

XRY Certification

Course Overview:

XRY Certification is the quintessential course when it comes to data extraction in mobile device forensics. Whether a novice in the field or a seasoned professional, students walk away with the skills and knowledge needed to tackle mobile device forensics using XRY.

This three-day course introduces you to industry standards and best practices when it comes to the identification, collection, and preservation of digital evidence. You will be guided through all facets of XRY from setup to extraction. You will leave confident in your ability to effectively collect data from various mobile devices as well as cloud data and data acquired from other sources.

Book now to get certified in today's fastest and most comprehensive mobile device extraction tool and get started on your path to becoming a MSAB Certified Forensic Professional.

Key course takeaways:

- Tailor XRY to your organization defining unique setup and storage routines
- Explore proper network isolation methods to ensure data protection
- Manage speed vs data density with Advanced File Decoding and Content Recognition
- Understand the secure XRY file format and how it maintains integrity and chain of custody
- Become proficient in extracting data logically and physically from various devices including SIM cards, memory cards, feature phones, and smart phones
- Utilize XRY Photon to extract data from popular Android apps such as WhatsApp and Signal
- Cloud data extraction using XRY Cloud
- Importing and decoding mobile device images from third party tools such as Graykey

Delivery Method

- Instructor-led Classroom

Course length

24 hours

Pre-Requisites

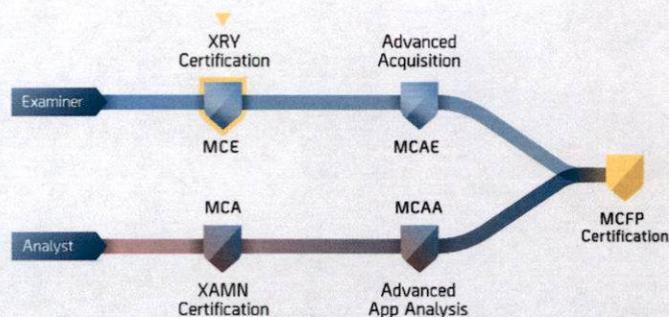

None

Learning Pathways:

MSAB offers two training pathways: the **Examiner** pathway and the **Analyst** pathway.

Each pathway provides users with unique certifications along the way, culminating in a final achievement of obtaining the designation of **MSAB Certified Forensic Professional**.

- MCE: MSAB Certified Examiner MCAE: MSAB Certified Advanced Examiner
- MCA: MSAB Certified Analyst MCAA: MSAB Certified Advanced Analyst
- MCFP: MSAB Certified Forensic Professional

XAMN Certification

Course Overview:

XAMN Certification is essential for those seeking to master their skills in digital forensics analytics. Learning how to utilize XAMN to its full potential will lead users to ultimate efficiency and effectiveness when it comes to data analysis. The ability to find evidence expeditiously in the vast amount of data found in today's mobile devices is crucial in solving cases.

This two-day course teaches you how to navigate and utilize all the functions found within XAMN. You will be guided through the complete analysis process from deploying powerful filtering techniques to locating evidence, marking identified evidentiary data with tags, to generating and exporting reports. In addition, you will become proficient in visualizing data using XAMN's geographic, timeline, and connection views. You will also learn how to import data from other sources such as call detail records, warrant returns, or reports from other mobile device forensic tools.

Book now to get certified in today's most powerful digital forensic analytical tool and get started on your path to becoming a MSAB Certified Forensic Professional.

Key course takeaways:

- Identify data origins utilizing Source Mode
- Employ protection while simultaneously identifying harmful matter with Project VIC
- Grasp a firm understanding of XAMN's various filters, including word lists, recognized content, and hidden artifacts
- Understand and work with persons, owners, and actors
- Import data from outside sources (warrant returns, CDRs, reports from other tools)
- Master when and how to use XAMN's List, Column, Gallery, Tree, and Chat views
- Become proficient in utilizing XAMN's Geographic, Timeline, and Connection views

Delivery Method

- Instructor-led Classroom

Course length

16 hours
