinery rather than diesel-powered machinery in all underground areas of the mine to reduce emissions and diesel consumption.[54] The Project uses modern environmentally sensitive flotation gold separation methods instead of cyanide or mercury.[55] In response to community concerns about noise, nearly all noise-generating aspects of the Project are underground or have been enclosed in insulated buildings to greatly reduce noise impacts to only the level of a whisper.[56] When dewatering the underground mining works, rather than discharge untreated water into local streams and use dilution with existing stream water to achieve California water quality objectives, the Project proposes to first treat all discharged water until it reaches drinking water standards, which will actually make the stream water higher quality than currently exists.[57] To minimize any potential for asbestos impacts, the Project not only complies with the California Airborne Toxic Control Measures for asbestos by screening samples with optical microscopes (as is typical for all Nevada County projects), the Project goes above and beyond this requirement by voluntarily testing samples using electron microscope methods for target mining zones long before they are mined to avoid any problematic geologic areas.[58]

Rise has even committed to providing substantial funding to the Air Quality Management District to hire a staff position to help oversee the mine and give the community certainty that the Project will be held responsible for meeting all air quality requirements. Finally, the Project has committed to funding and constructing a potable water pipeline for 30 properties, monitoring groundwater levels for 12 months ***prior*** to dewatering and even monitoring individual wells

throughout the community, even though the risk of groundwater well impact from the Project was found by multiple hydrogeological firms to be minimal.

As stated above and detailed in the EIR, the Project's only unavoidable significant impacts were the aesthetic impact, the temporary noise impact from the construction of the potable water pipeline, and the traffic impact at the SR 174/Brunswick Road and Brunswick Road/Sutton Way intersections.[59] We believe the EIR's conclusion that the Project would create an aesthetic impact is overly conservative and that the Project would actually have an aesthetic benefit given the substantial screening of the Project site and the proposed improvements to the heavily disturbed and battered site. Further, the noise impact from the potable water pipeline construction, while annoying, would only be temporary and would be similar to that of any local public works or construction project. Regarding the traffic impacts at the SR 174/Brunswick Road and Brunswick Road/Sutton Way intersections, Rise has agreed to enter into a Traffic Mitigation Agreement with the County to pay for the Project's fair share contribution towards improvements necessary to ensure the intersection operates at an acceptable level.

In sum, the Project is not the antiquated irresponsible gold mine of yesteryear that the project opponents worry about. Rather, the Project is designed to be the model of a modern mining operation, for which no expense has been spared to protect the environment and community.

E. Conclusion

The discussion above illustrates the Project's ability to create substantial economic benefits to the County. If approved, the Project would be a catalyst of economic growth for the County by creating hundreds of high-paying jobs, generating much needed local tax revenue for essential government services, and would provide a source of economic stimulus for the County as a whole. Further, the County is in great need of an employment driver to raise the economic fortune of the Grass Valley area. Rise believes that the benefits of the Project substantially outweigh its potential environmental impacts, and therefore respectfully requests that the County Planning Commission approve the Project.

Sincerely,

RISE GRASS VALLEY INC.

Ben Mossman, President

Re: opening of the mine

We both are in favor of opening the mine in this community. The negativity about the mine and it's so called terrible consequences seems to be from those who don't understand the mining industry. The story of many mega trucks hauling thousands of loads daily on their short trip is not true. One thousand tons per day equals only 40 loads . The increase in truck traffic in the Brunswick Road area would be hardly noticeable.

The regulations and inspections required to run an operation of that size will be regulated continuously and probably to the point of being over regulated.

The water and the well situation for the neighboring properties should not be a concern as Rise Gold has agreed to replace the wells with a water line. The mine will also be 2,000-2500 feet below the level of the earth. Blasting at gravel quarries now is barely heard , so the idea that a loud blast will occur seems really out of the equation. The mine , as we read somewhere, will be using electric vehicles. So no pollution from them, or at least a minimal amount of exhaust.

This community needs a base for employment. The mines pay decent wages with benefits and would encourage a younger generation to be able to live in this area and not have to leave in order to get ahead in life. We need decent employment opportunities for the locals. The Board of Supervisors is doing something to allow more cannabis business in this area. Think about it. Cannabis brings in many workers that are not the best ones to have around. At harvest time just look at the police blotter locally , or ask a peace officer , to see that it encourages a bad group of people. We are not saying that all people in the cannabis industry are bad, just that it has a higher percentage of unwanted people around. The mining industry uses drug testing so the undesirables are not involved. They would have to show up to work on a regular basis to keep their jobs.

We do own the property adjacent to the dump site on Centennial Drive and Whispering Pines and are looking forward to seeing that land developed. Currently it houses illegal homeless and the number of fires that are caused by them in the area is a concern. Just this weekend there was another one. How inconvenient for the business owners around the area. We could lose everything and off they move to another site with not a care in the world.

We are hoping you consider allowing the mine to give it a try. Believe the statistics, check on the mines in the state of Nevada and their progress, study the plans and don't listen to those who don't know what

they are talking about. The mining industry is extremely regulated with Federal, State and local government rules. The inspectors will be watching for anything that could go wrong. Allow the mine to give it a try. We need the industry in this area. Let Nevada County be an example of how mining in a community can work. We would rather be a mining community , as our past history documents, then the cannabis capital of the state or nation. Think about the extra income that the county and cities would receive from this industry. It is needed to fund the future.

Mr. Danny Milman
Nevada County Planning Commission
950 Maidu Avenue, Suite 170
Nevada City, CA 95959
planning@nevadacountyca.gov

Dear Mr Milman,

I am writing to plead that you vote AGAINST CERTIFICATION of the Idaho-Maryland Mine project Final EIR, and also that you vote against this project moving forward in any capacity.

My name is Jennifer Burt, and I live in District 1, where I have raised my two kids. My husband and I purchased our home and moved to this area many years ago because we were drawn to the natural beauty, open space, and ecology of the region, the ability to farm on our land, and the quiet ambiance of our neighborhood.

The threat of this project has caused significant distress for all of us, knowing how much it would degrade the quality of life and environment of this beautiful place if it goes forward. Worse, we have all watched the County sponsor a terribly prepared, absolutely inadequate EIR which was supposed to objectively analyze the impacts and describe a comprehensive, enforceable monitoring and mitigation program. Yet, despite the fact that this major project has so much potential to negatively impact our community and natural resources, the County and its consultants have failed to ensure the EIR does any of the above on any level for any topic. It is categorically the worst EIR for a large project that I've ever seen after working in the field of environmental consulting for over 20 years.

Certifying this EIR would just fast track the next poorly-thought-out mining operation to use it as their County-approved environmental document to build off of, and would ensure our community will continue to be unsettled by the threat of a huge gold mining operation happening underneath our very feet and homes, tampering with our groundwater supply. Gold is clearly an important part of Nevada County's past, but it is uninformed nostalgia to think it was a bright, shiny past. It was a gritty, loud, environmentally degrading and somewhat dystopian reality for the vast majority of the people living here and the natural environment when the Idaho-Maryland and Empire Mines were running here. Large-scale gold mining is not part of a sustainable and beneficial future for this County. We need to address climate change, water reliability in the face of climate instability, wildfire threats—more than enough difficult issues for one community to grapple with—let's not add a massive industrial mining operation by a greedy corporation with no interest in our local community to our list of current traumas. If you do approve this EIR or this project, you are setting the County up for a multitude of environmental lawsuits (if the EIR is approved) and an unmitigated environmental disaster (if this project or similar goes forward). Please do the right thing for your community and vote NO on certifying the project EIR and vote NO on allowing the project to move forward.

Sincerely,

Jennifer W. Burt

Laura Wagner-Balch Gary Balch

Subject: Public comment on the Environmental Impact report on the proposed Idaho Maryland Mine – Rise Grass Valley Project

We find that Economic Impact Report (EIR) inadequate for the reasons listed below.

- The EIR is not responsive to the community request to identify other mines that are operating around the clock which are surrounded by residential properties supported by drinking water wells which would be impacted by this project. Mr. Niehaus states that there are no comparable sites and drops the issue. This is inacceptable. If other sites are not comparable, the EIR needs to explore in detail the probable impacts on the ground, the ground water, the roads, the air and the general quality of life, of round the clock massive construction within a residential community.

- Healthcare costs to the community and employees are a significant element of a project of this nature, yet are not addressed in this study. This is unacceptable. Nevada County does not have a revenue stream to support healthcare costs of this project and would need to seek voter approval for funding the potential costs of worker injury, community injury, air quality, and unanticipated healthcare issues, costs which could be quite substantial.

- The EIR was not responsive to the capacity of the Rise Grass Valley, the organization proposed to undertake gold mining at the Idaho Maryland site. Does the company have the capital to undertake a project of this scope? Accounting and insurance reports are needed as is an analysis of what happened in the British Columbia project bankruptcy as a result of environmental and safety infractions by this same company. This is unacceptable and does not promote trust in the Rise Grass Valley's organization's ability to undertake the work in this county.

As a result of these inadequacies in the report, we recommend that the Planning Commission recommend that the Board of Supervisors reject the EIR and recommend denial of the permit application of Rise Grass Valley for the Idaho Maryland mine project. Staff should be released from further expensive investigation of this project for a period of no less than fifty years.

Thank you for your consideration.

Cc; Hardy Bullock

Hello Nevada County Planning Department and Board of Supervisors,

I was born here and live within a few miles of the Idaho Maryland mine site. I am gravely concerned about the mines impacts on my home and community for these several important reasons.

1. Property values- I never thought that I could afford a home here, when I had the opportunity to purchase in the 2009 Financial Crisis, I invested my life savings and my whole hearted effort to maintaining a home here. If the mine impacts the property value of my home in a negative way, My investment will be lost so that an out of town mining company may make their fortune instead.

2. Water- I get my water exclusively from a 80' deep well located within 2 miles of the mine site but outside the defined "impact zone". If we have learned anything from our legacy of mining and exploitation of the local environment, it is that there are "unforeseen" consequences to big projects like this mine and they frequently have an outsized impact on the surrounding area.

We can see it happening, much like the early recognizers of climate change in the 1980's and 90's, yet business as usual seems to prevail. If my water volume and quality suffer from the impact of the mine, I will be very upset, my land will lose value and it would have been avoidable. I do not trust the organizations that stand to profit to make choices that will respect my effort and commitment to maintain a home and reside here in this county. I expect our local elected officials to stand for my interests.

3. Noise and Traffic- Our community already suffered from poor road infrastructure. The increase in heavily loaded truck traffic will clog our intersections, degrade our already poor roads and fill my neighborhood with noise and dust. I fear that these will cause my property values and my family's quality of life and our right to quiet enjoyment of our parcel to similarly degrade.

I have sacrificed opportunities for employment, for investment, and for higher quality of life to live here. It is so very obvious that this mine, if allowed, will undermine the sacrifices that I have made to be a part of this specific community and undermine my family's efforts to weather the threats of fire and economics of living in this area.

If this mine is allowed, it will be the fault of county leadership, full stop.

I will lose my investments in my real estate and community that I have made over 45 years of living here. This is unacceptable to me as a local, born and raised, tax paying citizen. Do not allow this project to move forward. I personally have a great deal at stake and am not willing to trade it for the “projected benefits" of further ecological exploitation. We have learned from our past efforts that mining is toxic, has a huge impact on community, and has a much bigger footprint than any mining company would admit. We do not need another super fund site here. We have not even done a respectable job of cleaning up the historical mine sites that are currently still an environmental threat to life and habitat.

As a born and raised local and as an active and involved tax paying citizen,I insist that this mine is stopped. **It is incumbent upon you to stand up for our community and defend our town from exploitive outside interests.**

Many thanks,

Eli Ferrier

ATTACHED: **IMM Project FEIR Violation of CEQA Guidelines**

May 8, 2023

To: Nevada County Planning Commission

From: James Bair aristotle2001@gmail.com

Subject: IMM Project FEIR Violation of CEQA Guidelines

The IMM FEIR cannot be certified because there is a pattern of explicitly excluding critical content (**see CEQA quotes below**). In order to predict of the "adequacy" of mitigation measures, **CEQA requires that the FEIR provide details of how negative environmental impacts are to be mitigated**. This FEIR omits mitigation details based on case law (citations below) which are not relevant to the IMM Project in our judgement. For example, it states that measurements of toxins such as asbestos will be measured **after approval** based on plans also **developed after approva**l. The FEIR includes the following questionable statement in at least 7 places (quotes in italics):

> **To quote the IMM FEIR,** "*The engineering details and intensive sampling described by many commenters **would be** developed and completed through the implementation of mitigation measures, and is not required to be completed as part of the CEQA process".* **We cannot determine the adequacy of mitigation measures that are not fully described in the FEIR.** Excluding "engineering details" is justified using legal cases that are not relevant or comparable. Each of the seven FEIR occurrences of that quote in the FEIR are the same (See FEIR pages 19, 411, 638, 6835, 7590, 7797, and 8187).

But CEQA states: "*The project description **must contain sufficient specific information** about the project to allow the **public** and reviewing agencies to evaluate and review its environmental impacts. A project description that omits integral components of the project may result in an **EIR that fails** to disclose the actual impacts of the project."* (See Note 2 below). *(Santiago County Water Dist. v. County of Orange (1981) 118 Cal.App.3d 818, 829, 173 Cal.Rptr. 602.)* In this case the Court stated *"we hold that the provisions of CEQA do not exempt a public agency from the Public Resources Code section 21100 requirement that an EIR shall include a detailed statement setting forth "all significant effects on the environment of the proposed project…"* (see Note 2 and Exhibit A). The Santiago case cites several cases that reference examples of inadequate mitigation descriptions.

Legal Council also supports IMM FEIR insufficiency: *"See Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova (2007) 40 Cal.4th 412, 439 (holding factual inconsistencies and lack of clarity in the [IMM] FEIR leave the reader and the decision makers without substantial evidence to support the EIR's conclusions); Laurel Heights Improvement Assn v. Regents of Univ. of Cal. (1988) 47 Cal.3d 376, 404 (There must be a disclosure of the analytic route the agency traveled from evidence to action….)"* (See Note 5).

We recommend that the County Planning Commission not certify the FEIR because there is insufficient information as required by CEQA to allow evaluation of the mitigation measures.

/s/ James Bair 510.910.2300 Grass Valley, CA 94945

Former Grass Valley Planning Commissioner, Scientist at Stanford, Bell Labs of CN, and the USAF; also Manager, HP; Sr. Manager, Xerox Corp.

CC: Board of Supervisors and County Council

REFERENCES

NOTE 1: <u>FEIR references the legal cases on</u> pages 119, 411, 638, 6835, 7590, 7797, 8187.

The cases are [see Exhibit A]*: (1) Dry Creek Citizens Coalition v. County of Tulare* (1999) 70 Cal.App.4th 20, 26.) **Which cites** *Sacramento Old City Assn. v. City Council,* Court of Appeal Third District Apr 30, 1991**.**

(2) DRY CREEK CITIZENS COALITION v. Artesia Ready Mix Concrete, Inc., Real Party in Interest and Respondent. (1999) https://caselaw.findlaw.com/ca-court-of-appeal/1129797.html

The FEIR also states on p. 411 that "*details to be from the County …"* to further justify omission of mitigation measure details.

NOTE 2: CEQA Requirements

CEQA states:

"*There must be sufficient information to understand the environmental impacts of the proposed project.* (CEQA Guidelines, § 15146, *discussion*.) *The EIR must achieve a balance between technical accuracy and public understanding."* (Guidelines, § 15147, discussion.) [A detailed description of the project and mitigation measures is provided in the Guidelines to illustrate the required level of detail.]

> **Court of Appeal Judgement:**
>
> In *Santiago County Water Dist. v. County of Orange (continued from above): "…and that under the facts of the present case the superior court erred in upholding the approval of an EIR which deferred any consideration of any significant environmental effects of supplying water to the new community."*

NOTE 3: Dependency upon State agencies for implementation after IMM Project approval

For example, the FEIR says that plans to control the lethal air pollution and other negative environmental impacts will be done **after** the Mine Project is approved. They justify not doing the "engineering" plans for managing asbestos air pollution by **delegating** responsibility to The Northern Sierra Air Quality Management District (NSAQMD) that does not agree [see Exhibit B].

NOTE 4: Relevant Case Law, CA 3rd Appellate Court

Based in thousands of hours of analysis by the Public, a recommendation to certify the FEIR is vulnerable to a **"prejudicial abuse of discretion" decision based on case law**. To wit, *"In reviewing the adequacy of the county's actions in preparing the EIR for the sand and gravel mining plant, we are limited to deciding "whether there was a prejudicial abuse of discretion . . . [which] is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (§ 21168.5.) Thus, we do "not pass upon the correctness of the EIR's environmental conclusions, but only upon its sufficiency as an informative document."* (*County of Inyo* v. *City of Los Angeles* (1977) 71 Cal.App.3d 185, 189 [139 Cal.Rptr. 396].) [enhancement added]

Note 5: Legal conclusion that the mitigation measures are inadequate in SHUTE, MIHALY & WEINBERGER LLP letter to Matt Kelley, Nevada County Planning Department, March 20, 2023, page 24. "*The applicant prepared an Asbestos, Serpentinite, and Ultramafic Rock Management Plan (ASUR Plan) that purportedly incorporates measures to minimize asbestos in the engineered fill generated by the Project. DEIR at 3-20. According to the EIR, the ASUR Plan requires testing of all mined materials to ensure that average mined material and engineered fill contains* ***less than 0.01%*** *asbestos by mass. DEIR at 4.3-61 (emphasis added); id. at 3-20. Thus, the EIR gives the impression that all rock generated by the Project will be tested, and that it will achieve an average level of less than 0.01% asbestos by mass. However,* ***to the contrary****, the EIR and ASUR Plan elsewhere obliquely reveal that very little of the mined rock will actually be tested, that it will be held to a much lower standard of* ***0.25% asbestos****, and that there is no concrete plan for what to do if the engineered fill is found to be contaminated."* (Page 26) [CA State law clearly states contaminated fill cannot be hauled or used…]. (c.f. CEQA Guidelines § 15126.4(a)(1). [https://www.law.cornell.edu/regulations/california/14-CCR-15126.4]

EXHIBIT A: IMM FEIR CASES CITED TO JUSTIFIY EXCLUDING MITIGATION DETAILS

Dry Creek Citizens Coalition v. County of Tulare (1999) 70 Cal.App.4th 20 *Citizens challenged the County's approval of the Artesia sand and gravel mine on Dry Creek on the claim that the project description contained in the EIR prepared for a proposed expansion of the operation (from 33.5 ac. to 162 ac.) inadequately described water diversion elements of the project. They also challenge the adequacy of the EIR re: road improvements, mitigation measures, and cumulative impact analysis as to biological resources.* ***T****he court upheld the EIR on the basis that the Guidelines require a general description of project characteristics, not engineering drawings as argued by Citizens. Also, the County included "well established design criteria" for the project's water diversion structures. The county also included contingency measures in its requirement for a sycamore alluvial woodland revegetation plan, substantial evidence supported the adequacy of this mitigation. In dismissing the claim that some of the county mitigation was unlawfully deferred, the court cited* ***Sacramento Old City Assoc. v. City Council of Sacramento*** *(1991) 229 Cal.App.3rd 1011 for the proposition that an agency may adopt a mitigation program that will require mitigation, the precise design of which will be determined in the future. Read as*

a whole, the EIR adequately discussed impacts. https://casetext.com/case/sacramento-old-city-assn-v-city-council: Sacramento Old City Assn. v. City Council.

Case Summary: we conclude this case is not relevant to the IMM FEIR

The Sacramento Old City case is urban demolition and construction: "[Petition] *to set aside the decision of defendant, City Council of Sacramento (the City) to expand the downtown Sacramento Convention Center complex (the center) and to construct an office tower at 1325 J Street (the office tower). Plaintiffs also sought an injunction against the future demolition of the Merrium Apartments until the City prepares an adequate environmental impact report (EIR) on the project. On appeal, plaintiffs argue the EIR approved by the City is inadequate under CEQA. Plaintiffs contend the EIR is deficient because: (1) the EIR fails to adequately address mitigation of parking and traffic impacts; (2) the EIR contains insufficient findings concerning parking and the destruction of the Merrium Apartments.*

EXHIBIT B: Northern Sierra Air Quality Management District (NSAQMD) DEIR Comment April 4, 2022 [superseded ON April 28, 2023, AFTER THE COMMENT Period and is not addressed in the FEIR per NSAQMD.]

Re: Comments on Draft EIR for Idaho-Maryland Mine, Nevada County, CA

Introduction

The NSAQMD submitted comments and recommendations regarding the proposed project as part of the NOA/NOP, but these were omitted from the DEIR's NOP comment section.

The NSAQMD recommended that the applicant work with the Department of Toxic Substances Control, the US Geological Survey and/or the Office of Environmental Health Hazard Assessment to obtain concurrence that asbestos testing for the proposed mine is adequately addressed with regard to the number and locations of samples and applicable analytical techniques. It does not appear as if this was done.

The NSAQMD has also submitted additional comments and been involved in other ways with the environmental documentation process for the proposed project. Many of the NSAQMD's comments and observations have been addressed, but some important ones remain unaddressed. Notably, the DEIR includes a newly added, previously undiscussed method of converting asbestos in rocks to asbestos in air that is not backed by science.

Asbestos emissions are the primary concern of the Northern Sierra Air Quality Management District (NSAQMD). The DEIR's treatment of naturally occurring asbestos is scientifically unsound and therefore not adequate for CEQA purposes. Laboratory testing in November 2021 of seven dominant types of rock from the site discovered asbestos in every type, with an average of 594,625,000 asbestos fibers per gram. For perspective, a new penny weighs 2.5 grams. Based on the recent tests of 40 rock samples and 2 previous rock samples, in a penny's mass of average mine rock there are well over a billion asbestos fibers.

Asbestos and Public Health

Asbestos is a well-known carcinogenic toxic air contaminant. Effects of asbestos exposure are insidious, highly variable and may not show up for 10 to 40 years or more. The most infamous result of asbestos exposure is mesothelioma, a specific type of cancer. The Office of Environmental Health Hazard Assessment (OEHHA) approach to asbestos risk assessment under AB2588 (the Air Toxics Hot Spots Act) is currently based only on a person's risk of developing mesothelioma. It does not provide any assessment of risk of developing other types of asbestos-related diseases such as asbestosis (an inflammatory condition affecting the lungs that can cause shortness of breath, coughing, and permanent lung damage), pleural

plaques (changes in the membranes surrounding the lung), pleural thickening, benign pleural effusions (abnormal collections of fluid between the thin layers of tissue lining the lungs and the wall of the chest cavity) and assorted cancers of the lung, larynx, pharynx, stomach, colorectum and ovary.

For additional information on the effects of asbestos exposure, see the National Cancer Institute website (https://www.cancer.gov/about-cancer/causes prevention/risk/substances/asbestos/asbestos-fact-sheet). Following is a relevant excerpt from this website:

*There is some evidence that family members of workers heavily exposed to asbestos face an increased risk of developing mesothelioma (https://www.cancer.gov/about-cancer/causes prevention/risk/substances/asbestos/asbestos-fact-sheet#r12). This risk is thought to result from exposure to asbestos fibers brought into the home on the shoes, clothing, skin, and hair of workers. To decrease these exposures, Federal law regulates workplace practices to limit the possibility of asbestos being brought home in this way. Some employees may be required to shower and change their clothes before they leave work, store their street clothes in a separate area of the workplace, or wash their work clothes at home separately from other clothes (*https://www.cancer.gov/about-cancer/causes prevention/risk/substances/asbestos/asbestos-fact-sheet#r2*).*

Cases of mesothelioma have also been seen in individuals without occupational asbestos exposure who live close to asbestos mines ((https://www.cancer.gov/about-cancer/causes prevention/risk/substances/asbestos/asbestos-fact-sheet#r12)).

Asbestos PCM Conversion

The Air Quality sections of the DEIR include a newly introduced concept of converting asbestos measurements to PCM (phase contrast microscopy) units. There is no accepted method to convert between rock samples and air samples. The DEIR's approach of translating asbestos discovered in solid rock samples into PCM fiber concentrations in air is not possible. The PCM concept is from Appendix C: Asbestos Conversion Factors & Cancer Potency Factor, which is part of OEHHA's February 2015 Air Toxics Hot Spots Program Guidance Manual. OEHHA's conversion from fiber counts to mass as PCM fibers was developed exclusively for air samples. This is made clear in EPA's Airborne Asbestos Health Assessment Update document (USEPA, 1986. Airborne Asbestos Health Assessment Update. EPA/600/8-84/003F, Office of Health and Environmental Assessment, Washington, DC), which is referenced in OEHHA's Air Toxics Hot Spots Program Guidance Manual, Appendix C: Asbestos Conversion Factors & Cancer Potency Factor.

None of the DEIR's discussions regarding PCM conversions are valid. PCM cannot be used as a reporting metric, a compliance verification mechanism or a replacement for other methods of asbestos investigation. PCM asbestos conversion is not a concept that applies outside the world of asbestos air monitoring. During the DEIR comment period the NSAQMD contacted OEHHA with questions about the PCM conversion. OEHHA referred the NSAQMD to the California Air Resources Board (CARB) Risk Analysis Section, which worked with CARB's

Monitoring and Laboratory Division in providing an assessment of the underlying science. In short, CARB confirmed the non-validity of the applicant's PCM conversion approach. Following is an excerpt from a 3/28/22 email from CARB's Risk Analysis Section:

I … wanted to clarify our earlier statement from our previous email regarding the risk calculations based on the lab reports, we initially attempted to convert TEMs into concentration in the air per the OEHHA guidance and ran it through HARP, but after discussing the outcome with others internally, it really isn't an appropriate way to calculate the risk (this was confirmed below with our MLD staff as well). Rather, you would need an annual average concentration from either sampled or modeled air concentrations, so our initial analysis no longer applies.

Staff from our Monitoring and Laboratory Division observed the following:

1. Determination of Risk from Rock Samples. *I agree with you, it is not appropriate to determine risk from rock samples. The asbestos fibers considered in Appendix C of the Hot Spots Guidance came from airborne samples during occupational exposure studies. I checked the 1986 U.S. EPA reference….*

The PLM and TEM analyses in this DEIR were done on bulk samples (rocks), and the asbestos concentrations are reported in weight percent. It is not known how many asbestos fibers can be generated (and become airborne) from a given mass of asbestos-containing rock material. So there is no known conversion factor for the asbestos weight % (by TEM analysis of a rock sample) that can be used to estimate the number of PCM fibers/m^3 applicable for the Hot Spots risk assessment equation.

2. Calculation of asbestos weight % in TEM analysis report. *[This is in response to a separate question from the NSAQMD] The total asbestos weight % should be the sum of the chrysotile and amphibole asbestos weight percent. For sample **Y962990** (attached) it appears that there is an error in the report. Only 1 chrysotile fiber ≥5 µm is reported, and yet the weight % is 0.075. Comments describe actinolite fibers detected (an amphibole asbestos). Strange that a total weight % of <0.001 is reported.*

*For sample **Y962999** … I did not detect an anomaly in the TEM report. Chrysotile fibers can be much smaller and thinner than amphibole asbestos fibers. Many chrysotile fibers detected do not amount to much weight because they are so small or thin. CARB M435 PLM analysis of this sample is 2.5% asbestos by point-count. This is not unusual either. PLM analysis uses ~100,000 times more mass of sample than TEM analysis. It is best to start with PLM, and follow up with TEM for the PLM non-detects. TEM can miss out on finding the asbestos because the TEM sample mass is so low.*

3. DEIR asbestos calculations (Appendix C). *For Appendix C (attached) there were no equations given on how TEM structures per nanogram and PCM asbestos weight percent were calculated in the first table that groups asbestos test results by rock type. In the next table, on the second and third pages (pages 56 and 57), there is a missing column for TEM weight % from the analyses.*

4. Geological Units and Asbestos Testing (page 9). *The equations that [were] used for calculations of asbestos structures per nanogram and PCM asbestos by weight are not given. It is difficult to follow the discussion in this section because the lithology of the rock units is not described, and neither are the rock sample groupings clearly identified in Appendix C.*

NSAQMD recommends that the notion of PCM conversion should be thrown out because using OEHHA's air sampling PCM conversion formula for rock samples has the effect of making it look like there is less asbestos present than TEM laboratory work has demonstrated to be the case. Instead, the project's risk should be evaluated based on many more samples being gathered, and evaluated using TEM asbestos by weight. Those samples should be gathered in an approved, standardized manner (such as is set forth in Method 435) that employs composite collection practices rather than hand-picked pieces of core samples (which the tested samples were).

Using TEM to look at the same old core samples that were previously analyzed with PLM does have some value because we can now see how much asbestos the PLM method missed. PLM only detected asbestos in 2 of the 40 core samples, but the TEM method detected asbestos in 17 of the 40 samples, including in every rock type evaluated.

Both chrysotile and amphibole asbestos were discovered in the core samples. Chrysotile fibers tend to be smaller than amphibole fibers, making them more likely to become airborne and be transported great distances in the wind. Depending on weather conditions, they could be inhaled or deposited on surfaces in all parts of Nevada County for the 80-year duration of the project.

Note that the footnote on page 55 reads, "Samples containing naturally-occurring asbestos were from underground rock only; naturally-occurring asbestos is not known to outcrop at the surface of the Brunswick Site or Centennial Site." This is not the case – it could be that this was mistakenly left in the document from a version written before TEM was employed to get a closer look at the samples. While only 2 grab samples were taken from the surface of the 55-acre Centennial site, one of the two was found to contain 30-million chrysotile asbestos fibers per gram of rock, as is listed in the lab report for Sample Y962843 (ASUR Plan, unnumbered document page 106/131).

It is difficult to find the Health Risk Assessment among the many pages of the DEIR. It begins on unnumbered document page 356 of 1938 of Appendix E.1, as Appendix B of Appendix E.1. It should be noted that Appendix B of Appendix B of Appendix E.1, titled "Fugitive Dust TAC Concentrations" (starting on page 1,901 of the document) is missing asbestos. The Health Risk Assessment should be easier to locate.

The HARP report lists the maximum mitigated cancer risk as 3.34e-5 (group 543, p. 1839 of 1938) while the Appendix B, p. 1 reports the maximum cancer risk as 1.04e-5 (= 10.4e-6).

Asbestos Sampling and Monitoring

The NSAQMD has recommended that additional rock sampling be performed, and performed in a representative manner using composite samples, but it appears that no further sampling has been done (only further investigation of previously collected samples). There are still only 2 samples from the 56-acre Centennial site. All of the samples analyzed using TEM were previously analyzed using the inferior PLM method. The difference in the results from the two methods is large. PLM only detected asbestos in 2 of the 40 samples, but the TEM method detected asbestos in 17 of the 40 samples. This is mainly because PLM cannot detect small asbestos fibers, which are more easily entrained in the wind, can travel farther, and are inhaled deeper into the lungs.

It is unclear why the two serpentine samples originally evaluated using TEM were discarded from the 40-sample statistics and from consideration for the Health Risk Assessment. There were 42 samples analyzed using TEM, not 40. The two that were excluded are especially rich in asbestos. If all 42 samples are considered, the average asbestos concentration is 0.24% by weight.

In September 2020, the NSAQMD and Dudek communicated about monitoring. It would be ideal to have baseline monitoring data for at least a year before the project starts up. The NSAQMD suggested including a publicly accessible webcam (one for each site preferably) in the monitoring plan, as well as a MET site and a rain gauge. Monitoring specifics set forth in the Construction ATCM are available at CCR 93105(h)(3) and (h)(4). 40 CFR Part 58 (especially Appendix E) also contains relevant monitoring specifics.

Asbestos Emissions

Table 5 (App. E.1, document page 378/1938) lists construction emissions of .00003 tpy of asbestos, which is 0.06 lbs/year. This is incorrect. If we add the obvious dust from mitigated PM10 construction emissions due to off-road equipment (0.6 lbs/day) to the fugitive dust emissions (8.30 lbs/day) we get 8.9 lbs/day, or 3,248.5 lbs/year. TEM laboratory testing of 42 samples from the site yielded an average of 0.236355% asbestos content by weight. .236355 / 100 x 3,248.5 lbs/yr = 7.68 lbs/year, or 128 times the quantity of asbestos emissions presented in Table 5.

Dust emissions for the following 10 years are estimated at lbs/day from underground blasting (1.61) + ore processing (0.29) + fugitives (39.05) = 40.95 lbs/day, or 14,946.75 lbs/year. This comes to 35.33 lbs/year of asbestos emissions.

There is an Engineered Fill placement emissions table on unnumbered document page 303 that lists 37.95 lbs/day of PM emissions. The asbestos emission calculations are based not on the amount of asbestos present in the rock, but on the ASUR plan's goal of 0.01% asbestos in the engineered fill. The table at the top of the page includes emission factors. For the dumping of dump trucks, it includes emission factors for "material drop" from AP42, Table 13.2.4. The "material drop" emission factor is not for "material handling – blending." "Blending" implies disturbance that is continuous for some amount of time, whereas a material

drop is more or less instantaneous. The emission factor assumptions for the use of AP-42 section 13.2.4 should be explained. A material drop emission factor of 0.0001 lb/ton is used in the DEIR. However, the equation in 13.2.4 for material drop yields more than 6 times that amount if we apply a reasonable 5 mph wind speed and 3% moisture content.

Emissions Estimate Assumptions

On page 304, there are a few tables that are not explained. The rationale for using a silt content of 1.6% for the crushed rock and a moisture content of 15% for the sand tailings should be discussed. The normal ranges noted in AP-42 section 13.2.4 are a silt content of 0.44% to 19% and a moisture content of 0.25% to 4.8%. The choices taken in the DEIR for silt and moisture content result in lower emissions than the average anticipated values. Particularly since the waste rock has been crushed finely (beyond normal aggregate processing), the fill would have an increased concentration of fine particles/dust.

Additional assumptions on document page 304 that are questionable include a wind erosion area of 0.72 acres of active compaction, 0.34 acres access road and 1.00 acres either seeded or with covering underway. Elsewhere in the DEIR, it appears that more surface is to be disturbed that the area indicated in the assumptions on page 304. Likewise, the assumptions for bulldozing and compaction (2.43 hrs/day and 1.02 hrs/day respectively) seem to be less than indicated elsewhere in the DEIR.

The Logging and Chipping (described on page 4.3-56) is assumed to be for only 24 acres (Centennial and Brunswick sites combined). This is expected to take 11 years, so the assumptions divide 24 acres by 11 years to arrive at 2.18 acres per year, and it is assumed that logging and chipping will occur on only 1 day per year. It would be more realistic to consider that more than 2.18 acres might be cleared in a given year. Also, there is no mention of emissions associated with ongoing vegetation management.

Document page 306 contains logging & chipping emissions. There should be a source listed for the emission estimates. It is impossible to tell if the emissions are only from the equipment engines, engines plus tires, or engines, tires, root balls, fugitives from fans and loading limbs into the chipper, and so forth. Without an explanation there is no way to assess the validity of the numbers. From the tables on pages 307 and 308, it appears that those logging and chipping emissions listed on page 306 are only from the engines (which would be far less than if the entire process was evaluated). Following the chipping and logging estimates is a table that represents mobile sources associated with logging and chipping. However, it assumes that all operation is on paved roads and none of the vehicles are operating off-road, and only includes emissions directly from the vehicles (no fugitives). The emissions are based on EMFAC, which does not consider emissions from tires, fans and air displacement as vehicles navigate off-road to collect chips and logs.

The beginning of the Earthwork and Material Handling section (App. E-1, p. 24) reads, “Barren rock hoisted from the Brunswick shaft will be placed in the existing concrete silo located at the Brunswick Industrial Site. The barren rock will be transported from the concrete silo using a series of chutes and conveyors to a fully enclosed truck loading building. Barren rock may be

mixed with sands from the ore processing plant to create an engineered fill that meets appropriate geotechnical specifications for construction of development pads. Engineered fill would be transported from the ore processing facility to a receiving site, where it would be spread using a dozer."

Each transfer point along the "series of chutes and conveyors" is an emission point which is not accounted for in the DEIR.

Table 2 of the Health Risk Assessment lists the Base Elevation for the generators and diesel storage tanks in meters (placing them above 9,000'), whereas it should be feet.

The footnote for table 8 on page 28 of E.1 says, "Concentrate truck trip distance of 145 miles is based on the distance between the project sites and the Port of Oakland." There should be an explanation of why the 20 tpd of ore concentrate is going to the Port of Oakland. Is that where
it is to be refined, or is it being shipped overseas for processing? If it is being transported overseas, the associated emissions should be included in the GHG analysis since GHG emissions are a global concern.

Unnumbered document page 184 of E.1 (for paved road fugitive emissions from vehicles) shows a table that makes no sense. It has fractions of vehicles making fractions of trips, and then rounds the VMT numbers that result before performing the final calculations. For instance, Freight Trucks have an average of 0.43 daily trips going 0.52 miles and lists their VMT as 0. It appears that the 0 miles travelled is the multiplied by the weight of the trucks, which would yield 0. It also shows only 1 concentrate truck trip per day, whereas elsewhere there are 10 concentrate trips/day. However, there are 5 concentrate truck trips listed on page 186 and 187. This is just an example. Not only concentrate trucks but also other vehicles show different mileage, different trips numbers, etc. throughout the emissions calculations throughout the document. These should all be corrected and standardized before the DEIR is considered adequate.

The emissions estimates assume that all on-site roads will be paved. This should be included as a condition or mitigation measure.

The spreading of 1,000 tons per day of engineered fill with a dozer should be considered in the off-road equipment emissions (dozers are considered to be off-road equipment).

Also, it is not clear how or where the rock is to be "mixed with sands from the ore processing plant to create an engineered fill that meets appropriate geotechnical specifications for construction of development pads." The off-road equipment list includes a "mobile auger blending plant," so it would be presumed that this is how the waste sand from the processing plant would be mixed with waste rock. Every time rock and dirt that contain asbestos are moved there is the potential for additional asbestos emissions. All of these emissions should be included in the Toxic Air Contaminant/Health Risk Assessment evaluation.

The last sentence under Earthwork and Material Handling reads, "Notably, for fill transported to off-site industrial sites (for year 2033 and beyond), emissions associated with fill placement were not included since it was assumed that the other industrial facilities are already receiving,

or would receive, fill from other sources." The big difference between fill transported from the proposed Mine to be deposited in unknown locations around the community contains asbestos. When considering airborne toxics it doesn't make sense to consider emissions from handling fill with asbestos in it as equivalent to emissions from handling fill without asbestos in it.

App. E-1, document page 380/1938 lists 3 diesel generators that would operate 8 hours per day, 7 days per week in perpetuity (operational). Yet, the emissions from these generators are not reflected in the various emission quantification efforts.

Table 4 (off-road construction emissions), p. 32 includes 9 portable diesel generators operating 6 hours/day, 6 days/week.

The Wastewater Septic System does not include any mention of how the wastewater is getting from the Brunswick mine area up the hill to the proposed septic field. The main buildings at the mine are at approximately 2740' and the upper portion of the septic field is at 2875'. Therefore, all of the sewage from the mine's 312 employees plus contractors, visitors and truck drivers has to be pumped a quarter mile up the hill across an elevation gain of 135'. If it is being pumped by a generator, those emissions should be quantified.

Emissions from construction of the septic leach field and quarter-mile sewage line running up hill to the septic system appear to be missing.

The OFFROAD model does not include fugitive emissions. It only includes engine emissions. The Operational Off-road Equipment list (App. E-1, document page 380/1938) lists plenty of off-road equipment at the Brunswick site. Table 8 (Off-Road Equipment Assumptions – Logging and Chipping) includes a grapple loader, a front-end loader, a skidder, a grinder and two excavators. PM/NOA emissions from those do not appear to be included in the TAC calculations, which specify that there would be zero emissions from off-road equipment. This doesn't seem possible given the amount of off-road disturbance from the variety of mobile off road machinery, most of which moves dirt and rock as its primary function.

The "Earthwork and Material Handling Fugitive Dust" section starting on page 300 only includes a few of the construction activities that are anticipated (SF Creek Culvert Replacement, Pond Berm Repair, Service Shaft Collar and Building Pad). It assumes a serpentinite content (spelled "Sepentinite Concent" in the DEIR) in fill of 14.3%, with an asbestos content of 0.20%. A figure of 0.03% (which should be explained) appears to be derived from these numbers. Then there is a calculation of wind erosion that assumes a disturbed area of 4 acres. The resultant calculated fugitive dust emissions from wind erosion during construction is 0.41 tpy of PM10 and 0.02 tpy of PM2.5. The following unnumbered page (doc page 301) has an unlabeled table which seems to say that only 40,150 tons of fill would be placed per year (versus the proposed 365,000 tpy). The pages after that are unclear. For example, there is a sub-table called "Compaction" as part of the Fill Placement calculation series that notes a piece of equipment ("Cat563") that works for 0.06 hours per day. That is 216 seconds. On that same page is a bulldozer that moves 411.1 tons per hour and works 0.27 hours/day, which is 16 minutes and 12 seconds.

The reason for selecting 25 meters as the plume height and width for all of the line volume sources in Table 2 starting on page 8 of Appendix B of Appendix E.1 should be explained.

The DEIR cites AP-42, Ch. 13.3 as a source for blasting emissions information. ANFO is listed in that source as emitting 17 lb/ton of NOx. At 0.93 tpd of ANFO, that comes to 2.89 tons per year of NOx emissions from ANFO detonation. Nitrogen oxides are principally NO2, which is recognized as a TAC. These TAC emissions are not included in the DEIR.
The "Underground Blasting and Crushing" section (p. 4.3-56) assumes no TAC emissions from blasting.

ASUR Plan

The NSAQMD is neither approving nor disapproving the ASUR Plan because there is no legal requirement for such a plan – it is part of the project planning documentation.

The ASUR Plan includes corrective actions for certain circumstances. The NSAQMD does not necessarily approve these actions in lieu of other actions or penalties that the NSAQMD or other agencies may prescribe or require. The ASUR Plan cannot be seen as being exclusively directive for the applicant or binding in any way on any agency, and should include a statement to that effect. The enforcement authority of agencies is unaffected by the ASUR Plan.

The ASUR Plan's shortcomings include difficulties with enforceability, uncertainty regarding the exact nature of control technologies to be used, the self-policing nature of the plan and a way to quickly evaluate its effectiveness.

The first page of the ASUR's Table includes the TEM % by weight, but the next two pages omit this statistic.

The summary table (1st page of Appendix C) is missing a sample. It appears to be sample Y962992, which has the highest concentration of asbestos of any of the rock samples (7.3 structures per nanogram, or 7,330,000,000 asbestos fibers per gram).

ASUR 5.0 paragraph 5 reads, "The great majority of mine tunneling in barren rock for the Idaho-Maryland Mine Project is expected to occur in the meta-andesite porphyrite "Brunswick Block". No asbestos was detected by PLM in samples from the meta-andesite porphyrite lithology. Asbestos was detected in six of the eighteen samples by TEM methods and the eighteen samples averaged 0.26 TEM structures per nanogram (s/ng) or 0.002% PCM asbestos by weight." Here again the conversion to PCM is unwarranted, since OEHHA's PCM conversion only applies to air monitoring samples. The TEM data sheets provide a calculated asbestos percentage, which averages to 0.192% asbestos by weight in the porphyrite samples. At this concentration, in the daily mining of 1,500 tons there would be 2.88 tons of asbestos. However, using the inferior PLM quantification technique there would appear to be no asbestos at all.

Similarly, Table 2 of the Vergence report illustrates the superiority of TEM to PLM analyses in the comparison of two results from the same core sample. The 1.1 foot-long core from hole #I 19-13, which was from a depth of 5090.50 feet to 5091.60 feet, was analyzed using both TEM

and PLM. The less reliable PLM method did not detect any asbestos but the TEM method detected 2.0% asbestos. The average asbestos content in the two TEM-evaluated samples of serpentinite was 2.8%.

The proposal to use PLM for compliance purposes may be convenient, but there is a big difference between PLM results and TEM results. TEM is preferred for asbestos quantification because it is able to detect smaller particles. A comparison between PLM and TEM results shows that there are a lot of asbestos fibers in the rock that are too small to be detected using PLM. Choosing to use PLM is, in effect, choosing not to see the asbestos.

Asbestos has been found in all of the kinds of rocks that were analyzed from the site (porphyrite, diabase, sand tailings, unmineralized serpentinite, weakly ankeritized diabase/serpentinite, ankeritized serpentinite, and serpentinite). With only a relatively few samples having been analyzed, there is no way to know how much asbestos is present in a given untested rock sample, but every fragment of rock or soil from the mine or the mine tailings could contain asbestos. When those rocks are broken or that soil is driven on or otherwise disturbed, asbestos fibers could be released to the air in unknown concentrations. Once airborne, tiny asbestos fibers can potentially travel many miles.

There is at least one serious mistake in the TEM lab reports. The sheet for sample Y962990 lists a “Calculated Asbestos Concentration (Weight %)” for chrysotile asbestos as .075% (29 million fibers per gram), so there is obviously an error in the reporting of the total as <0.001 %. The percentage of total asbestos can’t be less than the percentage of a particular kind of asbestos.

Page 14, item 7 says that records of all analytical test work will be kept for a minimum of 7 years. Since asbestos related diseases often do not show up for 40 years or more, 7 years is not long enough for recordkeeping. Instead, the records should be kept (at least in electronic form) until at least 40 years after the mine closes.

Page 8, item 3 says, “Lithological units and gold mineralization will be adequately sampled and tested for naturally occurring asbestos….” The term “adequately sampled” is meaningless. Item 3 also includes some vague phrasing about testing using PLM and TEM. Is every sample to be tested both ways? How often? Also, in addition to converting TEM results to PCM with OEHHA’s conversion formula, the TEM results should be reported and available to the public.

The ASUR Plan should include measures to prevent secondary asbestos emissions from workers’ clothing and shoes. Historically, family members of individuals who have worked in mines where naturally occurring asbestos is present have been exposed to asbestos from the workers’ clothing and shoes, resulting in asbestosis and mesothelioma. Asbestos exposures to the general public could also occur if workers carry asbestos-containing soil on their shoes and clothing into local places of business, such as restaurants, retail stores, fitness centers, etc. Showering on-site and changing shoes and changing and washing clothing at the end of a worker’s shift is one way to prevent this type of secondary exposure. Alternatively, workers could wear protective suits and shoes that stay on-site. The manner of keeping asbestos from

leaving the site on workers' clothes, shoes and persons could be considered an airborne toxics mitigation measure.

The publication cited in the ASUR Plan, "NIOSH (2019). *Dust control handbook for industrial minerals mining and processing. Second edition*. https://doi.org/10.26616/NIOSHPUB2019124" discusses additional options for dust control, including the use of wind fences, fixed water spray systems and crust-forming agents, and covering inactive areas with clean gravel. The discussion of dome enclosures on page 357 of that document in particular should be reviewed (large ones can span a thousand feet and they can withstand 90-mph winds and heavy ice loads). Such technologies should be discussed/evaluated in the DEIR

As the tunnels progress and more samples are tested for asbestos, an ever-increasing knowledge base will develop. There should be a way to refine the ASUR Plan and reassess the project periodically. As a precedent, Teichert Aggregates has a 5-year conditional use permit review requirement for their Martis Valley operation near Truckee. If it is found that asbestos emissions are great enough to create a significant health risk, there should be a way to put the project on hold for as long as necessary to find ways to bring the asbestos emissions down, such as through additional or new technologies. It would be short-sighted to commit to the ASUR Plan for the entire life of the mine based on the few samples that have been tested so far. As time passes, technology advances. There may be a way to quickly monitor for asbestos emissions or assess the asbestos content of the rock body in the future. Control technology also advances, and someday there may be ways to further reduce the release of microscopic airborne asbestos fibers into the community.

Some of the gold veins are known to be hosted entirely in serpentinite. The NSAQMD recommends considering leaving those veins untouched for at least 40 years, by which time emission control technology is likely to have improved. Electrostatic mist screens, for example, show promise among emerging technologies.

Water

The Water Supply Assessment (WSA) is important because an abundant supply of water is necessary for the control of dust and toxics such as silica and asbestos. Unfortunately, it does not include enough detail to evaluate its accuracy. There should be an itemized list, or inventory, of water usage features so that reviewers can check to see if key elements are being overlooked or mischaracterized.

The water usage estimates are based on usage at "buildout." The document considers the first 10 years as the "construction" period because that is when the waste material is being deposited and compacted as engineered fill at the Centennial and Brunswick sites. It reads, "Because this WSA is assessing the impacts at buildout of the Proposed Project, the water demand during construction will not be included in buildout water demands." However, the buildout phase is not when the project would use the most water. That is, unless the eventual off-site compaction of engineered fill were to be included in water usage, that would increase the buildout consumption, especially since it would require an abundance of water due to the

presence of asbestos in the fill and the resulting requirement to comply with the Asbestos Airborne Toxic Control Measures for all fill placement activities (not discussed in the DEIR).

The DEIR estimates 5,700 gpd of potable water for sinks, toilets, showers and laundry. It would be important to have adequate shower capacity at the facility for the hundreds of anticipated employees. Workers in the mine would continually be subject to air saturated with moisture to the point of it dripping off their clothing (the DEIR specifies that there would be 100% saturation of the air in the mine). Dust laden with asbestos and other toxic substances would stick to skin, hair and clothing. Workers should not be allowed to leave the site with asbestos dust on their bodies, clothes or shoes because they would carry the asbestos dust into public places or home to people they live with.

A key question regarding water use assumptions is if the non-potable water would be of high enough quality to use for "100 percent saturation of air" (estimated at 40,000 gpd). If it has elevated levels of natural contaminants (such as arsenic, mercury and other heavy metals, iron and manganese) or if it has too much of the proposed water treatment and ore processing chemicals, it may not be suitable for employees to breathe. Water pumped from the mine would contain numerous substances including sodium hypochlorite (bleach), ammonia (partly from detonation of 1,860 lbs/day of ANFO explosive), potassium permanganate, sulfuric acid, sodium hydroxide, sodium bisulfite, assorted lubricants and petroleum products lost from equipment, and reagents including Aerofloat 208 (odor of alcohol and sulfur), Aerophine 3418A, Aerofroth 70-MIBC (odor of alcohol), Magnfloc 10 and Scaletrol PDC9401.

The ASUR Plan proposes that unpaved areas will be watered for dust suppression every 2 hours, which should be considered carefully in the WSA. The NSAQMD is concerned that the water budgeted for the project might not be adequate to meet the dust control requirements. Since the dust contains asbestos, silica and numerous other toxic substances, adequate dust control is necessary. There should never be a situation where dust control is compromised because of water usage restrictions, particularly in the summer months when the potential for dust generation is greatest.

https://www.epa.gov/sites/default/files/2019-04/documents/mr_guidanceforapplicationfordustcontrolpermit.pdf contains some "rules of thumb" for estimating water usage. For example, grading uses approximately 10,000 gal/acre per day; 30 gallons is required for each cubic yard moved; and pre-wetting areas to be disturbed requires 1 acre-foot of water (325,851 gal) per acre of land. The Health Risk Assessment (page 3) says that 104 acres are to be disturbed.

A lot of water is also needed for grinding mills, crushers, conveyors, conveyor transfer points and drop points to control emissions of dust and asbestos.

Dear Mr. Kelley:

As a property owner within the city limits of Grass Valley, I strongly object to certifying the Final EIR for the Idaho-Maryland Mine Project for three reasons:

1. The water quality analysis is inadequate.

2. Noise and vibration need further study with regard to surrounding land uses adjacent to the project.

3. Hazardous materials and their disposal long term, is not adequately addressed.

In addition, I object to this mining operation and its incompatibility with the goals and policies of the County of Nevada General Plan, as well as the City of Grass Valley.
The residential and light industrial land uses adjacent to the mining operation would be significantly impacted economically, aesthetically, and environmentally by the proposed project.

The long term environmental impacts of mining operations remains an ongoing problem and have been well documented: old tailings can still leach heavy metals decades after mining operations have ceased. One only has to look in our own backyard at the Empire Mine where remediation is still on-going. The state spent over $40 million over a decade for the cleanup.

The Iron Mountain Mine Remediation located near Redding, California is Superfund site and according to a 2020 report from the state legislative analyst's office (LAO) written by Gabriel Petek,
"...acid mine drainage from Iron Mountain---among the most acidic and metal-laden on earth---was transported downstream to the Sacramento River, threatening aquatic life and drinking water supplies for the City of Redding...According to U.S. EPA cleanup costs for the site could approach $1 billion."

Our city and county residents deserve to live in a safe and healthy environment and Rise Gold's plans are not one bit a part of that.

Sincerely,

Catherine Criss Flowers

NO to the reopening of the Mine!

Too many risks for our health!

It will pollute our air and water!

It will drain our water! This is California with constant droughts, terrible ones in the past. We need water!!

We can't trust the company Rise Gold!! They're being sued !

Please preserve our beautiful Nevada County, say NO to the mine!

Thank you.
Florence Themelis.

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Alisa Sandoval at aclaire.sandoval@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Alisa Sandoval. I live at 12580 Comet ln, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 3. Those of us in my neighborhood depend on wells for water. The proposed mine would pump out water needed by the residents to survive. It is unrealistic to think the water pumped from one area affects only that area. The tunnels that interconnect under all of Grass Valley and the natural fractures connect the water supply for the whole area. Please do not approve the mine. It would be a catastrophic hardship on those of us with wells.

Sincerely,

Alisa Sandoval

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Anita Jones. I live at 14618 Tyler Foote Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Rise Gold plans to pump out 3.6 million gallons every day for 6 months and another 1.2 for up to 80 years. Mine dewatering risks depletion of our region’s groundwater. It puts the health of wells and creeks at risk. The Final EIR did not address serious deficiencies identified by expert reviewers. Its claim that impacts won’t be significant aren’t supported.
Even using today’s best technology, fugitive dust from continuous rock crushing, hauling, and compacting risks release of asbestos and silica particles. The huge increase in diesel truck trips amplifies the problem. The Final EIR’s conclusion that air quality impact would be ‘less than significant’ is unsupported.

The project is too close to an established community which creates a much higher

level of risk if bad things happen.

Sincerely,

Anita Jones

Dear Nevada County Supervisors and Planning Commissioners,

My name is Anna Sullivan. I live at 13419 Hillview Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My family has lived in Peardale since 1952. This has been my home since1977.
I noticed a lot of the EIR talks about why concerns I have don't need to be addressed because California law doesn't require it. For example, the traffic report talk about heavy truck traffic. That will be a huge impact on the area. That SHOULD be addressed. Other problematic topics are brushed off, as well. I suspect the authors of the report live elsewhere. Please don't accept the FEIR.

Sincerely,

Anna Sullivan

My name is Beth Moorehead. I live at 118 Jan Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in downtown Grass Valley. Everyone will be impacted, regardless of whether we're a mile away or ten.
This is NOT a forward thinking plan for our county. This is similar to fixing a VCR to watch tapes on curbing climate change.
This adventure in futility has only one main benefactor - the mine owner. Who doesn't even live here!
My inlaws worked in the mines, they heard the mines from their homes every single day.. it was terrible.
Don't be backwards! We have companies like Analog Devices committed to staying in town and hiring locals for excellent jobs - this is the right path and this is who we want to have in our community.

Think resposibly

Sincerely,

Beth Moorehead

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Carol Lee at jandclee@comcast.net

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Carol Lee. I live at 12026 Crystal Wells Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My husband and I live in Deer Creek Park in District 1. We've lived here for almost 39 years, worked and raised our kids here, and hope to continue our retirement here. We are very appreciative of the existing peaceful environment and opportunities to enjoy the outdoors.

The re-opening of the Idaho-Maryland mine would be bad business all the way around. It is inconsistent with numerous Nevada County General Plan goals and policies established to protect and enhance our
community's health and quality of life. It is our hope that the County can continue to promote projects which support clean industry, combat climate change, do not add noise and heavy traffic to our atmosphere, retain the natural aesthetics already

present, and protect our water quality.

In my husband's words, this situation is a case of Greed vs Quality of Life, and Greed does not have a good record.

Please consider our opposition to re-opening of the Idaho-Maryland mine as you make your decisions this week. We do not support certification of the EIR either. We hope that pleasure of living in Nevada County now and in the future will be safe in your hands.

Sincerely,

Carol Lee

Dear Nevada County Supervisors and Planning Commissioners,

My name is Carolee Thomson. I live at 14407 Arrow Road, Penn Valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for 27 years, residing in Penn Valley. I am adamantly opposed to the reopening of the mine. It would be a blight, a noise-producing nuisance, and would have a far-reaching negative ecological impact. The economic benefit - arguably negligible- would in any case be far outweighed by other negative repercussions. I strongly urge you to vote no on the mine's approval.

Sincerely,

Carolee Thomson

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Caroline Groux at 421caval@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Caroline Groux. I live at 10845 Bartlett Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am extremely concerned about the re-opening of this mining project. I have been reading all the reports, followed information released about this project.
The reasons why I am opposed to this project are first because of the drastic negatives environment consequences that this could have. Then, I think that the promise of jobs and the boosting of the local economy is a lure.
Back in the 1800's there was no technology that we have today. Mining were employing people (not to mentioned killing a lot as well). Today's technology is not going to provide work for our local people the way it is promised. (Young people don't even want to work anymore) The bulk of the workers will come from outside Grass Valley. Yes they will need housing and buying food, but this is not going to boost the local economy. So it seems like what Grass Valley is more interested is in

the tax revenue from such enterprise. I am sure there are more ways to bring tax revenue without destroying the environment and making of Grass Valley a environmental disaster. And third, a Canadian company coming to fool our local people after it went bankrupt on other projects (leaving a huge mess behind) is not a good way for local official to develop a healthy, prosperous economy for Grass Valley.
I urge you to deny this project for the well being of this community.

Sincerely,

Caroline Groux

Dear Nevada County Supervisors and Planning Commissioners,

My name is cynthia moffatt. I live at 14041 Agony Hill Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 1, Heidi Hall , supervisor. I have been a resident of Nevada County since 1989. I am 100% against this mine project for the reasons of noise and water quality damage due to excavation, and the problems of air pollution, traffic, road damage and noise from 100 trips/day of rock hauling trucks. We do not have to ruin the lives of the adjacent property owners or the rest of us who drive the truck route, just because a developer sees an opportunity. Tax money and a few jobs will not compensate for this ruination. This is simply wrong. Please follow the wisdom and wishes of your constituents. If you are unsure, put it to a vote.

Sincerely,

Dear Nevada County Supervisors and Planning Commissioners,

My name is Donna Marie Fry. I live at 11120 Squirrel Creek Road, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We have lived in our Squirrel Creek Road home for over thirty-eight years. Behind our home is the beginning of Squirrel Creek and just a bit beyond that, is Hells Half Acre land. Recently we have seen the destruction of ephemeral water pools, growing unique to the area wildflowers, and woodland habitat obliterated by PG&E for a natural gasoline viewing construction project. Dear Lisa Swarthout, stand up for us and your district and please say no! to further destruction and environmental detriment to our county.

Sincerely,

Donna Marie Fry

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Dorothy Henderson. I live at 13074 Woolman Lane, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Disttict 1, and have been a resident here since 2000. My husband and purchased ten acres and helped in the building of our net zero home which was completed in 2016. We pay taxes and are active members of the community, and of our Quaker Meeting. We are deeply concerned with the Nisenan and support their efforts to regain their Federal tribal status. As I am sure you know, reopening the mines is not in harmony with the Nisenan way of life; a way of life that can teach us how to be more respectful of and in harmony with our planet. Thank you for considering our perspective as you make your decision.

Sincerely,

Dorothy Henderson

Dear Nevada County Supervisors and Planning Commissioners,

My name is Erin Vinacco. I live at 14618 Tyler Foote Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live near the North San Juan area in District 4 and have been a resident here for over 5 years. What I love best about living here is the natural beauty and the commitment residents have to preserving and sustaining that beauty. Please say "no" to this mine which will compromise both air and water quality and impact the health and quality of life for our residents. I understand that these are tough times economically and it can be easy to see a project like this in terms of the economic benefits but the risks significantly outweigh any potential benefit. Please make your decision by looking at the big picture and consider the immediate and long-term negative impacts to our residents and our community.

Sincerely,

Erin Vinacco

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in Woodpecker Ravine and know first hand the catastrophic effects the continuing drought has had on our forests. Adding to the threat caused to this through supporting an industry in our county that will demand more of our precious water and also poses countless other environmental risks is irresponsible at the least. Some argue that this county was built on mining, but even a century and a half later, there are hazards and damage that go unmitigated. Now that we know better, let’s do better! Say NO to the mine!

Sincerely,

Gayle Baker

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am a highly concerned citizen of Nevada county. I have lived in both Grass Valley and Nevada City for 45 years. For the last 35 years I have lived in District 1 outside of NC. Our true gold in this community is small town living in and adjacent to natural beauty, wildlife, unsurpassed flora, quiet, a slower pace, neighbors who know each other and care for each other. The violent, polluting extraction of ore from the earth is no longer a viable option in this beautiful and unique rural community. Please use your common sense, your clear thinking mind, your caring heart and your feeling body to recognize NO to the Mine is the wisest of all decisions. This wisdom will be recognized and hailed for generations to come.

Sincerely,

Dear Nevada County Supervisors and Planning Commissioners,

My name is James Smith. I live at 647 Packard Dr., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in district 3 next to Condon Park.
I have lived at this address for 30 years now and in the county for going on 40 years.
I have been following this issue for some time now.
I feel that opening up the Idaho Maryland mine will result in a large verity of problems.
From mine waste, most likely contaminated with Arsenic, and it's processing / disposal.
The effects on ground water depletion and lowered property values.
The heavy truck traffic on the near by road's, which will degrade the streets and leave the city / county stuck with the repairs.
These are just a few of many down sides to this proposal.

What minimal positive outcome from this will be vastly out weighed by the negative impacts to our community.

Sincerely,

James Smith

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of John Bansemer at johnbansemer@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Bansemer. I live at 11975 Lower Colfax Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Dear Mr. Kelley:

My home is in District 3 and I am a third-generation family owner on Lower Colfax Road. I am concerned for my potable water and the lack of assurances for property owners like me and our future water reliability.

I had drilled a marginal well that produced only 3 gallons minute at a depth of 300 feet back in 2000 and had to install a tank reservoir to comply with the Buidling department in order to receive a final for a garage and studio permit back in 2000.

Looking at the Rise zoning subsurface boundary area my parcel is the furthest southwest on the map and I am very concerned for my potable water source in the future with no assurances by either NID or Nevada County in this FEIS should it run dry.

I am also part of the Wells Coalition a group of property/well owners and residents near the Idaho-Maryland Mine. Which its purpose is to protect our only source of water, our wells. The thriving residential communities of Grass Valley and Nevada City are that NOT a place for Industrial Mining operations, they belong in open areas far removed from incorporated cities and public spaces. Not in the back yard of Historical towns!

I respectfully ask that the County REJECT the Final Environmental Impact Report (FEIR) for the Idaho-Maryland Mine and VOTE NO on the project. Huge risks are not being addressed, making this project completely unacceptable for well owners in the area.

100% certainty is a myth.
The Final EIR asserts that stronger mitigations and/or financial assurances are “not necessary because no significant impact to domestic water wells are predicted”.

But a “prediction” is only an educated guess – NOT a certainty. And in this case, it is based on an analysis that has serious flaws.

The stakes are too high to get this wrong. A review of the County’s Economic Impact Report revealed this project is unprecedented in its proximity to so many homes [1]. Pumping over a million gallons a day from an area with hundreds of wells is a huge risk. If “predictions” are wrong, it could cost the County, NID, and individual homeowners tens of millions of dollars – and years or decades – to connect a permanent water supply to each property.

Claiming “no significant impact” defies both science and common sense.

The FEIR is inadequate and provides well owners with very limited assurances for at least the following three reasons:

1) Predictions of the groundwater model have limited reliability.

In DEIR comments, the Wells Coalition provided many quotes from hydrology experts confirming that groundwater models in fractured bedrock like ours can NOT deliver 100% certainty. [2] There are also numerous defects in the groundwater model [3]. Even the FEIR agrees that additional data is needed for validating the model.

2) FEIR provides no current well baseline data / Domestic well monitoring program is too little, too late, and too short.

The FEIR lacks current well baseline data and is inadequate under CEQA. The FEIR relies only on sparse patches of data from 15 years ago.

Baseline data is needed in order to assess potential impacts to groundwater and well owners prior to determining mitigations. Current well performance data is key to establishing what current conditions are – e.g., establishing water quality or determining when a well has gone down or doesn't recharge as quickly. It is also the lynchpin in determining what "threshold" should be used to determine whether an impact is “significant”. Legal experts call the FEIR’s choice of setting the significance threshold at a 10% drawdown in water level arbitrary and invalid. [4]

The Final EIR’s addition of a Domestic Well Monitoring Program (DWMP) for 378 properties does little to ease the concerns of well owners within the designated area or beyond (it does not include properties with wells in NID-served areas). It is included as a condition of approval, but it is not mitigation.

Instead of collecting data before evaluating the project, as CEQA requires, this program takes place after the fact. It won’t collect the well performance data NID or the County needs. Monitoring is scheduled for only 12 months and takes just one water quality sample, which doesn’t account for year-over-year variations. A minimum of three years are needed to collect valid water quantity data and water quality should be tested twice a year. The program also expires five years after dewatering, but that provides no protection for accidents that could occur in future years as the mine operation expands. [5]

3) The proposed mitigations, which are not technically valid under CEQA, are deeply flawed.

Without accurate data on groundwater conditions and data from the actual

domestic wells, valid mitigations cannot be determined. What constitutes a significant impact must be based on real data, not arbitrary ideas created by the applicant. For example, even the current groundwater model shows groundwater level drops over a large area. But it is unknown how that may affect well owners.

In other words, well owners are being told to trust that nothing will go wrong with their water supply for 80 years based on assumptions and speculation. The FEIR compounds this uncertainty with a dizzying array of feeble mitigations and "peace of mind" programs stitched together with vaguely worded promises.

This statement in the FEIR Mitigation and Monitoring Program seemingly assures everyone that the applicant would mitigate potential well impacts – "pursuant to Nevada County General Plan Policy 17.12, the project applicant shall be responsible for providing a comparable supply of water to such homes and businesses whose wells are significantly impacted" – but the rest of the FEIR does not demonstrate how the applicant would meet these requirements.
Key concerns for members of the Wells Coalition include:
a. No financial bond or plan for connecting to NID if wells are damaged (beyond 30 parcels)
NID asked for a $14M bond to cover the costs of providing service to three neighborhoods in the event of unrecoverable well damage or failure [6]. The FEIR dismissed it, insisting NID needs nothing.
At the same time, the FEIR expanded the area of potential impact with the addition of the supplemental Domestic Well Monitoring Plan (which defined the area of impact as within the 1' drawdown isopleth in the groundwater model) – suggesting that even more money is needed.

There is no plan for connecting impacted wells beyond the 30 properties along Bennett Road. For example: no additional wells identified as needing mitigation; no water assessment to determine the feasibility of NID service, no plan for design, construction, permitting, or easements; and no timeline commitments if NID service is required.

This is a recipe for disaster. Even under the best of circumstances, today's NID projects take many years to complete, but a failure in this project could create a large-scale crisis. Neither the County nor NID want citizens screaming "where's my water?" for years on end. And property owners connected to unsightly water trucks will be faced with plummeting home values. A property with no water is worthless.

b. Promises to Fix Wells or Provide Water Trucks Won't Cut It

One of the most significant gaps in the FEIR is the absence of accountability. Its most concrete promise about providing potable water for impacted well owners is this: "If water supply to a property is disrupted for an appreciable amount of time (greater than a day) a temporary water supply will immediately be provided to the property using water tanks…". [7] These words fall short of holding the mine operator accountable for specific or reasonable timelines – for either fixing wells - or providing a permanent water supply replacement.

Even more concerning, all decisions about fixing wells or replacing water are left solely up to the mine operator, who would take action only if the 15 monitoring well locations in the official Groundwater Monitoring Program flags an impact. It makes no commitment to use the data from the individualized measurements in the supplemental Domestic Well Monitoring Program to flag an impact. This is especially concerning because the complexity of the fractured bedrock geology in the area may mask impacts and the threshold for triggering that impact is arbitrarily set at a 10% drawdown.

For homeowners with marginal wells, much smaller drawdowns may make their wells useless long before they get a call from the mine operator. For all well owners in the area, the described approach opens the door to unending debates about whether damage to a well was caused by the mine or some other condition.

If the mine were to reopen, a separate oversight committee or commission must be required. Such a committee would be authorized to make determinations of impact to well owners, resolve disputes, provide professional analysis and reporting of data regarding the monitoring, assure timely execution of mitigations, and administer fines or corrective notices.

Conclusion

The FEIR's assertion that there will be no significant impact to wells defies both science and common sense. The groundwater model is questionable. The FEIR provides no current well baseline data and tries to make up for it with a flimsy domestic well monitoring program that is too little, too late, and too short. And the proposed mitigations, which are not technically valid under CEQA, are deeply flawed.

This alarmingly inadequate FEIR provides no procedure, no funding guarantees, and

no independent oversight of the means by which the replacement of a permanent water source could be provided in a timely fashion for well owners. Ultimately, it does not provide a mechanism by which we can concretely say whether or not a well has been impacted by mine dewatering. Without such information there is no way to hold the mine accountable for lost domestic wells and the cost of replacement water services.

Please REJECT the Final Environmental Impact Report for the Idaho-Maryland Mine and VOTE NO on the project. This project is completely unacceptable for well owners in the area.

Sincerely,

Sincerely,

John Bansemer

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of John Brett at jbretii@yahoo.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Brett. I live at 11460 Lower Circle Dr, Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Sincerely,

John Brett

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is John Egan. I live at 16343 Rattlesnake Rd, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

We already know that this management has failed in Canada.. They polluted their prior mine in Canada and left the taxpayers with the bill to clean it up.... Now here, in our little bedroom and retirement community, they want to move 1000 tons of debris a day? Ore trucks will have 100 dump runs per day, operating seven days a week, 14 hours per day...And they want to dump it in the field below Hills Flat Lumber? .. This is absurd!

JUST SAY NO!

Sincerely,

John Egan

Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Judith Berliner. I live at 12803 MacBoyle Way, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I was raised in a Home on Macboyle Way. I remember when the tail end of the mine was still operating, and I am very opposed to opening this mine again. I also remember when the lumber mill was there, and there were trucks going up and down Brunswick Road, all the time I believe that rise gold makes promises they will never keep, and there will not be good jobs brought into this community. I see no reason to approve this mine we have a beautiful community that is much better distancing itself from mining operations.

Sincerely,

Judith Berliner

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ken Heftel at kenheftel@gmail.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ken Heftel. I live at 14278 La Noria CT, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

My name is Ken Heftel and I live in Grass Valley in District 3 about a mile from the mine. I moved to Grass Valley seven years ago after visiting several times and fell in love with the natural beauty of our foothills and our welcoming community. Unfortunately, we are here today to confront a threat to our current way of life. There are so many reasons why we should not be forced to accept an industrial mining operation in our neighborhood. There will be all of the large dangerous trucks on our roads all the time, the noise, and the visual impact of a large mine. And even a remote chance of losing or even slightly damaging or polluting our precious groundwater aquifers and surface waters is unimaginable. Rise Gold cannot guarantee that our groundwater supply will not be destroyed or damaged, in fact, they have presented plans to provide NID water to residents in the immediate area

where they obviously expect wells to lose their groundwater. And they have offered to monitor groundwater wells beyond that area which is because of some expectation that groundwater supply and quality can be damaged further away. Why would anyone (besides Rise Gold) want to accept even a remote possibility of losing or damaging our precious groundwater supply? There is no scientific study that can guarantee us that this will not happen. Past mining operations are notorious for their legacy of pollution and destruction. Yes, we could say that was a long time ago when we didn't know any better. But are we now so smart that mistakes won't ever be made again? I don't think so, do you?
Just look at what happened at the San Juan Ridge mine. In 1995, not 1895, blasting in the mine caused a massive dewatering event estimated at 6 million gallons a day. One mistake like that and you can't go back. I hope that our officials do the responsible thing and protect our groundwater supply, our home values, and our quality of life by saying NO to this potential nightmare.

Sincerely,

Ken Heftel

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Kristin Liljequist. I live at 13126 Pine Cone Circle, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in the Cedar Ridge area, off of Rattlesnake, (District 3) for 43 years. This proposed mine is much too close to established communities and neighborhoods to be a viable idea. Pumping out 3.6 million gallons of water everyday for 6 months? How many trucks per day destroying our roads and contributing significantly to the degradation of our air quality? How much extra noise pollution? For a highly debatable number of jobs? From a highly questionable outfit with a history of environmental degradation and legal issues in Canada related to either incompetence or malfeasance or both. This simply cannot happen in our community - anyone voting in favor of opening this mine is courting the distinct possibility of a local disaster.

Sincerely,

Kristin Liljequist

Dear Nevada County Supervisors and Planning Commissioners,

My name is Mark Greenberg. I live at 18389 Jayhawk dr, Penn valley, CA 95946.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am vehemently against the reopening of the mine. I could explain about the environmental damage it would cause, or the fact that Rise Gold and its management have a dubious record as mine operators, but I’ll leave that to others. What I will say is that though this area was once the biggest gold mining area in the history of the world, it no longer is. What it is now is a quiet community in the Sierra Foothills where citizens and tourists alike can marvel daily at the beauty and serenity around them. My wife and I came here sixteen years ago because of its quiet allure, and so have many others. Its a place where people can live and work in close proximity to nature at its best; unsullied by the noise and pollution of industry. It’s a community where people can retire to; where people can work remotely, where life can be enjoyed. As I said, this is no longer a mining area and it is not an industrial

area. And there is no reason to turn it into one. We do not need noise and pollution and dust and traffic congestion. Any gold thats left in that mine should stay there, along with the polluted water and gravel. I beg you, do not allow the Idaho/Maryland mine to be reopened. Do not destroy our beautiful community.

Sincerely,

Mark Greenberg

Dear Nevada County Supervisors and Planning Commissioners,

My name is Patricia Hall. I live at 14618 Tyler Foote Road, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I have lived in Nevada County for over 35 years. I have co-owned an electrical and solar company, been employed in various Nevada City businesses and for the last 20 years I have worked at a community health clinic. My family has been involved in local volunteer groups including volunteer fire departments. I strongly oppose the short sited, potentially irrevocable damage to our local environment including water, soil, noise and disruption reopening this mine would certainly entail. Please preserve our community for generations to come instead of focusing on again short sited solutions that are not well thought through. There are other alternatives to support local jobs and economy.

Sincerely,

Patricia Hall

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Robin Nichols. I live at 19525 Cooper Rd., Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I am asking that you consider the health, welfare and quality of life for us, the local residents and for our children and our children's children over the profits of a Canadian corporation with a dismal track record. Both EIRs are clearly flawed and insufficient. They used mines in industrial areas as baselines for how mines have affected neighborhoods, for example, and failed to consider the far-reaching affects of dewatering the mine-- pulling millions of gallons of our groundwater our of the underground aquifers that provide water to not only the neighborhood immediately surrounding the mine, but downstream as well. And then, there's the hazardous waste and mine tailings that the mine owners propose to just pile on-site or encapsulate in concrete vaults. Do we really want to sanction the creation of another superfund site in our county? That property could be repurposed for so many other

uses that would create more jobs, more housing and bring more business to our area than a mine could.

I was raised in Nevada County (we moved here in 1976) and most of my family lives here. I have traveled throughout much of the US and also abroad, and there's no place I'd rather live. Sadly, this won't be the case if you allow the mine to reopen. I am a Realtor, and most of my new clients over the past 10 years have been from out of the area. Our chamber of commerce and local businesses have worked hard to improve our down town areas for both locals and tourists. Nevada County has been a destination location but I guarantee that we will see a drop in property values and tourism and a mass exodus OUT of the county if this mine is allowed to reopen.

Sincerely,

Robin Nichols

This letter is submitted by the CEA Foundation MineWatch Campaign on behalf of Ronald and Deborah Fischer at

allstargv@outlook.com

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Ronald and Deborah Fischer. I live at 13341 Loma Rica Drive, Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

In 1984, we built our forever home in Wawona Mandrono subdivision on 13341 Loma Rica Drive Grass Valley CA and have live here since June of 1984. Our family was raised here while we continued to built our business, Fischer Towing since 1982 and selling it February 2021. Our daughter with her husband and their children and grandchild enjoy living off Hwy 174 on Chattering Pines In Grass Valley.
Our goal to live here is still on track with the understanding our water supply will not be in jeopardy. Additionally the traffic on Brunswick when leaving our home is already busy but the additional traffic , accidents and the winter storms will negitavely affect our egress and regress on Brunswick Rd. Overuse of the roads and

our quality of life where we currently feel safe will diminish.

PLEASE BOARD OF SUPERVISORS AND PLANNING DEPARTMENT - DO NOT CERTIFY THE EIR OR IDAHO MARYLAND MINE PROJECT FOR THE SAKE OF OUR COMMUNITY AND QUALITY OF LIFE IN OUR ENVIED RURAL COMMINITY.

Thank you for helping save our community by voting NO to the certification of the EIR and the Idaho Maryland Mine Project.

Sincerely,

Ronald and Deborah Fischer

950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Sands Hall. I live at 10160 Cedro Rd, Nevada City, CA 95959.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

It is, in fact, very hard to understand why this is still under any kind of consideration. The environmental impact will destroy so much of the beauty that brings people to this are as tourists — and they are an enormous economic boon — and for those who live here. Please DENY this report and let's stop with this truly horrible idea for out community.

Thank you for your hard work on this enormous is hugely flawed project. All the reading not to mention the listening you've had to do is staggering!

Sincerely,

Sands Hall

Nevada County Supervisors and Planning Department
Eric Rood Administrative Center
950 Maidu Avenue
Nevada City, CA 95959

Dear Nevada County Supervisors and Planning Commissioners,

My name is Stephen Knapp. I live at 111 Stanford Ct., Grass Valley, CA 95945.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

I live in District 3, near Grass Valley City Offices and about 2 miles from the Idaho=Maryland Mine.

I am opposed to reopening the Mine at this time primarily because the Environmental Impact Report and analysis is incomplete and appears to unscientifically support the interests of the mining operation. In particular, the analysis of ground water impacts is incomplete and should include up-to-date measurements from existing wells and from new monitoring wells, the need for which is acknowledged in the Final EIR. As a retired scientist, I object to glossing over the need for adequate data for a valid analysis. This is bad science.

I also object to reopening the Idaho-Maryland Mine because the impacts on water, air pollution, industrial noise and traffic, waste management, and greenhouse gas emissions are very serious, and are underestimated in the Final Environmental and Economic Impact Reports.

Please Just Say No.

Thank you,
Stephen L. Knapp, Ph.D.

Sincerely,

Stephen Knapp

My name is Suzona Pitkin. I live at 10229 Forest Springs Dr., Grass Valley, CA 95949.

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

Greetings,
My name is Suzona and I've been a resident of Nevada County for over 42 years. I'm currently a home owner in Alta Sierra which is District 2.

From my assessment of the DETRIMENTAL impact that opening the Idaho-Maryland Mine will have on my community I absolutely hope that re-opening the mine will NEVER be approved.

No one should ever trust Rise Gold due to their track record.

I care about keeping the environment here healthy, our neighborhoods quiet and

clean and the integrity of our community sound.
PLEASE SAY NO TO THE IDAHO-MARYLAND MINE!
Thank you,
Suzona Pitkin
A concerned citizen
of Nevada County, CA

As a concerned citizen, I am asking you to “just say no” to re-opening the Idaho-Maryland Mine and do not certify the flawed Environmental Impact Report. The project has significant and unavoidable environmental impacts that endanger this community's health and quality of life. A few jobs and uncertain tax revenues just aren’t worth the risk.

As a long time resident [over 50 years] of Nevada County and married into a family who helped settle this area, I am very opposed to the IMM. . It's not that I am against mining, it's that I am aware of the danger of our already limited water supply being impacted. IMM states that they will give water to the residents whose wells are impacted. Just where are they going to get the water? From NID? People forget that the "I" in NID stands for irrigation. I believe my husband's family was involved in the formation of NID. We who buy irrigation water for crops and livestock are already impacted by the sale of this water to urban areas. There is not enough water to be selling more of it to outside interests like IMM. Please do not allow money or other pressures to influence your decision to deny the re-opening of the IMM.

Sincerely,

Teri Personeni

I live at the edge of the drawn line by which wells are considered. Water does not follow human drawn lines. My water could easily be affected by the mine taking millions of gallons. When my water lessens to unusable amount of vanishes all together, my small farm disappears. My property value plummets to zero. Without water property is useless. Rise Gold should not and cannot be trusted. The FIER should be trashed and the mine property should NEVER have the ability to consider EVER reopening again.

Hello,

I am writing to inform of my adamant opposition to the reopening of the Idaho-Maryland mine. My family and I live two miles away from the site. We are concerned with the noise and traffic impacts, the massive amounts of water it will use, and the negative environmental impacts. Please feel free to contact me if you have any questions or need further elaboration.

Thank you for your time.

Melissa Neville
Rodriguez Court, Grass Valley

To those who have a say ---- re: the mine

I am writing once again to express my opinion and total distrust in this mine project. I live within arms throw of Brunswick Road which I travel daily. I must say that I am intensely disgusted that the county is even considering allowing the Idaho-Maryland mine to reopen. This has been tried before and was rejected a couple decades ago. What has changed to think that this is a good idea now???

Let us evaluate our situation. The Idaho-Maryland mine closed in ’56. At that time highway 49 was a two-lane winding road, and highway 174 was a dirt road. In the 50s the population was 5200 down from 5700a decade earlier. The mine was not making money. The amount of gold being drawn was meager. Since then, the town grew, expanding 49 into a divided four lane highway and paving 174 to Colfax. Olympia Park Lake was drained which became Brunswick Basin, a mecca of commence for Grass Valley and Nevada City. Grass Valley grew, Cedar Ridge and Peardale and Greenhorn

The town has grown significantly since then, more traffic, more homes, more water use. Yet, let us give our community over to a company from Canada who has a failure record there and is in court for everything we do not want to happen here. Rise Gold CEOs are in court for 16 offenses under the British Columbia Environmental Management Act, 9 under the Fisheries Act of Canada, 4 under the British Columbia Water Act. Great track record, yes? And we want them to do that here? Really? Are Americans that stupid, that greedy? Look at all the signs, No Mine, No Mine, No Mine. To be fair, I have heard that there are possibly two signs for the mine.

They have misled and bare-faced lied about the facts. Perhaps they go by their own alternative facts. We are in a drought and have been for over a decade. Water is our necessity, Canada has plenty of their own, which is melting by the year. This is Big Corporate mentality, greed, no matter how many cities get burned along the way. As long as they get theirs, we, do not matter. Hell, the mine has not been cleaned up since that last time it operated, 70 years ago. Are they going to do that?? Hell no! So, should this get passed for some ungodly ridiculous reason, what happens when they sell it? Does all this transfer to the new owner??? Yes of course it will.

This mine will heavily impact property values everywhere, especially those that have to go through Brunswick----Cedar Ridge. Properties will lose their water, values plummet and salability is lost, yet we still must pay property taxes on our homes that we may no longer be able to live in. When I lose my water, I lose my home. I also own a commercial building on Mill St. With the mine just a stone's throw away, it will heavily impact downtown commercial business. I won't mention the noise that impacts Brunswick basin, Cedar Ridge and Grass Valley. Oh, I guess I just did.

This is an absolutely insane idea, unless of course, Grass Valley and the surrounding area does not matter. There is no money to be made here nor jobs significant enough to warrant this ludicrous endeavor.

Our area is a wonderful place to live, bring up a family, retire, farm. A mine in the middle of our living room is, well, you get the point.

Within a two-mile radius there are thousands of homes and businesses surrounding this mine. Unlike Sutter where their mine is off to the side, protected by a hill where there are no buildings anywhere near, we surround Idaho - Maryland. Brunswick, Cedar Ridge, Peardale, Greenhorn, even Chicago Park all these will be significantly impacted. To get to Brunswick basin or Grass Valley from here we must pass a mine that has not run for 70 years. Unlike Sutter which has been mostly ongoing with short closures. Towns with working gold mines do not grow up around it, they grow away from it. We surround it!

Remember, Idaho-Maryland was a lumber mill for a long time. When the mine was in operation highway 49 was a winding two lane road. 174 was a dirt road. Look at us now, 70 years later. We built up around the mine because it was not going to open or no one would have bought anywhere near it. The Cedars is a good example, million-dollar homes that will significantly loose value.

Those in charge of Rise Gold are in court in Canada for failures they want to bring here. While in court for one incompetence, let's do it again somewhere else. Ridiculous, insane, incompetent.

Water is more valuable that gold. Property values are more important than gold. We lose our water we lose everything.

We are no longer a gold mining town; we are a tourist town, a farming community that is growing.

What the hell, let's go visit Grass Valley where there is an operating gold mine in the middle of their town. Sure, what the hell, lets adulterate our community.

Considering this this opening is ludicrous. The county should make an ordinance that no mine can run within twenty miles of a town. Anyone who votes for this really should see a psychologist or psychiatrist, either way. Get their head examined. Insanity is growing in this country, let us not let in happen here.

Vote NO!

Paul Crovo, North Meadow View and Mill St.

Hello, I am a concerned Nevada County resident who moved to this area over a decade ago for the quality of life in the area. We have pristine nature, cultural activities, beautiful towns, and a basically peaceful and happy population. All of that will change radically if the Rise Gold corporation is allowed to open the mine. The area will become noisy, polluted, and busy with constant trucks rolling through town. All of this negative impact for a few hundred jobs which can be created in other, more sustainable ways.

Property values will fall; the wells, creeks and land will most certainly be polluted; and the area will become an industrial disaster. In addition Rise Gold corporation has a despicable history of not honoring its promises for environmental remediation.

I can't imagine that a supervisor would vote for this mine. However, if any does so, I and many of my friends and acquaintances commit to making reelection of that supervisor impossible. This will certainly be their final term.

Sincerely,

Selene Mitlyng

Hi,
I am a long time Nevada County resident. Please approve the reopening of the Idaho Maryland mine. We need the jobs. We raised our children here but they both had to move away to find work. We could use the additional tax revenues to do things like creating fire breaks, managing the forests better to protect our homes, and increase social services. The benefits far outweigh the impacts. This is gold country, it makes sense to have a functioning gold mine with modern operations and controls.

Thank you,
Tim McShane
Nevada County resident

Nevada County Planning Commission:

Thank you for the opportunity to comment on the staff report or the proposed reopening of the Idaho-Maryland mine. My wife and I are local residents and property owners. Please consider the following comments:

1. As noted in the staff report, the proposed project is NOT consistent with numerous land use and other county policies. So it is surprising that staff has not provided a specific recommendation but rather has taken the approach of offering two opposite recommendations to the Planning Commission, one for denial and one for approval.

2. As noted in the staff report, the EIR concluded that there are unavoidable significant adverse impacts to aesthetics, noise and traffic resulting from the project. The alternate recommendation to approve the project relies on an extraordinary number of yet to be developed mitigation plans of dubious effectiveness.

3. The staff report noted that the project will result in 115-236 truck trips over 80 years. The language implies that these are totals rather than daily amounts and needs to be clarified. The number of trips and the non-stop nature of the proposed operation will result in significant impacts on local roads, traffic and general peace and quiet.

4. The proposed project is excessive in terms of its duration and hours of operation. They far exceed any "normal" business or industrial activity.

5. While the EIR conclusions related to potential dewatering of local water wells are encouraging, as noted in the comments from the Nevada Irrigation District (NID), groundwater models are simplistic compared to the actual geo-hydrologic conditions found in nature. Properties in this region rely heavily on individual water supply wells that are fed from fractured bedrock. Rather than a somewhat stable aquifer, well yields therefore are dependent on actual flow of groundwater through these fractures. The dewatering aspect of the proposed project is a potential significant negative impact of huge importance. The proposed mitigation measure of connecting impacted properties to an as yet to be constructed pipeline through yet to be established easements utilizing yet to be established water rights verges on the absurd. Neither the County nore the project applicant have the authority to guarantee future connection to the public water supply. NID alone has the authority to authorize additional connections to their system. These challenges have been pointed out by NID in their comment letter and should be

heeded.

In conclusion, the proposed reopening of the Idaho-Maryland mine is an extraordinarily intensive project that is not consistent with County policies; will result in unavoidable significant negative impacts to the community; relies on a very long list of questionable mitigations measures yet to be developed; and should NOT be approved.

Respectfully submitted,

Richard Merrifield

RE: Idaho Maryland Mine (Assessor Parcel Number's 006-441-003, -004, -005, -034; 009-630-037, -039; 009-550-032, -037, -038, -039, -040; and 009-560-036)

Dear Members of the Planning Commission:

Thank you for the opportunity to comment on the Idaho- Maryland Mine project that will be before the Planning Commission on May 10, 2023, for consideration of a recommendation regarding the Board of Supervisor's certification of the final Environmental Impact Report (EIR), the project's conditional use permit, and the proposed development agreement. Nevada Irrigation District (NID) previously provided comments on the project's draft Environmental Impact Report. While the District appreciates that some of the comments that Nevada Irrigation District provided were satisfactorily addressed, others were not. As such, we are providing additional comments to the Planning Commission for consideration.

Financial Assurance:
Regional groundwater models are simplistic representations of complex systems and therefore there is a high level of uncertainty related to predictions based on groundwater modelling. If the predicted number of wells impacted increases and more parcels do not have a potable water source, NID will have no obligation to provide financial assistance for the construction of improvements, or the payment of fees. Therefore, connection to NID's potable water system may be delayed, or worse may not happen, if the County or the applicant does not have the fiscal resources to pay for the infrastructure needed or the required fees.

As such, NID is once again requesting that the applicant be required to provide financial assurance (such as a bond or security deposit) in the amount of $14 million dollars to cover the cost of mitigating potential dewatering impacts in the Greenhorn, Woodrose and Beaver Lane areas. This financial assurance should be required until such time there is adequate evidence supporting a determination that continued dewatering activities have no impact to any private wells in the areas mentioned. Additionally, any lapse or failure to provide or maintain the

security deposit or bonds should result in the immediate suspension of the conditional use permit.

This requirement for financial assurance should be included in the proposed development agreement or the conditional use permit.

Climate Change:
Considering the uncertainty related to climate change and impacts to groundwater levels, it is recommended that the 10% drawdown threshold of significance for well mitigation be reduced to any drawdown from the established baseline (please see comments regarding baseline below). As climate change progresses, it is not widely understood what the long-term impacts will be on local groundwater supplies. NID has received an increased number of complaints related to groundwater impacts thought to be associated with climate change from parcels that do not have a potable water connection. NID is not the local groundwater authority and there is no dedicated source of funding to facilitate connection to a treated water system. Therefore, setting the drawdown threshold of significance at 10% could result in making a functioning well today, non-operable because of the proposed project combined with climate change. Potentially leaving parcels with no potable water source and no funding to provide one.

Groundwater Monitoring:
It is imperative that groundwater monitoring prior to dewatering occurs for more than 12 months. Groundwater levels fluctuate greatly from season to season, and it will not be possible to establish a reasonably sufficient baseline with data from only one year. NID requests that the baseline groundwater monitoring program period be extended to three years.

Again, thank you for the opportunity to provide comments on the Idaho Maryland Mine project. NID looks forward to working collaboratively with the County and Rise Grass Valley. If you have any questions or would like additional information, please contact me at (530)-273-6185.

Thank you,

Jennifer Hanson

PROFESSIONAL SUMMARY

Fully qualified Journeyman Electrician with proven skills in electrical installation, repair and maintenance. Prevents and traces faults to meet high-quality standards for electrical systems. Diligent about employing strong safety precautions and correcting defects. State certified Industrial and commercial construction
Detail-oriented electrician with experience installing, repairing and maintaining building electrical systems. Minimizes rework and maximizes safety by carefully following applicable codes. Works efficiently to accomplish project needs and leave customers satisfied with professional and neat work.

SKILLS

- Heavy Industrial and Commercial Construction
- Blueprints,Wiring Diagrams,Interconnect Drawings
- Industrial Controls,SCADA,Instrumentation
- Electrical Control Panels,PLC,Motor Control Center,Electrical Distribution
- OCAL,RGC,PVC,EMT Conduit

EXPERIENCE

Master Journeyman Electrician — December 2017 - Current
Telstar Insruments Inc. | Concord, California

- Administered close supervision projects successfully by coordinating work plans, team activities and required resources.
- Mastered,read and accurately interpreted electrical blueprints.
- Attained cooperation by educating junior electrical professionals in correct procedures and safety requirements.
- Achieved 100% proficiency with Industrial controls,SCADA,process controls,OCAL and RGC conduit,SS tubing,PLC and control panel manufacturing,waste water treatment and industrial plant construction,PGE gas control construction,MCC and PLC installation,instrumentation and programming

Master Journeyman Electrician — April 2016 - December 2017
Aqua Sierra Controls | Auburn , California

- Identified problems with electrical systems using skills in testing, troubleshooting and diagnostics.
- Kept industrial plants operating by installing, maintaining and repairing electrical equipment.
- Supported businesses with timely responses to electrical issues and upgrade work requests
- Met or exceeded current National Electrical Code and local jurisdiction requirements.
- Industrial control,PLC and Control panel manufacturing,process controls,waste water treatment plant maintenance and construction,100% RGC and OCAL conduit work.
- Calculated total load amperage ratings, wattages and KW and KVA sizes.
- Maintained inventory of tools, materials and equipment.

Journeyman Electrician July 2013 - October 2015

Central Sierra Electric | Jackson, Ca

.

- Accomplished 100% completion at high degrees of skill on Waste Water Treatment Plant projects for Soda Springs and Lincoln California
- Kept industrial plants operating by installing, maintaining and repairing electrical equipment.
- Oversaw apprentices, checking quality and completeness of electrical work performed.
- Accelerated job performance by obtaining materials and equipment required to complete assigned project.

Journeyman Electrician June 2010 - June 2013

Mountain Electrical Constuction | Grass Valley, California

- Completed accurate installations based on accurate interpretations of blueprints, drawings, and schematics.
- Achieved success with commercial construction for school district and military bases
- Accomplished proficiency by Identifying problems with electrical systems using skills in testing, troubleshooting and diagnostics.

Re: Vote NO on Rise Gold IMM FEIR

Dear Nevada County Supervisors and Planning Commissioners,

On the inappropriateness of using the CEQA process for the FEIR

When does CEQA apply?

CEQA only applies to projects that require **discretionary permits from a state public agency**. The state public agency must have some discretion in how the project can be conducted for CEQA to apply, and the **project must be one that could result in an adverse change to the environment**.

<!--[if !supportLists]-->- <!--[endif]-->The BoS **Nevada County** is not a state public agency, therefore Nevada County is not a "lead agency" as per CEQA. The NC Planning Department is a county agency and therefore the CEQA process does not apply here. Usurpation of state agency's authority is not a strategy that the county should be employing.

City and county general plans are sometimes touted as potential alternatives to CEQA. While these plans provide community-specific development guidelines, many of these are very outdated and may not reflect current realities or needs in the community.

<!--[if !supportLists]-->- <!--[endif]-->The Nevada County **general plan** was never meant to permit a toxic waste-producing, transporting, and storing project from the environmental or water resource authorities, and any argument contrary to this is specious on its face.

- Specific Community de**velopment guidelines** were certainly never intended to extend out to toxic waste-producing, transporting, and storing businesses.

There are also a number of categorical exemptions from CEQA that **exempt a project from CEQA** unless there is evidence of unusual circumstances indicating that the activity might have significant adverse impacts.

<!--[if !supportLists]-->- <!--[endif]-->As a category, toxic waste producing, transporting, and storing projects are exemptions from CEQA and subject to **California** Code of Regulations, Title 22, Division 4.5 - Hazardous Waste Control.

<!--[if !supportLists]-->- <!--[endif]-->In California, the California Department of Toxic Substances Control (DTSC) is the regulatory authority responsible for issuing permits for hazardous waste facilities. The law that governs the jurisdiction of the DTSC is the California Hazardous Waste Control Act (HWCA). This law gives the DTSC the authority to regulate the generation, transportation, storage, treatment, and disposal of hazardous waste in California. The HWCA is enforced by the DTSC through the **California** Code of Regulations, Title 22, Division 4.5 - Hazardous Waste Control. Thus the Nevada County Public Planning Department is not a rightful "lead agency" and all laws pertaining to the permitting of this IMM is are directed at a "lead agency". ie this FEIR is not authorized by a legally recognized "lead agency"

As an added safety measure against CEQA abuse, the statute was amended in 2010 to provide penalties to those **using the law maliciously**.

<!--[if !supportLists]-->- <!--[endif]-->Willful negligence can and will be construed as malicious.

CEQA **requires** agencies to adopt alternatives and mitigation measures and to require that a public agency adopt a statement of overriding considerations **explaining why it is approving a project with significant and unavoidable impacts**

<!--[if !supportLists]-->- <!--[endif]-->A few hypothetical county low-level jobs are not "overriding considerations" and the economic damages are potentially overwhelming, capable of county bankruptcy risk category.

The CEQA Act was designed to **ensure** that a project applicant—not the public—**bears the costs of providing the necessary infrastructure to support a project.** CEQA provides the important service of ensuring that project costs are internalized; that is, the project applicants will pay for their share of funding for the infrastructure of their project, including roads, water lines, and other public services, not to mention putting up-front the costs of potential long-term environmental harm.

> <!--[if !supportLists]-->- <!--[endif]-->The costs for **infrastructure** and **up-front costs of potential long-term environmental harm** mitigation measures are **not included in the FEIR**. This is a yet another major violation in the FEIR process in accordance with CEQA

<!--[if !supportLists]-->- <!--[endif]-->Why isn't the applicant paying for all of the work needed to comply with the administration of the project? The county has spent $millions on this project already and this is being borne by the public that is by far the majority which is already adverse to the project. The BoS will be held accountable at the next election cycle but that does not preclude that damage to the county will not have already been done.

<!--[if !supportLists]-->- <!--[endif]-->Anyone who is adversely affected by the failure of an agency or project proponent to comply with CEQA can file a lawsuit challenging the approval of the project. This must be on grounds raised during the review if there was a review and the grounds were known. Litigation has been used to require increased disclosure about the environmental impacts of a project, to require agencies to adopt alternatives and mitigation measures, and to require that a public agency adopt a statement of overriding considerations explaining why it is approving a project with significant and unavoidable impacts. Where is the **long-term environmental harm** of this very likely massive **public litigation cost** covered by Rise Gold?

The FEIR states that the remedial action includes excavation of soils within the former eastern and western tailing ponds and on-site consolidation of contaminated materials, as well as stabilization of contaminated materials within a small hot spot area by cement treatment prior to on-site consolidation. Stabilization includes mixing Portland cement with hot spot contaminated soils in the designated consolidation area to prevent **potential water quality impacts**.

<!--[if !supportLists]-->- <!--[endif]-->The **air quality impacts** are **not addressed** in the Brunswick or the Centennial sites which apparently only address, albeit inadequately, the potential water quality impacts. The **air quality** impacts **far exceed any water quality harms** as Portland cementing of contaminated soils will **not** prevent the toxins from being released as the cement dries out and leaves the residue dust.

Under CEQA, anyone who has objected to the project and is adversely affected by the failure of an agency or project proponent to comply with CEQA **can file a lawsuit** challenging the approval of the project. This must be **on grounds raised during the review** if there was a review and the grounds were known.

<!--[if !supportLists]-->- <!--[endif]-->Since CEQA provides the important service of ensuring that project costs are internalized; that is, the project applicants will pay for their share of this very likely outcome from any part of this project going forward. How is Rise Gold being held to cover this cost of the project?

The FEIR states that Recognized Environmental Conditions (RECs) indicate the presence or likely presence of any hazardous substances in, on, or at a property due to any release into the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. Any past release of hazardous substances or that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances is allowed to remain in place subject to the implementation of required controls.

Extensive site investigation, overseen by DTSC, has identified mill tailings, waste rock, and affected soil at the site that contain lead, arsenic, mercury, and other metals at concentrations exceeding background soil metals concentrations and regulatory benchmark concentrations. These all came from the IMM and hence it should be obvious that there is more inside the IMM that has not yet been blasted out of the mine and crushed. Elevated soil metals concentrations **present a potential human health risk** resulting from routine, long-term exposures, as well as ecological concerns in terms of impacts to plant and animal species. As a result, ad overseen by DTSC **under existing conditions, the majority of the Centennial Industrial Site cannot be developed due to unstable soils and/or contamination.**

<!--[if !supportLists]-->- <!--[endif]-->Since the Centennial Industrial Site cannot be developed, as deemed by the authorizing authority, due to unstable soils and contamination, and the Brunswick Site depends on a working Centennial Site, it holds that the Brunswick site also **cannot be developed**. To ignore this dependency is the willful ignorance of the law, common sense, and a blatant usurpation of state agency authority.

Evaluation and conclusions of the inadequacy of the FEIR

Elevated Metals Concentrations in On-site Soils

Previous environmental investigations have identified metal concentrations on the Brunswick Industrial Site that exceed regulatory criteria, primarily arsenic. Mine waste rock and soil fill contain elevated levels of arsenic …. Mine waste rock and tailings are present near the Brunswick Mine location and the fill is placed to the south of that location….Arsenic concentrations detected in mine waste samples were relatively low except for the mixed soil and rock fill beneath a five-acre paved area

Regarding CREC and HREC from Petroleum Toxins on the Brunswick site:

A **Land Use Covenant** with the Nevada County Assessor's Office was filed affecting the Brunswick Industrial Site, and proof of monitoring well destruction was submitted. The Land Use Covenant was established **to restrict groundwater use** based on remaining groundwater **contamination at concentrations above the Maximum Contaminant Level** (MCL) for drinking water

<!--[if !supportLists]-->- <!--[endif]-->How does permitting the IMM not violate the Land Use Covenant of the Nevada County's own Assessor's Office?

In accordance with CEQA Guidelines Appendix G**, an impact is considered significant if** the proposed project would:

<!--[if !supportLists]-->• <!--[endif]-->Create a significant hazard to the public or the environment through the routine handling, transport, use, or disposal of hazardous materials;

<!--[if !supportLists]-->• <!--[endif]-->Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment;

<!--[if !supportLists]-->• <!--[endif]-->Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile

of an existing or proposed school;

<!--[if !supportLists]-->• <!--[endif]-->Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;

<!--[if !supportLists]-->• <!--[endif]-->For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area;

<!--[if !supportLists]-->• <!--[endif]-->Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; and/or

<!--[if !supportLists]-->• <!--[endif]-->Expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires.

In accordance with CEQA Guidelines Appendix G, all of the impacts are significant impacts as all apply to the IMM site. More importantly, the FEIR proposed mitigation measures are economically and or physically effectively prohibitive and hence the un-avoidable risk of the significant impact to the community and region is significant and unavoidable and the result reached by the NC Planning Department as "*less-than-significant* level" is a gross error. It's tantamount to concluding that life on Mars has significant impacts but with a few mitigating measures in place it is possible. Many things are theoretically possible but impractical. That is the single largest problem with the FEIR, in theory, anything is possible, even reopening a Pandora's Box, but who is left to endure the curse following?

<!--[if !supportLists]-->- <!--[endif]-->The IMM project would Create a significant hazard to the public or the environment through the routine handling, transport, use, or disposal of hazardous materials, through the transport of 36,000 trucks carrying mine tailing from the mine and spewing toxic dust into the air and onto the highways and byways of Northern California and possibly to the state of Nevada.

<!--[if !supportLists]-->- <!--[endif]-->The IMM project would Create a significant impact hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment from any truck accident from 36,000 trucks/year spewing toxic dust into the air and onto the highways and byways of Northern California and possibly to the state of Nevada.

<!--[if !supportLists]-->- <!--[endif]-->The IMM project would prohibit the development of any property or school within one-quarter mile of any hazardous emissions or hazardous or acutely hazardous materials, substances, or waste from the Brunswick site.

<!--[if !supportLists]-->- <!--[endif]-->The IMM project would be solely by operations producing toxic waste tailings included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant impact hazard to the public or the environment.

- The IMM project would prohibit the land within two miles from being developed for a private or public airport or public use airport and would result in a safety hazard or excessive noise from dynamite blasting and rock crushing, for people residing or working in the project area.

- An accident at or as a result of the IMM project would completely overwhelm any county implementation adopted emergency response plan or emergency evacuation plan, and at its own costs of mitigation on behalf of the IMM applicant.

- An accidental or wildland fire at or as a result of the IMM project would impose a significant impact to expose people or structures, either directly or indirectly, to the risk of loss, injury, or death.

The IMM FEIR concludes this section on Mitigation Measures with a blanket "Implementation of the following mitigation measures would minimize the risk from transport, underground storage, and use of explosives at the Brunswick Industrial Site to a *less-than-significant* level."

<!--[if !supportLists]-->- <!--[endif]-->How is this possible to reach this result for toxic waste where thousands of regulations and operational details for which compliance has no tolerance for error, without first ascertaining continuously for 80 years that all of the regulations and mitigation operations are being adhered to?

<!--[if !supportLists]-->- <!--[endif]-->How is this possible for the risk alone to be covered from anything that could go wrong? What is the insurance cost and what insurer will cover the risk of any one of hundreds of possible catastrophic accidents?

To: Matt Kelley, Senior Planner
Nevada County Planning Department and Nevada County Planning Commission
Subject: Final Environmental Impact Report for the Idaho-Maryland Mine Project, State Clearinghouse # 2020070378 and Nevada County Planning Commission Special Meeting on May 10th, 2023 for the proposed Idaho-Maryland Mine – Rise Grass Valley project
Dear Mr. Kelley and The Nevada County Planning Department and Planning Commission:

The California Department of Parks and Recreation (CDPR), is submitting **the attached comments** on the Final Environmental Impact Report, State Clearinghouse #2020070378 for the proposed Idaho-Maryland Mine Project and on the Idaho-Maryland Mine Project Planning Commission Staff Report and associated Nevada County Planning Commission Public Meeting on May 10th, 2023. CDPR is a State Agency as defined by the California Environmental Quality Act (CEQA) § 21082.1, and a Trustee Agency as used by CEQA, its Guidelines, and as defined by CCR § 15386 for the resources affected by this project within a unit of the State Park System.

The mission statement of California State Parks directs CDPR to: preserve and protect biodiversity and fully functioning natural ecosystems; provide for the health and safety of the public (park visitors, park employees, and park residents); create and maintain outdoor recreation opportunities for residents and visitors of California; and protect cultural resources (http://www.parks.ca.gov/?page_id=91). The attached comments reflect the internal policies and directives of CDPR as they relate to the Final Environmental Impact Report for the Idaho-Maryland Mine Project (the Project) and the Idaho-Maryland Mine Project Planning Commission Staff Report.

Unfortunately, I am unable to attend the Public Meeting scheduled for tomorrow due to an illness. I hope that you can take the time to read these comments submitted by the Department and that they will help you with any actions that are needed to take on the Mine Project. Please contact me if you have any questions or concerns on the attached comments,

Thank You,

Subject: Final Environmental Impact Report for the Idaho-Maryland Mine Project, State Clearinghouse # 2020070378 and Nevada County Planning Commission Special Meeting on May 10th, 2023 for the proposed Idaho-Maryland Mine – Rise Grass Valley project

Dear Mr Kelley and The Nevada County Planning Department and Planning Commission:

The California Department of Parks and Recreation (CDPR), or California State Parks, as it is familiarly called, is submitting the following comments on the Final Environmental Impact Report, State Clearinghouse #2020070378 for the proposed Idaho-Maryland Mine Project and on the Idaho-Maryland Mine Project Planning Commission Staff Report and associated Nevada County Planning Commission Public Meeting on May 10th, 2023. CDPR is a State Agency as defined by the California Environmental Quality Act (CEQA) § 21082.1, and a Trustee Agency as used by CEQA, its Guidelines, and as defined by CCR § 15386 for the resources affected by this project within a unit of the State Park System.

The mission statement of California State Parks directs CDPR to: preserve and protect biodiversity and fully functioning natural ecosystems; provide for the health and safety of the public (park visitors, park employees, and park residents); create and maintain outdoor recreation opportunities for residents and visitors of California; and protect cultural resources (http://www.parks.ca.gov/?page_id=91). The following comments reflect the internal policies and directives of CDPR as they relate to the Final Environmental Impact Report for the Idaho-Maryland Mine Project (the Project) and the Idaho-Maryland Mine Project Planning Commission Staff Report.

CDPR owns and operates Empire Mine State Historic Park (the Park) in Grass Valley, CA. The Park hosts over 100,000 visitors annually, of which at least 50,000 use the vast trail system. Empire Mine SHP is located near to both the Brunswick and the Centennial Project sites of the Idaho Maryland Mine. The northwest boundary of the popular “Union Hill” area of the Park is just 450 feet to the southwest of the Brunswick facility project boundary, and the Upper Union Hill Trail Loop is located 850 feet away. The main rock processing areas at Brunswick are less than 0.5 miles away from a large area of Union Hill, including trails and valuable wildlife habitat.

The Park contains the "Bennett Street Grasslands," which are located along East Bennett Road, a 33-acre assemblage of dense riparian areas, wetlands, and unique, low elevation wet and dry grassland communities. The Bennett Street Grasslands contain a 0.45-mile stretch of South Fork Wolf Creek. The Bennett Street Grasslands provide important breeding, wintering, and fall migration habitat for birds. Over 100 species of birds have been detected at the site; this includes the banding and capture of the Willow Flycatcher, *Empidonax traillii* (California State Endangered Species), the yellow breasted chat, *Icteria virens* (California Bird Species of Special Concern), and detections of Olive-sided Flycatcher, *Contopus cooperi* (California State Bird Species of Special Concern) as well as, Yellow Warbler, *Setophaga petechia* (California State Bird Species of Special Concern), from 2019-2022.

The Bennett Street Grasslands and the South Fork Wolf Creek are also the site of a recently completed six-year mitigation project, the "Magenta Drain Mitigation" project which was a required mitigation from **Section A.8 of Streambed Alteration Agreement and Major Amendment No. 1600-2011-0009-R2**. The mitigation restored both wetland and riparian habitats along the South Fork Wolf Creek and included several local school groups planting native riparian vegetation along the banks of the creek.

The Bennett Street Grasslands hosts annual field trips for local 4th and 5th grade students. These students participate in active resource restoration and with the volunteer bird banding and inventory project taking place along the South Fork Wolf Creek. One such field trip was captured in the video "Bird Banding at Empire Mine State Historic Park" and featured in the 2019 Wild and Scenic Film Festival: https://youtu.be/3kJ68T92Flw. Bird banding is handled by Allison Nelson and Gold Country Avian Studies under a 7-acre conservation easement with the Bear Yuba Land Trust that is held at the Grasslands.

The Park also contains an additional portion of the South Fork Wolf Creek that is both upstream of the Bennett Street Grasslands, and downstream of the Brunswick facility, familiarly called the "Upstream Reach". The "Upstream Reach" is 0.4 miles (2200 feet) downstream of Brunswick facility on South Fork Wolf Creek, 1470 feet south of the Centennial site, and holds 13 acres of valuable riparian habitat.

General Comments:

CDPR submitted extensive comments on the Draft Environmental Impact Report (DEIR) for the Idaho Maryland Mine Project in early 2022, and Park staff has reviewed the responses to these comments that were published as part of the Final Environmental Impact Report (FEIR) in December of 2022. CDPR's original comments relayed a significant overall concern that the Project as currently proposed harbors potential to harm Empire Mine State Historic Park's natural resources and compromises the ability to fully carry out the Park's Mission Statement to protect and preserve the biodiversity and health of the ecosystems contained within, in addition to potentially harming the public's health, wellbeing, and visitor enjoyment while using the Park. Unfortunately, CDPR understands that the Project components that had potential for impacting the Park including the dewatering of mine tunnels to the South Fork Wolf Creek and associated riparian areas, groundwater depletion within adjacent meadows, and cumulative noise and air pollution impacts have not been changed or addressed sufficiently in the FEIR.

In fact, the Project appears to have been completely unaltered with only two significant analytical changes that have been made to the FEIR in relation to CDPR's requests which include the adoption of the Park as a "Sensitive Receptor" in noise and air quality analyses, and a new Appendix H that includes groundwater depletion modeling in regard to the Bennett Street Grasslands.

CDPR has also reviewed the just released Idaho-Maryland Mine Project Planning Commission Staff Report. CDPR was surprised to find that there was not one mention of Empire Mine State Historic Park, or the California Department of Parks and Recreation's concerns related to the Project within the 139 pages of content. There was also no mention of CA Water Code § 13050 section (f) that states: "'**Beneficial uses**' of the waters of the state that may be protected against quality degradation". CDPR strongly believes that Empire Mine State Historic Park and the natural resources contained within is a Beneficial User of the South Fork Wolf Creek.

Not mentioning the Park or the concerns that CDPR brought up from the DEIR in the Staff Report is strangely omissive considering that CDPR was listed as "Agency 1" in the *Chapter 2 – Responses to Comments* of the FEIR, and a total of 52 individual responses were given to CDPR over a total of 17 pages of text within the FEIR. CDPR would like the Nevada County Planning Commission to note that the Agency of the California Department of Parks and Recreation has significant and continued concern over the Idaho Maryland Mine Project as proposed and presented within the Final Environmental Impact Report.

Water / Dewatering / Downstream Impacts

CDPR finds the FEIR and the Project as proposed to still have significant potential impacts to Empire Mine State Historic Park. The critical issue for CDPR is the unknown impacts of mine dewatering on two stretches of the South Fork Wolf Creek that flows through the Park in parallel to East Bennett Street in Grass Valley. Currently the South Fork Wolf Creek contains measured flows that are consistently low in the late spring, summer, and fall months and range from 0.1-0.4 cfs (cubic feet per second). Winter flows have been measured during non-storm events by Park staff as averaging 1-2 cfs, with storm flows anywhere from 3-15 cfs. The FEIR does not address CDPR's concerns that adding 5.6 cfs of flow to the South Fork Wolf Creek at any point during the year and at any point for the life of the Project could have drastic effects on the health of the creek, the riparian vegetation, wildlife habitat, turbidity, and invertebrate life cycle health. In particular, CDPR is very concerned that the balance of lower late Spring to Fall creek flows could be disrupted at any point, and without notice, and create multiple unknown effects to the normalcy of the creek's seasonality.

Specifically, the Project dewatering into the South Fork Wolf Creek would completely alter the historic baseline flows, especially during the dry months. Altering normal summer flows (as low as 0.1 cfs) with the addition of an "average" of 1.9 cfs would bring summer dry month flows close to 2.0 cfs or above and would most likely completely alter the adjacent riparian vegetation adapted to the normal low summer flows. In the FEIR, the California Department of Fish and Wildlife commented (*Chapter 2 – Responses to Comments, Page 2-204*) that "The 80 year duration of the Project would essentially create a new hydrologic baseline in the Project

Area and in upstream and downstream interconnected hydrology. The DEIR does not discuss the shifting ecological baseline that would occur during the Project, nor does it account for impacts that would occur at the end of the Project or the restoration timeline for a return to the pre-project baseline conditions." CDPR concurs with the Department of Fish and Wildlife on this comment and is concerned that this new and uncertain "baseline" would create unintended consequences on the existing riparian habitat and vegetation communities. Vegetation adapts slowly over time to ecologic change and this quick change in baseline flows could cause riparian tree die-off due to flooding (much like a beaver dam effect), and cause die off of specific eco-tones adapted to the summer dry months and low flow of the South Fork Wolf Creek. CDPR has no way of evaluating the full impacts of the forced Creek flooding on the natural resources contained within the riparian ecosystems of the Park and is in no way prepared to manage for potential drastic changes in Park vegetation communities.

CDPR originally commented on the lack of an analysis on dewatering impacts on groundwater depletion on nearby vegetation communities. The FEIR now admits that the dewatering impacts will also affect groundwater dependent vegetation, as evidenced by the new Appendix H, "Technical Memorandum – Simulated Drawdown at Selected Meadows 17 June 2022" which depicts a map of the Bennett Street Grasslands (called "Empire Park Meadow") in "Figure No 2" that clearly shows portions of the meadow to have a deficiency of up to 0.8 feet of water without "discharge of 1.9 cfs" and up to 0.6 feet of water with "discharge of 1.9 cfs" to the Creek. CDPR finds it unacceptable that even with this modelled significant groundwater deficit that both the Appendix H and the Master Response 33 - Groundwater Dependent Vegetation, Chapter 2 – Responses to Comments state that "*With the planned discharge of 1.9 cfs, future mining is predicted to have no to very small drawdown in the vicinities of the meadows"* and "*With the addition of 1.9 cfs (850 gpm) (average maintenance dewatering rate), future mining is predicted to have no to very little groundwater drawdown in the vicinities of the meadows."*. These statements subjectively brush aside concerns with the well-being of the wet meadows located at Empire Mine State Historic Park and do not state that the total groundwater drawdown according to Appendix H in the "Empire Park Meadow" would affect up to 27% of the total area of the meadows without the dewatering input, and 16% with the dewatering input. The 16% figure assumes that the dewatering input back into the South Fork Wolf Creek would fan out back into the edges of the meadow where dewatering impacts would be focused. The FEIR does not propose mitigations or project changes for this significant issue that could drastically affect a large portion of the Bennett Street Grasslands ecosystem. No analysis, modeling, or maps were given that represent potential effects to the broad riparian area located closer to the Brunswick facility that Park staff refer to as the "Upstream Reach".

CDPR wrote in the comments to the DEIR that the Project as well as it's impacts and mitigations fail to adequately protect the South Fork Wolf Creek, it's riparian ecosystem, and it's "**Beneficial Uses**." Since there have been no significant changes to the Project proposal or its mitigations, the FEIR has also failed to provide any meaningful protections for the downstream portions of the South Fork Wolf Creek contained within the Park from proposed Project activities. CA Water Code § 13050 section (f) states: "'**Beneficial uses**' of the waters of the state that may be protected against quality degradation include … preservation and enhancement of fish, wildlife, and other aquatic resources or preserves". The Central Valley

Regional Water Quality Control Board have established in their 2018, Sacramento and San Juaquin Basin Plan that "**Fish, plants, and other wildlife, as well as humans, use water beneficially"** (page 2-1, Beneficial Uses, California Regional Water Quality Control Board, Central Valley Region, (RWQCB), 2018), and that existing "Beneficial Uses" of the Bear River Watershed which includes South Fork Wolf Creek are "Wildlife Habitat" and "Cold and Warm Freshwater Habitat" (page 2-10, RWQCB).

Air Quality and Noise / Vibration Impacts

The DEIR previously had only mentioned air quality degradation, noise, and vibration impacts on surrounding residential areas, it failed to mention the close proximity of Empire Mine State Historic Park, and the potential hazards for its Park trail users and employees. The Park, the natural resources contained within and its recreational users, had been neglected to be considered a "**Sensitive Receptor**" regarding Air Quality and Noise impacts. The FEIR fortunately added the Park and its users as a Sensitive Receptor and included the park boundaries on maps in Appendix K "Health Risk Assessment Memorandum for the Idaho-Maryland Mine Project", although still dismissing any significant impacts to the Park and offering little in the way of new discussion in the topic . The popular Union Hill Trail Loop is just 850 feet away from the Brunswick facility and the Bennett Street Grasslands is only 900 feet south of the Centennial facility.

The Hidden Falls Regional Park Trail Expansion Subsequent DEIR, Chapter 9, Air Quality (2020), Page 9-12, defines **Parks** as a **Sensitive Receptor** in this manner: "***Recreational land uses are considered moderately sensitive to air pollution. Exercise places a high demand on respiratory functions, which can be impaired by air pollution, even though exposure periods during exercise are generally short. In addition, noticeable air pollution can detract from the enjoyment of recreation.*"**

CDPR is acutely concerned about cumulative impacts to the Park and its users from all potential air pollution sources originating from the Project such as: fugitive dust emissions, airborne asbestos, and NOx emissions from trucks and equipment.

CDPR had established in its DEIR comments that the Department was and is still concerned about the potential for accumulated Noise from the project due to blasting, rock crushing, truck travel, and construction that may disrupt nesting bird habitat and other wildlife habitat at the Park, in addition to the nuisance of excess noise affecting the quality of the park visitor experience due to the close proximity of the Project facilities to the Park. The Park contains extremely valuable and rare low montane wet meadows and riparian thickets in the Bennett Street Grasslands that harbor excellent breeding, wintering, and fall migration habitat for birds. Over 100 species of birds have been detected at the site including several California State Endangered and/or Species of Special Concerns (Willow Flycatcher, Yellow Breasted Chat, Olive-sided Flycatcher, and Yellow Warbler).

As was stated previously, the FEIR did not adequately address potential noise impacts to wildlife and park visitation, only stating that "Examination of DEIR Figures 4.10-7 and 4.10-8 indicate that both daytime and nighttime noise generation of operations at the Brunswick Site

would be well below 40 dBA at the Empire Mine site." and "At the portions of the Empire Mine SHP nearest to the Centennial Site, predicted daytime noise levels are 27 dBA at the grasslands and 22 dBA at the nearest trail within the park." (*Chapter 2 – Responses to Comments, Page 2-191*). The FEIR fails to state which Project activity has been evaluated to produce the decibel figures cited above. Both the DEIR and the FEIR seemingly treated each Project noise generating activity as a single entity and failed to address the total cumulative impact of all Project noise generating activities together.

The standard method of combining two or more sound pressure levels at a single location involves 'decibel addition' according to the Federal Transit Administration's "TRANSIT NOISE AND VIBRATION IMPACT ASSESSMENT FTA-VA-90-1003-06 May 2006" manual. The manual states in Chapter 2: Basic Noise Concepts 2-3 that: "The combination of two or more sound pressure levels at a single location involves 'decibel addition' or the addition of logarithmic quantities. The quantities that are added are the sound energies (p2 rms). For example, a doubling of identical sound sources results in a 3 dB increase…" Thus, CDPR believes that the combination of mineral processing, fan ventilation, truck hauling, ore crushing, blasting, and other project activities should have been evaluated cumulatively as these activities are more than likely to be occurring simultaneously. Table 10 in "Appendix L Noise and Vibration Study" in the DEIR lists 43 individual activities or tools/equipment under "Typical Equipment, Idaho Maryland Mine" that all appear to be noise generating. The cumulative noise generating effect of all equipment is impossible for CDPR to evaluate without a table and map of detailed peak decibel effects adjacent to the project sites. The FEIR has failed to mention how many project activities would be occurring simultaneous to one another and how these project activities could exacerbate noise impacts above a significant threshold for sensitive receptors nearby including Empire Mine State Historic Park.

Summary of California Department of Parks and Recreation comments / concerns

In summary, the California Department of Parks and Recreation has grave concerns about the Idaho Maryland Mine Project as currently stated in the FEIR in regard to the health and welfare of the Park's ecosystems, the organisms contained within and the enjoyment of the park by visitors. As a California State Agency and a Trustee Agency under CEQA, the Department is entitled to comment on a Project's potential effects to one of its Park's units. CDPR notes that both "Recommendation A" and "Recommendation B" put forth by the Nevada County Planning Commission Staff Report certify the FEIR as "adequate" and "completed in compliance with California Environmental Quality Act". CDPR disputes this in both instances considering the previously stated deficiencies and unconsidered points of analysis contained within the FEIR and disagrees that the FEIR should be certified in its current form. But for the purposes of the Planning Commission meeting set on May 10th, 2023, CDPR would like to refer to the Nevada County Planning Commission Staff Report option **Recommendation A** as highly preferable regardless to insure the continued wellbeing and safety of the Park.

For reference, Empire Mine State Historic Park boundaries can be found on Page 8 of the Empire Mine State Historic Park brochure available here (and on the attached map on the following page of this document):
https://www.parks.ca.gov/pages/499/files/EmpireMineSHPWebLayout2016.pdf

The health and safety of Park visitors and employees, the Park visitor experience, and the preservation of natural and cultural resources are of the utmost importance to California State Parks. The Project as proposed could have significant impacts on those resources and values.

If any of our comments need clarification, please do not hesitate to contact Parks Environmental Scientist Daniel Lubin at dan.lubin@parks.ca.gov or at (530) 272-0298.

NEVADA COUNTY
BOARD OF SUPERVISORS

May 9, 2023

To: Nevada County Supervisors

From: Laura Wagner (Balch) and Gary Balch: 18286 Nubian Way: Nevada City, CA 95959

Laura Wagner-Balch Gary Balch

Subject: Public comment on the Environmental Impact report on the proposed Idaho Maryland Mine – Rise Grass Valley Project

We find that Economic Impact Report (EIR) inadequate for the reasons listed below.

- The EIR is not responsive to the community request to identify other mines that are operating around the clock which are surrounded by residential properties supported by drinking water wells which would be impacted by this project. Mr. Niehaus states that there are no comparable sites and drops the issue. This is inacceptable. If other sites are not comparable, the EIR needs to explore in detail the probable impacts on the ground, the ground water, the roads, the air and the general quality of life, of round the clock massive construction within a residential community.

- Healthcare costs to the community and employees are a significant element of a project of this nature, yet are not addressed in this study. This is unacceptable. Nevada County does not have a revenue stream to support healthcare costs of this project and would need to seek voter approval for funding the potential costs of worker injury, community injury, air quality, and unanticipated healthcare issues, costs which could be quite substantial.

- The EIR was not responsive to the capacity of the Rise Grass Valley, the organization proposed to undertake gold mining at the Idaho Maryland site. Does the company have the capital to undertake a project of this scope? Accounting and insurance reports are needed as is an analysis of what happened in the British Columbia project bankruptcy as a result of environmental and safety infractions by this same company. This is unacceptable and does not promote trust in the Rise Grass Valley's organization's ability to undertake the work in this county.

As a result of these inadequacies in the report, we recommend that the Planning Commission recommend that the Board of Supervisors reject the EIR and recommend denial of the permit application of Rise Grass Valley for the Idaho Maryland mine project. Staff should be released from further expensive investigation of this project for a period of no less than fifty years.

Thank you for your consideration.

Cc; Hardy Bullock

May 8, 2023

Dear Planning Commissioners and Board of Supervisors,
I am a 17 year resident of Grass Valley, currently District 3. I'm a retired Career Counselor, Workers Compensation Counselor and Job Developer. Over a span of 25 years I conducted countless labor market research projects.

Rise Gold's claims of local hiring for mine jobs and its big boost to our community caught my eye. I recognized it as flawed and a huge exaggeration. This is what I discovered in my fact-based research:

VERY FEW LOCALS ARE LIKELY TO BE HIRED FOR MINE JOBS BECAUSE GRASS VALLEY/NEVADA COUNTY DOES NOT HAVE A LABOR POOL WITH THE REQUIRED MINING EXPERIENCE AND SKILLS.

Rise Gold estimates at least 213 employees to be hired from the immediate Nevada County area; 202 of them will be underground miners.

However, their technical report of 2017 states in section 5.4: "Grass Valley no longer has a large pool of resident underground mining specialists, but there is a large workforce of mining specialists in Reno and Nevada (state), which is relatively close by."

And on their website Employment Detail Memo it is stated: "The core of the underground mining workforce requires skilled workers with a minimum of four years experience at a producing underground metal mine."

It is apparent that Rise Gold will not hire trainees and it is apparent that they will hire out of the area miners who have experience. These will be commuter employees

because Nevada County does not have the labor pool with the required mining experience and skills. These commuter/transient employees will work 12 hour shifts, 7 days on and 7 off, staying in Grass Valley in temporary housing to work and sleep for their 7-day shift. Then they will return to their hometowns for their 7 days off, and this is where they will spend their wages.

AUTOMATION IN THE GOLD MINING INDUSTRY IS A GROWING TREND, AND WILL REPLACE MINERS WITH ROBOTS AND DRONES.

NS Energy (a periodical considered the gold mining industry's largest resource for news, projects, and research) features a number of articles on gold mining automation, and reports that the future of gold mining automation is now; and it is not new. The first fully automated underground gold mine, the Syama Complex, has been fully operational since 2018. *NS Energy* states, "Looking forward, 45% of mining majors and 41% of non-majors revealed plans to invest in drone technology over the next two years."
Automation is becoming mandatory to remain competitive in the gold mining industry. Its main benefits are safety and efficiency. Safety being "the really obvious one, because we're taking people out of harm's way in an underground environment". Efficiency as a benefit increases productivity and profit. *NS Energy* predicts "a significant savings on personnel costs…" Note that this savings will increase company profits which do not remain in Nevada County.
Keep in mind, 202 of 312 Rise Gold employees are underground miners and 64 are in mineral processing. That means, 266 employees will be potentially replaced by automation.

In conclusion, it is likely that Rise Gold will hire experienced out-of-area/commuter mine workers and/or use robots and drones instead of employees. This seriously casts doubt on Rise Gold's claims of boosting local resident's incomes and consequently Nevada County's economy. Rise Gold's projections fall flat.

I respectfully ask that you deny the project and decertify the FEIR.

Sincerely,
Kathy Ogburn

(Note: a copy of this letter is also attached for your convenience)

Dear Nevada County Planning Commissioners and Planning Department Staff,

I am sorry that I will not be able to speak to you in person about this vital subject, but I felt it was important to write to personally and respectfully ask that you NOT recommend certification of the environmental impact report (EIR) that has been developed for the proposed re-opening of the Idaho Maryland Mine. In addition, I hope you make a strong statement recommending that the Board of Supervisors deny the land use permit. I believe that both the EIR and the project are deeply flawed. As responsible stewards of Nevada County's natural resources and human communities, you must vote against moving either of these documents forward.

I have made these hard decisions sitting in your seats. During my first term of service on the Nevada County Planning Commission (NCPC) in the 1990's we saw first-hand the catastrophic impacts of the Siskon gold mine operations which (despite an EIR saying that there would be NO NOTICEABLE IMPACT on water levels) dewatered the wells of the local health clinic, the elementary school and many private properties on the San Juan Ridge. In the late 1990's we reviewed an application for the Emperor Gold Mine project on the same site that you are now considering for this mine, conditioning it to protect the neighbor's wells. As a Nevada County County Supervisor I led the effort to make the state clean-up the abandoned copper mine that was in my district inside of the Spenceville Wildlife Refuge. Later, as the leader of The Sierra Fund, I worked closely with responsible miners and the Brown Administration to review and then significantly improve the California Surface Mining and Reclamation Act (SMARA) that regulates the permitting of mines.

Bringing that expertise to this project: This EIR report and the permit must both be rejected for many reasons. Geochemists, geologists, hydrologists, engineers, biologists, water quality scientists and more have provided expert criticisms of these documents and their findings will hold up under legal scrutiny. You will be provided with legal and scientific expertise generated by the project proponents, and you will bet told that "experts disagree." But in this case, the overwhelming preponderance of experts with no current or potential conflict of interest, have found deep flaws in both the EIR and the proposed plan of operation.

The last this County approved a hard rock gold mining permit (Blue Lead 2014) the project was stopped by litigation that settled out of court (and inspired the Brown Administration to work with me to dramatically reform SMARA). This document will likely face the same fate. It will never survive higher level expert scientific and legal review.

One example of these flaws is the way that the water issues are handled in the EIR and proposed mitigation measures.

CEQA requires that ALL environmental impacts be identified, described, and mitigation measures designed and ready-to-go, prior to approval of a project. In contrast to that law, the amended EIR that you are considering is basically silent on mitigation measures to protect water quality. The project's likely and suspected water quality impacts and mitigation measures are not specifically identified or described, instead, these are left to the regional water board to describe and mitigate AFTER the approval of this environmental impact document and land use permit. This long-standing "practice" – allowing a mining project's EIR and land use permit approval to move forward without water quality permitting and designs in place – must stop now. With this EIR and with this land use permit.

The EIR notes[1] that a Water Treatment Plant "may be" required and "discharge of treated water from the proposed mine into South Fork Wolf Creek is anticipated". As part of this post-EIR, post-land use permit approval process, the Regional Water Quality Control Board will determine the appropriate mining waste classification for the proposed engineered fill based on "… the following factors: (1) whether the waste contains hazardous constituents only at low concentrations; (2) whether the waste has no or low acid generating potential; and (3) whether, because of its intrinsic properties, the waste is readily containable by less stringent measures." We can assume from this statement they factually don't know what the volume or concentration of hazardous constituents in the discharge will be, and thus cannot recommend mitigation. Isn't that supposed to be part of an EIR?

What if the proposed mitigation of building a Water Treatment Plant is determined to be needed "in perpetuity" – just like the water treatment plant that cleans up the discharge from the legacy abandoned North Star Mine in southern Grass Valley? What will be the size and impacts of the treatment plant and design needed for this discharge? And, will these costs and impacts be brought back for inclusion in the financial cost estimate and financial assurance mechanism that this project must create and maintain? (FYI - You should take a look at the math behind the current reclamation cost estimate of $5,442 - link)

Beyond water quality - What about impacts on wells that are further away than anticipated, like the impacts of the de-watering of Siskon Gold Mine? In fact, this EIR and project plan go backwards in how they address the potential impacts on neighboring wells in contrast to the way the NCPC conditioned this in the 1990s when I

served.

The opening sentence of the project agenda item says it all: *The proposed project would reinitiate underground mining and gold mineralization processing for the IdahoMaryland Mine over an eighty- (80)-year permit period with gold mineralization processing and underground exploration and mining proposed to operate 24 hours a day, 7 days a week during full operations.* Are you really prepared to risk our county's water quality, air quality, tourism base, and basic safety for 80 years based on these flawed documents? With so many unanswered questions before you today?

RECOMMENDED ENVIRONMENTAL ACTION: The Planning Commission should recommend that the Board of Supervisors do not certify this environmental impact report due to the great potential for significant, unmitigated impacts.

RECOMMENDED PROJECT ACTION: The Planning Commission should recommend that the Board of Supervisors do not approve this land use permit.

Feel free to contact me with any questions. Thank you for this opportunity to comment, and, for your service.

Re: Oppose certification of Idaho Maryland Mine EIR and Deny Land Use Permit

Dear Nevada County Planning Commissioners and Planning Department Staff,

I am sorry that I will not be able to speak to you in person about this vital subject, but I felt it was important to write to personally and respectfully ask that you NOT recommend certification of the environmental impact report (EIR) that has been developed for the proposed re-opening of the Idaho Maryland Mine. In addition, I hope you make a strong statement recommending that the Board of Supervisors deny the land use permit. I believe that both the EIR and the project are deeply flawed. As responsible stewards of Nevada County's natural resources and human communities, you must vote against moving either of these documents forward.

I have made these hard decisions sitting in your seats. During my first term of service on the Nevada County Planning Commission (NCPC) in the 1990's we saw first-hand the catastrophic impacts of the Siskon gold mine operations which (despite an EIR saying that there would be NO NOTICEABLE IMPACT on water levels) dewatered the wells of the local health clinic, the elementary school and many private properties on the San Juan Ridge. In the late 1990's we reviewed an application for the Emperor Gold Mine project on the same site that you are now considering for this mine, conditioning it to protect the neighbor's wells. As a Nevada County County Supervisor I led the effort to make the state clean-up the abandoned copper mine that was in my district inside of the Spenceville Wildlife Refuge. Later, as the leader of The Sierra Fund, I worked closely with responsible miners and the Brown Administration to review and then significantly improve the California Surface Mining and Reclamation Act (SMARA) that regulates the permitting of mines.

Bringing that expertise to this project: This EIR report and the permit must both be rejected for many reasons. Geochemists, geologists, hydrologists, engineers, biologists, water quality scientists and more have provided expert criticisms of these documents and their findings will hold up under legal scrutiny. You will be provided with legal and scientific expertise generated by the project proponents, and you will bet told that "experts disagree." But in this case, the overwhelming preponderance of experts with no current or potential conflict of interest, have found deep flaws in both the EIR and the proposed plan of operation.

The last this County approved a hard rock gold mining permit (Blue Lead 2014) the project was stopped by litigation that settled out of court (and inspired the Brown Administration to work with me to dramatically reform SMARA). This document will likely face the same fate. It will never survive higher level expert scientific and legal review.

One example of these flaws is the way that the water issues are handled in the EIR and proposed mitigation measures. CEQA requires that ALL environmental impacts be identified, described, and mitigation measures designed and ready-to-go, prior to approval of a project. In contrast to that law, the amended EIR that you are considering is basically silent on mitigation measures to protect water quality. The project's likely and suspected water quality impacts and mitigation measures are not specifically identified or described, instead, these are left to the regional water board to describe and mitigate AFTER the approval of this environmental impact document and land use permit. This long-standing "practice" – allowing a mining project's EIR and land use permit approval to move forward without water quality permitting and designs in place – must stop now. With this EIR and with this land use permit.

The EIR notes[1] that a Water Treatment Plant "may be" required and "discharge of treated water from the proposed mine into South Fork Wolf Creek is anticipated". As part of this post-EIR, post-land use permit approval process, the Regional Water Quality Control Board will determine the appropriate mining waste classification for the proposed engineered fill based on "… the following factors: (1) whether the waste contains hazardous constituents only at low concentrations; (2) whether the waste has no or low acid generating potential; and (3) whether, because of its intrinsic properties, the waste is readily containable by less stringent measures." We can assume from this statement they factually don't know what the volume or concentration of hazardous constituents in the discharge will be, and thus cannot recommend mitigation. Isn't that supposed to be part of an EIR?

What if the proposed mitigation of building a Water Treatment Plant is determined to be needed "in perpetuity" – just like the water treatment plant that cleans up the discharge from the legacy abandoned North Star Mine in southern Grass Valley? What will be the size and impacts of the treatment plant and design needed for this discharge? And, will these costs and impacts be brought back for inclusion in the financial cost estimate and financial assurance mechanism that this project must create and maintain? (FYI - You should take a look at the math behind the current reclamation cost estimate of $5,442 - link)

Beyond water quality - What about impacts on wells that are further away than anticipated, like the impacts of the de-watering of Siskon Gold Mine? In fact, this EIR and project plan go backwards in how they address the potential impacts on neighboring wells in contrast to the way the NCPC conditioned this in the 1990s when I served.

The opening sentence of the project agenda item says it all: *The proposed project would reinitiate underground mining and gold mineralization processing for the IdahoMaryland Mine over an eighty- (80)-year permit period with gold mineralization processing and underground exploration and mining proposed to operate 24 hours a day, 7 days a week during full operations.* Are you really prepared to risk our county's water quality, air quality, tourism base, and basic safety for 80 years based on these flawed documents? With so many unanswered questions before you today?

RECOMMENDED ENVIRONMENTAL ACTION: The Planning Commission should recommend that the Board of Supervisors **do not certify this environmental impact report due to the great potential for significant, unmitigated impacts.**

RECOMMENDED PROJECT ACTION: The Planning Commission should recommend that the Board of Supervisors **do not approve this land use permit.**

Feel free to contact me with any questions. Thank you for this opportunity to comment, and, for your service.

First, as a 30-year retired government employee, I'd like to express my sympathies and appreciation to you for having to read through what must be a mountain of misinformed and hyperbolic opinions and comments.

My wife and I are voting residents of District 1. We once again write to you about the proposed project, this time to urge your recommendation for approval of the project, including the variances for structures to the Board of Supervisors.

Before I retired, my government employment gave me the responsibility of thoroughly evaluating proposed initiatives to make policy recommendations to elected officials based on facts. In some cases, politics overrode facts. I hope that in this case it does not happen.

I have thoroughly reviewed and investigated the details of the Rise Gold project proposals. I attended the Rise Gold company informational meetings and asked questions. I have attended the online webinars from the mine opposition groups. I have studied the history of mining projects in the County, and their historical impact on our environment and the economy of California and the nation. I have learned about the gold mining industry as a whole and its place in our global and national economy. I have talked with residents who live near the Brunswick/Idaho Maryland site. I have met and spoken with several Nevada County residents whose families have been involved with and affected by the rich mining history in the County for generations. I researched the history of the Rise Gold principles, met with their CEO and researched their past history in other previous projects.

Based on my research and attention to this project I am convinced:

1. The proposal is a viable, responsible, and positive project for the County.
2. The DEIR and subsequent FEIR address all the relevant environmental impacts and the mitigation proposals are more than adequate to address potential environmental issues.
3. The "significant and unavoidable impacts" from extra road traffic and visibility of structures are in fact not that significant when one factors in the inevitable housing density increases to Grass Valley and Nevada City under legislation like SB9, for example. The unavoidable impacts identified in the FEIR are minimal and do not outweigh the importance of this project to the entire County and the economic future faced by our region.
4. The residents of this County will benefit greatly from the commerce and economic engine provided by this project.
5. This project is easily interpreted as compatible with the spirit of the County's General Plan, despite attempts by unelected staff members to infer otherwise.
6. The Planning Commission should approve this proposal, specifically "Recommendation B" in the "Idaho – Maryland Mine – Rise Grass Valley Project" report.
7. There is significant and widespread support for this project in the County. This support tends to not be as vocal or obvious as those in the opposition, but the level of support should not be underestimated.

It is unfortunate that this important process has been hijacked by a group of "Not In My Back Yard" (NIMBY) residents who have engaged in an anything-goes campaign to frighten and mislead people into misguided activism. As I wrote to you before, I say this based on my firsthand experience on

social media interacting with followers of what legitimately now can be called a Cult of Mine Opposition. My wife and I were the subject of particularly nasty shouting down for even asking questions about clearly false statements. No amount of logic or facts will be tolerated by these folks because they have been utterly convinced by consistently false statements and fake science and have decided that it must be virtuous to be opposed to the mine and stick a sign in their yards.

Lastly, this is a huge opportunity for Nevada County to show the world that mining can be done responsibly and profitably without destroying the environment. Any small amount of research into the mining practices of other countries in South America or Africa will leave no doubt that this is not an issue we can just ignore and adopt NIMBY attitudes toward. The conditions and methods used in these countries by people are absolutely heartbreaking. Burning tire ash and extracting ore with mercury in the same dishes used for food preparation are common. 10% of gold mining goes to industrial purposes, including making cars that don't use fossil fuels and millions of computer components. The demand for gold will only increase globally as we move away from fossil fuels. We have a chance to be leaders and a shining example on sustainable and responsible mining. Support the Rise Gold Project.

Hello,

Please see attached letter. I can be reached for confirmation that I am a real person living in Grass Valley by calling 530-268-5528.

Thank you!

Kind regards,
Matthew Wich

To Whom it May Concern,

My name is Matthew Wich, I am a 13 year resident of Nevada County and now live in Grass Valley. I am vehemently opposed to the proposed Idaho Maryland Mine.

I'll be blunt here, the reasons for opposing this are too many to count, and can be deeply elaborated on at length if given the time. But I am short on time today, here's the summary:

- Environmental damage: we still see the scars of gold mining all over Nevada County from operations that are decades ceased. We all know that gold mining is not ever a "low environmental impact" project. Even if we presume there are techniques that do exist that I would find palatable, the CEO of the company seeking to operate this mine is currently embroiled in criminal proceedings for environmental damage for his previous project in Canada. I do not trust this person or his company to act in accordance with my desire to maintain the environmental integrity of our county. Additionally, tourism in Nevada County is firmly anchored in outdoor activities – any potential scaled damage to the environment, especially to the water table, would be deleterious to the revenue our community gains from having clean and accessible natural resources for enjoyment by all.

- Resource use: we need water to produce food and offset fire concerns. We do not have the water needed to support a scaled mining operation, and the idea that we would consider allocating water to a mining operation instead of sustainable non-polluting endeavors is ludicrous.

- Toxic Pollution: If a mine goes into this town, I'm moving out. I have young children and I am not going to expose them to straight up industrial waste. This world is already messed up enough. I do not want them to have to worry about the quality of the water they drink.

- Economics: the proposed economic benefit of the mine is blatantly skewed towards a small number of shareholders/mining executives, and that value comes from taking it away from the residents of this community. The number of jobs and "local wealth" created are a rounding error compared the losses in property values our community will sustain if a mine comes online anywhere near our residential areas. "Job creation" is a poor argument for a project that benefits no one except people who won't be forced to live directly in the fallout of their company's actions. If all of the main shareholders and executives of Rise Gold promise to live full time right next door to their own operation for the next 80 years, then maybe I'd begin considering anything they tell us as trustworthy.

That's about it. This is dumb. There's not a huge need for gold, over half of the gold produced goes toward jewelry manufacture. I'm not going to sacrifice clean drinking water so that someone can get more shiny things. What an waste.

Thanks, I hope you can appreciate my and my family's concerns.

Kind regards,

Matthew Wich

Dear Planning Commissioners and staff,

Attached is a document sharing written comments submitted by Wolf Creek Community Alliance regarding the consideration of the final EIR for the Idaho-Maryland Mine project. Thank you for considering these comments and doing your best to protect the quality of life in our community.

Gary Griffith
Jonathan Keehn
Wolf Creek Community Alliance
P.O. Box 477, Grass Valley, CA 95945

Planning Commission Public Comment
May 10th Special Meeting - Proposed Idaho Maryland Mine Project

Wolf Creek Community Alliance

Planning Commissioners and staff, Board of Supervisors,

We are submitting these comments as citizens of the Wolf Creek Watershed, in which this proposed project is situated, and as members of the Wolf Creek Community Alliance, a science and citizen base organization that has studied, advocated and worked to restore the watershed for the greater good of our community, for 18 years now.

We have read and commented on the NOP and the Draft EIR. We have also closely considered the new appendices, the Master Responses and the individual responses to our comments and those from other agencies or groups who have raised similar concerns. We find that the Final EIR has changed little, and still ignores, discounts or inadequately addresses impacts to the biological resources in the watershed. It offers little new data and answers concerns not by seriously considering them, but by dismissing them, often by resorting to its own speculative conclusions, and appeals to technical justifications that lead away from actually considering the potential impacts

being raised. We find this is the case with our comments and the comments of many others. Our concerns about impacts remain largely unanswered.

> Therefore, we ask that this project's final EIR NOT be certified as it does not adequately consider impacts to biological resources.
>
> We also ask that the project be DENIED as it is inconsistent with the County General Plan and community values.

The EIR…

1. **Does not adequately address impacts to the South Fork Wolf Creek**

because both the draft and final reports disregard the headwaters and the continuity of this federally protected perennial stream. In spite of concerns raised by WCCA, the California Department of Fish and Wildlife, and others, the report refuses to discuss any impacts to the creek as it flows through the Brunswick site, upstream of the location where it exists in the historical culvert. This culvert, that moves the flow of South Fork Wolf Creek is nonetheless a biological resource, allowing for the passage of trout and other aquatic species up and downstream between ponds and springs at the headwaters located near Wild Rose Lane, and its free-flowing downstream reaches. Impacts to biological resources occurring when this culvert is replaced need to be considered. They are not. Alternatives considering the daylighting of this currently culverted reach of the stream should also be considered. They are not.

As the CDFW states: ***"The DEIR did not analyze all potential temporary, permanent, direct, indirect and /or cumulative impacts to … aquatic features and associated biological resources/habitats that may occur because of the project."*** FEIR, 2-202.

Further, the DEIR itself states that a significant impact would occur if the project would: ***"Interfere substantially with the movement of any native resident or migratory fish or wildlife species."*** FEIR, 2-1091. CDFW in its comments also made clear that all fish populations native or otherwise need to be protected with the FEIR proposing ways to "avoid, minimize, or mitigate any potentially significant impacts." Only one CDFW trout survey was done on SFWC, during a period of low water due to extreme drought, without including the headwaters of the stream or areas downstream of the Bennett Street Grasslands, finding only brown trout. However, fish surveys with Gold Country Fly Fishers have documented populations of native rainbow trout downstream. Therefore, given the lack of sufficient evidence, it is unclear where native rainbow trout are present. Further study is needed. In any case, analysis of the potential impact to trout (as requested by CDFW) with regard to replacing the existing culvert should be required. Without that analysis, the DEIR is inadequate.

Please also refer to our DEIR comments, Group Letter 31, 2-1072 & 2-1075. Neither the DEIR and FEIR responses address this issue. Instead, they refer only to other impacts that have been studied and suggest only that "Previous permitting of the culvert installation and NID spill easement are not environmental issues required to be analyzed in the DEIR for this project." This response ignores rather than addresses the potential impacts to biological resources.

2. **Does not adequately address impacts to the Brunswick Pond.**

Instead it dismisses and does not study or consider the biological resources of the pond simply because it is a “man-made feature.” State and federal law, however, requires that any body of water connected in any way to the overall hydrology of a watershed be protected for its biological resources. This pond, historically, was part of a larger wetlands area that still partially exists today immediately downstream. South Fork Wolf Creek flows immediately next to this pond. Engineering studies in the EIR suggest uncertainty and possible connectivity between the pond and wetlands, thus the projected need to rebuild the pond berm. Study of how this pond is fed, is lacking. The DEIR itself expresses this uncertainty, vaguely saying that it receives its water “mainly” from surface runoff and precipitation. Most importantly, the pond is rich with life, supporting a riparian zone with habitat for migrant song birds, raptors, wood ducks, and potentially special status species, as the Gold Country Avian Society points out, potentially including Black Rail, and Willow Flycatchers. None of this is studied or considered by the EIR in spite of previously expressed concerns.

Please refer to Group Letter 13, 2-698 & Group Letter 31, p. 1075 and following. Also to DEIR, 4.4-15, Appendix F.7 and H.1. In Appendix F.7, the Brunswick Industrial Site and E. Bennett Road ROW Aquatic Resources Delineation, the background to this questionable discounting of the pond as a Federal “water of the U.S.” is also given, without qualitative data or sufficient observation. The report goes on to state that recent court cases do not “prevent CWA jurisdiction if a “significant nexus” such as a hydrologic connection exists, whether it be man-made (e.g., roadside ditch) or natural tributary to navigable waters, or direct seepage from the wetland to the navigable water, a surface or underground hydraulic connection, an ecological connection (e.g., the same bird, mammal, and fish populations are supported by both the wetland and the navigable water)…The FEIR, should have studied and analyzed whether a “significant nexus” exists hydrologically between the pond, the SFWC, and the wetlands before ruling the pond out as a water containing biological resources needing to be surveyed. This omission, in spite of comments suggesting this needed to done, does nothing to protect or mitigate impacts to this significant biological feature of the Brunswick site. Finally, please review Gold Country Avian Society’s comment (2-702), that the Pond is likely part of a “migration corridor” extending down into the Bennett Street Grasslands for special status willow flycatcher and other migrant birds. FEIR, Group Letter 13, 2-698-699.

3. **Does not adequately protect wetlands and meadows.**

The Centennial wetlands, analyzed only in the DTSC RAP, which has not yet been approved, are significant, unusually valuable biological resources within the watershed and western Nevada County. The impact of destroying critical habitat in those wetlands to endangered Monarch Butterflies is discounted and not analyzed. The suggested mitigation, paying for equivalent wetland elsewhere in the world, on a 1:1 basis, is claimed to be standard practice, but makes no sense when we consider the value of this wetland for our county and community.

Similarly, impacts to the Bennett Street Meadow, part of the original historic ‘Grass Valley,’ are claimed not to exist, in spite of the expert opinion of California State Parks, which has completed a 5-year restoration project in the meadow, Gold Country Avian Society, which has done bird banding there for over 3 years, and SYRCL. The FEIR, seeks to limit consideration of impacts by looking at them in isolation, using insufficient data to discount the impacts of increased flow, erosion, turbidity, temperature, water quality, groundwater

depletion, and noise. Updated responses in the FEIR often rely on speculation, insufficient data (as California State Parks comment) with regard to turbidity), or incomplete modeling, as Appendix H does by presenting only two scenarios for groundwater depletion, omitting projections using flows higher than the average 1.9 cfs.

These meadows and wetlands are unique resources. The FEIR does not offer enough analysis to assure that this last remnant of the original “Grassy Valley" will be protected. The Centennial wetland, with its Monarch Butterfly habitat, will be destroyed if this project is approved.

Please refer to Agency Comment letter 1, 2-167, 170, and Group Comment Letter, 31, 2-1072. See also FEIR, Appendix H, Itasca Memo - Simulated Drawdown in Selected Meadows, page 1, which states that: “Two model scenarios were conducted. Scenario 1 assumed that there is no discharge of the treated water from the underground workings at the planned discharge point shown in Figure 1. Scenario 2 assumed that there will be discharge of 1.9 cubic feet per second (cfs) of treated mine water at the planned discharge point.” Limiting the model scenarios only to a control (no discharge) and one variable (1.9cfs) is not sufficient to understand potential drawdown, as the dewatering permit allows for up to 5.6cfs at any time in the proposed 80 years of the project.

4. **Does not adequately address impacts due to dewatering.**

The DEIR attempts to assure us that dumping the 100,000 gallons a day, at a rate permitted up to 5.6 cfs into South Fork Wolf Creek, will either be too small to have an impact, or fully mitigated by water treatment.

Yet, a number of agencies and groups still express their concerns, including California State Parks, California Department of Fish & Wildlife, SYRCL, WCCA, and SSI.

They suggest that testing for turbidity impacts is too limited, that too little study was done downstream in the Bennett Street Grasslands, that temperature regulation will be more difficult than suggested, and uncertain, as it will require reducing operations underground.

We want to point out the lack of study given to benthic macroinvertebrates (BMI), those bottom-dwelling larva, worms, and molluscs essential to the aquatic food web, species such as the giant stonefly, an important food for trout as every fly fisherman knows.

Yet, no BMI studies, a standard protocol for assessing stream health, and essential for creating a baseline to monitor stream health, were conducted for this EIR. As Dr. Dave Herbst, PhD of UC Santa Cruz has said about the project:

> Significant biological impact assessment needs to consider benthic macroinvertebrates (BMIs) and the organic matter/algae that are the foundation of the food chain in this section of the creek and downstream of the project. The post-project NPDES permit would require

BMI biomonitoring but this does not satisfy the need to assess what the effects would be before the project is implemented.

The final EIR does not include this kind of essential assessment.

Please refer to Individual Letter 164, Dave Herbst, FEIR, 2-5590.

5. **Does not adequately consider impacts to the endangered Pine Hill Flannelbush.**

The flannelbush species on the Centennial site is so unusual and rare that scientists are still studying it, its DNA most likely showing that it is the endangered Pine Hill Flannelbush or even a new species, found only here. The EIR treats it as the endangered Pine Hill Flannelbush, but, in the interest of advancing only the most financially lucrative version of the project, defends the creation of a mine waste zone that would require the removal of 18 plants. The EIR does not consider an alternative, where the boundary for mine waste would be moved a short distance back from the population of flannelbush, so as to protect all its individuals. Instead it promotes a complicated, untested, habitat management plan, which horticultural experts at CNPS see as dangerous and unlikely to succeed. CDFW concurs, saying that transplanting endangered species is “Generally experimental in nature and unsuccessful.”

Plants would be dug up and transplanted - independent evidence suggests this would have an extremely high rate of failure and result only in the ‘taking’ of these plants. Collecting seeds and transplanting the seedlings also is unproven to work and will have a very low success rate. Habitat enhancement is suggested, without sufficient detail given, and without indication of the use of controlled burning, an essential part of the adaptive ecology of the plant as the USFS indicates.

This plant is too rare to be treated with such disregard for its survival. The project should have been adjusted to avoid the need to kill these protected plants. The Habitat Management Plan does not do enough to assure us that its mitigations will succeed in protecting this plant’s existence.

Please refer to Agency Letter 3, California Department of Fish and Wildlife, 2-200, and Group Letter 12, Friends of Banner Mountain, 2-682.

6. **Does not adequately consider impacts to special status species.**

Much of the biological surveying done in the EIR centers around the presence or absence of special status species. The EIR does a minimal job of this, initially doing so few surveys that additional ones had to be fit in and completed after the DEIR.

Yet, the problems with the surveys remain the same. Special status species are not always easy to find, due to their rarity, their movement, their blooming season, or year-to-year changes. So biologists look for suitable habitat as a sign of possible presence. Unfortunately the surveyors for this DEIR frequently minimize the suitability of habitat, almost always in the report without substantiation or specific evidence. This bias against finding suitable habitat is pointed out repeatedly by commentators, such as CNPS as other qualified experts.

Further, CDFW protocols require that surveyors should

> Space botanical field survey visits throughout the growing season to accurately determine what plants exist in the project area. This usually involves multiple visits to the project area (e.g., in early, mid, and late-season) to capture the floristic diversity at a level necessary to determine if special status plants are present.

Surveys were not done in this manner. The EIR instead asserts that single surveys were conducted somewhere (usually at the end, as it turns out) within a blooming or breeding season. CDFW is clear that this is not enough.

Overall, whether it is in regard to the Spotted Owl, the Monarch Butterfly (no survey at all undertaken), willow flycatcher, yellow-breasted chat, foothill yellow-legged frog, or the rare Finger Rush, the EIR does its best NOT to find these species, by minimizing the potential for their presence and following inadequate survey protocols.

And IF these species are found during construction, they will simply be removed and their habitat destroyed. And if the species is disturbed by noise, loss of habitat, or other disruption, they will simply be forced to leave, as the circumstances for their survival will no longer be present.

Please refer to Group Letter 5, California Native Plant Society, 2-414, Agency letter, 3, California Department of Fish and Wildlife, 2-201 & 2-203, as well as Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities, STATE OF CALIFORNIA CALIFORNIA NATURAL RESOURCES AGENCY DEPARTMENT OF FISH AND WILDLIFE, 2018, 5-6.

7. Unreasonably defers consideration of measures essential to the protection of biological resources, thus not allowing for a full consideration of its impacts.

Comment letters from the California Department of Fish and Wildlife, California Native Plant Society, and the Law Firm Shute, Mahaly & Weinberger, all point out the inadequacy of referring to future mitigations without explaining their details. This leaves us unable to judge the completeness and adequacy of those mitigations, whether they involve management plans, water treatment plans, permits, robust monitoring, financial assurances such as bonds, or public access to real-time information.

The California Department of Fish and Wildfire states this problem clearly in their comment:

> …formulation of mitigation measures should not be deferred until some future time. Because there is no guarantee that these approvals or cooperation with all the involved entities will ultimately occur, the mitigation measures are unenforceable and do not reduce the impacts to biological resources…

This uncertainty about the probable success of actions meant to mitigate impacts should have been remedied in the EIR by more detailed description of plans, as well as many more measures that build confidence for success, including economic support for the county to monitor mine operations, bonds sufficient to cover mine failures, and legally binding mechanisms that require mine operations to cease if impacts endangering the community occur.

Please refer to Agency Letter 3, California Department of Fish and Wildlife, 2-208 as well as Group Letter 5, California Native Plant Society, 2-417, and Group Letter 21, Shute, Mihaly & Weinberger, 2-818.

8. I**gnores cumulative impacts as speculative when these impacts reasonably could be studied and considered.**

As the City of Grass Valley asserts, “The applicant’s request for an 80-year permit is extraordinary…” The EIR justifies this by saying that it fits the economic model of the applicant. At the same time it strongly objects to the need for any long-term consideration of the project's impacts over that extended “multi-generational” period. Why 80 years? We need it for the money. Consider 80 years of impacts? No thanks.

What the EIR somehow assumes is the absence of change during 80 years, the absence of accumulating risk over time, and the absence of negligent operation or accident. Such details could have easily been analyzed through statistical modeling or reference to the compliance and accident record of similar mining operations. They are not.

Most egregious, however, is the dismissal of climate change as an impact to be considered. The EIR dismisses these concerns as “speculative,” whereas the State of California, the County, and numerous agencies, such as NID, have clearly acknowledged the existence of trends due to climate change - higher temperatures, increased drought, punctuated by extreme weather events, reduced water supply. Further these entities are all modifying policy, programs, and goals to meet these challenges.

The DEIR attempts to look scientific regarding all this by citing a single 2012 paper, claiming that it shows wide uncertainty about the impacts of climate change concerning groundwater recharge. Yet the paper itself in its conclusions argues that the groundwater age in all the springs tested appears to be a response to “lower recharge rates,” and that indeed the response to decreasing recharge may be “highly non-linear.” The conclusions of this paper do not support the assertions of the EIR.

This EIR unreasonably ignores impacts of climate change and suggests there are no cumulative impacts to consider in an 80 year project.

Please refer to Agency Letter 1, City of Grass Valley, p. 2-246, and Earman, Evolution of Groundwater Age in a Mountain Watershed over a Period of Thirteen Years, Journal of Hydrology, 460-461 (2012) p. 27.

Conclusion

These detailed examples should make clear that the EIR does not adequately address impacts to biological resources.

As a watershed organization we take seriously our mission to protect the Wolf Creek watershed. It is the duty of the Planning Commission to do that as well, first by ensuring that any Environmental Impact Report fully and adequately addresses impacts, and second, by considering the project's compatibility with the Country General Plan.

This EIR does not adequately address impacts to biological resources. We, therefore, ask that the EIR NOT be certified.

This project as presented is also inconsistent with community values and the County General Plan. It states that the objective should be to "Preserve the integrity and minimize the disruption of watersheds and identified critical water courses. (Objective 11.4), and to "Discourage intrusion and encroachment by incompatible land uses in significant and sensitive habitats." (Objective 13.1) This project as presented does not do that. The project should be DENIED.

Thank you,

Gary Griffith

Planning Commission Public Comment
May 10th Special Meeting - Proposed Idaho Maryland Mine Project

Wolf Creek Community Alliance

Planning Commissioners and staff, Board of Supervisors,

We are submitting these comments as citizens of the Wolf Creek Watershed, in which this proposed project is situated, and as members of the Wolf Creek Community Alliance, a science and citizen base organization that has studied, advocated and worked to restore the watershed for the greater good of our community, for 18 years now.

We have read and commented on the NOP and the Draft EIR. We have also closely considered the new appendices, the Master Responses and the individual responses to our comments and those from other agencies or groups who have raised similar concerns. We find that the Final EIR has changed little, and still ignores, discounts or inadequately addresses impacts to the biological resources in the watershed. It offers little new data and answers concerns not by seriously considering them, but by dismissing them, often by resorting to its own speculative conclusions, and appeals to technical justifications that lead away from actually considering the potential impacts being raised. We find this is the case with our comments and the comments of many others. Our concerns about impacts remain largely unanswered.

> Therefore, we ask that this project's final EIR NOT be certified as it does not adequately consider impacts to biological resources.
>
> We also ask that the project be DENIED as it is inconsistent with the County General Plan and community values.

The EIR…

1. **Does not adequately address impacts to the South Fork Wolf Creek**

because both the draft and final reports disregard the headwaters and the continuity of this federally protected perennial stream. In spite of concerns raised by WCCA, the California Department of Fish and Wildlife, and others, the report refuses to discuss any impacts to the creek as it flows through the Brunswick site, upstream of the location where it exists in the historical culvert. This culvert, that moves the flow of South Fork Wolf Creek is nonetheless a biological resource, allowing for the passage of trout and other aquatic species up and downstream between ponds and springs at the headwaters located near Wild Rose Lane, and its free-flowing downstream reaches.

Impacts to biological resources occurring when this culvert is replaced need to be considered. They are not. Alternatives considering the daylighting of this currently culverted reach of the stream should also be considered. They are not.

As the CDFW states: ***"The DEIR did not analyze all potential temporary, permanent, direct, indirect and /or cumulative impacts to … aquatic features and associated biological resources/habitats that may occur because of the project."*** FEIR, 2-202.

Further, the DEIR itself states that a significant impact would occur if the project would: ***"Interfere substantially with the movement of any native resident or migratory fish or wildlife species."*** FEIR, 2-1091. CDFW in its comments also made clear that all fish populations native or otherwise need to be protected with the FEIR proposing ways to "avoid, minimize, or mitigate any potentially significant impacts." Only one CDFW trout survey was done on SFWC, during a period of low water due to extreme drought, without including the headwaters of the stream or areas downstream of the Bennett Street Grasslands, finding only brown trout. However, fish surveys with Gold Country Fly Fishers have documented populations of native rainbow trout downstream. Therefore, given the lack of sufficient evidence, it is unclear where native rainbow trout are present. Further study is needed. In any case, analysis of the potential impact to trout (as requested by CDFW) with regard to replacing the existing culvert should be required. Without that analysis, the DEIR is inadequate.

Please also refer to our DEIR comments, Group Letter 31, 2-1072 & 2-1075. Neither the DEIR and FEIR responses address this issue. Instead, they refer only to other impacts that have been studied and suggest only that "Previous permitting of the culvert installation and NID spill easement are not environmental issues required to be analyzed in the DEIR for this project." This response ignores rather than addresses the potential impacts to biological resources.

2. **Does not adequately address impacts to the Brunswick Pond.**

Instead it dismisses and does not study or consider the biological resources of the pond simply because it is a "man-made feature." State and federal law, however, requires that any body of water connected in any way to the overall hydrology of a watershed be protected for its biological resources. This pond, historically, was part of a larger wetlands area that still partially exists today immediately downstream. South Fork Wolf Creek flows immediately next to this pond. Engineering studies in the EIR suggest uncertainty and possible connectivity between the pond and wetlands, thus the projected need to rebuild the pond berm. Study of how this pond is fed, is lacking. The DEIR itself expresses this uncertainty, vaguely saying that it receives its water "mainly" from surface runoff and precipitation. Most importantly, the pond is rich with life, supporting a riparian zone with habitat for migrant song birds, raptors, wood ducks, and potentially special status species, as the Gold Country Avian Society points out, potentially including Black Rail, and Willow Flycatchers. None of this is studied or considered by the EIR in spite of previously expressed concerns.

Please refer to Group Letter 13, 2-698 & Group Letter 31, p. 1075 and following. Also to DEIR, 4.4-15, Appendix F.7 and H.1. In Appendix F.7, the Brunswick Industrial Site and E. Bennett Road ROW Aquatic Resources Delineation, the background to this questionable discounting of the pond as a Federal "water of the U.S." is also given, without qualitative data or sufficient observation. The report goes on to state that recent court cases do not "prevent CWA jurisdiction if a "significant nexus" such as a hydrologic connection exists, whether it be man-made (e.g., roadside ditch) or natural tributary to navigable waters, or direct seepage from the wetland to the navigable water, a surface or underground hydraulic connection, an ecological connection (e.g., the same bird, mammal, and fish populations are supported by both the wetland and the navigable water)…The FEIR, should have studied and analyzed whether a "significant nexus" exists hydrologically between the pond, the SFWC, and the wetlands before ruling the pond out as a water containing biological resources needing to be surveyed. This omission, in spite of comments suggesting this needed to done, does nothing to protect or mitigate impacts to this significant biological feature of the Brunswick site. Finally, please review Gold Country Avian Society's comment (2-702), that the Pond is likely part of a "migration corridor" extending down into the Bennett Street Grasslands for special status willow flycatcher and other migrant birds. FEIR, Group Letter 13, 2-698-699.

3. **Does not adequately protect wetlands and meadows.**

The Centennial wetlands, analyzed only in the DTSC RAP, which has not yet been approved, are significant, unusually valuable biological resources within the watershed and western Nevada County. The impact of destroying critical habitat in those wetlands to endangered Monarch Butterflies is discounted and not analyzed. The suggested mitigation, paying for equivalent wetland elsewhere in the world, on a 1:1 basis, is claimed to be standard practice, but makes no sense when we consider the value of this wetland for our county and community.

Similarly, impacts to the Bennett Street Meadow, part of the original historic 'Grass Valley,' are claimed not to exist, in spite of the expert opinion of California State Parks, which has completed a 5-year restoration project in the meadow, Gold Country Avian Society, which has done bird banding there for over 3 years, and SYRCL. The FEIR, seeks to limit consideration of impacts by looking at them in isolation, using insufficient data to discount the impacts of increased flow, erosion, turbidity, temperature, water quality, groundwater depletion, and noise. Updated responses in the FEIR often rely on speculation, insufficient data (as California State Parks comment) with regard to turbidity), or incomplete modeling, as Appendix H does by presenting only two scenarios for groundwater depletion, omitting projections using flows higher than the average 1.9 cfs.

These meadows and wetlands are unique resources. The FEIR does not offer enough analysis to assure that this last remnant of the original "Grassy Valley" will be protected. The Centennial wetland, with its Monarch Butterfly habitat, will be destroyed if this project is approved.

Please refer to Agency Comment letter 1, 2-167, 170, and Group Comment Letter, 31, 2-1072. See also FEIR, Appendix H, Itasca Memo - Simulated Drawdown in Selected Meadows, page 1, which states that: "Two model scenarios were conducted. Scenario 1 assumed that there is no discharge of the treated water from the underground workings at the planned discharge point shown in Figure 1. Scenario 2 assumed that there will be discharge of 1.9 cubic feet per second (cfs) of treated mine water at the planned discharge point." Limiting the model scenarios only to a control (no discharge) and one variable (1.9cfs) is not sufficient to understand potential drawdown, as the dewatering permit allows for up to 5.6cfs at any time in the proposed 80 years of the project.

4. **Does not adequately address impacts due to dewatering.**

The DEIR attempts to assure us that dumping the 100,000 gallons a day, at a rate permitted up to 5.6 cfs into South Fork Wolf Creek, will either be too small to have an impact, or fully mitigated by water treatment.

Yet, a number of agencies and groups still express their concerns, including California State Parks, California Department of Fish & Wildlife, SYRCL, WCCA, and SSI.

They suggest that testing for turbidity impacts is too limited, that too little study was done downstream in the Bennett Street Grasslands, that temperature regulation will be more difficult than suggested, and uncertain, as it will require reducing operations underground.

We want to point out the lack of study given to benthic macroinvertebrates (BMI), those bottom-dwelling larva, worms, and molluscs essential to the aquatic food web, species such as the giant stonefly, an important food for trout as every fly fisherman knows.

Yet, no BMI studies, a standard protocol for assessing stream health, and essential for creating a baseline to monitor stream health, were conducted for this EIR. As Dr. Dave Herbst, PhD of UC Santa Cruz has said about the project:

> Significant biological impact assessment needs to consider benthic macroinvertebrates (BMIs) and the organic matter/algae that are the foundation of the food chain in this section of the creek and downstream of the project. The post-project NPDES permit would require BMI biomonitoring but this does not satisfy the need to assess what the effects would be before the project is implemented.

The final EIR does not include this kind of essential assessment.

Please refer to Individual Letter 164, Dave Herbst, FEIR, 2-5590.

5. **Does not adequately consider impacts to the endangered Pine Hill Flannelbush.**

The flannelbush species on the Centennial site is so unusual and rare that scientists are still studying it, its DNA most likely showing that it is the endangered Pine Hill Flannelbush or even a new species, found only here. The EIR treats it as the endangered Pine Hill Flannelbush, but, in the interest of advancing only the most financially lucrative version of the project, defends the creation of a mine waste zone that would require the removal of 18 plants. The EIR does not consider an alternative, where the boundary for mine waste would be moved a short distance back from the population of flannelbush, so as to protect all its individuals. Instead it promotes a complicated, untested, habitat management plan, which horticultural experts at CNPS see as dangerous and unlikely to succeed. CDFW concurs, saying that transplanting endangered species is "Generally experimental in nature and unsuccessful."

Plants would be dug up and transplanted - independent evidence suggests this would have an extremely high rate of failure and result only in the 'taking' of these plants. Collecting seeds and transplanting the seedlings also is unproven to work and will have a very low success rate. Habitat enhancement is suggested, without sufficient detail given, and without indication of the use of controlled burning, an essential part of the adaptive ecology of the plant as the USFS indicates.

This plant is too rare to be treated with such disregard for its survival. The project should have been adjusted to avoid the need to kill these protected plants. The Habitat Management Plan does not do enough to assure us that its mitigations will succeed in protecting this plant's existence.

Please refer to Agency Letter 3, California Department of Fish and Wildlife, 2-200, and Group Letter 12, Friends of Banner Mountain, 2-682.

6. **Does not adequately consider impacts to special status species.**

Much of the biological surveying done in the EIR centers around the presence or absence of special status species. The EIR does a minimal job of this, initially doing so few surveys that additional ones had to be fit in and completed after the DEIR.

Yet, the problems with the surveys remain the same. Special status species are not always easy to find, due to their rarity, their movement, their blooming season, or year-to-year changes. So biologists look for suitable habitat as a sign of possible presence. Unfortunately

the surveyors for this DEIR frequently minimize the suitability of habitat, almost always in the report without substantiation or specific evidence. This bias against finding suitable habitat is pointed out repeatedly by commentators, such as CNPS as other qualified experts.

Further, CDFW protocols require that surveyors should

> Space botanical field survey visits throughout the growing season to accurately determine what plants exist in the project area. This usually involves multiple visits to the project area (e.g., in early, mid, and late-season) to capture the floristic diversity at a level necessary to determine if special status plants are present.

Surveys were not done in this manner. The EIR instead asserts that single surveys were conducted somewhere (usually at the end, as it turns out) within a blooming or breeding season. CDFW is clear that this is not enough.

Overall, whether it is in regard to the Spotted Owl, the Monarch Butterfly (no survey at all undertaken), willow flycatcher, yellow-breasted chat, foothill yellow-legged frog, or the rare Finger Rush, the EIR does its best NOT to find these species, by minimizing the potential for their presence and following inadequate survey protocols.

And IF these species are found during construction, they will simply be removed and their habitat destroyed. And if the species is disturbed by noise, loss of habitat, or other disruption, they will simply be forced to leave, as the circumstances for their survival will no longer be present.

Please refer to Group Letter 5, California Native Plant Society, 2-414, Agency letter, 3, California Department of Fish and Wildlife, 2-201 & 2-203, as well as Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities, STATE OF CALIFORNIA CALIFORNIA NATURAL RESOURCES AGENCY DEPARTMENT OF FISH AND WILDLIFE, 2018, 5-6.

7. Unreasonably defers consideration of measures essential to the protection of biological resources, thus not allowing for a full consideration of its impacts.

Comment letters from the California Department of Fish and Wildlife, California Native Plant Society, and the Law Firm Shute, Mahaly & Weinberger, all point out the inadequacy of referring to future mitigations without explaining their details. This leaves us unable to judge the completeness and adequacy of those mitigations, whether they involve management plans, water treatment plans, permits, robust monitoring, financial assurances such as bonds, or public access to real-time information.

The California Department of Fish and Wildfire states this problem clearly in their comment:

> …formulation of mitigation measures should not be deferred until some future time. Because there is no guarantee that these approvals or cooperation with all the involved entities will ultimately occur, the mitigation measures are unenforceable and do not reduce the impacts to biological resources…

This uncertainty about the probable success of actions meant to mitigate impacts should have been remedied in the EIR by more detailed description of plans, as well as many more measures that build confidence for success, including economic support for the county to monitor mine operations, bonds sufficient to cover mine failures, and legally binding mechanisms that require mine operations to cease if impacts endangering the community occur.

Please refer to Agency Letter 3, California Department of Fish and Wildlife, 2-208 as well as Group Letter 5, California Native Plant Society, 2-417, and Group Letter 21, Shute, Mihaly & Weinberger, 2-818.

8. I**gnores cumulative impacts as speculative when these impacts reasonably could be studied and considered.**

As the City of Grass Valley asserts, “The applicant’s request for an 80-year permit is extraordinary…” The EIR justifies this by saying that it fits the economic model of the applicant. At the same time it strongly objects to the need for any long-term consideration of the project's impacts over that extended “multi-generational” period. Why 80 years? We need it for the money. Consider 80 years of impacts? No thanks.

What the EIR somehow assumes is the absence of change during 80 years, the absence of accumulating risk over time, and the absence of negligent operation or accident. Such details could have easily been analyzed through statistical modeling or reference to the compliance and accident record of similar mining operations. They are not.

Most egregious, however, is the dismissal of climate change as an impact to be considered. The EIR dismisses these concerns as “speculative,” whereas the State of California, the County, and numerous agencies, such as NID, have clearly acknowledged the existence of trends due to climate change - higher temperatures, increased drought, punctuated by extreme weather events, reduced water supply. Further these entities are all modifying policy, programs, and goals to meet these challenges.

The DEIR attempts to look scientific regarding all this by citing a single 2012 paper, claiming that it shows wide uncertainty about the impacts of climate change concerning groundwater recharge. Yet the paper itself in its conclusions argues that the groundwater age in all the springs tested appears to be a response to “lower recharge rates,” and that indeed the

response to decreasing recharge may be "highly non-linear." The conclusions of this paper do not support the assertions of the EIR.

This EIR unreasonably ignores impacts of climate change and suggests there are no cumulative impacts to consider in an 80 year project.

Please refer to Agency Letter 1, City of Grass Valley, p. 2-246, and Earman, Evolution of Groundwater Age in a Mountain Watershed over a Period of Thirteen Years, Journal of Hydrology, 460-461 (2012) p. 27.

Conclusion

These detailed examples should make clear that the EIR does not adequately address impacts to biological resources.

As a watershed organization we take seriously our mission to protect the Wolf Creek watershed. It is the duty of the Planning Commission to do that as well, first by ensuring that any Environmental Impact Report fully and adequately addresses impacts, and second, by considering the project's compatibility with the Country General Plan.

This EIR does not adequately address impacts to biological resources. We, therefore, ask that the EIR NOT be certified.

This project as presented is also inconsistent with community values and the County General Plan. It states that the objective should be to "Preserve the integrity and minimize the disruption of watersheds and identified critical water courses. (Objective 11.4), and to "Discourage intrusion and encroachment by incompatible land uses in significant and sensitive habitats." (Objective 13.1) This project as presented does not do that. The project should be DENIED.

Thank you,

Gary Griffith

California Native Plant Society
Redbud Chapter

Nevada County Planning Commission
Idaho.MMEIR@nevadacountyca.gov
planning@nevadacountyca.gov

Dear Commissioners,

These comments on the Final Environmental Impact Report for the Idaho Maryland Mine are submitted on behalf of the California Native Plant Society and its local Redbud Chapter. The Final Environmental Report is marred by the same defects that we addressed in our comments on the Draft Environmental Impact Report.

We agree with certain of the Staff Report's recommendations that the Board of Supervisors deny the rezone of the parcels to Light-Industrial with Mineral Extraction to allow for surface mining activities, that the Board deny the requested structure height variance, and that the Board take no action on the requested 80-year Use Permit and Reclamation.

We have grave concerns, however, with respect to the Recommendations that "the Board of Supervisors certify the Final Environmental Impact Report … as adequate for the Idaho-Maryland Mine Project, and that it has been completed in compliance with the California Environmental Quality Act, subject to the recommended Mitigation Measures … as modified by the Erratum to the [Final EIR]."

The defects in the DEIR identified in our Comments have not been cured and have been carried forward in the FEIR; as a result, the FEIR remains fundamentally flawed for the reasons stated in our prior comments on the DEIR, which are incorporated here by reference.

The FEIR relies upon the false premise that the mine will not negatively impact the Centennial parcel, omitting any consideration of the wetlands and other protected habitat on that site. It omits any analysis of the environmental impacts of the mine on the wetlands and protected plant species found on the Centennial Site, despite the fact that both the Draft and Final EIR contemplate the destruction of 98% of the wetlands on the site, among other impacts. Prior Redbud Chapter comments on the DEIR demonstrate that this approach represents an unlawful attempt to split the environmental analysis of a single site and project into two separate processes.

The claim is made that the FEIR for the mine is not dependent on the cleanup which is a perquisite of the use of the Centennial parcel as a place to stockpile waste rock removed from the mining operations. This claim relies on the premise that if the cleanup is not carried out, the waste will not be deposited on

the Centennial site and will instead be “sold in the regional market as construction aggregate.” No evidence for this option is provided, and there is no evidence that there is or will in the future exist a market for the sale of mine waste as construction aggregate. In the absence of any documentation of the existence of such a market, the claim is not supportable. Further, it is clear from the documentation that the plan in fact relies on the availability of the Centennial site to deposit more than half of the anticipated mine waste, to later become a site for industrial development.

The FEIR also contains inaccurate assertions about the timing and adequacy of supplemental plant surveys done at the site, and continues to rely upon deficient biological studies, both in terms of inadequate surveys not conducted over the full span of potential identification of target species, and untested and even demonstrably inaccurate surveys.

Calystegia stebbinsii FE CE 1B.1 - Post fire surveys were performed in June of 2022 after comments showed that initial surveys did not account for impacts of fire or capture the bloom period of several species of concern.

While these surveys did use a reference population of C. stebbinsii to show that it would be identifiable, this would only apply to mature plants. There is a high likelihood that there are a large number of immature C. stebbensii plants in the areas of the project site that had burned that would not have been easily identifiable. This is a diminutive species that is very easily overlooked when not in bloom, and as pointed out in Redbud’s prior comment letter on the DEIR it may take three years for this species to reach blooming size.

The additional survey did not take into account the fact that these potential occurrences would not be reproductively mature, and that seedlings of this slow growing perennial would be very small in their first year and would be exceedingly difficult to locate. Surveys would need to occur in 2024 or potentially 2025 to ensure that plants would be identifiable. Mitigation measure 4.4-1(b) specifies that 80% survival would be suitable for "Other Special Status Plant Species" (species other than Fremontodendron decumbens) despite C. stebbinsii being listed as endangered in both the state and federal endangered species acts. The mitigation also states that where 80% survival is not achieved--after 2 years, transplants of seedling shall be planted -- but it does not indicate the ratio of seedlings to be planted for each take/loss, only requiring establishment of 50% of transplants. Not defining the ratios of seedlings needed to mitigate losses could allow for a large reduction in the overall number of individuals.

Fremontodendron decumbens FE CR 1B.2 - Mitigation measure 4.4-1(a) is highly unlikely to be successful. F. decumbens is a species that is very sensitive to root disturbance and the likelihood of successfully transplanting established plants is improbable. From a horticultural standpoint, producing this plant from seed at the 100:1 ratio required would also likely be unsuccessful. Many professional native plant growers struggle to produce a handful of F. decumbens plants each season, let alone the many hundreds of seedlings that would likely be needed to mitigate this project. Even if a large quantity of seedlings were produced this species does not transplant easily and the 100:1 ratio may not be sufficient to mitigate losses. The 2022 survey mentioned that most of the mature plants had burned, and as this plant is slow to reach reproductive maturity the availability of seed for mitigation is also

questionable. By deferring amendments to the Habitat Management Plan and not describing the methods to transplant individuals or produce and establish seedlings experts on this species are excluded from providing meaningful input on the management plans that would be critical to mitigating for this unique endangered species.

We have argued on other projects that list 3 and 4 species should be considered, "Many CRPR 3 and 4 species, and many not yet ranked species, meet the same criteria as list 1 and 2 taxa, and many of these species are in the process of being considered for reranking to 1B."

We urge the Planning Commission not to certify this defective FEIR; it clearly is inadequate for the Idaho Maryland Mine project, and it is not in compliance with CEQA.

Sincerely,

/s/

Potential Release of Mercury Toxins at the Centennial Site

The Department of Toxic Substances Control (DTSC) is planning a toxic waste clean-up on the Idaho-Maryland Centennial site now owned by Rise Gold. The Hap Warnke Lumber Mill (**the Mill**) is located on this site. The land on which the mill sits has been identified as an area of "potential ecological **concern**," because it contains detectable amounts of **mercury toxin** which **exceed** the DTSC standards for safety. [1]

The DTSC is **not** planning on cleaning up the Mill area, however, because this area is currently **sealed** by an impermeable **layer** of concrete and asphalt. This layer helps **prevent** the mercury from being **released** into the environment.

According to the DTSC, as **long** as this protective layer is **not disturbed**, but "*remain[s] in place* **outside" the area** proposed for development, then all that needs to be done to this mercury-infused area, are periodic soil samplings in order to assure that the mercury remains contained.[2]

However, Rise Gold **DOES** plan on **disturbing** a portion of the Mill area by dumping its mine waste rock there.[3] Included in Rise's plans to develop this area, is the digging of a substantial drainage ditch along the mine waste's perimeter. [4]But in order to dig this ditch, Rise will have to **ignore** the DTSC's conditions, and will **penetrate** into this area, significantly **disturbing** the Mercury-laden soil. Not only does this disturbance ignore the DTSC's conditions for clean-up, but it also has the potential for releasing **mercury toxins** into the environment.

Please see the maps below.

The Final EIR **fails** to respect the DTSC's conditions for clean-up, neither does it address the potential impact of Rise's disturbance of this mercury-laced area.To certify this EIR would be tatamount to certifying a potential, and **very real**, release of mercury **toxin** into the environment. Please do not allow this to happen: do **not** certify this EIR.

Thank you,

Ralph Silberstein, on behalf of CEA Foundation

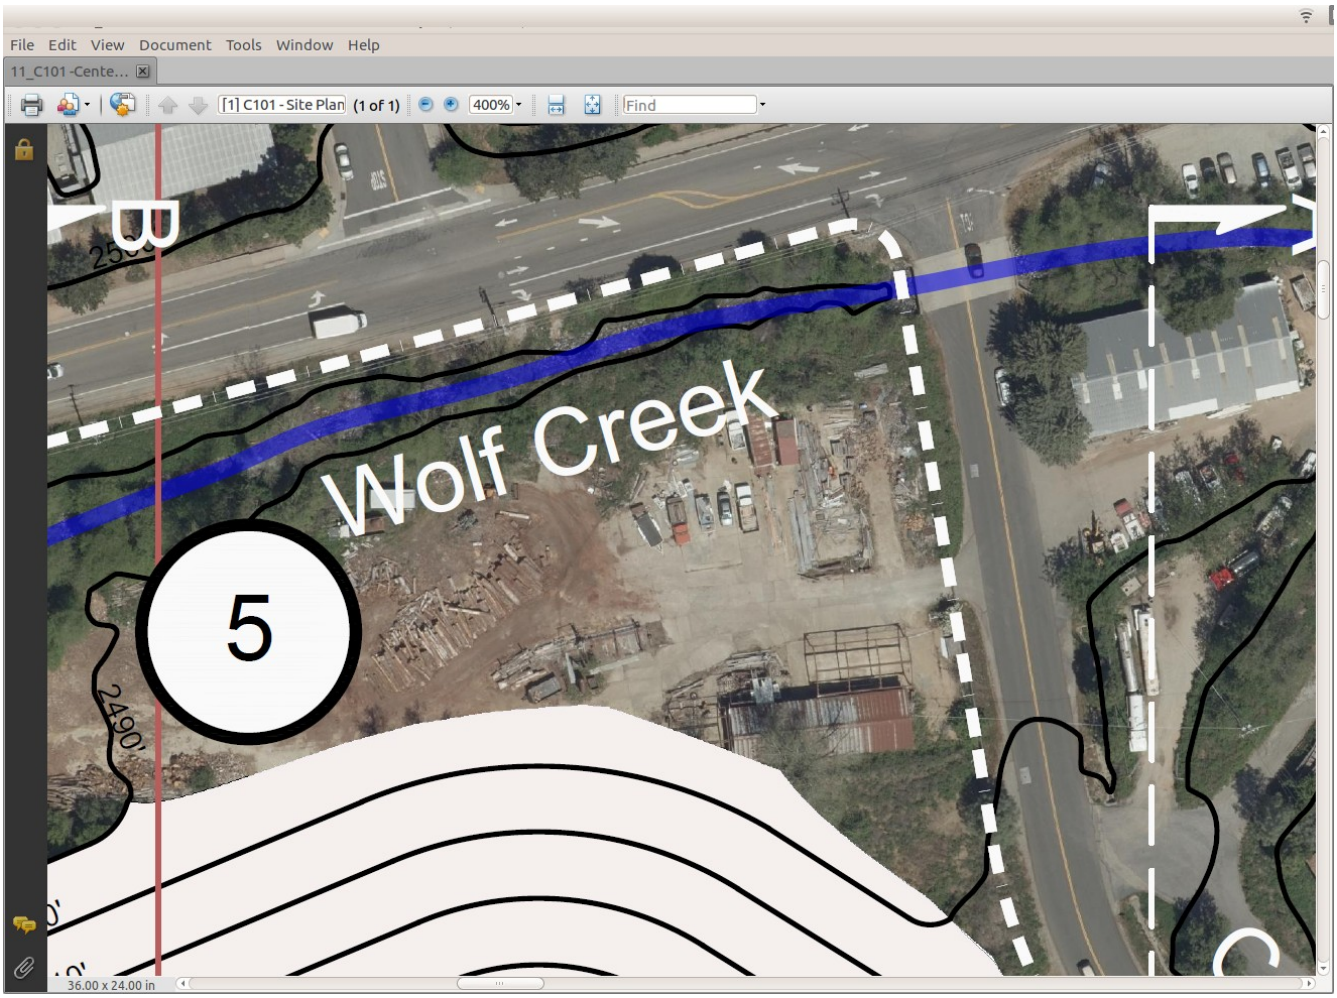
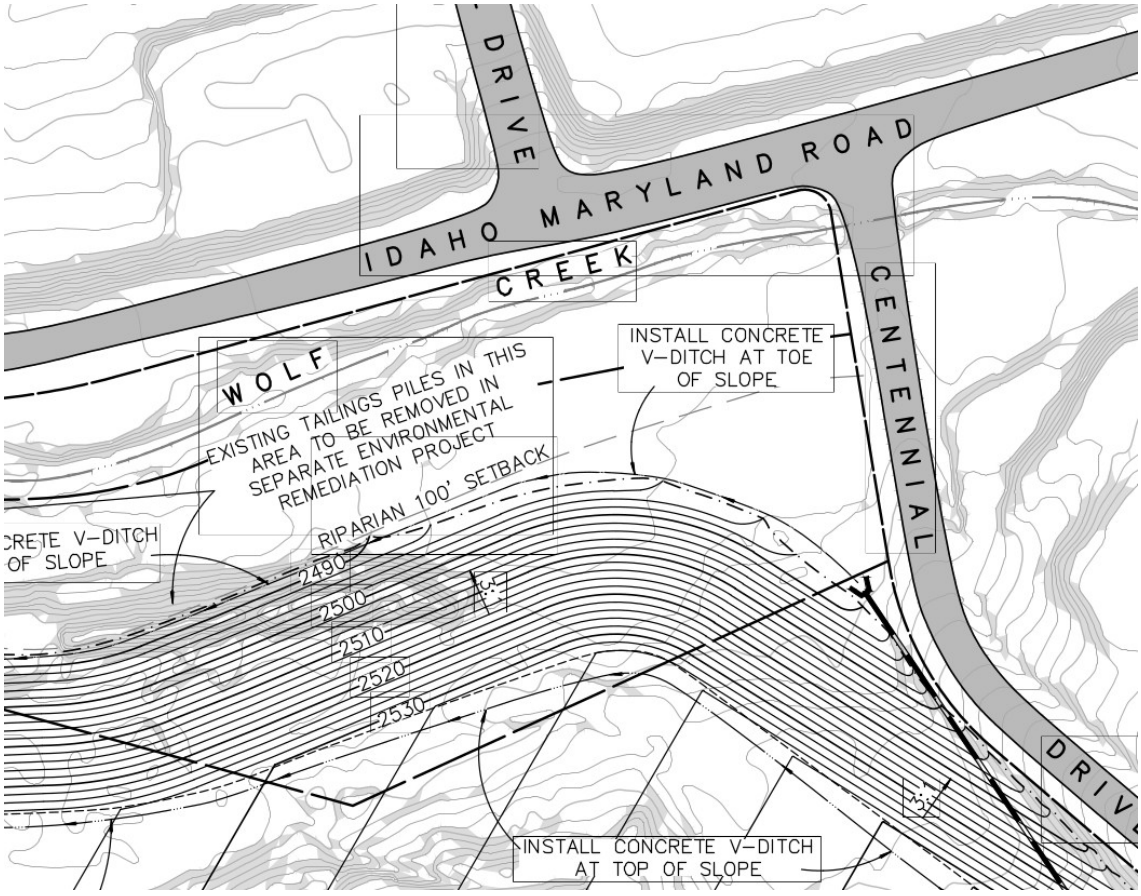
4 Application Documents, C1-CentennialSiteGrading.pdf

This plan is a corner of the Staff Report file “16.A - Centennial Industrial Site - Infrastructure Details.pdf.” It shows the Hap-Warnke Lumber Mill site on the corner of Idaho-Maryland Road and Centennial Drive. It is not being cleaned up with the DTSC RAP plan. The white lined area is the location of the “Engineered Fill.” A ditch will be constructed at the base of the fill as shown on next page.



This image is a portion of the Staff Report file “16.C - Centennial Industrial Site - Preliminary Grading Plan.pdf.” It shows the elevation lines of the Engineered Fill, and notes the “Concrete V-Ditch at the toe of the slope.” The V-Ditch will pass through the existing Lumber Mill building and across a portion of the paved surfaces. The construction activities will remove the protective paving and expose and disturb the soil under the pavement and structure.



Comment on the I-M Mine Project FEIR
Regarding Grp 7-14, Page 2-435; 2-516
May 10, 2023

Potential Water Pollution from Long Term Mining Effluent

This comment addresses current and potential water pollution from the Idaho-Maryland Mine.

The Water Code defines water pollution as "...acid mine drainage, the discharge or leaching of heavy metals, or the release of other hazardous substances." **Currently**, water draining from the mine into Wolf Creek contains almost six times the regulatory limit of arsenic, and exceeds the limit for iron, manganese, and zinc.[1] The Final EIR **fails** to specify how long-term monitoring of these substances will be accomplished. It also **fails** to identify how polluted mine water will be treated after the mine ceases operation.[2]

Although the Final EIR recognizes the **need** for long-term monitoring, it does not specify **how** this long-term monitoring will be accomplished. **Nor** does it identify **mitigation** measures capable of ensuring that unanticipated contaminants will **not adversely** affect water quality.

Because it lacks a specific, **long-term** monitoring plan, and lacks any measures needed to mitigate **contaminants**, the Final EIR **fails** to address what may be – based on historical evidence - significant and unavoidable polluting impacts to the environment.

As the Central Valley Regional Water Quality Control Board notes: "The Draft EIR should be revised to address anticipated post-mining water quality issues and whether the mine will require long-term oversight to ensure [that] water quality conditions comply with applicable regulatory requirements."[3] The Mine Project ignored this comment by the Water Board.

Should this EIR be certified, the **County** will be left with the responsibility of managing the pollution of these remnant mine waters. This, along with its **failure** to address the monitoring of water quality **after** the mine closes, is a substantial reason to **reject** this flawed EIR.

Thank you,

Ralph Silberstein, on behalf of CEA Foundation

Brunswick Site: Operational Noise Level is Underestimated

This comment addresses the FEIR's failure to address the increased noise level of mine operations from the proposed height increase of the mine waste pile.

The FEIR fails to adequately address the noise impacts to nearby residences which would result from increasing the height of the mine waste pile (Engineered Fill) on the Brunswick site. Alternative 2 of the DEIR proposes placing an additional 1.6 million tons of mine waste on the site, raising the height and volume of the fill pile by 50 feet.

This height increase would involve heavy equipment operations from a more elevated position with respect to the residencial properties – all of which are located **above** the proposed fill area. This would potentially increase the noise levels at those properties as a result of the change to the straight line distance to the residences, as well as "Other factors affecting sound attenuation [including] ...atmospheric absorption, shielding by intervening topography or structures, ground absorption, and attenuation caused by tree cover..." [1] The increased height of the fill and would likely worsen the noise levels at the residential properties as a result of the changes to these noise affecting factors.

Rainey's response to this FEIR comment has not considered the potential increase of residential noise due to the change in these factors, instead, side-stepping the issue by referring to their unrelated response to a comment by Salter.[2]

The failure of the FEIR to address this potential noise increase contributes to this EIR's total inadequacy.

This grossly impaired EIR must not be certified.

Thank you,

Ralph Silberstein, on behalf of CEA Foundation

B4

The FEIR Failed to Establish Valid Groundwater and Well Impact Thresholds

The Final EIR used the results of a study that used a computer simulation program that concluded draining a well down 20% to 40% could damage a well. Unfortunately, the study is not relevant. In the case of the Mine, wells will not be subjected to a single drawdown from pumping, but rather a permanent lowering of the ground water.

Using this inappropriate study, the Mine Final EIR then concludes that the water in a well could be lowered by 10% from its average level and still provide the owner with a "100% safety factor." Scientifically, this arbitrary "100% safety factor" interpretation is nonsense. Think about it. And where does the "100% safety factor" come from? Half of 20%. What is it 100% of?

But, aside from the Mine's questionable interpretation of some study's results, the bottom line is that ANY reduced amount of well water has a negative impact on the quantity of water available to the well owner.

And well owners whose wells are already marginal in meeting the owner's needs may be particularly at risk of suffering from reduced water capacity - and may even completely lose the function of their well. The high probability of future droughts will make the potential for a very negative impact from the mine's draw-down of groundwater – and its impact on private wells - even worse.

The Final EIR fails to provide a valid justification for allowing a Mining Project to reduce the quantity of a homeowner's well-water by 10%. To determine a valid justification for allowing this, the threshold for the amount of water a well could afford to be drawn down - while still providing for the homeowner's needs - MUST be based on actual **performance criteria** of each well, over at least 3 years of active monitoring.

Basing the allowable draw-down of a person's water on a faulty interpretation of a computer simulation is wholly unacceptable. Please, do not allow this: DO NOT certify this EIR.

Thank you.

Ralph Silberstein, on behalf of CEA Foundation

Flawed Analysis of the Correlation Between Mine Water levels and Well Water Levels

In the Mine Project's DEIR, their consultant, EMKO, states that, "*The differences...in the measurements from the **New Brunswick Shaft** (NB Shaft) versus those from the **domestic wells** indicate that there are not **any** direct connections (e.g. **via fractures**) between the domestic wells and **any** of the underground mine workings.*"[1]

However, had EMKO taken the time to do a **proper** analysis of the NB Shaft's water flow, they would have discovered – as have prior consultants – the **reason** why there does **not** appear to be any direct connection between the wells and the mine*:* and it has nothing to do with the lack of fractured rock between the two. It has to do with the East Eureka Drain.

The water from the Mine's NB Shaft flows out of the mine, into the East Eureka Drain. At an elevation of **2,497 feet**, the mine water then pours out of the Drain into Wolf Creek. And, it is no coincidence, that the water level in the NB Shaft **averages 2,497 feet**,[2] because whenever the water level gets higher than that, it flows out through this Drain.

Since the mine water drains out as soon as it rises above **2,497 feet**, the NB Shaft could easily be filling with well water, even though it may not be apparent. Therefore, the Mine Project's insistence that, "*The lack of a seasonal pattern in the mine water levels indicates that the mine workings are **not** directly connected to the **wells by...fractures**...*"[3] is worse than meaningless, because the mine and the wells **may** be connected. This **error in logic** has the potential to do great damage to the wells of neighboring residences through unanticipated, well-water draw-down.

This type of logic error is just one of a plethora of such errors which haunts this flawed EIR, and it underscores the importance of NOT certifying such a flawed document.

Please, say, "No," to both the Mine's permit, and the certification of this substandard EIR.

Thank you,

Ralph Silberstein, on behalf of CEA Foundation

The Claim That the Mine Project Will Create Industrial Land is False

The EIR **assumes** that the clean-up of the legacy mine toxins on the Centennial site has already been completed by the Department of Toxic Substances (DTSC) **prior** to the mine commencing operations there. Assuming that this clean-up has already occurred means that the entire **44 acres** of the Centennial site will be suitable for industrial use **before** the Mine Project begins the dumping of its mine waste there. In fact, after the DTSC clean-up, the Centennial site will be ready for development even if the Mine **never** opens.

However, one of the Mine Project's stated goals is to **increase** usable industrial land on the Centennial site **by dumping its mine waste** there. This assertion disregards the fact that the **44 acres** will **already** be clean and usable.[1] The **false** claim that the Mine Project – **rather than the Clean-up Project** - will create industrial land is repeatedly referenced in the FEIR with such statements as, "*The **objective** of the placement of engineered fill [**mine waste**], over approximately 5 years, at Centennial site is to **increase** the usable land area at the Centennial site to allow its future use as industrial land.*"[2]

Not only is the Mine Project's claim to eventually **increase** usable land **untrue**, but it's also quite **ironic**, because – at the end of having dumped its waste onto the **clean** land for five years - the amount of total land **then** available for industrial use will only be 37 acres: this is 7 acres **LESS** than the original 44 acres provided by the DTSC clean-up![3]

This type of bait-and-switch wording is just another example of why this project, along with its odious EIR, should definitely NOT be permitted or certified.

Thank you,

Ralph Silberstein, on behalf of CEA Foundation

3 DEIR Page 3-15

May 9, 2023

The FEIR contends that the Mine Project is designed to proceed whether the DTSC cleanup at Centennial is completed or not. The FEIR also contends the Centennial cleanup has independent utility, serves a different purpose, and can be implemented independently of the Mine Project.

These claims ignore the fact that one of the Mine Project's Objectives is to reclaim the Centennial Site for future industrial use. Since the cleanup project actually completes the work to achieve this goal, it obviously is part of the Mine Project. The claims also ignore the fact that many of the alternatives considered in the DEIR assume the Centennial cleanup has occurred. And the cleanup plan itself refers to the anticipated mine waste and uses the distinct euphemism "Engineered Fill."

The FEIR claims that discussions with EPA and DTSC occurred before the applicant applied for a permit. Rise Gold didn't buy the site to clean it up. It is being cleaned up to use it for dumping mine waste. Whether there were discussions among parties does not change the fact that the DEIR includes the Centennial cleanup as a Project Objective..

The FEIR also claims the Centennial cleanup is under DTSC control and the Mine Project is under the County's control. CEQA Guidelines state that projects include activities being approved and those that may be subject to other governmental approvals. This CEQA requirement prevents the exact circumstances here: an applicant filing separate environmental reports for the same project with different agencies to prevent consideration of cumulative impacts.

Even if it was appropriate to sever the Centennial Cleanup from the Mine Project, the FEIR fails to analyze the cumulative impacts of these projects together. CEQA requires the cumulative effects of two separate projects which are cumulatively considerable to be addressed in the EIR.

And finally, the FEIR assumes that for some impacts that the Centennial cleanup is complete and for others that it is not complete, leaving decision makers with a defective EIR.

I respectfully request you just say NO and reject the Final EIR.

Thank you.

Ralph Silberstein, on behalf of CEA Foundation

May 9, 2023

A few of the agencies who commented on the Draft EIR include: The Water Board, the Air Quality Management District, the City of Grass Valley, NID, and Baseline Environmental Consulting with 35 years experience in environmental consulting.

For any issue of substance, the FEIR responses to these agencies ignore the comments, often with some form of 'we know better' or 'you don't understand CEQA.' A few samples of Agency and expert comments include:

The Water Board: "The Draft EIR should be revised to address this comment." (This occurs three times regarding separate issues each time)[1].

The Air Quality Management District:"…the project's risk should be evaluated based on many more samples…" [2]

The City of Grass Valley: "Cursory dismissal of alternatives is based on economic assumptions for which there is absolutely no supporting evidence." [3]

NID: "…NID's Board of Directors expressed serious concerns that the number of impacted wells could far exceed the 30 estimated…" and "…that a mitigation measure…require the Applicant to put forth bonds [$14million]…to cover the costs of such infrastructure…" [4]

Baseline Consulting: "The FEIR analysis of project impacts from GHG emissions remains inadequate." [5]

And a longer excerpt from the City of Grass Valley's introductory response to the FEIR:

> "We are dismayed at the quality and tone of the responses which, in many cases, appear to have been written by the applicant's representative rather than an objective senior County staff member. The cavalier tone of some of the responses to a concerned city who will suffer concrete significant impacts as a result of the Project is disappointing. As detailed in our comments below, the City remains vexed by key aspects of this proposed 80-year mining and industrial development Project and believes the FEIR and the County's response have failed to remedy major deficiencies in the assessment of air quality, greenhouse gases, land use, noise, and traffic, and consideration of alternatives which could reduce, or avoid, potentially significant impacts to the City and surrounding County areas." [6]

The failure of the Final EIR to adequately respond to these credible comments further demonstrates the inadequacy of the Final EIR.

I respectfully request you to not Certify the Final EIR.

Thank you.

Ralph Silberstein, on behalf of CEA Foundation

May 9, 2023

CEQA requires that an EIR consider a reasonable range of alternatives that will foster informed decision-making and reduce impacts.

The FEIR's alternatives analysis is flawed because it failed to provide realistic alternatives that could greatly reduce the Project's significant impacts on aesthetics, noise, energy, and transportation.

The DEIR defined the Project so narrowly that few alternatives could meet its objectives. In defense of the Project's narrowly defined objectives, the FEIR contends that setting a high ore production level was necessary in order to finance and construct a mine "that will take in excess of 100 million dollars to construct."

The FEIR ignores evidence showing that a mining project with lower production would still be economically viable. The RDN Economic Report of the proposed project conducted for the County showed that the project would be profitable even assuming very low production.

The RDN report includes a "high-end scenario," based on assumed yearly production of 108,400 ounces of gold. Under this scenario, the mine would yield a profit of almost $112million every year, clearly enough to fund their construction costs. However, even under the "low-end scenario," in which the mine would produce 26,500 ounces annually, which by the way is the only number supported by current data, the mine would still be profitable, with a profit of over $27million/year, funding construction costs in about 4 years.

Even if production were cut in half from the low-end scenario, mine operations would still yield a 25% profit at over $5million/year. The FEIR should have included more flexible objectives with respect to the project's output.

The FEIR also attempts to refute arguments that it should have selected Alternative 2 as the environmentally superior argument. This Alternative would reduce the Project's significant impacts in nine of the ten categories but is discounted by the FEIR.

The Alternatives analysis is inadequate and fails to achieve its purpose under CEQA.

I respectfully request you JUST SAY NO to the Final EIR.

Thank you.

Ralph Silberstein, on behalf of CEA Foundation

B-13

EPA Superfund Listing: Only *Temporarily* Deferred

The success of this Mine Project relies on the hope that most of its waste will be classified as Group C. However, if the EPA has – or is considering – designating the Centennial site as a **Superfund site**, that means that the mine waste there is definitely NOT Group C, and the site will be placed on the National Priorities List for environmental clean-up. For various reasons, this Mine Project does NOT want it placed on that list.

This is why the Final EIR - wrongly - declares that, "Several commenters have...**incorrectly** asserted that the Centennial Site is...designated - or under consideration - to be listed as a "Superfund" site..."[1]

In fact, the commenters are NOT incorrect. The EPA **has** tested the site, and **has** placed it under consideration for Superfund status. The only reason they have not yet done so is "...because the California Department of Toxic Substances Control has a signed Voluntary Cleanup Agreement with the site owner, [so the] *EPA has chosen to **conditionally defer** listing the site as a **Superfund** site...*" [2]

However, instead of admitting the EPA's judgment, the Final EIR insists that, since the EPA **didn't** use the proper test, "...it can be **reasonably inferred** that the EPA also has concluded that the site would **not likely** score high enough to be placed on the National Priorities List."[3] This is sheer nonsense.

Not only was the EPA in the process of **listing** the Centennial Site a Superfund, but they go on to explain that, "Should **conditions** change such that federal **Superfund** involvement becomes appropriate, [the] EPA will work with the State...including the option of listing the site on the **National Priorities List** as a **Superfund** site."[4]

Once again, the Mine has chosen to – at best - obfuscate the truth: and the Mine can't claim ignorance because the EPA letter which is being quoted is addressed to the Mine's owner.

This community should not have to deal with this Mine or their EIR: please reject both.

Thank you.

Ralph Silberstein, on behalf of CEA Foundation

4 Ibid, Transmittal of Preliminary Assessment Report

May 9, 2023

In 1996, a Conditional Use Permit was granted by the Supervisors for Emperor Gold to dewater the mine for **exploration**. It was **not** a permit for production mining, although ore sampling was allowed.

There are dozens of citations on the internet describing the normal steps followed to open a mine, which includes at least: Feasibility Study, Exploration, Production and Reclamation.

The Exploration stage is where environmental baseline data and actual proof of gold reserves are collected to inform the Production EIR **before** the Production Use Permit is approved. The Nevada County Use Permit form for Mining clearly includes the option to request an Exploration Permit.

The 1996 permit followed the normal steps and included the preparatory work to ensure property owners would be able to get potable water immediately if a well problem was detected. Emperor Gold was required to obtain all permits, identify all right-of-way, easements, and agreements to guarantee installation of water service from NID to **any and all residences in the Study Area**."

In addition to wells in the area of East Bennett Rd., the Study Area included a large portion of Cedar Ridge north of Colfax Hwy, wells as far west as Union Hill, as far east as Bellview Rd., substantial areas in the Greenhorn Rd. neighborhoods to beyond Anchor Ln. and the north end of Glenn Pine Rd.

Emperor Gold was required to provide cash, bonds or securities to pay all construction costs, including meters, connection fees, lateral lines, and related expenses or damages associated with replacement water service. The dewatering permit was limited to 5 years. And because there was not expansion of mine works, the risk to wells was far less.

Yet not only is Rise asking you to skip the Exploration stage and trust they will provide all the missing information **at some time in the future**, their mitigations and proposed support for well owners **come nowhere close** to what was the minimum requirement in 1996.

The FEIR speculates that 15 monitoring wells will validate their computer model, **with data provided in the future**, and further speculates there will be no impacts to private wells.

The Mine project should have at least as good protections as the 1996 Approved Use Permit provided, if not more.

I respectfully request you Just Say NO to this inadequate Final EIR.

Thank you.

Ralph Silberstein, on behalf of CEA Foundation

May 9, 2023

The DEIR recognized that the Project's operational impacts from emissions would be potentially significant based on North Sierra Air Quality Management District's (NSAQMD) thresholds.

But the DEIR predicts there would be no difference between the project's unmitigated and mitigated operational emissions. In other words, the DEIR identified a significant impact, and then did nothing to mitigate it. This violates CEQA's clear mandate that an EIR must either adopt all feasible mitigation measures to reduce impacts to less-than-significant levels, or it must explain why further mitigation is not feasible.

The FEIR claims the Project's potentially significant operational air quality impacts are automatically reduced to less-than-significant levels by adopting certain construction-phase measures listed in the NSAQMD's CEQA guidelines.

The NSAQMD guidelines do not say a project can automatically reduce its significant operational air quality impacts simply by incorporating construction-related mitigation measures.

If mitigation measures are not at least partially effective in reducing an otherwise significant impact, they do not qualify as mitigation measures at all. Construction-phase measures that have literally zero impact on operational air quality emissions do not satisfy this requirement.

The FEIR claims CEQA materials from past projects in the region used the NSAQMD guidelines in the same way. Past practice does not supplant the clear directives in the NSAQMD guidelines and in CEQA itself.

But even if those previous studies were relevant, not a single one supports the FEIR's position. Three of the four projects had no estimated operational emissions at all. And the one project that did involve operational air quality emissions incorporated mitigation measures that substantially and quantifiably reduced those emissions, exactly what the EIR needed to do here.

The FEIR does not claim it is not feasible to adopt measures to lessen the Project's operational air quality impacts. It simply asserts that it did not need to consider such measures in the first place. That is wrong, and the EIR is legally deficient as a result.

I respectfully request you Just Say NO to the Final EIR.

Thank you.

To the Nevada County Planning Commission:

My name is Maggie McKaig, and I've been a Nevada County resident for 36 years, and a homeowner for 29 years.

I am writing to urge you to recommend to the Nevada County Supervisors that under no circumstances should Rise Gold's plan of reopening the Idaho-Maryland Mine be approved.

It is indisputable that Rise Gold's CEO, Ben Mossman, has a horrendous track record when it comes to safely opening and running a gold mine without it becoming a toxic wasteland. It doesn't take a lot of research to discover the facts: His previous company, Banks Island Gold, started in 2014, lasted barely a year before British Columbia provincial inspectors, following up on complaints, discovered that Banks Island Gold was releasing mine waste and contaminated water into creeks, ponds and wetlands. The only thing Mossman's Banks Island venture was successful at was ignoring every environmental regulation possible.

As such, Mossman is being sued by the provincial government. And Mr. Mossman's defence? His legal team claims that Mossman wasn't responsible for the contamination; releasing the mine waste wasn't his doing; it was his company's. As it was shown that Mossman was very hands on, and approved every step of the way, this defense is not only deceptive, it's absurd.

It is beyond me how anyone could seriously believe that Ben Mossman has our best interests at heart, as he contends. The people of Banks Island certainly learned their lesson on that one. And they'll be dealing with the toxic aftermath of Mossman's greed for many years.

Don't be taken in by Ben Mossman. The only thing this flim flam man deserves is a one-way bus ticket out of Nevada County.

Sincerely,

Maggie McKaig

Nevada City, CA 95959-8617
matt.kelley@co.nevada.ca.us
idaho.mmeir@nevadacountyca.gov

Dear Mr. Kelley and the Planning Commission,

Gold Country Avian Studies (GCAS), an avian research organization based in Nevada City, California and operating through state and federal wildlife research permits, is submitting the following comments on the Final Environmental Impact Report, State Clearinghouse #2020070378 for the proposed Idaho-Maryland Mine Project.

After reviewing the FEIR, we are recommending that the Planning Commission should **not certify** that FEIR is adequate and complete, and they should **not recommend** approval of a project Use Permit to the Board of Supervisors.

Through a DPR 65 California Department of Parks and Recreation Scientific Collecting and Research permit, GCAS has operated a bird monitoring and banding program at the Bennett Street Grasslands which are located along East Bennett Road, a 33-acre assemblage of dense riparian areas, wetlands, and unique, low elevation wet and dry grassland communities. The Bennett Street Grasslands contain a 0.45-mile stretch of South Fork Wolf Creek. The Bennett Street Grasslands (BSG) provide important breeding, wintering, and migration habitat for birds. Over 100 species of birds have been detected at the site; this includes the banding and capture of the Willow Flycatcher, *Empidonax traillii* (California State Endangered Species); the yellow breasted chat, *Icteria virens* (California Bird Species of Special Concern); and detections of Olive-sided Flycatcher, *Contopus cooperi* (California State Bird Species of Special Concern) as well as, Yellow Warbler, *Setophaga petechia* (California State Bird Species of Special Concern), from 2019-2022.

At BSG, we provide unique educational opportunities, including bird banding demonstrations in which elementary students are able to see wild birds up close in the hand, and high school and college students and local community members are able to learn about bird research and participate in citizen science. Noise from the mine would undoubtedly disturb these demos and activities, and would negatively impact the students' experience while outdoors in nature. Please understand that should the mine be approved, we would be obliged to express in our educational events that wastewater from the mine enters the water stream just upstream from the bird banding station, and that South Fork Wolf

Creek and the birds and other wildlife that use it are now subject to fluctuations in water level, temperature, turbidity, and the potential for leaks of toxins into the water stream due to the presence and activities of the mine.

Water / Dewatering / Downstream Impacts

We continue to have concerns largely around fluctuating water levels. Increasing flows to the site would potentially inundate and cause failure of nests adjacent to the creek of ground-nesting or low-nesting bird species. Moreover, our bird monitoring program would be directly affected by changing water levels as at least two of our bird trapping locations could be inundated when water levels are high. In addition, increased turbidity and an increase in water temperature could affect availability of benthic invertebrates and other arthropods (such as insects and larvae) that serve as a food source for birds and wildlife, which could negatively and directly impact bird survival or the survival of their young, potentially causing a decline in bird populations at the site and downstream.

The FEIR also does not address how dewatering will affect ground-water dependent vegetation at BSG, and subsequently affect birds and other wildlife that depend on the many plants that serve as food sources.

These issues have not been sufficiently mitigated nor planned for in the FEIR, and it should not be certified.

Disturbance to Wildlife

The FEIR does not fully address the potential for nesting Willow flycatchers at the site, and therefore should not be approved. In fact on p. 2-712 of the FEIR, it states : *"….page 4.4-39 of Chapter 4.4 is hereby revised as follows: … Several species of birds are known to forage and nest within riparian habitat along stream corridors, including the willow flycatcher (Empidonax traillii), yellow warbler (Setophaga petechia), yellow-breasted chat (Icteria virens), and olive-sided flycatcher (Contopus cooperi)… have been identified in an area of substantially higher stream and riparian habitat quality than the more highly disturbed riparian habitat located along the South Fork Wolf Creek within Brunswick Area. Accordingly, these species have a low probability of occurrence onsite, and no potential impact is expected."*

However, we counter that the potential for impact to these species is certainly present. Because of the volume of willow flycatchers that we catch immediately downstream at the Bennett Street Grasslands, including a female in breeding condition (with a brood patch) in the midst of the summer 2022 breeding season, it is entirely possible that this species breeds at the Brunswick site and disperses to BSG following breeding. I have identified a location within the Brunswick site that could provide appropriate breeding habitat for willow flycatcher or yellow-breasted chat and have created a map of potentially sufficient locations of this habitat. Due to the protected status of these species, do not disseminate this map to the public or to Rise Gold or affiliates.

On Page 3-55 of the FEIR it states "*Page 4.4-34, DEIR Chapter 4.4, Section 4.4.2, Table 4.4-6 is hereby revised as follows to include discussions on olive-sided flycatcher, willow flycatcher, yellow-breasted chat, and yellow warbler:*

For willow flycatcher*: "… Brunswick Area. Low (*probability of occurrence*) . Brunswick Industrial Site contains marginal suitable foraging and nesting habitat for the species along South Fork Wolf Creek adjacent to open wet meadows. No impacts to riparian habitat are proposed."*

However we insist here that the FEIR should not be approved because the probability of occurrence for willow flycatcher should have been changed to "High", and that the claim that there will be "no impacts to riparian habitat is entirely false. Similarly,
For yellow-breasted chat: "…*Brunswick Area. Low* (probability of occurrence*). Brunswick Industrial Site contains marginal suitable foraging and nesting habitat for the species".*
The revised FEIR Table 4.4-6 states that chats are "*Summer resident and inhabits riparian thickets of willow and other brushy tangles near waterways. "* These exact habitats **ARE** present at the Centennial site. Given the numerous detections of this species immediately downstream at BSG in summer, we have reason to believe that chats could be breeding at the Centennial site as well. This probability of occurrence should have been revised to "high" but is listed as "*low*", so we therefore recommend that the FEIR be rejected by the Planning Commission. Also, on p 2-140 of the FEIR it is stated "T*he riparian habitat within the Centennial and Brunswick Industrial Sites provides minimal suitable habitat for any of these species given the level of disturbance historically within those areas as well as the recent disturbance."* We strongly disagree as we have captured multiple individuals of both of these species, including willow flycatcher. Just because the CNDDB has not completed processing of our detections and captures, does not mean they do not occur within 5 mi of the site. Last year we provided photos of yellow breasted chats and willow flycatchers captured at the site.

We remind the Board of Supervisors and county planners that by newly including nesting bird surveys in the FEIR as a "mitigation measure", this FEIR does not create an actual plan to manage for the presence of chats and willow flycatchers and other species protected by the Migratory Bird Treaty Act. This FEIR is simply stating that the project owner will arrange for the minimum monitoring as required by law (CEQA). Simply following the law is not an appropriate mitigation. This FEIR would still allow work to be performed during bird nesting season and would allow important habitat for nesting and migrating willow flycatchers and yellow-breasted chats to be PERMANENTLY destroyed. We therefore recommend that the Use permit for this project not be approved.

The reopening of the Idaho Maryland Mine is a poor choice of the community and the environment, and especially local bird species. Please do not certify the FEIR nor approve the Use Permit.

Sincerely,
Allison Nelson
Director, Gold Country Avian Studies

RE: Idaho-Maryland Mine Project Final Environmental and Economic Impact Reports

The Honorable Planning Commissioners:

On behalf of the Nevada County Association of REALTORS (NCAR), we respectfully submit our comments relating to the Final Economic Impact Report for the Idaho-Maryland Mine Project. Upon reviewing the final report, we see multiple deficiencies and unmitigated impacts on the surrounding residential properties, overall community and market values of properties in Nevada County.

While we recognize deficiencies in the Environmental Impact report, as experts in our field, we wish to address specifically the results of the Economic Impact Report:

Real Estate Industry Survey – A survey previously completed by Rise Gold's Consultant RDN had a total of 65 completed surveys of which 79% believed that property values would be negatively impacted. However, the finding of the Economic Impact report dismisses the RDN Real Estate Industry Survey completely, stating results were not robust enough to be considered. The Nevada County Association of REALTORS (NCAR) re-sent the same survey questions to our association membership and are now presenting the results of that survey. 162 of our active membership participated and completed the survey, representing 27% of the total membership. The results are overwhelming. 87% of the survey participants believe that property values will be negatively impacted.

"...RDN planned to evaluate the total impact to property values and associated property taxes based on the anticipated average change in property values associated with the proposed project. ***Of the three types of research RDN performed for this analysis–the literature review, real estate industry survey, and case study analysis–the case study analysis strikes the balance of being the most robust and readily applicable for evaluating the proposed project. "***

This quote clearly states that a case study analysis was selected for the findings of this report and dismisses the findings of the real estate industry survey. We believe as REALTORS® that our expert opinion matters and should not be dismissed.

Rise Gold's consultant summarizes their Economic Impact Report findings stating, "*we do not estimate any anticipated average change in property values associated with the proposed project".*

As experts in our field, and based on our survey results, NCAR does not agree with the findings of the Final Economic Impact Report. Based on our survey, our REALTOR members answered firmly agree that our property values will be negatively impacted.

Zoning –

- General Plan Policy 17-2 states "the ME zone will be used to warn the public that the potential for a surface mining operation exists and thus this zone will discourage the encroachment of incompatible uses". The surrounding borders of the Brunswick site are currently zoned and built out as residential.
- General Plan Policy 17.14 states that "Already existing development…shall be protected from adverse environmental effects caused by mining, through enforced Use Permit conditions and mitigation measures or denial of the project."

Based on our own thorough analysis of the impact reports (drafts & finals), our association believes the Economic Impact Report results are incorrect and the report should **NOT** be certified.

Sincerely,

Steve Medina, President
Nevada County Association of REALTORS

Dear Nevada County Supervisors and Planning Department:

I trust all is well and you are having a great week so far Thank you for taking the time to read my letter.

My spouse and I would like to move (including our small business) to the Grass Valley / Nevada City area, but we are waiting to see what happens with the Idaho-Maryland Mine project first. If it goes forward, we will look elsewhere due to the terrible environmental effects that mines have on the communities they operate in. Please say "no" to the mine... and we can finally purchase our dream property in this beautiful area.

Thank you...

All my best,
Mike

Subject: Public Comment Opposing the Proposed Idaho-Maryland Mine Reopening

Dear Nevada County Planning Commission,

I write to express my strong opposition to the proposed reopening of the Idaho-Maryland mine by RISE Gold, as I believe it poses significant environmental, public health, and social risks to our community. As a concerned citizen, I urge you to prioritize the well-being of the community and the environment over short-term economic gains.

1. Environmental Impact: The reopening of the mine will lead to the destruction of habitats, loss of biodiversity, and degradation of the land. The waste products generated by mining, such as tailings and acid mine drainage, will contaminate water sources, jeopardize the health of aquatic ecosystems, and threaten the quality of drinking water for local residents.

2. Public Health Concerns: Air pollution from dust and emissions will have a negative impact on air quality, leading to respiratory problems and other health issues for nearby communities. Additionally, the potential for water contamination with heavy metals and other harmful substances poses a risk to public health, affecting not only humans but also wildlife and vegetation.

3. Social Impact: Mining activities often lead to social disruptions, such as forced relocation of local communities, loss of traditional livelihoods, and increased tensions between different groups. The influx of workers may also strain local resources, such as housing and public services, and contribute to social problems like crime and substance abuse.

4. Climate Change: Mining activities generate significant greenhouse gas emissions, which contribute to global climate change. By promoting the reopening of the mine, we are undermining our commitments to reducing emissions and transitioning to more sustainable energy sources.

5. Lack of Sustainable Development: While the mine may bring short-term economic benefits, it is essential to consider the long-term implications of such a project. Instead of investing in a project that depletes our natural resources and endangers public health, we should focus on promoting sustainable development, such as investing in renewable energy, conservation, and sustainable agriculture.

In conclusion, I strongly urge you to reject the proposed reopening of the Idaho-Maryland mine by RISE Gold. The potential negative impacts on our environment, public health, and social well-being far outweigh any short-term economic gains. Our community deserves better, and I ask that you prioritize the long-term health and sustainability of our region.

Sincerely,

Ryan Trauntvein
Nevada County Resident

Hello,

As a Nevada County resident I am against the reopening of the Idaho-Maryland Mine.
The two main reasons are due to the risk of neighbors losing their ground water access as well as possible poisoning of our water systems.

Would you please post on your nevadacountyca.gov project status page
https://www.nevadacountyca.gov/3195/Idaho-Maryland-Mine---Rise-Grass-Valley
the following:

1. A link to all data regarding samples tested of soil and water including geographical location, depth, and chemical content - previously collected - and to be collected at some regular sample period for the life time of the project (80 years)

2. A link to a step-by-step process of addressing any wrongdoing that is done to any of our neighbors such that everyone knows what to do if their well is accidentally run dry or poisoned etc.

3. A link to to the complete list of chemicals used in mining along with a confirmation that each of these chemicals will be tested at regular intervals on all water entering our waterways

4. A guaranteed post-Mortem public hearing after one year of operation to assess whether the people of Nevada County are negatively affected by the operation of the mine.

5. The amount that any government employee or organization benefits financially in anyway from the reopening of this mine

It is only through diligent observation, reporting, public discourse, and corrective feedback can we be sure that the people of Nevada County do not silently incur the burden for the financial gain of a few. If we do not learn from mistakes then we will repeat them. Please provide the links to the requested data so we can track and learn together whether this project is truly good for Nevada County.

Sincerely,
Heather

You think it's even possible to consider offering filthy, boring, dangerous work to desperate people as a good way to fill the coffers of the county?

Isn't the world filthy, dangerous, unhappy and greedy enough now for you to realize it's not the way to live? You want to take a county that offers a great deal of the opposite of that: beautiful, safe, happy people, a level of quiet and contentment not seen in much of the STATE even, let alone the world…and change it for the worse. Why? For money? No amount of money buys WHAT WE ALREADY HAVE NOW.

You think I want to live in dirtier air, unbearable noise, looking at massive trucks, knowing the earth is being chewed to hell, trees coming down, ugliness going up? We'll have lower property values, less tourism, worse health because of the air and stress, ruined water and no charming place to be anymore.

This is a move backwards into the past. It displays the same tired lie: it's good for the economy, it gives people jobs. Look around. That lie has been circulating for decades and everything is worse and worse not better and better.

We actually have something better going on here where we live. It's a living miracle.

I'm feeling disbelief that I even have to write a letter like this. The lack of vision in even considering such a backwards decision is shocking. Wake up. Wake up to what is important in life. Wake up to your true responsibility as a human being.

To the Nevada County Planning Commission:

My name is Maggie McKaig, and I've been a Nevada County resident for 36 years, and a homeowner for 29 years.

I am writing to urge you to recommend to the Nevada County Supervisors that under no circumstances should Rise Gold's plan of reopening the Idaho-Maryland Mine be approved.

It is indisputable that Rise Gold's CEO, Ben Mossman, has a horrendous track record when it comes to safely opening and running a gold mine without it becoming a toxic wasteland. It doesn't take a lot of research to discover the facts: His previous company, Banks Island Gold, started in 2014, lasted barely a year before British Columbia provincial inspectors, following up on complaints, discovered that Banks Island Gold was releasing mine waste and contaminated water into creeks, ponds and wetlands. The only thing Mossman's Banks Island venture was successful at was ignoring every environmental regulation possible.

As such, Mossman is being sued by the provincial government. And Mr. Mossman's defence? His legal team claims that Mossman wasn't responsible for the contamination; releasing the mine waste wasn't his doing; it was his company's. As it was shown that Mossman was very hands on, and approved every step of the way, this defense is not only deceptive, it's absurd.

It is beyond me how anyone could seriously believe that Ben Mossman has our best interests at heart, as he contends. The people of Banks Island certainly learned their lesson on that one. And they'll be dealing with the toxic aftermath of Mossman's greed for many years.

Don't be taken in by Ben Mossman. The only thing this flim flam man deserves is a one-way bus ticket out of Nevada County.

Sincerely,

Maggie McKaig

Opening a mine here in Grass Valley, Nevada County should not even be a question. Do people really want to work in the mine? When I walk at the Empire Mine and see and feel the total disregard for the land and shameful remnants of junk left all over the place. Trees growing around iron rope type fencing where they kept the mules for work. There are parts where I can see how beautiful it once was. People came and cut the trees, then ruined the land with giant holes out of greed. It is quite sickening and I didn't move here 16 yrs. ago for an industrial, loud, poluting environment. This place is a gorgeous, peaceful, happy place where people visit and live. Where most people seem happy and are friendly.
You would be the worst planning commission and board of supervisors I could think of if you think this is good for our towns.

As a homeowner with a well, I strongly object to the proposed re-opening of the Idaho Maryland mine. I have fears for the contamination of my well and those of other homeowners nearby the well project.

We are a thriving community of mix of retirees and working families. We draw tourists from many categories to our towns of Grass Valley and Nevada City for the charm, peace, beauty and quiet of these remarkable cities. We do not need the pollution that the proposed mine brings in the form of water degradation and noise of trucks removing the tailings.

Moreover, I understand the developers of this project can not be trusted to follow through on what they say they will do. They have lied and left other communities "holding the bag."

The people of Nevada County do not want this intrusion.

Comments OPPOSING CERTIFICATION of Final Environmental Impact Report(FEIR), and OPPOSING APPROVAL of a Conditional Use Permit to reopen the Idaho Maryland Mine

Submitted by: Charles W. Brock P.O. Box 269, Nevada City Ca. 95959; 530.362.0490

1. FEIR pgs. 8606, 8607 and 8608 (attached) state that mitigation measures for "temporary and PERMANENT ground disturbing activities" of "jurisdictional waters/wetlands that cannot be avoided" at the Brunswick and Centennial locations can be mitigated by payment of "an in-lieu fee or off-site wetland creation...or purchase of habitat credits". Rise Gold's Use permit application requests variances to the County's 100' riparian setback and permission to exceed 30% slope limits within these areas. Destruction of local riparian habitat has been strongly opposed by the Wolf Creek Alliance, and clearly violates Nevada County General Plan Objective 17.1 and Policies 17.11.3., 17.14, and 17.24.
2. FEIR pg. 5233 identifies the "overall (Brunswick) project site" as being located in the Foothills Fault System, which is designated a "Type C fault zone", with low seismicity and a low rate of recurrence...the nearest mapped active portion of the Foothill Fault System is approximately 25 miles northwest of the overall project site on the Cleveland Hill Fault". (Also see NV5 January 16, 2020 'Management Plan for Potential Seismic Hazards'.) FEIR pgs. 7196 & 7197 address Rise Gold's request to amend the County Final Map #85-7 for Bet Acres and remove the fault line and its 200' building setback on each side. The County concludes, citing NV5 Engineering and citation of their 11/18/19 (outdated) Geotechnical Report, that a "SIGNIFICANT IMPACT could occur without mitigation." Out of an abundance of caution the County consults with another engineering firm and concludes that building on the Brunswick site is feasible as long as building plans are approved by the Nevada County Building Department. Anderson Geotechnical, a local respected engineering firm was responsible for placing said fault line and setback notations on this final map. The fault line runs approximately 150' from the mine's main shaft and directly through the middle of the water treatment pond and its earthen dam. Please also note that in 1975, a damaging earthquake (magnitude range 5 to 6) occurred 10km south of Oroville, within the Foothill Fault System. (see attached August 1978 article in "California Geology'). Said article also identifies "damaging earthquakes" in 1909 and 1888 about 15 km northeast of Nevada City.
3. Potential for Collapse of shallow near surface workings "NOT FORMALLY CLOSED" (DEIR pp. 4.6-44 to 4.6-49), are referred to frequently in the context of mine dewatering, generally concluding they are a low risk for collapse. FEIR page 195 in Master Response 29 states "All near surface mine workings were specifically evaluated by NV5 in the Geotech Review of Near Surface Features, as shown in Table 4 of Appendix H.6. This statement is contradicted numerous times throughout the DEIR, FEIR and Technical Reports! However, the FEIR on pg. 195 states "near surface features are generally more susceptible to subsidence and collapse". A far greater risk

exists for collapse of admittedly unknown and non-engineered closure of near surface workings. DEIR pg. 4.6-13 states: "some near-surface features were historically closed without engineering design or agency oversight." "NV5 states near-surface mine features ...are generally more susceptible to subsidence and collapse than are deeper mine workings and may be located in weaker materials (soil and weathered rock). They recommend potential remediation ie. closure for all near surface mine features". The heightened risk of near surface workings collapse exist today, without any mine operations active, and are admittedly unknown. In their 11/18/19 Geotechnical Report on page 35, ppg. 8, NV5 states "Possible historic mining excavation not detected during our investigation may impact the proposed improvements." And, "Our investigation did not include evaluating the subject site for presence of historic mining features or hazardous materials. In 1998 a private residence built in BET acres (same map as Brunswick Mine Site) suffered a major collapse and sinkhole beneath the house during a period of HEAVY RAIN STORMS. I have spoken recently with the neighbor of the adjacent property who says he has two developing smaller "sinkholes" on his property today. As well, Geotechnical Assessment of near Surface Mine Features prepared by NV5 for Rise Gold, dated June 11, 2020 (outdated), on pg. 8 makes the following statements: "for paved locations where water level in the mine workings is present at depths less than 100 ft. and no records of physical closure are known", and "the ground surface at these locations should be surveyed prior to dewatering so that the locations can be monitored for possible future settlement", and "features were previously closed, no formal record of physical closure was identified" , and "This evaluation does not eliminate the possibility of future settlement at these historical excavation locations". It should also be noted that the same Geotechnical Report states on pg. 7, "Based on information provided by Rise, ...", and then later states in the same report on pg. 10: "We do not warrant the accuracy of information supplied by others". Let it not be forgotten that NV5 Engineering is under the employ of Rise Gold.

One is left to wonder how many unknown, improperly closed near surface workings exist on the mine site? Out of an abundance of caution I include herewith pgs. 4.5-9 and 4.5-19, 20, 21 and 22 of Holdrege and Kull's (now NV5), 10/18/2008 DEIR which speaks with far greater concerns regarding seismicity and unstable soils at the Brunswick Mine site. Couple concern for potential near surface collapse with the County Planning's admitted concern of potential "SIGNIFICANT IMPACT" of seismic issues, and the advisability of certifying the EIR becomes even more questionable.

4. FEIR Chapter 2 pg . 2-6 Master Response #3 states..."the County may revoke a Use Permit for the following reasons: #5. The permit was issued, in whole or in part, on the basis of a misrepresentation or omission of a material statement in the application for the permit." Attached herewith see GPA/ Zone Change Application, Applicant's Variance Justification, Project Information Questionnaire, and Mineral Exploration and/or Extraction Environmental Assessment, all four of which are part of Rise's Use Permit Application. I note on the attached documents numerous errors and/or misrepresentations which beg the question "Why bother to approve the Use Permit when the application itself contains so many misrepresentations, omissions and errors?" Hopefully the FEIR will not be certified and Use Permit approval will be moot.

5. Throughout the FEIR "Response to Comments" on pgs. 365, 1014, 1050, 5309, 5318, 3341, 5344, 5346, 5375, and 63 more times, County staff remarks "this comment will be provided to the County decision makers" or alternately, " these comments have been noted for the record and forwarded to the decision makers for their consideration". If each and every one of these noted items have not been forwarded to County decision makers, the FEIR should not be certified.
6. FEIR pg. 147 (Ch. 2-74), the mitigation measure providing treated water, applies to only 30 properties. Clearly, this physical activity, the noise from which is one of the FEIR's UNMITIGABLE SIGNIFICANT ENVIRONMENTAL IMPAC TS, undeniably contributes to significant loss of property values. The admission of said Environmental Impact represents a long term physical change which at the very least encompasses all of the mineral rights areas (should more well production be lost), and clearly IS a violation of CEQA.
7. NV5's Geotechnical Engineering Report dated November 18, 2019, (see #2 above), states on pg. 12: "we do not anticipate that the proposed project will result in the destruction, covering, or modification of any unique geological and/or physical features". Please see attached NV5 "Management Plan for Potential Seismic Hazards" (1/16/2020)(outdated) and the attached "SITE MAP' which is actually an aerial photograph of the existing on site pond, showing "Fault Line" running through the middle of said pond and its dam. Perhaps NV5 and Rise meant to say here that this fault line won't exist once they get the County to rerecord the existing Final Map, with the fault line and setback requirements removed. Risks represented throughout the FEIR and Technical Reports are regularly overlooked, brushed aside or just misrepresented.
8. FEIR pg. 8661 re. security/surety bonding, plus bonding requirements outlined in the County General Plan and permit process, far exceed Rise Gold's ability to pay! As stated on FEIR pg. 8661 "Implementation Schedule", bonding must be provided "Prior to commencement of mining operations." See attached analyses by Tim Ogburn (retired DTSC Administrator and Past Chairperson of Placer County Planning Commission), and Randy Newsom (retired Federal Bankruptcy Judge)addressing this vital issue. Also attached is Surety Bonding Industry information which notes qualifications for underwriting as "bonding capacity, credit and character". Given Mr. Mossman's record in Canada one can reasonably call into question his ability to secure adequate required bonding/surety on the character requirement alone.
9. Rise Gold Financial limitations. See attached analysis by Randy Newsome, retired Federal Bankruptcy Judge.
10. Add Management Plans + Variances + 3 Significant Unmitigable Environmental impacts + zoning change (which would render land use even more out of keeping with the General Plan) + Management Plan for development to allow violation of setback requirement in riparian zone + allowing work in areas of "steep slope in excess of 30%" + Subdivision Map Amendment and Management Plan to remove Fault zone from Final Map (all above noted in Planning Department "Project Description" of IMM) + unknown soil conditions + whatever is yet to be resolved with DTSC the at Centennial site and one has significant "Cumulative Impacts" placing the FEIR in obvious violation of CEQA and rendering it UNCERTIFIABLE and extremely risky on many levels! (Please also see Shute, Mihaly & Wineberger's response to FEIR dated 3/20/23, sent to County Planning Department regarding Cumulative Impacts).

11. Inadequate ASBESTOS and AIR QUALITY mitigation. See Shute, Mihaly & Wineberger letter, and attached "Mine Waste and Asbestos Impacts Comments on the Final EIR prepared by CEA Foundation, March 14, 2023", and attached: 1) Mitigated Daily Airborn Emmissions Chart (from DEIR Table 4.3-19, pg. 366 w/notes prepared by Jeff Kane MD, 2) Table 4.3-5 NSAQMD Thresholds chart, DEIR pg. 333, and 3) Table 4.3-6 of DEIR, pg. 334, and "Public Comments" of local scientist and past GV Planning Commissioner Jim Bair which include detailed DEIR and FEIR referenced notations.
12. General Plan Policy 17.14 states "Already existing development - commercial, residential and community – as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigation measures, OR DENIAL OF THE PROJECTS. The County shall be the enforcement agency." The FEIR identifies three SIGNIFICANT ENVIRONMENTAL IMPACTS that cannot be mitigated: Aesthetics , Noise and Traffic/Circulation. Asbestos should have been a fourth. FEIR pg. 132 states that Section 3 of the DEIR subjectively proffers that mine materials will likely be classified "Group C'. In fact, and as is the case throughout the FEIR we learn that surface and soils testing will have to be done during the course of construction/operation.
13. General Plan. Chapters 1, 4, 9, 14, 17, and 18 all provide arguments for denial of certification of the FEIR.
14. FEIR pg. 117 states "A Groundwater Monitoring Plan (GMP) is required for the Project under Mitigation Measure 4.8-2(a). It also states "the GPM is designed to provide sufficient time to predict adverse impacts" and "if necessary, provide an immediate water supply". The same plan states "groundwater-level information...shall be collected on a quarterly basis". Obviously, the timing structure of this plan is seriously flawed. PG. 147 of FEIR states "no groundwater level measurements have been completed since 2007, which creates some uncertainty to the predicted impact ...of water column in domestic wells." A Groundwater Monitoring Program does not reduce the project's groundwater impacts to a less-than-significant level. FEIR pg. 151 even more outrageously states, "water quality impacts to domestic wells are speculative impacts that do not require analysis under CEQA." One need only review the widespread water quality and well damage that occurred at the Siskon Mine in North San Juan to realize the absurdity of this statement!
15. Technical Reports incorporated throughout the Draft and Final EIR all contain expiration dates that predates issuance of both DEIR and FEIR. Specific wording "The findings of this report are valid as of the present date. The recommendations presented in this report should not be relied upon after a period of two years from the issue date without our review." All technical reports are out of date and should have been current for County Staff to rely on this vital data for the multitude of decisions made throughout the CEQA environmental review process. That said, these documents reveal significant geotechnical concerns/challenges from undocumented soils and fill material (sawdust), to stability of steep cut slopes and potential for naturally occurring asbestos that represent engineering challenges. The overwhelming magnitude of risks imposed by this mine project represent a challenge to the County, which given the inadequacies of the EIR process alone, appear to be well beyond the management capabilities of County staff, and specter of an 80 year use permit.

16. FEIR pg.132 states in Master Response 10 "the DEIR adequately evaluated the Brunswick fill". This statement is directly contradicted on pg. 11 of NV5 Geotechnical Report of the Brunswick Industrial Site dated 11/18/19 (outdated), where it states "The presence of undocumented fill materials in portions of previously graded areas" and "In general, existing undocumented fill should not be relied upon to support proposed improvements."
17. Variance Application for "steep slope"(slope gradients that exceed 30%) work is inadequately dealt with in the NV5 "Steep Slope and Sediment Control Management Plan" dated 1/2/20 (attached herewith)(Outdated). There are several statements of interest in this report: "The gently sloping surfaces along the valley floor were covered with thick vegetation and we could not evaluate the nature of the material in this area." And, "Due to the proposed development and existing site topography, there is no alternatively feasible location(s) on the subject property that would have less impact on the Site and surrounding areas." [Feeble justification for proceeding with the project at all!] "Deep fill was apparent in the vicinity of the New Brunswick Mine workings". And, "no feasible alternatives were identified ...that could avoid these environmentally sensitive resource areas." [Translate: Sacrifice environmentally sensitive areas.] "Regardless of the erosion control measures in place, some erosion and sediment transport from the graded areas should be anticipated", and "...periodic maintenance may be required to maintain and/or rebuild segments of improvements constructed on steep slopes due to future slope instabilities, erosion and mass wasting." And, "Our scope of services did not include an evaluation of the Site for the presence of hazardous materials. (DEIR pg. 498. There was a cyanide plant at the Brunswick site.). And, "Pre-existing soil conditions and/or substandard construction may cause future drainage issues at the site. We can assume no responsibility for the future performance of trail or drainage improvements." [Both the local Nisenan Tribe(see letter attached), and Wolf Creek Alliance have addressed concerns for the watershed and natural areas, including So. Wolf Creek watershed, below the Brunswick Industrial Site'.] FEIR pg. 7886 in Response to Comment Ind. 775 relies on a Preliminary Drainage Analysis prepared by Nevada City Engineering in 2019 (DEIR at pg. 4.8-75), to conclude that the project would not significantly alter drainage patterns, and in so doing seems to contradict itself. Again after the same Steep Slope Management Plan states "We do not warrant the accuracy of information supplied by others". Seems the right and left hands of these environmental documents have no idea what the other is doing!
18. DEIR pg. 4.4-89; implement Best Management Practices During Construction
19. DEIR pgs. 105 & 486 state "No equipment for vehicle maintenance or refueling shall occur within the 50-foot and 100-foot non-disturbance buffers. The contractor shall immediately contain and clean up any petroleum or other chemical spills with absorbent materials such as sawdust or kitty litter. For other hazardous materials follow the cleanup instructions on the label." Accidents will happen. The EIR fails to note how much kitty litter will be kept on hand.

MITIGATION MONITORING AND REPORTING PROGRAM
Idaho-Maryland Mine Project

Impact Number	Impact	Mitigation Measures	Monitoring Agency	Implementation Schedule	Sign-off
		grass, rose clover, winter and spring vetch, and wild oats shall not be used as they displace native species.			
		4.4-3(c) *To the extent feasible, as determined by the qualified biologist in coordination with the Corps, the project shall be designed to avoid and minimize adverse effects to waters of the U.S. or jurisdictional waters of the State of California within the project area. Prior to initiation of ground-disturbing activities, a Section 404 permit for fill of any jurisdictional wetlands within the Centennial Industrial Site and Brunswick Area shall be acquired, and mitigation for impacts to jurisdictional waters that cannot be avoided shall conform with the Corps "no-net-loss" policy, be provided at a minimum 1:1 ratio and be based on the final impact acreages verified by the Corps. Mitigation for impacts to both federal and State jurisdictional waters shall be addressed using these guidelines. Compensatory mitigation can include but is not limited to the following: onsite and/or offsite wetland creation and/or restoration, purchase or placement of conservation easements, payment of an in-lieu fee, and/or purchase of mitigation credits at an approved Corps wetland mitigation or conservation bank.* *The applicant must also obtain a water quality certification from the RWQCB under*	Nevada County Planning Department U.S. Army Corps of Engineers (USACE) Central Valley Regional Water Quality Control Board (RWQCB)	Prior to initiation of ground-disturbing activities

Grass Valley, California 95945

Subject: **Management Plan for Potential Seismic Hazards**

Dear Mr. Mossman,

This letter summarizes NV5's review of a previously-designated building setback associated with a fault zone crossing a portion of the Brunswick Industrial Site. The 119-acre Brunswick Industrial Site is located on the southwest corner of Brunswick Road and East Bennett Road, approximately ½ mile southeast of the Grass Valley city limits in unincorporated Nevada County, California, and is part of the Idaho-Maryland Mine Project (the Project).

The fault zone addressed herein crosses a portion of the Brunswick Industrial Site, specifically APNs 006-441-034 and 009-630-039, which are located at 12381 Brunswick Road and 12301 Millsite Road. For the purposes of this letter the two subject parcels are referred to as the "Site" or "subject site".

The Project is to include development of industrial facilities associated with proposed underground hard rock mining operations. Because construction is proposed within an area on the site designated as a building setback fault zone (herein referred to as "fault zone"), the Nevada County Community Development Agency (CDA) required the preparation of a management plan pursuant to Land Use and Development Code (LUDC) Section L-II 4.3.8 – Earthquake Faults & Seismically Sensitive Areas, to facilitate Project review and permitting.

The conclusions and recommendations presented herein are based on our understanding of the proposed development, the findings of geotechnical investigation, review of published geologic and soil survey maps, and our experience in the area. Our opinion is that the subject fault zone does not qualify as a seismically active area and therefore the proposed Project development within the identified fault zone is feasible without mitigation or restriction, provided that the recommendations of the Geotechnical Engineering Report (NV5; November 18, 2019) are incorporated into the Project plans and specifications.

1.0 INTRODUCTION

According to the Nevada County Planning Department property title records, an inferred fault alignment and a 200-foot building setback zone on each side of the inferred alignment passes through the subject site. The fault line and setback are recorded on Final Map 85-7 (Book 7 of Subdivisions at page 75) prepared by A.W. Beeson & Associates, Inc. (Beeson; January 1987) for the previously-proposed BET Acres Subdivision (Attachment A).

According to the map prepared by Beeson (1987), the recorded fault alignment is based on an "Anderson Geotechnical Report." The report was likely prepared by Anderson Geotechnical Consultants, Inc. (Anderson), who performed other geotechnical investigations in the area during this time. The report was not located by public records review and was not available from the firm that subsequently acquired Anderson.

NV5 performed a geotechnical engineering recommendations and provided geotechnical engineering recommendations for the Project in *Geotechnical Engineering Report, Idaho-Maryland Mine Project – Brunswick Industrial Site* (November 18, 2019). The geotechnical engineering investigation included a site reconnaissance and literature review pertaining to soil conditions and site geology, and a subsurface investigation and laboratory testing program.

2.0 PURPOSE

This management plan was prepared pursuant to Nevada County LUDC Sec. L-II 4.3.8 to address potential seismic hazards associated with the previously-identified fault alignment. Section L-II 4.3.8.C requires a management plan for development projects that will result in disturbance within seismically active areas, which are defined in Section L-II 4.3.8.B as areas determined to be within a seismic hazard zone or to have the potential to suffer ground rupture from active faults by the State Division of Mines and Geology.

3.0 SCOPE

To prepare this management plan, we reviewed published geologic literature pertaining to the site and surrounding area and the findings of our geotechnical engineering report for the Project.

4.0 SITE DESCRIPTION

The 119-acre Brunswick Industrial Site is located on the southwest corner of Brunswick Road and East Bennett Road, approximately ½ mile southeast of the Grass Valley city limits in unincorporated Nevada County, California, and is part of the Idaho-Maryland Mine Project (the Project). The fault zone addressed herein crosses a portion of the Brunswick Industrial Site, specifically APNs 006-441-034 and 009-630-039, which are located at 12381 Brunswick Road and 12301 Millsite Road. For the purposes of this letter the two subject parcels (comprising approximately 31.16 acres) are referred to as the "Site" or "subject site".

The Site sits in a valley created by the South Fork of Wolf Creek, and is bordered by Brunswick Road to the east, East Bennett Road to the north, predominantly vacant industrial properties to the south and southwest, and undeveloped land to the west and southwest.

At the time of our investigation, the Site consisted of generally flat-lying fill surfaces around the New Brunswick mine shaft, former sawmill landings, and gently to moderately sloping open space and forested areas around a pond and dam. Deep fill was present in the vicinity of the New Brunswick shaft and ore bin.

The South Fork of Wolf Creek is contained within an approximately 48-inch diameter corrugated metal pipe (CMP) culvert as it enters the Site. The creek discharges back into its natural channel within the site, continuing northwestward along the southwestern border of the property.

when did it become inferred

As shown on Map 85-7, the inferred fault alignment crosses the subject site from the south side of the pond near the southern site boundary and trends approximately 350 degrees towards the intersection of East Bennett Road from New Brunswick Court near the northern site boundary (Figure 1). The New Brunswick shaft is located approximately 150-feet west of the inferred fault alignment within the 200-foot setback zone.

5.0 PROPOSED IMPROVEMENTS

NV5 reviewed a Grading Plan (Sheet B-1) prepared by Nevada City Engineering, Inc. (and several sheets prepared by Rise Grass Valley, Inc. (November 2019), including an Infrastructure Plan (Sheet B101), Biological and Cultural Summary Map (Sheet B102), Infrastructure Details (Sheet B103) and Section Views (Sheet B104). Based on our review of these site plans, we understand that the proposed project improvements will likely include the construction of:

- New light-loaded and heavily-loaded structures to support industrial mining activities;
- Regrading of a portion of the dam;
- Retrofitting and expansion of the existing New Brunswick shaft;
- Construction of a new service shaft and headframe;
- Construction of a storm water detention pond;
- Construction of an engineered fill for future industrial development; and
- Associated infrastructure elements including earth retaining structures.

Appurtenant construction will include asphalt concrete paved roads and parking areas and underground utilities. Grading for the project will include cut and fill for building pads, roadways, surface and subsurface drainage improvements and underground utilities.

6.0 PREVIOUS SITE INVESTIGATIONS

NV5 requested public records from the County of Nevada; however, the "Anderson Geotechnical Report" referenced on Map 85-7 was not available. A geotechnical report for a neighboring East Bennett Street Property to the north (Anderson; May 12, 1986) was identified (Attachment B). NV5 reviewed the Anderson (1986) report, which states that Anderson performed a previous geotechnical reconnaissance (February 26, 1986) and references a fault on the subject site:

SEE ANDERSON LETTER IN ATTACHMENT # 2 AND PACKAGE

> "The fault that was addressed in our initial Geotechnical Reconnaissance (dated 26 February 1986) as crossing near lot 2 appears to be present on the northern most

part of the lot. The age of this fault in on the order of 100 million years and any potential risk of movement is so slight that it should not affect single family residential construction. We recommend that any construction be set back at least 200 feet from the fault (the approximate location of the fault is shown in our previous work, Geotechnical Reconnaissance)." (Anderson, 1986)

7.0 GEOLOGY ANS SEISMICITY

The Site is located within a region underlain by a complex assemblage of igneous and metamorphic rocks in the western foothills of the Sierra Nevada. The regional structure of the foothills is characterized by the north-northwest trending Foothills Fault System, a feature formed during the Mesozoic era (between approximately 65 million and 248 million years ago) in a compressional tectonic environment. A change to an extensional tectonic environment during the late Cenozoic (approximately within the last 30 million years), resulted in normal faulting which has occurred coincident with some segments of the older faults near the Site.

According to the Geologic Map of the Chico Quadrangle, California (California Department of Conservation, Division of Mines and Geology, 1992) the Site is underlain by massive diabase. A northwest trending liniment of the Grass Valley Fault Zone is approximately located or inferred along Brunswick Road east of the site (Figure 2). The Grass Valley Fault Zone is not considered active. Metavolcanic rock is mapped on the east side of Brunswick Road and the fault. Both of these units are associated with the Mesozoic Lake Combie Complex. The upslope area to the south and southwest of the Site is mapped as Miocene to Pliocene volcanics, predominantly andesitic pyroclastic rocks, which cover the fault that contacts the massive diabase and metavolcanic rocks. The Mesozoic era spans the period of time between 250 and 65 million years before present and the Miocene to Pliocene epochs span the period of time between 23 and 2.6 million years before present.

The Geologic Map of the Grass Valley - Colfax Area (A. Tuminas, 1983) presents the findings of a more detailed local study. According to this geologic map, an inferred fault trends north-northwest through the property approximately along the eastern shore of the pond and passing through the northern Site boundary. Four rock units are mapped as underlying the Site. The eastern portion of the Site (and fault) is mapped as early Mesozoic Lake Combie metavolcanic rock. The northern and western sloping flanks of the Site are mapped as early Mesozoic Lake Combie massive diabase. The lower valley portions encompassing the South Fork of Wolf Creek is mapped as Quaternary alluvium (i.e., water-lain sediments deposited in the past 2 million years). Tertiary clastic strata of the volcanic Mehrten formation is mapped in the upslope areas to the south and southwest of the Site. The Quaternary alluvium and Mehrten formation both cover the fault that contacts the older Lake Combie massive diabase and metavolcanic rocks.

The Fault Activity Map of California (2010) (http://maps.conservation.ca.gov/cgs/fam/), prepared by the California Department of Conservation, California Geological Survey (CGS), indicates that the Site is located within the Foothills Fault System. The Foothills Fault System is designated as a Type C fault zone, with low seismicity and a low rate of recurrence. The Foothills Fault System has been assigned a moment magnitude of 6.5. The nearest mapped active portion of the Foothill Fault System is approximately 25 miles northwest of the site on the Cleveland Hill Fault.

This article was published as a "Letter to the Editor" in the Bulletin of the Seismological Society of America v. 68, no. 1, pp. 245–249, February 1978....*Editor*

INTRODUCTION

The Foothills fault system, between Folsom and Oroville, is bound on the east by the northward trending Melones fault zone and on the west by the northwestward trending Bear Mountain fault zone. Recent studies have revealed more extensive Late Cenozoic faulting then previously recognized within the northern Sierra Nevada, including portions of the Foothills fault system (Alt and others, 1977; Schwartz and others, 1977). Damaging earthquakes, in the magnitude range 5 to 6, have occurred within this portion of the Foothills fault system in 1975, 10 km south of Oroville, and in 1909 and 1888 about 15 km northeast of Nevada City (figure 1, front cover). This article summarizes evidence from microearthquake surveys, from historical earthquake reports, and from geodetic surveys that the Foothills fault system is active between Oroville and Folsom.

SEISMICITY BETWEEN OROVILLE AND FOLSOM

Bear Mountain Fault Zone

Following the 1975 Oroville earthquake, improved regional seismograph coverage has led to the detection of several magnitude ~ 1.0 microearthquakes along the western or Bear Mountain zone of the Foothills fault system north of Auburn. Between December 1975 and March 1977, seven such events were recorded. Marks and Lindh (1977) located two events southeast of Honcut and one event east of Marysville (figure 1). The northern two events occurred on December 19, 1975 and January 1, 1976, while the southern event occurred on May 3, 1976. Marks and Lindh (1977) also located a magnitude 2.1 earthquake 10 km east of Honcut which occurred on February 13, 1976. Cramer and Sherburne (1977) reported two events near Smartville that occurred on August 21, 1976 and September 2, 1976. Finally Eaton and others (1977) located an event east of Honcut which occurred on February 7, 1977. The hypocentral parameters for these seven events are listed in table 1.

TABLE 1. KNOWN MICROEARTHQUAKE ACTIVITY IN SIERRA FOOTHILLS BETWEEN HONCUT AND FOLSOM FOR THE PERIOD DECEMBER 1975 THROUGH JULY 1977*

Date (yr.mo.day)	*Time (UT) (hr.min.)*	*Lat N*	*Long W*	*Depth*	*Magnitude*
	Bear Mountain Zone				
75 12 19	19 14	39°17.06'	121°29.28'	~ 18 km	1.3
76 01 01	10 22	39°17.45'	121°29.30'	~ 18 km	0.7
76 02 13	23 13	39°21.97'	121°22.20'	~ 7 km	2.1
76 05 03	12 16	39°08.25'	121°23.72'	~ 15 km	1.1
76 08 21	01 31	39°13.82'	121°18.08'	< 5 km	0.8
76 09 02	18 00	39°13.64'	121°19.46'	< 5 km	1.3
77 02 07	14 49	39°19.83'	121°22.80'	~ 4 km	1.3
	Melones Zone				
76 11 19	05 11	38°54.60'	120°57.14'	~ 10 km	1.1
77 05 15	18 44	39°16.7'	121°05.3'	~ 9 km	1.1

*Microearthquakes that occurred in the Rocklin pluton are not listed in this table, they are listed in Cramer and others (1977).

Melones Fault Zone

Besides the three damaging earthquakes mentioned in the introduction, other earthquake activity points toward the Melones zone as being active. Cloud (1976) lists felt reports of earthquakes near Nevada City as far back as 1867. Also listed by Cloud are two magnitude ~ 3.0 events instrumentally located along and to the west of the Melones zone. The first occurred about 20 km northeast of Auburn on March 12, 1950, and the second about 15 km southwest of Nevada City on October 5, 1960 (figure 1). Eaton and others, (1977) and Eaton and Conens (1977) detected two magnitude ~ 1.0 events on the Melones zone using a recently installed regional seismograph network. The hypocentral parame-

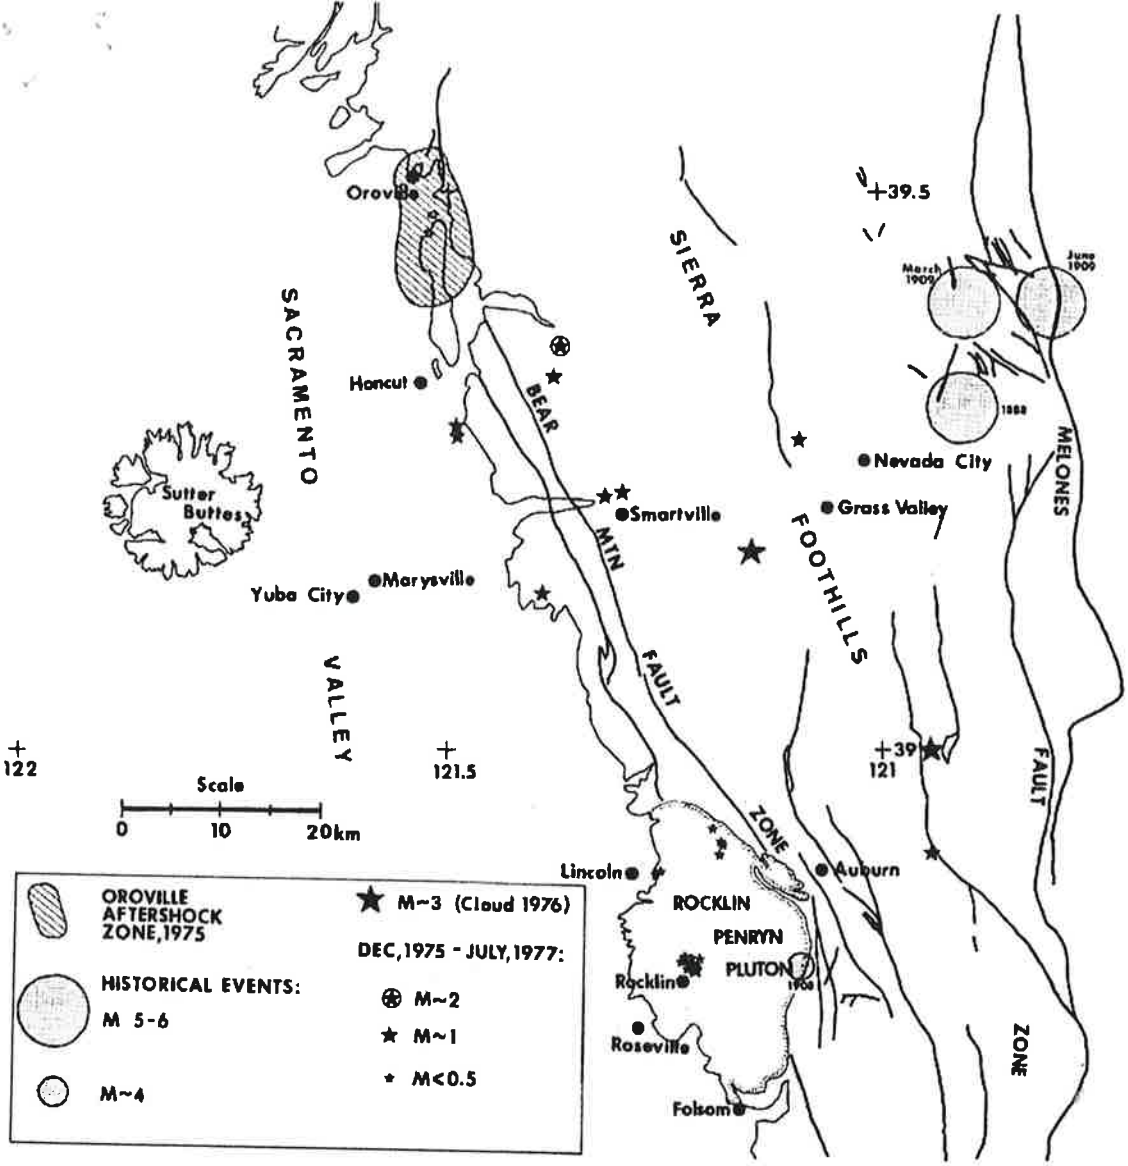

Figure 1. Map of northern part of Foothills fault system showing known earthquake activity between Oroville and Folsom. The contact to the west of the Bear Mountain fault zone is the boundary between the Sacramento Valley and the Sierra foothills. Hachured line indicates boundary between the Rocklin–Penryn pluton and metavolcanic rocks of the foothills. The 1888, 1908, and 1909 earthquakes were researched by CDMG; for the 1908 and 1909 events see Toppozada and others (1978).

ters for these two events are also listed in table 1. The first event occurred 10 km east of Auburn on February 7, 1977 and the second 2 km west of Nevada City on May 15, 1977 (figure 1).

DETAILED STUDIES NEAR ROCKLIN

Two microearthquake investigations have been conducted in the vicinity of Rocklin, California. The first by McNally and others (1978) discovered microearthquake activity within the Rocklin–Penryn pluton. During that survey, microearthquakes ($M \leq 1$) were concentrated in a cluster of activity near the town of Rocklin with two additional events near Lincoln (figure 1). The second microearthquake survey by Cramer and Sherburne (1977) confirmed the presence of the cluster of activity near Rocklin and detected additional microearthquakes ($M < 0$) near the northern edge of the pluton (figure 1). Continued monitoring by Eaton and others (1977) and Eaton and Conens (1977) using a regional telemetered network showed ongoing activity within the cluster near Rocklin, the largest being two magnitude 1.6 events.

Composite focal mechanisms based on P-wave first motions for both the Rocklin cluster of activity and the four events near the northern edge of the Rocklin–Penryn pluton indicate normal faulting, down to the east, on fault planes trending about N10°W with dips of 55° to 70° to the east (Cramer and others, 1977; McNally and others, 1978). This trend is compatible with the regional fault trend of the Sierra foothills. P-wave first motion data from the magnitude 1.1 event east of Auburn (Eaton and others 1977) also indicates normal faulting, down to the east, and is compatible with the composite mechanisms for the Rocklin pluton activity. This sense of down to the east motion on a normal fault is also compatible with geologic observations elsewhere along the Foothills fault system (Drew Smith, CDMG Geologist, oral communication; Alt and others 1977; Schwartz and others 1977).

Reports of felt earthquakes near Rocklin are rare (Townley and Allen, 1939; Bolt and Miller, 1975). Cloud (1976), in his review of the seismicity of the area, reported only three historical events that may have occurred near Rocklin. The three events are a February 23, 1885 event, an April 21, 1892 event reported as felt in Newcastle (5 km SW of Auburn, and a May 30, 1908 event reported as felt in Folsom and Represa (Townley and Allen, 1939). A search of old newspapers by one of the authors (D.L.P.) produced newspaper accounts for the 1908 event. The two earlier events were reported in the newspaper accounts as felt only at Newcastle, which is between Rocklin and Auburn. Figure 2 shows an isoseismal map for the 1908 event based on the newspaper accounts. A maximum reported intensity of IV–V and a total felt area of about 10,000 km² suggest a Richter mag-

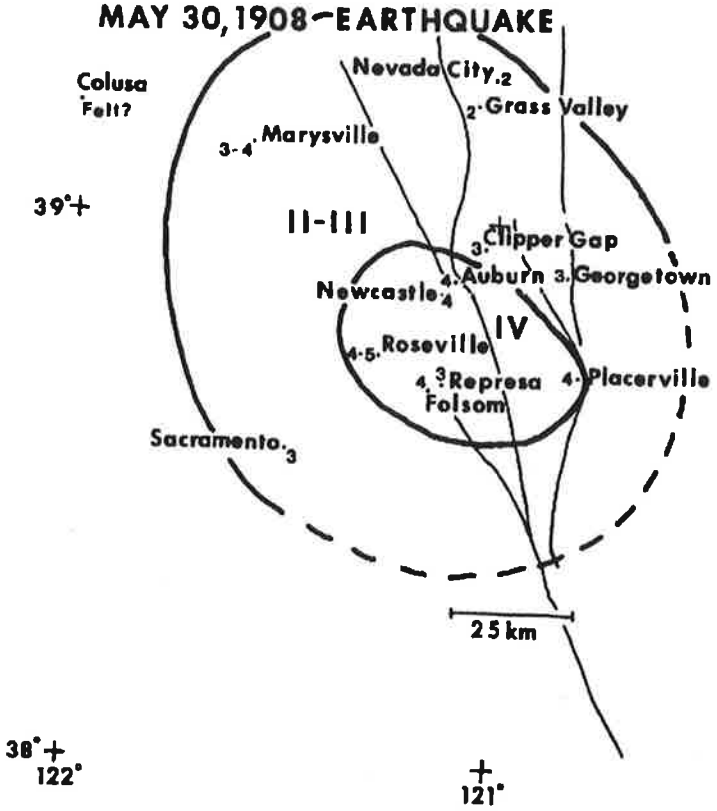

Figure 2. Isoseismal map of the May 30, 1908 earthquake showing Modified Mercalli intensity data determined from newspaper reports and the II and IV isoseismals. The generalized Foothills fault system in the Auburn area is shown in the background.

nitude of about 4 for this earthquake. Although the epicenter cannot be precisely defined, the intensity IV contour suggests that the event occurred on the Foothills fault system between Auburn and Folsom in proximity to the recent microearthquake activity near Rocklin. The epicenter for this event shown in figure 1 corresponds to the center of the intensity IV contour in figure 2.

DISCUSSION

Microearthquake studies in the Sierra foothills since late 1975 have revealed a pattern of ongoing low level seismicity between Oroville and Folsom. The occurrence of several magnitude ~ 1.0 events during this time period suggest that this portion of the Foothills fault system is active. Historical earthquake reports and instrumental earthquake locations also support this conclusion.

Detailed investigations in the vicinity of Auburn, California have shown microearthquake activity within the Rocklin–Penryn pluton. The main cluster of activity is in the middle of the pluton and is confined to an extremely small source volume. Another cluster of very small events is near the northern margin of the pluton where the Foothills fault system abuts the pluton. Composite focal mechanisms for events within the pluton as well as for one event east of Auburn are compatible with regional geology and trends of the Foothills fault system. These results suggest that the Rocklin–Penryn pluton is presently being deformed by the same regional stress pattern that caused Cenozoic movements elsewhere on the Foothills fault system. The isoseismals of a 1908 earthquake suggest that macroseismic activity has also occurred on the Foothills fault system in the vicinity of Rocklin.

Bennett and others, (1977) presented independent evidence of ongoing crustal movement based on first–order level lines between Roseville and Reno. The leveling data show episodic changes in elevation which approximately coincide with the Bear Mountain and the Melones zones of the Foothills fault system. As with earthquake data, the leveling shows that larger movements are occurring on the Melones fault zone than on the Bear Mountain fault zone.

ACKNOWLEDGMENTS

We would like to thank William U. Savage of Woodward–Clyde Consultants for sending us copies of newspaper accounts for the historical earthquakes. Gary Bates, student intern from the University of California at Davis, assisted in evaluating the historical newspaper accounts.

TITLE 3 LAND USE AND DEVELOPMENT CODE

CHAPTER II: ZONING REGULATIONS

ARTICLE 4 COMPREHENSIVE SITE DEVELOPMENT STANDARDS

Division 4.3 Resource Standards

Sec. L-II 4.3.8 Earthquake Faults & Seismically Sensitive Areas

A. **Purpose.** To minimize the impact of earthquakes and seismic hazard on people and development.

B. **Definitions.**

1. **Seismically Active Areas** - Areas determined to be within a seismic hazard zone or to have the potential to suffer ground rupture from active faults by the State Division of Mines and Geology.

C. **Standards.**

1. Projects shall be approved only when they are not within the defined area, unless the resource can be protected consistent with paragraph 2 below.

2. If the above standard effectively precludes development of the project, a Management Plan shall be prepared by a certified engineering geologist or civil engineer that minimizes safety impacts associated with the project. The Management Plan shall include a Geotechnical Report that includes the following:

a. Existing soils and geologic conditions, including location and chronology of local faults and epicenters, relationship of the site to said faults and epicenters, and other environmental factors, including rainfall, slopes, water table, vegetation, etc. that might affect soils and geologic conditions.

b. Conclusions of potential seismic hazards relative to the specific intended land use.

c. Recommended construction and/or land use restrictions that will avoid the hazard or lessen the hazard to an acceptable level, including construction techniques, building heights, site preparation measures, building setbacks, etc.

Where the Report determines that a seismic hazard does exist, conclusions and recommendations to lessen the seismic hazard shall be incorporated into the conditions of approval of the project. Where the Report determines that the seismic hazard cannot be lessened to an acceptable level, the project shall be denied.

Nevada County, California
GEOTECHNICAL INVESTIGATION

Gentlepersons:

An additional geotechnical investigation of 5 proposed residential lots on the north side of East Bennett Street near Brunswick Road has been completed. The purpose of our investigation was to locate any possible geologic hazzards due to past mining activity at the old Brunswick Mine. This investigation was perfomed in conjunction with our previous Geotechnical Reconnaissance (dated 26 Feb uary 1986) in which we recommended that additional studies take place to locate buried shafts, tunnels, and adits and find buildable areas on each residential lot. No additional work was performed on lots 6, 7, and 8. These lots are to have geotechnical investigations performed on an individual basis at a later date.

To complete our additional investigation, six test borings were excavated, at least one per lot, and a review of previous underground surveys was performed. The underground survey map was provided to us by Al Beeson, who obtained it from the

property owners. The underground map was produced by plotting underground data on a topographic base map produced in 1920 when the Brunswick Mine was still active. Using this map we were able to dertermine where the old mine structures (headworks, mills, pipelines, tailings piles) were located in relation to the site. The 1920 base map also shows the locations of old ditches, prospects, adits, and shafts. We were also able to determine the depth beneath the ground surface of the shafts and tunnels in the area. An extensive surface reconnaissance and a review of old (1962) aerial photos was also completed.

The locations of the test borings is shown on Figure 1. In the test borings, we found no evidence of near surface tunnels or voids within the depths drilled (20 to 35 feet). In choosing the locations of the test borings, we utilized spots that were unlikely to be the location of any tunnels (according to the 1920 map). Logs of the six test borings are shown on Figures 2 through 7. The locations of the borings on Figure 1 is only approximate as they were located by referencing from topographic features.

RESULTS AND CONCLUSIONS

The results of our study indicate that single family residences can be built on select areas on each of the five lots. On Figure 1, we have plotted appropriate building envelopes on each lot. These buiding areas have been selected to minimize the risk of experiencing problems from past mining activities at the site.

We recommend that residential construction be avoided on the tailings piles on lots 2 and 4. Although most of the tailings have been removed (reused for agregate and/or fill off the site), constructing on the remaining tailings could prove difficult. Home sites on the tailings are also considered undesirable. Lots

File No. 1818-1
12 May 1986

2 and 4 have enough area that is not on the tailings to provide sufficient building areas.

The fault that was addressed in our initial Geotechnical Reconnnaissance (dated 26 Febuary 1986) as crossing near lot 2 apperars to be present on the northern most part of the lot. The age of this fault is on the order of 100 million years and any potential risk of movement is so slight that it should not effect single family residential construction. We recommend that any constuction be set back at least 200 feet from the fault (the approximate location of the fault is shown in our previous work, Geotechnical Reconnnaissance).

Soil conditions at the site, other than the tailings piles, are suitible for conventional residential foundation systems if footings are properly designed and constructed.

Sincerely,

ANDERSON GEOTECHNICAL CONSULTANTS, INC.

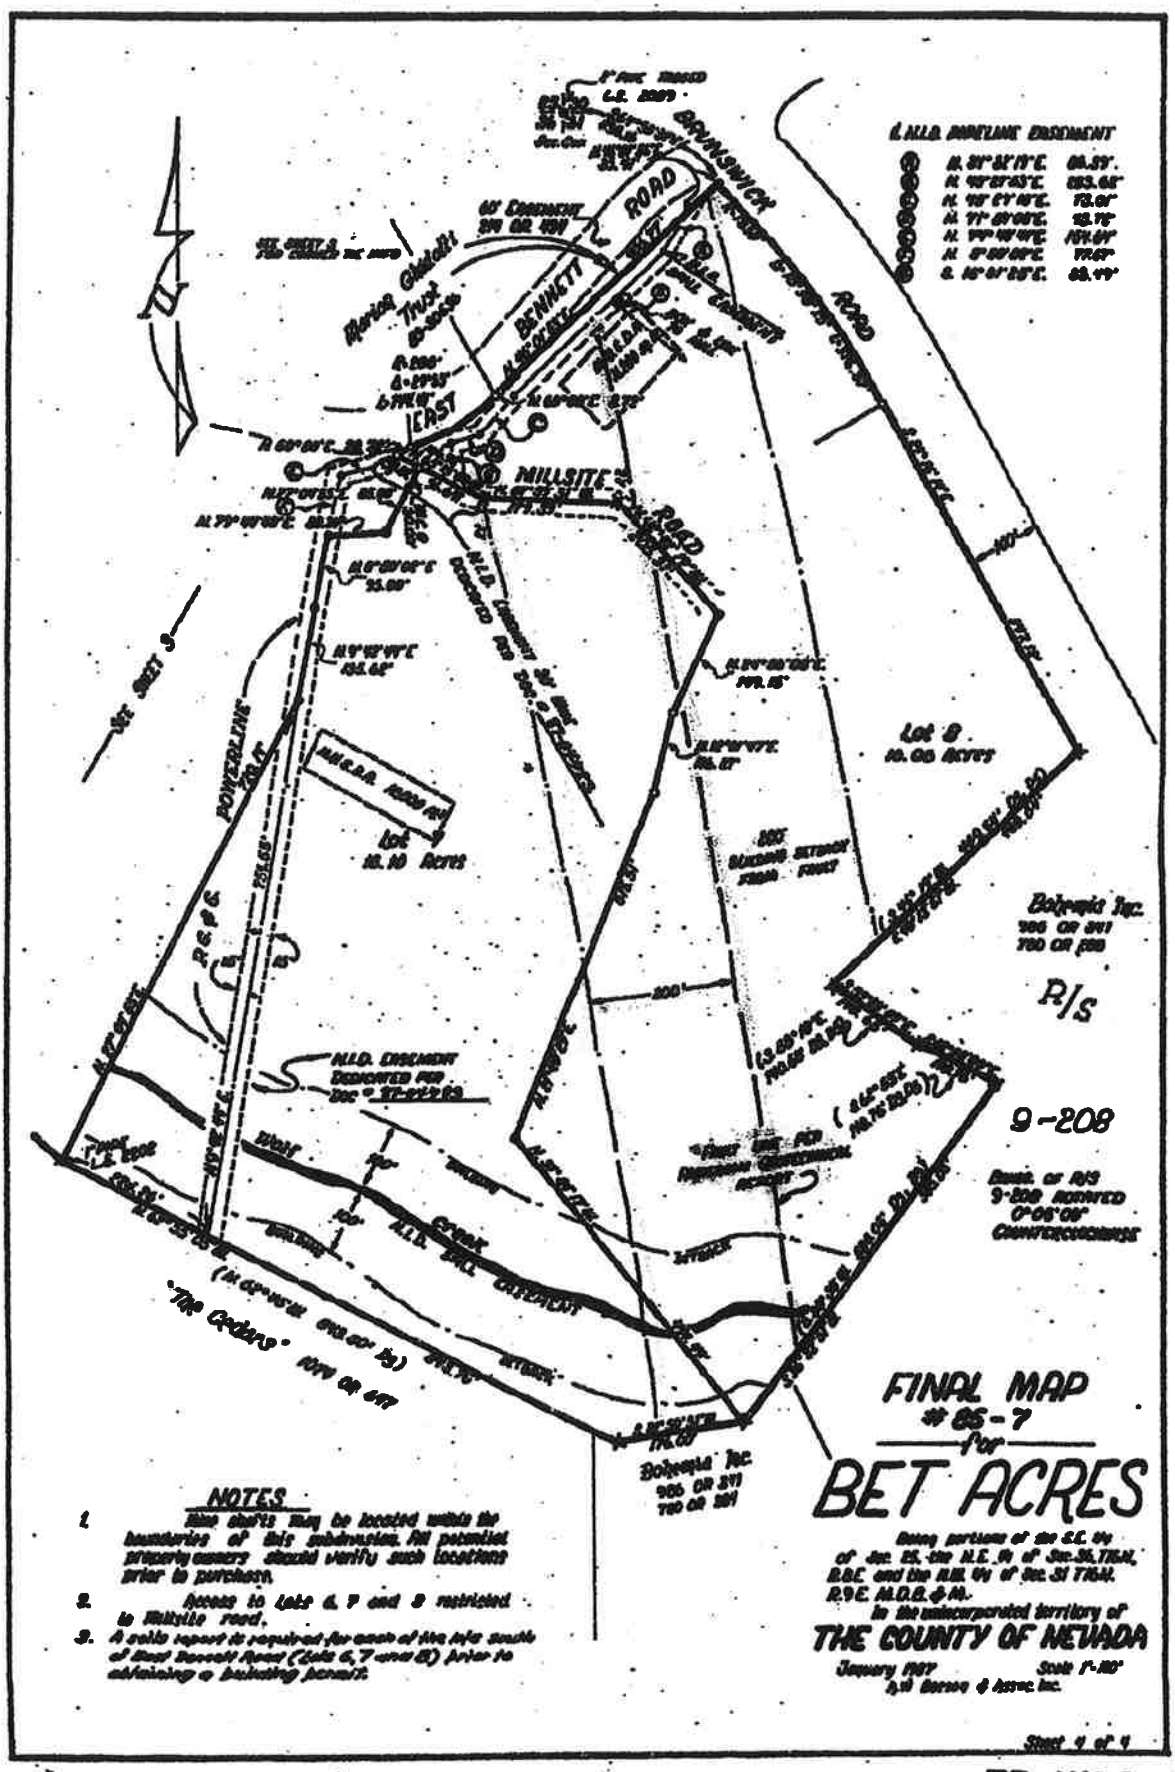
copies: 2 to Al Beeson



NOTES

1. Site shafts may be located within the boundaries of this subdivision. All potential property owners should verify such locations prior to purchase.
2. Access to Lots 6, 7 and 8 restricted to Millsite road.
3. A soils report is required for each of the lots south of East Bennett Road (Lots 6, 7 and 8) prior to obtaining a building permit.

ER-1499

which will be affected by a proposed project, including land, air, water, minerals, flora, fauna, noise, or objects of historic or aesthetic significance (PRC Section 21060.5).

The courts have affirmed this understanding. In the case *City of Hayward v. Board of Trustees of the California State University*, the First District Court of Appeal affirmed that the focus of CEQA analysis should be limited to physical environmental impacts related to a project.[2] The court held that, "The need for additional fire protection services is not an *environmental* impact that CEQA requires a Project Proponent to mitigate."

The commenter does not explain how the project's power consumption or transportation of explosives would result in public services demand that would necessitate the need for new or physically altered governmental facilities, thus potentially causing an environmental impact.

Response to Comment Ind 577-14

The project does not propose any trucking along Highway 174. Please see Master Response 10 - Explosives, Reagents, and Brunswick Fill.

Response to Comment Ind 577-15

Please see Chapter 4.6 of the DEIR and Master Response 29 – Near Surface Workings, and Master Response 7 – Location of Future Mining Areas.

Response to Comment Ind 577-16

Please see Chapter 4.6 of the DEIR and Master Response 29 – Near Surface Workings.

Response to Comment Ind 577-17

Please see Chapter 4.6 of the DEIR regarding seismicity of the project area.

The magnitude of the energy released during mining excavations by rock removal and rock placement is much smaller than the magnitude of energy activation required to trigger the release of a local pre-Holocene fault. No analysis was performed nor is necessary, as there is no potential for inducement of seismic activity on these faults from the proposed mining activity. Please see NV5 Memo attached to the Final EIR as Appendix P.

Response to Comment Ind 577-18

As discussed in Section 4.5-1 of the DEIR, based upon this substantial evidence in the record, the project includes a request to amend the Final Map for Bet Acres recorded in February 1987 in Book 7 of Subdivision Maps at Page 75 to remove the "200' Building Setback From Fault", as shown on Sheet 4 of Final Map #85.

In addition, a management plan was prepared pursuant to Nevada County LUDC Section L-II 4.3.8 to address potential seismic hazards associated with the previously-identified inferred fault alignment. It is NV5's professional opinion that the subject fault, identified on the property in Map 85-7, does not qualify as a seismically active area as defined by Nevada County LUDC Section L-II 4.3.8.B, and the proposed project development within the designated building setback fault zone is generally feasible from a geotechnical engineering standpoint. ECM, the County's independent peer review consultant for this project, concurred with NV5's professional opinion, after reviewing the data.

[2] First District Court of Appeal. *City of Hayward v. Board of Trustees of the California State University.* (November 30, 2015) 242 Cal.App.4th 833.

While the analysis shows that an active fault likely does not exist, out of an abundance of caution, the County has concluded that a significant impact could occur without mitigation. Mitigation Measure 4.6-1 requires that prior to approval of Improvement Plans, the design recommendations from the Brunswick Industrial Site Geotechnical Report (November 18, 2019) shall be incorporated into the Plans to the satisfaction of the Nevada County Building Department. The rezoning and map amendments would be considered at the same hearing as the other entitlements for the project, and contrary to the commenter's suggestion, there is no requirement that such approvals be heard at a separate hearing.

- AND VARIANCE?

Response to Comment Ind 577-19

In addition to settlement in the water treatment pond, the water treatment plant includes media filtration. Please see Appendix K.4 of the DEIR. The treated mine water discharge will be required to meet regulatory requirements for total suspended solids. Please see Master Response 35 – Discharge to South Fork Wolf Creek.

As stated on Page 4.8-70 of the DEIR, at the Brunswick Industrial Site, a detention basin would be constructed at the downstream toe of the engineered fill placement slopes, above South Fork Wolf Creek. The detention basin for the Brunswick Industrial Site is sized to detain storm flows to compensate for the quantity of treated mine water discharged to South Fork Wolf Creek, in addition to compensating for increased runoff from potential future industrial development of the site. During larger storm events, the proposed detention pond on the Brunswick Industrial Site would reduce the peak flows within South Fork Wolf Creek by much more than 5.6 cfs, as shown in Table 4.8-4. Thus, under project conditions, the overall peak storm flows would be lower than they are under existing conditions and therefore would not contribute to increased flooding downstream.

Response to Comment Ind 577-20

Please see Master Response 1 - Non-EIR/Administrative Issues, and Master Response 2 – Social and Economic Impacts.

As discussed on page 10 of Appendix N of the DEIR, the proposed project will have a surplus of water from the natural groundwater flow into the ground workings. Once the initial dewatering is completed, approximately 1,224,000 gallons per day are estimated to be pumped to the surface on an on-going basis to maintain the dewatered mine. The groundwater consumed during operations is estimated to be 84,000 gpd. As stated on page 2 of Appendix N, the mine would have a positive effect on water supply. NID could adjust its flows upstream to use the extra water available downstream if it desired to. The construction of a reservoir large enough to impound this quantity at the project site is not realistic nor feasible and would likely cause additional environmental impacts due to disturbance of other resources on the surface.

Response to Comment Ind 577-21

Please see Master Response 3 – Operator Responsibility.

NV5

Project No. 5279.02
June 11, 2020

Rise Grass Valley, Inc.
333 Crown Point Circle, Suite 215
Grass Valley, CA 95945

Attention: Ben Mossman, President

Reference: Idaho-Maryland Mine Project

Subject: Geotechnical Assessment of Near Surface Mine Features

Dear Mr. Mossman,

NV5 prepared this letter to summarize our assessment of geotechnical engineering conditions related to specific historical near-surface mine features associated with the Idaho-Maryland Mine (IMM) Project.

1 INTRODUCTION

1.1 PURPOSE

The purpose of the assessment was to provide an analysis of the potential for surface impacts at the location of known near-surface mine features resulting from dewatering of the underground mine workings as part of proposed IMM underground mining operations. The potential impacts evaluated herein include the potential for near-surface instability resulting from drawdown of the water level in the mine workings.

1.2 SCOPE

The assessment included review of surface conditions and existing improvements at the feature locations, review of as-built documentation of the underground workings, the Project Description of the Idaho-Maryland Mine Project, and discussion of the proposed future mining operations with a representative of Rise Grass Valley, Inc. (Rise). This letter presents NV5's opinion regarding the identified features and provides preliminary recommendations for mitigation of potential geotechnical impacts.

1.3 BACKGROUND

The features addressed as part of this assessment are depicted on the attached Sheet A207, *Mine Workings, Near Surface, Showing Location and Geometry* (Rise Grass Valley, Inc., August 15, 2019). The plan and cross sections are based on a digital LiDAR derived surface model and a digital model of the as-built mine workings.

Geotechnical engineering reports for Whispering Pines by Lowry and Associates (1983, 1986) did not specifically identify the feature. However, Lowry recognized the presence of numerous historic mine features in its report to support the development of the Whispering Pines Industrial Park, provided recommendations for closure of historic mine features, and required all shaft treatment work to be observed and evaluated by an engineering geologist from their firm. Its mapped location appears to be at a location where the road fill is approximately nine feet deep.

The method of physical closure is not known, and no closure documentation is available. No settlement of the ground surface is apparent. As depicted in Section J, the shaft is nearly vertical. Based on the water level in the mine workings determined by EMKO (2020) and ground surface elevations from LIDAR data (Aero Geomatics Ltd., May 2018), the water level in the mine workings is anticipated at approximately 75 feet bgs.

2.10 ROUNDHOLE SHAFT (IDAHO #2)

The Roundhole Shaft is located approximately 200 feet west of Brunswick Road between Idaho Maryland Road and Whispering Pines Lane. The feature includes a five-foot diameter vertical shaft bored to the 1000-level of the mine. The shaft was used for ventilation and transportation of supplies to the upper mine levels. Boring logs indicate that the upper 44 feet of the shaft were mined by hand and square set. Bedrock (gabbro) was encountered from 44 to 180 feet bgs and was underlain by serpentinite. The shaft is likely supported by a concrete collar near the ground surface and was observed to be covered with a concrete slab. The water level in the Roundhole Shaft is located in the underlying bedrock, below the weaker near-surface materials. The shaft is nearly vertical and water level in the mine workings is anticipated at approximately 165 feet bgs.

2.11 OLD BRUNSWICK INCLINE SHAFT

The Old Brunswick Incline Shaft is located at 12305 Bet Road. The feature extends from the ground surface at an incline of approximately 45 to 50 degrees to the 1,250-level of the mine. A Non-engineered soil/rock backfill collapsed in 1998 at the existing residence location. The collapse was likely associated with a vertical excavation to the ground surface from the incline shaft. The collapsed portal was closed by engineered design and the foundation residence was underpinned (Carlton Engineering, Structural Engineer Thomas Burkhart, S.E. 4378) in 2000 and 2001. Design and permitting documents are on file with Nevada County Building Department (Permit # 72094). The permit status is listed as final and closed. Based on the water level in the mine workings determined by EMKO (2020) and ground surface elevations from LIDAR data (Aero Geomatics Ltd., May 2018), the water level in this feature is expected to be at depth in bedrock.

2.12 OLD BRUNSWICK RAISE (SHAFT #2)

The Old Brunswick Raise (Section N) is mapped in a forested area at 12448 Old Mine Road and may be located beneath waste rock. According to Rise, this relatively shallow working is associated with the original mining exploration in the area. The feature is likely located above the water level in the mine workings elevation. Based on information provided by Rise, the

water level in this feature is expected to be at depth in bedrock. This feature is already dewatered and therefore the planned dewatering will have no effect on this feature. The Old Brunswick mine features were described during the parcel map creation in a geotechnical report by Anderson (1986) who conducted test boring and delineated areas inappropriate for residential construction over the Old Brunswick mine features which were incorporated into the final map for Bet Acres.

2.13 OLD BRUNSWICK 70-LEVEL STOPE

The Old Brunswick 70-level stope includes a relatively shallow mine excavation in the vicinity of 12477 and 12401 Old Mine Road and 12305 Bet Road. The stope extends from tunnel level upward towards the ground surface. As shown on Section M, the stope extends upwards to an elevation of approximately 88 feet bgs.

This feature is already dewatered and therefore the planned dewatering will have no effect on this feature. The Old Brunswick mine features were described during the parcel map creation in a geotechnical report by Anderson (1986) who conducted test boring and delineated areas inappropriate for residential construction over the Old Brunswick mine features which were incorporated into the final map for Bet Acres.

Shallow workings, referred to as the "70-foot level tunnel" (approximately 50-54 vertical feet below shaft surface), extend a few hundred feet in a general east-southeasterly direction from the Old Brunswick Incline Shaft.

The feature is located beneath forested property and in the vicinity of residential driveways. Water level in the mine workings is relatively deep at this location. Based on information provided by Rise, the water level in this feature is expected to be at depth in bedrock.

This feature is already dewatered and therefore the planned dewatering will have no effect on this feature. The Old Brunswick mine features were described during the parcel map creation in a geotechnical report by Anderson (1986) who conducted test boring and delineated areas inappropriate for residential construction over the Old Brunswick mine features which were incorporated into the final map for Bet Acres.

2.14 OLD BRUNSWICK DRAIN TUNNEL

The Old Brunswick Drain Tunnel is a lateral excavation that is mapped on a hillside where it meets the ground surface. The portal was not observed and may have been covered over or collapsed. Based on the water level in the mine workings determined by EMKO (2020) and ground surface elevations from LIDAR data (Aero Geomatics Ltd., May 2018), the water level in this feature is expected to be at depth in bedrock.

This feature is already dewatered and therefore the planned dewatering will have no effect on this feature. The Old Brunswick mine features were described during the parcel map creation in a geotechnical report by Anderson (1986) who conducted test boring and delineated areas inappropriate for residential construction over the Old Brunswick mine features which were incorporated into the final map for Bet Acres.

2.15 NEW BRUNSWICK SHAFT

The New Brunswick Shaft is a deep, large-rectangular vertical shaft that extends from the ground surface to below the 3280-level of the IMM. The portal is covered by a steel plate. The prominent cylindrical ore bin adjacent to the portal is still intact. The shaft is to be used as part of the proposed mining project.

3 CONCLUSIONS AND PRELIMINARY RECOMMENDATIONS

NV5 presents the following conclusions and preliminary recommendations based on the assessment findings presented above. Mine dewatering is not likely to have a significant effect on the historical, near-surface mine features analyzed herein. Mitigation (physical closure) is recommended at the East Eureka Shaft, East Eureka Drain, Idaho Drain Tunnel, Idaho Pump Shaft and Idaho Shaft, which are currently open or partially-closed. The proposed mitigation measures are readily-implemented, and cooperation agreements are in place to allow Rise to assist the property owners with closure. The assessment did not include subsurface investigation to confirm the actual subsurface conditions; therefore, these recommendations are considered preliminary and may need to be updated based on conditions encountered during physical closure work or future investigation(s). Specific recommendations for each feature are listed in Table 1.

1. Investigate and Close: For locations where water level in the mine workings is present at or near the ground surface and no records of physical closure are known, NV5 recommends further investigation and development of physical closure design. This includes near-surface features associated with the East Eureka Shaft, East Eureka Drain, Idaho Drain Tunnel, Idaho Pump Shaft and Idaho Shaft.
2. Survey and Monitor: For paved locations where water level in the mine workings is present at depths less than 100 feet and no records of physical closure are known, impact to near-surface features is not considered likely as a result of the proposed dewatering. However, NV5 recommends documentation of baseline conditions (current ground surface elevations) and periodic monitoring during future dewatering/mining operations. The ground surface at these locations should be surveyed prior to dewatering so that the locations can be monitored for possible future settlement. Surveying should include ground surface elevation relative to mean sea level to an accuracy of 0.01 foot, and horizontal coordinates (latitude and longitude) in decimal degrees using methods that satisfy state regulations. Surveying should be performed by a California Registered Professional Land Surveyor.
3. Notify and Document: NV5 recommends photographic documentation of surface conditions before, during and after dewatering for the following cases, where impact to near-surface features is not considered likely as a result of the proposed dewatering.
    a. Developed locations where the water level in the mine workings is present at depths less than 100 feet, and although the features were previously closed, no formal record of physical closure was identified.

b. Undeveloped locations where water level in the mine workings is present at depths less than 10 feet and no records of physical closure are known. The currently undeveloped locations should not be developed without investigation and engineered physical closure.

4. No Action: For locations where the water level in the mine workings is relatively deep (i.e., greater than 100 feet bgs) and/or the mining feature has previously been physically closed, the chance of near-surface impact associated with dewatering is considered remote. This evaluation does not eliminate the possibility of future settlement at these historical excavation locations, but finds that the possibility of impact resulting from the proposed dewatering is remote.

5 LIMITATIONS

NV5's assessment was limited to the specific features identified in this letter. Other features may be present that were not addressed herein.

NV5's scope was limited to the review of surface conditions and historical as-built documentation. No subsurface investigation was performed. Therefore, this assessment did not completely characterize subsurface conditions, and conditions may exist that require modification of our preliminary recommendations and proposed mitigation measures.

NV5's professional services were performed consistent with the generally accepted geotechnical engineering principles and practices employed in northern California. No warranty, expressed or implied, is made or intended in connection with our work.

These services were performed consistent with NV5's agreement with our client. We are not responsible for the impacts of any changes in standards, practices, or regulations subsequent to performance of our services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report. This report is solely for the use of our client. Any reliance on this report by a third party is at the party's sole risk.

The findings of this report are valid as of the present date. Changes in the conditions of the property can occur with the passage of time. The changes may be due to natural processes or to the works of man, on the subject site or adjacent properties. If changes are made to the nature or design of the project as described in this report, then the conclusions and recommendations presented in this report should be considered invalid by all parties. Only our firm can determine the validity of the conclusions and recommendations presented in this report. Therefore, we should be allowed to review all project changes and prepare written responses with regards to their impacts on our conclusions and recommendations. The recommendations presented in this report should not be relied upon after a period of two years from the issue date without our review.

is additional, real, permanent, quantifiable, verifiable and enforceable, the report shall include: (i) the applicable protocol(s) and methodologies associated with the carbon offsets, (ii) the third-party verification report(s) and statement(s) affiliated with the carbon offset projects, (iii) the unique serial numbers assigned by the registry(ies) to the carbon offsets to be retired, which serves as evidence that the registry has determined the carbon offset project to have been implemented in accordance with the applicable protocol or methodology and ensures that the offsets cannot be further used in any manner, and information sufficient for the County to verify that the purchased offsets meet the requirements identified within this mitigation.

To ensure consistent and effective enforcement of this mitigation measure and to assist the County with its review of the report described above, an implementation process timeline and associated flow chart for the implementation and administration of this mitigation measure's requirements has been prepared and is attached as Appendix F to the FEIR.

If the County determines that the project's carbon offsets do meet the requirements of this mitigation measure, the offsets can be used to reduce project GHG emissions and project permits shall be issued. If the County determines that the project's carbon offsets do not meet the requirements of this mitigation measure, the offsets cannot be used to reduce project GHG emissions and project permits shall not be issued. Additionally, the County may issue a notice of non-consistency and cease permitting activities in the event that the County determines the carbon offsets provided to reduce project GHG emissions are not compliant with the aforementioned standards. In the event of such an occurrence, project permitting activities shall not resume until Rise has demonstrated that the previously provided carbon offsets are compliant with the standards herein or have provided substitute carbon offsets achieving the standards of this mitigation measure in the quantity needed to achieve the required emission reduction. In the event that the project is out of compliance with this Mitigation Measure and fails to demonstrate compliance after receiving notice of said violation, the County shall have authority to impose administrative penalties, take legal action to force compliance, or to start proceedings to suspend or revoke the Project's permits.

Conclusion

As discussed above, Mitigation Measure 4.3-7(b) is distinguishable from the mitigation measure in the *Golden Door* case and complies with all legal requirements for mitigation measures involving purchase of carbon credits. Moreover, although no new impacts have been identified, the County has revised Mitigation Measure 4.3-7(b) to further address concerns raised by commenters and to clarify with certainty that the carbon credits will effectively mitigate the Project's impacts from construction-related emissions of greenhouse gas to a less than significant level. Thus, the DEIR adequately mitigates the Project's construction GHG emissions.

Master Response 29 - Near Surface Workings and Subsidence

Comments

Several commenters asserted that the Project would cause hazards due to the collapse of near surface workings, or deep mine workings when the mine is dewatered, which could result in impacts to surrounding properties (e.g., above-ground structures and residents) atop the underworkings.

FEIR Pg 195

Discussion

As discussed on pages 4.6-44 to 4.6-49 of the DEIR, under Impact Statement 4.6-3 related to unstable geological units, the potential collapse of near surface mine workings was evaluated and Mitigation Measure 4.6-3(c) was included in the DEIR to close six near surface mine features, resulting in a less-than significant impact relating to potential collapse of mine features.

As discussed on page 4.6-12 of the DEIR, the current water elevation in the mine is approximately 2,500 feet above mean sea level. In order to recommence mining, the underground mine must be dewatered, and groundwater entering the mine must be continuously pumped during the mining operation. When the water level in the mine workings is located near the ground surface, the drawdown of groundwater within the mine workings may increase the potential for settlement or collapse of shallow workings that were not formally closed. (see DEIR, pp. 4.6-44 to 4.6-49.) Near surface workings that are already in a dewatered state would generally not be significantly impacted by dewatering the mine. As shown on Drawing A207, including in Appendix H.6 to the DEIR, the current water level in the mine is only close to the surface in the area near the Idaho shaft near Idaho Maryland Road. All near surface mine workings were specifically evaluated by NV5 in the Geotech Review of Near Surface Features, as shown in Table 1 of Appendix H.6.

As discussed on page 4.6-44 of the DEIR, potential for collapse of existing near-surface mine features as a result of the proposed project was evaluated by NV5, whose report was independently peer reviewed by the County's consultant, ECM. Mitigation Measure 4.6-3(c) required the closure of six mine features.

As stated on page 2 of Appendix H.6, near-surface mine features are generally more susceptible to subsidence and collapse than are deeper mine workings, because the near-surface features may be located in weaker materials (soil and weathered rock); whereas the deeper mine workings are commonly located in competent bedrock. In addition, the underground mine workings focused on removal of quartz vein materials that are generally narrow, so the collapse of a deep (e.g., 100 feet bgs) mine feature is not likely to be expressed at the ground surface. The County's independent expert ECM is in agreement with NV5 and based on the known physical characteristics of the rock units, considered a 100-foot distance below ground surface to be conservative (page 33 of Appendix H7), meaning that NV5 believed that collapse of features even closer to the surface than 100 feet bgs are unlikely to be expressed on the surface. Furthermore, flooded workings that are not already closed or proposed to be closed are greater than 165 feet below surface (see Drawing 207 in DEIR Appendix H.6) and therefore underground workings that have potential to cause subsidence at surface have been thoroughly analyzed in the DEIR.

Once the mine is dewatered, new mining excavations will be constructed as described on page 3-19 of the DEIR. To provide access to the gold mineralization, a network of tunnels and raises would be constructed throughout the life of the mine. The tunnels would be constructed in the nonmineralized rock which, at the mine, is typically meta-andesite volcanic rock. Modern ground support, which may include rock bolting and screens, would be installed in tunnels as deemed necessary to ensure a safe work environment and in accordance with best mining practices coupled with routine inspections by the US Mine Health and Safety Administration (MSHA). Therefore, it is unlikely that any new underground openings would produce a fall of ground or collapse that would affect the integrity of the mine. Except for the new Service Shaft, all of these new workings would be at least 500 feet below ground surface and therefore too deep to cause subsidence at surface even if they were to collapse. As described on page 3-19 and 3-20 of the DEIR, production blasting is used to create underground openings, and these openings are then refilled with cemented paste backfill. Backfilling re-supports the rock within and around the original opening preventing caving and resulting in stability in the deep part of the mine. This stability at

depth carries upwards, thus eliminating the possibility of the mining producing any voids that would reach the surface or near surface.

Conclusion

The DEIR's evaluation of the potential for dewatering to result in collapse of surface materials is legally adequate and based on expert analysis, independently reviewed and corroborated by the County's independent consultant.

Master Response 30 - Biological Study Technical Adequacy

Comments

Several commenters questioned the adequacy of the biological technical reports, specifically the timing and methodology of surveys.

Discussion

As summarized in section 4.4.1, "Introduction," and 4.4.4, "Method of Analysis," of the DEIR, and included as Appendix F, eleven different technical reports were prepared that characterize and analyze the biological resources, habitat, and waters within the Project site. These technical reports were prepared by biologists with over 30 years of combined local expertise in the species and environment within the Project site, and in accordance with federal, state, and local regulations and agency-authored manuals. For example, the aquatic resource delineations prepared for the Centennial Site and Brunswick Area followed U.S. Army Corps of Engineers manuals for conducting wetland delineations.[15] As another example, the botanical field surveys were conducted in accordance with the relevant California Department of Fish and Wildlife guidance.[16] These technical studies were then peer reviewed by the County and their biological consultant. The peer review was conducted by a biological resources firm (Madrone) with similar local experience that resulted in several rounds of review and revision prior to the County's acceptance of these reports for use in the DEIR. As a result, numerous biological experts with local knowledge have analyzed, and reviewed the characterization and analysis included in these biological technical reports prior to their use and incorporation into the DEIR. Specifics regarding methodology and timing of surveys for rare plants is found in Master Response 31 (Rare Plants) and amphibians is addressed in Master Response 38 (Foothill Yellow Legged Frog and California Red Legged Frog).

In addition to the biological resources assessment reports and aquatic resource delineations, management plans were also prepared in accordance with Nevada County Land Use and Development Code (Section L-II 4.3.3) to minimize Project impacts to certain biological resources (i.e., aquatic resources, Pine Hill flannelbush) to the maximum extent possible. These management plans were similarly peer reviewed by the County's biological consultant.

The biological studies and management plans were the basis of scientific evidence used by the County to determine whether the Project would trigger any of the thresholds of significance identified in Chapter 4.4, Biological Resources, of the DEIR, and thus, result in significant effects to biological resources. The thresholds of significance used in the DEIR are based on Appendix G of the CEQA Guidelines (Section IV).

proposed improvement areas. As will be further discussed, the majority of the current steep slope areas will be removed under the post-remediation baseline condition.

Brunswick Industrial Site

Brunswick Industrial Site topography varies from flat to gently sloping along portions of the developed areas, to steeply sloping in the western and southern portions of the Site. Elevations range from approximately 2,900 feet AMSL in the southwest corner of the Site to approximately 2,780 feet AMSL along the northeastern boundary. Steep slope gradients (30 percent or greater) are partially present in the following areas of the Brunswick Industrial Site:

1. The Brunswick Road fill slope along the northeastern Site boundary;
2. Fill slopes associated with the historical New Brunswick mine area in the northern portion of the Site;
3. Cut and fill slopes associated with the historical lumber pond and dam in the northern portion of the Site;
4. Terraced cut slopes associated with the historical lumber decks in the central portion of the Site; and
5. Discontinuous areas of steep native slopes above and to the southwest and south of the historical lumber terraces.

Impact discussion 4.6-2 in Section 4.6.4 of this chapter, Impacts and Mitigation Measures, includes an exhibit showing the steep slopes on the Brunswick Industrial Site in relation to the proposed improvement areas.

Liquefaction

Liquefaction occurs when saturated fine-grained sands and/or silts lose physical strength temporarily during earthquake induced shaking and behave as a liquid due to the loss of point-to-point grain contact and transfer of normal stress to the pore water. Liquefaction potential varies with water level, soil type, material gradation, relative density, and probable intensity and duration of ground shaking. The Geotechnical Engineering Reports concluded that the overall potential for liquefaction at both the Centennial and Brunswick Industrial Sites is remote.[7]

Expansive Soils

Expansive soils are characterized by their ability to undergo significant volume change due to variation in moisture content. For the Centennial Industrial Site, Engeo (2007) encountered potentially expansive clay/silt layers within the mine tailings. The laboratory test results indicated that these soils exhibit low to moderate shrink/swell potential with variations in moisture content. Moderately to highly expansive soil layers were encountered in other on-site locations. Engeo characterized their explorations as having a limited amount of potentially expansive clay.[8]

NV5 performed expansive soil testing at the Brunswick Industrial Site (2019) and determined that the potential for expansive soil hazards to affect the proposed improvements is considered to be moderate to high. Thin lenses of expansive fine-grained near-surface soils are present at the Site.

Brunswick Clay-Lined Pond Dam

The existing clay-lined pond, constructed for the sawmill circa 1988, was evaluated by NV5. NV5 advanced seven exploratory borings along the south and southwestern portion of the pond dam. Generalized descriptions of the soil units encountered during the exploratory boring investigation are described in stratigraphic succession below:

- Upper Fill - **Sandy Clay/Sandy Silt**: Yellowish brown, stiff to very stiff fill encountered in all borings from the surface of the dam embankment to approximately 7.5 to 14 feet bgs.
- Lower Fill - **Clayey Gravel with Sand**: Grayish brown clay with bluish gray rock, medium dense fill, approximately 4 to 8 feet thick, was encountered in several borings. **Well Graded Gravel with Sand**: Bluish Gray, medium dense crushed mine rock fill, approximately 2.5 to 5 feet thick, was encountered in two borings. **Organic Soil**: Black, soft to medium stiff, well preserved to partially decomposed organic fill (predominantly sawdust with some bark), approximately 1 to 4 feet thick, was encountered in multiple borings.
- Bottom of Fill – **Silt with Sand/Sandy Clay**: Mottled dark brown or olive gray, soft to medium stiff to medium dense fill, approximately 1 to 3 feet thick, were encountered in several borings.
- Native Floodplain Deposits – **Silt**: Very dark grayish brown to mottled dark brown, soft to very stiff native soil below fill at least 2 to 4 feet thick, was encountered in several borings.
- Native Residual Soil – **Clay with Sand**: Reddish brown, medium stiff to stiff residual soil below fill at least 1 to 2 feet thick, was encountered in two borings.

The on-site exploratory dam borings and an interview with an equipment operator previously involved with construction of the dam, confirm that a layer of organic fill (sawdust) is present within the southwestern-most 200-foot segment of the dam. Boring logs indicate that the sawdust layer is up to 4 feet thick at the dam centerline, at a depth of approximately 12 to 18 feet bgs. Based on the original topography of the dam footprint, it is likely that the organic layer thickness decreases towards the inboard section of the pond and increases towards the downslope face of the dam.

Near Surface Features that Could Become Unstable

NV5 performed an assessment of the potential for surface impacts at the locations of known near-surface mine features resulting from dewatering of the underground mine workings as part of proposed project's underground mining operations.[9]

The Idaho-Maryland Mine was first located as the Eureka claim in 1851, targeting a gently easterly-raking ore shoot located on the eastern side of Grass Valley. In 1915, the Eureka, Idaho and Maryland claims were assembled under Errol MacBoyle and reopened. MacBoyle consolidated the Brunswick and Morehouse mines into the Idaho Maryland group in 1926. The mine was forced to close at the onset of World War II but reopened after the war and continued operations until final closure in 1957.

Subsequent land use in the area shifted toward urban development and land holdings were subdivided and rezoned for commercial, light industrial and residential use. Over this period, some near-surface mining excavations were closed, filled, or obscured by earthwork grading and

[9] NV5. *Idaho-Maryland Mine Project: Geotechnical Assessment of Near Surface Mine Features.* Revised September 11, 2020.

development. NV5 performed record searches and located as-built documentation or records of closure for some of the near-surface features. Other features were historically closed without engineering design or agency oversight.

The current water elevation in the mine is approximately 2,500 feet AMSL and currently drains by gravity from the East Eureka Shaft. In order to recommence mining, the underground mine must be dewatered, and groundwater entering the mine must be continuously pumped during the mining operation. Approximately 2,500 acre-feet (approximately 815 million gallons) of water are expected to be pumped from the underground workings during the initial 6-month dewatering period (EMKO, 2020), lowering the water level in the mine approximately 3,200 feet from the current water elevation in the mine of 2,497 feet AMSL. When the water level in the mine workings is located near the ground surface, the drawdown of groundwater within the mine workings may increase the potential for settlement or collapse of shallow workings that were not formally closed. Near surface workings that are already in a dewatered state would generally not be significantly impacted by dewatering the mine.

NV5's assessment focuses on specific near-surface mine features because they are generally more susceptible to subsidence and collapse than are deeper mine workings. The near-surface features may be located in weaker materials (soil and weathered rock); whereas the deeper mine workings are commonly located in competent bedrock. In addition, the underground mine workings focused on removal of quartz vein materials that are generally narrow, so the collapse of a deep (e.g., 100 feet bgs) mine feature is not likely to be expressed at the ground surface.

Of the near-surface features evaluated by NV5, several were recommended for closure where the static groundwater surface is located within 100 feet of the ground surface. These features are discussed below and the locations of these features are shown in Figure 3-14 of the Project Description chapter. In their peer review of NV5's report, ECM notes that, as a margin of safety, NV5 has chosen a separation between the groundwater surface and the ground surface of 100 feet. They believe that in all areas where the separation equals or exceeds 100 feet there is no chance that ground water drawdown could affect surface structures. This water table/ground surface separation distance clearly divides the northern mines from the southern mines. The northern mine openings all have a separation of less than 100 feet, and NV5 recommends potential remediation (i.e., closure) for all of them. For the southern mines, where the separation is greater than 100 feet, they recommend no further actions. ECM is in agreement with NV5 and based on their conclusions and based on the known physical characteristics of the rock units, considers this distance to be conservative.[10]

East Eureka Shaft

The East Eureka Shaft is located at 815 Idaho Maryland Road beneath a commercial office building occupied by Navo and Sons. Access to the feature is limited by the existing building. Below the building, the feature is suspected to be open and supported with a concrete collar. A small steel pipe passes through the east side of the building from a sump adjacent to the feature (EMKO, 2020).

[10] ECM. *Applicant Report Peer Review, Idaho Maryland Mine: Centennial and Brunswick Sites* [pg. 34]. August 13, 2020.

tectonics, volcanic activity within the southern Cascade Range and from regional tectonic activity within the Basin Range province to the east could constitute future sources of seismic activity.

Earthquake-Induced Ground Failure

Violent ground shaking can lead to various types of ground failure that liquefaction can initiate. Liquefaction is a phenomenon whereby unconsolidated and/or near saturated soils lose cohesion and are converted to a fluid state as a result of severe vibratory motion. As discussed above, the project area could experience ground shaking during an earthquake but because the intensity of the ground shaking in this region would be low to moderate, the potential for liquefaction and seismically-induced landslides is low. The threat of damage by liquefaction is not a concern for the 101-acre Idaho-Maryland site because subsurface materials beneath the property are mostly lacking in the combination of soil types and groundwater conditions needed for this type of failure. Some localized, shallow slope failures (e.g., contained debris flows or slumps) may occur during an earthquake but there is a low potential for these incidents to cause injury or damage.

Mining-Induced Subsidence or Collapse

Subsidence and sudden collapse of the ground surface can be caused by natural geologic phenomenon (gradual subsidence from groundwater and oil removal, decomposition of organic material, roof failures in underground limestone caves) and by the failure of subsurface manmade features, such as tunnels, water lines, and mine shafts. Mining and construction operations over mine workings (i.e., tunnels and portals) can compromise the structural integrity of a shallow mine tunnel resulting in a cave-in. Caving in a shallow mine tunnel or portal can be expressed at the surface as rapid or gradual ground surface subsidence. Shallow mine workings are more susceptible to caving because the geologic materials between the shaft and the surface are less competent than the bedrock at depth. For example, a portion of the Old Brunswick shaft of the Idaho-Maryland mine collapsed during a storm in 1998 causing a sinkhole that structurally damaged the foundation of a private home. The shaft collapse occurred because a contractor inadvertently built a house over an abandoned 45-degree inclined shaft years after it was backfilled with uncompacted material. The surface subsidence occurred when the loose uncompacted material covering the shaft became saturated with surface water and washed down the shaft.

At the Idaho Maryland Mine, most of the mine workings are deep and the potential is low for a collapsed mine tunnel to affect the ground surface. However, there are areas where shallow mine workings could cave-in resulting in ground surface subsidence.

Slope Stability

Unstable soils can result from vegetation removal associated with wildfires, timber harvesting, mining, and grading as part of road and building and site development. Significant precipitation can exacerbate unstable conditions, resulting in landslides and mudslides. Slope failures include falls; topples; slides (rotational or translational); lateral spreads; flows (in bedrock or soils); or a complex combination of two or more of the five types of movement. Relative stability is

liquefaction, landslides, substantial soil erosion or the loss of topsoil due to construction activities, and expansive soils would be less than significant. These potential hazards were discussed above in the setting section but are not further analyzed in this EIR. Please note that soil erosion impacts associated with sustained increases in flow due to dewatering activities and discharge into the Wolf Creek Watershed are analyzed in Section 4.7, *Hydrology and Water Quality*.

Impacts and Mitigation Measures

Reclamation Plan Impacts (Class IV-No Impact)

The proposed Reclamation Plan includes several actions necessary to restore the project site and prepare it for the proposed subsequent use. The proposed subsequent use could consist of commercial/industrial development. Those reclamation plan actions with geotechnical and seismic considerations include backfilling drill holes and water wells, concrete capping of underground accesses, backfilling shafts and portals, clearing the site of foundations, drawing down stockpiles, demolishing access roads, revegetation and re-soiling. From a geotechnical standpoint, the actions under the Reclamation Plan actions can be considered site improvements that would reduce future geologic impacts on the project areas. For example, revegetation, re-soiling, and removal of foundations would reduce erosion and loss of topsoil and would stabilize near-surface soils. Compaction, slope contouring, and backfilling would comply with the local and State building code requirements. Reclamation Plan actions would not reduce the potential for earthquakes but the removal of structures and other equipment would decrease the potential impacts associated with structural failure or collapse during a seismic event.

Impact 4.5-1: Proposed dewatering and mining activity could cause shallow mine workings to cave-in resulting in subsidence at the ground surface at some locations. Subsidence due to collapsed shallow tunnels and mine portals could injure mine workers and the public or result in property loss both at the project site and on adjacent parcels. *Less than Significant with Mitigation (Class II).*

Some areas on or nearby the project site would be susceptible to surface subsidence in the event of a mine tunnel or portal cave-in.[4] The applicant has identified the proposed decline portal and the concrete collar of the New Brunswick Shaft as project areas susceptible to a cave-in and surface subsidence. All other areas proposed for mining would be sufficiently deep and an unanticipated collapse of these deep workings would not cause surface subsidence. The 1995 EIR

---

[4] In a mine tunnel, the degree of caving from above into the tunnel is dependent on the size of the tunnel; at some point, the cave-in stops because the tunnel fills up with material and the cave-in is essentially "choked-off". The existing tunnels at the Idaho-Maryland Mine are relatively small (e.g. only 6 feet high and narrow) compared to tunnels built today. Considering the size of the existing tunnels, this analysis conservatively considers that 70 vertical feet of caving would occur before the cave-in stops. The actual extent of upward caving would likely be less. However, the 70-foot estimate provides a means to identify and categorize shallow mine workings; this analysis assumes that if the mine tunnel is less than 70 feet deep, there is a potential for surface subsidence to occur if that tunnel collapses.

identified other locations where there is a potential for subsidence to occur.[8] The first location is on the order of a couple hundred feet of tunnel trending in a generalized south-southwesterly direction from the collar of the "Old Brunswick Incline Mine Shaft", which reportedly was an old drainage tunnel that is no longer in use (GeoSolutions, 2008). The second location of potential subsidence is a few hundred feet of tunnel trending in a generalized east-southeasterly direction from the "Old Brunswick Incline Mine Shaft"; this tunnel section was previously interpreted as the 70-foot level of the Old Brunswick Mine (70 foot level tunnel).[9] The 1995 Draft EIR also mentions subsidence potential in the area of assessor parcel numbers 09-581-12, 09-581-13 and 09-581-17. These parcels are privately owned but are considered in the analysis because they are proximate to and could be affected by subsidence of the "70-foot level tunnel." Based on the available information, the analysis of subsidence for this EIR considered the structural integrity of the proposed decline portal, the concrete collar of the New Brunswick Shaft, and the areas identified during the 1995 EIR, as discussed below.

Although the proposed decline portal would be shallow for a certain distance, it would be constructed with internal structural features consisting of a combination of wire mesh reinforced concrete and/or steel supports. The applicant proposes to place concrete and steel supports in the decline portal and tunnel for an adequate distance until the decline reaches a depth where it is surrounded by fresh, unweathered, competent bedrock. Given the proposed construction techniques and current state of the art in mining engineering and construction, the decline portal would not be susceptible to subsidence after completion and throughout the life of the project.

The concrete collar of the New Brunswick shaft is a concern for the proposed project because the concrete may be too old and structurally weak to support the weight of structures needed to support the dewatering pumps and other mining-related construction. Failure of the concrete collar is considered an adverse impact because if the concrete were to fail, it could cause localized cave-in, subsidence, and structural collapse, which could injure workers, cause property damage, and result in construction delays. It should be noted that the public would not be able to access the Brunswick Shaft area; restricting access would therefore eliminate the public's exposure to potential subsidence hazards at that location.

The former drainage tunnel and "70-foot level tunnel" still represents a potential subsidence hazard because these two tunnels were identified as shallow mine workings. Although the proposed project would likely not affect these two sites, a cave-in of one of the tunnels could cause injury or property damage if surface subsidence were to occur. Because these locations are proximate to the project and subsidence could affect project operations, this EIR considers subsidence in these locations a potential adverse impact of the project.

8 It should be noted that the 1995 EIR identified the areas discussed herein as potential areas of subsidence but did not prescribe mitigation because the applicant's project would not affect these areas.

9 It should be noted that although this tunnel is named the "70 foot level tunnel", its vertical distance from the ground surface is not 70 feet. Lateral tunnels connected to this shaft are labeled by their slope distance down centerline of the declined shaft instead of their vertical distance from ground surface. Because the shaft slopes at an angle of about 50 degrees to the horizontal in a southeast direction, the maximum vertical distance between top of tunnel to the ground surface is likely to be about 54 feet in the area adjacent to the portal of the shaft.

Reclamation Plan

Actions required under the Reclamation Plan would reduce the potential for future cave-ins and surface subsidence. The Idaho-Maryland site portal, Idaho-Maryland shaft, Round Hole shaft, and the New Brunswick site shaft would be capped with concrete thereby reducing the potential for cave-in or collapse of these near-surface mining structures. Reclamation of underground shafts and headings would be completed by the use of paste backfill. Rock backfill could also be used depending on the suitability and availability of material. Capping and backfilling subsurface accesses and shafts would reduce the future risk of collapse and subsidence and therefore, the Reclamation Plan would ensure that impacts remain less than significant.

Conclusion

Based on the geologic characteristics found in the area and intentions of the applicant to mine only at deeper levels of the mine, there would be a very low risk of subsidence at the surface as a result of the proposed underground mining activities. However, the areas identified above, in addition to unidentified locations, could, at some point during the life of the project, experience cave-in with associated surface subsidence. This is especially the case for the concrete collar around the Brunswick Shaft; failure of the concrete to support down-shaft equipment would adversely affect the project. Mitigation Measure 4.5-1 addresses the potential for cave-in and subsequent surface subsidence in mine workings at the site and the uncertainty surrounding the competency of the concrete collar and tunnels. Mitigation Measure 4.5-1 provides a mechanism that requires the applicant, through a third party review, to identify and correct potential subsidence hazards and requires that corrective action take place prior to construction. Engineered remedies to reduce or eliminate potential subsidence (i.e., shoring, tie-backs, steel supports, concrete mesh, rock bolting, steel reinforced concrete) are standard mining tunnel construction methods used successfully throughout the industry and thus, secondary impacts associated with corrective measures are not expected.

Mitigation Measure 4.5-1: The applicant shall identify current mine workings that are less than 70 feet deep (considered shallow), regardless of whether they are utilized during the proposed project or would remain unaffected. The applicant shall retain a licensed geotechnical engineer (per approval by the City of Grass Valley) to perform a detailed, third-party evaluation of the existing, shallow mine workings. The applicant shall complete the evaluation prior to the start of project construction. Through this evaluation, the mining engineer, with assistance from the applicant, shall establish sufficient data to determine whether the particular shallow mine working is susceptible to failure. Information required by this evaluation includes, but is not necessarily limited to, tunnel depth, underlying geology, relative rock strengths, size of the mine working, and groundwater conditions. Using generally accepted mine engineering practice, including American Society of Testing and Materials (ASTM) standards for rock strength testing, the third party review shall demonstrate that shallow mine workings would not fail under static and earthquake conditions and that the concrete collar at the Brunswick Shaft is competent to support the weight of the proposed equipment. If the third-party review determines a potential subsidence hazard exists, the applicant and the third party licensed engineer shall 1) develop feasible corrective measures to be included as part of the project, 2) have the measures approved by the City of Grass Valley, and 3) ensure that all corrective actions are completed before project construction begins. The corrective measures recommended by

the third party engineer shall effectively reduce or eliminate the risk of subsidence in the event that the underlying mine working collapsed. Measures could include but are not limited to shoring, tie-backs, steel supports, concrete mesh, rock bolting, steel reinforced concrete. The applicant shall submit to the City of Grass Valley, the completed report prepared by the third-party mining engineer and a detailed schedule outlining the process and schedule necessary to rectify identified subsidence hazards.

Significance after Mitigation: Less than Significant.

Impact 4.5-2: Areas of the project sites contain fill material that is unsuitable to support structural improvements. Soils with low bearing strength or fills that are compressible or can collapse could cause proposed buildings and other structural improvements to settle differentially leading to structural damage, injury to workers, and potential property loss. ***Less than Significant (Class III).***

Following their preliminary geotechnical investigation in October 2004, Holdrege and Kull stated that their primary concern is the presence of fill in portions of the previously graded areas of the Idaho-Maryland site and New Brunswick site. Much of the fill encountered during a previous subsurface investigation at the Idaho-Maryland site reportedly contained organic material that would not be suitable to support structural improvements.

Holdrege and Kull anticipate that the relatively shallow fill across much of the southern area of the Idaho-Maryland site would be able to be removed or, if deemed suitable for the purpose, used for compacted fill. However, deeper fill previously encountered in the southeastern area would likely require extensive excavation and would not likely be reused due the reported abundance of organic materials. The disturbed material and waste rock identified in the northwestern part of the Idaho-Maryland site and at the New Brunswick site may not be suitable to support structural improvements. Additionally, waste rock piles cover portions of the Idaho-Maryland, New Brunswick, and Round Hole sites. In general, these piles are not suitable to support structural improvements, and the waste rock piles in the area of the proposed ceramic plant would likely require removal prior to construction.

The October 2004 Holdrege and Kull geotechnical study was intended as a preliminary assessment of the geotechnical conditions on the three proposed project sites and did not constitute a detailed geotechnical investigation (sometimes referred to as the "design-level geotechnical investigation"). Typically, the design-level geotechnical investigation is conducted following completion of the CEQA process when project details can be more fully developed and finalized. Design-level investigations usually consist of subsurface soil sampling, detailed identification of underlying geologic material, and soil and rock strength testing. While the October 2004 study did conclude that development of the proposed project was feasible, it did identify unsuitable soils. These unsuitable soil conditions would be further investigated during the design-level investigation using accepted, standard geotechnical methods and testing protocols. For example, field drilling and/or test pits would help determine the depth and distribution of the previously identified unsuitable soils and engineers would submit samples to the soils laboratory

Conclusion

As such, comments concerning potential social or economic effects of the project, when not contributing to, or when not caused by, a physical change to the environment, need not be analyzed or addressed further in this EIR.

Master Response 3 - Operator Responsibility

Comments

The County has received several comments stating that the Project should not be approved due to the past record of Rise Gold and its CEO, Ben Mossman. Specifically, the commenters allege that Rise Gold will fail to comply with its conditions of approval and will operate the mine in an illegal manner, causing harm to the community and the environment.

Discussion

These comments do not raise an issue relevant to CEQA analysis, as the possibility of non-compliance with conditions of approval or mitigation measures is not considered an environmental impact under CEQA. Moreover, the County has ample authority to revoke the Project's permits if the operator does not comply with the required mitigation measures and conditions of approval. The County will also continue to monitor the project through implementation of CEQA mitigation monitoring. Specifically, County Code Section L-II 5.11 states that the County may revoke a use permit or other permit for the following reasons:

1. Non-compliance with conditions of approval, mitigation measures or the approved site plan.
2. Violation of any law in connection with the permit.
3. Expansion of the use or structure without amending the existing permit or receiving a new permit.
4. Operating in a manner that threatens or is injurious to the public health or safety, or constitutes a nuisance.
5. The permit was issued, in whole or in part, on the basis of a misrepresentation or omission of a material statement in the application, or in the applicant's testimony presented during the public hearing, for the permit.
6. Circumstances under which the permit was granted have been changed by the applicant to a degree that one or more of the findings contained in the original permit can no longer be made and the public health, safety, and welfare require the revocation.

As such, in the event that the mine operator fails to comply with its mitigation measures or conditions of approval, the County would initiate proceedings to revoke its permit. If the County revoked the use permit for the mine due to non-compliance with permit requirements, the mine could no longer operate.

While the commenter's concerns are not a CEQA environmental issue for purposes of the EIR, Mr. Mossman provided background information on a discharge incident at a previously operated mine in Canada, which summary is set forth below:

> Benjamin Mossman was a director and officer of Banks Island Gold Ltd. ("Banks"), a company formerly listed on the TSX Venture Exchange that traded under the symbol "BOZ". Banks operated the Yellow Giant Gold Mine (the "Mine") located in British Columbia, Canada. In 2015, unusually heavy rains occurred at the Mine site, which caused an alleged discharge to occur on a small portion of the site. Mr. Mossman was not at the

GPA/ZONE CHANGE APPLICATION R1
FILING INSTRUCTIONS & CHECKLIST

This form must be filed with your application. Please check off (✓) each item to verify that the required information is attached. Your application will not be accepted if any required item is missing.

☒ **1. The signed and completed Application form, including a letter of authorization from the property owner(s) if forms are signed by a Representative (attached).**

Submitted with the Application Packet for a Use Permit.

☒ **2. Filing fees pursuant to the most recently adopted Resolution of the Board of Supervisors. The department for which the fee is required must approve any deviation from the adopted fee schedule.**

Filing fees paid on November 20th, 2019 at the time of application submission.

☒ **3. The signed and completed Agreement to Pay Form (attached).**

Submitted with Mining Use Permit Application Packet.

☒ **4. Two copies of the property Grant Deed, verifying ownership and the legal description of each affected parcel.**

Submitted with Mining Use Permit Application Packet.

☒ **5. The completed Project Information Questionnaire form (attached).**

Submitted with Application Packet for a Use Permit.

☒ **6. A written statement indicating the circumstances justifying a Rezoning or General Plan Amendment, including any changes in circumstances that justify a reclassification. Address all General Plan policies that support your proposal, explaining how the application is consistent with relevant policies.**

Written statement attached (see page 3).

☐ **7. General Plan Amendments must include an economic analysis pursuant to Policy 2.6 of the General Plan. The analysis shall address the impact of the proposed amendment on the County Economic Policy and its supporting policies and programs, particularly the impact on the short and long-term jobs/housing balance, and the land use designations of the General Plan.**

No General Plan Amendment is being requested.

ITEM 6. A written statement indicating the circumstances justifying a Rezoning or General Plan Amendment, including any changes in circumstances that justify a reclassification. Address all General Plan policies that support your proposal, explaining how the application is consistent with relevant policies:

As detailed in *Idaho-Maryland Mine Project Description* (Benchmark, November 2019), Section 5.4, "General Plan Land Use Designations and Zoning Classifications," all parcels on the project site are designated Industrial in the *Nevada County General Plan* (the "General Plan"). The County Zoning Code designates the Centennial Industrial Site as Light Industrial (M1) and the Brunswick Industrial Site as Light Industrial (M1) with Site Performance Combining District (SP). Section L-II 3.22 (D)(2)(a) of the County Zoning Ordinance states that mineral exploration is allowed in the M1 district. However, Section L-II 3.22 (D)(3) of the County Zoning Ordinance states that surface mining (e.g., surface work incident to an underground mine, such as processing, stockpiling of mined materials, waste disposal, and the reclamation thereof) is allowed in the M1 district where the property is zoned ME; therefore, the site is proposed to be rezoned Light Industrial (M1) with Mineral Extraction Combining District (M1-ME).

As provided in the Mineral Management Element of the General Plan, "Surface mining is conditionally permitted in compatible designations that are zoned within the 'ME' Mineral Extraction Combining District. Such areas are those known to contain potentially significant mineral resources and lie in compatible areas for surface mining. Areas not currently zoned 'ME' and that lie in a compatible designation may be rezoned if a significant resource can be shown to be present." The regulations state that this district shall be used only on those lands that are within any of the compatible General Plan designations and that are not in a residential zone. The current site is for industrial uses and is not within a residential zone.

In establishing the ME District, one or more of the following standards must be met:

1. Said lands have been designated as Mineral Resource Zone-2 (MRZ-2) based on State of California Classification Reports.
2. It has been clearly demonstrated that significant mineral deposits are likely present on said lands based on data similar in nature to the State Classification Reports.

The site is designated by the State of California as Mineral Resource Zone ~~1~~-2b for hydrothermal deposits (area where ~~available geologic information indicates there is little likelihood for the presence of~~ significant inferred mineral resources are present). Historic gold mining of the project site and recent drilling clearly demonstrates that significant mineral deposits are present on the project site.

The Brunswick Industrial Site is a unique property due to its location above an identified gold resource and the existing infrastructure (i.e., Brunswick shaft) providing access to this resource. The property's size, location, and access to local roadways provides the ancillary characteristics necessary to support a project of this magnitude and importance. No other properties in the area with similar zoning provid[illegible] characteristics.

The project would be consistent with the relevant General Plan policies. Namely, the following goals and policies related to mineral resources encourage the protection of valuable mineral resources for extraction:

Goal 17.1: Recognize and protect valuable mineral resources for current and future generations in a manner that does not create land use conflicts.

Policy RD-4.3.4: Protect valuable mineral deposits from intrusion by incompatible land uses that will impede or preclude mineral extraction or processing. Promote the proper management of all mineral resource activities in the County and minimize the impact of extraction and processing on neighboring activities and the environment in general.

Policy 17.6: Encourage extraction of mineral resources in compatible areas prior to intensified urbanization or conversion to other incompatible land use development.

Policy RD-4.3.4: Encourage the mining of previously mined land, if such land still contains economically mineable minerals, so the land can be reclaimed for alternative uses.

A detailed analysis of the project's consistency with all General Plan and zoning regulations will be included in the *Idaho-Maryland Mine Land Use Technical Study* that is being prepared by Benchmark Resources and will be evaluated by Nevada County as part of their environmental review process. The technical report will be completed in December 2019.

APPLICANT'S VARIANCE JUSTIFICATION

please type or print in black ink

Pursuant to Sec. L-II 5.7 of Zoning Regulations, and Sec. L-XVI 2.6 Fire Safe Regulations (if applicable), of the County Land Use and Development Code, the following listed findings must be made by the hearing body in order to grant a variance. Please provide written explanation of why your request satisfies the required findings (attach a separate sheet for this information if necessary):

1. **The variance, if granted, does not constitute the granting of a special privilege inconsistent with the limitations placed on other properties in the vicinity and in the same zoning district in which the subject property is located, because:**

To allow for the mining operations on the surface of the Brunswick Industrial Site, including processing, waste disposal, and the reclamation thereof (subject to the regulations in Section L-II 3.22, Surface Mining Permits and Reclamation Plans, of the County Zoning Ordinance), the site is proposed to be rezoned Light Industrial (M1) with Mineral Extraction Combining District (M1-ME). Thus, the proposed activities on-site would be allowed uses within the zoning ordinance, and not a special privilege. To be able to execute the activities allowed on-site, certain structures must be taller than 45 feet. Thus, the variance would only make it feasible to implement those activities already determined to be allowed within the Light Industrial (M1) with Mineral Extraction Combining District (M1-ME).

2. **There are special circumstances applicable to the subject property including size, shape, topography, location or surroundings and because of these circumstances, the strict application of the provisions of this Chapter would deprive the subject property of privileges enjoyed by other properties in the vicinity and in the same zoning classification, because:**

The Brunswick Industrial Site is a unique property due to its location above an identified gold resource and the existing infrastructure (i.e. Brunswick Shaft) providing access to this resource. The property's size, location, and access to local roadways provides the ancillary characteristics necessary to support a project of this magnitude and importance. No other properties in the area with similar zoning provide all these characteristics.

3. **The variance does not authorize a use not otherwise authorized by the zoning district in which the property is located, because:**

With the rezone, the proposed use (gold mining and processing and the reclamation thereof) would be an authorized use. Increasing the allowed building height would not allow for an unauthorized land use.

4. **The granting of the variance does not, under circumstances and conditions applied in the particular case, adversely affect the public health, safety, or welfare, the integrity and character of the District, nor the utility and value of nearby property, because:**

The increased building heights would be designed, constructed, and operated in compliance with the Occupational Safety and Health Administration (OSHA) requirements, zoning standards, the County building code, the health and safety code, Nevada County Consolidated Fire District rules, and other applicable County and State regulations. Therefore, the variance would not allow a use that would adversely affect the public health, safety, or welfare; the integrity and character of the district; or the

utility and value of surrounding property.

5. **The variance is consistent with the Nevada County General Plan because:**

The increased building heights would be designed, constructed, and operated in compliance with the Occupational Safety and Health Administration (OSHA) requirements, zoning standards, the County building code, the health and safety code, Nevada County Consolidated Fire District rules, and other applicable County and state regulations. In addition, the project building heights would comply with the *Nevada County Airport Land Use Compatibility Plan* (NCALUCP) and would not create aesthetic impacts. The project site is partially within Zones D and E of the NCALUCP. For Zone D, airspace review is required for objects greater than 3,207 feet mean sea level (msl) (See Table 2A of the NCALUCP). The tallest point of the project site (the 165-foot-tall headframe building) would be at 2,912 feet msl. In addition, the project is not a noise-sensitive use, would not pose a hazard to flight, and would not exceed the density requirements; therefore, the project would comply with the requirements of the NCALUCP for Zones D and E. The proposed project would be required to be reviewed by the Airport Land Use Commission because, among other reasons, it would include new development of buildings more than 100 feet tall in Zones D and E (See Policy 1.4.3 of the NCALUCP).

Regarding aesthetics, site visibility would be limited by the surrounding trees and topography and would be consistent with the industrial nature of the surrounding area. The buildings would not be visible from a designated state scenic highway. Lighting would include shielded fixtures to minimize light pollution and nighttime glare and would comply with applicable zoning standards and County building codes.

A detailed analysis of the project's consistency with the *Nevada County General Plan* and zoning regulations will be included in the *Idaho-Maryland Mine Land Use Technical Study* that is being prepared by Benchmark Resources and will be evaluated by Nevada County as part of their environmental review process. The technical report will be completed in December 2019.

6. **The variance is the minimum departure from the requirements of this ordinance necessary to grant relief to the applicant, because:**

The building heights are the minimum required to make the mining operations feasible and ensure the safe operation and movement of personnel and equipment. A new headframe building will be constructed at the existing Brunswick Shaft and concrete silo. In order to place rock into the concrete silo the headframe must be a height of 165 feet. The new Service Shaft headframe requires a height of 80 feet in order to allow hoisting of cages to transport people, materials, and equipment to and from the underground mine. The Process Plant requires a height of 65 feet to allow necessary machinery for the paste backfill plant to be installed and for an overhead hoist system to be installed in the building to install, replace, and maintain process equipment.

7. ***(Applicable only to variances to fire protection measures, i.e., side and rear yard setbacks)*** **The granting of a variance provides the same practical effect of fire protection because the following substitute measures have been incorporated into the project:**

Not applicable.

VARIANCE
FILING INSTRUCTIONS & CHECKLIST

This form must be filed with your application. Please check off (✓) each item to verify that the required information is attached. Your application will not be accepted if any required item is missing.

☒ **1. The signed and completed Application form, including a letter of authorization from the property owner(s) if forms are signed by a Representative.**

Submitted with the Application Packet for a Use Permit.

☒ **2. Completed "Applicant's Variance Justification" form.**

Variance Justification form attached (see page 1).

☒ **3. Filing fees pursuant to the most recently adopted Resolution of the Board of Supervisors.**

Filing fees paid on November 20th, 2019 at the time of application submission.

☒ **4. The signed and completed Agreement to Pay Form.**

Submitted with Mining Use Permit Application Packet.

☒ **5. Two copies of the property Grant Deed, verifying ownership and the legal description of each affected parcel.**

Submitted with Mining Use Permit Application Packet.

☒ **6. The Hazardous Waste Statement forms.**

Submitted with Mining Use Permit Application Packet.

☒ **7. Photos of the site and a site plan reduction indicating where photos were taken.**

Submitted with the Application Packet for a Use Permit. See *Appendix A: Site Photo Location Key & Site Photos* of the Project Information Questionnaire.

☒ **8. Two copies of building elevations and floor plans; including square footage calculations. Plans must be drawn to a recognizable scale.**

Submitted with Application Packet for a Use Permit (Building Elevations & Floor Plans: Figures B301, 302, 303, 304, 305, and 306).

☒ 9. 10 folded copies of a site plan drawn per instructions. All **plans must be folded** to a maximum 8 ½" X 14" size. Unfolded plans will not be accepted.

Submitted with Mining Use Permit Application Packet (Site Plan Drawings: Figures A101, A201, A202, A1, B101, B102, B103, B1, B104, B2, C101, C102, C1, and C2).

☒ 10. One 8 ½" x 11" reduction of the site plan.

Submitted with Application Packet for a Use Permit.

FORM/CONTENT OF SITE PLAN

The following information shall be provided on the site plan, if applicable.

☒ 1. The site plan shall be fully dimensioned and drawn to a commonly recognized architect's or engineer's scale, IN INK. The legal lot size shall be shown.

☒ 2. Provide a vicinity map showing the general project location (1" = 2000' scale) in relationship to the surrounding area with the mileage from the nearest County road shown. Include Section, Township, and Range.

☒ 3. Provide a North arrow and the scale to which the plan is drawn.

☒ 4. Provide a legend which includes:
   a. the project proposal (Variance for .....)
   b. property owner(s)/applicant name(s)
   c. applicant's representative, if any
   d. date of Site Plan preparation
   e. Assessor's Parcel Number

☒ 5. Show the location and names of all abutting roads, including rights-of-way boundaries, road centerlines, width of traveled way, type of surfacing and grades.

☒ 6. Show location of sewage disposal systems and wells.

☒ 7. Show all required setbacks for buildings, waterways, sewage disposal and well sites.

☒ 8. Show the location and purpose of all existing public and private utility easements.

☒ 9. Show location of all existing and proposed structures on the property; show their setbacks from property lines, label their use and show their size (gross square footage by floor).

☒ 10. Delineate any *applicable* environmentally sensitive areas as listed in Sec. L-II 4.3.3 of Zoning Regulations. Mapping should reflect any resources identified and mapped in any specialized studies that have been prepared for this project.

Note that applicability will vary, dependent on the type of land use. For example, variances for single family residential use will not be subject to the same Resource Standards that apply to other discretionary projects.

COUNTY OF NEVADA

PROJECT INFORMATION QUESTIONNAIRE R1

The information provided in this questionnaire will be used for preparation of the project Initial Study (environmental review) and for overall project review. All questions must be answered completely with legible responses, typed or in black ink, providing more than a simple "yes", "no" or "NA" response. Attach separate written discussion pages where needed to provide a complete response.

1. *Project Description:*

a. Describe the proposed project including any proposed phasing:

Rise Grass Valley Inc. ("Rise") proposes to reinitiate underground mining and gold mineralization processing of the Idaho-Maryland Mine (the "project") in unincorporated Nevada County. The proposed facilities and operations will be located on two properties owned by Rise named the Brunswick Industrial Site and the Centennial Industrial Site, also referred to as the Brunswick site and Centennial site.

The project is described in detail in the Project Description included with this application.

Photos of the site and a site plan Photo Location Key indicating where photos were taken are included in Appendix A of this application form.

b. Are any exceptions to required standards proposed or required for this project (a Variance, a Petition for Exceptions or a Management Plan to encroach into any sensitive resources)? *If yes*, identify the nature of the proposed variance, exception or management plan:

The following exceptions to required standards are required for this project:

- Variance to exceed building height standard of 45ft.
- Management Plan for Watercourse / Wetlands / Riparian Areas.
- Habitat Management Plan for the Pine Hill Flannelbush (Fremontodendron decumbens).

c. *Code Violations*: To your knowledge, are there any Code violations occurring on this property, including the issuance of a Warning Notice or a Citation for the subject property?

☐ **Yes** ☒ **No** **If Yes, describe:**

2. *Land Use:*

a. Does this project have a relationship to a larger project or a series of projects?

☐ **Yes** ☒ **No** **If Yes, describe:**

b. Describe existing on-site land uses:

Mineral exploration by surface exploration core drilling has been completed over the last several years and may re-commence at any time. This mineral exploration is an allowed use on the property.

c. Describe surrounding land uses, indicating distance to nearest residence:

Land uses are described in the Environmental Assessment form of the Mining Use Permit Application (A.1.3) and in Section 5.3 "*Surrounding Land Uses*" of the Project Description included in this application.

The nearest residence at the Centennial site is located ~285 ft from the property boundary and at the Brunswick site is located ~50 feet from the property boundary.

d. Describe project potential to change the character of the surrounding area, including the loss of open space.

None.

e. Will this project displace any residential units?

☐ **Yes** ☒ **No** **If Yes, describe:**

f. Will this project result in a population increase in the immediate project area?

☐ **Yes** ☒ **No** **Explain:**

g. List any specialized plans or zoning restrictions applicable to this project site, e.g., an "SP" zoning, a Master Plan, a Specific Plan, an Area Plan, an Airport Land Use Plan?

The parcels comprising the Brunswick site are zoned M1-SP.

The Application is seeking a zone change on the six Brunswick site parcels from Light Industrial with Site Performance Combining District (M1-SP) to Light Industrial with Mineral Extraction Combining District (M1-ME).

3. *Geology/Soils*

a. A Preliminary Grading Plan is attached. ☒ **Yes** ☐ **No**

b. A Soils/Geologic Report is attached. ☒ **Yes** ☐ **No**

A geotechnical assessment report for the Brunswick Industrial Site, prepared by NV5 Global, Inc. (Holdrege & Kull), is included with this application.

A geotechnical assessment report for the Centennial Industrial Site, prepared by NV5 Global, Inc. (Holdrege & Kull), will be submitted before the end of December 2019.

c. Slopes that exist on site prior to grading:

SLOPES EXISTING ON SITE PRIOR TO GRADING

Type	Acres	% of site
Brunswick Industrial Site		
Gentle (0-10%)	60	50%
Rolling (10-30%)	53	45%
Steep (more than 30%)	6	5%
Centennial Industrial Site		
Gentle (0-10%)	42	75%
Rolling (10-30%)	12	22%
Steep (more than 30%)	2	3%

Slopes greater then 30% are highlighted on the preliminary grading plans, prepared by Nevada City Engineering, included with this application.

d. Does the project propose to encroach into slopes of 30% or greater?

Yes

If yes, is a Management Plan included in this application? ☐ **Yes** ☒ **No**

A geotechnical assessment report for the Brunswick Industrial Site, prepared by NV5 Global, Inc. (Holdrege & Kull), is included with this application.

A geotechnical assessment report for the Centennial Industrial Site, prepared by NV5 Global, Inc. (Holdrege & Kull), will be submitted before the end of December 2019.

Is the site on filled land? ☒ **Yes** ☐ **No** **If yes, explain:**

The Centennial Industrial Site was historically used by the Idaho-Maryland Mine to deposit mine tailings and historic mine tailings and rock currently remain on the site. The Brunswick site has areas which have been filled to create level areas on site.

A geotechnical assessment report for the Brunswick Industrial Site, prepared by NV5 Global, Inc. (Holdrege & Kull), is included with this application.

A geotechnical assessment report for the Centennial Industrial Site, prepared by NV5 Global, Inc. (Holdrege & Kull), will be submitted before the end of December 2019.

e. Are there existing erosion problems or geologic hazards occurring on this site, such as landslides, mudslides, ground failures, earthquake faults or similar hazards? *If yes*, describe:

No.

f. Will a grading permit be required? ☒ **Yes** ☐ **No**

***If yes*, have you attached a preliminary grading plan?** ☒ **Yes** ☐ **No**

Describe proposed site grading:

How many cubic yards of soil will be imported, exported or moved on site?

During construction at the Brunswick site, approximately 60,000 cubic yards will be moved on-site for grading work and detention pond construction. Additionally, approximately 50,000 cubic yards will be excavated and then replaced during construction of the Service shaft.

Approximately 1,440,000 yards of engineered fill with be placed on the Brunswick site and 1,040,000 yards of engineered fill will be placed on the Centennial site during the mine operation. Dry density for engineered fill is assumed at 115 lbs /ft^3 for conversion of tons to cubic yards.

Maximum proposed depth and slope of any excavation and the type:

Maximum depth of excavation will be ~60 feet at the Service shaft location at the Brunswick site and will have excavated wall slopes of 1H:1V. The overburden (i.e., soil and weak rock) will be excavated from the surface and a concrete collar installed from the surface profile to the bedrock. The depth to bedrock is approximately 60 feet. The overburden material will be excavated to allow the shaft and concrete collar to be constructed, and then the overburden will be placed and compacted around the concrete collar to the original ground surface elevation.

Grading material sources or disposal sites:

Grading material for construction at the Brunswick site will be derived from cut material onsite.

Approximately 1,440,000 yards of engineered fill with be placed on the Brunswick site and 1,040,000 yards of engineered fill will be placed on the Centennial site during the mine operation. Engineered fill will be sourced from barren rock and sand tailings producing from underground mining.

Transport methods and haul routes:

Route A: Brunswick Industrial Site to Centennial Industrial Site

Engineered fill placed on the Centennial site will be trucked, in 20-ton loads, from the Brunswick site on the following route:

Loaded trucks exit Brunswick site at the E. Bennett Road exit, east to Brunswick Road, north on

Brunswick Road to Whispering Pines Lane, west on Whispering Pines Lane to Centennial Industrial Site.

Empty trucks from Centennial site to Whispering Pines Lane, east on Whispering Pines Lane to Brunswick Road, south on Brunswick Road to the Brunswick Road entrance to Brunswick site.

Route B: Brunswick Industrial Site to Brunswick Industrial Site

Engineered fill placed on the Brunswick site will be trucked, in 20-ton loads, within the Brunswick site. No off-site transport is required.

Route C: Brunswick Industrial Site to State Route 20/49

Engineered fill to be utilized in local and regional construction markets will be trucked, in 20-ton loads, from the Brunswick site on the following route:

Loaded trucks exit Brunswick site at the E. Bennett Road exit, east to Brunswick Road, north on Brunswick Road to access State Route 20/49.

Empty trucks will return by State Route 20/49, south on Brunswick road to the Brunswick road entrance to Brunswick site.

The location and height of any proposed or required retaining walls:

A loading bay at the proposed warehouse on the Brunswick site will have retaining walls up to 4 feet below ground surface.

Refer to Drawing B303 and Section 5.2.5 "*Retaining Wall Design Criteria*" of the Geotechnical Engineering Report for the Brunswick Industrial Site prepared by NV5 Global, Inc. (Holdrege & Kull).

4. *Water Quality:*

Describe any water bodies on, or adjacent to, the property, including lakes, rivers, creeks, seasonal and/or perennial water courses, irrigation ditches or drainage swales.

The main stem of Wolf Creek runs west through the north side of the Centennial site. South Fork Wolf Creek originates at the Brunswick Site and runs northwesterly through the Brunswick Site.

A constructed clay lined pond is located on the Brunswick site.

Aquatic resources are described in two reports included with this application:

Brunswick Industrial Site and East Bennett Road ROW Aquatic Resources Delineation of Water of the United States and State of California. Greg Matuzak Environmental Consulting LLC. 2019.

Centennial Industrial Site Aquatic Resources Delineation of Water of the United States and State of California. Greg Matuzak Environmental Consulting LLC. 2019.

a. Is there a floodplain on or within 100 feet of this project site? If yes, is it identified on the Federal Emergency Management Agency (FEMA) maps and have you included a copy of that map with this application? ☒ Yes ☐ No

No floodplains occur at the Brunswick site.

The Centennial site has an area identified on a FEMA map. The identified floodplain area is outside the planned project footprint as shown on Drawing C101.

A copy of the FEMA map at the Centennial site is included in Appendix B of this application form.

b. For development projects, describe impervious surfacing created by this project:

At the Brunswick site, ~9.1 acres are currently paved with asphalt which remains from the previous use as the Bohemia Lumber Mill. The only structure on site is the historic concrete silo at the Brunswick shaft. Some areas of existing paving will be removed, and additional areas will be paved. Final paved areas are estimated at ~11.8 acres and buildings will cover ~3.2 acres. Planned landscaping exceeds the minimum required landscaping for parking areas of ~0.2 acres. Remaining open spaces on the site, after development, includes large areas of existing forest areas and wetland meadows. Remaining open spaces create significant visual screening, residential buffers, and street buffers.

At the Centennial site, an existing paved private driveway crosses the northwest side of site to access DeMartini RV Sales which is located on adjacent property. A small metal building and an area of paving exists on the northeast side of the site related to the inactive Hap Warnke Sawmill and will be removed. The project does not propose any new paving at the Centennial site.

IMPERVIOUS SURFACING

Lot Coverage	Existing %	Proposed %
Brunswick Industrial Site		
Building coverage	0.1%	2.7%
Surfaced areas	7.7%	9.9%
Landscaped areas(required)	0%	0.2%
Open space (excluding required landscaping)	92.2%	87.2%
Total	**100%**	**100%**
Centennial Industrial Site		
Building coverage	0.1%	0%
Surfaced areas	2.5%	0.8%
Landscaped areas	0%	0%
Open space (excluding required landscaping)	97.4%	99.2%
Total	**100%**	**100%**

c. Describe any discharge to surface waters that will result from this project, including any wastewaters other than storm water runoff that may be present in the discharge:

Groundwater pumped from the underground mine will be pumped to surface at the Brunswick site, treated, and then discharged to South Fork Wolf Creek.

A hydrology and water quality analysis report, prepared by EMKO Environmental Inc., will be submitted

before the end of December 2019.

A water treatment plant design report, prepared by Linkan Engineering, will be submitted before the end of December 2019.

The treated water pipeline and outfall is discussed in a report included with this application:
Hydrology and Hydraulic Calculations for the Preliminary Drainage Study & Detention Basin Sizing for Centennial and Brunswick Sites. Nevada City Engineering. October 2019.

d. Identify the water body or feature that receives runoff waters, describing proposed methods for treating and controlling runoff before it enters the drainage or watercourse.

Water bodies that receive runoff water from the sites are as follows:

Centennial Industrial Site: Wolf Creek
Brunswick Industrial Site: South Fork Wolf Creek

Detention ponds constructed on each site will control run-off before drainage enters the watercourse. The storm water drainage system is described in a report included with this application:

Hydrology and Hydraulic Calculations for the Preliminary Drainage Study & Detention Basin Sizing for Centennial and Brunswick Sites. Nevada City Engineering. October 2019.

e. Will a permit be required from the California Regional Water Quality Control Board?

☒ Yes ☐ No

***If* application for a State permit has been made, provide the permit #:_____.**

f. Are there any wetlands or riparian areas on this site? ☒ Yes ☐ No

If yes, describe:

Wetlands and riparian areas are described in the aquatic resources delineations included with this application:

Brunswick Industrial Site and East Bennett Road ROW Aquatic Resources Delineation of Water of the United States and State of California. Greg Matuzak Environmental Consulting LLC. 2019.

Centennial Industrial Site Aquatic Resources Delineation of Water of the United States and State of California. Greg Matuzak Environmental Consulting LLC. 2019.

Will wetlands be affected by the proposed project? ☒ Yes ☐ No

Will an Army Corps of Engineers wetlands permit be required? ☒ Yes ☐ No

If yes, is correspondence to or from the Army Corps attached? ☐ Yes ☒ No

g. Does this project propose to encroach into the required buffer from any perennial or seasonal waterbodies or riparian area? ☒ **Yes** ☐ **No**

Yes, is a Management Plan included in this application? ☒ **Yes** ☐ **No**

5. *Air Quality:*

a. Describe any air pollutants, i.e. dust, smoke, fumes or odors, which may be generated by this project both during and after construction (short and long term impacts).

An air quality assessment report, prepared by Dudek, to be submitted before the end of December 2019.

b. Is the project site mapped within an area known to contain naturally occurring asbestos?

☒ **Yes** ☐ **No** **Source of information:**

Serpentinite mapped in area by USGS and Rise Grass Valley Inc. testing of serpentinite in drill core.

Additional information pertaining to management of naturally occurring asbestos is included in Section 4 "*Conclusions*" of the Geotechnical Engineering Report for the Brunswick Industrial Site prepared by NV5 Global, Inc. (Holdrege & Kull).

6. *Transportation / Circulation:*

a. A traffic study is included with this application. ☐ **Yes** ☒ **No**

A traffic impact analysis report, prepared by KD Anderson & Associates, Inc. Transportation Engineers, will be submitted before the end of December 2019.

b. Does this project require/include a Petition for Exceptions? ☐ **Yes** ☒ **No**

c. Describe the access roads serving this project:

Brunswick Road and E. Bennett Road serve the Brunswick Industrial Site.
Whispering Pine Lane serves the Centennial Industrial Site. Whispering Pines Lane becomes Centennial Drive where the road turns north until it intersects Idaho Maryland Road.

ACCESS ROADS SERVING PROJECT

Road Name	Right of Way Width (ft)	Surfacing	Finish Grade
BRUNSWICK INDUSTRIAL SITE			
Brunswick Road	100 ft	Asphalt	~4.0% at entrance to Brunswick site
E. Bennett Road	~75 ft	Asphalt	~6.5% at entrance to Brunswick site
CENTENNIAL INDUSTRIAL SITE			
Whispering Pines Lane	50 ft	Asphalt	~5.5% at entrance to Centennial site

General Plan

The Nevada County General Plan was originally approved by the Board of Supervisors in 1996. The General Plan has been subsequently amended in 2008 (Safety Element), in 2010 (Circulation Element and Housing Element, 4th Revision) and in 2014 (Land Use Element and Housing Element, 5th Revision). More recently the Board of Supervisors has adopted amendments to the Safety and Noise Elements in October 2014.

Policy Guide

The Nevada County General Plan is the long-term policy guide for the physical, economic and environmental future of the County. It is comprised of goals, objectives, policies, and implementation measures, which are based upon assessments of current and future needs and available resources, and which are intended to carry out the four central themes which are critical to the future of Nevada County and its quality of life.

Community Values

The General Plan is a dynamic document because it is based on community values and an understanding of existing and projected conditions and needs, all of which are subject to change over time. It is the intent of the County that this Gene desirable degree of flexibility to be able to accommodate cha sound long-term foundation for development based on good planning principles that remain timeless.

Hi, how can I help you today?

f. Within what Fire Severity zone is the project site mapped (Moderate, High or Very High) on the CalFire Fire Severity Hazard maps?

The Brunswick and Centennials sites are mapped as Very High on the CalFire Fire Severity Hazard map.

g. Will this project result in the need for additional public services including fire, police, water, sewage disposal or recreation, including annexation to a special district? X

☐ **Yes** ☒ **No** **If yes, describe:** WRONG ANSWER

12. Utilities & Services Systems:

a. List the public utilities that are available to serve the project site and the entities that provides service:

Telephone:

Various - TBD

Electricity:

Pacific Gas and Electric Company

A Will Serve Letter from PG&E has been included in Appendix B of the Environmental Assessment of the Mining Use Permit Application.

Gas (propane or natural gas)

No propane or natural gas use proposed

High speed internet service:

Various – TBD

b. Will this project require the extension of service for any energy source?

☐ **Yes** ☒ **No** **If yes, describe:**

c. Will this project require the recording of a new utility easement?

☒ **Yes** ☐ **No** ***If yes*, the proposed easement must be shown on the site plan.**

An easement may be recorded in favor of the Nevada Irrigation District for the potable water pipeline through private property from Whispering Pines Land to E. Bennett Road. Rise currents owns property and easements for this route which are shown in Drawing A-1.

d. Describe how this project maximizes energy efficiency, i.e., utilizes alternative energy sources, pursuant to General Plan policies EC-8.6.1, EC-8.6.4 & 14.2:

No homes or subdivisions are proposed in the project. No solid fuel burning devices or fireplaces are

proposed in the project.

e. What type of sewage disposal system is proposed for this project (public sewer, individual septic systems, community system, centralized system)?

Onsite septic system

The site evaluation for an on-site Pressure Dose sewage disposal system is detailed in a letter report, prepared by Navo & Sons, Inc., included in Appendix A of the Environmental Assessment of the Mining Use Permit Application.

13. Aesthetics:

a. Will there be a change to any highly visible ridgelines or any scenic viewsheds?

☐ **Yes** ☒ **No**

***If yes*, is a Management Plan included in this application?** ☐ **Yes** ☐ **No**

b. Is this project visible from a scenic highway, a large population center, or a public recreation area? ☐ **Yes** ☒ **No** **If yes, describe:**

c. Does this project propose any outdoor storage, activity or use (other than parking)?

☒ **Yes** ☐ **No** **If yes, describe the use:**

At the Brunswick site, outside areas will be used to move supplies, persons, and equipment to and from buildings. Trucks will be loaded with sand tailings by front end loader during daytime hours. Several tanks related to mineral processing are located outside of the process plant building. Materials may be stored outside in paved areas around buildings.

Engineered fill will be transported, placed, and compacted at both the Brunswick and Centennial sites.

d. Does this project propose new fencing? ☒ **Yes** ☐ **No**

If yes, describe fence type, height, materials and colors:

Security fencing will be used to restrict access to portions of the Brunswick site. Fencing will be metal chain link and range in height in accordance with Nevada County Code Sec. L-II 4.2.6.

e. Will this project require the installation of new overhead utility lines, visible from public roadways or adjacent properties? ☐ **Yes** ☒ **No** **If yes, describe:**

___ If yes, a copy of the evaluation is attached.

g. Will this project prohibit or decrease agricultural production, on or off-site?

☐ Yes ☒ No If yes, describe:

15. Cultural Resources:

a. ☐ A letter from the North Central Information Center is attached, recommending whether an on-site Cultural Resources Inventory be conducted.

b. ☒ An Inventory was conducted and is attached.

c. ☐ An Inventory is not attached because:

☐ The North Central Information Center determined that an inventory is not required due to project size or sensitivity level (see letter).

☐ An on-site inventory was conducted for a previous project and is on file with the Planning Department, County File No#:_____.

16. Recreation:

a. Describe any public recreational facilities existing or proposed on the project site, including trails. Describe any known historic, public use of this site.

None

***Development project information* (not applicable to Tentative Maps)**

17. Proposed Use:

a. Proposed use/occupancy type:

A total of ~126,300 ft^2 of industrial buildings will be constructed as shown in the below table. Building use can generally be classified as follows:

Office – 10,100 ft^2
General Industrial – 50,700 ft^2
Manufacturing – 51,000 ft^2
Warehouse – 14,500 ft^2

BUILDINGS

Building	Gross Area (ft²)	Maximum Height (ft)
Brunswick Shaft Complex		
Headframe	2,600	165
Shaft building	1,700	25
Conveyor and Raise building	700	17
Rock truck loading	1,700	20
Hoist Building	2,800	50
Electrical Building	800	15
Mine Compressor Building	1,600	20
Process Plant Area		
Process Plant	29,200	64
Process Plant addition	7,300	26
Generator building	3,900	20
Warehouse / Office Area		
Warehouse	28,900	27
Changeroom & Office building	24,600	30
Water treatment plant	8,500	26
Machinery building	1,600	20
Service Shaft Complex		
Shaft building	2,700	24
Headframe (located in shaft building)		80
Hoist building	2,800	50
Electrical building	800	15
Machinery building	1,600	20
Security building	2,400	15

Additional structures include tanks located outside the process and water treatment plants, fuel tank, covered conveyor, and breezeway as shown in the table below.

OTHER STRUCTURES

Building	Gross Area (Square Feet)	Maximum Height (Feet)
Covered conveyor (Brunswick to process plant)	3,400	35
Breezeway (security building to changeroom/office)	1,400	11
PROCESS PLANT		
Clean water tank	535	30
Process water tank	455	30
Tailings thickener	2,400	34
Paste filter feed tank	535	30
Cement silo	115	40
WATER TREATMENT PLANT		
Treated water tank	315	30
GENERATOR BUILDING		
Diesel fuel tank (30,000 gallons)	600	20

b. Building type & hazard classification:

Pre-manufactured steel

c. Days & hours of operation:

24 hours per day, 7 days per week

d. Total number of employees:

312

e. Describe any outdoor activity proposed, including area square footage:

At the Brunswick site, outside areas will be used to move supplies, persons, and equipment to and from buildings. Trucks will be loaded with sand tailings by front end loader during daytime hours. Several tanks related to mineral processing are located outside of the process plant building. Materials may be stored outside in paved areas around buildings.

Engineered fill will be transported, placed, and compacted at both the Brunswick and Centennial sites.

f. Number of parking spaces, pursuant to Sec. L-II 4.2.9.f. of Zoning Regulations:

PARKING

	Required	Proposed
Regular stalls	125 - 208	152
Compact stalls	0 - 83	56
Wheelchair accessible	7	9
TOTAL	215	217

Two of the Wheelchair accessible stalls are Van Accessible. Thirteen of the regular stalls are electric vehicle stalls.

g. Are loading bays or drop off areas proposed or required?

One loading bay is proposed at the Warehouse Building on the Brunswick site. A drop off area is located at the end of the main parking area. Access to site will be controlled by gates and security at both entrances.

18. Building Characteristics of Each Proposed Building:

a. Building size in square feet (existing and proposed):

No buildings currently exist on the Brunswick site. Planned building sizes are shown in the tables *BUILDINGS* and *OTHER STRUCTURES* in Section 17a above.

One small metal building currently exist on the Centennial site related to the inactive Hap Warnke Sawmill, which will be removed. No buildings are proposed at the Centennial site.

APPLICANT: Rise Grass Valley Inc. PHONE NO.: 604-260-4577

CONTACT PERSON: Benjamin Mossman PHONE NO.: 604-260-4577

EMAIL: Admin@risegrassvalley.com

16. Describe the ultimate physical condition of the site and specify proposed use(s), or potential uses, of the mined lands as reclaimed:

See Section 5 "*Reclamation*" of the Reclamation Plan. A majority of the aboveground facilities and structures will remain to support the sites postmining industrial land use. All paved surfaces, including access roads, parking areas, and driveways, will remain to facilitate access to the site and buildings.

The engineered fill piles at the Brunswick and Centennial sites will be maintained until they are used for future industrial purposes.

C. ENVIRONMENTAL IMPACTS:

1. Land

a. How many cubic yards will be moved or disturbed?

During construction at the Brunswick site approximately 60,000 cubic yards will be moved on-site for grading work and detention pond construction. Additionally, approximately 50,0000 cubic yards will be excavated and then replaced during construction of the Service shaft.

Approximately 1,440,000 yards of engineered fill with be placed on the Brunswick site and 1,040,000 yards of engineered fill will be placed on the Centennial site.

b. Will the Project result in the destruction, covering or modification of any unique geological and/or physical features, such as unstable soils or historical faults?

☐ Yes ☒ No **If Yes, what protective measures are anticipated?**

WRONG ! fault line

c. Will the project result in increased erosion from wind or water, on-site or off-site?

☐ Yes ☒ No **If Yes, explain:**

d. Will the project expose the people or property to geologic hazards, such as earthquakes, landslides, mud slides, ground failures, or similar hazards?

☐ Yes ☒ No **If Yes, explain:**

wrong

e. Will the project result in the loss of agricultural lands?

☐ **Yes** ☒ **No** **If Yes, specify:**

f. Is all or a portion of this property subject to a Williamson Land Act Contract (i.e., an agricultural preserve)?

☐ **Yes** ☒ **No** **If Yes, specify:**

g. Is all or a portion of this property zoned TPZ? ☐ **Yes** ☒ **No**

If Yes, attach exhibit and copy of timber management plan.

2. Water:

a. Will the project result in any stream alteration? ☒ **Yes** ☐ **No**

For operations occurring within or adjacent to a seasonal or permanent stream, river or other body of water, describe actions being taken to protect water quality and wildlife habitat:

The project will result in the removal and/or alteration of "waters of the U.S.", including wetlands, and "waters of the State of California" at the Brunswick Industrial Site, as shown in Drawing B102. Wetlands are also mapped at the Centennial Industrial Site and are expected to be removed and mitigated under the separate DTSC cleanup project as shown in Drawing C102. The aquatic resources, potential impacts, and mitigation measures are described in detail in the following reports included with this application:

Brunswick Industrial Site and East Bennett Road ROW Aquatic Resources Delineation of Water of the United States and State of California. Greg Matuzak Environmental Consulting LLC. 2019.

Brunswick Industrial Site and East Bennett Road ROW Biological Resources Assessment. Greg Matuzak Environmental Consulting LLC. 2019.

Brunswick Industrial Site and East Bennett Road ROW Watercourse / Wetlands / Riparian Areas Management Plan. Greg Matuzak Environmental Consulting LLC. 2019.

Centennial Industrial Site Aquatic Resources Delineation of Water of the United States and State of California. Greg Matuzak Environmental Consulting LLC. 2019.

Centennial Industrial Site Biological Resources Assessment. Greg Matuzak Environmental Consulting LLC. 2019.

Technical Memorandum for Centennial Industrial Site: Idaho-Maryland Mine Project - Biological Resources Impact Assessment. Greg Matuzak Environmental Consulting LLC. 2019.

b. Will there be any increased run-off? ☐ Yes ☒ No Explain:

Post development runoff during storm events, including the treated mine water discharge of 5.6 cfs, from both the Centennial and Brunswick sites will be equal to or less than the estimated current run-off. Therefore, with the construction of the detention ponds, the project will have no impact or increase of flows in creeks during storm events.

The storm water drainage system is described in a report included with this application:

Hydrology and Hydraulic Calculations for the Preliminary Drainage Study & Detention Basin Sizing for Centennial and Brunswick Sites. Nevada City Engineering. October 2019.

c. Will there be any discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen or turbidity?

☒ Yes ☐ No If Yes, explain:

Groundwater present in the existing mine workings and inflow into the underground mine workings during the life of the projected will be pumped to surface, treated, and discharged to South Fork Wolf Creek at the Brunswick Site. A detailed description is included in Section 6 *"Site Plan"* of the Project Description. Supporting documents include reports:

A hydrology and water quality analysis report, prepared by EMKO Environmental Inc., will be submitted before the end of December 2019.

get it.

The water treatment is described in a report included with this application:

Idaho-Maryland Water Treatment Plant Design Report. Linkan Engineering. November 2019.

d. Will there be any septic tank installation, sedimentation or potential chemical contamination? Indicate amount of effluent which may be generated. Percolation tests should be provided.

☒ Yes ☐ No If Yes, explain:

A septic tank will be installed on the Brunswick Industrial Site and the amount of effluent which may be generated is estimated at 5,690 gallons per day based on employee numbers, shifts, and uses. The site evaluation for an on-site Pressure Dose sewage disposal system is described in a letter report, prepared by Navo & Sons, Inc., included in Appendix A of this application.

e. Industrial water requirements:

Brunswick Industrial Site

Amount required per day: 123,000 gallons per day

Source: Treated mine water

Will water be recirculated for re-use? ☒ **Yes** ☐ **No**

See Section 7.4 *"Water Supply and Consumption"* of the Project Description for additional details regarding industrial water requirements at the Brunswick Industrial Site.

Centennial Industrial Site

Amount required per day: 42,000 gallons per day

Source: NID

Will water be recirculated for re-use? ☐ **Yes** ☒ **No**

See Section 7.4 *"Water Supply and Consumption"* of the Project Description for additional details regarding industrial water requirements at the Centennial Industrial Site.

f. Will there be any changes in the quantity of ground waters, either through direct additions or withdrawals, or through interception of any aquifer, by cuts or excavations?

☒ **Yes** ☐ **No** **If Yes, explain and describe method to monitor effects:**

Groundwater present in the existing mine workings and inflow into the underground mine workings during the life of the projected will be pumped to surface, treated, and discharged to South Fork Wolf Creek at the Brunswick Site. See Section 6 *"Site Plan"* of the Project Description.

Pumping of ground water could potentially result in a draw-down of the water table, in areas in close proximity to the existing mine workings. As described in Section 6.7 *"Potable Water Pipeline"* of the Project Description, out of an abundance of caution, the existing NID potable water pipeline will be extended on East Bennett Road to provide potable water service to residences currently on wells that may be affected by the project.

Supporting documents include reports:

where are these?

A hydrology and water quality analysis report, prepared by EMKO Environmental Inc., will be submitted before the end of December 2019.

A groundwater model using finite element methods including predictive simulations and sensitivity analysis report, prepared by Itasca Denver, Inc., will be submitted before the end of December 2019.

g. Will there be a substantial reduction in the amount of water, otherwise available for public water supplies? ☐ Yes ☒ No If Yes, explain:

See 2f above.

h. Will the project expose people or property to water-related hazards, such as flooding or ground slippage? ☐ Yes ☒ No If Yes, explain:

i. Will there be any significant changes in temperature, flow, or chemical content of surface thermal springs? ☐ Yes ☒ No If Yes, explain:

3. Air and Noise

a. Will there be any changes in air movement, temperature, dust, ash, smoke, fumes or odor as a result of the project? ☐ Yes ☒ No If Yes, explain:

An air quality assessment report, prepared by Dudek, to be submitted before the end of December 2019.

b. Method of dust control: (specify water or chemicals to be used, and frequency of application)

The majority of the Brunswick work site has already been, or will be paved in order to reduce dust from vehicle traffic. In areas where engineered fill is placed and compacted water will be used as necessary to control dust and allow for required compaction levels.

The processing plant is located indoors and milling will be done with water which largely eliminates dust. Industrial dust control techniques will be used as necessary in the processing plant.

c. Will the project result in a change in existing noise or vibration (due to blasting or use of heavy earth moving or breaking equipment) levels in the vicinity?

☒ Yes ☐ No If Yes, explain:

A noise and vibration analysis report and underground blasting assessment report are included with this application:

Noise and Vibration Analysis – Idaho Maryland Mine. Bollard Acoustical Consultants, Inc. 2019.

Environmental Factors of Blasting Report for the Proposed Idaho-Maryland Gold Project. Intercontinental Development Corporation – Precision Blasting Services. September 2019.

photometric plan (refer to Drawing E001, E100, and E110), prepared by M. Neils Engineering, Inc., is included with this application.

6. Land Use

WRONG

a. Might the project conflict with existing land uses including recreational, educational, religious or scientific? ☐ Yes ☒ No If Yes, explain:

Existing land uses include open space with remnants of existing gold mining and other industrial operations. No recreational, education, religious, or scientific land uses exist on or near the site.

WRONG

b. In what way will the project cause change in the land use pattern, scale, or character of the general area?

Historically, underground gold mining occurred below the majority of the property. Aboveground portions of the sites were used for various gold mining and processing activities. A major sawmill previously operated on the Brunswick Industrial Site and closed in 1991. The Hap Warnke sawmill operates on the Centennial Industrial Site and is currently inactive. Since 2018, Rise has been conducting exploration drilling to characterize underground resources in anticipation of future mining. As described in the Project Description included with this application, the Project includes underground mining, aboveground gold and waste rock processing, and offsite hauling of engineered fill. The site has a General Plan designation of Industrial. The Application is seeking a zone change on six of the twelve parcels from Light Industrial with Site Performance Combining District (M1-SP) to Light Industrial with Mineral Extraction Combining District (M1-ME).

The uses proposed in the attached Project Description are allowed under these land use designations.

c. Distance from the location of the nearest recognized named community:

The City of Grass Valley is adjacent to the Centennial Industrial Site boundary. Please see Section 5.3 "*Surrounding Land Uses*" of the attached Project Description providing a summary of surrounding land uses.

7. Natural Resources

a. Will the project result in the increased rate of use of any renewable or non-renewable natural resource? ☐ Yes ☒ No Which one(s):

The project will use energy which includes utility supplied electricity, petroleum products such as diesel fuel, and various materials to produce gold and gold concentrates.

How about water

8. Risk or Upset

a. Will the project involve a risk of explosion or the release of hazardous substances, including but not limited to oil, pesticide, herbicide, chemicals, or radiation, in the event of accident or upset conditions, flammables, or explosives?

☐ Yes ☒ No **If Yes, explain:**

The project will comply with all local, state and federal regulations related to the storage, use, and disposal of hazardous substances.

b. Will the proposal result in possible interference with an emergency response plan or an emergency evacuation plan, or will it result in improving such plans or capabilities?

☐ Yes ☒ No **If Yes, explain:**

The project will have fully trained and equipped mine rescue teams. Mine rescue teams will be trained in accordance with MSHA regulations and be available to respond to underground and surface fires, accidents, or medical emergencies. The operator will seek cross training opportunities and mutual aid agreements with local emergency response organizations and other mining operations. The project will always have skilled tradesmen onsite including electricians and mechanics.

9. Population

a. Will the project have a growth-inducing effect on thecommunity?

☐ Yes ☒ No **If Yes, describe in detail:**

The project will not result in direct or indirect growth-inducing effect on the local community. The project will employ approximately 300 people during full operations. The current population of Nevada County is approximately 100,000 people. This level of employment would not result in a substantial increase in the population of Nevada County and result in the need for additional housing, public infrastructure, emergency services, or other direct growth effects.

Utility infrastructure installed as a result of the Project would be limited to the proposed electrical transmission line that would provide power to the Project. The transmission line would be sized to meet the anticipated power requirements of the Project and would not provide a new source of electricity that would indirectly induce growth in surrounding areas through the removal of a barrier associated with inadequate electrical supply infrastructure.

Any required off-site roadway improvements would be intended solely to off-set any traffic impacts of the project, provide safe access and achieve acceptable levels of service for existing and future projected traffic volumes. The improvements would not remove a barrier to growth or otherwise induce growth.

Water District:

Nevada Irrigation District (NID).

Rise Grass Valley has existing water accounts with NID for the various parcels that comprise the Brunswick Industrial Site.

Other

b. Method of sewage disposal:

The site evaluation for an on-site Pressure Dose sewage disposal system is detailed in a letter report, prepared by Navo & Sons, Inc., included in Appendix A of this application.

c. Describe storm water drainage system (use exhibit)

The storm water drainage system is described in a report included with this application:

Hydrology and Hydraulic Calculations for the Preliminary Drainage Study & Detention Basin Sizing for Centennial and Brunswick Sites. Nevada City Engineering. October 2019.

15. Human Health

a. Will the project result in the creation of any health hazard or potential health hazard (excluding mental health)?

☐ **Yes** ☒ **No** **If Yes, specify:**

Identify health hazards and define methods of control.

A quantitative health risk assessment, prepared by Dudek, will be submitted before the end of December 2019.

16. Aesthetics

a. How will the different project phases compare aesthetically with the surrounding area?

An aesthetics report including an analysis and renderings from important public viewpoints, prepared by Benchmark Resources, will be submitted before the end of December 2019.

b. Will the project cause a change in scenic views from existing residential areas, or public lands or roads? ☐ Yes ☒ No If Yes, describe in detail nature of change and duration.

17. Cultural Resources

a. Are there any sites of historical, archeological or paleontological interest on the subject property? ☒ Yes ☐ No ☐ Don't know If Yes, explain:

Any potential sites of interest are described in the survey report included with this application:

Cultural Resources Survey Report for the Idaho-Maryland Mine Project. InContext Cultural Resources Solutions. October 2019.

Source of information:

Cultural Resources Survey Report for the Idaho-Maryland Mine Project. InContext Cultural Resources Solutions. October 2019.

Will the proposal result in adverse physical or aesthetic effects to a prehistoric or historic building, structure or object? ☒ Yes ☐ No If Yes, explain:

The Cultural Survey Report identifies several potential items of interest which may be impacted by the project.

A comprehensive report on impacts to potential sites of interest is being prepared by Incontext Cultural Resources Solutions and will be submitted before the end of December 2019.

18. General

a. As a result of the project, how many local people will be employed?

The project will employ an estimated 312 persons during full mine operations, the majority of which would be local to Nevada County.

b. What effect will the project have on the local tax base?

The project is expected to have a positive effect on the local tax base.

c. What is the relationship of this project to a larger or future project?

None

d. Identify State or Federal agencies that require permits, leases or licenses, and the type to be issued:

OVER

WHERE'S THE COUNTY OF NEVADA ON THIS LIST?

POTENTIAL PERMITS AND APPROVALS FOR THE IDAHO MARYLAND MINE PROJECT

Agency/Department	Permit/Authorization	Required For
FEDERAL AGENCIES		
Army Corps of Engineers	Individual/Nationwide Section 404 Discharge Permit (Clean Water Act, 33 USC 1341)	Dredge/fill into "waters of United States"
Fish and Wildlife Service	Biological Assessment, Section 7 Consultation, Biological Opinion (Endangered Species Act, 16 USC 1531-1544)	Activity where there may be an effect on federally regulated species
		Activity where incidental take of federally listed species anticipated
Advisory Council on Historic Preservation	Section 106, (National Historic Preservation Act, 16, USC 470); Designation survey, determination of effort	Potential impacts to historic, architectural, archeological, or cultural characteristics of properties that qualify to meet National Register Criteria (State Historic Preservation Officer responsible for administration) Note: Also refer to National Natural Landmarks Program (36 CFR 62) and National Historic Landmarks Program (36 CFR 65)
Bureau of Alcohol, Tobacco, and Firearms	Purchase, Storage, or Transportation of Explosives Permit (27 CFR 55)	Purchase and/or transporting explosives across a state line. Storage requirements apply to all persons storing explosives.
Mine Safety and Health Administration	Notice of Commencement of Operations	Notice of the ownership and location of the mine
	Emergency Fire, Evacuation, and Rescue Plan	Potential emergency situation plans required for Surface operations
	Legal Identity Report	Reporting the type of operation, location and ownership
	Record of Inspection of Self-Propelled Equipment	Records, on self-propelled equipment must be maintained for six months and be available to inspectors
	Record of Testing the Resistance of Electrical Ground System	Recording the test required annually and after installation, repair, or medication of the electrical ground systems
	Miner Training Program	Mine safety training programs educating workers
	MSHA Identification Number	Tracking all mine sites
STATE AGENCIES		
Regional Water Quality Control Boards	General Construction Activity Stormwater Permit; Notice of Intent (40 CFR Part 122)	Stormwater discharges associated with construction activity

Agency/Department	Permit/Authorization	Required For
	National Pollutant Discharge Elimination System Permit (33 USC 1251 *et seq.*)	Discharge of waste into surface waters of California
	Water Discharge Permit (Water Code 13000 *et seq.*)	Discharge of wastewater that may affect groundwater quality
State Water Resources Control Board Division of Water Rights	401 (Water Quality) Certification (Clean Water Act, 33 USC 1251: if the project requires Army Corps of Engineers 404 permit)	Discharge into "water of the United States" including wetlands
	General Industrial Activity Stormwater Permit. Notice of Intent (40 CFR Part 122)	Stormwater discharges associated with industrial activity, unless covered by individual NPDES Permit
	Spill Prevention Control and Countermeasures Plan. (Health and Safety Code 25270 *et seq.*; 40 CFR Part 112.)	Underground storage of petroleum of 42,000+ gallons. Above ground storage with 10,000+ gallons; or any spill affecting surface waters, single tank of 600 gallons or 1320 total
State Office of Historic Preservation	Section 106, National Historic Preservation Act (16 USC 470; 36 CFR 62; 36 CFR 65).	Avoidance of historic, archaeological, or cultural characteristics of properties that meet National Register Criteria
California Department of Fish and Wildlife	Lake/Streambed Alteration Agreement	Substantial alteration of the bed or bank of river, stream, or lake (includes road or land construction across a natural streambed)
	Incidental Take Permit	For take of any species listed under the California Endangered Species Act ("CESA")
California Occupational Safety and Health Administration (Cal-OSHA)	Annual permit	Construction/demolition of any structure over 3 stories
	Construction permit	Worker safety/health
	Underground Diesel Permit	Underground use of diesel engines
Northern Sierra Air Quality Management District	Authority to Construct (Local district rules, per Health and Safety Code 42300 *et seq.*)	Constructing, modifying or operation a facility or equipment that may emit pollutants from a stationary source
	Permit to Operation (Local district rules)	Operation equipment that may emit pollutants from a stationary source

CERTIFICATION

I hereby certify that the statements furnished above and in the attached exhibits present the data and information required for this initial evaluation to the best of my ability, and that the facts, statements and information presented are true and correct to the best of my knowledge and belief.

MITIGATION MONITORING AND REPORTING PROGRAM
Idaho-Maryland Mine Project

Impact Number	Impact	Mitigation Measures	Monitoring Agency	Implementation Schedule	Sign-off
		to verify that the noise reductions comply with the assumptions in the DEIR. Further, the County will verify and enforce use and operation of noise reduction equipment and features through implementation of Mitigation Measure 4.10-3.			
COA 8	*The applicant shall be required to use only electrical, pneumatic, or battery powered mining equipment in the underground mine.*		Nevada County Planning Department	During mining activities	
COA 9	*The project will not burn vegetative material. Processing of vegetation before placement of engineered fill will be done by chipping.*		Nevada County Planning Department	During construction, operation, and reclamation activities	
COA 10	*The applicant will be required to provide one-week notice of any expected flow interruptions when feasible, and notice of any spill or contaminating event. Additionally, the applicant will be required to provide NID access to real-time flow data of South Fork Wolf Creek directly downstream from the Project's discharge, with 15-minute interval data, with a trend history of at least one week. The County will not require the flow data to be publicly available, but the data may be made publicly available at the applicant's or NID's discretion.*		Nevada County Planning Department	One week prior to, and during, any expected flow interruptions, and in the event of any spill or contaminating event	
COA 11	*To ensure that reclamation will proceed in compliance with the approved Reclamation Plan, the County shall require security that will be released upon satisfactory performance. The Project Applicant may post security in the form of a surety bond, trust fund, irrevocable letter of credit from an accredited financial institution, or other method acceptable to the County and the State Mining and Geology Board as specified in State regulations, and which the County reasonably determines are adequate to perform reclamation in accordance with the mining operation's approved Plan.*		Nevada County Planning Department	Prior to commencement of mining operations	
COA 12	*Except for the construction of the proposed Service Shaft, all underground blasting for production, tunnelling, and raising would take place more than 500 feet below ground surface and no underground mining will take place outside of the area denoted on the maps included in Appendix A of the Final EIR.*		Nevada County Planning Department	Prior to approval of improvement plans and during construction and operation	

Prepared by RANDALL NEWSOME, retired FEDERAL BANKRUPTCY JUDGE

PRESENTATION REGARDING RISE GRASS VALLEY'S FINANCIAL CONDITION

By RGV's own estimate, it needs at least $100 million to reopen the mine. The number may be closer to $200-300 million according to estimates of what Emgold would have needed to reopen it.

According to it's December 15, 2022 SEC 10Q, Rise had about $167,000 in cash and about $488,000 in accounts payable. In other words, it was unable to meet its debts as they come due, which amounts to equitable insolvency.

According to another SEC report filed on February 1, 2023, on January 31, 2023 Rise raised about 1.8 million dollars in newly-issued stock and rights to purchase stock. Stock issuance (which depletes the value of current shareholder equity) is the principal way Rise has raised money over its 6-year history. It has shown no ability to raise money through typical commercial means such as from a bank or other financial institutions. The only loan the company apparently has ever obtained was from a company called Eridanus Capital, LLC, which is indirectly owned by a gold investor in New York City by the name of Dan Oliver. That loan was for $1 million dollars, secured by a lien on all of Rise's property. If Rise defaults on that loan, Oliver in essence will have the right to acquire the company through a foreclosure on its lien. The loan was drawing 25% interest until it got renegotiated down to 15% in January. It's maturity date also was extended from September of 2023 to September of 2024.

It is highly unlikely that Rise will ever be able to raise the money it needs to reopen the mine. First, it has no proven reserves, i.e. measured volume and weight of gold that is economically mineable. This fact was highlighted in Rise's own economic impact report. Proven reserves is the gold standard, if you will, of investing in any kind of mine. Second, it has no operating income upon which a lender could rely for repayment. Third, anyone lending money to Rise at this point would stand behind Eridanus in getting repaid.

It's time for Rise to prove that it's plan to reopen the mine is more than just a speculative scheme, and that all of the promises it's made are not merely empty slogans. This is consistent with the requirements of the County's General plan. Policy 17.13 of Chapter 17 of the General Plan, which deals with mining, states as follows:

"The County shall require satisfactory forms of accessible security, including irrevocable letters of credit, cash deposits, escrowed negotiable instruments, or performance bonds to cover all such damages which may stem from the projects."

Before the Board of Supervisors even considers voting on a conditional use permit for this project, it should require Rise to present irrevocable financing commitments from suitable lenders that adequately comply with this requirement.

IDAHO MARYLAND MINE SPECIAL USE PERMIT

PROPOSED FINANCIAL ASSURANCES

AND

CONDITIONS OF APPROVAL

By

Tim Ogburn

Thank you!

There is a tremendous amount of financial exposure for Nevada County because of the mine.

$131,000,000 in fact!

My pertinent background:

- Chairman of the South Lake Tahoe Planning Commission
- Supervising senior scientist for 20 years with DTSC
- As General Services Manager for San Joaquin County I was responsible for overseeing the agenda packages for the BOS

My findings are supported by reference links and citations included in my documentation.

Specifically:

- **Nevada County General Plan**

- *IMM Land Use Technical Study March 2020*
- FEIR

My **findings are:**

1. **To Protect the County and its constituents Nevada County is required to secure surety bonds and a cash reserve of $131,000,000 from the permit applicant.**

2. Rise Gold does not meet the requirements to obtain these bonds. In fact they don't even come close. (more later)

The easiest way to avoid

1. this financial exposure for the County,

2. the potential lengthy court battles

3. and all the work required to protect the county and oversee all the bonded activities….. is simple.

4. Vote no on the special use permit.

Here are my findings

The following ***County General Plan*** citations are provided for reference:

- **Goal HM-10.5** - Protect public health, safety, natural resources, and property through regulation of use, storage, transport, and disposal of hazardous materials.

- **Policy HM-10.5.5** - The **County will actively promote prompt clean-up or remediation of properties contaminated by mine waste** or other hazardous materials and shall not grant any discretionary or ministerial land use approvals to develop or change boundaries or reconfigure parcels believed to be contaminated, unless and until the nature, extent, type and location of the contamination is determined and satisfactory arrangements are made for clean-up or remediation, in accordance with Nevada County standards or State regulations.

- **Policy 17.11** - Recognize the importance of water conservation and quality for the present and future needs of the County by: 1. Requiring the conservation of on-site water during mining operations. 2. Requiring that off-site water discharge complies with State water quality standards. 3. Requiring that any increase or decrease of off-site discharge is not detrimental to the downstream environment or downstream water users.

- **Policy 17.13** - The

- **Policy 17.24** - **Regardless of the General Plan designation, subsurface mining shall be conditionally permitted throughout the County.** Said mining shall be allowed only after impacts on the environment and affected surface land uses have been adequately reviewed and found to be in compliance with CEQA. Of particular importance shall be the **impact of the operation on surface land uses, water quantity and quality, noise and vibration, land subsidence, and traffic associated** with surface access. **All other related impacts shall also be addressed.**

- **Policy 17.7** [not addressed by Land Use Technical Study] Use permit time limits for each project shall be established on a case-by-case basis. Time limits shall be based on the reasonably expected life of the mining operation and potential conflicts with future neighboring land uses. Each project shall have a periodic review for compliance with the use permit by the Planning Agency. In no case shall such review time period exceed five years. Said review shall be funded by the applicant.

- **Policy 17.14** - Already existing development - commercial, residential, and community - as well as undeveloped private lands, shall be protected from adverse environmental effects caused by mining through enforced use permit conditions and mitigations measures, or denial of the projects. The County shall be the enforcement agency.

The following citation from the ***IMM Land Use Technical Study March 2020*** provided for reference:

- **The project would include provision of a financial assurance mechanism consistent with the requirements of the SMARA** [SMARA - California Surface Mining and Reclamation Act of 1975; SMARA, Public Resources Code, Sections 2710-2796]

The following citation from the ***Final Environmental Impact Report***, December 2022, is provided for reference:

- Mitigation Measure 4.8-2(a) **requires a groundwater monitoring plan.** The project applicant shall implement the Groundwater Monitoring Plan (GMP) **prepared** by Itasca Denver, Inc. (February 2021), as approved by the County.

PROPOSED FINANCIAL ASSURANCES

My **Proposed Financial Assurances** apply to the **first 10 years of mine operation.**

The financial assurance instruments should be **revisited every 10** years to determine the annual amounts for the next successive 10-year period, for the full duration of the mine operation.

General Liability and Environmental Mitigation bond. Ten-Year Period Amount. $80,000,000.

General Environmental Clean Up Bond $15,000,000 (Jamestown Mine)

Cash Account $5,000,000

Domestic Well Water Monitoring Bond (Not clean up!) $2,000,000

NID $14,000,000

Air Quality Monitoring and Dust Mitigation Bond 2,000,000

Water Discharge Quality Monitoring Bond $2,000,000

Seismic Monitoring Bond $3,500,000

Centennial Site Clean-up Performance Bond $7,600,000

Surety Bond

General Liability bond. Ten-Year Period Amount. $80,000,000.

General Environmental Clean Up Bond $15,000,000

The Mine Operator shall provide a **General Liability Bond** from a reputable bonding company experienced in bonding mining extraction projects, in the amount of $80 million, to guarantee compliance with all conditions of the issued Use Permit. This bond shall be **in addition to** other bonds required by State or regional jurisdictional agencies such as NID.

The Mine Operator shall provide a **General Environmental Clean Up Bond** in the amount of $15,000,000.

Closed in 1994 because of ground water contamination issues.

It had to be cleaned up!

County required a $25 mil **general liability insurance policy (which the appellate court found had pollution liability exclusions)** in todays $ is $68,622,000

They also required a $3 mil clean up bond which is $8,234,000 in todays $.

$5.3 mil to clean up the ground water contamination **(176 wells)** in 1994. $10,162,000 today.

$3,000,000 clean up bone bond **$2.2mil cost** to the county is $4mil today.

https://www.recordnet.com/story/news/1999/09/16/mine-fouling-water/50805003007/

https://www.in2013dollars.com/us/inflation/1986?amount=25000000

Bond for the Siskon Gold Mine project back in the 1990s; the one on the Ridge that flooded out and got shut down. The County only required a $400,000 surety bond for "mine closure", and a portion of the bond was released and untapped by the County despite Siskon not completing all of the permit requirements for reclamation.

https://www.sjrtaxpayers.org/history/

Cash Account RGV

Ten-Year Period Amount: $5,000,000

Per General Plan Policy 17.13 and the FEIR

Mine Operator shall provide a cash reserve account to pay for all County staff expenses and oversight of monitoring programs associated with IMM for full duration of the project.

The anticipated estimated cost for **County oversight is $169,200 time three shifts $507,000 per year,** based on staff expenses and a contract with an independent consulting firm to provide a full-time Senior Environmental Engineer for **continuous on-site inspection and reporting to the County to assure compliance with the permit conditions.**

The anticipated costs are to include: [but not limited to Staff Expenses]

- Staff Expenses: **the FEIR Summary Ground Monitoring Plan continuous on-site monitoring of operation is required** to comply with all conditions and technical measures, having an on-site inspector, independent and reportable to the County and paid for by the project owner.

- The average Senior Environmental Engineer salary in California is $117500 (DTSC) as of January 26, 2023 including benefits is $169,200 per year.

- $169,000 per year for 10 years plus annual labor cost inflation of 2%.

- [See: Calculation link https://whaleapp.io/compound-interest-calculator/?gclid=EAIaIQobChMIyvWckObW_QIVnjKtBh3fqQ9WEAAYAiAAEgJ8FPD_BwE]

Domestic Well Water Monitoring Bond (Not clean up!)

Ten-Year Period Amount: $2,000,000 (see Jamestown Mine)

Per the FEIR (Mitigation Measure 4.8-2(a)), 4.8-2(b) and the FEIRSummary Ground Monitoring Plan.

The Mine Operator shall conduct a well water monitoring as follows.

- Prior to mining operation: test all private domestic wells within a one-mile radius from the outer boundary of the 2,500-acre potential underground tunneled "mining area"; such testing to be conducted by an independent testing company selected by the County, to establish 'base line 'data for water quality and quantity of wells during both peak summer and winter time period.

- During mining operation: test all private domestic wells [selected in the 'prior-operation test' on an annual basis [or more frequently if there is a detectable change in well performance by the private land owner].

- If there is a depletion of water quality or quantity in a well, the Mine Operator shall provide a comparable source of water to the private property owner; such comparable 'source 'shall be from the City of Grass Valley water system, or from NID piped water system, or a newly drilled well.

NID

Ten-year Period Amount: $14,000,000

Per https://www.theunion.com/news/environment/hung-out-to-dry-well-owners-contend-with-idaho-maryland-mine-report-s-findings/article_9723e46d-925b-50ff-b9e9-388b6ab63669.html April 6, 2022

NID General manager recommends Rise Gold post a $14 million bond to cover all potential costs regarding an NID groundwater monitoring program, including potential impacts to NID water storage, and conveyance systems.

Water Discharge Quality Monitoring Bond

Ten-Year Period Amount: $2,000,000

The FEIR requires a

Groundwater Monitoring Plan (GMP) under **FEIR Mitigation Measure** 4.8-2(a). Discharge quality monitoring program cost: $200,000/year.

Air Quality Monitoring and Dust Mitigation Bond

Ten-Year Period Amount: $2,000,000

Per General Plan 17.13 and FEIR 4.3

Require air quality monitoring and dust mitigation on frequent basis both on-site and off-site; and sound/noise level monitoring program, estimated cost: $200,000 annually.

Seismic Monitoring Bond

Ten-Year Period Amount: $3,500,000

There is an earthquake fault that runs through the middle of the mine.

The capital cost of an average mine wide seismic system is in the range of $200,000 to $500,000, with typical yearly operating and maintenance costs in the neighborhood of 20-40% of the capital cost. Seismic monitoring from explosives activity will be **$350,000 annually**. [See: https://onepetro.org/ARMACUSRMS/proceedings-abstract/ARMA07/All-ARMA07/ARMA-07-174/116336]

Ten-Year Period Amount: $7,600,000

Stated in the Mine's Technical Report.

Centennial Site is an **essential component** of the day-to-day operations of the Idaho Maryland mine.

This is supported by **the Centennial site APNs** and the **Idaho Maryland Mine site APNs are cited together** in the property description in both the **Technical Report of the Idaho Maryland Project** and **DTSC's Voluntary Cleanup Agreement**.

State law requires that the responsible party post a performance bond to guarantee completion of the cleanup.

The Voluntary Agreement with DTSC has **not been finalized** thus the required Financial Assurance bond has **not been secured**.

Rise Gold states that they will clean up the site once the permit is approved. If Rise Gold does not clean up the Centennial site and if a bond is not secured before it becomes an **orphaned** site **the County could be obligated** for a minimum of **$3.5 M + $200,000 a year for DTSC oversight.**

[Bond Calculation: DTSC clean-up estimates are historically low. Double the estimated clean-up cost of $3.5 million plus $200,000 per year for DTSC oversight for three years is $3.5 M times two plus $200,000/year for three years = $7,600,000]

Examples, Ridge and Tuolumne County Centennial site. a chance to show good faith but haven't done it. Good actor?? bad actor??

The County is **required** to secure from the applicant over **$131,000,000** in **financial assurances** to **protect** the county if the special use permit is approved.

Rise Gold does not meet the bonding requirements to obtain these bonds. In fact they don't even come close.

To qualify, the surety underwriter will review your bonding capacity (collateral), credit, and character.

https://suretybondauthority.com/environmental-surety-bond/ Rise can not get a bond

The easiest way to avoid

1. this financial exposure for the County,

2. the potential lengthy court battles

3. and all the work required to protect the county and oversee all the bonded activities is simple.

4. another Siskon Mine and JamesTown Mine fiasco

5. on the special use permit.

See Pg 4!

CONSTRUCTION SURETY BOND

Environmental Surety Bond

Getting this surety bond is easy! *Let us help you get bonded.*

APPLY NOW!

What Is An Environmental Surety Bond?

Construction bonds serve a wide array of purposes in construction projects, such as guaranteeing payments, ensuring fulfillment of obligations, and implementing building standards made in full compliance with a stipulated contract.

Contractors, from small to big players, encounter challenges only because they lack environmental components in the project. This results in contractors being perceived as "environmental risks."

Now, there is a specialty bond program that aims to protect environmental integrity. This bond is called Environmental Surety Bond.

An **Environmental Surety Bond** is a unique guarantee that contractors will comply with federal regulations and environmental policies. It is designed to prevent environmental damage by covering construction projects and hazardous materials within the bond.

Mitigating environmental risks for contractors can be tough because of the long-term liability, the collateral they require, and the length/period of some of the bonds.

Who Needs An Environmental Surety Bond?

- Small to large construction firms that encounter dirt projects containing environmental components (ex. PCB, petrochemicals, lead, asbestos, etc.) where their current Surety is uninterested in providing the bond
- Traditional contractors performing construction landfills
- Environmental remediation contractors that need extra bonding capacity
- Environmental consultants conducting their environmental remediation work
- Manufacturing companies whose processes generate by-products that remain in residual landfills
- Coal-burning by-product (fly-ash) storage utilities that require a closure bond
- Principals with environmental guarantees

To learn how much an Environmental Surety Bond costs, get your free quote now!

GET FREE QUOTE

What Construction Activities Do The Environmental Surety Bond Cover?

Environmental Surety Bonds include **bid bonds**, **performance bonds**, and **payment bonds** when remediating a contaminated property. Similar construction surety bonds are also required for landfill construction, wetland mitigation, mining, and other industries which may impact the environment.

Examples of environmental projects that need these bonds include:

- asbestos abatement/removal
- brownfield remediation
- demolition/disposal of contaminated facilities
- dewatering system installation
- environmental excavation
- erosion control
- landfill capping, landfill liners, landfill closure

- mining rehabilitation
- sediment control
- soil stabilization
- underground tank removal

Remediation is defined as the remedy, removal, or reversal of environmental damage. To clean up and dispose of pollutants and contaminants, remediation contractors are required to obtain Environmental Surety Bonds before they commence on a remediation project.

Are There Types Of Environmental Surety Bonds?

Yes, there are many available types of Environmental Surety Bonds.

EPA Closure Bond: This guarantees that solid waste landfill owners will act by the rules and regulations of the permit/closure plan required by the **U.S. Environmental Protection Agency**. This type of construction bond is also applied to well drilling operations.

Post Closure Bond: This guarantees that solid waste landfill owners will monitor and maintain a landfill by rules and regulations of the permit/closure plan issued by EPA.

Collection Bond: This ensures contracts for both residential and commercial waste collection, disposal, and transportation.

How Much Does An Environmental Surety Bond Cost?

The bond amount and fees may vary according to the specifications required by federal regulations. Also, the Surety will determine the amount based on the applicant's financial capacity.

Single bonds can go up from $5-$10 million with an opportunity to develop aggregate work programs up to $20 million for qualified principals.

How Do I Obtain An Environmental Surety Bond?

An Environmental Bond is a specialty bond that requires a knowledgeable and risk-based underwriting approach by a surety company. Select a Surety that has expertise in dealing with mitigating environmental risks at state and federal levels.

To qualify, the surety underwriter will review your bonding capacity, credit, and character. Sureties will require documents to be submitted, which include the following:

- Completed Environmental Surety Bond application
- Bond Form (can be obtained from the Obligee)
- Financial documents (bank statements, cash flow, revenue, irrevocable letters of credit, etc.)

Surety Bond Authority, Inc. understands these environmental risks that contractors face. We have the capacity and experience to provide the appropriate bonding solutions. **Contact** us now and let us help you get started with your environmental surety bond!

New to Surety Bonds? No problem.

PROJECT DESCRIPTION

ENVIRONMENTAL IMPACT REPORT DOCUMENTS

PROJECT DOCUMENTS

SCOPING MEETING - JULY 2020

Project Description

The project is a combined application for a Conditional Use Permit and Reclamation Plan to reinitiate underground mining and gold mineralization processing of the Idaho-Maryland Mine within unincorporated Western Nevada County. The proposed project would be located on two properties owned by Rise Grass Valley, which are referred to as the Brunswick Industrial Site and the Centennial Site. As proposed, the project would be comprised of approximately 175 total surface acres and approximately 2,585 subsurface acres to which the applicant retains the mineral rights.

As proposed, the project would include the following elements:

- Surface access to subsurface mining.
- Dewatering of the existing underground mine workings.
- Mining existing and new underground mine workings.
- Processing gold mineralization and rock.
- Placing engineered fill at the Brunswick and Centennial Industrial Sites
- Export of engineered fill from the Brunswick Industrial Site to support local construction projects.
- Operation of pumps and a water treatment facility to dewater the underground mine workings.
- Construction of a water pipeline to transport treated water to an outfall located in South Fork Wolf Creek.
- Construction of the necessary aboveground facilities at the Brunswick Industrial Site (to include but not limited to, headframes and hoists, surface structures, a mineral processing plant) to support underground mining and mineral processing.
- Underground mining, including drilling, blasting, and gold mineralization removal.
- Gold mineralization and rock processing at the Brunswick Industrial Site and off-site transport of gold concentrate.
- Transport of engineered fill from the Brunswick Industrial Site and placement at the Centennial Industrial Site.

intensified use

- Management Plan component to allow for development within a building setback fault zone at the Brunswick Industrial Site.
- Boundary Line Adjustment that would transfer approximately 46.27 acres for three separate parcels (APN: 009-630-039, 006-441-034, 006-441-003) to reconfigure their property lines to resolve an issue of proposed buildings crossing property lines at the Brunswick Industrial Site.
- Subdivision Map Amendment to amends Lots 7 & 8 of the Bet Acres Subdivision Map to remove the 200-foot Building Setbacks on each side of the designated Fault Line as shown on the subdivision map.

Environmental Impact Report Documents (EIR)

The Nevada County Planning Department will be the lead agency and will prepare an Environmental Impact Report (EIR) for the Idaho-Maryland Mine Project (proposed project). There will be opportunities to provide comments throughout the process. To be notified of these opportunities and when new material becomes available, please subscribe here.

Project Documents

As part of the application process, the applicant has submitted technical studies and other documents which are available for public review here. Documents available for review include:

- Transport of engineered fill from the Brunswick Industrial Site to off-site construction projects.
- Placement of engineered fill at the Brunswick Industrial Site.
- Construction of a potable water pipeline to supply residences along a portion of East Bennet Road.

As proposed the project would include a Rezone application to rezone the parcels located at the Brunswick Industrial Site from Light Industrial (M1) with Site Performance Combining District (SP) to Light Industrial (M1) with Mineral Extraction Combining District (M1-ME) to allow for sub-surface mining operations and to provide for public awareness of the potential surface mining to occur where adequate information indicates that significant mineral deposits are likely present. The project would also include a Reclamation Plan and required Financial Assurance Cost Mechanisms to reclaim the project site to a condition suitable for industrial uses as allowed by the Nevada County Land Use and Development Code, Section L-II 2.5 – Industrial Uses and Table L-II 2.5.D – Light Industrial.

In addition to the entitlements listed above, the project would also include the following entitlements:

Intensified use

- Variance to the Building Height Limits to allow for the construction of several structures up to a height of 165 feet, where 45 feet is the maximum height limit allowed pursuant to the Light Industrial Zoning District.
- Management Plan to allow for development within the required 100-foot setback of the Riparian Area of a Perennial Watercourse, at the Brunswick Industrial Site and to minimize the direct impact to special-status plant species, at the Centennial Industrial Site.

intensified use 3

- Management Plan to allow for development within the required 100-foot setback from the high water mark of existing Perennial Streams, 100 feet from all Wetlands and Riparian areas and 50 feet from the high water mark of Intermittent Streams at the Centennial Industrial Site.
- Management Plan component to allow development within locations of areas of steep slopes that are in excess of 30% at both the Centennial Industrial Site and the Brunswick Industrial Site.

intensified use

INTENSIFIED USE

- Management Plan component to allow for development within a building setback fault zone at the Brunswick Industrial Site.
- Boundary Line Adjustment that would transfer approximately 46.27 acres for three separate parcels (APN: 009-630-039, 006-441-034, 006-441-003) to reconfigure their property lines to resolve an issue of proposed buildings crossing property lines at the Brunswick Industrial Site.
- Subdivision Map Amendment to amends Lots 7 & 8 of the Bet Acres Subdivision Map to remove the 200-foot Building Setbacks on each side of the designated Fault Line as shown on the subdivision map.

Environmental Impact Report Documents (EIR)

The Nevada County Planning Department will be the lead agency and will prepare an Environmental Impact Report (EIR) for the Idaho-Maryland Mine Project (proposed project). Mine Waste and Asbestos Impacts Comments on the Final EIR
March 14, 2023

Overview

Airborne asbestos is hazardous to inhale, leading to lung cancer and other diseases. The Idaho-Maryland Mine Final EIR does not provide enough data to determine the potential impacts of airborne asbestos, and the asbestos management plan (ASUR plan) for preventing hazardous emissions is inadequate.

Very limited asbestos testing was done, constituting less than 2/10,000 of the total rock to be mined over the project lifespan. As the Air Quality Board stated "It would be short-sighted to commit to the ASUR Plan for the entire life of the mine based on the few samples that have been tested so far." **(FEIR Page 2-360)**

The ASUR plan was developed to limit emissions, but it is a flawed document that fails to provide the needed protections. Under the plan, if the asbestos concentrations on any 1000-ton lot of mined materials would put the 3-month rolling average asbestos concentration over a threshold of 0.01%, it would not be allowed to be exported.

A key problem is accurate and timely testing. It takes 2 weeks to get the results. The Final EIR has no provisions for stockpiling materials while waiting for results. And no temporary storage on the surface is provided. To avoid the need for stockpiling mined materials, the plan states that exploratory drilling tests will determine what can be mined in advance. Then grab samples will be taken as the rock is loaded into silos for deployment. But the testing is too sparse.

The loading into silos of 1000 tons of rock requires about 166 6-ton skip loads. This means that the grab test will only capture, on average, about 1 out of 55 skip loads, and even then, the three grab samples will be mixed together to form one combined test. And even accurate sample testing before shipping will not always prevent exceeding the safe average threshold.

Examination of how this system may fail reveals that large quantities of mine waste could pass through undetected. And though the ASUR plan talks about what happens when the delayed testing shows that the threshold was exceeded, it doesn't actually provide a credible solution or adequate oversight.

Finally, it's important to note that all exported Mine Waste from this mine must be classified as "Restricted Materials" (ASUR 9.2, p18) Aggregate suppliers in the region have indicated that they do not handle Restricted Materials because there is no market for them and there already are abundant aggregate sources regionally.

In conclusion, the Final EIR does not provide adequate data on asbestos concentrations, and fails to adequately address processing and disposal of asbestos-bearing mine waste.

A. Introduction

Asbestos is found in all the rock types within the Idaho-Maryland Mine in varying concentrations, though it is predominantly associated with Serpentinite, which can contain high concentrations. Airborne asbestos is hazardous to inhale. It can lead to mesothelioma cancer, asbestosis, and other diseases, and is closely regulated by the California Air Resources Board (CARB). The mine's "Asbestos, Serpentinite, and Ultramafic Rock (ASUR) Management Plan" (DEIR Appendix E.2) was developed to address the management of asbestos airborne emissions. Regulation of asbestos emissions falls under the jurisdiction of CARB and the Northern Sierra Air Quality Management District (NSAQMD). Management of asbestos to prevent hazardous emissions is complicated by the difficulties of accurately testing for it and by the fact that concentrations can be found close to gold ore.

B. Criteria

The FEIR Condition of Approval 3 (COA-3) and the ASUR Plan establish a limit of 0.01% asbestos by weight as the threshold for managing all mine waste that leaves the enclosed project structures or containment structures, such as the silos, conveyors, and processing facility. Under the ASUR Plan, if the asbestos concentrations on any 1000 ton lot of mined materials would put the 3-month rolling average asbestos concentration over 0.01%, then that lot would not be allowed to be sent out of the containment structures.

The Final EIR does not provide enough baseline data to determine whether the project can be mined while meeting this threshold. Very limited testing was done. Thirty-seven samples were taken, but they came from only 3 drill holes. (Drill Holes 1-18-11, 1-19-13, and 1-19-14, ASUR Plan, Appendix C, p55-57). Assuming that each sample provided a good estimate of the asbestos concentrations for a 2000 cubic foot volume (20' h x 10' w x 10' d), the tests constituted less than 2/10,000 of the total rock to be mined over 75 years. The criteria for sample selection was not specified and the sampling party was not named.

Even so, of the 37 drill core samples from the mine that were tested, asbestos testing (TEM method) determined that 15 had asbestos, and 8 of those had asbestos over the 0.01 limit. A potential hazard clearly exists.

There are three test methods. Polarized Light Microscopy (PLM) is fast but not precise, being only valid for detecting above 0.25%. This method is not adequate for detecting the 0.01% threshold, but it is used to define the threshold for surfacing applications under the Airborne Toxic Control Measure (ASTM). The Transmission Electron Microscopy (TEM) process is more accurate, but takes up to 2 weeks to get a result. The TEM test is what dictates most of the management activities in the ASUR Plan to prevent asbestos emissions. (A third method, Phase Contrast Microscopy (PCM), is not valid for rock sampling but is used for air quality monitoring and provides a referential standard for TEM.) (ASUR, p8).

The FEIR has NO plans for the temporary stockpiling of mined materials. So, to avoid the need for stockpiling mined materials, the ASUR Plan states that samples from exploratory drilling will be tested for asbestos in advance of mining. If the anticipated rolling average asbestos levels exceed 0.01%, gold ore will not be mined and barren rock will either not be mined or mined using a dust collection system and materials will be disposed underground (ASUR, p9). However, the prescribed testing is sparse and could easily miss rock having higher asbestos levels. Just one combined test per 1000 thousand tons of mine rock is prescribed (1000 tons is approximately equal to an 8'x8'x170' block).

The mined rock will be lifted from the mine to the silos on the surface with skips. Gold ore will be dumped into a silo with 1000 tons of capacity and barren rock into two smaller silos with 400 tons of capacity. From the gold ore silo, material is fed into the processing facility via an enclosed conveyor.

The project plans to process about 1500 tons of rock per day, from which 1000 tons is expected to be mineralized rock (gold ore) and 500 tons is expected to be waste rock (barren rock). The gold ore will be run through the processing facility to extract a gold concentrate, leaving 1000 tons of fine sand tailings material which must be disposed.

About half of the sand tailings, 500 tons per day, will be mixed with cement to form a cement paste backfill material which will be put back into the mine. The other 500 tons per day of sand tailings will stockpiled to be loaded onto trucks with a front-end loader and trucked off. The 500 tons of barren rock that are mined daily will be moved via conveyors to the truck loading building for export.

C. Deficiencies of the Testing and Processing Plans

To prevent the 3-month rolling average of asbestos in rock from exceeding the 0.01% threshold, the ASUR Plan relies on developing an inventory of asbestos levels of un-mined rock through exploration and testing, and then avoiding mining the rock that would violate the threshold.

However, the critical test that monitors what will be exported is taken when the gold ore and barren rock are lifted and dumped into the silos. A minimum of three grab samples must be taken for each 1000 tons that are transferred. These three samples will then be combined to form a composite sample for a single test result. Each sample is added to the record which tracks the rolling average of exported materials.

The materials are lifted into the silos using skip carts that lift around 6 tons (ASUR, Fig 2). The processing of 1000 tons requires about 166 skip loads. Each grab test will only capture, on average, about 1 out of 55 skip loads, and even then, the three grab samples will be mixed together in a combined test. Because of the sparseness of the sampling, 1000 tons of mine rock, or about 50 truckloads worth, could contain excessive levels of asbestos and still pass through undetected.

Complicating that, the materials go into a split output stream, with a daily average of 1000 tons going to the processing facility and 500 tons going directly off-site as barren waste rock. It is not specified how the grab samples would be associated with the two output streams.

After processing, as described previously, the sand tailings are exported: 500 tons of the tailings will go off-site, and 500 tons will be transported back into the mine and used as cemented paste backfill. The plan should specify separate sampling criteria for each stream of materials which should follow those materials through the process phases.

The amount of required testing is inadequate to reasonably detect the asbestos levels of materials leaving the containment structures. The ASUR Plan does not even specify testing of the sand tailings after processing, and there are no provisions for the gold ore to be tracked to associate the specific test results with the 1000 ton loads as the material is sent through the processing facility. If a TEM grab test comes back with unexpectedly high asbestos values, how would the processing system determine which sand tailings from the processing output should be redirected to be used as cemented-paste backfill? This part of the plan is inadequate in assuring that higher-than-expected levels of asbestos are not being exported.

The materials' processing is a stream, but the ASUR Plan tries to manage the materials by testing blocks of un-mined rock. Materials from multiple sites within the mine will be transported, crushed to 6" maximum size and lifted for processing. Most of the materials will then be sent via conveyors to the processing facility, and the resultant sand tailings will be conveyed and accumulated for hauling out. The testing procedure is poorly suited for tracking the materials through the processing system. How will the process keep track of which final outputs were from a given block of un-mined rock?

In addition, under certain conditions as described in ASUR Plan Section 6.0-7i (ASUR, p8), gold ore with high asbestos levels would be processed, which means introducing gold processing tailings with known exceedances into the same system.

D. Deficiencies in the Moving Average Approach

Exceeding the 0.01% threshold would only be detected in hind-sight once the TEM tests are processed. In addition, a series of many individual loads in excess of 0.01% could be shipped out and still not exceed the 3-month rolling average if the average started out low. Given that there is no plan for on-site storage, the possibility is real that, during the 2 week testing lag time, many additional 1000-ton batches of materials exceeding 0.01% asbestos would be processed. Taken together, many weeks' worth of mine waste with high levels of asbestos could be shipped out.

We noted above that one test from 3 grab samples is sparse and can likely give inaccurate results. But even if testing accurately measures the asbestos levels per day, it does not assure that the 3-month rolling average won't end up exceeding the 0.01% threshold. For example, the following test results would result in a 0.024% average asbestos concentration on Day 120 even after an operations shut down on day 106.

Threshold Exceedance Example

Day 105:
- 75 days exported averaging 0.008%
- 15 days exported averaging 0.02%
- 15 days exported (test results not back yet, avg 0.03%)

((75x0.008)+(15x0.02)) /90 = **0.01% average. OK**

Day 106:
- 74 days exported averaging 0.008%
- 15 days exported averaging 0.02%
- 1 day exported at 0.03%
- 14 days already exported (test results not back yet, avg 0.03%)

(74x0.008)+(15x0.02) + (0.03) /90 = **0.0102% average, SHUT DOWN**

:

Day 120:
- 60 days exported averaging 0.008%
- 15 days exported averaging 0.02%
- 15 days exported averaging 0.03%

((60x0.008)+(15x0.02)+(15x0.03))/90 = **0.024%**

Results in 15 days exceeding the 0.01% rolling average!

In the Threshold Exceedance Example, the 90 day average asbestos level ends up at 0.024% even while complying with the ASUR Plan by shutting down on the first day of exceedance (Day 106). Plus, in total, 30 individual days of output exceeded 0.01% asbestos concentration.

The ASUR plan to prevent the asbestos levels from exceeding the 0.01% threshold is inadequate.

E. Surface Exposures of Airborne Asbestos at the Engineered Fill Sites

There will be about 500 tons per day of sand tailings exported from the ore processing plant. This represents approximately one half of 1000 tons of tested gold ore from the silo. The sand tailings from the gold ore processing is stockpiled inside a containment structure to be loaded onto trucks with a skip loader and shipped off. Operations run for 24/7 but materials are only shipped off 16 hours per day and may have weather related days of no shipping, accumulating the sand tailings, which are loaded into trucks outside the structure (FEIR Page 2-543). Conceivably, the 30 days of gold ore that were processed in the Threshold Exceedance Example could produce sand tailings exceeding the 0.01% threshold.

How would it be determined which sand tailings came from the contaminated materials that end up in the sand tailings containment structure?

After the sand tailings are delivered to the planned Engineered Fill dumping sites at the Centennial site, and later the Brunswick site, they will be mixed with the barren rock in the open air by "on-site blending of blast rock and sand tailings" (DEIR Centennial GeoTechnical Report, p13). Using the Threshold Exceedance Example, thirty days of materials exceeding the asbestos threshold - equivalent to 1500 truck loads - could be mixed in the open air on the Engineered Fill sites, in clear violation of the ASUR Plan goals for reduction of airborne asbestos.

F. Exported Mine Waste is Classified as "Restricted Materials"

All mine waste, aka "Engineered Fill" or "sand tailings and barren rock," from the Idaho-Maryland Mine is considered "Restricted Materials" under 17 CCR 93106(d)(1). (ASUR Plan, p16-17).

The Restricted Materials can be separated into two groups, one group being below the 0.25% threshold under the ASTM rule, and the other group being equal or above that threshold.
For materials below 0.25% asbestos using the PLM test, the material can be transported and used for Engineered Fill or surface applications, but *"Any person who transports Engineered Fill (considered a restricted material) must maintain a copy of all receipts with the material at all times during transit and application"* (ASUR p16).
The following receipts must be provided:

A. The amount of restricted material that was sold or supplied;
B. The date that the restricted material was sold or supplied;
C. The dates that the restricted material was sampled and tested; and
D. A statement that the asbestos content of the restricted material is less than 0.25 percent.

Because the ASUR plan establishes a threshold of 0.01% for the rolling 3-month average using TEM testing, it is probable that most of the mine waste that is output from the facility would fall below 0.25%. However, it is worth noting that some 1000 ton daily outputs could exceed 0.25% and still not cause the rolling 3 month average to exceed 0.01%. (For example, 89 days with an average of 0.007% and 1 day with 0.25% asbestos concentration by weight equals a rolling average of less than 0.01%.)

For materials at or above 0.25% asbestos, the mine waste is classified as "Asbestos Containing Material" under ATCM for Surfacing Standards. For Engineered Fill materials detected at or above 0.25% using the PLM test, strict usage requirements are imposed to prevent exposure or possible future

disturbances. ATCM requires that *"the material shall not be used for surfacing applications pursuant to 17 CCR 93106"* (ASUR p16).

In the case of at or above 0.25%, it cannot be used for surfacing, but it may be used for operations that assure the materials will be handled under strict conditions. All materials in this classification must be accompanied with the following written receipt:

WARNING!
This material may contain asbestos.
It is unlawful to use this material for surfacing or any application in which it would remain exposed and subject to possible disturbances.
Extreme care should be taken when handling this material to minimize the generation of dust.

Any person who transports Engineered Fill (considered a restricted material) must maintain a copy of all receipts with the material at all times during transit and application.

Of course, the three-month rolling average must also be less than 0.01% to even be shipped out.

G. The "Restricted Materials" classification may severely limit off-site sales.

As the ATCM rules make it clear:
"**All aggregate extracted from the Idaho-Maryland** *underground mine, including barren rock and mineralized material sent for processing,* **is considered Restricted Material** *under the ATCM for Surfacing Applications"* (ASUR 9.2, p18).

Aggregate suppliers in the region have indicated that they do not handle Restricted Materials because there is no market for them.

H. Unapproved Underground Dumping May Violate Water Board Standards

The ASUR Plan does not address how the mine waste which might be diverted to underground storage because of high asbestos levels would be tested to conform with the Water Board's requirements to prevent pollution of ground and surface waters through leaching of hazardous chemicals. Because the Final EIR did not include adequate testing of the mine rock for possible water contamination, the Water Board is requiring continuous testing to determine whether the materials conform to Group C mine waste, which is required for off-site use, or whether the Water Board will require special processing as the more hazardous Group A or Group B mine waste.

I. The ASUR Plan is Ambiguous and Self Contradictory

1) Ambiguous Terms

The ASUR Plan discusses the processing and testing of mine waste by utilizing the euphemism "Engineered Fill," eventually describing it on page 13 in the statement: "...asbestos content of Engineered Fill (barren rock and sand tailings) placed and compacted..." Since there is an intent to simply sell the the mine waste, "Engineered Fill" doesn't seem to mean the applicant is including the "placement and compacting." Hence, the document seems to define Engineered Fill simply as "barren rock and sand tailings."

The use of the term "engineered fill" is ambiguous when there are statements such as ""the remainder of the *sand tailings* will be used for *engineered fill.*" Substituting the words "barren rock and sand tailings" for "engineered fill" in this statement then reads thus: "the remainder of the *sand tailings* will be used for *barren rock and sand tailings.*"

Another confusing example is the use of the term "Asbestos Containing Materials." This term is explicitly defined in the document to mean materials having over 0.25% asbestos under the ASTM rule. However, materials having asbestos exceeding 0.01% are also referred to as "asbestos containing materials," as seen on ASUR Plan page 20.

The ASUR Plan document contains numerous ambiguous statements which distort the meaning and validity of the document.

2) Aggregates, Surfacing and Loopholes

Rock aggregates that are used in the construction industry include a wide range of materials mostly consisting of specific crushed rock sizes that are generally screened or filtered to within certain size limits (e.g. ¾" Class II road base) and many also require washing. The barren rock that is produced by the mine will be mixed crushed rock 6 inches or less in size and would need to be recrushed to the right sizes, screened, and sometimes washed to meet most aggregate market demand. The sand tailings are fine sand or silt size granules which have very limited use. (See https://www.gohbe.com/index.php/rock-masonry.) However, the ASUR Plan mistakenly treats Engineered Fill and surfacing materials interchangeably. Engineered Fill made of barren rock and sand tailings is not suitable for surfacing applications. Sand tailings have little use and the barren rock would first need additional processing, which requires facilities that the mine does not provide.

The word "aggregate" is commonly known but is not specifically defined in the ASUR Plan. In Section 8.4 (p16), the term is used to describe regulatory restrictions: "*If a composite sample determines that aggregate is not Asbestos-Containing Material, a written receipt must be provided to the recipient of the Engineered Fill.*" This statement is ambiguous in that it is not clear that the Engineered Fill being referred to is the "aggregate" used in this sentence, or some additional materials.

The ASUR Plan repeatedly refers to surfacing materials as if they are equivalent to Engineered Fill. For example, the statement in Section 6.0 -Item 7(i):

"*If planned mining is projected to result in insufficient material available for Surfacing in Engineered Fill Placement Plan:*

i. An operational plan will be prepared and approved...."

Item 7(i) in section 6.0 also describes ambiguous conditions about "insufficient materials" which seemingly allow mining of Asbestos Containing Material if it is gold ore.
Then the subsequent Item 8(i) in Section 6.0 then states that if the 0.01% threshold would be exceeded, gold ore will not be mined. *(ASUR, p9)* This is in direct contradiction to Item 7(i)!

3) Operations Oversight

The ASUR Plan lacks clearly defined oversight for the management of the asbestos materials. Nor are guidelines for approval of changes to operations or procedures provided. Here the responsibility is given to an unspecified "geology department."

"*If the three-month rolling Asbestos Inventory for materials hoisted to surface exceeds 0.01% asbestos by mass of PCM equivalent units the geology department will immediately investigate the source of the*

asbestos containing material and halt mining in the area of concern until a revised mine plan is prepared in compliance with the ASUR Plan" (ASUR, p20).

This is inadequate. To provide reasonable safeguards, an independent party should be responsible for overseeing monitoring, investigations, reporting, and corrective actions. What constitutes a valid report should be defined. And guidelines for subsequent actions should be explicitly defined and authorized by the County and NSAQMD, and not be done by employees of the mine.

The ASUR Plan was written by Rise Gold (ASUR, p1).

Conclusion

The Final EIR does not provide adequate data on asbestos concentrations in mine rock to determine the potential impacts under CEQA. In addition, the ASUR Plan fails to adequately address processing and disposal of asbestos-bearing mine waste to meet its stated goals, and the ASUR Plan is internally inconsistent and ambiguous, providing numerous loopholes in regulatory oversight.

The potential for hazardous airborne pollution from the mine project is a significant health concern which is inadequately addressed in the Idaho-Maryland Mine Final EIR. This Final EIR should be rejected.

The appended figure is from page 106 of Rise Gold's "Technical Report On The Idaho-Maryland Project" (https://www.risegoldcorp.com/uploads/content/I-M_Tech_Report.pdf). It shows the Morehouse Fault and the location of gold ore in close proximity to surrounding Serpentinite rock beds. Serpentinite is generally high in asbestos. The purple shows Serpentinite, the orange shows Gabbro, and the red line shows the gold-quartz ore vein. The region near the bottom of the figure is a primary target for the proposed project.

Health Risks are Unavoidable

"Naturally occurring asbestos is found ...throughout California, most commonly where ultramafic rock or serpentinite rock is present. **When construction activities occur in areas with naturally occurring asbestos in the soils or rock, the asbestos fibers can become airborne and may be inhaled, which can cause chronic local inflammation and disrupt orderly cell division, both of which can facilitate the development of asbestosis and cancer.**" DEIR 4.3 and FEIR

DEIR pg 334

Table 4.3-6
NSAQMD Thresholds of Significance for Health Risks

Risk Factor	Threshold
Cancer	Increased cancer risk of >10.0 cases per million persons
Non-Cancer	Increased non-cancer risk of >1.0 Hazard Index (Chronic or Acute)

Source: Longmire, S. NSAQMD. Personal communication [email] with M. Morales, Dudek. February 19, 2021.

100,000 persons in Nevada County only takes <ONE PERSON to get cancer to exceed threshold...

Asbestos is the common name for a group of naturally occurring fibrous silicate minerals that can separate into thin but strong and durable fibers, with principal forms including chrysotile, crocidolite, amosite, tremolite, actinolite, and anthophyllite.

DEIR Pg 333

Table 4.3-5 NSAQMD Thresholds of Significance (lbs/day)			
Threshold Level	**ROG**	**NO_x**	**PM_{10}**
Level A Threshold	<24	<24	<79
Level B Threshold	24-136	24-136	79-136
Level C Threshold	>136	>136	>136
Source: NSAQMD. Guidelines for Assessing and Mitigating Air Quality Impacts of Land Use Projects. Draft Revised March 2021			

NSAQMD, Northern Sierra Air Quality Management District, is heavily used to justify pollution levels.

Total Mine airborne toxins and carcinogens 153.16 lb/day is a violation of (NSAQMD) thresholds.

NSAQMD states: "If unmitigated emissions of ROG, NOx, and/or PM10 exceed 136 pounds per day (Level C), then there is a potentially significant impact and mitigation is required; if **mitigated emissions* of ROG, NOx, and/or PM10 still exceed 136 pounds per day (Level C) after implementation of mitigation, then a significant and unavoidable impact would occur."**

- *as stated in both the DEIR and the FEIR
- "The TAC [toxic air contaminants] emissions associated with blasting and crushing, ore processing, and earthwork and material handling would include asbestos and silica emitted from the fugitive dust produced." FEIR

MITIGATED DAILY AIRBORNE EMISSIONS

FROM DEIR TABLE 4.3-19, P. 366*

YEAR 1 OF OPERATION	
Reactive organic gas (ROG)	8.50 lb/day
Oxides of nitrogen (NOX)	35.82
Carbon monoxide (CO)	90.46
Oxide of sulfur (SOX)	0.28
Particulates <10 microns (PM10)	13.23
Particulates <2.5 microns (PM2.5)	4.87
Total airborne toxins and carcinogens:	153.16 lb/day**

YEAR 1	153.16 lb/day X 300 days/yr	=	45,948 lb
YEAR 2-6	341.61 lb/day X 300 days/yr X 5 yr	=	512,415 lb
YEAR 7-12	332.4 lb/day X 300 days/yr X 6 yr	=	598,320 lb
YEAR 13-80	292.83 lb/day X 300 days/yr X 68 yr	=	5,973,732 lb

Total airborne toxins and carcinogens, 80-year project:
7,130,415 lb = 3,600 tons *by Jeff Kane, MD

Note: Does not include emissions generated in post-mining reclamation, 200,000 annual minutes of diesel idling, or greenhouse gases.

** FEIR p. 256 states: "...if mitigated emissions of ROG, NOX, and/or PM10 still exceed 136 lb/day (Level C) after implementation of mitigation, then a significant and unavoidable impact would occur."

Public Comment to the Nevada County Planning Commission, Mar. 9, 2023: Example of Inadequate Mitigation in Rise Gold Mine Inc. (IMM reopening) Final Environmental Impact report (FEIR), Asbestos Pollution

Hi, I'm Jim Bair, Leader of the Stop the Mine Task Force in Grass Valley. I have been asked to provide specific references to the FEIR. So, I include notes here and references in a detailed report with this comment. [i] [Blue type not read publicly].

The FEIR concludes that the project could result in a significant impact (health and mortality) by exposing receptors [people] to substantial concentrations of asbestos, and requires mitigation to reduce the impact to a less than significant level. The proposed Mitigation Measure 4.3-2 is inadequate for dozens of technical reasons.[ii] Here are a few key points.

First, the required the submission and implementation of an Asbestos Dust Mitigation Plan (ADMP) to Northern Sierra Air Quality Management District (NSAQMD) for review and approval is not to be done until after project approval. [iii]

There's no question asbestos is present in the mineral rights area. [iv] The exact quantity cannot be determined because the rock sampling using 19 bore holes to generalize to 2500 acres is invalid. Even so, asbestos was found in a significant proportion of samples (FEIR p. 123, parag. 5, and p. 416.) (Section 4.4 of Appendix K.2 of the DEIR)

Given asbestos will become airborne, there is no adequate measurement once it's in the air.

The mitigation measure is inadequate because:

- The State and Federal (EPA) authorities state they do not have an airborne asbestos measurement methodology
- Measurement technology is limited by the extremely small size of asbestos fibers (see EPA ref., p.8 [1]).
- The proposed mitigation is for **dust** which is defined as larger particles (PM 10) while asbestos fibers are often 10 to 20 times smaller than dust -- .5 microns (<PM2). Asbestos is more like smoke and can toxify air miles from its source
- The mitigation measure is only for dust using water spraying, washing truck tires, sealing the hauling trucks, paving the processing area. The FEIR states even some dust will escape (become fugitive).
- Chemical stabilizers to reduce haul road dust have minimal impact on asbestos particles.
- Extremely small numbers of asbestos fibers can cause cancer, asbestosis, and death...[v]

In conclusion, the FEIR makes the following questionable overarching judgement:

Warning: "*The engineering details and intensive sampling described by many commenters would be developed and completed through the implementation of mitigation measures, and is not required to be completed as part of the CEQA process*" – **this is a legal question.**

Subject: Example of inadequate mitigation in Rise Gold Mine Inc. Final Environmental Impact report (FEIR)

See pg 9 of "project information" Duplicative + wrong reference.

Copy: County Planning Department

From: Jim Bair

Executive Summary

This comment on the Final Environmental Impact Report (EIR) for Rise Gold Mine Inc. provides one example of hundreds of cases where the FEIR does not adequately address the Public Comments on the Draft EIR. My comment describes inadequate, misleading and incorrect statements about asbestos, one of the most dangerous pollutants in the world. Scientific, peer-reviewed references are included.

The proposed FEIR asbestos mitigations are essentially unchanged from the DEIR. The FEIR fails to address Rise Gold Mine's Technical Reports and Appendices that discuss the Mine proposal's inadequacies. These include invalid asbestos measurement in rock and predicted air samples.

There is little question that asbestos is extremely toxic. If it escapes into our air, it will probably cause cancer. Airboune asbestos is often lighter than dust and, like smoke, can pollute the air for miles. The FEIR says the commenter doesn't know what smoke is, and repeats that smoke is like dust.

As is the case throughout the FEIR, operational testing is relegated to government agencies. The authors of the FEIR continue to delegate the Asbestos and Dust Mitigation **Plan** to the Northern Sierra Air Quality Management District **after Mine project approval.** I quote the State agencies which say they do not even have a way to measure airborne asbestos.

The FEIR continues to reference itself (EIR) as evidence; e.g., *"the health risk assessments are conservative and therefore…the DEIR adequately evaluates the potential health effects from asbestos."*

The bottom line is after the project is operational, if levels are exceeded, then a "significant and unavoidable impact would occur." **There is no evidence to predict acceptable levels of asbestos pollution from mine operations that include processing 1,500 tons of mine rock per day**.

Report and References

This comment is in response to the Final EIR Idaho-Maryland Mine Project, December 2022. The FEIR fails to adequately address the public comments on the Draft EIR. While some responses are contained in the FEIR, they may be combined into Master Reponses, and they often do not provide adequate mitigation measures. When a

comment from an agency or individual is referenced, the FEIR usually does not contain new information that addresses the specific requests in the DEIR Comments.

For example, my DEIR comment [Comment Ind 353-19] described inadequate, misleading and incorrect statements about asbestos, one of the most dangerous pollutants[ii]

The FEIR does not adequately address my Comment on the DEIR:

1. The inadequate FEIR asbestos mitigations are unchanged from the DEIR. The required *Asbestos Dust Mitigation Plan*, page 3-3, (4.3-2) is only a "summary" and does not address asbestos fibers which are too small to be treated as dust. [iii] To quote the FEIR Group Response, "*the DEIR requires the submission of an Asbestos Dust Mitigation Plan (ADMP) to Northern Sierra Air Quality Management District (NSAQMD) for review and approval. The ADMP has minimum requirements as described in the mitigation measure. Additional measures, such as air monitoring if required by the NSAQMD,* ***would be*** *detailed in the ADMP*" (FEIR Comment Grp 7-143 Mitigation Measure 4.3-2). **The required Asbestos Dust Mitigation Plan is not done.** See Note 4 below.

2. There is inadequate sampling of the mineral rights area. Conclusions based on 19 bore holes are not valid to generalize to 2,500 acres. Some samples did contain asbestos indicating far more bore holes are needed for valid sampling. There should be at least one bore hole for each unique geologic structure. (See Master Response 23).

3. The use of asbestos detection technology is incorrect. The measurements and the mitigations failed to address the size of asbestos fibers. Asbestos fibers are often less than one micron in size and cannot be detected by Polarized Light Microscopy (PLM asbestos testing). [Microscopes using light are not sensitive enough.] TEM (Transmission Electron Microscopy) must be used to detect sub-micron fibers and to distinguish between asbestos fibers and non-asbestos fibers.[iv]
   TEM asbestos testing requires shipping samples to San Leandro, CA, with a turn-around of days. Thus, the real-time monitoring restated in the FEIR is impossible. Quantities that are hazardous to public health would be widely airborne before tests results would be available.

4. The FEIR mitigation of airborne asbestos is inadequate because it is treated as "dust" in the DEIR and cannot be measured (see Note 4). The comment that mitigation cannot be done to CA standards of air quality (Northern Sierra Air Quality Management District (NSAQMD)) is proof of inadequacy. Asbestos fibers are too often smaller than dust (PM2). The FEIR must describe mitigation measures for sub-micron fibers in addition to washing and spraying in open tailings areas, and especially the trucking lanes to and from the tailings dump site (Centennial).[v]

5. Even though the FEIR declares that asbestos pollution is a serious negative impact, it does not contain the plan for mitigation. Quote, "*the DEIR concludes that the Project* ***could*** *result in a significant impact with respect to exposing receptors [people] to* ***substantial concentrations of asbestos*** *and requires mitigation to reduce the impact to a less than significant level.*" Page 183.[vi]

Conclusion

The lack of feasible mitigation of asbestos is an example of significant and unavoidable negative environmental impacts. The FEIR (page 256) states that if certain levels of asbestos emissions are exceeded, then there is a potentially significant impact and mitigation is required. If after implementation of mitigation, levels are exceeded, then a significant and unavoidable impact would occur." **There is no evidence to predict less than the unacceptable Level C of asbestos pollution from processing 1,500 tons of mine waste per day.** [vii]

The FEIR continues to cite Federal and State rules, regulations and guidelines in inaccurate ways to insinuate that future impacts will be less than significant, e.g., NSAQMD and OEHAA (CA Office of Environmental Health Hazard Assessment). The FEIR states, **if and when pollution mitigations are implemented and followed by measurement**, they will be less than significant but there is no airborne measurement methodology according to NSAQMD. [viii]

NOTES re: Asbestos in the FEIR

Note 1: Unsupported claims (page 180):

"This master response confirms that the proposed project will use chemical dust stabilizers that are not considered toxic air contaminants, nor do they have adverse effects on water quality or aquatic life. **[There is no evidence that dust stabilizers will control asbestos]**. *This response also demonstrates that, after implementation of mitigation, the project's construction and operations would not expose sensitive receptors to substantial concentrations of fugitive dust such that a human health effect would occur* (Appendix G, III(c))." **This statement cannot be supported.** Asbestos is not limited to "dust" – the particles are too small – **the response doesn't demonstrate anything.**

The FEIR does not address the predicted amount of asbestos (page 180), it merely references the DEIR as evidence!

"Several commenters asserted that the assumptions used in the Health Risk Assessment (HRA) understated the amount of asbestos that will be found in the rock mined at the project, and likewise the level of respirable asbestos that will be emitted into the air. Conversely, the assumptions used for the HRA were based on conservative assumptions that overstate the amount of asbestos in Final EIR". Responses to Comments Page 2-108: "...the rock and tailings and overstate the amount of asbestos that will become airborne. As such, the HRA provides a conservative analysis of asbestos impacts, and thus, adequately evaluates the potential health effects from asbestos attributable to the proposed project."

There's no proof to support the claim of an adequate evaluation primarily because the amount of airborne asbestos cannot be predicted (see invalid sampling and particle size).

Note 2: FEIR Chapter 3 – Revisions to the Draft EIR Text

The FEIR claims are without evidence. The referenced Asbestos Dust Mitigation Plan (ADMP) is not done. I noted that it should before DEIR acceptance. The required ADMP plan still is not submitted to the Northern Sierra Air Quality Management District (NSAQMD) or any other recipient.

Note 3: Master Response 23 - Inadequacy of Sampling - Asbestos

P 182 Conclusion quote: "Based on these conservative assumptions, **the DEIR concludes that the Project could result in a significant impact with respect to exposing receptors [people] to substantial concentrations of asbestos and requires mitigation to reduce the impact to a less than significant level**. Mitigation Measure 4.3-2 of the DEIR requires the submission of an Asbestos Dust Mitigation Plan (ADMP) to Final EIR Idaho-Maryland Mine Project December 2022 Chapter 2 – Responses to Comments Page 2-111 Northern Sierra Air Quality Management District (NSAQMD) for review and approval. The ADMP has minimum requirements as described in Mitigation Measure 4.3-2. Additional measures, such as air monitoring, if required by the NSAQMD, would be detailed in the ADMP.

P253 quote: "Rather, the concentrations of asbestos at receptor [people] locations are modelled and the health risk is calculated in accordance with OEHAA guidelines. OEHHA is the lead state agency for the assessment of health risks posed by environmental contaminants in California." **Modeling to forecast asbestos concentrations is delegated to the State which is too general to apply to this unique project.** (Appendix report: Health Risk Assessment Memorandum for the Idaho-Maryland Mine Project Date: July 11, 2022).

Note 4: This is proof of inadequacy: **"The Northern Sierra Air Quality Management District (NSAQMD) has indicated that there is no approved method, and thus some uncertainty, regarding the estimation of asbestos risk based on rock samples." FEIR page 416, Agency response 11-2.**

[i] Jim Bair, BS, MA, PhD student, aristotle2001@gmail.com, is Leader of the Stop the Mine Task Force, Unitarian Universalist Community of the Mountains https://www.uugrassvalley.org/justice/stop-the-mine-task-force/
128 Sierra Blanca Ct., Grass Valley, CA 95945

[ii] See references in my DEIR Comment; this observation is corroborated by three MDs and a Professor of Medicine. Note that my Endnotes and NOTES are important because the FEIR is inconsistent and extremely challenging to process at over 10,000 pages.

[iii] Dust is regulated, sub-micron particles are not. In addition, FEIR page 181 states that the plan to monitor for airborne asbestos is not done: "Air monitoring requirements will be specified in

the approved Asbestos Dust Mitigation Plan (ADMP), which must be approved by the Northern Sierra Air Quality Management District **prior to Project operations**. The ADMP is required under the Asbestos Airborne Toxic Control Measure (ATCM) for Construction, Grading, Quarrying, and Surface Mine Operations. Section (h)(3) of the ATCM specifies the requirement for analysis of air samples. Analysis of all air samples shall follow the analytical method specified by the United States Environmental Protection Agency (USEPA) Asbestos Hazard Emergency Response Act (AHERA) criteria for asbestos (40 CFR, Part 763 Subpart E, Appendix A, adopted October 30, 1987). The ATCM modifies the AHERA criteria for asbestos and requires a lower detection limit and the counting of all asbestos structures irrespective of length...".
[EPA regulations are at https://www.ecfr.gov/current/title-40/chapter-I/subchapter-J/part-302]
EPA Regulations are limited and cannot be relied upon: "13. Observe the following **counting rules: Count only fibers equal to or longer than 5 micrometers [microns].**" Occupational Safety and Health Admin., https://www.govinfo.gov/content/pkg/CFR-2011-title29-vol6/pdf/CFR-2011-title29-vol6-sec1910-1001.pdf
Asbestos fibers are **typically less than 5 micrometers [microns] and frequently measure .5 micron.**

[iv] Pamela Heard, Licensed Respiratory Specialist,

[v] FEIR page 136 **falsely** states that, "From a health perspective, the Health Risk Assessment (HRA) prepared for the proposed project (included in Appendix B of Appendix E.1 of the EIR) evaluated fugitive dust as PM10. The HRA concluded that a significant health hazard to the public would not occur as a result of fugitive dust [dust that escapes containment] after implementation of mitigation (see DEIR, p. 4.3-82). For more detail, please refer to Master Response 20 – Conservatism Used for Metals in Dust, Master Response 21 – Silica Health Risk, and Master Response 22 – Conservatism Used for Asbestos.

[vi] Page 183 (2-110) states that," the DEIR concludes that the Project **could result in a significant impact with respect to exposing receptors to substantial concentrations of asbestos** and requires mitigation to reduce the impact to a less than significant level. Mitigation Measure 4.3-2 of the DEIR requires the submission of an *Asbestos Dust Mitigation Plan* (ADMP) to Northern Sierra Air Quality Management District (NSAQMD) for review and approval. The ADMP has minimum requirements as described in Mitigation Measure 4.3-2. Additional measures, such as air monitoring, if required by the NSAQMD, would be detailed in the ADMP. **The ADMP cannot be found in the FEIR.**

[vii] FEIR p. 256 states that, "If unmitigated emissions of ROG, NOx, and/or PM10 exceed 136 pounds per day (Level C), then there is a potentially significant impact and mitigation is required; if mitigated emissions of ROG, NOx, and/or PM10 still exceed 136 pounds per day (Level C) after implementation of mitigation, then a significant and unavoidable impact would occur."

[viii] **The FEIR contains broad brush statements that future measures prove that mitigations will be made, quote:** "Response to Comment Agcy 1-17 The commenter asserts that the project's ROG, NOX, and PM10 emissions should be considered "potentially significant" after mitigation; however, the commenter misunderstands the NSAQMD guidelines. The NSAQMD requires implementation of certain mitigation measures for each defined level of emissions volumes (A, B, C) to achieve an impact determination of less-than significant impact. As stated on page 4.3-41 of the DEIR, the NSAQMD has developed a tiered approach to significance levels. The tiered thresholds for Levels A, B, and C are given in Table 4.3-5 for a project's estimated emissions of criteria pollutants in pounds per day. A project with emissions qualifying it for Level A thresholds (i.e., all projects with emissions greater than zero) requires the most basic mitigation. Projects that qualify for Level B require more extensive mitigation, and projects that qualify for Level C require the most extensive application of mitigation. If unmitigated emissions of ROG, NOx, and/or PM10 exceed 136 pounds per day (Level C), then there is a potentially significant impact and mitigation is required; if mitigated emissions of ROG, NOx, and/or PM10 still exceed 136

pounds per day (Level C) after implementation of mitigation, **then a significant and unavoidable impact would occur.** [c.f.. Final EIR Idaho-Maryland Mine Project December 2022 Chapter 2 – Responses to Comments Page 2-6315 INDIVIDUAL LETTER 332: JEFF KANE]

Quote [NSAQMD states they do not have a measurement methodology]: **"Unmitigated emissions below Level C would result in an impact that is potentially significant, and mitigation is required;** following implementation of mitigation (as specified separately for Level A and Level B by NSAQMD), emissions would be less than significant. The DEIR imposes the NSAQMD recommended mitigation measures for the project's ROG, NOX, and PM10 emissions, and therefore achieves a less than significant impact, per NSAQMD guidance. (DEIR, p. 4.3-73.) Notably, the NSAQMD thresholds used for criteria air pollutants for the project are the same thresholds used by the commenter in the Empire Mine State Historic Park Site Characterization and Remediation Draft Program EIR in 2009. While the commenter asserts that emissions meeting NSAQMD level B thresholds should be considered "potentially significant" after mitigation, the commenter's 2009 EIR stated that the park project's NOx emissions, which were shown to meet NSAQMD level B thresholds, were "less than significant" after implementation of standard dust control mitigation, **similar to the standard mitigation used in the project's DEIR.** (See Empire Mine State Historic Park Site Characterization and Remediation Draft Program EIR, pp. 4.2-31 to 4.2-35.) Grass Valley, California 95945

Subject: **Geotechnical Engineering Report**

Dear Mr. Mossman:

This report presents the results of our geotechnical engineering investigation for the 119-acre property located at the southwest corner of Brunswick Road and East Bennett Road in Grass Valley, California. As proposed, the project is to include development of industrial facilities associated with proposed underground hard rock mining operations. We anticipate that site improvements will include the construction of multiple new light and heavily loaded structures, embankment mitigation of the existing pond, retrofitting and expansion of the existing New Brunswick shaft, construction of a new service shaft and headframe, construction of an engineered fill pad for future industrial use, and associated infrastructure elements including roadways, storm drains and underground utilities.

The findings, conclusions and recommendations presented in this report are based on the following relevant information collected and evaluated by NV5: literature review, surface observations, subsurface exploration, laboratory test results, and experience with similar projects, sites and conditions in the area. Our opinion is that the project can be completed as proposed, provided the recommendations presented in this report are implemented. Our primary concerns, from a geotechnical engineering standpoint, include:

- The presence of relatively thin layers/pockets of organic material (predominantly sawdust) in the southwestern end of the existing pond dam, which can be mitigated by conventional earthwork methods, including excavation and removal of the organic materials followed by replacement and recompaction of the overlying dam fill.
- The stability of steep temporary cut slopes proposed for construction of deep sub-surface structures, which can be mitigated by conventional geotechnical engineering methods, including temporary cut slope design and/or shoring design for the proposed temporary excavations.
- The presence of undocumented fill material in portions of previously graded areas, which can be mitigated by testing of the fill material, and if necessary, reworking and recompaction of fill that is deemed unsuitable to support site development.
- The presence of thin lenses of expansive fine-grained near-surface soils in areas of proposed infrastructure improvements, which can be mitigated by conventional earthwork procedures (e.g., excavation and removal from areas to support structures or foundation elements).

- The existing corrugated metal pipe (CMP) culvert that conveys water through the Site to South Fork Wolf Creek appears to be approaching the end of its lifespan. Considering the moderate corrosive potential of the Site soils encountered in the vicinity of the culvert, as well as the proposed industrial fill pad to be constructed over the culvert alignment, we recommend replacing the existing culvert prior to construction of the engineered industrial fill pad.
- The potential for naturally occurring asbestos (NOA) in imported fill material generated underground, which can be mitigated by implementation of conventional engineering controls to limit dust emissions during earthwork.

Recommendations for mitigating these concerns are presented in this report. During construction, we should be retained to observe and confirm site conditions and modify our recommendations, if necessary. This report should not be relied upon without review by NV5 if a period of 24 months elapses between the issuance report date shown above and the date when construction commences.

NV5 appreciates the opportunity to provide geotechnical engineering services for this important project. If you have questions or need additional information, please do not hesitate to contact the undersigned at 530-478-1305.

Sincerely,
NV5

3.2 SOIL CORROSION POTENTIAL

The site soil corrosion potential was evaluated by Sunland Analytical. The soil samples tested were collected at a depth of approximately 3.0 feet bgs from trenches BK-2 and T19-12. The test results are summarized in Table 3.2-1 below, and are discussed in Section 5.1.14 of this report.

Table 3.2-1, Summary of Corrosion Potential Lab Test Data

Boring No.	Sample No.	Sample Depth (ft)	Test No.	Description	Test Results
BK-2	BK-2	0.0 - 3.0	CA DOT Test #422m	Chloride	7.5 ppm
			CA DOT Test #417	Sulfate	26.2 ppm
			CA DOT Test #643	PH	4.78
			CA DOT Test #643	Min. Resistivity	5360 ohms-cm
T19-12	T19-12-B1	2.0 - 3.0	CA DOT Test #422m	Chloride	1.7 ppm
			CA DOT Test #417	Sulfate	3.0 ppm
			CA DOT Test #643	PH	5.63
			CA DOT Test #643	Min. Resistivity	4020 ohms-cm

Notes: CA DOT = California Department of Transportation
ppm = parts per million
ohms-cm = ohms-centimeters

4.0 CONCLUSIONS

The following conclusions are based on our field observations, laboratory test results, and our experience in the area.

1. It is NV5's opinion that the site is suitable for the proposed improvements provided that the geotechnical engineering design recommendations presented in this report are incorporated into the earthwork and structural improvement project plans. NV5 should be allowed to review the proposed final earthwork grading plan and structural improvement plans to determine if the geotechnical engineering recommendations have been properly incorporated, are still applicable, or need modifications. Prior to a new phase of development for the project, we should be retained to observe the soil/rock conditions present and confirm or modify our recommendations, if necessary, before grading and construction begins.

2. Our primary concerns, from a geotechnical standpoint include:

    - The presence of relatively thin layer/pockets of organic material (predominantly sawdust) in the southwestern end of the existing pond dam, which can be mitigated by conventional earthwork methods, including excavation and removal of the organic materials followed by replacement and recompaction of the overlying dam fill.

        - Additional borings (B19-4, -5 and -6) advanced along the dam centerline as part of the 2019 drilling program, as well as previous borings (B96-1 and -6) and interview of an equipment operator previously involved with construction of the dam, confirm that a layer of organic fill (sawdust) is present within the southwestern-most 200-foot segment of the dam. Boring logs indicate that the sawdust layer is up to approximately 4 feet thick at the dam centerline at a depth of approximately 12 to 18 feet bgs.

- Based on the original topography of the dam footprint, it is likely that the organic layer thickness decreases towards the inboard section of pond and increases towards the downslope face of the dam. NV5 recommends that the upslope face of the dam (and the associated clay liner) be preserved during the repairs by the construction of a temporary cut slope. Based on soil conditions observed in the upper fill during our drilling program, we anticipate that a temporary cut slope gradient of approximately 1:1, horizontal to vertical (H:V), will be feasible during the repairs, provided that the water level in the pond is managed so that seepage is not present in the cut slope. A grading plan, cross sections and slope stability analysis of proposed cut slopes should be prepared to describe the proposed earthwork repair prior to grading. If desired, raising of the dam embankment to accommodate higher water levels in the pond is potentially feasible and can be incorporated into dam improvement design and grading plans. The plan and cross section should depict typical temporary cut slope gradients, excavation depths, maximum water surface elevation, and earthwork volume estimates.

- Steep temporary cut slopes are proposed for construction of a shaft collar. Potential slope instability can be mitigated by conventional geotechnical engineering methods, including temporary cut slope design and/or shoring design for the proposed temporary excavations.

- The presence of undocumented fill materials in portions of previously graded areas, which can be mitigated by testing of the fill material and, if necessary, reworking and recompaction of fill that is deemed unsuitable to support site development. During our subsurface investigation of the Site, we encountered existing fill and disturbed soil throughout the property that varied in depth up to approximately 20 feet bgs. In general, existing undocumented fill should not be relied upon to support proposed improvements. Heterogeneous fills of unknown origin, quality and method of placement, such as those encountered, can settle and/or heave erratically under the load of new fills, structures, slabs, and pavements. Footings, slabs, and pavements supported on heterogeneous fill could also crack as a result of such erratic movements. Thus, where not removed by planned grading, heterogeneous fills should not be relied upon to support proposed improvements unless it is excavated and replaced as an engineered fill or verified with supplemental evaluation and confirmation of previous compaction testing (if available). These evaluations will be determined on a case-by-case basis. We provide recommendations for existing fill in Section 5.1.3.

- The presence of thin lenses of expansive clayey near-surface soils in areas of proposed infrastructure improvements, which can be mitigated by conventional earthwork procedures (e.g., removal of the potentially expansive clay or approved blending with granular fill materials). Expansive near-surface soils shrink and swell as they lose and gain moisture throughout the yearly weather cycle. Near the surface, the resulting movements can heave and crack lightly loaded shallow foundations (spread footings) and slabs and pavements. The zone of moisture content fluctuation is dependent on the expansion potential of the soil and the extent of the dry season. The detrimental effects of the above-described movements can be reduced by pre-swelling the expansive soils and covering them with a moisture fixing and confining blanket of properly compacted select fill, as subsequently defined or mixed and blended with granular on-site soil at a mixing ratio provided by our firm. In building areas, the blanket thickness required depends on the expansion potential of the soils and the anticipated performance of the foundations and slabs.

- The existing corrugated metal pipe (CMP) culvert that conveys water through the Site to South Fork Wolf Creek appears to be approaching the end of its lifespan. Considering the moderate corrosive potential of the Site soils encountered in the vicinity of the culvert, as well as the proposed industrial fill pad to be constructed over the culvert alignment, we recommend replacing the existing culvert prior to construction of the engineered industrial fill pad.

- The potential for naturally occurring asbestos (NOA) in imported fill material generated underground, which can be mitigated by implementation of conventional engineering controls to limit dust emissions during earthwork. Earthwork and other disturbance of materials containing mafic and ultramafic rocks is regulated by the California Air Resources Board (CARB) and the Northern Sierra Air Quality Management District (NSAQMD). Pursuant to the California Code of Regulations Title 17, Section 93105, an Asbestos Dust Mitigation Plan (ADMP) is typically required to describe material handling protocols to be used during construction to reduce the release of naturally occurring asbestos (NOA) into the atmosphere during earthwork grading and other soil/rock disturbance.

3. NV5 understands that the proposed mine operations will produce blast rock and sand tailings in approximately equal proportions to be transported to the ground surface and then blended prior to placement as engineered fill to support future industrial site development. Based on particle size data provided by Rise Grass Valley, NV5 anticipates that waste rock and tailings generated by the proposed mining operation will meet the geotechnical engineering criteria for structural fill (Section 5.1.6).

4. Based on our site observations, the geology of the region and our experience in the area, our opinion is that the risk of seismically induced hazards such as slope instability, liquefaction, and surface rupture are remote at the subject site. We do not anticipate that the proposed project will result in the destruction, covering, or modification of any unique geological and/or physical features.

5. Based on the site geology and our observation of the surface conditions, we anticipate that grading and excavation onsite will reveal variably weathered, fractured, metamorphic rock. Areas of resistant rock may be encountered which may require ripping, splitting or hammering, to increase the rate of excavation. In addition, spoil resulting from excavation onsite will likely consist of predominantly angular, gravel to cobble-sized rock fragments. This material may be suitable for use as fill, depending on the nominal size of the rock fragments, but will likely require specific recommendations for fill placement and observation to confirm compaction. Preliminary recommendations addressing rock fill placement are included in this report.

6. During our site investigation, we did not encounter ultramafic rock, serpentinite, or NOA minerals. However, the proposed industrial mining operations may encounter serpentinite, an ultramafic rock often associated with naturally occurring asbestos (NOA). If ultramafic rock, serpentinite or NOA-containing minerals are imported to the ground surface of the site, site grading would be regulated under Cal/EPA Air Resources Board Regulation 93105, Asbestos Airborne Toxic Control Measure for Construction, Grading, Quarrying, and Surface Mining Operations (ATCM) and Placer County Rule 228, Fugitive Dust. We anticipate that, as a minimum, dust mitigation measures such as limiting site access, restricting onsite construction vehicle speeds, covering stockpiled soil, and liberal use of water during grading will be required during grading to prevent the generation of dust from the Site. We can prepare an asbestos dust mitigation plan (ADMP), if required, for project planning and approval purposes.

3. These services were performed consistent with our agreement with our client. We are not responsible for the impacts of any changes in environmental standards, practices, or regulations subsequent to performance of our services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report. This report is solely for the use of our client unless noted otherwise. Any reliance on this report by a third party is at the party's sole risk.

4. If changes are made to the nature or design of the project as described in this report, then the conclusions and recommendations presented in this report should be considered invalid. Only our firm can determine the validity of the conclusions and recommendations presented in this report. Therefore, we should be retained to review all project changes and prepare written responses with regards to their impacts on our conclusions and recommendations. However, we may require additional fieldwork and laboratory testing to develop any modifications to our recommendations. Costs to review project changes and perform additional fieldwork and laboratory testing necessary to modify our recommendations are beyond the scope of services presented in this report. Any additional work will be performed only after receipt of an approved scope of services, budget, and written authorization to proceed.

5. The analyses, conclusions and recommendations presented in this report are based on site conditions as they existed at the time we performed our surface and subsurface field investigations. We have assumed that the subsurface soil and groundwater conditions encountered at the location of our exploratory trenches and borings are generally representative of the subsurface conditions throughout the entire subject site. However, the actual subsurface conditions at locations between and beyond our exploratory trenches/borings may differ. Therefore, if the subsurface conditions encountered during construction are different than those described in this report, then we should be notified immediately so that we can review these differences and, if necessary, modify our recommendations.

6. The elevation or depth to the groundwater table underlying the subject site may differ with time and location; therefore, the depth to the groundwater table encountered in the exploratory trenches and borings is only representative of the specific time and location where it was observed.

7. The subject site map shows approximate exploratory trench/boring locations as determined by pacing distances from identifiable site features. Therefore, the trench/boring locations should not be relied upon as being exact nor located with surveying methods.

8. Our geotechnical investigation scope of services did not include evaluating the subject site for the presence of historic mining surface features or hazardous materials. Although we did not observe evidence of historic mining activity or hazardous materials within the proposed building area at the time of our field investigation, all project personnel should be careful and take the necessary precautions should hazardous materials be encountered during construction. Possible historic mining excavation not detected during our investigation may impact the proposed improvements.

9. NV5's experience and that of the civil engineering profession clearly indicates that during the construction phase of a project the risks of costly design, construction and maintenance problems can be significantly reduced by retaining a design geotechnical engineering firm to review the project plans and specifications and to provide geotechnical engineering CQA observation and testing services. Upon your request NV5 will prepare a CQA geotechnical engineering services proposal that will present a work scope, a tentative schedule and fee estimate for your consideration and authorization.

If NV5 is not retained to provide geotechnical engineering CQA services during the construction phase of the project, then NV5 will not be responsible for geotechnical engineering CQA services provided by others nor any aspect of the project that fails to meet your or a third party's expectations in the future.

10. All temporary excavations must comply with applicable local, state and federal safety regulations, including the current Occupational Safety and Hazards Administration (OSHA) excavation and trench safety standards. Construction site safety is the responsibility of the contractor, who is solely responsible for the means, methods and sequencing of construction operations. Under no circumstances should the findings, conclusions and recommendations presented herein be inferred to mean that NV5 is assuming any responsibility for temporary excavations, or for the design, installation, maintenance and performance of any temporary shoring, bracing, underpinning or other similar systems.

11. The findings of this report are valid as of the present date. However, changes in the conditions of the property can occur with the passage of time. The changes may be due to natural processes or to the works of man, on the subject site or adjacent properties. In addition, changes in applicable or appropriate standards can occur, whether they result from legislation or the broadening of knowledge. Therefore, the recommendations presented in this report should not be relied upon after a period of two years from the issue date without our review.

Subject: **Steep Slope, Erosion and Sediment Control Management Plan**

Dear Mr. Mossman,

This report presents our management plan addressing construction on steeply sloping portions of the proposed construction at the 119-acre property (herein referred to as the "Site" or "subject site") located at the southwest corner of Brunswick Road and East Bennett Road in Grass Valley, California. As proposed, the project is to include development of industrial facilities associated with proposed underground hard rock mining operations. Because grading is proposed in areas where native slope gradients exceed 30 percent (herein referred to as "steep slopes"), the Nevada County Community Development Agency requires the preparation of a management plan to facilitate review and permitting of the proposed improvements.

The conclusions and recommendations presented in this management plan are based on our understanding of the proposed development, a surface reconnaissance and subsurface investigation at the Site, review of published geologic and soil survey maps, and our experience with subsurface conditions in the area. We understand that proposed site development includes grading in steep slope areas. Our opinion is that the proposed development in steep slope portions of the property are feasible, provided the recommendations included in this management plan are incorporated into the project plans and specification in conjecture with the grading recommendations provided in the project Geotechnical Engineering Report, dated November 18, 2019.

Please contact us if you have any questions regarding our observations or the conclusions and recommendations presented in this report.

Sincerely,

NV5

SLOPES

1.0 INTRODUCTION

At the request of Ben Mossman of Rise Grass Valley, Inc., NV5 prepared this management plan to address proposed grading construction on steeply sloping portions of the 119-acre property located at the southwest corner of Brunswick Road and East Bennett Road in Grass Valley, California. Because the proposed improvements will include grading in areas with slope gradients that exceed 30 percent, the Nevada County Community Development Agency requires the preparation of a management plan.

We provided geotechnical engineering recommendations for the project in our report entitled *Geotechnical Engineering Report; Idaho-Maryland Mine Project – Brunswick Industrial Site*, dated November 18, 2019. Our geotechnical engineering investigation included a site reconnaissance and literature review pertaining to soil conditions and site geology, and a subsurface investigation. The findings of our investigation were used to prepare this management plan.

2.0 SCOPE OF SERVICES

To prepare this management plan, we reviewed the findings of our investigation for the project, as well as the geotechnical engineering recommendations presented in our report. Based on findings made during our site reconnaissance and subsurface investigation, results of our literature review, and our experience with soil conditions in the area, we prepared this plan which provides additional recommendations for earthwork and erosion control associated with the proposed grading improvements on steeply sloped portions of the Site.

3.0 SITE DESCRIPTION

The Site comprises approximately 119 acres and is located approximately 2 miles east-southeast of downtown Grass Valley in Nevada County, California. According to the Nevada County Geographical Information System (GIS) online database (https://gis.nevcounty.net/MyNeighborhood/) the subject property is associated with assessor's parcel numbers (APNs) 006-441-003, 006-441-004, 006-441-005, 006-441-034, 009-630-037, and 009-630-039. The Site sits in a valley created by the South Fork of Wolf Creek, and is bordered by Brunswick Road to the east, East Bennett Road and one residential property to the north, minimally developed residential properties upslope to the south and southwest, and undeveloped steeply sloping naturally vegetated terrain to the west.

At the time of our investigation, the Site consisted of generally flat lying surfaces around the abandoned New Brunswick shaft and sawmill landings, gently sloping open fields and tree covered areas extending downstream of the dam, and steep slopes along the southern and western perimeter of the Site. Site topography varied from flat to gently sloping along portions of the developed areas, to steeply sloping in the western and southern portions of the Site. Deep fill was apparent in the vicinity of the New Brunswick Mine workings. We also observed the mine silo, concrete slabs-on-grade, and the covered New Brunswick shaft in this area. The gently sloping surfaces along the valley floor were covered with thick vegetation and we could not evaluate the nature of the material in this area. The South Fork of Wolf Creek is contained within an approximate 48-inch CMP culvert that trends northwest through the center of the Site and discharges back into its natural channel, continuing northwestward along the northwestern border of the property.

4.0 PROPOSED IMPROVEMENTS

We reviewed site plans for the project including a Grading Plan (sheet B-1) prepared by Nevada City Engineering, Inc.; and Infrastructure plan (sheet B101), Biological and Cultural Summary Map (sheet B102), Infrastructure Details (sheet B103) and Section Views (sheet B104) prepared by Rise Grass Valley, Inc. and dated November 2019. Based on our review of these site plans, we understand that the proposed site improvements for the project will likely include the construction of:

- Multiple new light and heavily loaded structures to support industrial mining activities;
- Mitigation of the existing pond dam embankment and liner;
- Retrofitting and expansion of the existing New Brunswick shaft to support industrial mining activities;
- Construction of a new service shaft and headframe to support industrial mining activities;
- Construction of a storm water detention pond;
- Construction of an engineered fill pad for future industrial use; and
- Associated infrastructure elements including retaining structures.

Appurtenant construction will include asphalt concrete paved roads and parking areas, and underground utilities. We anticipate that grading for the project will include cut and fill for building pads, roadways, culvert improvements, dam mitigation, and retaining structures and excavation for underground utilities.

We anticipate that grading for the proposed project will include cut and fill for roadways and engineered fills. In order to achieve the desired grading for the proposed development, existing slopes exceeding 30 percent will be disturbed during grading construction. Due to the proposed development and existing site topography, there is no alternatively feasible location(s) on the subject property that would have less impact on the Site and surrounding areas.

5.0 PURPOSE

We understand that the primary concern is the disturbance of original ground as a result of grading in slope areas exceeding 30 percent, and the potential of sediments and other undesirable materials being discharged into downslope drainages. The purpose of our management plan is to facilitate review and permitting of the proposed improvements within these steep sloped areas, as required by the Nevada County Community Development Agency.

6.0 CONCLUSIONS

The following conclusions and opinions are based on the findings of our site reconnaissance and subsurface investigation, our review of local geologic conditions, and our experience in the area.

1. It is our opinion that the proposed project developments within steep slope areas are generally feasible from a geotechnical engineering standpoint, provided the grading recommendations included herein are incorporated in conjecture with the grading recommendations presented in the Geotechnical Engineering Report for the project dated November 18, 2019.

2. The proposed project development is generally located in areas where natural slope gradients are less than 30 percent. However, isolated and peripheral steep slope areas are incorporated within the limits of the proposed development. No feasible alternatives were identified during design of the proposed project that could avoid these environmentally sensitive resource areas.

3. Areas of steep slopes (exceeding 30 percent) and high erosion potential are considered to be environmentally sensitive resource areas. Our opinion is that project grading activities for the proposed development on the steeply sloping portions of the property will require hillside grading techniques, as well as sediment and erosion control measures, in accordance with industry accepted Best Management Practices (BMP's).

4. In general, no major streams or drainage courses were identified within the limits of the proposed development. The South Fork Wolf Creek that passes through the Site is, and is proposed to remain, contained within a culvert that discharges downslope of the limits of the proposed development. Surface water runoff should be routed to rock-lined V-ditches or cross culverts, where possible, to reduce erosion from concentrated surface water flow.

5. Our primary concern regarding the subject site is the increased potential for erosion when grading is performed on relatively steep slopes. To mitigate the potential for erosion, grading operations on slopes exceeding 30 percent should not be performed when significant precipitation is likely to occur. The locally defined wet season begins on October 15 and ends on April 15 of the following year. Grading work at the Site may continue under fair weather conditions during the wet season, provided the following recommended hillside grading and sediment and erosion control measures are implemented.

6. We anticipate that a storm water pollution prevention plan (SWPPP) will be required for the project. The erosion and sediment control elements, as well as the monitoring requirements, of the SWPPP should be implemented to reduce the likelihood of storm water pollution.

7. Regardless of the erosion control measures in place, some erosion and sediment transport from the graded areas should be anticipated. Sedimentation basins or similar silt removal elements should be constructed to reduce the likelihood of sediment laden storm water from leaving the Site. It should be understood that periodic maintenance may be required to maintain and/or rebuild segments of improvements constructed on steep slopes due to future slope instabilities, erosion and mass wasting.

8. Our experience in the area has shown that slopes steeper than approximately 2:1, horizontal:vertical (H:V), can be difficult to successfully revegetate with standard seed and straw placement. The use of tackifiers, fiber emulsions, jute netting or permanent erosion control mats may be necessary on steeper slopes. If requested, we can provide further recommendations for such mitigation measures.

7.0 RECOMMENDATIONS

The following general geotechnical engineering recommendations are based on our understanding of the project as currently proposed, our observations of surface and subsurface conditions, our literature review, and our experience in the area.

7.1 CLEARING AND GRUBBING

Strip and remove organic surface soil containing shallow vegetation and any other deleterious materials. Vegetation and organic-rich topsoil may be suitable as a mulch but should generally not be used as engineered fill. The depth of stripping may vary across the Site. Vegetation, tree stumps and exposed root systems, and any other deleterious materials not used in landscape areas, should be removed from the Site or used in open space areas.

Overexcavate and remove loose debris and existing fill to underlying, competent material. Remove loose backfill from exploratory trenches, existing roadway fill, mantles or soil test pits, mining excavations, tree stump holes, and other disturbance features.

Remove all rocks greater than 8 inches in greatest dimension (oversized rock) from the top 12 inches of soil. Oversize rock (more than 8 inches in greatest dimension) should generally not be used as engineered fill but may be suitable for use as riprap for slope protection, stacked rock walls or in landscape areas.

7.2 PREPARATION FOR FILL PLACEMENT

Upon completion of site clearing, grubbing and overexcavation, exposed native soil in areas that will receive fill should be observed by a representative of NV5 prior to fill placement. Fill placed on slopes steeper than 5:1, H:V should be benched into the existing slope to allow placement of fill in thin horizontal lifts. Benches should be at least 10 feet wide and should extend a minimum of 2 feet into competent native soil or rock on the down slope edge, as determined by NV5 in the field.

7.3 FILL PLACEMENT

Fill should be placed according to the following guidelines:

Material used for fill construction should consist of uncontaminated, predominantly granular, non-expansive native soil or approved import soil. Imported fill material, if proposed, should be predominantly granular, non-expansive and free of deleterious or organic material. If imported material is selected, a representative sample should be submitted to NV5 for approval and laboratory analysis at least 72 hours prior to use as fill.

Rock used in fill should be no larger than 8 inches in diameter. Oversize rock (more than 8 inches in greatest dimension) should generally not be used as engineered fill but may be suitable for use as rip rap for slope protection, stacked rock walls or in landscape areas. If the fill is to be reinforced with geotextile fabric or geogrid, rock size may be further restricted in the area of fabric placement, as determined by NV5.

Fill should be uniformly moisture conditioned and placed in maximum 8-inch thick loose lifts (layers) prior to compacting. Fill should be compacted to at least 90 percent of the maximum dry density, and the upper 12 inches of fill in hardscape areas should be compacted to a minimum of 95 percent of the maximum dry density per ASTM D1557. The moisture content, density and relative compaction of fill should be evaluated by our firm during construction. Compaction tests area typically performed every 12 to 18 vertical inches of fill.

7.4 CUT/FILL SLOPE GRADING

Based on our observations of soil conditions on the Site, potential cut and fill slopes steeper than 2:1, H:V, will be subject to erosion and raveling and will require routine maintenance. Therefore, cut and fill slopes steeper than 2:1, H:V, are not recommended without the use of rock slope protection, geotextile reinforcement, or retaining walls, as discussed below.

Fill Slope Grading

Steeper fill slope gradients (up to 60° or approximately 2/3:1, H:V) would be feasible with incorporation of soil reinforced structures. Fill slope gradients steeper than 1:1, H:V, would likely require modular block facing or other permanent facing in addition to geotextile reinforcement. As an alternative to rock or block facing, a proprietary retaining system such as Maccaferri Terramesh or Tensar Sierra Scape may be appropriate. If requested, NV5 can provide design and/or consultation assistance in selection and design of cost effective alternative solutions.

Fill should be placed in horizontal lifts to the grades shown on the project plans. Slopes should be constructed by overbuilding the slope face with compacted fill and then cutting it back to the design slope gradient. Fill slopes should not be constructed or extended horizontally by placing soil on an existing slope face and/or compacted by track walking.

Benching must extend through loose surface soil into firm material, and be performed at intervals such that no loose soil is left beneath the fill. An equipment width bench should be made at least every 5 vertical feet. Actual bench intervals should be verified in the field by NV5 based on existing slope gradients.

Cut Slope Grading

Cut slopes steeper than 2:1, H:V, may be feasible with incorporation of rock slope protection, modular block facing or mechanically stabilized earth (MSE) structures. The retention of near-vertical cuts up to approximately six feet tall may be feasible using dry-stacked rock. Taller near-vertical cuts would likely require conventional retaining walls, MSE structures, or tieback systems. If requested, NV5 can provide design and/or consultation assistance in selection and design of cost effective alternative solutions.

7.5 SUBSURFACE DRAINAGE

We anticipate that seepage may be encountered during grading for proposed improvements onsite, particularly in deeper excavations and utility trenches or if grading is attempted during or immediately following the rainy season. We anticipate that dewatering may be possible by gravity or by installation of sump pumps in the excavation. Specific subsurface drainage recommendations can be provided as needed during construction.

7.6 SURFACE WATER DRAINAGE

Proper surface water drainage is important to the successful development of the project. Surface water drainage should not be directed over cut and fill slope faces. The intercepted water should be discharged into natural drainage courses. Ephemeral streams and drainage channels shall be kept clear, and allow surface water to drain.

Culverts should be installed where proposed grading crosses drainage channels and ephemeral streams to reduce the chances of erosion at these locations. Energy dissipaters, such as riprap or splash blocks, should be installed at the culvert inlets and outlets to mitigate erosion of the trail at these crossings.

If cross culverts are to be installed, general guidelines for culvert sizing and installation can be found in the Nevada County Land Use and Development Code, Chapter XVII, Article 5. We can provide specific recommendations on the design of these crossings if needed.

7.7 EROSION CONTROL DURING CONSTRUCTION

Existing vegetation should be preserved to the extent practical, and exposed soil should be protected from wind and water erosion. Graded portions of the Site should be seeded as soon as possible following grading to allow vegetation to become established prior to the rainy season. The following erosion control measures should be implemented for cut and fill slopes to reduce erosion.

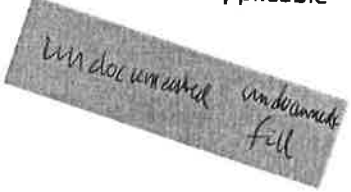
Best management practices (BMPs) should be implemented for erosion and sediment control. Typical BMPs, such as seeding, mulch, straw with jute netting, tackifiers, fiber rolls, silt fences, rock/log check dams and sediment traps, should be used during and after construction as needed to reduce erosion and retain sediment at the construction area.

The earthwork contractor should provide labor, materials, and equipment to maintain and protect exposed soil from wind and water erosion. If a storm is forecasted for the area, all exposed fill areas shall be sloped to drain and compacted with a smooth drum roller to facilitate runoff. All existing surface drainage facilities must be kept free of soil and debris during construction. The contractor should provide siltation control and management during construction. All temporary or constructed water conveyance channels should be kept free of sediment or debris at all times. Temporary erosion control should be applied within and adjacent to the boundary of the construction zone. At end of seasonal grading activities, the erosion control devices should remain functional and in place to provide erosion control protection into the winter.

7.8 GRADING PLAN REVIEW & CONSTRUCTION MONITORING

Construction quality assurance includes review of plans and specifications and performing construction monitoring as described below.

1. NV5 should be retained to review the final grading plans prior to construction to confirm our understanding of the project at the time of our investigation, to determine whether our recommendations have been implemented, and to provide additional and/or modified recommendations, if necessary.
2. We recommend holding a preconstruction site meeting with the client, general contractor and all subcontractors involved with site grading, underground utility, and foundation construction to review and discuss the geotechnical related aspects of the project and establish a protocol for addressing geotechnical issues during construction of the project.
3. NV5 should be retained to perform construction quality assurance (CQA) monitoring of all earthwork grading performed by the contractor to determine whether our recommendations have been implemented, and if necessary, provide additional and/or modified recommendations. Special inspection and testing services should be requested by the owner or project general contractor, as required by the Structural Engineer and requirements of the local applicable building code.



8.0 LIMITATIONS

Our professional services were performed consistent with the generally accepted geotechnical engineering principles and practices employed in northern California. No warranty, expressed or implied, is made or intended in connection with our work.

Pre-existing soil conditions and/or substandard construction may cause future drainage issues at the Site. We can assume no responsibility for the future performance of trail or drainage improvements.

Our scope of services did not include an evaluation of the Site for the presence of hazardous materials. Although we did not observe the presence of hazardous materials at the time of our field investigation, all project personnel should be careful and take the necessary precautions should hazardous materials be encountered during construction.

These services were performed consistent with NV5's agreement with our client. We are not responsible for the impacts of any changes in standards, practices, or regulations subsequent to performance of our services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report. This report is solely for the use of our client unless noted otherwise. Any reliance on this report by a third party is at the party's sole risk.

The findings of this report are valid as of the present date. Changes in the conditions of the property can occur with the passage of time. The changes may be due to natural processes or to the works of man, on the subject site or adjacent properties. If changes are made to the nature or design of the project as described in this report, then the conclusions and recommendations presented in this report should be considered invalid by all parties. Only our firm can determine the validity of the conclusions and recommendations presented in this report. Therefore, we should be allowed to review all project changes and prepare written responses with regards to their impacts on our conclusions and recommendations. The recommendations presented in this report should not be relied upon after a period of two years from the issue date without our review.

Re: Comments on the Draft Environmental Impact Report, Idaho-Maryland Mine Project

Dear Nevada County Planning Department:

I am a 23-year resident of Nevada County, and hereby respectfully submit these comments on the Draft Environmental Impact Report ("DEIR") for the proposed re-opening of the Idaho-Maryland Mine ("Project" or "Mine"). The DEIR is deficient in countless ways. The DEIR's analysis of the Project's impacts on water quality and quantity – particularly in the midst of the worst drought in this area in 1200 years, *see* https://www.nature.com/articles/s41558-022-01290-z and https://www.nytimes.com/2022/04/04/opinion/environment/california-drought-wildfires.html -- is woefully inadequate. The same is true for the impacts on air quality and public health, environmental hazards and hazardous materials, waste management, seismic hazards, greenhouse gas emissions, biological and aquatic resources, aesthetics, traffic, and noise pollution, among many other issues. The DEIR's proposed mitigation measures for all these impacts are wholly inadequate. The DEIR's overwhelming deficits have been documented by others in extensive comments, specifically including those of the Community Environmental Advocates, which I incorporate by this reference as if fully set forth herein.

As a lawyer with more than 30 years of experience representing Indian tribes in California, I will focus my comments on the DEIR's insufficiency with respect to the Nevada City Rancheria Nisenan Tribe ("Tribe"). The Project proponent and the County's environmental consultant failed entirely to consult with the Tribe. The Tribe recently was added to the California Native American Heritage Commission's Tribal Consultation List and is therefore entitled to meaningful consultation as a matter of State law, including SB 18, AB 52, and provisions of the California Environmental Quality Act ("CEQA"). *See, e.g.*, Cal. Pub. Res. Code §§ 21074, 21080-21084; Governor's Office of Planning and Research, *Technical Advisory: AB 52 and Tribal Cultural Resources in CEQA* (June 2017) (available at https://www.google.com/search?q=CEQA+consultation+requirements&client=firefox-b-1-

d&channel=tus5&ei=0EFLYpWFHdqgkPIPpM2c-AM&ved=0ahUKEwiVrf2njfv2AhVaEEQIHaQmBz8Q4dUDCA0&uact=5&oq=CEQA+consultation+requirements&gs_lcp=Cgdnd3Mtd2l6EAM6BAgAEEdKBAhBGABKBAhGGABQ-QVYkQxgrQ9oAHACeACAAVqIAawBkgEBMpgBAKABAcgBCMABAQ&sclient=gws-wiz). The DEIR recites that its authors sought to contact the Tribe, but that half-hearted, feeble effort fails to meet CEQA's requirements, policies, or purposes requiring ***meaningful*** consultation. Indeed, the DEIR's Ethnographic Overview ***fails to even acknowledge the present-day existence of the Tribe and its members***. *See* DEIR p. 4.5-2. In fact, the Nisenan people have existed here since time immemorial, and this century has seen a revitalization of the Tribe's governmental and cultural activities. *See* https://www.nevadacityrancheria.org/.

The Legislature provided in Assembly Bill 52 that:

"In recognition of California Native American tribal sovereignty and the unique relationship of California local governments and public agencies with California Native American tribal governments, and respecting the interests and roles of project proponents, it is the intent of the Legislature, in enacting this act, to accomplish all of the following: (1) Recognize that California Native American prehistoric, ***historic***, archaeological, cultural, and sacred places are ***essential elements in tribal cultural traditions, heritages, and identities***. (2) Establish a new category of resources in the California Environmental Quality Act called "tribal cultural resources" that considers the ***tribal cultural values*** in addition to the scientific and archaeological values when determining impacts and mitigation. (3) Establish examples of mitigation measures for tribal cultural resources that uphold the ***existing mitigation preference for historical and archaeological resources of preservation in place***, if feasible. (4) Recognize that California Native American tribes may have expertise with regard to their tribal history and practices, which concern the tribal cultural resources with which they are traditionally and culturally affiliated. Because the California Environmental Quality Act calls for a sufficient degree of analysis, ***tribal knowledge about the land and tribal cultural resources at issue should be included in environmental assessments for projects*** that may have a significant impact on those resources. (5) In recognition of their governmental status, establish a ***meaningful consultation*** process between California Native American tribal governments and lead agencies, respecting the interests and roles of all California Native American tribes and project proponents, and the level of required confidentiality concerning tribal cultural resources, at the earliest possible point in the California Environmental Quality Act environmental review process, so that tribal cultural resources can be identified, and culturally appropriate mitigation and mitigation monitoring programs can be considered by the decision making body of the lead agency. (6) Recognize the ***unique history of California Native American tribes*** and uphold existing rights of all California Native American tribes to participate in, and contribute their knowledge to, the environmental review process pursuant to the California Environmental Quality Act (Division 13 (commencing with § 21000) of the Public Resources Code). (7) Ensure that local and ***tribal governments***, public agencies, and project proponents ***have information available, early in the California Environmental Quality Act environmental review process, for purposes of identifying and addressing potential adverse impacts to tribal cultural resources*** and to reduce the potential for

> delay and conflicts in the environmental review process. (8) Enable California Native American tribes to manage and accept conveyances of, and act as caretakers of, tribal cultural resources. (9) Establish that a substantial ***adverse change to a tribal cultural resource has a significant effect on the environment.***"

AB 52, § 1 (Gatto, 2014) (emphasis added). Nevertheless, ***without any Tribal consultation whatsoever***, the DEIR simply concludes that "Tribal Cultural Resources were not identified for the project site." DEIR p. 4.5-11.

The utter lack of Tribal consultation also fails to meet the promises the County made to the Tribe in Resolution No. 20-533 "recognizing the Nevada City Rancheria Nisenan Tribe's historical, cultural and continued significance to Nevada County and California ...." *Id.* In that Resolution, the County recognized that gold mining here led to "the displacement of the Tribe and its members." *Id.* The County also acknowledged the "Tribe's continuous existence as an indigenous tribe in Nevada County, and further recognizes the Tribe's historical, cultural and continued significance to Nevada County and California." The County also "supports ***future collaboration and agreement between the County and the Tribe*** that strengthen each of their governments, for their mutual benefit and to ***ensure that local land use impacts on tribal and county governments, including their citizenry, services, lands, and infrastructure, are maintained and mitigated for the benefit of all.***" *Id.* (emphasis added).

The DEIR fails entirely to assess the Mine's impacts – historical, present, and future -- on the Tribe, its members, its ancestral lands, and its cultural resources. It fails to assess the theft of Tribal water resources and ancestral lands, the loss of hunting and gathering grounds, and impacts on Tribal cultural resources caused by the Mine and that will be perpetuated by the Mine's proposed re-opening. Moreover, the DEIR fails to assess the Mine's impacts in causing and perpetuating the genocide against the Tribe and its members, as well as the related impacts of the proposed Mine re-opening, including the badges and incidents of the genocide and its lingering intergenerational trauma. There are no mitigation measures proposed to compensate the Tribe for the genocide and its continuing impacts on the Tribe, its members, its lands, and its cultural resources. Indeed, as noted in the U.S. National Archives and Records Administration, California's gold rush was in significant part responsible for the failure to ratify the California Indian treaties, including the Camp Union Treaty of 1851, to which the Tribe's ancestral leader was a signatory. *See* L. Miller, *The Secret Treaties with California Indians*, https://www.archives.gov/files/publications/prologue/2013/fall-winter/treaties.pdf ("in the wake of the gold rush, white Californians strongly objected to the treaties"). The Mine is responsible for the theft of the Tribe' ancestral lands, and the proposal to re-open it must include mitigation for that calamitous impact.

The DEIR lacks the information and analysis required to identify all the Mine's potentially significant impacts on the Tribe, its members, and its ancestral homelands, and its cultural resources. As noted by other commentors, the DEIR also lacks an accurate Project description, relies on an incomplete baseline for evaluating the Project's environmental impacts, lacks data and analyses needed to make informed determinations, underestimates or omits impacts and fails to provide effective and feasible mitigation measures.

The DEIR fails to satisfy CEQA's requirements. It also fails to meet the County's obligations to the Tribe undertaken in Resolution No. 20-533. The Tribe has the right under State and County law to be fully and meaningfully consulted on the Project. The DEIR must at a minimum be revised accordingly and recirculated, with a full analysis of the Mine's impacts on the Tribe, its members, its ancestral lands, and its Tribal cultural resources. The revised DEIR must propose meaningful mitigation for the badges and incidents of the genocide, the theft of Tribal ancestral lands, the theft and destruction of Tribal natural and cultural resources, and the destruction of the Tribe's traditional way of life.

Sincerely,

Frank Lawrence, Esq.
